Keratosis follicularum, a disease marked by papules containing plugs of horny epithelial cells.

keraunograph (ke-râ′nō-grȧf), *n.* Same as ★*ceraunograph*.

keraunoid (ker′â-noid), *a.* [Gr. *κεραυνός*, thunderbolt, + *-oid*.] In *petrog.*, noting bifurcate microlitic crystals of augite, feldspar, or other minerals. *Washington*, 1896.

keraunophobia (ke-râ-nō-fō'bi-ą), *n.* Same as ★*ceraunophobia.*

keraunoscopeion (ke-râ″nō-skō-pē'ọn), *n.* Same as *ceraunoscope.*

keraunoscopy (ke-râ-nos'kō-pi), *n.* Same as ★*ceraunoscopy.*

Kerberos (kėr'bẹ-ros), *n.* [Gr. Κέρβερος.] Same as *Cerberus.*

kerchief-plot (kėr'chif-plot), *n.* A garden-plot no bigger than a handkerchief.

> Gentle breezes bring
> News of winter's vanishing,
> And the children build their bowers,
> Sticking *kerchief-plots* of mould
> All about with full-blown flowers.
>
> *Wordsworth,* To the Same Flower [Small Celandine], st. 3.

kerchunk (kėr-chungk'), *adv.* [*ker-* + *chunk*[1].] With a sudden heavy blow or thump. [Slang or colloq., U. S.]

kerf[2] (kėrf), *v. t.* [*kerf*[2], *n.*] To cut (a strip or bar of wood) with one or more kerfs for the purpose of bending it.

kerflummux (kėr-flum'uks), *v. t.* and *i.* [*ker-* + *flummux.*] To 'flummux' completely. [Slang or colloq., U. S.]

Kermanji (kėr-män'jẹ̄), *n.* The language of the Kurds; Kurdish.

kermes, *n.* 3. Short for *kermes-mineral,* or, more properly, *mineral kermes.*

kernbut (kėrn'but), *n.* [*Kern,* a river in California, + *but(tress).*] A name suggested by A. C. Lawson for a peculiar topographic form in the Kern River valley, California,—a buttress projecting from one side of a cañon and crowding the river against the opposite wall.

> From the fact of their being buttresses of a peculiar type recognized for the first time in Kern Cañon, the feature is called a *kernbut.*
>
> *Bulletin Geol. Dept. Univ. of California,* 1904, III. 332.

kern-curve (kėrn'kėrv), *n.* In *projective geom.,* the conic of reference whose every tangent is dual to its own contact-point.

kerned (kėrnd), *a.* [*kern*[1] + *-ed*[2].] Said of a printing-type that has a small projection beyond its body, as the knobs at the ends of f and j.

kernel[1], *n.* 4. (*b*) An enlarged lymphatic gland.—6. In *metal.,* a nucleus of a double sulphid of copper and iron obtained in roasting cupriferous iron pyrites. The kernels are separated by hand from the lumps of pyrites and are melted for copper. *Phillips and Bauerman,* Elements of Metallurgy, p. 485. —**Waxing kernels.** (*b*) Swollen tonsils.

kernel-roasting (kėr'nel-rōs″ting), *n.* The process of roasting cupriferous iron pyrites for the extraction of copper. See ★*kernel*[1], 6. *Phillips and Bauerman,* Elements of Metallurgy, p. 485.

kern-soap (kėrn'sōp), *n.* Soap separated from the original solution by the addition of salt or a strong brine: same as *curd soap* (which see, under *soap*). *Sci. Amer. Sup.,* May 20, 1899.

kern-stone (kėrn'stōn), *n.* A coarse-grained sandstone.

Kerosene emulsion. See ★*emulsion.*

kerosene-engine (ker'ọ-sēn-en″jin), *n.* An engine using kerosene as a fuel; strictly, an internal-combustion engine using kerosene-oil as a source of hydrocarbon fuel.

kerosolene (ker'ō-sọ̄-lēn), *n.* [*keros(ene)* + *-ol* + *-ene.*] A trade-name for petroleum ether which at one time was proposed for use as an anesthetic.

kerplunk (kėr-plungk'), *adv.* [*ker-* + *plunk.*] With a sudden 'plunk' or plunge. [Slang or colloq., U. S.]

Kerr effect, Kerr's constant. See ★*effect,* ★*constant.*

Kerry[2] (ker'i), *n.* A breed of small, active, black cattle having its origin in the southwest of Ireland: of considerable value for dairy purposes.

kerseymere-twill (kėr'zi-mēr-twil″), *n.* A four-harness twill-weave: same as ★*cassimere-twill.*

kershaw, *n.* Same as ★*cushaw.*

kerslap (kėr-slap'), *adv.* [*ker-* + *slap*[1].] With a sudden slap or loud slapping blow. [Slang or colloq., U. S.]

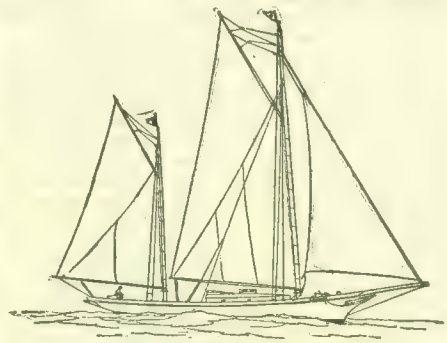
kerslop (kėr-slop'), *adv.* [Var. of *kerslap.*] Same as ★*kerslap.*

kerwallop (kėr-wol'ọp), *adv.* [*ker-* + *wallop*[1] and *wallop*[2].] With a sudden wallop or onrush. [Slang or colloq.]

kerygma (ke-rig'mą), *n.* [Gr. *κήρυγμα,* < *κηρύσσειν,* herald, proclaim: see *caduceus.*] A proclamation; preaching; specifically, Christian preaching.

keryktics (ke-rik'tiks), *n.* [A bad form (with a worse one, *kerystics*) for what would be reg. **kerykics,* or rather **cerycics,* pl. of **cerycic,* < Gr. *κηρυκικός,* adj., < *κῆρυξ* (*κηρυκ-*), a herald.] That department of practical theology which treats of the science of preaching. It includes missionary preaching and preaching to believers, as differentiated from homiletics, which deals only with the latter. *Baldwin, Dict. of Philos. and Psychol.,* I. 160.

kerystic (ke-ris'tik), *a.* [A bad form, intended to be formed from Gr. *κηρύσσειν,* proclaim, herald, < *κῆρυξ,* a herald.] Of or pertaining to preaching.



kestrel, *n.*—**Nankeen kestrel,** the Australian sparrow-hawk, *Tinnunculus cenchroides;* so named on account of its yellowish color, which suggests that of nankeen.

keta (kē'tą), *n.* A vernacular name in Kamchatka of the dog-salmon, *Oncorhynchus keta.* The fish is one of the smaller of the Pacific salmon and is found from San Francisco to Kamchatka, ascending all streams in the fall and spawning at no great distance from the sea.

ketate (kē'tāt), *n.* [*ket(one)* + *-ate*[1].] The name of a class of organic compounds containing the complex $\frac{X}{Y}>C<\frac{OR}{OR}$. They are also called *ketone ethers.*

ketazin (ke-taz'in), *n.* [*ket(one)* + *az(ote)* + *-in*[2].] The name of a class of organic compounds containing the complex $\frac{R}{R'}>C:NN:C<\frac{R''}{R'''}$. They are crystalline and stable and are prepared by the action of hydrazine on ketones.

ketch-yacht (kech'yot), *n.* A small pleasure-vessel with two masts and three fore-and-aft

Ketch-yacht.

sails, the mainsail being smaller than the foresail, and the one head-sail (the jib) setting on a short bowsprit.

ketine (kē'tin), *n.* [*ket(one)* + *-ine*[2].] 1. The name of a class of organic compounds containing the complex

$$N<\frac{CH.CH}{CH:CH}>N.$$

They are prepared by the reduction of nitroso-ketones, closely resemble the pyridine bases in general properties, and are also called *pyrazins* and *aldines.* See ★*aldine*[2]. 2. A colorless, crystalline, basic compound,

$$N<\frac{C(CH_3).CH}{CH:C(CH_3)}>N,$$

found in commercial fusel-oil and prepared by the action of ammonia on glycerol. It crystallizes in lustrous plates or rhombohedra, melts at 15° C., and boils at 155° C. Also called *2,5-dimethylpyrazin, dimethyldiazin, glycoline,* and *dimethylaldine.*

ketipic (kē-tip'ik), *a.* Noting an acid, a colorless amorphous compound, $HOCOCH_2CO\text{-}COCH_2COOH$, prepared by the action of diethyl oxalate on two equivalents of ethyl dichloracetate. It decomposes at 150° C., without melting, into carbon dioxid and diacetyl. Also called *diacetyl-dicarboxylic acid.*

keto-. A combining form used in organic chemistry to indicate the presence of the ketone group $\frac{R'}{R}>CO$.

keto-aldehyde (kē-tō-al'dē-hīd), *n.* An organic compound which contains both an aldehyde (COH) and a ketone (CO) group, as in the osons, $CH_2(OH)[CH(OH)]_3\underline{CO.COH}$.

ketohexose (kē-tō-hek'sōs), *n.* [*keto(ne)* + Gr. *ἓξ,* six, + *-ose.*] A ketone-alcohol containing 6 atoms of carbon, a member of one class of the glucoses. Fruit-sugar or levulose is the most familiar example of such a substance.

ketol (kē'tol), *n.* [*ket(one)* + *-ol.*] The name of a class of organic compounds containing the group

$$\frac{R}{R'}>COC(OH)<\frac{R''}{R'''}.$$

They are also called *ketone alcohols.*

ketole (kē'tōl), *n.* Same as *indol.*

ketone, *n.*—**Ketone blue.** See ★*blue.*—**Pimelic ketone.** Same as ★*cyclohexanone.*

ketose (kē'tōs), *n.* [*ket(one)* + *-ose.*] A class-name applied in organic chemistry to sugars, such as fructose, containing a ketone group.

ketoxime (kē-tok'sim), *n.* [*ket(one)* + *oxime.*] A class-name applied in organic chemistry to compounds of ketones and hydroxylamine, containing the group $\frac{R}{R'}>C:NOH$.

kettle-boiler (ket'l-boi″lėr), *n.* An obsolete type of steam-boiler the general form of which was spherical like that of a kettle, with a flat bottom over the fire.

kettle-bottom (ket'l-bot″um), *n.* 1. *Naut.,* a vessel having a flat floor.—2. A hill the outline of which suggests an upturned kettle. [Rare.]

kettle-broth (ket'l-brôth), *n.* See the quotation.

> '*Kettle-broth*' . . . consists of pieces of stale bread liberally moistened with boiling water, and besprinkled with salt and pepper.
>
> *Eleanor G. O'Reilly,* Sussex Tales, II. 187. *N. E. D.*

kettled (ket'ld), *a.* In *geol.,* worn into potholes or 'giant-kettles.'

kettledrum (ket'l-drum), *v. i.*; pret. and pp. *kettledrummed,* ppr. *kettledrumming.* To drum (on the kettledrum); sound like a kettledrum.

kettle-maw (ket'l-mâ), *n.* Same as *angler,* 2.

kettle-net (ket'l-net), *n.* *Naut.,* a net for catching mackerel.

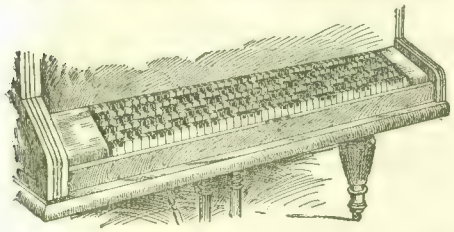
Ketton-stone (ket'ọn-stōn), *n.* In *petrog.,* an oölitic limestone found at Ketton, England.

ketuba (ke'tö-bä), *n.* [Heb., < *katab,* write.] Among the Jews, a written marriage contract.

> The phraseology of the document follows a set form, the particulars relating to dowry and marriage settlement varying in individual cases. The language is always Aramaic. After the date, the names of the contracting couple and those of their parents are fully given thus: "N, son of N, of the city of N, said to the virgin N, daughter of N, 'Be thou my spouse according to the law of Moses and Israel, and I will labor, honor, nourish, and support thee according to the custom of Jewish men who labor, esteem, nourish, and support their wives truthfully.'" Then follow the particulars of amount, etc. (200 sus to a virgin and 100 sus to a widow), the husband binding himself to pay that amount in full "from the best part of his possessions, . . . even from the garment upon his shoulders." The document is signed by the bridegroom and two witnesses, and is then read by the rabbi, in the presence of all concerned, at the marriage ceremony.

Keupermergel (koi'pėr-mėr-gl), *n.* [G., 'Keupermarl.'] In *geol.,* a subdivision of the Triassic system in Germany which attains a thickness of 1,000 feet. It is underlain by the Lettenkohle and overlain by the Rhætic, and is the middle division of the Keuper.

kevel[4] (kev'el), *n.* [Also *keval, kevil;* origin obscure.] A local name in Derbyshire, England, for the calcareous gangue of lead ore (galena).



keweenawite (kē'wē-nâ-īt), *n.* [*Keweenaw* + *-ite*[2].] An arsenide of copper and nickel, $(Cu,Ni)_2As$, found in Keweenaw county, Michigan.

key[1], *n.* 3. (*k*) In *printing,* the circular ratchet that closes or uncloses patent quoins of iron. —11. A wooden pin for fastening hides together while they are being limed. *Modern Amer. Tanning,* p. 207.—**Cross keys,** in *her.,* keys borne crosswise as in the papal arms: a frequent sign in Europe.—**Gold key,** the office of groom of the stole.—**Key of the sea,** the pelican's-foot shell, *Aporrhais pespelecani.* See cut under *Aporrhais.*—**Keys of the weather,** the twelve days of Yuletide (December 25–January 5), popularly considered as the keys to the weather of the coming year, month by month.—**Reverse keys,** wedges or keys used for driving apart or separating two pieces of a machine. They are made of two steel plates, one of which has a projection on one side and the other a recess in one edge of the same length as the projection on the first key. They are frequently used for forcing tapered rods out of their sockets.—**Ringing-key,** in *telephony,* a key by which an operator makes the necessary connections to send calling-current and operate the bell of any subscriber: frequently combined with a listening-key, in which case the device is called a *listening-and-ringing key.*—**St. Peter's keys,** the emblem of the papal authority and of the spiritual power of binding and loosing; the cross keys in the papal crown. See *power of the keys,* under *key*[1].—**Secondary key,** in *music.* Same as *relative* or *parallel key.*—**Split key,** a split pin; a pin made of half-round wire which has a loop for a head and the ends of which can be easily spread apart to prevent its falling out.—**Stepped key,** a key which has separate and movable bits: used with permutation locks.

key[1], *v. t.*—**To key up,** to drive in the keys (in the sense of wedges) so as to change the shape of the structure. Thus, *to key up an arch* is to drive in the last stone (compare *keystone*), so that the whole arch will hold itself off the centering, which may then be struck and removed.

keyboard, *n.* **1.** Pedal keyboards in the organ are called *radiating* when the keys are made to converge somewhat below the player's seat, like the ribs of a fan, and *concave* when the general level of the inner keys is lower than that of the outer ones. In the best organs the pedal keyboard is both *concave* and *radiating*.

2. The set of keys for operating the letters of a type-writing or type-setting machine.—**Jankó keyboard,** a form of pianoforte keyboard, invented in 1882 by Jankó, then of Berlin. It consists of six rows, or three double rows, of peculiarly rounded keys, closely

Jankó Keyboard.

terraced so that the player may pass readily from one to another or use two rows at once. The three double rows are duplicates of each other, and are connected with the same levers: they are provided simply to give the maximum ease of shifting and combining. Each double row is arranged thus:

C♯ D♯ F G A B
C D E F♯ G♯ A♯

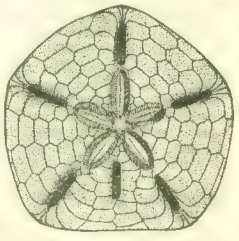
The keys corresponding to the black keys of the ordinary keyboard are distinguished by black bands. The utility of the invention lies (*a*) in its compactness, an octave being about equal to a sixth in the ordinary keyboard, so that intervals longer than an octave may be spanned; (*b*) in its adaptability to the hand, so that by shifting from row to row the shorter fingers can be favored; (*c*) in the fact that the fingering for every tonality is the same, thus facilitating transposition and the playing of pieces in 'remote' keys; and (*d*) in facilitating special effects, like the glissando.—**Universal keyboard,** a particular arrangement of letters on the keyboard of a type-writer, adopted by most of the manufacturers in the United States, so that any operator may use any machine without special practice. Another arrangement is called the 'ideal keyboard.'

key-center (kē′sen″tėr), *n.* In the keyboard of a pianoforte or organ, the center of a key or digital: used as a point of reference in measurements.

key-chuck (kē′chuk), *n.* A jaw-chuck the screws of which are actuated by a key-wrench.

key-clog (kē′klog), *n.* A wooden clog, or a metal strip or plate, attached to a key to prevent it from being overlooked or lost.

key-coupler (kē′kup″lėr), *n.* In *organ-building*, a coupler between two keyboards or between octaves on the same keyboard, when the coupled keys actually move. See *coupler* (*a*).



key-frame (kē′frām), *n.* In the organ and the pianoforte, the board underneath and supporting the keys. See cut under *pianoforte*.

key-gage (kē′gāj), *n.* A plate-gage, either male or female, used for checking the width of keys and key-seats, the female or receiving gage being notched the exact width of the key and its mate being the exact width required for the keyway.

key-hammer (kē′ham″ėr), *n.* A hand-hammer used for driving keys or wedges.

Keyhole nebula. See ★*nebula*.

keyhole-urchin (kē′hōl-ėr″chin), *n.* Any flat sea-urchin having keyhole-like openings through the test, as *Scutella* and *Mellita*.

Keyhole-urchin (*Scutella sexforis*). Test from the apical side (original). (From Lang's "Comparative Anatomy.")

key-horizon (kē′hō-rī′zon), *n.* An easily recognized geological surface which serves as a plane of reference from which measurements can be made.

By connecting the points of equal elevation a contour map of the *key horizon* was constructed.

Contrib. to Econ. Geol., U. S. Geol. Surv., 1902, p. 339.

key-lead (kē′led), *n.* In the organ and the pianoforte, a small piece of lead let into a key-tail to insure the prompt rise of the key when it is released. See cut under *pianoforte*.

keyless (kē′les), *a.* [*key*[1] + *-less*.] Having no key (in any sense).

key-loader (kē′lō″dėr), *n.* In the making of pianofortes or organs, a workman who inserts the key-leads.

key-log (kē′log), *n.* In *lumbering*, a log which is so caught or wedged that a jam is formed and held by it.

key-model (kē′mod″el), *n.* The model of a vessel cut from a block composed of various layers of wood fastened together by wooden keys.

key-money (kē′mun″i), *n.* Money exacted from a coming tenant before the keys of the house are delivered to him. [Eng.]

key-move (kē′möv), *n.* The first move in the solution of a chess problem or end-game study, as intended by its author. Another such move, not intended by the author, is called a *cook*.

key-plan (kē′plan), *n.* A diagrammatic or abridged plan giving simply the emplacement of the chief points of interest. It may be a key or index to more elaborate plans.

key-plate, *n.*—**Drop key-plate,** a key-plate having a pivoted cover or guard over the keyhole.

key-recorder (kē′rē-kôr″dėr), *n.* A clock combined with a time-registering mechanism operated by pressing numbered keys. *Engin. Mag.*, July, 1904, p. 618.

key-seater (kē′sē″tėr), *n.* A machine for cutting a keyway or slot for a spline. Portable machines designed to cut a keyway in a piece of shafting, while in position, are essentially small milling-machines operated by hand or by a motor, or by means of flexible shafting, and having narrow-face cutters for milling out the slot. Larger machines are modifications of the slotting-machine or draw stroke shapers. Also called *keyway cutter*.

key-seating (kē′sē″ting), *n.* **1.** A key-seat; a keyway.—**2.** The process of cutting a key-seat.

Keyser cup. See ★*cup*.

key-stringed (kē′stringd), *a.* Of musical instruments, having strings and played by means of a keyboard.

key-tube (kē′tūb), *n.* **1.** A tube in a lock designed to support the key.—**2.** The hollow shank or stem of a pipe-key.

K. F. An abbreviation of *Knight of Ferdinand* (Spain).

kg. An abbreviation (*a*) of *keg;* (*b*) of *kilogram*.

K. G. C. An abbreviation of *Knight of the Golden Circle* (United States).

K. G. C. B. An abbreviation of *Knight of the Grand Cross of the Bath*.

K. G. H. An abbreviation of *Knight of the Guelfs of Hanover*.

kgm. An abbreviation of *kilogrammeter*, the gravitational unit of work.

K. G. V. An abbreviation of *Knight of Gustavus Vasa* (Sweden).

K. H. An abbreviation of *Knight of* (*the Order of*) *Hanover*.

khaki. I. *a.* **2.** Made of the cloth known as khaki (without direct reference to color).

He descended in a new *khaki* suit of a delicate olive-green. *R. Kipling*, Arrest of Lieut. Golightly, in Plain Tales from the Hills, p. 124.

II. *n.* **1.** On account of its neutral color and other conveniences, khaki is now used extensively for uniforms in the British and United States armies, especially while they are engaged in active operations in the field. It was originally a cotton twill, but it is now also made of wool and of various colors.

2. A soldier clad in khaki. Hence—**3.** The cause and the policy represented by the khaki-clad military forces operating in South Africa in 1899–1902, and support of the British government in its war policy at that time: as, to vote *khaki*, that is, to support the government and its measures in carrying on the Boer war.—**4.** The bonds issued by the British government in raising money to continue the Boer war.

The market does not know whether the new war loan, *Khakis*, will be offered at 97, 98, 99, or 100. *Westminster Gazette*, March 9, 1900. *N. E. D.*

khakied (kä′kid), *a.* Clothed in khaki. *Daily Express* (London), June 26, 1900.

khal (käl), *n.* [Hindustani *khāl*, a creek, inlet, rivulet, watercourse.] A creek, pool, or tank.

This is steeped in the big *khal* at Ishapur, and during the fermenting stage mosquitoes are generated very plentifully. *Jour. Tropical Med.*, June 15, 1903, p. 200.

khalifa, khalifah (kä-lē′fą), *n.* [Ar. *khalīfa*.] Same as *calif*.

khalil (kä-lēl′), *n.* Same as *chalil*.

Khamitic (ka-mit′ik), *a.* Same as *Hamitic*.

khandjar, khanjar (kan′jär), *n.* Same as *handjar*.

khat (kät), *n.* See *kafta*.

khatri (kat′ri), *n.* [Hind. *khatrī*, < Skt. *kshatriya*.] A member of the second or military caste among the Hindus. *N. E. D.*

kheda (ke′dą), *n.* [Also *keddah*, < Hind. *khedā*, < Skt. *ākheṭa*, hunting.] In India, a snare, in the form of an inclosure, in which adult wild elephants are captured.

The custom in Bengal is to construct a strong enclosure (called a *keddah*) in the heart of the forest. *Sir J. E. Tennent*, Ceylon, II. 342.

khediviate (ke-dē′vi-āt), *n.* [*khedive* + *-i-* + *-ate*[3].] The office, dignity, or government of the khedive; the dominions of the khedive.

An account is given of the reforms instituted during the *Khediviate* of Ismail Pasha. *Encyc. Brit.*, XXVII. 703.

khersal, *n.* See ★*khirsal*.

khirsal (kėr′sal), *n.* [Also *khersal, khairsal;* E. Indian: cf. Hind. *khair*, the tree *Acacia Catechu*.] Nearly pure catechin found in pockets of the wood of *Acacia Catechu*, the East Indian tree yielding catechu, and used by the natives in betel-chewing.

Khlisti, *n.* Same as *Khlistie*.

khoja (kō′jä), *n.* [Also *khodja, khodgea, cojah, hoja, hojah, hodja*, etc., < Turk. *khawāja*, pron. *kŏhja, khāja*, = Hind. *khuājah*, in popular pronunciation *khājā*, < Pers. *khawāja*, pron. *khājah*, a rich merchant, a gentleman, a man of distinction, in Turk. also specifically a teacher, a scribe.] **1.** In Persia, a gentleman; a man of distinction.—**2.** In Turkey, specifically, a teacher in a school attached to a mosque.

khubber (kub′ėr), *n.* [Also *khuber, khabbar, khabar;* < Hind. Pers. Ar. *khabar*.] Information; intelligence; report.

Khussak beds. See ★*bed*[1].

Ki. An abbreviation of *Kings*.

kiang[2], *n.* See ★*kyang*.

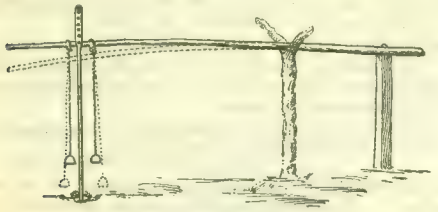
kibble[2] (kib′l), *v. i.*; pret. and pp. *kibbled*, ppr. *kibbling*. [*kibble*[2], *n.*] To hoist ore or refuse in a mine-bucket or kibble.

kibosh (ki-bosh′ or kī-bosh′), *n.* [Also *kybosh, kye-bosh;* origin obscure, but prob. a spontaneous emphatic word of purposely indefinite character, < *ki-, ka-, ker-*, a vague introductory syllable (see ★*ker-*), + **bosh*, an emphatic syllable (prob. sometimes associated with the historical word *bosh*, nothing, stuff, nonsense, a word of Turkish origin which came into English use at about the same time). As the word never had a definite meaning, it served as a convenient substitutionary word where emphasis was to be conveyed or precise words were lacking at the moment. Compare the similar vague substitutionary uses of *thing, jig, bob, thingumbob, stuff*, etc.] **1.** Something indefinite; a thing of any kind not definitely conceived or intended: as, I'll give him the *kibosh*. [Slang.] *N. and Q.*, 9th ser., VII. 277.—**2.** The thing in question; the stuff: as, that's the proper *kibosh*. [Slang.] Hence, specifically—**3.** The stuff used in filling cracks or giving finish or shadow to architectural sculptures, namely, Portland cement.

"Where's the *kybosh?*" . . . is a query . . . constantly overheard where architectural sculptors are at work. *N. and Q.*, 9th ser., VII. 277.

4. Wages; money. *Eng. Dial. Dict.* (s. v. *kybosh*). [Cornwall.]—**5.** Affectation; display; pretense. *Eng. Dial. Dict.* (s. v. *kybosh*). [Cornwall.]—**6.** Stuff; nonsense; rubbish; bosh. [Slang.]—**To put the kibosh on.** (*a*) To subject to the thing vaguely threatened, that is, to put an extinguisher on; finish off; do for (a person); put to silence. [Slang.]

"Hoo-roar," ejaculates a pot-boy in parenthesis, "*put the kye-bosk* [read *kyeboshf*] *on* her, Mary!" *Dickens*, Sketches by Boz, Seven Dials.



It was attending one of these affairs which finally *put the 'kibosh' on* me. *C. Roberts*, Adrift in America, i.

(*b*) To put the finishing touches on; perfect (one) in his trade. *N. and Q.*, 9th ser., VII. 277. (*c*) Intransitively, to do one's best. [Slang.]

kibosh (ki-bosh′ or kī-bosh′), *v. t.* [*kibosh, n.*] **1.** To finish off; knock out; squash completely; end. *Eng. Dial. Dict.* [Slang.]—**2.** To throw kibosh, or Portland cement, upon (carved stonework) with a blowpipe and a brush, so as to enhance the shadows. *N. and Q.*, 9th ser., VII. 277.

kick, *v.* **I.** *trans.* **6.** In *cricket*, to cause (the ball) after pitching to rise higher than usual: said of the bowler, and also of the ground or the wicket.—**To kick down,** to bore (a well) by a drill worked as follows: A wooden casing is sunk in

the ground or rock for a few feet and the boring-tool works inside of and is guided by this casing. The tool

Kick-down.

is suspended from the free end of a horizontal hickory pole which is supported only at one end. One or more stirrups are suspended by ropes from the pole near the drill, and each operator places a foot in a stirrup. The tool is moved or kicked down by the pressure of the operators' feet and rises by the spring of the hickory pole. The tool is rotated somewhat at each stroke by the operators.

II. *intrans.* 6. In *cricket*, to rise after being bowled higher than usual from the pitch; bump: said of the ball.

kick, *n.* 11. In *archery*, the unsteady motion of an arrow at the beginning of its flight caused by the faulty drawing or loosing of the bow.—12. In *elect.*, a high-voltage current or discharge of short duration appearing in inductive electric circuits when the conditions of the circuit are changed, especially when it is opened.—**Free kick,** in *foot-ball*, a kick made when the opponents are restrained by rule from advancing upon the kicker.—**Kick of the rudder** (*naut.*), the jerk of the rudder.—**Kick of the thunder-cloud,** in *meteor.*, the sudden outward, and therefore also downward, push due to the hypothetical sudden expansion of the rapidly ascending air within a thunder-cloud. To this 'kick' the sudden temporary rise of pressure recorded on barograms is attributed, as is also the outblowing squall-wind.—**Kick of the wheel** (*naut.*), the jerk of the wheel due to a sharp movement of the rudder-head caused by the action of the sea on the rudder.—**Place kick.** Usually, in a place kick, a player lies at full length on the ground, holding the ball and pointing it as directed by the kicker, who gives a signal for it to be placed on the ground and immediately kicks it before the opponents can advance to block the kick. Ordinarily a try at goal, after a touch-down, is made by a place kick.

kick-ball (kik'bâl), *n.* A name for foot-ball.

kick-down (kik'doun), *n.* The apparatus used in kicking down. See *to* ★*kick down*.

kicker, *n.* 3. *Naut.*, the propeller of a small launch.—4. In *cricket*, a ball which kicks or bumps, that is, which rises higher than usual after pitching.—5. In *poker*, a card held up with a pair, usually an ace or king.—6. The reversing gear of some direct-acting steam and hydraulic pumps.

kicking-coil (kik'ing-koil), *n.* In *elect.*, a reactive coil.

kicking-colt (kik'ing-kōlt), *n.* The spotted touch-me-not or jewel-weed, *Impatiens biflora*. Also called *kicking-horses*.

kicking-horses (kik'ing-hôr″sez), *n.* Same as ★*kicking-colt*.

kicking-jacket (kik'ing-jak″et), *n.* A device to prevent a horse from kicking. It consists of two wide straps which pass over the horse's rump, one at the crupper, the other at the loin, connected at the ends by straps secured to rings at the ends of the main straps, to which are also attached two looped straps at each end. The loop-straps buckle around the shafts.

kick-out (kik'out), *n.* In *foot-ball*, a drop kick, punt, or place kick made by a player of that side which has made a safety or a touch-back: it is the method of again putting the ball in play.

kick-plate (kik'plāt), *n.* A broad metal plate placed at the bottom of a door to protect it against injury.

kick-wheel (kik'hwēl), *n.* A primitive form of the potters' wheel operated by the foot of the workman.

In 1863 a great demand sprang up [in the Southern States] for earthen jars, pitchers, cups and saucers, and the fire-brick works were partially transformed into a manufactory of such wares, which were produced in large quantities by negro men and boys, who employed the old-fashioned "*kick-wheel*" in their manufacture.

E. A. Barber, Pottery and Porcelain of the U. S., p. 250.

kid[1], *n.* 7. *pl.* In *astron.*, a pair of small stars in the constellation Auriga, represented as kids held in the hand of the charioteer.—**Undressed kid,** light goatskin finished on the flesh side, usually intended for gloves.

kid-brush (kid'brush), *n.* A soft brush used for brushing the grain of goatskins during the process of finishing. *C. T. Davis*, Manuf. of Leather, p. 367.

kidder[2] (kid'ėr), *n.* A fence of stakes in a river used as an obstruction to vessels; also, a series of stakes placed across a river for entangling fish.

kidder-net (kid'ėr-net), *n.* A fish-net stretched between stakes in a river.

kiddly-benders (kid'li-ben″dėrz), *n.* Same as *kittly-benders*. Also *tiddly-benders* and *tids*.

kiddush (kid'ösh), *n.* [Heb., < *kadash*, sanctify.] In Jewish use, a form of sanctification of the Jewish sabbaths and festivals. At the end of the evening prayer on Friday, the hazzan, or reader of the synagogue, 'makes kiddush,' that is, he says a blessing over a cup of wine. The same ceremony is performed at home by the master of the house, who recites the last two words of verse 31 of the first chapter of Genesis and the following three verses (Gen. ii. 1–3). He then says a blessing, sips a little of the wine, and passes the cup to the other members of the family.

kid-finished (kid'fin″isht), *a.* Dressed and finished so as to be soft and pliable.

kid-kill (kid'kil), *n.* Same as ★*kill-kid*.

kidney, *n.* 5. In *min.*, a concretion shaped like a kidney.

The coal has been intensely crushed and affected, probably by a shearing movement of the inclosing sandstone, so that the bed is not well defined, but the coal was found in lenses and *kidneys* often as large as 8 feet thick and 13 feet long.

Contrib. to Econ. Geol., U. S. Geol. Surv., 1902, p. 278.

Amyloid kidney, a kidney which is undergoing lardaceous or waxy degeneration.—**Hind kidney,** the posterior portion of the vertebrate kidney; in amniote vertebrates, the metanephros, or true kidney.—**Wandering kidney.** Same as *floating kidney* (which see, under *kidney*).—**Waxy kidney.** Same as *amyloid* ★*kidney*.

kidney-paved (kid'ni-pāvd), *a.* Paved with cobblestones. [Eng.]

kidney-piece (kid'ni-pēs), *n.* A cam having an outline somewhat resembling that of a kidney.

kidney-table (kid'ni-tā″bl), *n.* A table, usually a writing-table, the top of which is kidney-shaped or is imagined to be so.

kidney-worm (kid'ni-wėrm), *n.* Any parasitic worm which infests the kidneys of man or lower animals, as *Eustrongylus gigas*, the giant strongyle or giant kidney-worm found in the horse, and *Sclerostoma pinguicolum*, which infests the kidney, lungs, and other parts of the hog, and is called *lard-worm* when found in leaf-lard.

kies (kēs), *n.* [G., gravel, etc.; see *chesil.*] A German term for the sulphid ores, especially those involving iron and copper: now adopted into English. *J. F. Kemp*, Handbook of Rocks, p. 196 (1904).

kieye, *n.* [Amer. Ind.] A fish, *Argyrosomus hoyi*, of the family *Salmonidæ*, found in the deep waters of Lake Michigan.

kifussa (ki-fö'sä), *n.* [W. African.] A disease of the natives of West Africa, probably the sleeping-sickness.

kiku (kē'kö), *n.* [Jap. *kiku.*] The chrysanthemum, extensively used as a decorative motive in Japanese art. In conventionalized form it constitutes the imperial crest of Japan. See *kikumon*.

kil, *v.* and *n.* A simplified spelling of *kill*.

kilampere (kil'am-pār″), *n.* Same as ★*kiloampere*.

kileh (kē'le), *n.* [Turk. *kīleh.*] A Turkish measure of capacity equal to 0.912 of an imperial bushel.

kilem (kī'lem), *n.* The term proposed in 1860 by G. J. Stoney, as an English equivalent of the French *kilometre*.

kiley (kī'li), *n.* [Also *kylie;* aboriginal Australian.] A boomerang. [West Australia.]

kilim, khilim (kil'im), *n.* [Turk. *kilīm*, a Turkish carpet (of various kinds); Pers. *kilim*, a carpet.] An Oriental rug, made in Turkish Kurdistan and the neighboring territory. It is woven with a flat stitch and is made alike on both sides.

kill[1], *v. t.* 6. In *leather-manuf.*, to remove the natural grease from (the skin) in making furs or robes from hair skins. *C. T. Davis*, Manuf. of Leather, p. 496.—7. In *tennis*, to strike (the ball) with such force as to make it impossible for the opponent to return it.—**Killed spirits of salts.** See ★*salt*[1].—**To kill the sea** (*naut.*), to reduce the violence of the sea: said of a heavy rain, which sometimes acts upon the surface of the water in such a way as to keep it from breaking.—**To kill the wind** (*naut.*), to cause the wind to die away: said of a heavy shower.

kill[1], *n.* 2. An animal that has been killed, as by a beast of prey or by a sportsman; a bag of game.

killcrop (kil'krop), *n.* [G. *kielkropf*. Origin uncertain.] In popular tradition, a child born with an insatiable hunger; one who can eat and eat and is never the fatter: supposed to be a fairy changeling.

kill-devil, *n.* 3. Among sailors, etc., alcoholic spirits of bad quality; a strong raw liquor. See the quotation under *rumbullion*.

killer, *n.* 4. A contrivance for killing large ferocious animals. It consists of an elastic strip of hard material, which is coiled up, tied together with sinew, and inclosed in a bait. When swallowed the sinew is digested, and the coil unwraps and tears the intestines of the animal. It is used by Eskimos and Chukchees for killing wolves, and by the Samoans for killing sharks. *Amer. Anthropologist*, April–June, 1901, p. 391.

5. The technical name among house-painters for anything used to prevent resin, locally present in woodwork, from exuding and making visible spots on the painted surface; also, in a more general sense, any substance used to remove spots on such surfaces.

killing, *n.* 2. In the manufacture of steel, the practice of stopping or preventing the evolution of gas in the steel. Steel is most commonly killed with silicon or aluminium. *Phillips and Bauerman*, Elements of Metallurgy, p. 348.

killing-circle (kil'ing-sėr″kl), *n.* See *pattern*, 10.

kill-kid (kil'kid), *n.* The lambkill, *Kalmia angustifolia*.

kill-time (kil'tīm), *n.* and *a.* **I.** *n.* Something, as a social amusement or a more serious occupation, entered into to kill time or the sense of time; a pastime.

That which as an occasional pastime he might have thought harmless and even wholesome, seemed to him something worse than folly when it was made a *kill-time*, —the serious occupation for which people were brought together. *Southey*, Doctor, lxv.

II. *a.* Capable of killing time: as, a *kill-time* sport; a *kill-time* novel.

kill-wart (kil'wârt), *n.* The celandine, *Chelidonium majus*. Also called *wartweed*.

kiln, *n.*—**Annular kiln.** Same as ★*ring-kiln*.—**Beehive kiln,** a round, up-draft kiln used by potters for burning common ware.—**Calcining kiln.** See ★*calcine*.—**Continuous kiln,** a brick-kiln so constructed that the heat which passes away from the already burnt brick is utilized to heat the green brick entering the kiln. See *railway* ★*kiln*, *Hoffman* ★*kiln*, and ★*ring-kiln*.—**Dietsch kiln,** a vertical cement-kiln, similar to the lime-kiln, having certain conveniences for exposing the material at different stages of the burning, so that the burner can have access to it: used chiefly in Germany.—**Down-draft kiln,** a brick- or pottery-kiln in which, by a peculiar construction, the draft is deflected downward. See the extract.

The most rational kilns, then, are those working on what is known as the "*down draught*" principle. In these the gases rise from the fire-places to the crown against which they strike and are compelled to descend between the bungs of saggars or of ware to the flues under the floor which lead to a center tunnel connected with the stack. The striking against the crown of the kiln, the horizontal movement under the same, with the mixture effected by the impeding tops of the bungs of the ware and the downward movement, most effectually breaks up any tendency of the gases to move in separate channels. *Langenbeck*, Chem. of Pottery, p. 183.

Dueberg kiln, a variety of the Hoffman kiln in which the fire travels around a continuous circuit. Cars are loaded with green brick, which remain at rest during the process of firing and are drawn out after the kiln has sufficiently cooled.—**Dunnachie kiln,** a variety of regenerative kiln for burning fire-bricks, invented by James Dunnachie of Lanark, Scotland.—**Dutch kiln,** an open brick-kiln having a temporary roof which is removed when the kiln becomes sufficiently heated.—**Gerstenhöfer kiln,** a form of pyrites-burner used in the manufacture of sulphuric acid by the lead-chamber process. A vertical shaft of fire-brick has arranged in it a number of fire-clay bars in successive tiers, from one to another of which the pyrites, crushed to a moderately fine powder, drops in the midst of an ascending current of hot air, the sulphur becoming converted into sulphur-dioxid gas, which is drawn off through a flue at the top, while the oxid of iron formed is removed at the bottom of the shaft.—**Hoffman kiln,** a kiln of the ordinary type of continuous-burning kilns, devised by Frederick Hoffman of Berlin: one of the most valuable inventions in ceramic art. See the extract.

The burning chamber of the *Hoffman kiln* consists of an endless tunnel of an annular shape, either circular, or elliptic, or oblong in plan. This endless tunnel is successively filled with green brick, and after the fire has passed through, leaving the burned brick behind, they are successively taken out when sufficiently cooled down; soon afterward they are replaced by green brick.

C. T. Davis, Manuf. of Bricks, p. 266.

Mendheim kiln, a variety of continuous brick-kiln. See the extract.

The *Mendheim kiln* consists of a combination of a series of arched burning chambers, connected with each other by flues, so as to form a complete circuit. These kilns are fired by gas and the fire proceeds from one chamber to another, passing through the flues, thus travelling around similarly as in the Hoffman kiln.

C. T. Davis, Manuf. of Bricks, p. 272.

Railway kiln, a continuous kiln in which the bricks are slowly moved on cars, by means of a screw, during the process of burning. The green bricks are loaded at one end of a long, straight tunnel in the middle of which the fire is burning. As they near the other end they are gradually cooled by a current of air which flows in the opposite direction, passes through the fire, and escapes through a chimney where the green bricks are introduced.

—**Regenerative kiln**, a brick-kiln of peculiar construction. See the extract.

The objects of all late improvements in the *regenerative kilns* are to thoroughly mix the air and gas burned in such kilns and to effect a better diffusion, regulation, and equalization of the heat obtained from their combustion.
C. T. Davis, Manuf. of Bricks, p. 272.

Ring kiln. See ★*ring-kiln*.—**Rotary kiln**, an apparatus devised for the burning or calcination of cement. It consists of a cylinder slightly inclined, supported by rollers, and revolving slowly—about once a minute. The material is fed in at the upper end and works gradually downward, falling out at the lower end.—**Running kiln**, a lime-kiln that is fed from above and delivers continuously below.—**Up-draft kiln**, a kiln in which the draft and burning gases are introduced at the bottom, pass through the ware, and escape at the top.

kiln-dry (kil′drī), *v. t.* To dry in a kiln, as lumber, fruit, etc.

kilnman (kil′man), *n.*; pl. *kilnmen* (-men). A workman who tends a kiln or oven in a pottery; an ovenman.

kilo-. [F. *kilo-*, a definitely phonetic spelling of *chilo-* (with *ch* = *k*), this standing for *chilio-*, < Gr. *χίλιοι*, a thousand: see *chiliasm*, etc.] In the nomenclature of the metric system, a prefix meaning 'thousand,' as in *kilogram*, *kilometer*, etc.

kilo-ampere (kil′ō-am-pār″), *n.* One thousand amperes or one hundred c. g. s. units: a practical unit of current.

kilocalory (kil′ō-kal″ō-ri), *n.*; pl. *kilocalories* (-riz). [Also *kilocalorie*; *kilo-* + *calory*.] The quantity of heat required to raise one kilogram of water from 0° C. to 1° C. or, sometimes, from 15° C. to 16° C.; one thousand gram-calories or lesser calories; a greater calory.

kilo-erg (kil′ō-ėrg), *n.* [*kilo-* + *erg*.] A practical unit of energy equal to 1000 ergs.

kilogauss (kil′ō-gous), *n.* [*kilo-* + *gauss*.] A flux-density of 1000 lines per square centimeter: a practical unit of magnetic flux-density or magnetic induction.

Kilogram calory. See ★*calory*.—**Kilogram-centigrade heat-unit.** See ★*heat-unit*.—**Paris kilogram**, a name by which the international standard of weight or prototype preserved in the Archives of Paris is sometimes designated.

kilogram-molecule (kil′ō-gram-mol″e-kūl), *n.* A quantity of an element or compound whose weight in kilograms is numerically equal to its molecular weight; one thousand gram-molecules.

kilojoule (kil′ō-joul), *n.* [*kilo-* + *joule*.] A practical unit of energy equal to 1000 joules or to 1×10^{10} ergs.

kilom. An abbreviation of *kilometer*.

kilomaxwell (kil′ō-maks″wel), *n.* [*kilo-* + *maxwell*.] A unit of magnetic flux equal to one thousand maxwells.

kilometric (kil-ō-met′rik), *a.* Of or pertaining to a kilometer; measured in kilometers.

kilometrical (kil-ō-met′ri-kal), *a.* Same as ★*kilometric*.

kilovolt (kil′ō-vōlt), *n.* [*kilo-* + *volt*[2].] A practical unit of electromotive force equal to 1000 volts or 1×10^{11} c. g. s. units.

kilovolt-ampere (kil′ō-vōlt-am-pār″), *n.* In *elect.*, a practical unit of power; a kilowatt.

kilowatt-hour (kil′ō-wot-our), *n.* The energy developed in one hour by a kilowatt of power or activity: a practical unit of energy.

kilowatt-meter (kil′ō-wot-mē″tėr), *n.* An instrument for the measurement of electrical power so graduated as to read in kilowatts.

kilowatt-minute (kil′ō-wot-min″it), *n.* A practical unit of work; the work done in one minute by a machine developing one kilowatt of power; 60,000 joules.

kilowatt-second (kil′ō-wot-sek″und), *n.* A practical unit of work; the work done in one second by a machine developing one kilowatt of power; 1000 joules.

kilt[1], *v.* **II.** *intrans.* To step lightly and nimbly, as if with the skirts kilted out of the way.

kilter, *n.* **2.** In *poker*, a hand with no card above a nine, no pair, and no chance to make either flush or straight.

Kiltorcan beds. See ★*bed*[1].

kilty (kil′ti), *n.*; pl. *kilties* (-tiz). [*kilt*[1] + *-y*[2].] In the British army, a nickname for a Highland soldier. *J. Ralph*, An American with Lord Roberts, p. 55.

kimberlite (kim′bėr-līt), *n.* [*Kimberley* + *-ite*[2].] In *petrog.*, a dense porphyritic peridotite, occurring at Kimberley, South Africa, partly serpentinized with phenocrysts of olivin and with a few of biotite, bronzite, ilmenite, perovskite, and pyrope. In places it has a spherulitic texture resembling chondri. It is partly brecciated and carries diamonds and fragments of carbonaceous shales. *Carvill Lewis*, 1887.

kimisa (ki-mē′sä), *n.* [Indian adoption of Sp. *camisa*: see *camise*, *chemise*.] In British Guiana, a coarse cotton garment worn by the semicivilized Indian women and sometimes by the negresses. It is made like a petticoat, but is drawn up and fastened over one shoulder, the other being left bare.

kin[5] (kin), *n.* Same as ★*kine*[3].

kina (kē′nä), *n.* Same as *quina*.

kinæsthesiometer (kin-es-thē-si-om′e-tėr), *n.* [*kinæsthesia* + Gr. *μέτρον*, measure.] An instrument for determining the degree of muscular sense or kinæsthesia.

Kinah (kē′nä), *n.*; pl. *Kinoth* (kē′nōt). [Heb. *qînāh*.] In Jewish use, lamentation: the name of the liturgy for the fast, on the 9th of Ab, commemorating the destruction of the temple. It contains dirges and the book of Lamentations.

kinaki (kē-nä′kē), *n.* [Maori.] Anything eaten with other food for the sake of variety or as a relish.

kina-kina (kē″nä-kē′nä), *n.* Same as *kin-kina* and *quinaquina*.

kinase (kin′ās), *n.* [Gr. *κιν(εῖν)*, move, + *-ase*.] A ferment-like body which is capable of rendering physiologically active another ferment and thus produces chemical changes in a third body while in itself it is apparently inert. Enterokinase, which occurs in the intestinal juice, renders the pancreatic trypsin active and thus brings about the digestion of albumins. Kinases probably occur widely distributed both in the animal and the vegetable world.

kinch[3] (kinch), *n.* [A variant of *kink*[1].] A slip-knot; figuratively, a hold; an advantage.

kinch[3] (kinch), *v. t.* [A variant of *kink*[1].] To twist a cord about, as about the tongue or nose of a horse.

kind[2], *n.*—**Consciousness of kind.** See ★*consciousness*.—**Course of kind.** See ★*course*[1].—**Out of kind**, out of the original or natural breed or variety.

Their stubbornness is but a strong hope malignified, or, as we say, grown wild and *out of kind*.
T. Jackson, Eternal Truth of Scripture.

Kinderhook group. See ★*group*[1].

kindle[1], *v. i.* **2.** To be with young: an English fanciers' term applied to rabbits. *N. E. D.*

kindling[1], *n.* **2.** The bringing forth of young: applied by English fanciers to rabbits. *N. E. D.*

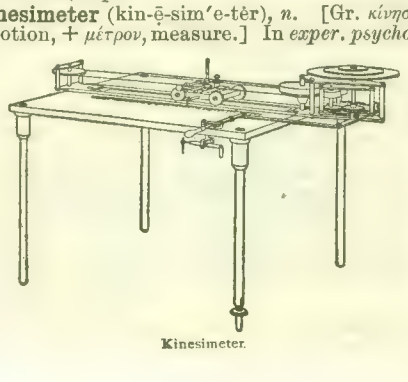
kine[3] (kīn), *n.* [Also *kin*; < Gr. *κίν(ησις)*, motion. Compare *dyne*, < Gr. *δύν(αμις)*, power.] In *phys.*, the c. g. s. unit of velocity. Since in the c. g. s. system the units of distance and time are the centimeter and second, respectively, the kine is a velocity of one centimeter per second.

Kinematic curve, geometry. See ★*curve*, ★*geometry*.—**Kinematic method.** See *altitude of a* ★*cloud*.

kinematograph (kin-ē-mat′ō-gràf), *n.* Same as ★*cinematograph*.

kinematographic, kinematographical, *a.* Same as ★*cinematographic*, ★*cinematographical*.

kinemometer (kin-ē-mom′e-tėr), *n.* An instrument for determining the speed of vehicles.



kinenegative (kin-ē-neg′a-tiv), *n.* [Gr. *κίνη(σις)*, motion, + E. *negative*.] In *photog.*, the negative of a film, ribbon, or other support from which pictures are taken for projection in a cinematograph.

kinesalgia (kin-ē-sal′ji-ä), *n.* [NL., < Gr. *κίνησις*, motion, + *ἄλγος*, pain.] Pain excited by movement.

kinesiatrics (ki-nē-si-at′riks), *n.* [Gr. *κίνησις*, motion, + *ἰατρικός*, of healing.] Same as *kinesitherapy*.

kinesigraph (ki-nē′si-gràf), *n.* [Gr. *κίνησις*, motion, + *γράφειν*, write.] In *photog.*, a form of kinetograph.

kinesimeter (kin-ē-sim′e-tėr), *n.* [Gr. *κίνησις*, motion, + *μέτρον*, measure.] In *exper. psychol.*, an instrument devised by G. S. Hall, and described in 1885 by H. H. Donaldson, for the exploration of the cutaneous surface. The kinesimeter consists essentially of a metal table the top of which is furnished with slit and grooves for the reception of a traveling car. The car is connected by belting to a set of friction-gears turned by an electric motor. On its under surface, the car carries a swinging point of hard rubber or metal, so counterpoised as to move without friction or acceleration over the surface of the skin. The skin may thus be examined for sensations of pressure and temperature, or for the limits of the perception of movement.

Kinesimeter.

kinesiology (ki-nē-si-ol′ō-ji), *n.* [Gr. *κίνησις*, motion, + *-λογια*, < *λέγειν*, speak.] The science of exercise, especially as a hygienic or therapeutic agent.

kinesiometer (ki-nē-si-om′e-tėr), *n.* Same as ★*kinesimeter*.

kinesipath (ki-nes′i-path), *n.* Same as *kinesipathist*.

kinesis (ki-nē′sis), *n.* [Gr. *κίνησις*, motion, movement, < *κινεῖν*, move.] **1.** Any manifestation of dynamic energy.—**2.** In *cytol.*, a short expression for *karyokinesis*.

Before the formation of the protetrads the thread prepared for the first maturation division undergoes a first longitudinal division, which effaces itself. At the first metaphase there is a second division (? longitudinal) which appears preparatory to the second *kinesis* and does not efface itself, but is useless, since it separates two demi-dyads which will pass into the same spermatid.
Jour. Roy. Micros. Soc., Oct., 1904, p. 529.

kinesiscope (ki-nē′si-skōp), *n.* [Gr. *κίνησις*, motion, + *σκοπεῖν*, view.] An instrument designed to rest on the sea-bottom and detect electrically the approach of steamships.

kinesthetic, *a.*—**Principle of kinesthetic equivalents.** See ★*equivalent*.—**Kinesthetic memory.** See ★*memory*.

Kinetic center, stability. See ★*center*[1], ★*stability*.

kinetically (ki-net′i-kal-i), *adv.* In a kinetical manner.

kinetocamera (ki-nē-tō-kam′e-rä), *n.* A camera so arranged as to photograph successive phases of a movement; a cinematograph. *Scripture*, Exper. Phonet., p. 30.

kinetogenetic (ki-nē″tō-jē-net′ik), *a.* [Gr. *κινητός*, movable, + *γένεσις*, origination (see *genetic*).] Developing or bringing about movement.

Its action is so constant an accompaniment of development that the forces of the latter may be divided into the *kinetogenetic*, or those that develop movement, and the statogenetic, or those that develop rest or equilibria amongst the parts of the germ.
J. A. Ryder, Biol. Lectures, 1895, p. 46.

kinetogram (ki-nē′tō-gram), *n.* [Gr. *κινητός*, movable, + *γράμμα*, anything written.] In *photog.*, a picture for projection by the cinematograph.

kinetograph (ki-nē′tō-gràf), *n.* [Gr. *κινητός*, movable, + *γράφειν*, write.] A device for taking a series of photographs of a moving object.

kinetographer (kin-ē-tog′ra-fėr), *n.* One who takes pictures for or uses a kinetograph.

kinetographic (ki-nē-tō-graf′ik), *a.* Of or pertaining to the kinetograph; obtained or made by means of the kinetograph.

kinetography (kin-ē-tog′ra-fi), *n.* [Gr. *κινητός*, movable, + *-γραφια*, < *γράφειν*, write.] In *photog.*: (*a*) The art or practice of taking pictures of moving objects for projection by the kinetograph or cinematograph. (*b*) The projection of such pictures on a screen.

kinetophonograph (ki-nē-tō-fō′nō-gràf), *n.* A combined phonograph and kinetograph. By the use of these instruments a scene enacted may be reproduced at any other time and place, the voices of the actors being heard while their performance is witnessed.

kinetoscope, *n.* **3.** An apparatus invented by Edison for exhibiting photographic pictures of objects in motion. Its essential parts are a ribbon containing the pictures, a mechanical device for causing the pictures to pass rapidly in succession under a lens or sight-piece, a lamp for illuminating the pictures, and a mechanical device for causing a circular revolving screen to move rapidly before them. A slot is cut in this screen, and its revolutions are so timed that the slot passes before each picture just as it is in line with the eyepiece. The effect is to give a view of each picture in succession, and to cut off the view as the picture is moved forward. The apparent result to the eye is a continuous picture in which the objects photographed appear to be in motion.

kinetoscopic (ki-nē-tō-skop′ik), *a.* Pertaining to or having the nature of a kinetoscope.

This method has been so simplified that little books of *cinetoscopic* views are sold, from which the moving effect

is obtained by simply letting the leaves escape rapidly from the thumb as the book is bent backwards.
Encyc. Brit., XXVII. 95.

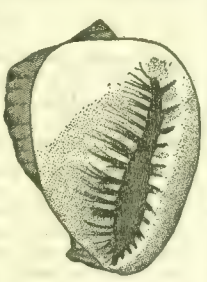
kin-fun (kim-pûng′), *n.* [Jap. *kin-pun*, pron. *kim-pun* (kim-pûng′), from *kin*, gold, + *fun*, powder.] A powdered gold lacquer.

king[1], *n.* 6. The male of a termite or white ant.

Virgin queens show marked preference or dislike toward certain *kings*; queens having once mated permit no close approach of an alien *king*, and do not respond to the attentions of *kings* of their own lineage; they may drop their wings without assistance from workers; light and warmth appear to be required for the stimulation of the *king* and queen to mating.
Jour. Roy. Micros. Soc., Feb., 1903, p. 35.

7. The perfect female bee. The queen bee was formerly known by this name. Also *king bee*.

Bees served me for a simile before
And bees again—"Bees that have lost their *king*,
Would seem a repetition and a bore.
J. H. Frere, Monks and Giants, iv. 22 (1817).



King Arthur, a game played by British man-of-war's-men in the tropics. One of the crew is chosen by lot to represent the 'king,' and allows buckets of sea-water to be thrown over him until one of his fellows is detected laughing at his absurd efforts to dodge the deluge: the one so detected then takes the king's place.—**King bird of paradise**, *Ciccinurus regius*, a small species, which occurs in New Guinea and several other islands. The male is of a brilliant red color.—**King of the herrings**, (*c*) In Australia, the elephant fish.—**King of the mackerels**, *Ranzania truncata*, a fish of the family *Molidæ*: regarded by the Hawaiian Islanders as the king of the mackerels and tunnies.—**King of the mullets**, (*b*) *Apogon imberbis*; a fish of the family *Cheilodipteridæ*, found in the Mediterranean Sea.—**King's bargain** (*naut.*), a meritorious sailor on a British naval vessel.—**King's bencher** (*naut.*), a sea-lawyer; a trouble-making member of the crew of an English man-of-war. [Eng.]—**King's blue.** See ★*blue*.—**King's gambit declined.** See ★*gambit*.—**King's Knight's defense.** Same as *Berlin* ★*defense*.—**King's Knight's gambit, opening.** See ★*gambit*, ★*opening*.—**King's-letter man**, formerly, in the British service, an officer of the rank of midshipman who held the sovereign's word that a letter of recommendation from his captain, after a certain period of experience, would secure for him a lieutenant's commission.—**King's own**, any article, issued from the British royal storehouses for naval or army use, which is distinguished by the mark or brand of a broad arrow.—**King's regulations.** See ★*regulation*.—**King's Rook's Pawn's gambit.** See ★*gambit*.—**King's side**, in *chess*, that side of the board on which the King stands, embracing the King's, King's Bishop's, King's Knight's, and King's Rook's files.—**King's widow**, in *feudal law*, a widow of a principal tenant or vassal of the king, who was compelled to take an oath in Chancery that she would not marry again without the king's consent.

king-ball (king′bâl), *n.* In *bagatelle* and similar games, the object-ball.

king-bolt, *n.* 3. An iron rod in a roof- or bridge-truss, used in place of a king-post to prevent the inclined members from allowing an increase of the distance between the tie and the compression pieces.

king-conch (king-kongk), *n.* A helmet-shell, *Cassis madagascariensis*, from the West Indies, used in cameo-cutting.

kingcup, *n.* 2. The marsh-marigold, *Caltha palustris*.

King-conch (*Cassis madagascariensis*).

kingdom, *n.*—**The Flowery Kingdom**, the Chinese empire: a partial translation of Chinese *Chung hwa kwoh*, 'Middle flowery kingdom.' The usual term is *Chung kwoh*, 'Middle kingdom,' a geographical expression. 'Flowery' is a rhetorical addition.—**The Middle Kingdom**, China.

king-eagle (king′ē″gl), *n.* The imperial eagle. See *eagle*, 1.

Kingena (king-ē′nä), *n.* [NL.] A genus of fossil brachiopods of the family *Terebratulidæ*. They have round or oval shells with a large foramen and a loop the descending and ascending lamellæ of which are wholly or partly coalesced with the median septum.

king-fluke (king′flök), *n.* Same as *turbot*, 1.

kinglessness (king′les-nes), *n.* The state of having no king: used by Carlyle to denote a state of anarchy.

And everywhere the people, or the populace, take their own government upon themselves; and open '*kinglessness*,' what we call anarchy, . . . is everywhere the order of the day. Such was the history, . . . from end to end of Europe, in those March days of 1848.
Carlyle, Latterday Pamphlets, No. 1.

king-lory (king′lō″ri), *n.* Same as ★*king-parrot*.

king-monkey (king′mung″ki), *n.* One of the African horse-tailed monkeys, *Colobus polycomus*, related to the guereza. Its general color is black, but a mark on the forehead, a fringe on the throat and chest, and the tuft on the end of the tail are white.

king-of-the-meadow (king″o̤v-thē̤-med′ō), *n.* The joepye-weed, *Eupatorium purpureum*. Also *queen-of-the-meadow*.

king-parrakeet (king′par″ą-kēt), *n.* Same as ★*king-parrot*.

king-parrot (king′par″o̤t), *n.* A name of somewhat vague application, but generally given to an Australian lory, *Aprosmictus scapulatus*, which has a brilliant red head and neck, green back and wings, and dark blue tail. Also known as *king-parrakeet* and *king-lory*. The female, of a dull green, with dull blue tail, is known as the *queen-parrot*.

king-pot (king′pot), *n.* The central and largest crucible used in the manufacture of bronze. *Phillips and Bauerman*, Elements of Metallurgy, p. 503.

king-row (king′rō), *n.* In *draughts* or *checkers*, the last row of squares on each side on which the pieces which are to be crowned or made king are placed or which they must reach.

king's-crown (kingz′kroun), *n.* Same as *king's-clover*.

king's-cure (kingz′kūr), *n.* The pipsissewa or prince's-pine, *Chimaphila umbellata*; also, the spotted wintergreen, *C. maculata*.

king-spoke (king′spōk), *n.* *Naut.*, a spoke of the steering-wheel, usually distinguished by a mark of some kind, which is directly over the barrel-hub when the rudder is amidships.

king's-rod (kingz′rod), *n.* A hardy, herbaceous perennial of the lily family, *Asphodelus ramosus*, a native of southern Europe, bearing large white flowers having a reddish-brown line in the middle of each perianth segment and arranged in very long, dense racemes.

kingston (king′stun), *n.* [Also *kingstone*, *kinson*; origin conjectural.] The angel-fish or monk-fish, *Squatina vulgaris*, one of the elasmobranchiate fishes found on the coasts of Great Britain.

king's-tree (kingz′trē), *n.* A medium-sized tree of the family *Loganiaceæ*, *Strychnos Atherstonei*, native to South Africa, the twigs of which are used by the Kafirs for preparing ceremonial staffs.

kinit (kin′it), *n.* [*kine*[3] + (*un*)*it*.] Same as *poundal*.

kin-kan (kēn′kän′), *n.* [Jap.] A Japanese name for the little orange-like fruit more commonly known as *cumquat*. It is a dwarf species, *Citrus Japonica*, now grown to some extent in the southern United States.

kinko (kēn′kō), *n.* The trepang or bêche-de-mer.

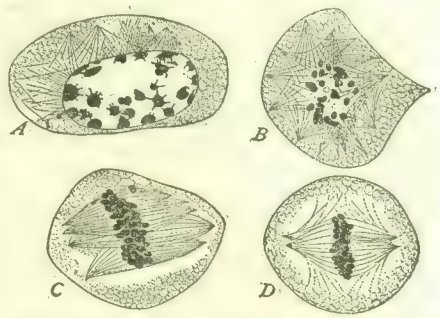
kinnor (kin′ôr), *n.* [Heb.] An ancient Hebrew instrument, probably of the zither or lyre class, but possibly a harp: translated 'harp' in the English Bible.

kinocentrum (kin-o̤-sen′trum), *n.*; pl. *kinocentra* (-trä). [NL., irreg. < Gr. *κινεῖν*, move, + *κέντρον*, center.] The centrosome regarded as a motor center of the kinoplasm. The movement of cilia and of the tail of the spermatozoa is supposed by some cytologists to have its origin in the centrosome. Opposed to ★*chemocentrum* (the nucleus of the cell).

kinodrome (kin′o̤-drōm), *n.* [Gr. *κίν(ησις)*, motion, + *-δρομος*, < *δραμεῖν*, run.] An instrument for exhibiting moving pictures. *Kansas City Daily Times*, Oct. 14, 1903.

kinoic (ki-nō′ik), *a.* [*kino*[1] + *-ic*.] Of or pertaining to kino.

kinoin (kē′nō̤-in), *n.* [*kino*[1] + *-in*[2].] A colorless crystalline substance, $C_{14}H_{12}O_6$, obtainable in small quantity from kino. It does not precipitate a solution of gelatin, but is converted by heating into kino-red.



kinoplasm (kin′o̤-plazm), *n.* [NL. *kinoplasma*, irreg. < Gr. *κινεῖν*, move, + *πλάσμα*, anything formed.] In *cytol.*, a general term for the more active portion of the cell-cytoplasm. The kinoplasm is regarded as having fibrillar structure and as giving rise to motile structures like cilia and flagella. Opposed to ★*trophoplasm* (nutritive plasma).

Strassburger also regards protoplasm as composed of two portions: a motile *kinoplasm* which is fibrillar, and a nutritive trophoplasm which is alveolar, in structure.
Encyc. Brit., XXXII. 42.

kinoplasma (kin-o̤-plaz′mą), *n.* [NL.] Same as ★*kinoplasm*.

kinoplasmic (kin-o̤-plaz′mik), *a.* [*kinoplasm* + *-ic*.] Of or pertaining to kinoplasm.

The first indication of a spindle in these cells is the formation of a felted zone of *kinoplasmic* fibers surrounding the nucleus. *Bot. Gazette*, Aug., 1903, p. 81.

Kinoplasmic Fibrillæ in Plant-cells. Division of spore mother-cells in *Equisetum*, showing spindle-formation. (Osterhout.)

A, early prophase, kinoplasmic fibrillæ in the cytoplasm; *B*, multipolar fibrillar figure invading the nuclear area after disappearance of the nuclear membrane; *C*, multipolar spindle; *D*, quadripolar spindle which finally condenses into a bipolar one. Highly magnified. (From Wilson's "The Cell.")

kinoplastic (kin-o̤-plas′tik), *a.* [Gr. *κινεῖν*, move, + *πλαστός*, < *πλάσσειν*, form.] Same as ★*kinoplasmic*.

kino-red (kē′nō̤-red″), *n.* A red substance of a somewhat resinous character forming a constituent of kino and producible artificially from kinoin. It precipitates a solution of gelatin.

Kinorhyncha (ki-nō-ring′kä), *n. pl.* [NL., irreg. < Gr. *κινεῖν*, move, + *ῥύγχος*, snout.] A class and order consisting of the single genus *Echinoderes*. *Dujardin*.

kinosthenic (kin-os-then′ik), *a.* [Irreg. < Gr. *κινεῖν*, move, + *σθένος*, force, + *-ic*.] Entering into a mathematical expression only through a fluxion: applied to a coördinate as entering into an expression for a Lagrangian function.

kinotannic (kē-nō̤-tan′ik), *a.* [*kino*[1] + *tannic*.] Noting an astringent acid contained in kino.

kinovin (ki-nō′vin), *n.* [Also *chinovin*, *quinovin*; < *kina* (= *china*[2], *quina*) + L. *ovum*, egg (white), + *-in*[2].] An organic substance of neutral character, found in cinchona-bark, which on boiling with dilute acid yields kinovic acid and a sugar-like substance called *kinovite*. It appears to exist in two isomeric forms, the one occurring in true cinchona-bark, the other in cuprea-bark. Also called *kinova bitter*.

kinsen (kin-sen′), *n.* [Jap., < *kin*, gold, + *sen*, thread.] In Japan, gold wire, used for cloisons in enamel.

kinspeople (kinz′pē-pl), *n. pl.* Kinsfolk.

kinzigite (kint′sig-it), *n.* [Named from *Kinzig* valley, Black Forest, + *-ite*[2].] In *petrog.*, a gneissic rock composed of oligoclase, biotite, garnet, and sometimes graphite. *Fischer*, 1860.

kioea (kē-ō-ā′ą̈), *n.* [Maori.] The Sandwich Island curlew, *Numenius tahitiensis*.

Kionoceras (kī-o̤-nos′ę̤-ras), *n.* [NL., < Gr. *κίων*, a pillar, + *κέρας*, horn.] A genus of fossil nautiloid cephalopods characterized by its surface-sculpture, which consists of longitudinal ridges in the earlier stages, after which inconspicuous annuli appear which become obsolete before the ephebic stage. It ranges from the Silurian to the Carboniferous.

kip[4], *n.* 2. A lodging-house; a bed in a lodging-house; hence, a bed in general. *N. E. D.*

kip-leather (kip′leᵀᴴ″ėr), *n.* Bark-tanned side-leather finished on the flesh side with a wax finish.

kipper[3] (kip′ėr), *n.* [Queensland Australian dialect.] A young man who has been initiated and is classed with the men of his tribe. See ★*bora*[2]. [Australia.]

kipperer (kip′ėr-ėr), *n.* One who kippers or cures fish. *Nature*, Sept. 4, 1902, p. 435.

Kipp's apparatus. See ★*apparatus*.

kiri (kē′ri), *n.* [Jap.] A large tree, *Paulownia tomentosa*, of the family *Scrophulariaceæ*, cultivated in Japan for its extremely light wood. It is never found in groves or in forests, but occurs scattered in more open places, growing like fruit-trees. Its grayish wood, in comparison with most other woods of light weight, is remarkably strong and does not warp or split easily. On account of its lightness and softness it is used in many ways, especially for the manufacture of small, light boxes, wooden shoes, lacquer ware, and toys. From its seeds an oil is obtained which in Japan is used for waterproofing paper. See *Paulownia* and *kirimon*.

kirin (kē-rēn′), *n.* [Jap. *kirin*, Chinese *kilin*, a fabulous animal said not to tramp on live insects or to eat live grass.] Same as *kilin*.

kirk[2] (kėrk), *v. t.* Same as *kirve*.

The constrained attitudes which coal miners are compelled to assume while "*kirking*" or undercutting the coal seams result in nystagmus.
Buck, Med. Handbook, VI. 323.

kirkify (kėr′ki-fī), *v. t.*; pret. and pp. *kirkified*, ppr. *kirkifying*. [*kirk*[1] + *-i-fy*.] To make like the Scottish kirk in principles or like a kirk in architecture. *N. E. D.*

kirkward (kėrk′wärd), *a.* and *adv.* [*kirk*[1] + *-ward*.] Churchward; toward the church.

kirn[2], *v. t.* 2. In *mining*, to bore with a hand-jumper or kirner. [Scotch.]

kirner (kėr′nėr), *n.* [See ★*kirn*, *v. t.*, 2.] In *mining*, a hand jumper; a churn-drill. [Scotch.]

kiroumbo (ki-röm′bō), *n.* [*Malagasy.*] A common name for the two species of peculiar birds included in the genus *Leptosoma*, found in Madagascar.

kirri (kir′i), *n.* [Also *keerie*, *kerrie*, S. African D. *kieri*; from the Kafir name.] A short, heavy stick or club with a knob on one end, used as both a striking and throwing weapon by the Bushmen and other natives of South Africa. Also called *knobkerrie*.

Kirtlandia (kėrt-lan′di-ą), *n.* [NL., named after Jared P. *Kirtland*, an American ichthyol-

Kirtlandia vagrans.
(From Bulletin 47, U. S. Nat. Museum.)

ogist.] A genus of fishes, belonging to the family *Atherinidæ*, found on the coasts of North and Central America.

kirwanite (kėr′wąn-īt), *n.* [Named (1833) after R. *Kirwan*, an Irish mineralogist.] A mineral, related to the chlorites, occurring in green fibrous forms in the basalt of Ireland.

kischtimite (kēsh′ti-mīt), *n.* [Named orig. in G. *Kischtim-parisit*, 'parisite of *Kyshtymsk*' (G. *Kischtim*), in the Ural, in Russia.] A fluocarbonate of the cerium metals, related to parisite.

kisher, kishr (kish′ėr, kish′r), *n.* [Ar. *qishr*, rind, peel, shell, husk.] A favorite drink of the Arabians, especially in Yemen, made of an infusion of the husks or pods of the coffee-berry. *Ratzel* (trans.), Hist. of Mankind, III. 210.

Kishiu pottery. See ★*pottery*.

kishlak (kēsh′läk), *n.* [Also *kishlag*; < Turk. *kishlāgh*, *kishlāq*, *kishlā*, < Turki *qīsh-lāq*, lit. 'winter place,' < *qīsh*, winter, + *-lāq*, a suffix forming nouns of locality (as also in *yaï-lāq*, 'summer place,' mountain pasture).] In Turkestan, a place inhabited during the winter; winter quarters; also, any settlement or village.

Right opposite the Indich Bashur, on the right side of the Shakh-Dara, there is a small *kishlag*, abandoned.
Geog. Jour. (R. G. S.), XVI. 674.

kism (kizm), *n.* A subdivision of an Egyptian province.

kiss, *n.* 4. A very slight, glancing touch.—5. A small drop of sealing-wax accidentally let fall upon a letter near the seal.—**Electrical kiss**, an early experiment with the Leyden jar in which one person, standing on an insulating support, held the outer coating of a charged jar, while a second person touched the knob or wire connected with the inner coating. The jar was then discharged by bringing together the lips of the two operators.

We encrease the force of the *electrical kiss* vastly.
Franklin, Experiments and Observations on Electric-[ity, p. 10.

Kisses out and kisses in, in *billiards*, extra contacts that (sometimes foreseen without being meant, or feared without being guarded against) either prevent a count or cause one. As affecting position merely, 'kiss out' and 'kiss in' may be either designed or accidental.

kiss, *v. t.*—**To kiss the book**, to take an oath by kissing the Bible.

kissable (kis′a-bl), *a.* [*kiss* + *-able*.] That can be kissed; attractive, so as to invite a kiss.

kissably (kis′ą-bli), *adv.* In a manner to suggest kissing.

kissage (kis′ąj), *n.* Kissing. [Nonce-word for the sake of a rime.]

Ere they hewed the Sphinx's visage
Favouritism governed *kissage*
Even as it does in this age.
R. Kipling, Departmental Ditties, Gen. Summary, st. 3.

kissing-bug (kis′ing-bug), *n.* Any one of several species of predatory bugs of the family *Reduviidæ*. Applied notably to *Opsicoetes personatus*, *Melanolestes picipes*, *Rasahus biguttatus*, and *Conorhinus sanguisugus*. The name *kissing-bug* originated in the newspapers in June, 1899, many persons being bitten that summer and often on the lip.

Kissing-bug (*Rasahus biguttatus*).
(Howard, U. S. D. A.)

kissing-gate (kis′ing-gāt), *n.* A narrow gate, not wide enough for two to pass as strangers.

kiss-me-quick (kis′mē-kwik″), *n.* A name given to various things of a presumably coquettish or attractive nature: a small becoming bonnet fashionable about the middle of the nineteenth century; a lady's cap with ribbons that tied under the chin on one side with 'kissing-strings'; a short lock of hair curled in front of each ear, etc. The name is also given to the wild pansy. See *kiss-me*.

kissybion (ki-sib′i-on), *n.*; pl. *kissybia* (-ą). [Gr. *κισσύβιον*.] In *Gr. antiq.*, a drinking-cup made of ivy-wood or decorated with ivy-leaves. It is mentioned several times in the Odyssey. It probably had a single long handle like the cyathus.

kisu (kē′sù), *n.* [Jap. *kisz*.] Same as ★*okigisu*.

kisutch (kē′such), *n.* [Also *keezitch*; a native name.] The vernacular name in Alaska and Kamchatka, and also the technical specific name, of a kind of salmon.

kit[1], *n.* 5. An English fanciers' term for a small flock of pigeons, particularly tumblers.

kit[8] (kit), *n.* [Maori *kete*, Samoan and Tahitian *ete*, a basket, = Hawaiian *eke*, a bag.] A bag or basket woven of native flax, used by the Maoris. [Australia.]

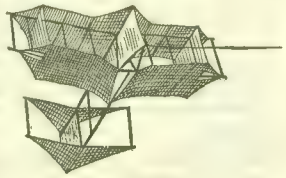
kitamakura (kē-tä-mä′kö-rä), *n.* [Jap. *kita-makura*, implying 'one who sleeps with the head to the north,' < *kita*, north, + *makura*, pillow.] A Japanese name of a gymnodont fish, *Eumycterias rivulatus*. Also known as *yokobuku* and *akamebuku*.

kitar, kittar (ki-tär′), *n.* [Ar. *kitār*: see *guitar*.] An Arab guitar or lute, commonly with four pairs of strings.

kit-bag (kit′bag), *n.* A bag to hold a soldier's or sailor's kit.

We're bearded and we're dirty,
As well as broken down:
So why the dickens don't they send
Our *kit-bags* from Capetown?
Grumbles from the Ranks, st. 5, in War's Brighter Side, [p. 280.

kitchen, *n.* 3. In *metal.*, the space between the fire and flue-bridges of a reverberatory furnace in which the work is performed. Also called the *laboratory*.



kitchen-court (kich′en-kōrt), *n.* In a large house, the court upon which the kitchen and its dependencies open by doors or windows, or both. The arrangement may be such that only one opening from the service part of the house communicates with the grounds.

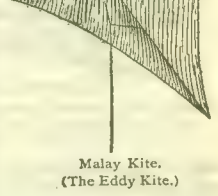
kit-dressing (kit′dres″ing), *n.* A rustic festival in which girls carry on their heads kits decorated with willow.

kite[1], *n.* 7. A variety of tumbler, black, with the inner webs of the primaries red or yellow. —8. Something thrown out as a suggestion to see 'how the wind blows'—what the condition of public opinion is on a certain subject, or what conclusions may inferentially be drawn.

A few suggestions have been thrown out by various students which must be regarded more as trial hypotheses than as definite conclusions, indeed they should be looked upon rather as "*kites*."
Nature, Aug. 14, 1902, p. 380.

9. In *geom.*, a deltoid: so called by Sylvester from its resemblance to a spear-kite.—**Aërocurve kite**, a cellular kite invented by C. H. Lamson. In this kite the forward supporting surfaces are curved like the wings of a bird, while the rear cell is flat and smaller in size, forming a tail-like rudder. The framework which holds the cloth covering slides on two supporting rib-like cross-braces, thus permitting the kite to

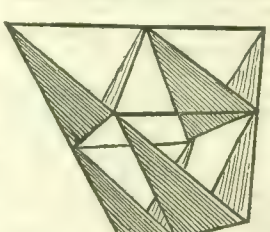
Aërocurve Kite.



be folded when not in use.—**Auxiliary kite**, a kite attached by a clamp or safety-catch and a short line to the main kite-line of the highest or main kite, for the purpose of supporting the line and relieving the main kite of unnecessary strain.—**Box kite**, a form of cellular kite in which the front and rear cells are rectangular parallelepipeds. The different types of this kite in use are: (1) The *Hargrave box kite*, the framework of which consists of a backbone of wood or other rigid material, with diagonal struts or braces which may be collapsed when desired for folding or packing. (2) The *Blue Hill box kite*, designed by H. H. Clayton, the essential principle of construction being corner-posts extending from end to end of the kite, with the girder form of bracing. This form of construction is now almost universally used in kites designed for scientific purposes. (3) The *Weather Bureau kite*, designed by C. F. Marvin. It embodies the essential features of the Blue Hill box kite, with the added novelty of a collapsible frame and a supplementary surface in the front cell.—**Boys'** or **uniplane kite**, a single-plane kite, usually formed by two sticks crossing each other at an angle and tied so as to form a support for a surface of cloth or paper. In some forms a third stick is used. The surface of this form of kite is flat, and a tail is required in order to maintain equilibrium in the air. The best-known forms are the *bow kite*, the *diamond kite*, the *hexagonal kite*, and the *star kite*.—**Brahminy kite.** See *brahminy*.—**Cellular** or **multiplane kite**, a kite the first forms of which were invented by Lawrence Hargrave about 1892. He made a variety of forms, the essential principle of construction being an open cell of circular, triangular, rectangular, or other shape, joined by a rigid rod or backbone to another cell. The flying-line is attached near the inner edge of one cell, which thus becomes the front cell. The wind blowing through the cells exerts a lifting effect on the upper and lower surfaces, while the side surfaces give great stability. The cells are usually formed of a framework of sticks covered with cloth. The scientific principle involved is the combination of a superposed plane and a following plane. See cut at ★*bridle*, 10.

The *cellular* or *multiplane kites* are also far steadier than single-plane kites, and we believe they are better adapted than the latter to maintain their equilibrium under great variations of wind force.
C. F. Marvin, Kite Exper. at the Weather Bureau, p. 27.

Chinese kite, a kite (made in China) resembling a bird, a man, a dragon, or other object, formed of light paper or cloth stretched on a framework of bamboo or wood. They are extensively flown in China, Japan, and the Malay Peninsula.



The most curious style of *Chinese kite* is the dragon kite. It consists of a series of small elliptic, very light disks formed of a bamboo frame covered with India paper. These disks are connected by two cords which keep them equidistant.
O. Chanute, Progress in Flying Machines, p. 194.

Collapsible kite, a kite that can be folded up for convenience in transportation.—**Hargrave kite.** See *cellular* ★*kite*.—**Malay kite**, a form of kite used in the Malay Peninsula. The framework consists of two sticks crossing each other at right angles, one of which is made so elastic that it bends in the wind and forms a bow; or else the stick is tied with a cord so as to retain the form of a bow. This bow, when properly placed, balances in the wind, so that the kite flies without a tail. The best-known type of this kite in the United States is the *Eddy kite*, in which the bowed cross-stick is placed at a point distant 18 per cent. of the length of the vertical stick from the top of the kite. This was the first kite to be used for scientific purposes in America, except the boys' kite used by Franklin and his followers.

Malay Kite.
(The Eddy Kite.)

—**Pariah kite**, *Milvus* (or *Milvulus*) *govinda*, a bird of prey common in southern India, where it plays to some extent the part of a scavenger: not to be confused with the brahminy kite, *Haliastur indus*, which is a very distinct bird.—**Spear-kite**, a kite built upon a frame consisting of one vertical and one horizontal stick: named from its resemblance to a spear-head.—**Square-tailed kite**, *Milvus* (or *Lophoictinia*) *isurus*, an Australian species.—**Tetrahedral kite**, a kite the skeleton or framework of which forms a tetrahedron, or a kite built up of individual parts, the skeleton of each part forming a tetrahedron. This kite is an invention of Alexander Graham Bell. In its developed forms it involves the principle of the cellular kite of superposed planes and following surfaces.

Tetrahedral Kite.

Tetrahedral kites combine in a marked degree the qualities of strength, lightness, and steady flight; but further experiments are required before deciding that this form is the best for a kite, or that winged cells without horizontal aeroplanes constitute the best arrangement of aero-surfaces.
A. G. Bell, in Nat. Geog. Mag., June, 1903, p. 229.

War or **observation kite**, a kite used to elevate men for the purpose of reconnaissance or observation. Several forms of kite have been used for this purpose by Baden-Powell, Wise, and Cody.

For some time past attempts have been made to devise kites of sufficient dimensions and lifting power to carry a person into the air, either for meteorological observations, or simply to reconnoiter the surrounding country, the lat-

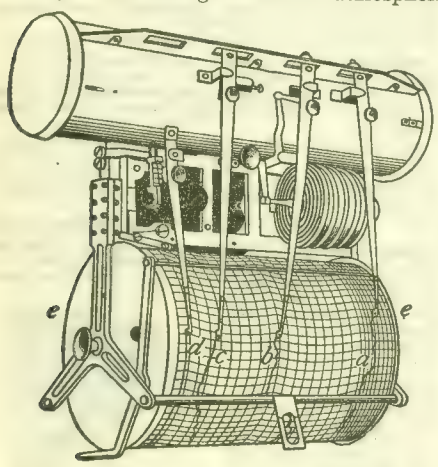
ter object naturally constituting for the most part an acquisition to a military equipment. Major Baden Powell of the British army has devised a kite which will lift a man into the air, but its scope, as frequent experiments have shown, is somewhat limited. Mr. Samuel Franklin Cody, however, has devised an *observation kite* which has been submitted to several exacting tests in England, and has proved practical and successful for general observation and meteorological experiments.

Sci. Amer. Sup., April 11, 1903, p. 22804.

Whistling kite, *Haliastur sphenurus*, an Australian bird of prey related to the brahminy kite of India. Its general color is ashy brown above, rufous on the head, and dull yellowish with dark markings below.

kite[1], *v. i.* **3.** To fly a bird-shaped kite over a grouse moor: an English sporting-term. The birds, taking this for a hawk, lie close, until the dogs are near.

kite-balloon (kīt'ba-lön″), *n.* A captive balloon so constructed as to act partially as a kite. Archibald's kite-balloon was an ordinary balloon fitted with a cone-shaped structure to support it. Parseval's kite-balloon, used by the Germans for scientific and also for military purposes, consists of an elongated balloon held rigid by an air-sack inflated by the wind, the sack being a part of the rear end of the balloon.



kite-boat (kīt'bōt), *n.* A boat propelled by the pulling force of a kite.

A few weeks ago S. F. Cody, in thirteen hours, safely crossed the English Channel between Dover and Calais in a "*kite-boat*," described as a miniature submarine boat weighing four tons, and propelled by a modified box-kite.

Amer. Inventor, Dec. 15, 1903, p. 276.

kite-fish (kīt'fish), *n.* A gurnard, *Trigla cuculus*, found in the Mediterranean and off the western coasts of Europe.

kite-meteorograph (kīt'mē″tē-ō-rō-gråf), *n.* A small apparatus, designed to be carried by a kite, for obtaining records of atmospheric conditions at considerable altitudes: made in various forms devised by Fergusson, Richard, and Marvin.

Marvin's Kite-meteorograph.

a, record of the pressure; *b*, record of the temperature of the air; *c*, record of the temperature of the wet-bulb thermometer; *d*, record of the velocity of the wind; *e*, *e*, revolving drum.

kite-photograph (kīt'fō″tō-gråf), *n.* A photograph taken by means of a camera attached to a kite.

kittel[2] (kit'el), *n.* [Yiddish *kittel*, < G. *kittel*, MHG. *kittel*, *kitel*, a frock, blouse, shirt-waist; origin unknown.] A Yiddish name for an ample linen or cotton robe which orthodox Jews wear on three solemn occasions, namely, at nuptial ceremonies (by the bridegroom); at the seder service, on the first two evenings of Passover (by the master of ceremonies); and on the Day of Atonement. Pious Jews are also buried dressed in a kittel.

kittereen (kit-ę-rēn'), *n.* [Also *kittareen*, *kitterine*, *kittering*; origin unknown. It has been referred, without proof, to *Kettering*, a local name, and *Kit Treen*, a man's name.] 1†. A kind of omnibus. [Western England.]—2. A one-horse, two-wheel chaise or buggy, with or without a movable top. [Jamaica.]

kittle[1], *v. t.* **2.** To confuse with questions or statements.

kitty-witch (kit'i-wich), *n.* A small swimming-crab, *Porcellana platycheles*, found in the North Sea and the Mediterranean.

kiva (kē'vä), *n.* [Also spelled *kib-va*. Moki.] A sacred chamber, wholly or partly underground, in which many of the religious ceremonials of the Pueblo Indians are performed. Also *estufa*.

A pueblo of the size of Awatobi, with so many evidences of long occupancy, would no doubt have several ceremonial chambers or *kivas*, but as yet no one has definitely indicated their positions.

Rep. Bur. Amer. Ethnol., 1895–96, p. 611.

kiver[1], *n.* **2.** A sunfish or pumpkin-seed. See *pumpkin-seed*, 2. Also *kivy*. [Local, U. S.]

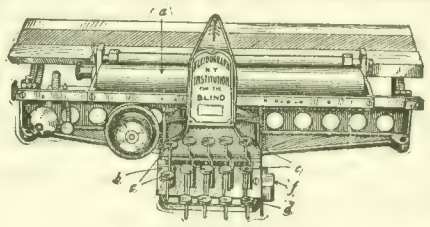
kivu (kē'vö), *n.* [African.] A native name for one of the tsetse-flies which communicate the nagana or sleeping-sickness in Africa.

kl. An abbreviation of *kiloliter*.

K. L. An abbreviation of *Knights of Labor*.

K. L., K. L. A. Abbreviations of *Knight of Leopold of Austria*.

klafter (kläf'tėr), *n.* [G. *klafter*, MHG. *klāfter*, OHG. *clafdra*, the stretch of the arms, a fathom.] The German fathom, a measure containing 6 local feet. The square klafter contained 36 square feet and the cubic klafter 216 cubic feet. The equivalent value in English measure varies with the length of the local foot which was the basis of the klafter. The Austrian klafter was about 74⅔ English inches, that of Hamburg about 66⅔ inches.



klahowya (klä-hou'yä), *n.* [Connected with Chinook jargon *klahowya*, *klahowyam*, poor, wretched, pitiable, < Chinook *tlakauyam*, its poverty.] Good-by. [Washington and British Columbia.]

klaprothium (klap-rō'thi-um), *n.* [NL., < M. H. *Klaproth* (1743–1817), a German mineralogist.] An early name for the metal cadmium.

klaprotholite (klap'rōth-ō-līt), *n.* [Named after M. H. *Klaproth* (1743–1817), a German mineralogist.] A sulphobismuthite of copper, $Cu_6Bi_4S_9$, occurring in steel-gray orthorhombic crystals.

Klebs-Loeffler bacillus. See ★*bacillus*.

kleidograph (klī'dō-gråf), *n.* [Gr. κλείς (κλειδ-), key, + γράφειν, write.] A form of typewriter for embossing paper by the New York point system of writing for the blind. It consists essentially of a carriage for the paper, a small keyboard, and embossing mechanism operated by the keys. The keyboard contains fourteen keys and a space-key. The keys are arranged in three ranks of four each, with two keys for capitals placed at the left, and with a space-key at the right. The two upper ranks are for the points used in forming small letters, and are numbered, the first rank being numbered 1357 and the second rank 2468, these numbers corresponding to the numbers of the fourth base of the New York point system. The third or lowest rank consists of compound keys for making two impressions at one stroke, called first, second, third, and fourth compound key. The blind operator uses the left hand in handling the keys and moving the carriage, the right hand being free to read any form of tangible print or writing by touch. The characters are formed by combinations of the eight keys, each stroke or pressure on a key indenting the paper with one dot: a large percentage of all the letters are formed by touching two keys in succession and all can be formed by four motions. The keys of the lower rank make two indentations for one stroke at a great gain in the speed of the work. The machine automatically spaces the letters and the space key is used to separate the words and sentences. See ★*typewriter*, 1, and ★*point*[1], 31.

Kleidograph.

a, carriage; *b*, keyboard; *c*, small-letter keys; *d*, compound keys; *e*, capital-letter keys; *f*, space-key.

Kleinian (klī'ni-an), *a.* Of or pertaining to Felix Klein (1849–), the German geometer.—**Kleinian function, group.** See ★*function*, ★*group*[1].

Klein solution. See *heavy solution*, under *solution*.

klementite (klem'en-tīt), *n.* [Named after Dr. C. *Klement* of Brussels.] A silicate of aluminium and iron, related to the chlorites and occurring in dark olive-green scales at Vielsalm, Belgium.

kleptic, kleptocracy, kleptophobia. See ★*cleptic*, etc.

K. L. H. An abbreviation of *Knight of the Legion of Honor*.

K-light (kā'līt), *n.* In *spectroscopy*, the light of the K-line of the spectrum, due to the incandescence of calcium vapor. This line, which lies in the extreme violet of the spectrum, is of high actinic power. Its presence in the light from the sun's atmosphere is utilized in the photography of the solar prominences and in similar work.

klinker, *n.* See *clinker*.

klinocephalic, klinocephalism, klinocephalus, klinocephaly. See ★*clinocephalic*, etc.

klinostat, *n.* See *clinostat*.

kliphok (klip'hok), *n.* [D. *klip*, cliff, + *hok*, pen or dungeon.] In South Africa, a ruined native stone hut.

klon, *n.* See ★*clon*.

klonal, *a.* See ★*clonal*.

klootch (klöch), *n.* [A back-formation from *klootchman*.] Same as ★*klootchman*.

klootchman (klöch'man), *n.* [Chinook jargon *klootchman*, < Nootka *tlotsma*, woman.] A woman, particularly an Indian woman. [Washington and British Columbia.]

klop (klop), *n.* [Also *clop*; imitative.] A sound made by the fall or regular beat of a solid on a hard surface, as a horse's hoofs on a pavement. Also repeated, *klop-klop*.

klumene (klö'mēn), *n.* [Appar. Gr. κλύμενος, famous: see *Clymenia*, ★*clymene*.] In *chem.*, the name first given to acetylene by its discoverer, E. Davy, who obtained it as a product of the action of water on crude potassium carbide formed in the preparation of metallic potassium.

knacker[2], *n.* **4.** A man who dismantles and sells the materials of old houses, ships, etc.

knackery (nak'ę-ri), *n.*; pl. *knackeries* (-riz). [*knacker*[2] + *-y*[3].] A yard for slaughtering worn-out horses; a knacker's yard.

knacky (nak'i), *a.* [*knack* + *-y*[1].] Adroit; clever; adaptable; having a knack.

Knapsack sprayer. See ★*sprayer*.

knee, *n.* **3.** (*e*) In *mech.*, the middle joint or elbow in a toggle-joint. (*f*) In *anat.*, a knee-shaped part. See *genu* (*b*).

5. In *graphics*, a break or abrupt change in a plotted curve.

On the rising curve there is seen to be a more or less well defined "*knee*" where the relation of stress to strain undergoes a marked change.

Physical Rev., Aug., 1904, p. 114.

6. A natural prominence; a rock, hill, or part of a hill.—**Capped knee.** See ★*capped*.—**Knee of the head**, in *ship-building*, the large flat timber which is fayed edgewise upon the fore part of the stem.—**Sprung knee**, a forward bowing of the knee of the horse, mule, or ass, caused by the shortening of the flexor tendons behind as a result of inflammation.

knee, *v. i.*—**To knee out**, to break out at a right angle and return to the original direction.

knee-ball (nē'bâl), *n.* Same as ★*molula*.

knee-board (nē'bōrd), *n.* A drag or tension-board on a cotton-yarn winding-machine. *R. Marsden*, Cotton Weaving, p. 257.

knee-boot (nē'böt), *n.* **1.** A compressed leather shield for covering the side of a horse's knee. The wrapper is of soft leather or felt. —**2.** A boot which comes to the knee.

knee-hole (nē'hōl), *n.* The space under a desk occupied by the knees of one seated at the desk. [Local, Eng.]

knee-ill (nē'il), *n.* Same as *navel-ill*. Also *joint-ill*.

kneeing (nē'ing), *n.* An angular bending or knee-shaped projection. *Buck*, Med. Handbook, III. 624.

knee-knapt (nē'napt), *a.* Same as *knock-kneed*. [Prov. Eng.]

kneelet (nē'let), *n.* [*knee* + *-let*.] A knee-piece in medieval armor, sometimes carrying a spike.

knee-lyre (nē'līr), *n.* Same as *lira da gamba* (which see, under *lira*[2].)

knee-movement (nē'möv″ment), *n.* A device for operating a toggle-joint.

kneepan, *n.* **2.** In *entom.*, the femoral concavity into which the tibia is inserted. *Kirby and Spence*.

knee-pipe (nē'pīp), *n.* An elbow; a bent pipe.

knee-plate, *n.* **3.** In *ship-building*, a small triangular plate fitted at the point of connection of the beam and frame to strengthen it.

knee-protector (nē'prō-tek″tor), *n.* A pad used to protect the knee in roller-polo, football, and similar games.

knee-punch (nē'punch), *n.* A punch which is bent to allow its being used through a narrow opening.

knee-stake (nē'stāk), *v. t.*; pret. and pp. *knee-staked*, ppr. *knee-staking*. In *leather-manuf.*, to stake or soften by aid of the knee. *Fleming*, Practical Tanning, p. 51.

knee-viol (nē'vī″ol), *n.* Same as *viola da gamba* (*a*) (which see, under *viola*[1]).

Kneiffia (knī'fi-ä), *n.* [NL. (Spach, 1835), named in honor of F. G. *Kneiff* (-1832), an apothecary and botanist of Strasburg.] A genus of plants of the family *Onagraceæ*. They

differ from *Œnothera* in their diurnal flowers, unequal stamens, and usually club-shaped and often winged capsules. There are about 12 species, belonging chiefly to the eastern United States, commonly known as *sundrops*.

kneip (knīp), *v. i.* [G. *kneipen*, carouse, tipple, booze, fuddle, < *kneipe*, a pot-house, beer-shop: see ★*kneipe*.] In German universities, to drink and be convivial at a 'kneipe,' according to the German 'beer-code.'

In whatever other respects the German student may be irregular, he always *kneips* according to rule.
J. M. Hart, German Universities, p. 139.

kneipe (knī'pe), *n.*; pl. *kneipen* (-pen). [G. *kneipe*, a pot-house, beer-shop, bar-room, students' club.] In German universities: (*a*) A room, or sometimes a house, where beer-drinking is carried on. (*b*) A beer-drinking; a carousing; a booze; especially, a semiprofessional carouse of students according to a complicated set of more or less humorous rules, which are somewhat strictly observed.

knel, *v.* and *n.* A simplified spelling of *knell*.

knez (knez), *n.* [Serv. Slov. *knez*, Bohem. *kněz* (*kniez*), Russ. *knyazŭ* (*kniaz*) (Albanian *knez*), MGr. *κνέζης*, etc., a prince; connected with OHG. *chuning*, etc., AS. *cyning*, E. *king*.] Prince: a Slavic title of nobility equivalent to prince or duke, and sometimes implying sovereignty.

knickers (nik'ėrz), *n. pl.* A contraction of *knickerbockers*. Also used adjectively, in the form *knicker*: as, a *knicker* suit.

knife, *n.*—**Barlow knife**, a pocket-knife having the name 'Barlow' on the handle. These knives were extensively used for many years, since they had excellent steel blades and were inexpensive. Also called *Billy Barlow knife*.—**Graefe knife**, a slender knife used in the operation of linear extraction of cataract.—**Recording knife**, the sapphire cutting-point of the phonograph. *Scripture*, Exper. Phonetics, p. 35.

knife-bar, *n.* 2. A metal bar with an acute edge employed on different machines with different functions.

knife-box, *n.* 2. Same as ★*griffe*[1], 3.

knife-bracelet (nīf'brās″let), *n.* A narrow bracelet of iron, with a sharp edge which is usually covered with a strip of hide. The edge may be uncovered and the bracelet used to inflict wounds by a blow. Such knife-bracelets are worn by the Irenga and other tribes of the upper Nile. In other parts of Africa bracelets or arm-rings with attached knives or spikes are worn.

To guard themselves from capture, they [Reshiats or Darsonichs] wear a very sharp *knife bracelet*, and when fighting they remove the sheath.
Geog. Jour. (R. G. S.), XI. 383.

knife-fish (nīf'fish), *n.* A cyprinoid fish, *Pelecus cultratus*, found in eastern Europe.

knife-man (nīf'man), *n.* A special workman employed in the more delicate and important part of archæological excavations in which it is necessary to substitute a knife for a spade.

knife-roller (nīf'rō″lėr), *n.* A roller with blades or knives, arranged spirally or otherwise, as on the knife-roller cotton-gin.

knife-switch (nīf'swich), *n.* In *elect.*, a form of switch in which the circuit is closed by the insertion of a metallic strip pivoted, like a knife-blade, between metallic clips or springs.

knife-worm (nīf'wėrm), *n.* Any cutworm.

Knight of the brush, a painter.—**Knight of the pestle**, an apothecary.—**Knight of the quill**, a writer; an author.—**Knights of Columbus**, a fraternal and beneficent association founded at New Haven, Conn., in 1882, to promote Catholic education and charity and to provide an insurance system for its members. The order is governed by a supreme council, is divided into State, Territorial, and subordinate councils, is established throughout the United States and Canada, and abroad, and numbers over 300,000 members.—**Knights of Pythias**, a secret fraternal order founded at Washington in 1864. It has an insurance or beneficial branch.—**Two Knights' defense**. See *opening*, 9.

knight-cross (nīt'krôs), *n.* The scarlet lychnis or cross of Jerusalem, *Lychnis Chalcedonica*.

knight-fish (nīt'fish), *n.* A common name applied to *Monocentris gloræ-maris*, a berycoid fish found in Australia. Also called *pine-cone fish*.

knismogenic (nis-mō-jen'ik), *a.* [Gr. *κνισμός*, tickling, + *-γενης*, -producing.] Productive or provocative of tickling: as, *knismogenic* sensations. *G. S. Hall*, Adolescence, II. 95.

knitting-bur (nit'ing-bėr), *n.* In a knitting-machine, a wheel with blades for carrying the yarn to the needles and clearing it from them while the web is forming.

knob, *n.* (*i*) A small flock, less than 30, of ducks: an English sporting-term.

knobble (nob'l), *n.* [Dim. of *knob*.] A small knob or lump.

knobbling-fire (nob'ling-fīr), *n.* A bloomery for refining cast-iron.

knob-fly (nob'flī), *n.* A natural fly used in angling; also, an artificial fly. Also called *knop-fly*.

knob-grass (nob'gràs), *n.* Same as ★*knob-root*.

knobkerrie, knobkerry (nob'ker-i), *n.* [Cape D. *knopkieri*; as *knob* + *kerrie*, *kirri*.] See ★*kirri*.

knob-root (nob'röt), *n.* The horse-balm, *Collinsonia Canadensis*.

knobstones (nob'stōnz), *n. pl.* The local name in Kentucky for the silicious group. *Amer. Jour. Sci.*, 1866, p. 105, cited in Dialect Notes, II. vi.

knock, *v.* **I.** *trans.* **3.** To speak ill of one. [College slang.]—**To be knocked off** (*naut.*), to be turned to leeward: said of a vessel when, by reason of the sea hitting her on the weather bow, her head is sent to leeward of the point toward which she had been looking.—**To knock down.** (*c*) To take to pieces (as a machine or a barrel), for storage or for purposes of transportation; as, for barrels *knocked down*—so much. (*d*) See the extract.

A system known as "*knocking down* one's cheque" prevails all over the unsettled parts of Australia. That is to say, a man with a cheque, or a sum of money in his possession, hands it over to the publican, and calls for drinks for himself and his friends, until the publican tells him he has drunk out his cheque.
H. Finch-Hatton, Advance Australia, p. 222, quoted in [E. E. Morris, Austral English.

To knock up. (*e*) In *cricket*, to score runs by hitting. [Colloq.]

II. *intrans.* **4.** To keep up a system of annoying attacks; to keep striking or hitting until the other side capitulates or buys the 'knocker' off. [Political slang, New York.]

There are several ways of getting into Tammany Hall. One is to be born there; and another is to work your way up in; a third is to lower yourself down in. The fourth, and a very successful way, is what the Tammany men call "*knockin'*." This is to fight Tammany Hall until the organization opens and receives you, paying in return almost anything within reason.
N. Y. Com. Advertiser, May 11, 1901.

knockabout (nok'a-bout), *a.* and *n.* **I.** *a.* **1.** Noting something which knocks (other things) about; rough; buffeting; boisterous: as, a *knockabout* game of foot-ball.—**2.** Accustomed to knock about or to be knocked about: as, a *knockabout* globe-trotter; suitable to be knocked about in: as, a *knockabout* coat.—**3.** Noisy; full of horse-play: as, a *knockabout* entertainment; *knockabout* business. [Theat. slang.]—**4.** In Australia, applied to a jack of all trades on a station.

II. *n.* **1.** A traveler; one who has knocked about.—**2.** A performer in a knockabout play or sketch; the sketch itself. [Theat. slang.]—**3.** In Australia, a hand on a station who does a little of everything.—**4.** A small sailing-yacht of light construction and simple sail rig, the latter consisting of a mainsail and

Knockabout.

a jib bent on a stay that is set up on the stem of the boat. These boats, as a rule, are flat-bottomed, with a fin-keel, and can be handled very quickly, going from one tack to another without apparently losing speed. Some knockabouts are provided with a center-board instead of a fin, for use in shallow waters.—**5.** A small launch.

knocker, *n.* **5.** One who keeps up a system of 'knocking' or persistent attack, with ulterior motives. See ★*knock*, *v. i.*, 4.—**6†.** A sort of pendant to a wig.—**Newgate knocker**, a lock of hair worn by thieves and others in such a manner as to be supposed to resemble the knocker on the prisoners' door at Newgate.

knocker-up (nok'ėr-up), *n.* A person employed, especially in mill towns, to go about and waken those whose work requires them to be up early.

knocking, *n.* **5.** The practice of persistent attack with ulterior motives. See ★*knock*, *v. i.*, 4. [Political slang, New York.]

knock-off, *n.* **2.** In *mech.*, a releasing device; a tappet or cam for releasing some part of a mechanism. It is used in some forms of engine valve-gears to operate the admission-valves.

knock-out, *a.*—**Knock-out attachment**, an attachment to a sheet-metal press used to knock the finished ware off the dies; a form of ejector. It is automatic and is made in several forms.—**Knock-out drops**. See ★*drop*.

II. *n.* **1.** In *pugilism*, the act of rendering insensible; a blow which produces insensibility.—**2.** A knock-off; a release; specifically, a device for allowing a valve in a spring-testing machine to open when the ram encounters a resistance.

knop, *n.* **6.** A loop or tuft in two- (or more) ply yarn produced in doubling for ornamental purposes.

knop-fly (nop'flī), *n.* Same as ★*knob-fly*.

knopite (knop'īt), *n.* [G. *knopit* (1894), named after Professor A. *Knop* of Karlsruhe.] A titanate of calcium and cerium occurring in lead-gray isometric crystals. It is intermediate in composition between perovskite and dysanalyte.

Knorria (nor'i-ą), *n.* [NL. (Sternberg, 1820), named after Georg Wolfgang *Knorr*, a German paleontologist.] A supposed genus of Paleozoic fossil plants consisting of trunks whose surfaces present inclined overlapping ridges. They are now known to be, for the most part at least, decorticated trunks of *Lepidodendron* in which the whole bark has been stripped off, the course of the leaf-trace bundles through the middle cortex being represented by these ridges, and presenting an appearance wholly different from that of the real surface of the trunk.

knot[1], *n.* **3.** (*u*) In musical instruments of the lute, viol, and similar classes, same as *rose*[1], 15.—**Double overhand knot**, a common landsman's knot made by uniting two pieces of string or rope. It is decried by sailors because it will slip when a strain is put upon it. See the illustration.—**Hangman's knot**, a knot formed

Double Overhand Knot.

by laying back the bight of a rope near the end, then winding seven turns around it from left to right, and passing the end back under all the turns. This makes a slip-noose and a long cylindrical knot through which the hauling part of the rope travels freely.—**Loop-knot**, any knot which forms a loop, such as a bowline.—**Old-granny knot**. Same as *granny's-knot*.—**Stopper knot**. See *stopper-knot*.—**Vital knot**, the 'nœud vital' of Flourens; a small area of the oblongata, destruction of which means instant death, and which has therefore been regarded as preëminently the vital center.

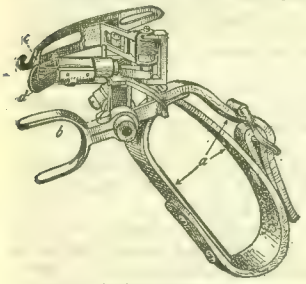
The *vital knot* of Flourens is the vital center and must also be the center of pleasure and pain, which are merely alterations in the functions of organic life.
G. Sergi, quoted in Ribot (trans.), Psychol. of Emotions, p. 28.

Hangman's Knot.

knot-grass, *n.* **3.** (*e*) The joint-grass, *Paspalum distichum*. See *Paspalum*.—**Knot-grass moth**. See ★*grass-moth*.

knot-hole (not'hōl), *n.* A hole in a board or plank formed by the falling out of the piece of a knot, node, or knur left when the plank was sawed.

knot-horn (not'hôrn), *n.* A collectors' name for any phycitid moth: so called because the males of this family frequently have a swollen basal antennal joint. *Cambridge Nat. Hist.*, VI. 424.



knotless (not'les), *a.* [*knot* + *-less*.] Without a knot, in any sense of the word; with the knots removed or untied.

knot-maul (not'mâl), *n.* A maul which has a head made from a knot or other tough piece of wood.

knot-pound (not'pound), *n.* A unit in terms of which the weight of copper and, indirectly, the electrical conductivity of a submarine or underground cable are expressed; one pound per nautical mile or knot.

knot-root (not′rōt), *n.* Same as ★*knob-root*.

knotter, *n.* 2. In *textile-manuf.*, a hand-device for mechanically tying together two ends of yarn or thread. —3. The mechanism in a harvester and binder which ties the knots in the binding-cord.

Barber Knotter.

a, strap for fastening on the hand; *b*, thumb-piece; *c*, knotter and cutter; *d*, thread-guide.

knotty-horn (not′i-hôrn), *n.* An American cerambycid beetle (the cloaked knotty-horn), *Desmocerus palliatus*, dark-blue in color, with the basal part of the elytra orange. Its larvæ bore into the stems of elder. *Comstock*, Manual of Insects, p. 570.

knotty-pated (not′i-pā″ted), *a.* A doubtful term, either genuine and meaning 'having a knotty or lumpy pate,' or, simply, 'having a hard (wooden) pate,' or a mistake for *not-pated* (which is also used by Shakspere).

Why, thou . . . *knotty-pated* fool, thou . . . obscene, greasy, tallow-catch. *Shak.*, 1 Hen. IV., ii. 4.

Knotty-horn (*Desmocerus palliatus.*) Enlarged one third.

knotwork, *n.* 2. A kind of fancy-work made of thread, yarn, etc., by tying knots. It is usually finished with a crocheted edge.

knot-writing (not′rī″ting), *n.* A mnemonic device consisting of strings in which a number of knots are made, the number and order of knots serving the end of recalling certain objects or events: used by many primitive tribes unfamiliar with the art of writing—for instance, by the Australians, the California Indians, and also by the Peruvians. See *quipu*. *Ratzel* (trans.), Hist. of Mankind, I. 344.

knowability (nō-a-bil′i-ti), *n.* The quality or condition of being (easily) recognized, known, or comprehended.

One of the few advantages that India has over England is a great *knowability*. . . . At the end of twenty years [a man] . . . knows, or knows something about, every Englishman in the Empire.
R. Kipling, Indian Tales, p. 489. *N. E. D.*

knowledge, *n.*—**Dynamic knowledge,** knowledge that effects changes, especially in conduct and social relations. *Ward*, Dynamic Sociol., II. 509.

Knox beds, dolomite. See ★*bed*[1], ★*dolomite*.

Knoxville beds. See ★*bed*[1].

knoxvillite (noks′vil-īt), *n.* [*Knoxville* (see def.) + *-ite*[2].] A hydrated sulphate of ferric iron, chromium, and aluminium occurring in greenish-yellow rhombic plates: found at the Redington mercury-mine, Knoxville, California.

K. N. S. An abbreviation of *Knight of the North Star* (Sweden).

knuckle, *n.* 8. A sharply bent loop, as of intestine, especially when imprisoned, as in a hernia.

When a small *knuckle* of intestine has slipped into a narrowing there is no strangulation at once and fecal matter enters the *knuckle* through its upper entrance.
Med. Record, Feb. 28, 1903, p. 350.

9. In *mech.*, the swinging leaf or hook used for the coupling device in certain automatic car-couplings, particularly in the Janney or M. C. B. (master car-builders') type. A hole is usually provided in the knuckle so that the common link-coupling may be used with it.

knuckle, *v. i.*—**To knuckle to.** (*a*) To acknowledge one's self convinced, in the wrong, or beaten. (*b*) To apply one's self earnestly.

knuckle-bone (nuk′l-bōn), *n.* 1. A bone in a knuckle-joint, especially of a sheep: used in the game of knuckle-bones. See *dib*[3].—2. *pl.* The game played with dibs or knuckle-bones.

He became one of the leading players at *knuckle-bones*, which all jhampanis and many saises play while they are waiting outside . . . of nights.
R. Kipling, Indian Tales, p. 34.

knuckle-kneed (nuk′l-nēd), *a.* Having very prominent knees.

knuckle-post (nuk′l-pōst), *n.* One of the two cross-arms in a knuckle-joint; specifically, the vertical post carrying the stub-axle in the steering-knuckle of an automobile.

knuckle-thread (nuk′l-thred), *n.* A screw-thread which has a large round at the top and bottom.

knuckling (nuk′ling), *n.* A deformity of the fetlock-joint, caused by a shortening of the tendons behind, which results in throwing the joint upward and forward, making the foot more upright than is normal. *U. S. Dept. Agr., Rep. on Diseases of the Horse*, 1903, p. 346.

knurl, *n.* 3. In *photog.*, a milled-edge roller used for dotting and softening outrunning lines and making dark spaces lighter.

knurled, *a.* 3. Milled: said of the serrated edge of a coin. Also called *knarled*. See *mill*[1], 4.

ko[2] (kō), *n.* [Chinese *ko*, prop. the culm of the bamboo, hence a stick, piece, thing, as a conventional term of enumeration.] A Chinese unit of customary enumeration, in connection with certain classes of things: as, yi *ko* jin, a man or 'one man' (usually rendered in pidgin-English 'one *pleecey* man').

koali (kō-ä′lē), *n.* [Hawaiian *koali*, < *koali*, *koai*, creep around.] In Hawaii, a name for several vines belonging to the genus *Ipomœa*.—**Koali-ai** (edible convolvulus), *Ipomœa tuberculata*, a stout twiner with a tuberous root which was formerly used by the natives as food in times of scarcity. The stems are strong and durable and are used by the Hawaiians as cordage. The plant is distributed over tropical Asia and parts of South America.—**Koali-awahia** (bitter convolvulus), *Ipomœa congesta*, a stout twiner, the root of which is a powerful cathartic, much used in native medicine.

kob, *n.*—**Leche, lichi,** or **lechwe kob,** *Kobus leche*, a large species from South Central Africa. The general color is pale brown, ears fawn-colored, under parts and a ring round the eyes white.—**White-eared kob,** *Kobus leucotis*, a species found in Uganda, characterized by its general dark color and white ears.

kobbera, *n.* See ★*cobbra*.

Kobell's test. See ★*test*[1].

kobong (kō′bong), *n.* [Aboriginal Australian.] In West Australia, the totem animal of a clan.

kobu (kō′bō), *n.* [Jap.] An important broad-fronded, edible seaweed, *Laminaria saccharis* (which see, under *Laminaria*), found on the coasts of Japan, and especially of Yezo, the most northerly of the four large islands, where it is known as ★*kombu* (which see).

kobza (kob′zä), *n.* [Russ., Little Russ., Pol. *kobza*, Turk. *kopuz*, a pandora.] A rude lute used in Little Russia.

K. O. C. An abbreviation of *kathodic opening contraction*.

kochelite (kō-ke-līt′), *n.* [G. *kochelit* (1868), named from *Kochel*wiese, in Silesia.] A mineral closely related to fergusonite: found in the granite of the Kochelwiese, Silesia.

Koch's comma bacillus, Koch-Weeks bacillus. See ★*bacillus*.

kodak (kō′dak), *n.* [An arbitrary word invented as a trade-mark.] A hand-camera, of a special make, designed for taking instantaneous photographs; hence, any similar camera.

kodak (kō′dak), *v.* [*kodak, n.*] **I.** *trans.* To photograph with a kodak.

II. *intrans.* To take photographs with a kodak; use a kodak.

kodaker (kō′dak-ėr), *n.* One who uses a kodak.

Kœberlinia (kėb-ėr-lin′i-ä), *n.* [NL. (Zuccarini, 1832), named after C. L. *Koeberlin*, a Bavarian botanist.] A genus of dicotyledonous shrubs or small trees, the type and only genus of the family *Kœberliniaceæ*. The only species, *K. spinosa*, is a native of western Texas and northern Mexico. It is characterized by the stiff green branches ending in firm thorns, scale-like caducous leaves, and small white flowers in lateral racemes near the ends of the branchlets. See ★*junco*[2].

Kœberliniaceæ (kėb-ėr-lin-i-ā′sē-ē), *n. pl.* [NL. (Engler, 1895), < *Kœberlinia* + *-aceæ*.] A family of American shrubs or small trees of the order *Hypericales*, the junco family, consisting of the single monotypic genus *Kœberlinia*. See ★*Kœberlinia*.

Kœllia (kėl′i-ä), *n.* [NL. (Moench, 1794), named in honor of Johann Ludwig Christian *Koelle* (1763–97), a German physician and botanist.] A genus of dicotyledonous plants belonging to the family *Menthaceæ*. See *Pycnanthemum*.

koenenite (kėn′e-nīt), *n.* [Named after Dr. A. von *Koenen*.] A hydrated oxychlorid of aluminium and magnesium occurring in red cleavable masses.

koettigite (kėt′ig-īt), *n.* [Named (1850) after Otto *Koettig*, who first analyzed it.] A hydrous arseniate of zinc, cobalt, and nickel, related to vivianite in form and composition.

Koheleth (kō′hā-let), *n.* [Heb. *qōhēleth*, a word of uncertain meaning, but appar. connected with *qahal*, congregate, and hence translated in the Septuagint version of *Ecclesiastes* 'member of an assembly,' but understood by Jerome and later authors as 'Preacher.'] 1. The book of Ecclesiastes, traditionally ascribed to King Solomon.—2. One of the six traditional surnames of King Solomon: said to have been applied to him because his words were spoken in public gatherings. The other five were *Jedidiah*, *Agur*, *Jakah*, *Lemuel*, and *Iticl*.

Kohlrausch's law. See ★*law*[1].

kohua (kō′hō-ä), *n.* [Maori.] 1. A native Maori oven. This consisted of a hole in the ground, containing heated stones, in which the food was placed in baskets. Water was then poured on the stones, and the whole covered up to keep in the steam till the food was properly cooked. See ★*umu*.
2. A three-legged iron pot or kettle; a 'go-shore' or 'go-ashore.' [New Zealand.]

koi (kō′ē), *n.* [Jap.] The common carp, *Cyprinus carpio*, found in the rivers of Japan.

koilonychia (koi-lō-nik′i-ä), *n.* [Gr. κοίλος, hollow, + ὄνυξ (ὀνυχ-), finger-nail.] A spoon-shaped finger-nail with surface concave instead of convex.

koilorachic (koi-lō-rak′ik), *a.* [Gr. κοίλος, hollow, + ῥάχις, the spine.] Having a spinal column with a lumbar curve concave forward, or with a lumbovertebral index of more than 102. *Turner*.

koji (kō′jē), *n.* [Jap. *kōji*.] A ferment used by the Japanese in making sake or rice-wine. It is produced by leaving steamed rice exposed to the air at ordinary temperature until a fungus growth makes its appearance. Used as an infusion, it acts upon starch, converting it into maltose and dextrine, and ultimately into glucose susceptible of alcoholic fermentation.

kokam (kō′käm), *n.* [Hindi.] Same as ★*corcopali*.

kokio (kō-kē′ō), *n.* [Hawaiian, prop. a shrub or tree.] A name in Hawaii of several species of malvaceous shrubs or trees belonging to the genus *Hibiscus*.—**Kokio-keokeo** ('white kokio'), *Hibiscus Arnottianus*, with white flowers: same as ★*hauhele*.

koklass (kōk′las), *n.* A native name of pheasants of the genus *Pucrasia*, which are distinguished by the long crests and ear-tufts of the males. These pheasants are found through the Himalayas from Afghanistan to Manchuria.

Common Koklass. (*Pucrasia macrolopha.*)

koko[1] (kō′kō), *n.* [W. African.] Same as *cocco*.

koko[2] (kō′kō), *n.* [Hawaiian *koko*, a particular use of *koko*, blood (sap). These plants yield an abundance of milky sap or latex.] A name in Hawaii of several shrubs and small trees belonging to the genus *Euphorbia*, and particularly of *E. lorifolia*. This is a tree 12 feet high, found at high elevations, and is much used as fire-wood.

kokong (kō-kông′), *n.* [Also *kokoon*, *cocoon*; < Sechuana *khokong* or *kgokoñ*.] The brindled gnu, *Catoblepas taurina*.

kokoon (kō-kön′), *n.* Same as *cocoon*[2] and ★*kokong*.

kokopu (kō′kō-pō), *n.* [Maori.] A fish, *Galaxias fasciatus*, of the family *Galaxidæ*, found in Australian waters. See ★*cockabully*. Also sometimes applied to other fishes of the same family.

kokowai (kō′kō-wī), *n.* [Maori.] Red ocher. [New Zealand.]

koku (kō′kū), *n.* [Jap.] A liquid and dry measure used in Japan. As a liquid measure it is equivalent to 47.6 United States gallons; as a dry measure, to 5.11 United States bushels.

kola, kolanine, kola-nut, kola-red. See ★*cola*[2], ★*colanine*, *cola-nut*, ★*cola-red*.

kolea (ko-lā′ä), *n.* [Hawaiian.] The Pacific golden plover, *Charadrius dominicus fulvus*, which makes a wonderful trip from Alaska to the Sandwich Islands.

kolkol (kol′kol), *n.* [Southern Maidu (California).] Shell money of the Californian Indians, made of *Olivella biplicata*. The word was in use in central California.

kolloxyline, *n.* 2. A substance closely related to celloidin, and used like it in histological technic: said to be more readily soluble.

kol nidre (kōl nid′rā). [Heb., 'all vows.'] The opening words of the most solemn prayer of the Jewish ritual for the eve of the atonement fast. It is chanted three times by three pious members, including the hazzan, or cantor. The reformed communities of America and Europe have discarded it, owing to the fact that it seems to release the supplicants from all vows from one Day of Atonement until the next, according to one of its declarations.

kolokolo (kō-lō-kō′lō), *n.* [Hawaiian, a creeper, < *kolo*, creep.] A name applied by the natives in Hawaii to a number of plants with a creeping or prostrate habit.—**Kolokolo kuahiwi** ('mountain creeper,') *Lysimachia Hillebrandi*, a species of loosestrife with dark-purple sweet-scented flowers, found on the highlands of Kauai.

kolpohysterectomy, *n.* See ★*colpohysterectomy*.

komatik (ko-mä′tik), *n.* [Labrador.] A sledge used by the people of Labrador.

kombe (kom′bā), *n.* [Native African name.] A rambling or climbing shrub of the dogbane family, *Strophanthus Kombe*, native of East Africa. It furnishes a part of the officinal *Strophanthus* seeds used in medicine. See *Strophanthus*.

Kombe (*Strophanthus Kombe*). *a*, branch with leaves and flowers, one third natural size; *b*, corolla, laid open, the attenuate lobes removed, one third natural size; *c*, stamen, front and side view, natural size; *d*, pistil, natural size; *e*, portion of follicle, one sixth natural size.

kombic (kom′bik), *a.* Noting an acid, a little-known compound of uncertain properties and composition, found in *Strophanthus* seeds.

kombo (kom′bō), *n.* [African.] A ceremonial form of greeting, employed by chiefs in many parts of Africa.

kombu (kom′bū), *n.* [Jap.; Chin. *k'un-pu*.] A Japanese coarse, edible seaweed, also called ★*kobu* (which see), great quantities of which are gathered on the coasts of Yezo and elsewhere and prepared for use as pickles, seasoners, relishes, vegetables, sweetmeats, and, in powdered form, as tea. See the extract.

Kombu is one of the staple foods of the country [Japan], entering into the dietary of almost every family and being eaten alone as a vegetable or as a seasoning for meats, fish, stews, etc. *Nat. Geog. Mag.*, May, 1905, p. 218.

Kome beds. See ★*bed*[1].

komenic, *a.* Incorrect form for ★*comenic*.

kommers (ko-mārs′), *n.* [G. *kommers*, also *kommersch*, a particular pronunciation, among students, of *kommerz*, *commerz*, commerce, trade, intercourse, society, drinking-club, etc.; < L. *commercium*, commerce: see *commerce*.] A social gathering of German university students at some place of entertainment.

Come in; Come in. You shall see some sport. A Fox [Freshman] *commerce* is on foot and a Regular Beer-Scandal. *Longfellow*, Hyperion, iv.

kommos, *n.* See *commos*.

kona (kō′nä), *n.* [Hawaiian *kona*.] The southwest wind that sometimes occurs in the Hawaiian Islands, interrupting the northeast trade-winds and usually bringing rain.

konarite, *n.* An incorrect spelling of ★*connarite*.

Kongo colors. Same as *direct cotton* ★*colors*.

Koniéprusian (kō″ni-ā-prō′si-an), *n.* [*Koniéprus* + *-ian*.] In *geol.*, a term adopted by French geologists for the lowest division of the Devonian formation when expressed as a pelagic fauna in limestone facies. It is represented by the Koniéprus limestone of the Bohemian basin, and is essentially equivalent to the Hercynian stage and limestone of the German geologists.

koninckinid (kō-ning′kin-id), *n.* One of the *Koninckinidæ*, or a brachiopod related thereto.

koninckinoid (kō-ning′ki-noid), *a.* Pertaining to or having the characters of the *Koninckinidæ*.

konini (kō′nē-nē), *n.* [Maori.] In New Zealand, the fruit of the kotukutuku or native fuchsia, *Fuchsia excorticata*. It is an ovoid, fleshy, four-celled, pendulous black or purple berry, which is edible and pleasant and forms the principal food of the wood-pigeon.

koniology (kō-ni-ol′ō-ji), *n.* [Gr. *κόνις*, dust, + *-λογια*, < *λέγειν*, speak.] The science which treats of dust and its components, especially of the dust floating in the atmosphere.

koniscope, *n.* See ★*coniscope*.

konje (kon′je), *n.* [Native African name.] A valuable fiber-plant, *Cordyline Guineensis*, yielding African bowstring hemp. See *Sansevieria*.

konnarite, *n.* See ★*connarite*.

konzi (kon′zi), *n.* [African.] Lichtenstein's hartbeest, *Bubalis lichtensteini*, a large African antelope which inhabits the Zambesi region. It has rather small ringed horns that bend upward and outward, then inward, and, finally, backward.

koobery (kö′be-ri), *n.* [Also *kooberry;* from an aboriginal Australian name.] A fish, *Therapon richardsonii*, of the family *Hæmulidæ*, found in Australia.

koodoo, *n.* 2. One of the bushbucks, *Tragelaphus selousi*, which inhabits the swampy regions of central and eastern Africa.—**Greater koodoo,** *Strepsiceros kudu*, rapidly being exterminated in most parts of its range.—**Lesser koodoo,** *Strepsiceros imberbis*, a species smaller than the common koodoo, lacking the fringe of hair beneath the throat, and having horns more closely twisted. It appears to be confined to Somaliland and the region about Kilimanjaro.

kookaburra (kö-kạ-bur′ä), *n.* [Also *gogobera, goburra, gobera;* an aboriginal Australian name.] The native name adopted as a common name for the laughing-jackass, *Dacelo gigas*, a large species of kingfisher. The name is extensively used about Sydney and is given by E. P. Ramsay in his "Catalogue of Australian Birds." See cut under *Dacelo*.

koolaman, kooliman (köl′a-man, -i-man), *n.* Same as ★*coolamin*.

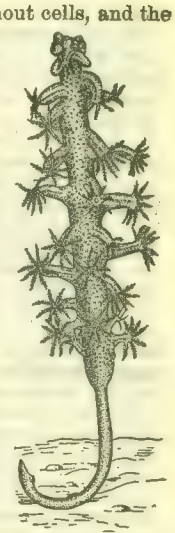
koontee, koonti, *n.* See *coontie*.

koosin (kö′sin), *n.* Same as ★*kosin*.

kootchar (kö′chär), *n.* [Aboriginal Australian.] An Australian stingless bee probably belonging to the genus *Melipona*. *Cambridge Nat. Hist.*, VI. 63.

kop[1] (kop), *n.* [D. *kop* = E. *cop*[1]. Compare ★*kopje*.] A small hill. [South Africa.]

The three field batteries then came into action against a high tableland *kop* which formed the right of the held position, the advance remaining checked the while. *L. James*, in War's Brighter Side, p. 347.



kop[2] (kop), *n.* [D. *kop* = E. *cop*[3], cup.] In Holland, the name given to the liter when used as a dry measure.

kopang (kō′päng), *n.* [Malay *kopang, kupang;* cf. *cobang, kobang*.] An old money of account at Penang, equal to a tenth of a United States dollar.

koph (kōp, kōf), *n.* [Also *qoph;* Heb. *qōp, qōph*, Phen. **qōp*, whence Gr. *φόππα, κόππα*.] The nineteenth letter (ק) of the Hebrew alphabet, corresponding to the Roman *q*. Its numerical value is C.

Kophobelemnon (kō-fō-bē-lem′non), *n.* [NL., < Gr. *κωφός*, dull, dumb, + *βέλεμνον*, dart.] A widely distributed genus of sea-pens, typical of the family *Kophobelemnonidæ*. *Asbjörnsen*, 1856.

Kophobelemnonidæ (kō-fō-bē-lem-non′i-dē), *n. pl.* [NL., < *Kophobelemnon* + *-idæ*.] A family of pennatulacean alcyonarians having the polyps on both sides of the elongate cylindrical rachis in a single series or in indistinct rows, large and without cells, and the ventral streak of the rachis without polyps. It includes the genera *Kophobelemnon*, *Sclerobelemnon*, and *Bathyptilum*.

Kophobelemnon leuckartii.

kopiopia (kō-pi-ō′pi-ä), *n.* [NL., irreg. < Gr. *κοπιᾶν*, be tired (*κόπος*, tiredness, fatigue), + *ὤψ* (*ὠπ-*), eye.] A condition in which the eyes quickly tire.

kopje (kop′i), *n.* [D. *kopje* (pron. kop′ye, in Cape D. kop′i), orig. **kopken*, dim. of *kop*, a hill: see ★*kop*[1] and *cop*[1].] A small hill. [South Africa.]

Kopjes, short, thick, volcanic-looking hills, often with a squared-off summit or a crater-like bowl on the top, such as Majuba has. They are . . . hills made of rock so that the surface is a fretwork of the outermost boulders. *J. Ralph*, An American with Lord [Roberts, p. 4.

koprosterin (ko-pros′te-rin), *n.* [As *koproster(ol)* + *-in*[2].] Same as ★*koprosterol*.

koprosterol (ko-pros′te-rol), *n.* [Gr. *κόπρος*, dung, + *(chole)sterol*.] A colorless dextrorotatory compound, $C_{25}H_{44}O$, found in human feces. It is a derivative of cholesterol, which it resembles in general properties, and is possibly identical with stercorin. It forms long, slender, pliable needles melting at 95–96° C. Also called *koprosterin*.

Kopt, *n.* See *Copt*[2].

Koptic, *a.* and *n.* See *Coptic*.

koradji (kō-rä′ji), *n.* [Also *coradgee, karáji*, etc.; native Australian.] A shaman or medicine-man of the Australian aborigines.

Korahite (kō′ra-īt), *n.* [*Korah* + *-ite*[2].] In *Jewish hist.*, a descendant of Korah (1 Chron. vi. 22, etc.), the great-grandson of Levi. The Korahites ("sons of Korah") distinguished themselves in the Levitical services as singers in the temple. Certain Psalms (xlii., xliv., xlv., etc.) are superscribed as "for the sons of Korah."

korakora (kō-rä-kō′rä), *n.* [Also *coracora, korocora*, etc.; < Malay *kōra-kōra:* see ★*caracoa*.] A Malayan boat, formerly in use, having a high curved stem and stern.

koranolatry (kō-ran-ol′a-tri), *n.* Worship of or reverence for the Koran.

From Lully down Mohammedans have been the hardest to convert. Heresy and apostasy from *koranolatry* is here treason. *G. S. Hall*, Adolescence, II. 729.

korigum, korrigum (kor′i-gum), *n.* [African.] The Senegal hartbeest, *Bubalis senegalensis*, a species with rather short, heavy, lyrate horns, which inhabits Central Africa from Senegal to Somaliland.

korimako (kō-ri-mä′kō), *n.* [Maori.] A Maori name for the New Zealand bell-bird, *Anthornis melanura*.

korin (kō′rin), *n.* [W. African.] A species of gazel, *Gazella rufifrons*, found in Senegal, Africa.

kornerupine (kôr-ne-rö′pin), *n.* [Named (1885) after A. N. *Kornerup*, a Danish geologist.] A silicate of aluminium and magnesium, $MgAl_2SiO_6$, occurring in from colorless to white fibrous or columnar aggregates: found at Fiskernäs, Greenland. Prismatine, from Waldheim, Saxony, is a similar mineral.

Japanese Koro. Iron, inlaid with gold. (In the Pennsylvania Museum, Philadelphia.)

koro[2] (kō′rō), *n.* [Jap. *kōrō*.] A Japanese incense-burner or censer, usually of bronze, iron, or pottery.

korora (kō′rō-rä), *n.* [Maori.] A Maori name, to some extent adopted as a common name, for the little penguin, *Eudyptula minor*, the smallest member of the group.

korrel (kor'el), *n.* [D., a grain, a decigram, a particle, crumb; = E. *kernel.*] In Holland, the name given to the decigram.

korroboree, *n.* and *v.* See *corroboree.*

korumburra (kor'um-bur-ä), *n.* [Aboriginal Australian.] A brown-and-yellow flesh-fly. *E. E. Morris,* Austral English.

kosher (kō'shėr), *v. t.* To make 'kosher,' or ceremonially correct.

kosin (kō'sin), *n.* [*koso* (*kosso, kusso*) + *-in*2.] A sulphur-yellow tasteless compound, $C_{23}H_{30}O_7$, obtained from cusso. It does not preëxist in the drug, but is a decomposition-product of kosotoxin. It is physiologically inactive. Also *kussin, koussin, kosein, kussein,* and *tæniin.*

kosmochlore, *n.* See ★*cosmochlore.*

kosmochromite (kos″mō-krō'mīt), *n.* [Gr. *κόσμος,* ornament, + *χρῶμα,* color, + *-ite*2.] Same as ★*cosmochlore.*

kosotoxin (kō-sō-tok'sin), *n.* [*koso,* otherwise *cusso,* + *toxin.*] A yellowish, amorphous compound, $C_{26}H_{34}O_{10}$, obtained from cusso, the pistillate flowers of the Abyssinian tree *Brayera anthelmintica.* It is anthelmintic.

koswite (kos'wīt), *n.* [*Kosw*(*insky*), a locality in Perm, northern Ural, + *-ite*2.] In *petrog.,* a variety of pyroxenite composed of diopside-diallage, with small amounts of olivin, hornblende, magnetite, and chrome-spinel. The characteristic feature is the texture produced by the magnetite, which is about 16 per cent. of the rock and forms a matrix for the other constituents.

kotal (kō'tal), *n.* [Pushto *kōtal.*] In Afghanistan, a mountain pass; the summit of a pass.

> We . . . reached the *kotal* in an hour.
> *Lord Roberts,* Forty-one Years in India, II. 147.

Kotari (kō-tä'rē), *n.* One of the minor Dravidian languages of India spoken by the Kotars.

kotschubeite (kot-shö'bē-īt), *n.* [Named after a Russian count, P. A. von *Kotschubei.*] A rose-red variety of clinochlore containing several per cent. of chromium oxid.

köttigite, *n.* See ★*koettigite.*

kotuku (kō'tö-kö), *n.* [Maori.] The New Zealand white heron, *Ardea timoriensis:* like other herons miscalled a crane.

kotukutuku (kō-tö-kö-tö'kö), *n.* [Maori.] In New Zealand, a small ornamental tree, *Fuchsia excorticata,* which belongs to the evening-primrose family. Its trunk is covered with ragged, papery bark, and its wood, which is soft and useless, contains much tannic and gallic acids. It bears red-purple flowers about an inch long and a pleasant, edible fleshy berry called by the natives *konini.* The name is more commonly shortened to *tookytook,* a corruption of the aboriginal name. Also called *native fuchsia.*

kotwalee (kot-wä'lē), *n.* [Also *kotwallee, cutwallee,* < *kotwal, cutwal,* a police officer: see *cutwal.*] A police station. [Anglo-Indian.]

kou (kō'ö), *n.* [Hawaiian.] In the Hawaiian Islands, a name of *Cordia subcordata,* a tree belonging to the borage family, from which the natives make wooden bowls, or calabashes, for holding their poi.

koueme (kö-ā'me), *n.* [Native name in East Africa.] A tall, climbing plant of the gourd family, *Ampelosycios scandens,* with stems from 50 to 100 feet long and bearing large, fleshy fruits which sometimes reach 60 pounds in weight. It is a native of eastern tropical Africa and is much cultivated by the natives there and in the Mascarene Islands for its large oily seeds, which are boiled and used for food.

kourgan, kourgane, *n.* Same as ★*kurgan.*

kouse (kous), *n.* [Also *cous, cows,* and *cowish,* of Amerindian origin: see *cowish*2.] A native name for *Lomatium Cous* and other species of the same genus, umbelliferous food-plants of the Columbia River region.

> The Sioux Indians beat dried wild cherries with buffalo meat to form their winter stock of pemmican. In Oregon and Washington an immense amount of food was gathered from the camass root, and also from the *kouse* root.
> *Yearbook U. S. Dept. Agr.,* 1899, p. 308.

koussein, koussin, *n.* Same as ★*kosin.*

kowdie (kou'di), *n.* An imperfect rendering of *kauri,* a New Zealand tree. See *kauri-pine.*

kowhai (kō'hwī), *n.* [Maori.] In New Zealand, either of two trees of the bean family, *Sophora tetraptera* and *Clianthus puniceus.* The first has yellow flowers, and is further distinguished as *yellow kowhai* or locust-tree, while the second, with red flowers, is called *scarlet kowhai, parrot's-bill,* or *kaka-bill.* See *Clianthus* and ★*goai.*

kowl (koul), *n.* [Also *cowl, cowle;* < Hind. Ar. *qaul,* speech, word, saying, vow.] A written engagement. [Anglo-Indian.]

> Things for which we need a *kowl.*
> *R. Kipling,* in Pearson's Mag., Dec., 1897, p. 622.

koyan (kō'yan), *n.* [Malay *kōyan.*] A Malayan measure used in stating heavy weights, as of cargoes. It varies from 30 to 40 piculs. In the Straits Settlements it is equal to 40 piculs or 5,333.333 pounds avoirdupois; in Penang it is equal to 5,705.143 pounds.

kozo (kō'zō), *n.* [Jap. *kōzo.*] The paper-mulberry, *Papyrius papyrifera.* See *Broussonetia.*

K. P. An abbreviation (*a*) of *Knight of St. Patrick;* (*b*) of *Knights of Pythias.*

Kr. 1. The chemical symbol for the element *krypton.* — 2. [*l. c.*] An abbreviation of *kreutzer.*

K. R. An abbreviation of *Knight of the Redeemer* (Greece).

kra (krä), *n.* [Malay *krā.*] A Malayan name of the crab-eating macaque, *Macacus cynomulgus,* widely adopted as a book-name.

kraal (krâl or krä'l), *v. t.*; pret. and pp. *kraaled,* ppr. *kraaling.* [*kraal, n.* Compare *corral, v.*] To place (cattle or sheep) in a kraal or shed for shelter or safe-keeping. See *kraal, n.*

> If goats are to produce the best fleeces they are capable of they must be maintained in uninterrupted good condition. They must have a variety of food, principally shrubs and aromatic plants, and lead an active life; they must, if possible, have running water to drink, and be kept free from dust; they must not be *kraaled* (or shedded) except when absolutely necessary; they must have clean sleeping places, and must not be crowded together.
> *Yearbook U. S. Dept. Agr.,* 1901, p. 278.

krach (kräsh), *n.* [F., < E. *crash, n.*] A 'crash' in finance.

> It must suffice to say that in the following May the great Vienna "*Krach*" occurred, and the colossal bubble of speculation burst, bringing with it all the ruin foretold by Lasker and Bamberger. *Encyc. Brit.,* XXV. 472.

krait (krīt), *n.* [Also *karait, korait;* < Hind. *karait.*] A small snake, *Bungarus cæruleus* or *B. candidus,* extremely venomous, and common throughout the greater part of the Indian subregion. It is all the more dangerous on account of its small size, and is believed to be responsible for a large share of the 20,000 deaths caused by wild animals that occur annually in India.

> At the end of an hour he died as they die who are bitten by the little *karait.*
> *Kipling,* The Recrudescence of Imray.

Krakowiak (krä-kō'vi-äk), *n.* Same as *Cracovienne.*

kral (krä'l), *n.* [Bulg. Sorbian *kral,* Serv. *kralj,* Bohem. *král,* Pol. *krol,* Russ. *korolĭ,* Albanian *kralj,* Turk. *kral, keral,* MGr. *κράλης,* Lith. *karalius,* Lett. *kralīts,* a king; < OHG. *Karl, Karal,* ML. *Carolus,* the name of Karl the Great, Charlemagne the emperor of Germany: see *carl.* Compare *cæsar,* Russ. *tsar,* emperor, etc., from the name of Julius Cæsar.] The title of the kings of southern Slavonic countries.

> Brought Sisvan the *Kral* of Bulgaria to his knees.
> *Poole,* Turkey, p. 42.

krameric (krā-mer'ik), *a.* [*Krameria* + *-ic.*] Derived from ratany.—**Krameric acid,** a crystalline astringent compound contained in the root of ratany, *Krameria triandria:* used in medicine.

krameroform (krā-mer'ō-fôrm), *n.* A product similar to tannoform, made with kramero- or ratanhia-tannic acid.

kran (krän), *n.* A coin of Persia. The value of the gold kran is about 17 U. S. cents. Currency is silver circulating above its metallic value; the exchange value of the silver kran is, approximately, $0.0885.

krans (kräns), *n.* [D. *krans,* wreath, rim, cornice, in S. Africa the overhang of a cliff: see *crants.*] The overhang of a cliff; a precipitous wall of rock which surrounds a valley. Also *krantz.* [South Africa.]

> Above, hemming in the view, the grim rusty-brown or purple *krantzes* and alternating slopes, clad at the dry seasons with faded scrub and trees, rising grandly up to the even edge of the plateau.
> *Geog. Jour.* (R. G. S.), Feb., 1908, p. 140.

Kraunhia (krou'ni-ä), *n.* [NL. (Rafinesque, 1808), probably from a personal name.] A genus of climbing leguminous plants commonly known as *Wistaria* (which see).

Krause's corpuscle or **end-bulb.** See ★*corpuscle.*

kraut-cutter (krout'kut″ėr), *n.* A hand-machine for slicing and shredding cabbages in making sauer-kraut. One type employs a revolving disk having radial knives.

krautweed (krout'wēd), *n.* Either of two cruciferous plants, *Brassica arvensis,* the charlock, also called *crowdweed,* and *Raphanus Raphanistrum,* the wild radish, sometimes called *white charlock.*

K. R. C. An abbreviation of *Knight of the Red Cross.*

K. R. E. An abbreviation of *Knight of the Red Eagle* (Prussia).

kreatinic, kreatoxicon, kreatoxin. See ★*creatinic,* ★*creatoxicon,* ★*creatoxin.*

krebspest (krebs'pest), *n.* [G., < *krebs,* crawfish, + *pest,* disease.] A bacterial disease of crawfish, prevalent on the continent of Europe.

> The crayfish disease, '*Krebspest,*' for years past widespread and destructive in Europe, but here unknown. The author and his assistant have made a special research on this subject and have described as the cause of the disease Bacterium pestis astaci.
> *Science,* July 1, 1904, p. 15.

kreoform, *n.* See ★*creoform.*

kreolin, kreophagism, kreosol, kreotoxism, kresol. See ★*creolin,* ★*creophagism, creosol,* ★*creotoxism, cresol.*

Kressenberg beds. See ★*bed*1.

kriegspiel (krēg'spēl), *n.* [G. *krieg,* war, + *spiel,* game.] A game designed to teach the principles of strategy and tactics. Two opposing combatant forces are represented by blocks made to the scale of the map upon which the game is played. These blocks represent the tactical units of each arm. The game is played by the commander of each force, and is supervised by an umpire. Until the forces are actually in sight of each other they are so screened that neither commander sees the operations of the other. Each move or change of position corresponds to a given interval of time. As chance is an element of warfare, it is represented in the game by the throwing of dice and reading the consequences in a table of possibilities.

krinin, krinogenic. See ★*crinin,* ★*crinogenic.*

Krishnaism (krish'na-izm), *n.* [*Krishna* + *-ism.*] The worship of Krishna (which see). Krishnaism is of comparatively recent origin. A mass of absurd and licentious rites and practices, it enjoys a corresponding popularity throughout a great part of India.

Krishnaist (krish'na-ist), *n.* One who worships the Hindu deity Krishna. See *Krishna* and ★*Krishnaism.*

kriss, *n.* Same as *creese.*

Krohn's gland. See ★*gland.*

kromskop (krōm'skōp), *n.* A trade-name of the ★chromascope (which see).

krone, *n.* 3. A current silver coin of Austria and the Austrian dependencies, equal to 100 heller or $20\frac{3}{100}$ United States cents.

Kronocentric (kron-ō-sen'trik), *a.* [Gr. Κρόνος, Saturn, + *κέντρον,* center, + *-ic.*] Relating to the planet Saturn as a center, or to the center of Saturn. *Science,* Jan. 29, 1904, p. 163.

kroumatic (krō-mat'ik), *a.* [Prop. (in Latinized form) **crumatic;* < Gr. *κρουματικός,* < *κροῦμα*(*τ*-), a stroke, a beat, < *κρούειν,* strike, beat.] Sounded or produced by striking: said of musical instruments or tones. Hence—**Kroumatic music,** instrumental music in general.

Krupped (krupt), *a.* Hardened by the Krupp process; Kruppized.

> One calibre of Harveyed steel, or ⅔ calibre of *Krupped* armour. *Encyc. Brit.,* XXXI. 355.

Kruppize (krup'īz), *v. t.*; pret. and pp. *Kruppized,* ppr. *Kruppizing.* [*Krupp* (see def.) + *-ize.*] To subject a steel armor-plate to the Krupp process of manufacture, by which the face is made very hard to a considerable depth, while the body of the plate remains softer.

> Owing to the great severity of the ballistic tests, which necessitates the employment of a *Kruppized* process, it is impossible . . . to furnish the armor at the prices stipulated by Congress as the maximum that can be paid.
> *Army and Navy Register,* June 3, 1899.

kruzhka (krözh'kä), *n.* [Spelled erroneously, in G. and F. style, *kruschka, kruchka,* etc., < Russ. *kruzhka,* a jug, tankard, cup, also a liquid measure; dim. of Pol. *kruzh,* Polabian *kreuz,* a jug, etc.: cf. MHG. *krüse,* G. *krause;* E. *cruse.*] A Russian liquid measure equivalent to 0.32 of a United States gallon. Also *krouchka.*

kryofine (krī'ō-fin), *n.* [Gr. *κρίος,* frost, + (*paraf*)*fine.*] A colorless, crystalline compound formed by heating paraphenetidin and methyl-glycolic acid together: it is antipyretic and analgesic.

kryogen, kryokonite, kryoscopy. See *cryogen, cryoconite,* ★*cryoscopy.*

krypteon (krip'tē-on), *n.* [Gr. *κρυπτός,* hidden, + *-eon,* as in *aecordeon.*] In *exper. psychol.,* an exposure apparatus of simple construction, introduced by E. C. Sanford in 1896. The krypteon consists of a board set obliquely

upon a base, and having a flap of cardboard hinged along its lower edge. The flap can be turned up and down for successive exposures of visual stimuli.

kryptol (krip'tol), *n.* [Gr. *κρυπτός*, hidden, + *-ol.*] A trade-name for a loose, granular material, a mixture of graphite, carborundum, and fire-clay, having a high electrical resistance. It is used in electric stoves and furnaces, particularly those for scientific purposes, as a means of producing high and easily regulated temperatures by the passage through it of an electric current. *Amer. Jour. Psychol.*, XII. 302.

krypton (krip'ton), *n.* [NL. *krypton*, prop. **crypton*, < Gr. *κρυπτόν*, neut. of *κρυπτός*, hidden, secret: see *crypt.*] A chemical element, one of the five recently discovered gaseous constituents of the atmosphere, first obtained by Ramsay and Travers in 1898. It is colorless, transparent, without observable taste or smell, of density 40.88 as compared with hydrogen, liquefiable at −151.7° C. under atmospheric pressure, and occurs in the atmosphere to the extent of but 1 volume in 20,000,000 volumes of air.

On June 6, 1898, the discovery of yet another element was announced, in a communication made by Prof. Ramsay, of London, to the Academy of Sciences, of Paris. The communication was read to the Academy by M. Berthelot. This new element is a gas, and makes a fifth constituent of the atmosphere; it is, however, present in very minute quantities, viz., one part in ten thousand of its volume. *Krypton* belongs not to the argon, but the helium group; its density is greater than that of nitrogen, being, according to the corrected measurement, 22.47.
Sci. Amer., July 9, 1898, p. 26.

krystic, *a.* See **crystic.*

K. S. An abbreviation (*a*) of *King's Scholar*; (*b*) of *Knight of the Sword* (Sweden).

K. S. A. An abbreviation of *Knight of St. Anne* (Russia).

K. S. G. An abbreviation of *Knight of St. George* (Russia).

K. S. P. An abbreviation of *Knight of St. Stanislaus of Poland.*

kt. An abbreviation of *knight.*

K. T. An abbreviation (*a*) of *Knight Templar*; (*b*) of *Knight of the Thistle* (Scotland).

Kt. Bach. An abbreviation of *Knight Bachelor.*

ktypteite (tip'tē-īt), *n.* [Appar. irreg. < Gr. *κτυπος*, a loud noise, + *-t-* + *-e-* + *-ite*[2].] Calcium carbonate occurring in pisolitic form at Karlsbad, Bohemia, and elsewhere: it is probably a kind of aragonite, and is converted into calcite by heat.

kuan-liao (kwän-lē-ou'), *n.* [Chinese *kuan*, of the state, official, + *liao*, flux of glass, colored glass.] Imperial glass made at Peking, China.

kubong (kö-bong'), *n.* [Malay *kūbong.*] The flying-lemur. See **colugo.*

kudu, *n.* See *koodoo.*

kuh (kö), *n.* [Achinese?] A tin coin of Achin, Sumatra, equal to one four hundredth of a peso or dollar.

Kuhlia (kö'li-ạ), *n.* [NL., named after Heinrich *Kuhl*, a naturalist who discovered the typical species in the streams of Java.] A genus of fishes, belonging to the family *Kuhliidæ*, found in the tropical Pacific.

Kuhliidæ (kö-lī'i-dē), *n.* [NL., < *Kuhlia* + *-idæ.*] A family of fishes of the tropical Pacific.

kujawiak (kö-yä'vi-äk), *n.* [Pol., < *Kujaw*, G. Kujau, a town in Silesia.] A Polish dance resembling the mazurka; also, the music for such a dance.

kuku (kö'kö), *n.* A large and handsome fruit-pigeon, *Carpophaga novæ-zelandiæ*, found in New Zealand.

kukui (kö-kö'ē), *n.* [Hawaiian *Kukui* (= Tahitian *tutui*), < *kui* = Tahitian, Tongan, Marquesan, etc., *tui*, pierce or thread upon a skewer, = Maori *tuitui*, sew.] In Hawaii, the candlenut-tree, *Aleurites Moluccana*, which is easily recognized among the trees of the forest by its silvery foliage. The leaves are either undivided or lobed, and are usually cordate at the base, with a pair of glands at the junction of the blade and the petiole. Throughout Polynesia the oily nuts are roasted and strung upon a reed or the rib of a cocoanut-leaflet, and used by the natives for illuminating their houses. These nuts also furnish the lampblack used for painting and tattooing. In Hawaii the roasted kernels are chopped fine, mixed with certain seaweeds and salt, and used as a relish at native feasts. The oil derived from the kernels is amber-colored, odorless, and very fluid; it acts as a mild cathartic. See *Aleurites.*

kulaite (kū'la-īt), *n.* [*Kula*, in Lydia, Asia Minor, + *-ite*[2].] A group of basalts from the Kula basin, Asia Minor, containing more hornblende than augite, and differing in the kinds of feldspathic constituents. One variety contains orthoclase and bytownite in nearly equal proportions with nephelite; another contains andesin, with leucite and nephelite. *Washington*, 1894.

kuliat (kö-lē-ät'), *n.* [Also *culiat*; said to be Tagalog.] A name applied in the Philippines to *Gnetum scandens*, a climbing shrub with opposite leaves and catkin-like inflorescence. The seeds are roasted and eaten by the natives, and the stem yields a fiber which is used for cordage and, in the Andaman islands, for making fishing-nets. Also called *mala-itmo* (false betel-pepper) and *itmong-ouäk* (crow's betel-pepper.) Also *culiat.* See *Gnetum.*

kulp (kulp), *n.* [Origin obscure.] A species of shark or dogfish, *Squalus spinax niger.*

kulturkampf (kůl-tör'kämpf″), *n.* [G., < *kultur*, culture, civilization, + *kampf*, fight.] A struggle for civilization: a name given to the conflict between the imperial government of Germany and the Roman Church, which lasted from 1872 till 1886. The name was first given to it by Virchow, in one of his electoral manifestos, to imply that it was a struggle of principle between the teaching of the Roman Church and that of modern civilization.

In Germany, when the Pontificate of Leo XIII. began, a disastrous conflict between the Imperial Government and the Church was in progress. It was called the *Kulturkampf*, as professing to be undertaken on behalf of civilization and culture; but it had originated in the belief, instilled into the Government by interested persons, that the Vatican Decrees on Infallibility were issued for a political purpose. *Encyc. Brit.*, XXXII. 271.

kumara (kö'mä-rä̤), *n.* [Maori. Also *kumera*, *kumarrah*; < *kumara* = Samoan *umala*, = Tahitian *umara*, etc.] The aboriginal name in New Zealand for the sweet potato.

kumascope (kö'mạ-skōp), *n.* [Irreg. < Gr. *κῦμα*, wave, + *σκοπεῖν*, view.] An instrument for detecting electric waves; a receiver or coherer: used in wireless telegraphy.

Dr. Fleming said that the time had arrived to introduce a new word into the art of wireless telegraphy. The whole apparatus by which the messages were translated was called a receiver, which was too wide a word to be considered as a definition. The arrangement by which the electric impulses in the receiving aerial were utilized was called a "coherer"; but since that word had been introduced, contrivances for the purpose had been devised which did not cohere, and therefore the word was too limited in its application. He had therefore ventured to coin a fresh word, which was "*kumascope*," derived from the Greek word *κῦμα*, a wave; it was similar to electroscope and many others of a like kind.
Sci. Amer. Sup., July 18, 1903, p. 23033.

Contact kumascope, a receiving instrument, in wireless telegraphy, which depends for its action upon changes in contact-resistance under the action of electric waves, that is, upon coherer action.—**Magnetic kumascope,** a receiving instrument, in wireless telegraphy, which depends for its action upon the magnetizing or demagnetizing effect of electric waves.

kumascopic (kö-mạ-skop'ik), *a.* Of or pertaining to the kumascope.

Kumassi (kö-mas'i), *n.* [W. African; also spelled *Coomassie.*] The name of a town in West Africa, used as a label for several colors. See **black*, **blue*, etc.

kumatologist (kö-mạ-tol'ō-jist), *n.* [*kumatology* + *-ist.*] A student of kumatology; one who makes a special study of oceanic and atmospheric waves and of their influence on geologic and geographic phenomena.

kumatology (kö-mạ-tol'ō-ji), *n.* [Irreg. < Gr. *κῦμα(τ)*, wave, + *-λογια*, < *λέγειν*, speak.] The science of the forms and characteristics of waves. See the extract.

I [Vaughan Cornish] think the time has come when it will be for the advantage of our science that there should be a distinctive word for the study of the waves and wave-structures of the Earth as a special branch of geography. Κῦμα, genitive Κύματος, is Greek for 'a wave.' I propose that the word '*kumatology*' be added to the vocabulary of our science, to designate that department of geography which deals with the waves and wave-structures of the Earth. *Geog. Jour.* (R. G. S.), XIII. 624.

kumera, *n.* See **kumara.*

kummeter (kö'me-tėr), *n.* [Irreg. < Gr. *κῦμα*, wave, + *μέτρον*, measure.] A form of cymometer for measuring the lengths of the waves used in wireless telegraphy. *J. A. Fleming*, in Trans. Internat. Elect. Congress, 1st ser., 1904, III. 616.

kumquat, *n.*—**Native kumquat,** in Australia, a small tree of the rue family, *Atalantia glauca*, bearing round, acid fruits about one half inch in diameter, from which an agreeable beverage or preserves can be made. Its wood is of a bright yellow color with brown streaks or veins. Called also *desert lemon.* See *cumquat.*

Kunckel's phosphorus. See **phosphorus.*

Kundt's constant law. See **constant*, **law*[1].

kungu (köng'gö), *n.* [Also *nkungu*; a native name near Lake Nyassa.] A winged aquatic insect supposed to belong to the culicid genus *Corethra.* It arises in swarms from Lake Nyassa.—**Kungu cake,** a cake made of the dipterous insect kungu and eaten by the natives near Lake Nyassa, who gather the insects in large numbers for this purpose.

Kunzite (könts'īt), *n.* [Named after George F. *Kunz*, a New York mineralogist.] A transparent pink-and-purple lilac variety of spodumene. It is found in crystals near Pala, San Diego county, California, and affords gems weighing from 1 to 200 carats each. Described by Baskerville in "Science" for August, 1904. It is very phosphorescent when exposed to radium rays, the Röntgen rays, etc.

kupang (kö'päng), *n.* [Philippine Sp. *cupang*, prob. connected with Bisaya *copang*, a skein of cotton or silk.] In the Philippine Islands, *Parkia Roxburghii*, a tree belonging to the mimosa family, with bipinnate leaves having minute leaflets and one or two glands on the petiole. The flowers are borne in dense heads at the end of long peduncles, and the pods are about a foot long bearing numerous seeds surrounded by a sweet pulp. The tree is said to yield a resin used for illuminating. Also written *cupang* and *copang.*

kupfernickel (kůp'fėr-nik″el), *n.* [G.: see *copper* and *nickel.*] The common German name of the mineral niccolite: so called because, though an ore of nickel, it has a coppery-red color.

kura (kö'rä), *n.* [Jap. a storehouse.] In Japan, a building without large windows and unfit for residence, arranged as a thoroughly fire-proof storehouse for valuables. It forms a separate place of storage, where the proprietor's works of art and other treasures are kept. Compare *godown.*

kurakkan (kö-ra-kän'), *n.* [Cingalese.] In Ceylon, same as *raggee.* See *Eleusine.*

kurbash, *n.* See *koorbash.*

kurdaitcha (kör-dī'chä̤), *n.* [Also *coordaitcha*, *goditcha* (def. 2); aboriginal Australian.] 1. Among the tribes of central Australia, a man chosen to avenge the death of one who has died, every death being supposed to be due to the magic influence of some enemy.—2. A kind of shoe, made of emu-feathers matted together with human blood, worn by the kurdaitcha when on his errand. See def. 1. *E. E. Morris*, Austral English.

kurgan (kör-gän'), *n.* [Russ. *kurganŭ*, Pol. *kurhan*, = Pers. *kurkhāne*, a mound, tumulus, < North Turk. *kurgan*, a fortified place.] One of the prehistoric burial-mounds in Russia, found from the Carpathians eastward into Siberia. Most of the kurgans belong to the stone age and contain remains of a dolicho ephalic type which preceded the present brachycephalic type of Russia. They were, however, used as late as the tenth century of our era.

To the British barrows, of which there are two types, the older long and the later round-shaped, correspond the *Kurgans* of the Russian steppe lands, and the already described mounds of North America. Both the *Kurgans* and the mounds reach far into the historic period, and the *Kurgans* were still used as burial-places in the 10th and 11th centuries of the new era. *Keane*, Ethnology, p. 126.

kurhaus (kör'hous), *n.* [G., < *kur*, cure, + *haus*, house.] The principal building at a watering-place; a house arranged for the convenience of persons who resort to mineral springs and the like.

Kurlbaum's process. See **process.*

kuromatsu (kö″rō-mät'sŭ), *n.* [Jap. *kuromatsu*, *kuro matsz*, < *kuro*, black, + *matsu*, *matsz*, pine.] A valuable timber-tree, *Pinus Thunbergii*, yielding a durable wood, used for bridge-construction and engineering-work, particularly below ground.

kuromoji (kö'rō-mō″ji), *n.* [Jap. **kuromoji* < *kuro*, black, + *moji*, cotton gauze.] Any one of several species of shrubs or small trees belonging to the laurel family, especially *Benzoin sericeum*, *B. umbellatum*, *B. citriodorum*, and *Litsea glauca.* Several of the species, particularly the first named, yield a grayish-white, silky, fragrant wood which is used for the manufacture of toothpicks. From the foliage of several species a volatile oil is obtained.

kurrajong (kur'a-jông), *n.* Same as *currajong*: the name is also applied to a number of other malvaceous and sterculiaceous trees or shrubs yielding strong bast-fibers from which the natives make cordage, nets, or matting. See the phrases below.—**Black kurrajong,** any one of several species of trees belonging to the genus *Sterculia*, especially *S. diversifolia*, and another sterculiaceous tree, *Rulingia pannosa.*—**Brown kurrajong,** a small tree of the family *Sterculiaceæ*, *Commersonia echinata*, having soft, light, white wood.—**Green kurrajong,** a tall malvaceous shrub, *Hibiscus heterophyllus.* Called also *Queensland sorrel.*—**Tasmanian kurrajong,** *Plagianthus sidoides.* See *currajong.*

kurtorachic (kėr-tō-rā'kik), *a.* [For **cyrtorhachic*; < Gr. *κυρτός*, curved, + *ῥάχις*, spine.] Having a spinal column with a lumbar curve convex forward, or a lumbo-vertebral index of less than 98. *Turner.*

kuruma (kö′rö-mä), *n.* [Jap.] A Japanese cart; a vehicle of any kind, including the jinrikisha.

> The . . . charm of Japan . . . began for me with my first *kuruma*-ride out of the European quarter of Yokohama into the Japanese town. . . . The jinrikisha, or *kuruma*, is the most cozy little vehicle imaginable.
> *L. Hearn*, Glimpses of Unfamiliar Japan, I. 1, 2.

kurung (kù-rùng′), *n.* See ★*kurunj*.

kurunj (kù-rùnj′), *n.* [Also *kurung*; < Marathi *kurunj*, Hindi *kurung*, < Skt. *kurunja*.] A tall, erect leguminous tree or climber, *Pongam pinnata*, of the family *Leguminosæ*. See *Pongam* (*Pongamia*).

kurunj-oil (kù-rùnj′oil), *n.* A fixed oil expressed from the seeds of the East Indian tree *Pongam pinnata:* used in medicine. Also called *poola-oil*.

kurvey (kėr-vā′), *v. i.* [A back-formation from *kurveyor*.] To conduct a transport by bullock-wagon. [South Africa.]

> The journey to De Kaap by bullock-waggon occupied about six weeks. "*Kurveying*" (the conducting of transport by bullock-waggon) in itself constituted a great industry. *Encyc. Brit.*, XXXI. 81.

kurveyor (kėr-vā′o̤r), *n.* [An accommodated form (after *conveyor*) of D. *karweier*, < *karwei*, a job, MD. *corweie*, < OF. *corvee*, forced labor: see *corvée*.] In South Africa, a traveling carrier or trader who carries the goods of others from one point to another in his heavy ox-wagon, and who also peddles his own wares.

Kushite, kusso. See *Cushite, cusso*.

kusimanse (kö-si-män′se), *n.* [W. African.] A small West African civet-cat, *Crossarchus obscurus*.

kusum (kùs′ùm), *n.* [Hind. *kusum*, also *kasum*, *kasūm*, *kusumbh*, *kusumbha*, < Skt. *kusumbha*.] The safflower, *Carthamus tinctorius*. See *Carthamus*.

Kutorgina (kū-tôr-jī′nä), *n.* [NL.] A genus of Cambrian protrematous brachiopods with incipient cardinal area, great delthyrium, and very rudimentary processes and deltidium.

kv-amp. An abbreviation for *kilovolt-ampere*.

k. w. In *elect.*, an abbreviation of *kilowatt*.

kwan[1] (kwän), *n.* [Also *quan;* Annamese.] A silver coin of Annam and Cambodia, equivalent to a string of 600 cash or to 4 francs.

kwan[2] (kwän), *n.* [Jap.] A Japanese unit of weight, equal to 1,000 momme or 8.28 pounds avoirdupois. *C. Hering*, Conversion Tables, p. 61.

kwazoku (kwä-zō′kŏ), *n.* [Jap.] One of the two classes of modern Japanese nobility, corresponding to the old territorial nobility.

K. W. E. An abbreviation of *Knight of the White Eagle* (Poland).

kw-h. An abbreviation of *kilowatt-hour*.

Ky. An abbreviation of *Kentucky*.

kyang (kyäng), *n.* [Also *kiang*, < Tibetan *kyang*.] The wild ass of Tibet, *Equus hemionus*. It is over four feet high at the shoulder, of a dark-reddish color, with a narrow stripe along the back.

> It is, perhaps, worth while for me to say that this animal, the *kyang*, is a decided ass, and not a horse.
> *Geog. Jour.* (R. G. S.), XV. 397.

kyanism (kī′an-izm), *n.* [Named after J. H. *Kyan*, the inventor of the process.] Impregnation (of wood) with a solution of corrosive sublimate to prevent decay.

kyanopsia (kī-an-op′si-ä), *n.* [NL., < Gr. *κύανος*, blue, + *ὄψις*, vision.] Blue vision; a pathological condition in which all objects appear of a blue color. Also, and more commonly, written *cyanopsia* or *cyanopia*.

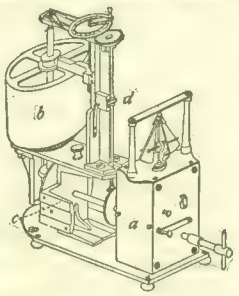
kyar (kī′är), *n.* Same as *coir*.

kybosh, *n.* and *v.* See ★*kibosh*.

kychtymite (kich′ti-mīt), *n.* [*Kychtym*, in Russia, + *-ite*[2].] Same as ★*kischtimite*. *Moroziewicz*, 1897.

kyesamechania (kī-ē″sa̤-mē̤-kā′ni-ä), *n.* [NL., < Gr. *κύησις*, conception, + *ἀμηχανία*, helplessness, incapacity, < *ἀμήχανος*, without means, helpless, < *ἀ-* priv. + *μηχανή*, an instrument, machine, contrivance, means: see *machine, mechanic*.] In *biol.*, hindrance to impregnation; the inability of a certain group of individuals to impregnate others than themselves, due to morphological or physiological changes in the seed or ovum, or both, or to a change in the time of maturity of the seeds or ova. *Eimer*, 1895.

kylie, *n.* See ★*kiley*.



kylin, *n.* See *kilin*, ★*kirin*.

kylindrite, *n.* See ★*cylindrite*.

kyllosis (ki-lō′sis), *n.* [NL., < Gr. *κύλλωσις*, crooking, crippling, < *κυλλοῦν*, crook, cripple, < *κυλλός*, crooked, crippled, as a leg bent outward.] Same as *club-foot*.

kymatologist, kymatology. Same as ★*kumatologist*, ★*kumatology*.

kymograph, *n.*—**Ludwig-Baltzar kymograph,** a perfected form of the physiological kymograph of C. Ludwig, built by the mechanician G. Baltzar: it is remarkable for its extreme accuracy and wide range of utility. The instrument is now supplied by practically all dealers in physiological and psychological apparatus.

Ludwig-Baltzar Kymograph.

a, clock-work; *b*, kymograph-drum; *c*, face of stage for horizontal position of drum; *d*, mechanism for automatic lowering of drum during rotation. The instrument is also furnished with a device for the taking of records upon an "endless-paper" strip, which is not shown in the figure.

kymographion (kī-mo̤-graf′i-o̤n), *n.* Same as *kymograph*.

kynanthropy (kī-nan′thro̤-pi), *n.* Same as *cynanthropy*.

kynite (kī′nīt), *n.* A dynamite containing about 25 per cent. of nitroglycerin.

kynophobia (kin-o̤-fō′bi-ä), *n.* Same as ★*cynophobia*, 2.

kynurenic (kin-ṳ̄-ren′ik), *a.* Same as ★*cynurenic*.

kynurine (kin′ṳ̄-rin), *n.* Same as ★*cynurine*.

kyphos (kī′fos), *n.*; pl. *kyphoi* (-foi). [Gr. *κύφος*, a hump, hunch.] The hump or bend of the spine in kyphosis.

kyphoscoliosis (kī″fō-skol-i-ō′sis), *n.* [NL., < Gr. *κυφός*, humped, + *σκολίωσις*, crookedness.] Combined lateral and posterior curvature of the spine.

Kyphosidæ (kī-fos′i-dē), *n. pl.* [NL., < *Kyphosus* + *-idæ*.] A family of fishes inhabiting chiefly the Mediterranean Sea and the Pacific Ocean.

Kyphosinæ (kī-fo̤-sī′nē), *n. pl.* [NL., < *Kyphosus* + *-inæ*.] A subfamily of fishes belonging to the family *Kyphosidæ*.

Kyphosus (kī-fō′sus), *n.* [NL., < Gr. *κυφός*, humpbacked, + L. *-osus*, E. *-ous*.] A genus of fishes belonging to the family *Kyphosidæ*, inhabiting the Pacific Ocean, some of them American, but most East Indian.

kyphotic (kī-fot′ik), *a.* [*kyphosis* (*-ot-*) + *-ic*.] Relating to or affected with kyphosis.—**Kyphotic pelvis.** See ★*pelvis*.

kypoo (kī′pö), *n.* An astringent solid extract similar to gambier or catechu, made in Ceylon.

Kyrielle (kir-i-el′), *n.* [F. *kyrielle*, dim. of *kyrie:* see *Kyrie eleison*.] 1†. Same as *Kyrie eleison*.—2. [*l. c.*] A verse form in French poetry, divided into equal couplets ending with the same word, which serves as a refrain. *N. E. D.*

> The *kyrielle*, of which we have three specimens, . . . ought to have been discarded.
> *Saturday Rev.*, Dec. 3, 1887, p. 770.

kyrin (kī′rin), *n.* [Appar. < Gr. *κῦρος*, supreme power (?), + *-in*[2].] An end-product of proteolytic digestion, of the type of a polypeptide, as glutokyrin.

kytomitome (kī-tom′i-tōm), *n.* Same as ★*cytomitome*.

2. A symbol: (*a*) (2) In *chem.*, l- before certain compounds has reference to their levorotation, as distinguished from *dextrorotation* (d-) or *inaction* (i-). (*c*) In *mineral.*, the final letter of the general symbol *hkl*, given to the face of a crystal in the system of Miller. See ★*symbol*, 7. (*d*) In *elect.*, the symbol for ★*inductance* (which see). (*e*) In *phys.*, for *length:* used in formulæ.— **3.** An abbreviation (*l*) of *Lady;* (*m*) of *Lake;* (*n*) [*l. c.*] of *lane;* (*o*) of *Latitude;* (*p*) [*l. c.*] of *law;* (*q*) [*l. c.*] of *league* or *leagues;* (*r*) [*l. c.*] of *leave;* (*s*) [*l. c.*] in a ship's log-book, of *length;* (*t*) of *Liberal;* (*u*) [*l. c.*] of the Latin *libra*, a pound in weight; (*v*) [*l. c.*] of *link* or *links;* (*w*) [*l. c.*] of *liter;* (*x*) of *London;* (*y*) [*l. c.*] of *long;* (*z*) of *Lord;* (*aa*) [*l. c.*] of *low.*

L^3 (el), *n.* Used colloquially for *el.*, an abbreviation of *elevated*, shortened from *elevated railway.*

l. 1 e., l. 2 e., etc. Abbreviations of *left first entrance, left second entrance,* etc.

La. 2. A contraction of *Louisiana.*

L. A. An abbreviation of *Literate in Arts.*

laager, *v.* **II.** *intrans.* To halt and form a laager; encamp in a laager: as, we *laagered* five miles farther on.

laap (läp), *n.* Same as ★*laarp, lerp.* [Australia.]

laap-insect (läp'in″sekt), *n.* Same as ★*lerp-insect.*

laarp (lärp), *n.* Same as *lerp.* [Australia.]

laavenite, *n.* Same as ★*låvenite.*

Lab. An abbreviation (*a*) of *Labrador;* (*b*) [*l. c.*] of *laboratory.*

labarri (lä-bä′rē), *n.* [Also *labaria:* from a native name.] A very deadly snake, *Trigonocephalus atrox*, of Guiana and eastern Brazil. It is grayish brown with darker markings, the coloration harmonizing with the dead leaves and fallen branches.

The *Labarri* is usually found coiled on the stump of a tree, or in some other place where it can hardly be distinguished from the object on which it is lying. It is mortally poisonous when adult. It may be described as rainbow-colored in life, but its brightness fades soon after death. It is said that specimens eight feet long have been killed. *Sci. Amer.*, March 7, 1903, p. 176.

labba (lab′ä), *n.* [Arawak *lappa* (Martius, 1863, p. 311).] In British Guiana, a name applied to the paca, *Cœlogenys paca.* It seems formerly to have been also used for the agouti, as the name occurs in books of West Indian travel, and the paca was never a resident of the West Indies.

Labechia (la-besh′i-ạ), *n.* [NL.] A genus of *Stromatoporidæ* of the Silurian period, characterized by the plate-like expanded cœnosteum, the surface of which is covered with wart-like prominences which are the ends of solid vertical pillars. Between these develop irregular laminæ.

labefact† (lab′ē-fakt), *v. t.* [L. *labefacere*, pp. *labefactus*, cause to totter: see *labefaction.*] Same as *labefy.*

labefact (lab′ē-fakt), *a.* [L. *labefactus, pp.*] Weakened; tottering; giving way.

label-card (lā′bel-kärd), *n.* A card with name of owner, destination, or other particulars attached to something for identification or direction; a label.—**Label-card slide,** a slide of metal containing a label-card: usually applied to such a slide on a mail-pouch.

labellate (lā-bel′āt), *a.* [NL. **labellatus,* < *labellum,* a little lip: see *labellum.*] Long-lipped. *J. D. Dana.*

label-stop (lā′bel-stop), *n.* In *arch.*, the termination of a label or dripstone: usually a decorated boss or corbel.

Labial cartilage, one of several cartilages, occurring in pairs, attached to the anterior part of the cranium or to the cartilages bounding the mouth: typically present in sharks.

labialate† (lā′bi-ạ-lāt), *a.* and *n.* [*labial* + *-ate*^{1}.] Same as *labiate.*

labiality (lā-bi-al′i-ti), *n.* [*labial* + *-ity.*] The character of being labial, especially in phonetics and music.

labiatifloral (lā-bi-ā-ti-flō′rạl), *a.* Same as *labiatiflorous.*

labichorea (lā″bi-kō-rē′ä), *n.* [NL., < L. *labium,* lip, + NL. *chorea.*] A form of dyslalia or speech defect, due to a spasmodic closing of the lips in the enunciation of the labials, so that the latter are separated by an interval from the succeeding vowels. Also called *labichoreic stuttering.*

labichoreic (lā″bi-kō-rē′ik), *a.* Pertaining to or affected with labichorea.

Labidesthes (lab-i-des′thēz), *n.* [NL., irreg. < Gr. λαβίς (λαβιδ-), forceps, + ἔσθίειν, eat.] A genus of fishes of the family *Atherinidæ*, found in the Great Lakes and the lakes of the upper Mississippi valley.

labile, *a.* 2. In *med.*, noting a mode of application of electricity in which the active electrode is passed back and forth over the nerve or muscle to be acted upon: opposed in this sense to ★*stabile.*—**Labile equilibrium.** See ★*equilibrium.*

lability, *n.* 2. Instability, as, in *chem.*, the quality of being easily broken down to form simpler chemical compounds or even elements.

By combining these two methods there is induced a "nuclear *lability,*" which renders these eggs susceptible to the influence of carbon dioxide as a provocative of cleavage. *Jour. Roy. Micros. Soc.*, April, 1904, p. 188.

labilize (lab′i-līz), *v. t.*; pret. and pp. *labilized,* ppr. *labilizing.* [*labile* + *-ize.*] In *chem.*, to make labile or more readily susceptible of change; make unstable.

The rôle of the oxygen must have been that of a *labilising* agent, directly producing the condition for explosive decomposition in the active biogens.
Nature, Feb. 26, 1903, p. 385.

labiobidental (lā″bi-ọ̄-bī-den′tạl), *a.* and *n.* Pronounced with the lips and two teeth: a phase of *labiodental. Stud. Yale Psychol. Lab.*, X. 104.

labioglossolaryngeal (lā″bi-ọ̄-glos″ọ̄-lā-rin′jē-ạl), *a.* [L. *labium,* lip, + Gr. γλῶσσα, tongue, + λάρυγξ, larynx, + *-e-al*^{1}.] Relating to the lips, tongue, and larynx. Bulbar paralysis, affecting these parts, is sometimes so designated.

labiograph (lā′bi-ọ̄-gràf), *n.* [L. *labium,* lip, + γράφειν, write.] In *physiol.* and *psychophys.*, an instrument for recording the voluntary (in speaking) or involuntary movements of the lips.

labioguttural (lā″bi-ọ̄-gut′ụ-rạl), *a.* [L. *labium,* lip, + *guttur,* throat, + *-al*^{1}.] In *phonetics,* sounded in the throat and shaped by the lips.

labiomancy (lā′bi-ọ̄-man″si), *n.* [L. *labium,* lip, + Gr. μαντεία, divination.] Divination or interpretation by means of the motions of the lips; specifically, lip-reading.

labiomental (lā″bi-ọ̄-men′tạl), *a.* [L. *labium,* lip, + *mentum,* chin, + *-al*^{1}.] Relating to the lips and the chin.

labionasal (lā″bi-ọ̄-nā′zạl), *a.* and *n.* [L. *labium,* lip, + *nasus,* nose, + *-al*^{1}.] **I.** *a.* Formed or pronounced by the coöperation of the lips and the nose.

II. *n.* An articulate sound produced by the coöperation of the lips and the nose, or the letter or character representing such sound, namely, *m.* In pronouncing *m*, the lips are closed and nasal passages are open.

labiopalatine (lā″bi-ọ̄-pal′ā-tin), *a.* [L. *labium,* lip, + *palatum,* palate, + *-ine*^{1}.] Relating to the lips and the palate.

labioplasty (lā′bi-ọ̄-plas″ti), *n.* [L. *labium,* lip, + Gr. πλαστός, formed, + *-y*^{3}.] A plastic operation to replace the whole or a part of a lip which has been lost.

labipalp, *n.* (*b*) In lamellibranchs, an extension of the margin on each side of the mouth into a more or less elongated structure having a grooved and ciliated surface and serving to collect food-particles and conduct them to the mouth.

labization (lā-bi-zā′shọn), *n.* Same as *bebization.*

labor^1, *n.*—**Bureau of Labor.** See ★*bureau.*—**Dry labor,** childbirth attended with little or no discharge of liquor amnii.—**Federation of Labor.** See ★*federation.*—**Induced labor,** labor in which the uterus is incited to contract by artificial means.—**Labor party,** any political party formed of working-men, or professing to represent the interests of labor, that is, of working-men.—**Missed labor,** a condition in which the fetus is retained in the womb beyond the normal period of gestation.—**Postponed labor,** labor occurring after the term of normal gestation is past.—**Socialist Labor party,** a political and socialist party in the United States. It was formed in New Jersey, in 1877, out of an earlier organization (the Social Democratic Working-men's party, formed in Philadelphia in 1874), and since 1888 has figured in National and State politics with a ticket of its own.—**United Labor party,** a political party organized in the interests of labor, which, in 1888, nominated a candidate for President.

laborage (lā′bọr-āj), *n.* [*labor*^{1} + *-age.*] **1**†. Plowing; plowed land.—**2**†. Labor; work.—**3.** Payment for labor.

laboratorial (lab″ọ-rā-tō′ri-ạl), *a.* [*laboratory* + *-ial.*] Relating or belonging to a laboratory.

laboratorian (lab″ọ-rā-tō′ri-ạn), *a.* and *n.* [*laboratory* + *-an.*] **I.** *a.* Of or pertaining to a laboratory.

II. *n.* One who conducts scientific investigations in a laboratory.

laboratory, *n.* 3. The space between the fire and the flue-bridges of a reverberatory furnace in which the work is performed.—**Laboratory milk.** See ★*milk.*—**Marine laboratory,** a laboratory or observatory situated upon the ocean or its shore, and equipped with appliances for collecting, observing, and experimenting upon marine animals and plants; a marine zoölogical station.

labor-day (lā′bọr-dā), *n.* In some of the States, a legal holiday, commonly the first Monday in September, established for the benefit of the laboring classes.

laborist (lā′bọr-ist), *n.* and *a.* **I.** *n.* A member of a labor party or one who is an advocate of the interests of labor.

II. *a.* Pertaining to labor and its interests.

laborite (lā′bọr-īt), *n.* In *British politics,* a member of the Labor party.

The heavy vote given to the Liberals in England by the Labor Party, the "*Laborites,*" as they are there called, does not at all mean that the issue of protection is not the main one. *N. Y. Times*, Jan. 16, 1905.

Laboulbenia (la-böl-bē′ni-ạ), *n.* [NL. (Montagne and Robin, 1853), named after Alexandre *Laboulbène,* a French entomologist.] A genus of minute ascomycetous fungi containing numerous species parasitic upon insects, especially beetles. The perithecium is borne on a stalk-like receptacle with appendages and one or more antheridia at one side. The reproduction is sexual and resembles that of the red seaweeds. The asci are 4-spored. *L. elongata* is a cosmopolitan species found on beetles of the genera *Platynus, Colpodes,* etc.

Laboulbeniaceæ (la-böl-bē-ni-ā′sē-ē), *n. pl.* [NL., < *Laboulbenia* + *-aceæ.*] A large family of peculiar ascomycetous fungi named from the genus *Laboulbenia.*

Laboulbeniales (la-böl-bē-ni-ā′lēz), *n. pl.* [NL., < *Laboulbenia* + *-ales.*] An order of ascomycetous fungi containing the single family *Laboulbeniaceæ.* Also called *Laboulbenineæ.*

Laboulbeniineæ (la-böl-bē-ni-ī′nē-ē), *n. pl.* [NL.] Same as ★*Laboulbeniales.*

labradophyric (lab″rạ-dō-fir′ik), *a.* [*labrador(ite)* + *(por)phyr(it)ic.*] Noting porphyritic igneous rocks whose phenocrysts are labradorite. *Dana,* Manual of Geol. (4th ed.), p. 77.

Labradorean (lab-rạ-dō′rē-ạn), *a.* and *n.* Same as ★*Labradorian.*

Labradorian (lab-ra-dō′ri-an), *a.* and *n.* [*Labrador* + *-ian.*] **I.** *a.* Of or pertaining to Labrador.

II. *n.* In *geol.*, a subdivision of the Archæan rocks of New Hampshire: proposed by Hitchcock for a group below the Huronian. *Dana*, Manual of Geol. (4th ed.), p. 446.

labrador-rock (lab′ra-dôr-rok″), *n.* A rock composed almost wholly of labradorite. Same as ★*anorthosite.*

labrador-stone (lab′ra-dôr-stōn″), *n.* Same as *labradorite.*

labrick (lā′brik), *n.* A fool; an ass. [U. S. (Missouri) slang.] *S. Clemens* (Mark Twain), Pudd'nhead Wilson, i.

labrosauroid (lab-rō-sâ′roid), *a.* Related to or having the characters of the genus *Labrosaurus.*

Labrosomus (lab-rō-sō′mus), *n.* [NL. *Labrosomus* (Gill) for earlier *Labrisomus* (Swainson, 1839), < NL. *Labrus* + Gr. σῶμα, body.] A genus of blennioid fishes, found in the Atlantic from the West Indies to Brazil.

labrum[2] (lā′brum), *n.*; pl. *labra* (-brȧ). [L. *labrum*, contraction of *lavabrum*, < *lavare*, wash: see *lave*[2] and compare *lavatory*, *laver*[1].] In *Rom. archæol.*, a bath-tub, especially one of those of hard, fine material more or less richly sculptured, rather common in the museums of Italy. Also called *lavabrum.*

labrys (lab′ris), *n.* [Gr. λάβρυς (given as a Lydian word), same as πέλεκυς, an ax.] See ★*double ax.*

This discovery in the Palace of a shrine of the Double Axe, and its associated divinities, derives a special interest from the connection already established on philological grounds between *labrys*, the Carian term for the sacred Double Axe, and the name Labyrinth.
A. J. Evans, in Jour. Roy. Inst. of Brit. Architects, X. [103.

labурnic (lȧ-bėr′nik), *a.* [*laburnum* + *-ic.*] Pertaining to or derived from laburnum.—**Laburnic acid**, a substance contained in the seeds and bark of laburnum, *Laburnum Laburnum.* It is probably a mixture of organic and inorganic acids.

laburnum, *n.*—**Native laburnum.** Same as ★*clover-tree.*—**Sea-coast laburnum**, in Australia, a cosmopolitan shrub or small tree of the warmer regions, *Sophora tomentosa.* See *Sophora.*

labyrinth-beetle (lab′i-rinth-bē″tl), *n.* Any beetle of the family *Bostrychidæ* (which see). *Kirby and Spence.*

labyrinthitis (lab″i-rin-thī′tis), *n.* [NL., < Gr. λαβύρινθος, labyrinth, + *-itis.*] Inflammation of the labyrinth of the internal ear.

labyrinthodontoid (lab-i-rin-thō-don′toid), *a.* and *n.* [*labyrinthodont* + *-oid.*] **I.** *a.* Pertaining to or having the characters of the genus *Labyrinthodon.*

II. *n.* A stegocephalous amphibian related to the genus *Labyrinthodon.*

labyrinthous (lab-i-rin′thus), *a.* [*labyrinth* + *-ous*]. Having a labyrinthine or meandering arrangement, as the tubes in the interior of certain extinct sponges.

lac[2], *n.*—**Arizona lac**, the product of an insect, *Carteria Larreæ*, belonging to the *Coccidæ*, which infests the creosote-bush, *Covillea tridentata.* It resembles the gum-lac of commerce and yields a red coloring matter showing the reactions of cochineal. The substance is found as an incrustation on the twigs of the bush and contains dead bodies of the insects by which it was secreted. The Indians use it to cement their arrow-heads to the shafts, and for various medicinal purposes. This lac is also found on the twigs of a leguminous shrub, *Acacia Greggii*, growing in the arid regions of Arizona.—**Bleached lac**, the decolorized resin obtained by dissolving seed-lac in a boiling alkaline lye and passing chlorin gas through the liquid until the lac is precipitated.—**Mexican lac**, the resinous exudation from a species of *Croton.*—**Sonora lac**, the product of *Carteria Mexicana*, an insect infesting a leguminous shrub (*Coursetia glandulosa*) which grows in northwestern Mexico. The crude substance, which occurs on the twigs in the form of a brick-red incrustation, is collected by the Indians of Sonora and sold in the markets. It resembles grain-lac, but is less vividly red and has the taste of succinic acid. The natives use it in making cement and as a remedy for affections of the lungs, for fevers, and for other maladies. It consists in part of a substance similar to the shellac of commerce and yields a fine red coloring matter.

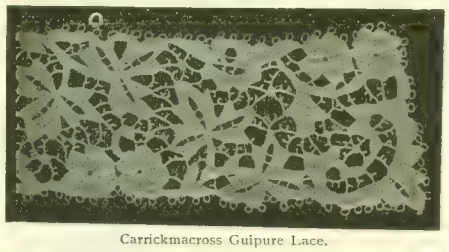
Laccadivian (lak-ȧ-div′i-an), *a.* Of or pertaining to the Laccadive Islands.

laccaic (la-kā′ik), *a.* [*lacca* + *-ic.*] Same as ★*laccic*, 2.

laccase (lak′ās), *n.* [*lacca* + *-ase.*] An oxidizing ferment which is concerned in the production of the black Japanese lacquer. It is obtained from the Japanese lac-tree, *Rhus vernicifera*, and from various fungi.

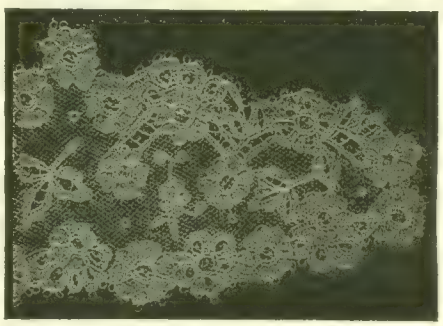
laccate, *a.* **II.** *n.* The general name of salts of laccic acid.

laccic, *a.* 2. Noting an acid, a brownish-red compound, $C_{16}H_{12}O_8$(?), obtained from lac-dye by the action of dilute hydrochloric acid. It crystallizes in minute plates, decomposes without melting at about 180° C., and resembles carminic acid.



lac-cochineal (lak′koch″i-nēl), *n.* Same as *lac-insect.*

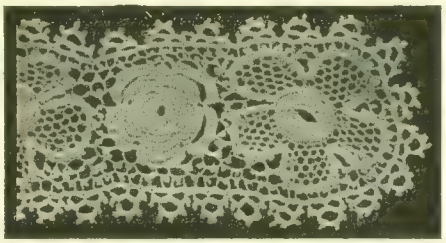
laccol (lak′ol), *n.* [*lacca* + *-ol.*] A compound contained in the juice of the lac-tree, *Rhus vernicifera.* It is probably an aromatic polybasic phenol. Under the influence of laccase it absorbs oxygen from the air and yields a black substance.



laccolite (lak′ō-līt), *n.* Same as *laccolith.*

The ontogeny of the volcano may be viewed in the light of the phylogeny traced through its fossil remains—lava sheets, tuff beds, *laccolites*, volcanic necks like those of the Mount Taylor plateau, and other products of organic action during the ages past. *Pop. Sci. Mo.*, July, 1902, p. 279.

lace, *n.*—**All-over lace**, lace of any kind which is 18 or more inches in width and in which a pattern is repeated.—**Antique lace**, a hand-made pillow-lace of heavy linen thread in a large, open, rectangular mesh: used mostly for curtains, bed-spreads, and draperies.—**Arabe lace**, a kind of coarse bobbin-lace with a large cable-edged pattern, made in Arabia and also in France and Belgium.—**Arabian lace.** Same as *Arabe* ★*lace.*—**Battenberg lace**, a kind of fine linen-thread lace in which are worked rings, picots, cords, etc., with connecting bars or brides.—**Binche lace**, a fine pillow-lace without a raised edge, the ground of which resembles a spider-web with small dots: named after Binche, Belgium.—**Bourdon lace**, a machine lace of silk and cotton with scroll-like patterns cable-edged on a regular mesh.—**Bretonne lace**, a cheap narrow pillow-lace, used for edging, etc.—**Carrickmacross lace**, an Irish lace made in both guipure and appliqué.—



Carrickmacross Guipure Lace.

Carrickmacross Appliqué Lace.

Craponne lace, a kind of inferior, stout thread guipure lace for furniture, etc.—**Cut lace.** Same as *punto tagliato* ★*lace.*—**Escurial lace**, a silk lace made in imitation of rose-point, with its patterns outlined with lustrous cord.—**Fayal lace**, a delicate and beautiful lace made by the peasant women of Fayal (one of the Azores) from the fibers of the American aloe, *Agave americana.*—**Filet lace**, any lace made with a square mesh.—**Gimp lace**, a coarse lace made by winding threads of silk, worsted, or cotton around a foundation of wire or twine, more or less open in design: chiefly employed in upholstery, though sometimes used for trimming wearing-apparel.—**Hand-embroidered lace**, point-lace embroidered with floral or fancy designs.—**Irish crochet lace**, an Irish linen

Irish Crochet Lace.

hand-made lace distinguished for its beauty of workmanship and design.—**Luxeuil lace**, a hand-made lace of Luxeuil, France; specifically, a stout, heavy fabric.—**Maltese lace.** (*a*) A hand-made lace made in the island of Malta. (*b*) A machine-made lace of coarse cotton thread. (*c*) A pillow-lace with geometric designs.—**Medici lace**, a variety of torchon lace, like ordinary insertion, with one edge scalloped.—**Mélange lace**, a heavy, black, hand-made silk pillow-lace, characterized by a blending of Spanish patterns with ordinary Chantilly effects. The edge is usually plain and straight, but is sometimes ornamented with a fine silk fringe.—**Net-lace.** Same as *punto a reticello* ★*lace.*—**Normandy lace.** Same as *Valenciennes lace.*—**Nottingham lace**, a bobbin-net lace, chiefly for curtains, originally made at Nottingham, England.—**Open lace.** Same as *punto in aria* ★*lace.*—**Oriental lace**, a kind of lace made on an embroidering-machine in which the needle and shuttle act in combination, producing both simple and complex designs.—**Point de Gêne lace**, a machine-made lace imitating point de Venise.—**Point de neige lace**, a form of lace into the border of which patterns are worked with a

Maltese Lace.

flat thread or tape.—**Point de Venise.** Same as *rose point* (which see, under *point*[1]).—**Punto a reticello lace**, lace in which the groundwork of linen is first prepared by pulling out vertical and horizontal threads until an open network is formed. This is then filled in with patterns in various stitches. Also called *net-lace.*—**Punto di Venezia lace**, Venice point. This is essentially a punto in aria lace of great richness of design. Venice point appeared at about the beginning of the seventeenth century. The manufacture was introduced by Colbert into France and the style called *French point.*—**Punto in aria lace**, lace in which the design is first drawn on a piece of paper and the outlines laid down in coarse thread. This thread is covered with buttonhole stitch and the pattern within the outline worked out with various stitches. Also called *open lace.*—**Punto tagliato lace**, the simplest of all needle-made laces. The pattern is transferred to linen and worked out with various stitches, the linen being afterwards cut away from the finished work. Also called *cut lace* and *point coupé.*—**Repoussé lace**, a variety of lace in which the designs or patterns are so worked or formed as to give a cup effect.—**Rococo lace**, an Italian lace with rococo designs.—**Seville lace**, a pillow-lace resembling torchon.—**Swiss lace**, imitation Brussels lace made in Switzerland.—**Wood-fiber lace**, artificial silk lace made from wood cellulose.—**Youghal lace**, an Irish needle-point lace of coarse thread, made in Munster county, Ireland.

lace-bowl (lās′bōl), *n.* A bowl of Oriental porcelain delicately ornamented with pierced designs of intricate lace-like pattern which are filled in with translucent glaze in the rice-grain style.

lace-bug (lās′bug), *n.* Any member of the family *Tingitidæ* (which see). *L. O. Howard*, Insect Book, p. 299.—**Hawthorn lace-bug**, an American tingitid, *Corythuca arcuata*, which lives upon leaves of the hawthorn.

lace-button (lās′but″n), *n.* The daisy-fleabane or sweet scabious, *Erigeron annuus.*

lace-flower (lās′flou″ėr), *n.* The wild carrot, *Daucus Carota.*

lace-glass (lās′glȧs), *n.* Venetian glass with lace-like designs.

lace-grass (lās′grȧs), *n.* See ★*grass.*

lace-pod (lās′pod), *n.* See *Thysanocarpus.*

laceration, *n.* 4. In *Actinozoa*, the formation of a new polyp by the separation of a portion of the basal expansion by contraction of the body.

lacertofulvin (lȧ-sėr′tō-ful-vin), *n.* [L. *lacertus*, lizard, + *fulvus*, yellow, + *-in*[2].] A yellow pigment, probably a lipochrome, found in the skin of certain reptiles.

lacery (lās′ę-ri), *n.* [*lace* + *-ery.*] 1. Laces collectively.—2. Lace-like work or embroidery.—3. An enlacement; an interlacement.

lacet (lā′set), *n.* [*lace* + *-et*[1].] In *needle-work*, a trimming made of a braid known as *lacet braid* fashioned into various designs with lace stitches.

lace-wing (lās′wing), *n.* Same as *lace-winged fly.*

Lace-winged insects. See ★*insect.*

lacewood (lās′wůd), *n.* Same as *lacebark*, 3.

Lachenalia (lak-e-nā′li-ȧ), *n.* [NL. (Jacquin, 1787), named in honor of Werner de *Lachenal* (1736–1800), professor of botany in Basel.] A genus of bulbous plants of the family *Liliaceæ.* The leaves are few and radical, the flowers are several to many on a short scape, either drooping or erect, in color ranging from white through blue, red, and yellow; and the perianth is usually very irregular, the outer segments often sepal-like. There are about 30 species, natives of

South Africa, several of which are cultivated as cool greenhouse subjects. A form of *L. tricolor* is probably best known among gardeners under the horticultural name *L. Nelsoni*. The species of *Lachenalia* are sometimes called *Cape cowslip*, and a spotted form of *L. pendula* is known as *leopard-lily*.

Lachnolæmus (lak-nō-lē'mus), *n.* A corrected spelling of ★*Lachnolaimus*.

Lachnolaimus (lak-nō-lī'mus), *n.* [NL.] A genus of labroid fishes found in the West Indies.

Lachnum (lak'num), *n.* [NL. (Retzius, 1779), < Gr. λάχνη, down, hair, fur.] A genus of ascomycetous fungi of the family *Pezizaceæ*, having more or less hairy sessile or short-stipitate apothecia and hyaline ellipsoid or spindle-shaped spores. About 130 species have been described. They are widely distributed and occur on dead sticks and stems.

lacing, *n.* **10.** Instructural work, particularly bridge work, the system of slender, diagonal members which connect the two opposite parallel members or flanges of a structural iron or steel beam, column, or strut. In lacing the several members form a single, continuous zigzag line, but do not cross one another as in latticing.

lacing-bar (lā'sing-bär), *n.* See ★*lattice-bar*.

lacing-eye (lā'sing-ī), *n.* In marine hardware, a ring or eye of metal secured to the edge of a sail and used to retain the lacing which holds the sail to the boom.

lacing-machine (lā'sing-ma-shēn″), *n.* An apparatus for automatically lacing into a continuous chain the pattern-cards of a Jacquard loom.

Laciniaria (lā-sin-i-ā'ri-ạ), *n.* [NL. (Hill, 1768), < *lacinia* (which see) + *-aria* (see *-ary*[1]), in reference to the lacerate or laciniate involucral bracts of some of the species.] A genus of plants of the family *Asteraceæ*. There are 40 or more species, all natives of eastern and central North America. *L. squarrosa* and other species are called *blazing-star* on account of their handsome rose-colored flowers. Several species have been in popular use as medicinal plants under the names *button-snakeroot, rattlesnake-master, backache-root*, and *colic-root*. See *Liatris*.

Laciniata (lā-sin-i-ā'tạ), *n. pl.* [NL., neuter pl. of **laciniatus*: see *laciniate*.] A suborder of *Lepidoptera* proposed by Packard to include only the aberrant family *Eriocephalidæ*, in which the mouth-parts differ greatly from the normal lepidopterous type. The mandibles are fairly well developed, and the maxillæ do not form a proboscis, having each two separate rather short lobes and a long five-jointed flexible palpus.

laciniation (lā-sin-i-ā'shọn), *n.* **1.** The state of being laciniate.—**2.** A laciniate projection or lobe.

lacinule (lā-sin'ūl), *n.* Same as *lacinula*.

lacinulose (lā-sin'ū-lōs), *a.* [*lacinula* + *-ose*.] Same as *lacinulate*.

lacistemaceous (las″i-stē-mā'shius), *a.* Belonging to or having the characters of the *Lacistemaceæ*.

lackage (lak'āj), *n.* [*lack*[1] + *-age*.] Shortage or deficiency in weight; lightness when compared with the standard of weight: said of coins.

lacken† (lak'ẹn), *v. t.* [*lack*[1] + *-en*[1].] **1.** To belittle; disparage; depreciate.—**2.** To lack; to be without.

"It is certain," the Italian historian continues, "that the Portuguese of the fifteenth century entirely *lackened* knowledge of any land to the south-west."
Geog. Jour. (R. G. S.), IX. 189.

lackey-caterpillar (lak'i-kat″ẹr-pil-ạr), *n.* The larva of the lackey-moth.

lackland (lak'land), *n.* and *a.* [*lack*[1], *v.*, + *land*[1].] **I.** *n.* One who lacks land or landed possessions; one who, like a younger son, inherits no territory: as, John *Lackland*, King of England.

II. *a.* Having no land.

lackmoid, *n.* Same as *lacmoid*.

lackmus, *n.* Same as *lacmus*.

La Couyère slates. See ★*slate*[2].

lacquer, *n.*—**Ke-uchi lacquer,** lacquer which has been allowed to stand several months to become thick. It is used for drawing fine lines in the decorations without danger of spreading.—**Ki-seshime lacquer.** See *seshime lacquer*, under *lacquer*.—**Ki-urushi lacquer** [Jap. *ki*, tree, + *urushi*, lacquer], crude lacquer, the sap of the *Rhus vernicifera* of Japan.—**Kuma-urushi lacquer** [Jap. *kuma*, border, + *urushi*, lacquer], lacquer colored with lampblack, used for drawing fine lines in the shading of feathers, hair, etc., on gold lacquer.—**Muranashiji lacquer** [Jap. *mura*, clustered, + *nashi*, a pear], a variety of Japanese lacquer with small gold flakes in irregular clusters. See *nashiji* ★*lacquer*.—**Nakanuri lacquer** [Jap. *naka*, middle, + *nuri*, lacquer, varnish], a pure lacquer freed from water, exposed to the light, and stirred till it becomes black: used as a basis, or undercoating, on which the finishing lacquer is afterward placed.—**Nashiji lacquer** [Jap. *nashi*, a pear], a variety of Japanese lacquer sprinkled with gold, in imitation of the skin of a pear. Also called *aventurin lacquer*.—**Nuritate lacquer** [Jap. *nuri*, lacquer, + *tate*, stir], a pure lacquer to which has been added water which had been used with a whetstone and contains fine particles of the stone in suspension: used on cheap ware.—**Roiro lacquer** [Jap. *ro-iro*, greenish black], a variety of Japanese lacquer of a pure black or greenish-black color.—**Ro-urushi lacquer** [Jap. *ro*, dark green, + *urushi*, lacquer], a dark-green varnish made by adding to branch-lacquer a small proportion of tooth-dye, which is prepared by boiling rice-vinegar in which iron filings have been placed, and by afterward exposing it to the rays of the sun for several days.—**Shunkei lacquer** [Jap. *Shun-Kei*, name of the inventor], a variety of Japanese lacquer produced by mixing oil with the sap of the lacquer-tree (*Rhus vernicifera*). It is of a yellowish color and needs no polishing. When applied to furniture, being transparent, it shows the natural grain of the wood beneath.—**Shunuri lacquer** [Jap. *shu*, vermilion, + *nuri*, varnish], a Japanese lacquer of a pure red color: same as *coral* or *vermilion lacquer* (which see, under *coral*).—**Shu-urushi lacquer** [Jap. *shu*, vermilion, red, + *urushi*, lacquer], a red lacquer which requires no final polishing. See *shunuri* ★*lacquer*.—**Su-chau lacquer** [named from a city in China], a red cinnabar lacquer with carved decoration, made in China.—**Tsugaru lacquer** [Jap. *Tsugaru*, name of a district in the province of Mutsu], a variety of Japanese lacquer with marbled or veined effects in various colors.—**Tsui-koku lacquer.** See *Tsui-shu lacquer*, under *lacquer*.—**Yeda-urushi lacquer** [Jap. *yeda*, branch], varnish obtained from the branches of the lacquer-tree; branch-lacquer. See *seshime lacquer*, under *lacquer*.

lacrymal. **I.** *a.*—**Lacrymal bay,** the recess at the internal angle of the eye.—**Lacrymal groove.** See ★*groove*.—**Lacrymal passages,** all the parts traversed by the tears from the lacrymal gland to the opening of the duct in each nasal fossa.

II. *n.* **4.** In *ichth.*: (*a*) A bone lateral to the ethmoid in fishes, the prefrontal: not homologous with the bone called 'lacrymal' by Parker. *Starks*, Synonymy of the Fish Skeleton, p. 509. (*b*) A bone in front of the eye in fishes, part of the suborbital ring; the preorbital: not homologous with the bone called 'lacrymal' by Geoffroy. *Starks*, Synonymy of the Fish Skeleton, p. 520.

lacrymist, lachrymist (lak'ri-mist), *n.* [L. *lacryma*, tear, + *-ist*.] One who weeps easily or constantly.

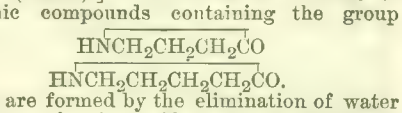
lacrymomalar, lachrymomalar (lak″ri-mō-mā'lạr), *a.* Relating to the lacrymal and malar bones: as, the *lacrymomalar* articulation. *Proc. Zool. Soc. London*, 1901, I. 139.

Lacrymonasal pillar or **process,** a slender splint of bone projecting forward and downward from the lacrymal into the nasal vacuity in the skull of the *Rhea*.—**Lacrymonasal vacuity.** See ★*vacuity*.

lacrymosal, lachrymosal (lak-ri-mō'sạl), *a.* Same as *lacrymose*.

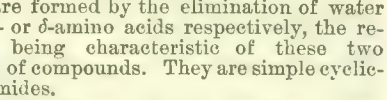
lacrymosity, lachrymosity (lak-ri-mos'i-ti), *n.* [*lacrymose* + *-ity*.] The condition of tearfulness; the quality of causing tears.

lacrymous, lachrymous (lak'ri-mus), *n.* Same as *lacrymose*.



lac sulphuris (lak sul'fū-ris). [NL., 'milk of sulphur.'] In *chem.*, an old name for sulphur precipitated at common temperature by an acid from the solution in water of an alkaline or calcic sulphid: a white, not yellow, powder.

lactacidine (lak-tas'i-din), *n.* [*lact-ic* + *acid* + *-ine*[2].] The trade-name for a mixture of lactic and salicylic acids used as a food-preservative.



lactagogue (lak'ta-gog), *n.* [L. *lac* (*lact-*), milk, + Gr. ἀγωγός, < ἀγειν, lead.] Same as *galactagogue*.

lactalbumin (lak-tal-bū'min), *n.* [L. *lac* (*lact-*), milk, + E. *albumin*.] An albuminous substance resembling serum albumin which is found in milk.

lactam (lak'tam), *n.* [L. *lac* (*lact-*), milk, + E. *am(monia)*.] The name of a class of organic compounds containing the group

or

They are formed by the elimination of water from γ- or δ-amino acids respectively, the reaction being characteristic of these two classes of compounds. They are simple cyclic-acid amides.

lactamic (lak-tam'ik), *a.* [*lactam* + *-ic*.] Noting an acid, α-aminopropionic acid, $CH_3.CHNH_2.COOH$, or alanin.

Lactaria (lak-tā'ri-ạ), *n.* [NL. (Persoon, 1797), < fem. of L. *lactarius*, milky: see *lactary*.] A genus of fungi of the family *Agaricaceæ*. They have the hymenophore continuous with the stem, and the pileus usually depressed at the center. When broken the gills and flesh exude a variously colored milky juice, whence the name. The species are numerous and some are edible. Also written *Lactarius*.

lactaric (lak-tar'ik), *a.* [*Lactar(ius)* + *-ic*.] Noting an acid, a colorless compound, $C_{15}H_{30}O_2$, contained in the mushroom *Lactarius piperatus*. It crystallizes in small needles and melts at 69.5–70° C.

lactarium (lak-tā'ri-um), *n.*; pl. *Lactaria* (-ạ). [NL., neut. of L. *lactarius*, *a.*] Same as *lactary*.

lactase (lak'tās), *n.* [L. *lac* (*lact-*), milk, + *-ase*.] A ferment which inverts lactose to dextrose and galactose.

lactatic (lak-tat'ik), *a.* and *n.* [*lactate* + *-ic*.] **I.** *a.* Promoting the secretion of milk in the breast.

II. *n.* A galactagogue.

lactational (lak-tā'shọn-ạl), *a.* [*lactation* + *-al*[1].] Relating to the period of lactation. *Med. Record*, Feb. 28, 1903, p. 337.

lactescency (lak-tes'ẹn-si), *n.* Same as *lactescence*.

lactification (lak-ti-fi-kā'shọn), *n.* [L. *lac* (*lact-*), milk, + *-ficatio(n-)*, < *-ficare*, < *facere*, make.] The production of lactic acid in milk and other fluids by the lactic-acid bacteria.

lactifluous (lak-tif'lọ-us), *a.* [L. *lac* (*lact-*), milk, + *fluere*, flow, + *-ous*.] Yielding a thick milky juice; flowing with milk.

lactiform† (lak'ti-fôrm), *a.* [L. *lac* (*lact-*), milk, + *forma*, form.] Like milk.

lactigenous (lak-tij'e-nus), *a.* [L. *lac* (*lact-*), milk, + *-genus*, -producing.] Having the properties of a galactagogue.

lactim (lak'tim), *n.* [*lact(am)* + *-im*.] The name of a class of organic compounds containing the group –C(OH):N–. It is a tautomeric and, occasionally, isomeric form of the lactam radical.

lactimide (lak-tī'mid), *n.* [*lact-ic* + *imide*.] A colorless neutral compound, $CH_3CH{<}^{CO-NH}_{NH-CO}{>}CHCH_3$, prepared by heating *a*-aminopropionic acid in a current of hydrochloric-acid gas. It crystallizes in needles or plates, melts at 275° C., and sublimes.

lactite (lak'tīt), *n.* [L. *lac* (*lact-*), milk, + *-ite*[2].] The trade-name of a substitute for bone or celluloid, prepared by gelatinizing casein with borax solution and treating the product with acetic acid and lead acetate and drying it under pressure.

lactivorous (lak-tiv'ọ-rus), *a.* [L. *lac* (*lact-*), milk, + *vorare*, feed upon.] Feeding on milk.

lactoalbumin (lak″tọ-al-bū'min), *n.* Same as ★*lactalbumin*.

lactobutyrometer, *n.*—**Marchand's lactobutyrometer,** an instrument for determining the quantity of butter-fat in milk. It depends upon the solubility of the fat in ether and the formation of a layer of liquid fat at 40° C. when the ether is shaken with alcohol of 86–90 per cent. The volume of the layer of fat is measured by a scale, and the percentage of the same in the milk is obtained by a simple calculation.

lactocaramel (lak-tọ-kar'ạ-mel), *n.* [*lact-ic* + *caramel*.] Caramelized lactose.

lactocholine (lak-tọ-kol'in), *n.* [*lact-ic* + *choline*.] A compound of choline and ethylidene lactic acid.

lactochrome (lak'tọ-krōm), *n.* [L. *lac* (*lact-*), milk, + Gr. χρῶμα, color.] In *chem.*, a name given by Blyth to a nitrogenous substance of an orange color, obtained in very small quantity from the whey of milk after casein and albumin had been removed, and believed by him to be the source of the yellow color of milk and of butter.

lactoglobulin (lak-tọ-glob'ū-lin), *n.* [L. *lac* (*lact-*), milk, + E. *globulin*.] A globulin found in milk.

lactol (lak'tol), *n.* [*lact-ic* + *-ol*.] A colorless, tasteless compound, the lactic-acid ester of β-naphthol: an intestinal antiseptic.

lactolase (lak'tọ-lās), *n.* [*lactol* + *-ase*.] A ferment of vegetable origin which supposedly causes the formation of lactic acid during anaërobic fermentation.

lactometric (lak-tọ-met'rik), *a.* Of or pertaining to a lactometer or to the measurements and tests of a lactometer. *Sadtler*, Handbook of Indust. Chem., p. 265.

lactonic (lak-ton'ik), *a.* [*lactone* + *-ic*.] Pertaining to a lactone.—**Lactonic acid.** Same as ★*galactonic acid*.

lactopepsin (lak-tọ-pep'sin), *n.* [*lacto(se)* + *pepsin*.] A solution containing various digestive ferments and lactose: a commercial preparation.

lactophen (lak′tō-fen), *n.* [*lact(ic)* + *phen(yl)*.] Same as ★*lactophenine*.

lactophenine (lak-tō-fen′in), *n.* [*lactophen* + *-ine*².] A colorless crystalline compound, $C_2H_5O^1C_6H_4^4NHCOCHOHCH_3$, used in medicine as a febrifuge and soporific.

Lactophrys (lak′tō-fris), *n.* [NL., < ★*lact(oria)*, a milk-cow (< L. *lac* (*lact-*), milk), + Gr. *ὀφρύς*, eyebrow. The allusion is to the projecting horns of *L. tricornis*.] A subgenus of fishes of the family *Ostraciidæ*, most of them found in American waters.

lactopicrin (lak-tō-pik′rin), *n.* [L. *lact(uca)*, lettuce, + E. *picrin*.] An amorphous, bitter substance, one of the active principles of Canadian lettuce, *Lactuca Canadensis*.

lactoproteid (lak-tō-prō′tē-id), *n.* [*lact-ic* + *proteid*.] Any one of the albumins which occur in milk.

lactoprotein (lak-tō-prō′tē-in), *n.* Same as ★*lactoproteid*.

Lactoridaceæ (lak″tō-ri-dā′sē-ē), *n. pl.* [NL. (Engler, 1887), < *Lactoris* (*Lactorid-*) + *-aceæ*.] A family of dicotyledonous archichlamydeous plants of the order *Ranales*, containing the single monotypic genus ★*Lactoris* (which see).

lactoridaceous (lak″tō-ri-dā′shius), *a.* Belonging to the plant-family *Lactoridaceæ*.

Lactoris (lak-tō′ris), *n.* [NL. (Philippi, 1865), < L. *lactoris*, the Latin name of some unidentified plant.] A genus of plants constituting the family *Lactoridaceæ*. It consists of a single species, *L. Fernandeziana*, from the island of Juan Fernandez, a low, diffusely branching shrub with smooth, obovate, entire, stipulate leaves, the short-pedicelled, inconspicuous flowers borne singly in the axils of the leaves or in small leafy axillary racemes. The perianth segments are three, calyx-like; the stamens six, in two series; the carpels three, only slightly united with each other.

lactosazone (lak-tōs-az′ōn), *n.* [*lact(ose)* + *azo-* + *-one*.] A yellow compound, $C_{24}H_{32}O_9N_4$, prepared by the action of phenylhydrazine on lactose. It crystallizes in needles and melts at 200° C. Also called *lactose-osazone*.

lactoscope, *n.*—**Feser's lactoscope**, an apparatus for determining the quality of milk. A known volume of milk is diluted with a measured volume of water until the graduations on a central white staff become visible. The extent of dilution determines the value of the milk.

lactose-osazone (lak′tōs-ōs-az″ōn), *n.* Same as ★*lactosazone*.

lactoserum (lak-tō-sē′rum), *n.*; pl. *lactosera* (-rä). [L. *lac* (*lact-*), milk, + NL. *serum*.] A serum, obtained by immunization with milk, which contains precipitins (coagulins) corresponding to all the albumins of the milk and some related albumins of the body of the animal.

lactosin (lak′tō-sin), *n.* [*lactose* + *-in*².] A colorless, dextrorotatory, non-reducing compound, $C_{36}H_{62}O_{31}.H_2O$, found in the root of *Silenaceæ*. It forms small lustrous crystals which give off water at 110° C.

lactothermometer (lak″tō-thėr-mom′e-tėr), *n.* [L. *lac* (*lact-*), milk, + E. *thermometer*.] A small thermometer inclosed in a glass tube and used in testing milk.

lactotoxin (lak-tō-tok′sin), *n.* [L. *lac* (*lact-*), milk, + Gr. *τοξ(ικόν)*, poison, + *-in*².] A ptomaïne found in milk: supposedly the same as the tyrotoxicon of cheese.

lactoviscometer (lak″tō-vis-kom′e-tėr), *n.* [L. *lac* (*lact-*), milk, + *viscus*, viscus, + *metrum*, measure.] An instrument for indicating the quality and composition of milk by its rate of flow through a capillary tube. *Sci. Amer. Sup.*, Nov. 7, 1903, p. 23285.

lactucerin (lak-tū′sē-rin), *n.* [L. *lactuca*, lettuce, + *-er* + *-in*².] 1. The dried milky juice of the European lettuce, *Lactuca virosa*. It consists of a mixture of *α*- and *β*-lactucerol acetates and has the formula $C_{20}H_{32}O_2$.—2. A colorless dextrorotatory compound, $C_{28}H_{44}O_2$ (?), contained in the juice of the European lettuce. It crystallizes in microscopic needles and melts at 210° C. Also called *lactucon*.

lactucerol (lak-tū′sē-rol), *n.* [*lactucer-in* + *-ol*.] A bitter, colorless, dextrorotatory compound, $(C_{18}H_{30}O.H_2O)_2$, obtained from the dried juice of the European lettuce, *Lactuca virosa*. It exists in two modifications termed *α*- and *β*-*lactucerol*. The former crystallizes in long, silky, lustrous needles, melts at 166–181° C., and may be distilled in an atmosphere of carbon dioxid; the latter crystallizes from ether in long needles with a silvery luster, from alcohol as a gelatinous mass.

Lactucic acid. (*a*) A bitter, acrid, brownish-green, amorphous compound obtained from the juice of *Lactuca Canadensis*. (*b*) A light-yellow crystalline compound, $C_{40}H_{58}O_{11}$ (?), formed by the action of dilute sulphuric acid on lactucarium. It gives a wine-red color with alkalis.

lactucin (lak-tū′sin), *n.* [L. *lactuca*, lettuce, + *-in*².] A colorless compound, $C_{40}H_{48}O_{13}$ or $C_{22}H_{26}O_7$ or $C_{22}H_{28}O_8$, obtained from the dried juice of the common lettuce, *Lactuca sativa* and *L. sagittata*. It crystallizes in pearly scales.

lactucol (lak-tū′kol), *n.* [L. *lactuca*, lettuce, + *-ol*.] A colorless dextrorotatory compound, $C_{13}H_{20}O$, prepared by fusing lactucerin with potassium hydroxid. It crystallizes in needles melting at 162° C.

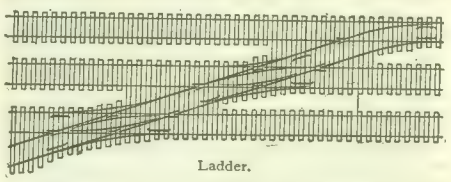
lactucon (lak-tū′kon), *n.* Same as ★*lactucerin*.

lactucone (lak-tū′kōn), *n.* Incorrect for ★*lactucon*.

lactucopicrin (lak-tū-kō-pik′rin), *n.* [L. *lactuca*, lettuce, + E. *picrin*.] An amorphous bitter principle, not well known, said to be contained in lactucarium.

lactumen (lak-tū′men), *n.* [NL., < L. *lac* (*lact-*), milk.] Same as *milk-blotch*.

lacturamic (lak-tū-ram′ik), *a.* [*lact-ic* + *ur-ea* + *am(ine)* + *-ic*.] Derived from lactic acid and urea.—**Lacturamic acid**, a colorless compound, $NH_2CONHCH(CH_3)COOH$, prepared by boiling lactyl urea with barium-hydroxid solution; urein-2-propanoic acid. It crystallizes in small rhombic prisms and melts at 155° C.



lactyl (lak′til), *n.* [L. *lac* (*lact-*), milk, + *-yl*.] A lactic-acid radical: as, *lactyl* chlorid, $CH_3.CHCl.CO.Cl$.

lacunary, *a.* 2. Consisting of lacunes, as, for the most part, the circulatory system in *Mollusca*.

lacuscular (lā-kus′kū-lär), *a.* [L. *lacusculus*, a small lake (dim. of *lacus*, lake, pool), + *-ar*³.] Relating to or inhabiting small pools.

Lacustrine age or **period.** See ★*age*¹.

ladder, *n.* 3. A series of buckets for dredging and filling which are carried up and down an incline; a bucket-conveyer.—4. In *railroads*, a track which connects by switches the ends of a series of parallel tracks and is used in sorting cars in a drill-yard. See ★*drill-yard*.

Ladder.

—**Adjustable ladder**, a ladder used in gymnasiums for exercising, so swung on supports that it may be placed in an upright, horizontal, or slanting position, and may hang against the wall when not in use.—**Indian ladder**, a ladder having a single pole with steps or footholds on the sides; a tree-ladder: so called because, as used by the Indians of the southwestern United States, it is formed from a tree-stem by lopping off the branches a few inches from the stem. A firemen's scaling-ladder is essentially an Indian or tree-ladder. See *ladder*, 1.—**Pneumatic extension ladder.** Same as *aërial* ★*truck*.—**Rope ladder.** See *rope*¹, *n.*—**Telescopic aërial ladder.** Same as *aërial* ★*truck*.

ladder-back (lad′ėr-bak), *n.* A chair-back which is made of horizontal slats passing from one side to the other.

ladder-beetle (lad′ėr-bē′tl), *n.* An American chrysomelid beetle, *Calligrapha scalaris*, which feeds on elm, alder, and willow. It is yellowish-white in color, with ladder-shaped dark markings. Also *linden leaf-beetle*.

ladder-cell (lad′ėr-sel), *n.* A scalariform cell. See *scalariform*, 1 (*b*), and *scalariform vessels*, under *scalariform*.

ladder-hook (lad′ėr-hůk), *n.* A double hook, with a set-screw, used to hold a ladder in place on a roof or against a building.

laddering (lad′ėr-ing), *n.* [*ladder* + *-ing*¹.] A narrow insertion of lace or muslin used in dressmaking, consisting of alternate bars and open spaces, somewhat resembling a ladder. Ribbons may be run in and out through these for ornament. Also called *beading*.

ladder-point (lad′ėr-point), *n.* A kind of stitch resembling ladder-stitch.

ladder-tape (lad′ėr-tāp), *n.* A woven tape consisting of two long pieces connected by short ones, something like the crosspieces of a ladder: used for making Venetian blinds.

ladder-track (lad′ėr-trak), *n.* See ★*drill-yard*.

ladia (lä-di-ä′), *n.* [Also *lodia*, *lodja*, etc.; < Russ. *ladiyá*, *ladĭyá*, also *lodiyá*, *lodĭyá*, a decked boat with a mast.] Same as ★*lodja*.

la-di-da (lä-di-dä′), *a.* and *n.* [Also extended **ladidady*, spelled *lardy-dardy*; syllables suggestive of a languid or mincing speech or manner.] I. *a.* Languidly genteel in speech or manner; foppishly affected.

II. *n.* A languidly genteel person; an affected fop or 'swell.' [Colloq.]

la-di-da (lä-di-dä′), *v. i.* [Also extended *lardy-dardy*; < *la-di-da*, *a.*] To act in a languidly genteel manner; pose as a 'swell.'

> I like to *la-di-da* with the ladies,
> For that is the style that suits
> The noble name and glorious fame
> Of Captain de Wellington Boots.
>
> *Stirling Coyne*, The Widow Hunt, quoted in N. & Q., 9th [ser., VIII. 19.

Ladinian stage. See ★*stage*.

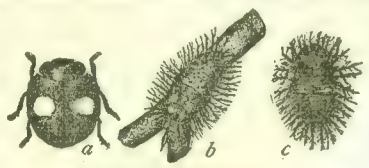
ladle, *n.* 5. A burghal duty charged on grain, meal, and flour brought to market for sale; the proceeds obtained from that duty: from the dish or vessel used to measure the grain or meal. *Jamieson*, Scottish Dict., Sup. [Scotch.] —**Safety-ladle**, a foundry-ladle which is tipped by means of a worm, thus facilitating the steady and safe pouring of the metal. Only large ladles are thus equipped.

ladling (lā′dling), *n.* Same as *lading*, *n.*, 3.

ladling-hole (lā′dling-hōl), *n.* Same as *lading-hole*.

Lad'p. A contraction of *Ladyship*.

ladrone, *n.* 2. In the Philippine Islands, among American soldiers, a hostile Filipino soldier or 'insurgent.'



> Thus we not only get *ladrone* as a substitute for "insurgent," which in turn is a substitute for "the enemy," or "the Filipino forces," but "ladronism" appears in the news dispatches as a harmless equivalent for resistance to an armed invader.
>
> *Springfield Republican*, quoted in N. Y. Evening Post, [April 4, 1903.

ladronism (la-drōn′izm), *n.* [*ladrone* + *-ism*.] The character or conduct of a ladrone or robber. See extract under ★*ladrone*, 2.

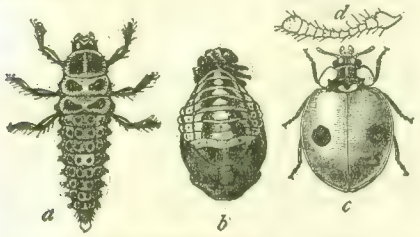
> *Ladronism* reached its maximum early last spring, when a dozen provinces, some of them near Manila, were infested with them. . . . At present there are scarcely any ladrones left, only a few in Albay Province, in southern Luzon, where they have not been pursued with as much vigor as elsewhere, but recent advices indicate that the constabulary have since destroyed their bands.
>
> *Nat. Geog. Mag.*, March, 1904, p. 111.

lady, *n.* 10. In *astrol.*, a term designating the planet Venus when in the circumstances under which, if a masculine planet, she would be termed *lord*: as, *lady* of the ascendant.—**Lady altar**, the altar in a Lady chapel dedicated to the Virgin Mary.—**Lady in waiting**, a lady who is in attendance upon a queen. See *maid of honor* (*a*).—**Lady's cloth.** See ★*cloth*.—**Lady's friend.** See ★*friend*.—**Lady's looking-glass.** Same as *Venus's looking-glass* (which see, under *Venus*).

ladybird, *n.*—**Ashy-gray ladybird**, a coccinellid beetle, *Cycloneda abdominalis*, of ashy-gray color, ornamented with seven black spots on the thorax and eight on each wing-cover. It is often found in abundance upon orange-trees, where its larvæ prey upon plant-lice and young scale-insects.—**Bean ladybird.** Same as ★*bean-beetle* (which see).—**Blood-red ladybird**, an American coccinellid beetle, *Cycloneda sanguinea*, with blood-red elytra and a black thorax spotted with orange.—**Boreal ladybird**, an American coccinellid beetle, *Epilachna borealis*, of phytophagous habits. It feeds upon the leaves of cucumber, melon, and other cucurbitaceous plants.—**Cactus ladybird**, an American coccinellid beetle, *Chilocorus cacti*, occurring commonly in the southwestern United States, where it feeds on scale-insects.—**Comely**

Cactus Ladybird (*Chilocorus cacti*).
a, beetle; *b*, pupa; *c*, larva. Enlarged.

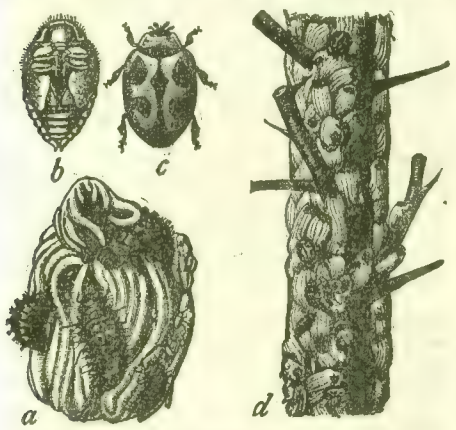
ladybird, an American coccinellid beetle, *Coccinella venusta*, pink in color and marked with 10 large black spots. —**Convergent ladybird**, an American coccinellid beetle, *Hippodamia convergens*, of wide distribution; a



Convergent Ladybird (*Hippodamia convergens*).
a, adult; *b*, pupa; *c*, larva: all enlarged.
(Chittenden, U. S. D. A.)

noted enemy of injurious plant-lice.—**Eyed ladybird**, an American coccinellid beetle, *Cycloneda ocularta*, occurring in the Southern States, California, and Mexico.—**Five-spotted ladybird**, an American coccinellid beetle, *Coccinella quinquenotata*.—**Herbivorous ladybird**, any species of the coccinellid genus *Epilachna*, all of which, in both larval and adult stages, are phytophagous and not carnivorous; specifically, in the eastern United States, the

squash ★*ladybird* (which see).—**Nine-spotted ladybird,** *Coccinella novemnotata*, a brick-red species with 9 black spots.— **Painted ladybird,** *Harmonia picta*, straw-yellow marked with black.— **Plain ladybird,** *Cycloneda sanguinea*, light red without elytral markings.— **Squash ladybird,** *Epilachna borealis*, a phytophagous species whose larvæ feed on the leaves of squash and other cucurbits.— **Thirteen-spotted ladybird,** *Hippodamia tredecimpunctata*, brick-red with 13 black spots.— **Twice-stabbed ladybird,** *Chilocorus bivulnerus*, black with two red spots.— **Two-spotted ladybird,** *Adalia bipunctata*, red with one black spot on each wing-cover.



Nine-spotted Ladybird (*Coccinella novemnotata*). Two and a half times natural size.

Two-spotted Ladybird (*Adalia bipunctata*).
a, larva; *b*, pupa; *c*, adult; *d*, antenna of same: all enlarged. (Marlatt, U. S. D. A.)

ladybug, *n.*—**Australian ladybug,** specifically, in California, *Vedalia* (*Novius*) *cardinalis*, an Australian

Australian Ladybug (*Vedalia* (*Novius*) *cardinalis*).
a, ladybug larvæ feeding on female and egg-sac of fluted scale; *b*, pupa; *c*, ladybug; *d*, orange twigs showing scale and ladybugs: *a*, *b*, *c*, enlarged; *d*, natural size. (Marlatt, U. S. D. A.)

coccinellid beetle brought by the United States Department of Agriculture to kill off the white or fluted scale (*Icerya purchasi*). See ★*Icerya*, with cut.

lady-by-the-gate (lā″di-bī-ᵺē-gāt′), *n.* The soapwort or bouncing-bet, *Saponaria officinalis*.

lady-crab, *n.* 2. (*a*) See *crab*[1], 1. (*b*) In the Channel Islands, *Portunus puber*.

ladyfish, *n.* 4. A trachinoid fish, *Sillago domina*, found in the Bay of Bengal and generally throughout the East Indian archipelago. —5. The ten-pounder.—6. A mermaid. [Humorous.]

> "A judge of mermaids, he will find
> Our *ladyfish* of every kind
> Inspection will repay."
> *W. S. Gilbert*, 'Bab Ballads,' Captain and the Mermaids.

ladyish (lā′di-ish), *a.* Somewhat like a lady; having the airs of a fashionable lady. *N. E. D.*

ladyism (lā′di-izm), *n.* The condition and manners of an affected "fine lady." *N. E. D.*

ladykind (lā′di-kīnd), *n.* The women of a family or party. Compare *womankind*. *Scott.*

lady-laurel (lā′di-lâ″rel), *n.* See ★*laurel*.

Lady-mass (lā′di-mȧs), *n.* A mass said specifically in honor of the Virgin Mary.

lady-pea (lā′di-pē), *n.* See ★*pea*[1].

Lady-quarter (lā′di-kwâr″tėr), *n.* In England, the quarter of the year in which Lady-day occurs.

lady's-laces (lā′diz-lā″sez), *n.* The ribbon-grass, *Phalaris arundinacea*. Also called *bride's-laces*.

lady's-lint (lā′diz-lint), *n.* The greater stitchwort, *Alsine Holostea*.

lady's-milk (lā′diz-milk), *n.* The milk-thistle, *Mariana Mariana*. Also called *Virgin Mary's thistle*.

lady's-needlework (lā′diz-nē″dl-wėrk), *n.* The hedge-parsley, *Torilis Anthriscus*.

lady's-nightcap (lā′diz-nīt″kap), *n.* The hedge-bindweed, *Convolvulus sepium*.

lady's-paintbrush (lā′diz-pānt″brush), *n.* See ★*Emilia*.

lady's-pocket (lā′diz-pok″et), *n.* The spotted touch-me-not, *Impatiens biflora*: so called from the saccate sepal of the flower.

lady's-purse (lā′diz-pėrs), *n.* The shepherd's-purse, *Bursa Bursa-pastoris*.

lady's-shoes-and-stockings (lā′diz-shöz″and-stok″ingz), *n.* The bird's-foot trefoil, *Lotus corniculatus*. Also called *shoes-and-stockings*.

lady's-thimble (lā′diz-thim″bl), *n.* The harebell or bluebell, *Campanula rotundifolia*. The name is also applied to the foxglove.

Laekenian sands. See ★*sand*[1].

Læliorchis (lē-li-ôr′kis), *n.* [NL. (Wight, 1905), < *Lælia*, an untenable name for the genus, + *Orchis*.] A genus of monocotyledonous plants of the family *Orchidaceæ*. See *Lælia*.

læmoparalysis (lē″mō-pa-ral′i-sis), *n.* [NL., < Gr. *λαιμός*, throat, + *παράλυσις*, paralysis.] Paralysis of the pharynx or esophagus.

læmoscirrhus (lē-mō-sir′us), *n.* [NL., < Gr. *λαιμός*, throat, + *σκίρρος*, a tumor.] Cancer of the gullet.

læmostenosis (lē″mō-stē-nō′sis), *n.* [NL., Gr. *λαιμός*, throat, + *στένωσις*, narrowing.] Temporary or permanent constriction of the esophagus.

Laënnec's cirrhosis. See ★*cirrhosis*.

læotropism (lē-ot′rō-pizm), *n.* [*læotrop-ic* + *-ism*.] The state of being læotropic.

læsio enormis (lē′sio ē-nôr′mis). [L., 'excessive injury.'] In *civil law*, the injury sustained by one party to a contract who has suffered a loss of more than one half the value of the contract by reason of the fraud or overreaching conduct of the other party.

Læstadia (lē-stā′di-ą), *n.* [NL., named for Lars Levi *Laestadius*, a clergyman and botanist of Lapland.] An untenable generic name for *Guignardia*, still much used.

lætic (lē′tik), *a.* [LL. *læticus*, < *lætus*, a foreign bondman, appar. from the OTeut. term represented by AS. *læt*, in a similar sense.] Pertaining to the læti, foreign cultivators of the soil during the later Roman Empire, who paid tribute for their land.

lætificant, *a.* See ★*letificant*.

Lafayette group. See ★*group*[1].

lag[1], *n.* 6. A term of hard labor or transportation. [Australia.]— 7. In *elect.*, the displacement of phase of an electric wave back, or behind (in time), to another electric wave: used mainly with regard to alternating-current circuits.—8. See *lagging of the tides*, under *lagging*.—**Angle of lag.** (*a*) In *elect.*, the angular displacement by which an alternating current follows the electromotive force. This lag occurs in alternating-current electrical circuits when there is inductance at any point in the line. (*b*) The angle corresponding to the lag of the tides; the hour-angle between the lunar transit and the flood-tide; the shifting of the earth's magnetic system from a symmetrical distribution about the noon meridian into the observed eccentric position.—**Lag of brushes,** in *elect.*, the backward shift of brushes on the commutator of an electric machine.—**Magnetic lag.** See *magnetic* ★*hysteresis*.

lag-angle (lag′ang″gl), *n.* See *angle of* ★*lag*.

Laganidæ (la-gan′i-dē), *n. pl.* [NL., < *Laganum* + *-idæ*.] A family of irregular echinoids, of the order *Gnathostomata*, typified by the genus *Laganum*.

Laganium (la-gā′ni-um), *n.* Same as ★*Laganum*.

Laganum (lag′ą-num), *n.* [NL. (Gray, 1855), < Gr. *λάγανον*, a broad cake of meal and oil.] The typical and only genus of the family *Laganidæ*. Also *Laganium*.

lagarto, *n.* 2. A common name of two different fishes belonging to the family *Synodontidæ*, both of the Atlantic.

lag-barrel (lag′bar″el), *n.* An octagonal barrel, or bar, having an intermittent rotary motion for the pattern-chain of a dobby-loom.

lag-bolt (lag′bōlt), *n.* Same as *lag-screw*, 1 and 2.

laggardism (lag′ard-izm), *n.* [*laggard* + *-ism*.] Sluggishness; the characteristic of hanging back; lagging.

laggardly (lag′ard-li), *adv.* Loiteringly; lazily; sluggishly.

lagger[1], *n.* 2. Same as *lag*[1], *n.*, 5.

lagger[3] (lag′ėr), *n.* A sailor.

lagging, *n.* 4. (*b*) A covering for the face of a pulley, designed to increase its effective diameter or to augment the adhesion of the

belt.— 5. Same as ★*lag*[1], *n.*, 7.— 6. *Naut.*, the part of a barrel-stave beyond the head. Also spelled *laggin*.

lag-last (lag′lȧst), *n.* and *a.* **I.** *n.* One who hangs back; a loiterer; one who falls behind.

II. *a.* Lingering; hanging back; lagging.

lagna (läg′nä), *n.* [Skt. *lagna*, Hind. *lagan*, point of intersection, point where the sun and the planets rise, pp. of √*lag*, adhere to, pierce, touch, etc.] The point on the ecliptic which is rising at any given moment. *Geog. Jour.* (R. G. S.), XVI. 703.

Lagoa, *n.* 2. [*l. c.*] A moth of this genus. —**Waved lagoa,** an American megalopygid moth, *Lagoa crispata*, yellowish in color, with wavy lines running from near the base to the tips of the wings. Its larvæ feed on the plum, apple, blackberry, and other trees and plants.

Lagochila (lag-ō-kī′lą), *n.* [NL., < Gr. *λαγώς*, hare, + *χείλος*, lip.] A genus of fishes belonging to the family *Catostomidæ*, the suckers, found in the Mississippi valley.

lagomorph (lag′ō-môrf), *n.* Any member of the *Lagomorpha*, a superfamily of rodents containing the hares and pikas.

> No sufficiently primitive stages of the teeth of either the Histricomorphs or the *Lagomorphs* have to my knowledge as yet been found. *Amer. Jour. Sci.*, Nov. 1903, p. 367.

lagomorphous (lag-ō-môr′fus), *a.* Of or pertaining to the *Lagomorpha*: same as *lagomorphic*.

lagophthalmy† (lag-of-thal′mi), *n.* Same as *lagophthalmia*.

lagopous (la-gō′pus), *a.* [Gr. *λαγώπους*, hare-footed (< *λαγώς*, hare, + *πούς*, foot), + *-ous*.] In *bot.*, soft and hairy like a hare's foot.

Lagrange beds. See *Lafayette* ★*group*.—**Lagrange disk.** Same as *interfusion* ★*disk*.—**Lagrange's map-projection.** See *map-projection*, under *projection*.

lag-ship (lag′ship), *n.* A transport used for taking convicts to New South Wales, or one used as a prison. [Cant, Eng.]

lag-spike (lag′spīk), *n.* A form of spike in which the part that enters the wood has a thread like that of a wood-screw or lag-screw: used for holding railway-rails to the ties or other substructure.

> The spike may be driven into the wood by a maul or sledge, but it can be taken out only by unscrewing. The thread has a ratchet-tooth section, with the long slope on the advancing side, and the straight radial helix opposed to motion toward the end where the head is. Also called *screw lag-spike*.

laguana (lä-gwä-nä′), *n.* [Sp. *la guanábana*, the soursop (the fruit), < *guanábano*, the sour-sop tree, of Carib origin.] In Guam, the sour-sop, *Anona muricata*. See *Anona*.

lag-wood (lag′wůd), *n.* In *ship-building*, the wood obtained from large branches of the oak near the head of the tree.

L. A. H. An abbreviation of *Licentiate of the Apothecaries' Hall*.

laid, *p. a.* 3. In *embroidery*, stitched upon a ground. Gold and silver thread, and silk cords, are frequently treated in this way.

> On the satin Stuart bindings we find a prevailing use of fine coloured floss silks, . . . and in later times an extensive use of '*laid*' silver thread backgrounds, metal cords, wires and metal threads of numberless patterns.
> *C. Davenport*, in Burlington Mag., March, 1904, p. 268.

Laid and set, in *plastering*, finished ready for painting or papering: said of plaster-work on lath as distinguished from that done on solid masonry.—**Laid down,** an expression used with reference to British warvessels in connection with the date of placing the first keel-plates on the blocks: as, the battleship was *laid down* June 10th, 1905.

Laille shales. See ★*shale*[2].

laiose (lī′ōs), *n.* [Gr. *λαιός*, left, + *-ose*.] Same as *Leo's* ★*sugar*.

lair[1] (lâr), *v.* [*lair*[1], *n.*] **I.** *trans.* 1. To put or have put in a lair or den.— 2. To shelter; hold as in a lair.

> A mountain seems
> To dwellers round its bases but a heap
> Of barren obstacle that *lairs* the storm
> And the avalanche's silent bolt holds back
> Leashed with a hair.
> *Lowell*, The Cathedral, p. 62.

II. *intrans.* 1. To lie (on); rest inactively. —2. To enter a lair; lie down (in); lurk.

lairage (lâr′āj), *n.* Space where cattle may lie down and rest. *N. E. D.*

laissez-aller (lā-sā-zä-lā′), *n.* [F., impv. of *laisser*, let; *aller*, go.] A letting go; unrestraint: implying sometimes a little too much unconventionality. Also *laisser-aller*.

laitance (lā-tons′), *n.* [F., < *lait*, milk.] The milky washings from the surface of concrete which has recently been laid under water.

lake[1], *n.*—**Capillary lake.** See ★*capillary*.—**Glacial lake,** a lake formed by the damming of the natural drainage of a region by a glacier, which thus hinders the dis-

charge of the water.—**Karst lake.** See ★*karst.*—**Lake country,** a country abounding in lakes; specifically, a district in England comprising parts of Lancashire, Cumberland, and Westmoreland. See *Lake School,* under *lake*[1].—**Lake poet.** See *Lake School.*—**Ox-bow lake,** a crescentic or nearly circular lake, occupying a meander that has been deserted by the river that formed it.—**Relict lake,** a lake remaining on a land-surface from which the sea has withdrawn.—**Soda lake,** a saline lake in which the salinity is due to sodium carbonate.—**Walled lake,** a lake provided with a wall of gravel and boulders which nearly or quite encircles it and which is heaped up at the upper edge of the strand by the expansion of the ice when freezing in the winter. Walled lakes are not uncommon in Wisconsin and Minnesota.

lake[3], *n.*—**Carmine lake.** See ★*carmine.*

lake[3] (lāk), *v.* [*lake*[3], *n.*] **I.** *intrans.* To become laky, or like a lake (pigment) in color. See ★*laky*[2].

In a case of leukæmia, *laking* was almost complete in a short time. *Med. Record,* June 13, 1903, p. 953.

II. *trans.* To cause to resemble a lake (pigment) in color; specifically, discharge (the hemoglobin) rapidly from the erythrocytes into the blood-plasma.

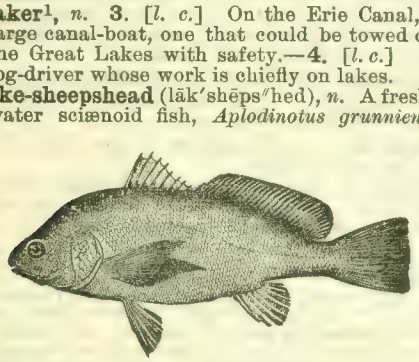
For the preparation of hæmoglobin the blood was collected in ammonium oxalate, washed, *laked* with distilled water, centrifugalized to get rid of the stroma, treated with 25 per cent. absolute alcohol, upon the addition of which the crystals of oxyhæmoglobin are deposited at 0° Centigrade. *Science,* March 6, 1903, p. 369.

lake-basin (lāk′bā″sn), *n.* **1.** The area occupied by a lake.—**2.** The area from which the waters of a lake are collected.

lake-bass (lāk′bȧs), *n.* The large-mouthed black-bass, *Micropterus salmoides.*—**White lake-bass,** *Roccus chrysops,* a serranoid fish found in the Great Lakes and southward in the Mississippi valley.

lake-carp (lāk′kärp), *n.* The carp-sucker of the Great Lakes, *Carpiodes thompsoni.*

lake-land (lāk′land), *n.* Same as ★*lake country.*



lakelander (lāk′lan-dėr), *n.* One who lives in the lake-land or lake country of England.

lake-ore (lāk′ōr), *n.* A peculiar type of brown hematite which is deposited in certain Swedish lakes and possesses a concretionary oölitic or pisolitic texture. After being dredged or dug the layer is renewed in 25 or 30 years. *J. F. Kemp,* Ore Deposits of the U. S. (4th ed.), p. 92.

lake-pitch (lāk′pich), *n.* A commercial name of the softer, less altered, and more valuable kind of asphalt obtained from the pitch lake in the island of Trinidad. Compare ★*land-pitch.*

Laker[1], *n.* **3.** [*l. c.*] On the Erie Canal, a large canal-boat, one that could be towed on the Great Lakes with safety.—**4.** [*l. c.*] A log-driver whose work is chiefly on lakes.

lake-sheepshead (lāk′shēps″hed), *n.* A fresh-water sciænoid fish, *Aplodinotus grunniens,*

Lake-sheepshead (*Aplodinotus grunniens*).
(From Bulletin 47, U. S. Nat. Museum.)

found in the Great Lakes and southward to Texas. Also known as *drum* or *thunder-pumper.*

lake-trout, *n.* **3.** A fish, *Galaxias auratus,* of the family *Galaxidæ,* found in Tasmania.

lakism (lāk′izm), *n.* [*lake*[1] + *-ism.*] Imitation of the style of the Lake poets. See *Lake School,* under *lake*[1].

lakmoid, *n.* Same as *lacmoid.*

lakmus, *n.* Same as *lacmus.*

laky[2] (lā′ki), *a.* [*lake*[3] + *-y*[1].] Resembling a lake (pigment) in color; laked: specifically, noting the change of color of the blood caused by a sudden discharge of hemoglobin into the blood-plasma in consequence of destruction of the erythrocytes.

la-la (lä-lä′), *a.* [Syllables suggestive of languor or weakness: compare ★*la-di-da.* There is an allusion to *tra-la-la, tra-la,* meaningless syllables used in singing.] So-so; poor; languid. [Colloq.]

lall[2] (lal), *v. i.* [Imitative, like Gr. *λαλεῖν,* speak, etc.: see *lallation.*] To speak unintelligibly; speak childishly. See *lallation.*

lalling (lal′ing), *n.* Same as *lallation.*

laloneurosis (lal″ō-nū-rō′sis), *n.* [Gr. *λάλος,* talkative, + *νεῦρον,* nerve, + *-osis.*] A neurosis which affects articulation.

lalophobia (lal-ō-fō′bi-ȧ), *n.* [Gr. *λάλος,* talkative, + *-φοβία,* ⟨ *φοβεῖν,* fear.] A morbid dread of speaking.

laloplegia (lal-ō-plē′ji-ȧ), *n.* [NL., Gr. ⟨ *λάλος,* talkative, + *πληγή,* stroke.] Paralysis of the muscles which take part in articulation.

Lam. An abbreviation of *Lamentations.*

lama[4] (lä′mä), *n.* [Samoan *lama* = Tahitian, Maori, etc., *rama,* a torch, a light.] In Samoa, the candlenut-tree (*Aleurites Moluccana*) or its nut. See ★*kukui.*

lama-deity (lä′mȧ-dē″i-ti), *n.* The deity represented by the lama.

Gratitude to the *lama-deity* for life and safety.
Geog. Jour. (R. G. S.), XV. 621.

Lamaitic (lä-mȧ-it′ik), *a.* Same as *Lamaistic.*

Lamanism (lä′mȧn-izm), *n.* [F. *lamanisme.*] Same as *Lamaism.*

Lamanite (lā′mȧn-īt), *n.* According to the Book of Mormon, a descendant of Laman, the son of Lehi, a righteous Jew of the tribe of Joseph, who fled with his sons from the destruction of Jerusalem to America. Because of their wickedness the Lamanites lost their fair skin, sank into barbarism, and became the red Indians.

Lamarckian, *a.* **II.** *n.* One who holds the Lamarckian theory. See *Lamarckism.*

Lamarckism, *n.* **2.** The doctrine that the generation of an organism from an egg is epigenesis or new formation. [Rare.]—**New Lamarckism.** Same as ★*Neo-Lamarckism.*

Lamarckite (la-mär′kīt), *n.* One who holds the Lamarckian theory; a Lamarckian. See *Lamarckism.*

lamb, *v. i.*—**To lamb down,** to lose or spend money; be cleaned out. [Australian.]

II. *trans.*—**To lamb down,** to knock down [spend] a check or a sum of money in a spree. *E. E. Morris,* Austral English. [Australian slang.]

lambardar, lumberdar (lum-bär-där′), *n.* [Hind. *lambar,* number, ⟨ E. *number,* + Pers. *-dār,* suffix of agent.] A village head man of northern India who is registered by a number in the collectors' roll and receives and pays over the government dues.

lambda, *n.* **3.** A British collectors' name for a common Old World noctuid moth, *Plusia gamma,* occurring in Europe, China, Japan, and India, and also, probably by introduction, in South America.

Lambdoid ridge or **crest.** See ★*ridge.*

lambdoidean (lam-doi′dē-ȧn), *a.* Same as *lambdoid.*

lamber (lam′ėr), *n.* [*lamb* + *-er*[1].] **1.** A shepherd whose business it is to take care of the young lambs and ewes at lambing-time.—**2.** A ewe when lambing.

Lambert's law of cosines. See ★*cosine.*—**Lambert's method.** See *altitude of a* ★*cloud.*

Lambeth degree, delf. See ★*degree,* ★*delf*[2].

lambiness (lam′i-nes), *n.* The conventional characteristics of lambs.

I confess I have always abominated the lamb, and nourished a romantic feeling for the wolf. O, be done with *lambiness!* Let us see there is a prince, for I am weary of the distaff. *R. L. Stevenson,* Prince Otto, ii. 4.

lambitive (lam′bi-tiv), *a.* and *n.* Same as *lambative.*

lamb-lily (lam′lil″i), *n.* The Scotch asphodel, *Tofieldia palustris.*

lamb-mint (lam′mint), *n.* Either peppermint or spearmint.

lamb's-cress (lamz′kres), *n.* The hairy bitter cress, *Cardamine hirsuta,* an Old World plant common, and perhaps native, in the eastern United States.

lamb's-foot (lamz′fůt), *n.* The common plantain, *Plantago major;* also, occasionally, the lady's-mantle, *Alchemilla vulgaris.*

lamb's-tail (lamz′tāl), *n.* The common club-moss or running-pine, *Lycopodium clavatum.*

lamb's-tongue, *n.* **3.** See *Scolopendrium.*

Lamb's-wool sky. See ★*sky*[1].

lamdan (lam-dän′), *n.*; pl. *lamdanim* (-dä′nēm). [Yiddish, ⟨ Heb. *lamad,* learn.] A Talmudical scholar.

lamed (lä′med), *n.* [Heb. *lāmed.*] The twelfth letter (ל) of the Hebrew alphabet, corresponding to the Syriac *lomad,* the Arabic *lām,* the Greek *lambda,* and the English *L.* Its numerical value is XXX.

lamella, *n.* **2.** *pl.* The British pharmacopœial name for medicated gelatin disks used in ophthalmic practice.—**Appunn's lamella,** in *psychophys.,* a strip or band of soft steel, held in a wooden vise and vibrating (according to its position in the vise) between the limits 4 and 24 in the second: used to determine the lower limit of tonal hearing.—**Ovigerous lamella,** in cirripeds, one of the sheets or plates of ova.—**Pleurapophysial lamella,** the thin plate of bone which bounds externally the vertebrarterial canal on either side of the neck in birds. *Mivart.*—**Supporting lamella,** in hydroid polyps, the delicate, transparent, non-cellular film or membrane lying between the ectoderm and the endoderm: same as *mesoglœa.*—**Vascular lamella.** See ★*cathammal,* 2.

Lamellar cataract. Same as *zonular cataract* (which see, under *zonular*).

Lamellaria (lam-e-lā′ri-ȧ), *n.* [NL., ⟨ L. *lamella,* a thin plate, + *-aria.*] The typical genus of the family *Lamellariidæ. Oken.*

Lamellariidæ (lam-e-lā-rī′i-dē), *n. pl.* [NL., ⟨ *Lamellaria* + *-idæ.*] A family of tænioglossate gastropods, having a mantle which covers the shell more or less completely, no operculum, and dorsally fused jaws. It includes the genera *Lamellaria, Marsenina, Velutina,* and *Onchidiopsis.* They are carnivorous, living on hydrozoans, alcyonarians, and colonial ascidians. With the exception of the first genus, they are boreal forms.

lamellation (lam-e-lā′shọn), *n.* The character or state of being lamellated; specifically, in *geol.,* an arrangement of the minerals of a metamorphic rock in parallel lamellæ or folia. 'Lamellation' and 'foliation' are employed in preference to 'bedding' or 'stratification,' because the structure may have no connection with sedimentation, but be the result of crushing and shearing. *Geikie,* Text-book of Geol., p. 789.

Lamellicorn leaf-chafer. See ★*leaf-chafer.*—**Lamellicorn scavenger.** See ★*scavenger* and *Laparosticta.*

lamellicornous (lā-mel-i-kôr′nus), *a.* [*lamellicorn* + *-ous.*] Same as *lamellicorn.*

lamelligerous (lā-me-lij′ė-rus), *a.* [L. *lamella,* a thin plate, + *gerere,* bear, + *-ous.*] Bearing lamellæ or ridges: as, the *lamelligerous* lobe in *Nautilus.*

lamelloid (lā-mel′oid), *a.* [*lamel(la)* + *-oid.*] Having the character of a thin plate or lamella.

Now as we proceed up the neck to the head, these transverse processes project less and less from the bodies of the vertebræ, and become less robust and angular, at the same time that they are antero-posteriorly elongated; and possess regular *lamelloid* walls, so as to form rather canals than simple foramina for the artery.
Amer. Nat., Jan., 1904, p. 31.

lamellose-stellate (lam″e-lōs-stel′āt), *a.* With lamellæ or plates arranged radially or in star-shaped groups or clusters.

lamellous (lā-mel′us), *a.* [*lamella* + *-ous.*] Same as *lamellose.*

lamellule (lā-mel′ūl), *n.* [NL. *lamellula,* dim. of L. *lamella,* a thin plate: see *lamella.*] A small lamella.

lamentational (lam-en-tā′shọn-ạl), *a.* [*lamentation* + *-al*[1].] Pertaining to or of the nature of lamentation.

lamiid (lā-mī′id), *n.* and *a.* **I.** *n.* A beetle of the coleopterous family *Lamiidæ.*

II. *a.* Resembling or belonging to the family *Lamiidæ.*

lamin (lam′in), *n.* [L. *lamina:* see *lamina.*] **1.** Same as *lamina.*—**2.** A thin plate (of metal) used as a charm, or in old astrological work. *N. E. D.*

lamina, *n.*—**Dental lamina,** an ingrowth of ectoderm from the edge of the jaw, from which in turn are given off the cells which form the enamel-organ of the developing teeth; the dental ridge.—**Dorsal lamina.** (*b*) In ascidians, a prominent median longitudinal ridge running along the middle of the dorsal surface of the pharynx to the opening of the esophagus.—**Lamina chorioidea,** an irregular fold of connective tissue and blood-vessels invaginated into the third ventricle of the reptilian brain, between the lamina terminalis and the paraphysis. It is prolonged laterally through the foramen of Monro into the lateral ventricle, where it is known as the *choroid plexus.*—**Lamina commissuralis mesencephali,** a wide commissure of white fibers in the roof of the mesencephalon, limited in front by the posterior commissure and behind by the decussation of the fourth nerves.—**Lamina papyracea,** that portion of the ethmoid bone which appears in the orbit, partaking in the formation of its inner wall; the os planum.—**Sutural lamina,** in the polyplacophorous mollusks or chitons, one of the double projections on the anterior margin of each valve, except the first. These projections are processes of the articulamentum or inner layer of the test.

laminal (lam′i-nal), *a.* [*lamina* + *-al*[1].] Pertaining to or of the nature of a lamina; disposed in laminæ.

laminariaceous (lam-i-nā-ri-ā′shius), *a.* Belonging to the family of seaweeds *Laminariaceæ.*

laminarite (lam′i-nā-rīt), *n.* [*Laminaria* + *-ite*[2].] A fossil seaweed resembling *Laminaria.* See *Laminarites.*

Laminated spring. See ★*spring.*

lamination, *n.* **2.** In *elect.,* the constructing of the iron part of a magnetic circuit of thin

laminæ or sheets of iron or steel, for the purpose of eliminating, in an alternating or rotating magnetic field, the induction of currents in the iron and the loss of power resulting therefrom. The lamination for this purpose must be at right angles to the direction in which an induced current would flow, but parallel to the direction of the magnetic flux. —**Oblique** or **transverse lamination,** in *geol.*, false bedding.

laminectomy (lam-i-nek′tō-mi), *n.* [L. *lamina,* lamina, + Gr. ἐκτομή, excision.] In *surg.*, exsection of the laminæ of one or more of the vertebræ to relieve pressure upon the spinal cord.

In a recent case in which there was anterior dislocation of the fourth cervical vertebra, *laminectomy* was done for pachymeningitis. *Med. Record,* July 11, 1903, p. 78.

laminous (lam′i-nus), *a.* [NL. *laminosus:* see *laminose.*] Same as *laminose.*

lamp[1], *n.*—**Alcohol lamp.** Same as *spirit-lamp.*—**Alembical lamp.** See ★*alembical.*—**Alformant lamp,** an apparatus, invented by Schering, in which paraform is converted into formaldehyde-gas by the heat from an alcohol lamp.—**Annealing-lamp,** an alcohol lamp for heating dentists' foil.—**Automatic lamp,** a heating-lamp which extinguishes itself when the object to be warmed reaches a certain temperature. A lamp of this kind is commonly used by dentists in heating vulcanizers and in other work of this nature.—**Berzelius's lamp,** an Argand lamp for burning alcohol, much used in chemical laboratories before coal-gas became generally available for heating purposes. It was brought into use by the Swedish chemist Berzelius early in the nineteenth century.—**Blow-through lamp,** a form of flash-light apparatus used in photography in which the material used to produce the flash is blown through the flame of a lamp.—**Brehmer lamp.** See *electric* ★*arc.*—**Cooper-Hewitt lamp,** a form of mercury arc-lamp. See ★*mercury lamp* and *electric* ★*arc.*—**Dibdin's pentane Argand lamp,** a form of standard lamp which burns a mixture of air and pentane. A screen on the metal chimney of the Argand steatite burner may be moved to 2.15 inches (54.6 millimeters) above the steatite ring, thus affording a source of light of ten candle-power.—**Duboscq lamp,** a self-regulating electric arc-lamp especially adapted to lantern projection and lighthouse illumination.—**Finsen lamp,** an electric lamp of peculiar construction used for the administration of the Finsen light treatment. See *Finsen* ★*light treatment* and *Finsen's* ★*apparatus.*—**Fluorescent lamp,** a lamp consisting of a glass bulb coated interiorly with calcium tungstate or some other substance which fluoresces under the influence of an electric discharge.—**Focus-lamp,** an incandescent electric lamp with closely coiled filament: designed for use in projection-lanterns and for other optical purposes.

When incandescent lamps are used for optical purposes it is necessary to compress the filament into a small space, so as to bring it into the focus of a lens or mirror. The filament is then coiled or crumpled up into a spiral or zigzag form. Such lamps are called *focus lamps.*
Encyc. Brit., XXVIII. 88.

Formaldehyde lamp, a flameless lamp in which methyl (wood) alcohol, as a liquid or a vapor, is brought, with air, into contact with platinized asbestos wicks or perforated sheets. Formaldehyde results from the incomplete oxidation of the alcohol. It is used in disinfecting. See ★*formaldehyde-generator.*—**Girard's lamp,** a lamp for burning illuminating-oil, so constructed as to maintain the supply of oil at a constant level.—**Harcourt lamp.** See ★*light standard.*—**Hefner lamp.** See ★*light standard.*—**Hero's lamp,** a form of lamp devised by Hero 200 B. C. The raising of the oil is effected by the pressure of a liquid of greater specific gravity acting through a column of air. A solution of brine in a chamber, *c,* flowing through a tap drives the air from a vessel, *d,* through a pipe, *e,* into an oil-reservoir, *a.* Oil is thus forced from the reservoir, *a,* into the bird's beak, whence it drops into a receptacle, *b,* supplying a wick burning at the tail.—**Incandescent lamp.** See *incandescent light,* under *electric light.*—**Keats's lamp,** a moderator lamp burning sperm-oil, used as a standard of illumination: devised by Keats in 1869. It was first adjusted to give a light of ten candle-power, but was afterward so modified by Sugg as to give a light of sixteen candle-power, burning oil at the rate of 925 grains per hour.—**Lamp battery.** See ★*battery.*—**Lummer lamp,** a form of mercury arc-lamp designed with special reference to spectroscopic work. See ★*mercury lamp.*—**Magnetite lamp.** See *electric* ★*arc.*—**Mercury-vapor lamp,** an electric lamp in which the source of light is an arc formed in mercury vapor at very low pressures within a vacuum-tube. See ★*mercury lamp.*—**Nernst lamp,** an incandescent electric lamp the filament of which consists of a cylindrical rod made from a mixture of metallic oxids. This lamp, which was invented by Professor Nernst of Göttingen, depends upon the fact that many oxids such as CaO and MgO, and also the oxids of the rare earths, in particular thorium oxid, which have very high specific resistance when cold, begin to conduct the electric current when heated. The filament or so-called *glower* is made from a mixture of the rare earths powdered, mixed with a binder, and pressed through a die so as to form a cylindrical thread, which is then baked. The diameter of the glower is about .63 millimeters and its length depends upon the voltage of the lamp. The terminals are of platinum wire joined to the ends of the glower by fusion in the electric arc. The glower when cold is an insulator, but when heated it becomes an electrolytic conductor. When traversed by a direct current the heat generated appears chiefly at the positive pole and platinum-black is deposited at the negative pole. When alternating currents are used the distribution of heat is uniform and the life of the lamp is greatly increased. Since the resistance of the filament, as shown in the curve in Fig. 1, falls rapidly with rising temperature, the lamp when placed in a constant-potential circuit tends to take increasing current as the filament becomes hotter. It is therefore necessary for purposes of regulation to place in series with the filament a metallic resistance called the *ballast.* This consists of a very fine iron wire mounted in a glass tube and surrounded with hydrogen. Its resistance increases with rise of temperature and thus counterbalances the loss of resistance in the filament. Upon starting the lamp it is necessary to bring the filament to a temperature such that it begins to carry a current sufficient to keep itself hot. The device used for this purpose in Nernst lamps of the American type is called the *heater.* It consists of a porcelain tube, about 30 millimeters long, around which a fine platinum wire is spirally wound. The coil is kept in place by a paste or enamel. Two or more such heaters are placed horizontally above the glower, and heat the latter by radiation to the temperature necessary to start the lamp. The glower begins to take current at about 700° C. The electrical connections are shown in Fig. 2. The heater, *h,* is in multiple circuit with the glower, *g.* So long as the latter is cold the entire current between the lamp terminals flows through the heater. In series with these are the lamp-ballast, *b,* and the cut-out, *c.* The cut-out is a small electromagnet which tends to attract the contact-spring, *s,* thus opening the glower circuit. When the heater begins to take sufficient current to maintain its temperature the current of the coil in the cut-out magnet becomes strong enough to break the circuit, after which the entire current flows through the glower. The electrical efficiency of the Nernst lamp is about the same as that of the ordinary incandescent lamp (when used with an opal shade about 3.47 watts per mean spherical hefner). The radiant efficiency of the Nernst filament, obtained by integration of the energy curve by Coblentz, was found to be .033 as against .04 for the acetylene flame. The temperature of the filament is somewhat lower than that of the ordinary incandescent lamp—from 1,400 to 1,700° C. The candle-power, however, is high on account of the large diameter of the filament, and the form of the lamp is well adapted for lighting from overhead, since no shadows are cast downward. The color of the light of the Nernst lamp differs but little from that emitted by carbon at the same temperature. It is somewhat stronger in the red than the light from the acetylene flame, and is free from the marked selective radiation characteristic of the Welsbach mantle.—**Open-arc lamp.** See *electric* ★*arc.*—**Osmium lamp,** an incandescent electric lamp having a filament of metallic osmium instead of carbon. Devised by Auer von Welsbach.—**Phase-lamp,** in *elect.,* an incandescent lamp used to indicate the phase relation between alternating-current generators.—**Pilot-lamp.** (*a*) An electric lamp upon a switchboard, used to indicate the position of switches. (*b*) In *telephony,* an auxiliary signaling-lamp placed in front of the switchboard and serving to indicate to the chief operator delay in responding to any one of a group of call-signals.—**Platinum lamp.** (*a*) A lamp having a platinum filament which is made incandescent by an electric current. (*b*) A lamp having a spiral of platinum placed above the wick. The vapor from the alcohol (ethyl or methyl) drawn up by the wick unites with the air through the agency of the platinum, which is thus made to glow.—**Pyro-electrolytic lamp.** Same as *Nernst* ★*lamp.*—**Quartz lamp,** a mercury lamp in which the arc is formed within a vacuum-tube of fused quartz. See ★*mercury lamp.*—**Reichsanstalt lamp,** a modified form of the Hefner lamp. See ★*light standard* and ★*illumination,* I.—**Rose lamp,** a modified form of the Berzelius alcohol lamp for use in chemical laboratories: mounted upon an upright metallic rod so as to admit of adjustment as to height. Named after the German chemist, H. Rose.—**Synchronizing lamp.** Same as *phase-*★*lamp.*—**Tantalum lamp,** an incandescent electric lamp of which the filament is a wire of metallic tantalum, .05 millimeters in diameter, instead of carbon. On account of relatively high conductivity the tantalum filament for a 110-volt lamp has to be about 650 mm. long, and is supported by being stretched in zigzag fashion up and down between the ends of the radial arms of two star-shaped supports. It gives a clear, white light of 25 normal candle-power with an expenditure of electrical energy only about half that for a carbon lamp, but the cost of the lamp itself is (at any rate at present) higher, and the illuminating power is not as generally acceptable as the 16 candle-power in general use. The resistance of the tantalum filament increases with rise of temperature, the durability is as great as that of carbon, and the liability to injury by mechanical shocks or accidental increase of voltage is, it is claimed, less.

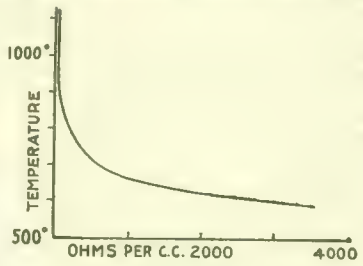


Figure 1.

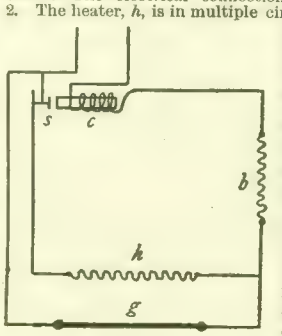

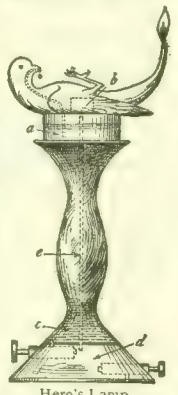

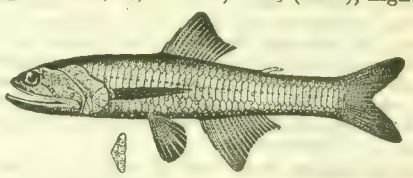

Figure 2.

Hero's Lamp.
(Drawn from Groves and Thorp's "Chemical Technology.")

Lampadena (lam-pa-dē′nä), *n.* [NL., < Gr. λάμπη, a torch, + ἀδήν, a gland.] A genus of deep-sea fishes found in the Gulf Stream.

Lampanyctus (lam-pa-nik′tus), *n.* [NL., irreg. < Gr. λάμπη, a torch, + νύξ (νυκτ-), night.]

Lampanyctus crocodilus.
(From Bulletin 47, U. S. Nat. Museum.)

A genus of deep-sea fishes commonly known as *lantern-fishes:* widely distributed.

lamp-ballast (lamp′bal″ast), *n.* In *elect.,* a resistance placed, for purposes of regulation, in series with the filament of an electric lamp. In the case of the Nernst lamp the ballast consists of a very fine iron wire in an atmosphere of hydrogen within a sealed glass tube.

lamp-bank (lamp′bangk), *n.* A number of incandescent lamps mounted in rows upon a frame and connected together either in multiple circuit or in multiple series. Also called a *bank of lamps. Trans. Amer. Inst. Elect. Engin.,* 1900, p. 171.

lamp-bend (lamp′bend), *n.* A bent or curved pipe-elbow, used to connect two pipes which meet at an angle greater than a right angle.

lamp-changer (lamp′chān″jėr), *n.* A device with a long handle for removing incandescent electric lamps from, or placing them in, their sockets when the latter are difficult of access.

lamperina (läm-pe-rē′nä), *n.* [Amer. Sp.] A common name of *Polistotrema stouti,* one of the eel-like lower vertebrates found on the California coast and north to Cape Flattery.

Lampeter Brethren. A small sect established in 1846 among some students of Lampeter College at Lampeter, Cardiganshire, Wales, by Henry James Prince, one of the extreme evangelical school. His fanaticism led him to declare his doctrines to be the new dispensation of the Holy Ghost, superseding the dispensation of Christ. He and those who believed him lived in an abode called the *Agapemone,* or 'abode of love.' Also *Princeites.*

lamp-fish (lamp′fish), *n.* A deep-sea fish, *Scopelus resplendens,* of the family *Myctophidæ,* having luminous spots, or photophores, on the head and body.

lamp-foot (lamp′fůt), *n.*; pl. *lamp-feet* (-fēt). A unit sometimes employed in computing the wiring of an installation of electric lights. The product of the number of lamps by the feet of wire necessary to supply them gives the number of lamp-feet.

lamp-hour (lamp′our), *n.* The energy required to maintain one electric lamp in normal operation for one hour: a practical unit sometimes employed in electric lighting.

lampic (lam′pik), *a.* [*lamp*[1] + *-ic.* The acid was first obtained by burning ether in a lamp.] Derived from a lamp: applied specifically to an acid, a mixture of acetic acid and aldehyde, formed by the oxidation of alcohol.

lamp-indicator (lamp′in″di-kā-tor), *n.* A device consisting of a Wheatstone bridge one arm of which contains an incandescent lamp. The adjustment is such that when the electromotive force of the circuit to which the indicator is applied reaches proper value the bridge is balanced.

lampistry (lam′pis-tri), *n.* [*lampist* + *-ry.*] The art of making and decorating lamps; the work of a lampist.

lamp-post (lamp′pōst), *n.* A post or pillar, usually of iron, designed to support a street-lamp or other outdoor lamp.

lamprey, *n.*—**Brook-lamprey,** a small lamprey which inhabits the brooks of Europe and North America. Five or six species are known.—**Silvery lamprey, small black lamprey,** common names of the lampreys.

lamprey-eel (lam′pri-ēl″), *n.* A lamprey.

lamprite (lam′prīt), *n.* See ★*meteorite.*

lamp-room (lamp′röm), *n.* A room or compartment, as on a vessel, especially fitted for filling and trimming lamps and storing them when not in use.

lamprophyllite (lam-prō-fil′it), *n.* [Gr. *λαμπρός*, shining, + *φύλλον*, leaf, + *-ite*[2].] A mineral from the nephelite-syenite of Kola, Russian Lapland, related to astrophyllite in form, cleavage, and probably in composition.

Lamprops (lam′props), *n.* [NL., < Gr. *λαμπρός*, shining, + *ὤψ*(*ὠπ-*), eye.] The typical genus of the family *Lampropsidæ*. *L. quadriplicata* is found off the northeastern coast of America. *Sars*, 1863.

Lampropsidæ (lam-prop′si-dē), *n. pl.* [NL., < *Lamprops* + *-idæ*.] A family of cumacean crustaceans in which the first antennæ have both flagella well developed and nearly equal, the male has three pairs of pleopods or none, and the telson is distinct, with three or more terminal spines. It includes the genera *Lamprops*, *Hemilamprops*, *Paralamprops*, *Platyaspis*, and *Chalarostylis*.

lamp-station (lamp′stā″shon), *n.* In *coal-mining*, an underground cabin where safety-lamps may be opened and trimmed: a place beyond which no naked lamps must be taken.

lampyrid (lam′pi-rid), *n.* and *a.* **I.** *n.* A member of the coleopterous family *Lampyridæ*.

II. *a.* Having the characters of or belonging to the family *Lampyridæ*.

län (län), *n.* [Sw., a fief, a fee, an administrative district, = AS. *læn*, a grant, fief: see *læn*.] An administrative division of Sweden; a government at the head of which is a prefect nominated by the king.

Lana philosophica, an early chemical name for the light, woolly flakes of white zinc oxid, produced by burning vapor of zinc which is allowed to escape into the air.

lanacyl (lan′a-sil), *n.* A trade-name of several acid coal-tar colors.—**Lanacyl violet.** See ★*violet*[1].

lanai (lä-nä′i), *n.* [Hawaiian.] In Hawaii, a bower, piazza, or porch.

Lancashire boiler. See ★*boiler*.

Lancaster yellow. See ★*yellow*.

lance[1], *n.* **9.** A pointed stick of light timber used for the erection of a temporary telegraph- or telephone-line: used especially in military operations.

The second truck is loaded with four or five hundred *lances* of well-seasoned cypress or spruce, each a trifle over fourteen feet in length.
Sci. Amer., Dec. 27, 1902, p. 459.

Sable lance, a fish, *Mellotus villosus*, of the family *Argentinidæ*, found in the northern parts of the Atlantic and Pacific.

lanceated (lan′sē-ā-ted), *a.* [L. *lanceatus* (< *lancea*, lance) + *-ed*[2].] Shaped like a lance; pointed and long.

lance-fish (lans′fish), *n.* A fish of the genus *Ammodytes*, which includes small carnivorous fishes inhabiting sandy shores of cold regions.

lance-head, *n.* **2.** *Lachesis mutus*, a venomous snake of South America. See *bushmaster*.

lancelet, *n.*—**Bahama lancelet,** a lancelet, *Asymmetron lucayanum*, found in the Bahamas.—**California lancelet,** *Branchiostoma californiense*, found from San Diego Bay southward.—**West Indian lancelet,** *Branchiostoma caribæum*, found in shallow waters, buried in the sand, from Beaufort, North Carolina, to the mouth of the La Plata.

Lanceola (lan-sē-ō′lä), *n.* [NL., < LL. *lanceola*, dim. of L. *lancea*, lance.] The typical genus of the family *Lanceolidæ*. *Say*, 1818.

Lanceolidæ (lan-sē-ol′i-dē). *n. pl.* [NL., < *Lanceola* + *-idæ*.] A family of amphipod crustaceans, of the tribe *Hyperidea*, having the first antenna straight and the first joint of the flagella swollen. It is typified by the genus *Lanceola*.

lance-ovate (lans′ō″vāt), *a.* In *bot.*, very narrowly ovate.

lancet, *n.* **4.** In *entom.*, one of the lower pair of piercing organs in the dipterous mouth; the scalpella: supposed by Kirby and Spence to represent the maxillæ of the haustellate mouth.

lanceted (lan′set-ed), *a.* Having a lancet-window or a lancet-arch.

lancet-headed (lan′set-hed″ed), *a.* Having a pointed head like a lancet: said of windows. See cut of *lancet-window*.

lancet-plate (lan′set-plāt), *n.* In the structure of the *Blastoidea*, a long narrow plate, pointed at both ends, which extends along the center of each ambulacrum. Its proximal end is inserted between the deltoids and takes part in the lip around the summit opening. The upper surface is excavated along the median line, and this groove probably served to conduct food to the mouth. The plate has an interior axial canal which communicates by means of the ambulacral opening with an oval ring belonging to the water-vascular system. In some cases there is a smaller plate beneath which is called the *under lancet-plate*.

lancet-tooth (lan′set-töth), *n.* A fleam-tooth.

lancewood, *n.*—**Cape lancewood,** a tough wood obtained from *Curtisia faginea* of South Africa. It is used for spokes, shafts, spears, and turnery. See *assagai-wood*.

lancha (län′chä), *n.* [Philippine Sp., Pg. *lancha*, sometimes derived from the Malay *lancha*, but this is in turn referred by others to the Pg. or Sp., which, in that case, is perhaps referable to the Eng. *launch*, *lanch*. But the history is not clear. Prob. E. *lanch*, a boat, has nothing to do with *launch*, verb.] A launch or barge; a medium-sized boat used in the Philippine Islands for the transportation of merchandise and native products.

Lancs. An abbreviation of *Lancashire*.

land[1], *n.* **9.** One of the strips into which a field is divided in plowing: same as *ridge*, 3. See quotation under ★*cut*, 24. Compare *dead furrow*.—**Dun land,** in Devonshire, England, a soil which has resulted from the decomposition of the schistose rock of the district.—**Height of land,** a line or belt of land between the opposite slopes of two river systems; a divide; a water-parting. *Encyc. Brit.*, XXXI. 332.—**Indemnity lands,** in *United States law* (in the construction of land-grants made in aid of railroads), those lands which are selected in place of parcels lost by previous disposition or reservation for other purposes, the title to which does not accrue until the time of their selection.—**Judge Jeffrey's land.** See *king's* ★*land*.—**King's land,** a child's outdoor game in which the king stands within certain boundaries until he succeeds in touching one of the other intending players, who then becomes king. The game, with variations, is known by various other names, as *Van Diemen's land*, *Dixie's land*, *golden pavement*, *Judge Jeffrey's land*, *Tom Tiddler's ground*, etc.—**Land hemisphere.** See ★*hemisphere*.—**Land in severalty.** See *severalty*.—**Land of Promise.** See *promise*.—**No man's land,** (*b*) *Naut.*, an article or space left uncleaned or uncared for on account of its not falling within the limits of the work assigned to individuals of the crew.—**Nook of land.** See *nook*.—**Poison land,** in western Australia, land so covered with a growth of plants poisonous to sheep and cattle that it cannot be used for pasture.—**Running with the land,** being of force by association with the land affected: a phrase applied to covenants in deeds of real property. See *covenants which run with the land*, under *covenant*. A personal covenant is binding on the covenantor only. A real covenant—one running with the land—is created where the maker binds himself and his heirs, executors, or administrators.—**Scab land,** in Washington and Oregon, land originally covered with fine volcanic dust which has been blown away by the wind, leaving on the surface only a mass of sharp fragments of stone.—**Seated lands,** in *U. S. law*, lands occupied or cultivated; public lands of which actual possession has been taken by private persons under proper authority of law.—**Staple of land.** See *staple*[2].—**The land of nod.** See *nod*.—**To hold the land** (*naut.*), to keep a vessel within sight of the coast.—**To hug the land.** See ★*hug*.—**To make free with the land** (*naut.*), to sail close to the shore.—**Torrens land system,** a system of governmental registration and guarantee of land titles, named from Sir Robert Richard Torrens who established it in South Australia in 1857. It has been adopted by most of the Australian colonies, by New Zealand, British Columbia, California, and a few other western States.—**To see how the land lies,** to find out the exact state of things.—**To settle the land.** See *settle*[1], *v.*—**Unseated lands.** (*a*) Land once seated, but abandoned. (*b*) Uncultivated land subject to taxation. [Pennsylvania.]—**Van Diemen's land.** See *king's* ★*land*.

land-agent (land′ā″jent), *n.* A real-estate agent; in England, also a steward or manager of an estate or landed property.

landamann (län′da-män), *n.* The chief magistrate of a Swiss canton; also the chief officer in some of the smaller districts.

landau, *n.*—**Canoe landau,** a landau in which the lower lines of the body have a continuous sweep. The term is used to distinguish this form from the angular quarter and drop-center types.—**Five-glass landau,** a landau with a leather top over the rear seat. The front section has large glasses in frames which can be dropped down in the body. The supports of the top are hinged to fall down upon the boot, and leave the front seat uncovered. There are three windows in the front section and two in the doors: hence the name.

landboc (land′bōk), *n.* [OE. *landbok*, < *land*, + *boc*, book.] In *old Eng. law*, a deed or grant of land, usually Saxon. Such deeds had little weight against the king's claims.

land-breast (land′brest), *n.* The frontage or face of the wall which forms a bridge-seating or abutment and acts as a retaining wall to the bank behind it. It includes both the abutment-pier proper and the wing-walls at each side of it.

land-chain (land′chān), *n.* Same as *Gunter's chain* (which see, under *chain*).

land-crab, *n.* **2.** A burrowing crayfish, *Engæus fossor*, of Tasmania and Victoria (Australia), which forms crab-holes.

landdrost (land′drōst), *n.* [D., < *land*, land, + *drost*, bailiff, steward.] In South Africa, a magistrate.

Landenian (lan-dē′ni-an), *a.* and *n.* [*Landen*, a town in Belgium, + *-ian*.] **I.** *a.* In *geol.*, pertaining to the basal deposits of the Lower Eocene in France and Belgium, corresponding to the Woolwich and Reading beds of England. The lower deposits are fluvio-marine, while the upper beds contain only marine fossils.

II. *n.* The Landenian deposits.

landfall, *n.*—**To make a good landfall** (*naut.*), to sight a certain point of land at the time calculated.

land-form (land′fôrm), *n.* An area of land having certain topographic features which distinguish it from neighboring areas. *W. M. Davis*.

landgraveship (land′grāv-ship), *n.* The office, territory, or authority of a landgrave. *N. E. D.*

landgravess (land′grāv-es), *n.* Same as *landgravine*. *N. E. D.*

landing, *n.* **9.** In *lumbering:* (*b*) A place to which logs are hauled or skidded preparatory to transportation by water or rail. (*c*) A platform, usually at the foot of a skid-road, where logs are collected and loaded on cars. A *lightning landing* is one having such an incline that the logs may roll upon the cars without assistance.—**To break a landing,** to roll a pile of logs from a landing or bank into the water.

landing-box (lan′ding-boks), *n.* In *mining*, the box into which the mine-pump delivers water.

landing-party (lan′ding-pär″ti), *n.* An armed boat's crew sent on shore for offensive or defensive operations, such as engaging an enemy, or for protecting life and property.

land-junker (land′yöng″kėr), *n.* [G., < *land*, land, + *junker*, junker.] In Germany, one who owns lands or estates; a squire.

land-lane (land′lān), *n.* An open water-passage in the ice of the polar oceans leading toward land.

We discovered new islands in the west as far as our range of vision admitted, and, to judge by the large open *land-lane* which ran in that direction, one might suppose that the land there was of considerable extent.
Geog. Jour. (R. G. S.), IX. 482.

land-law (land′lâ), *n.* **1.** The law of a land or country; the 'law of the land.'—**2.** Law, or a law, relating to land considered as property.

land-lead (land′lēd), *n.* Same as ★*land-lane*. See the extract.

This open water must rather be regarded as a *land-lead*, which, like all other *land-leads*, is formed and opened by a land-breeze, and is closed again by the wind blowing in shore. *Geog. Jour.* (R. G. S.), IX. 485.

land-line (land′līn), *n.* **1.** An overland telegraph-line, as distinguished from a marine cable.—**2.** In *fishing*, a line passing from the end of a seine to the shore. *Knight*, Dict. Mech. Sup., 1884.

land-lobster (land′lob″stėr), *n.* A land-crab or robber-crab.

land-lock (land′lok), *n.* **1†.** The state of being shut in, or almost shut in, by land.—**2.** A landlocked place, as a harbor or valley.

landlordly (land′lôrd-li), *a.* [*landlord* + *-ly*[1].] Like a landlord or pertaining to a landlord.

landlordship (land′lôrd-ship), *n.* The position or duties of a landlord.

land-marker, *n.* **2.** [*cap.*] One of the sect called *Landmark* ★*Baptists* (which see).

land-marshal (land′mär″shal), *n.* **1.** A provincial marshal in Prussia and some other parts of the German Empire.—**2.** The speaker or presiding officer of the first Chamber of the Swedish Diet.

land-mere (land′mēr), *n.* A boundary of a parish, county, etc.

landocracy (lan-dok′ra-si), *n.* [*land*[1] + Gr. *-κρατια*, < *κρατεῖν*, rule.] A class which rules or controls by virtue of its ownership of landed property. [Humorous.]

landocrat (lan′dō-krat), *n.* One who belongs to the landocracy.

land-office, *n.*—**A land-office business,** a 'rushing' business; a boom. The allusion is to the brisk work of the local government land-offices in the western United States when they are besieged by applicants for land patents on the occasion of opening new lands to settlement. [Slang.]

It [the Santiago mill] is owned by the Union Mill and Mining Company, which once did *a land-office business* in ore crushing.
Rep. to House of Representatives, Precious Metals, 1881, [p. 153.

land-packet (land′pak″et), *n.* A name formerly given jocosely, in the newly settled parts of the western United States, to any vehicle undertaking a passage across the plains: later it had some specific applications.

land-pitch (land′pich), *n.* A commercial name for the harder, more altered by exposure to the

air, and less valuable kind of asphalt obtained from the pitch lake in the island of Trinidad. Compare ★*lake-pitch*.

land-rail, *n.* 2. A general name for any member of the rail family that, like the New Zealand weka rail, frequents uplands instead of marshes.

Two of the most interesting birds are *land rails* of the genus *Cabalus*. *Yearbook U. S. Dept. Agr.*, 1898, p. 90.

land-relief (land′rē-lēf″), *n.* Surface form; topography.

The relation of rain, wind and *land-relief* was, in fact, strikingly illustrated by our experiences. *Geog. Jour.* (R. G. S.), XV. 463.

land-sale (land′sāl), *n.* In *mining*, a sale of coal at the pit, as distinguished from disposal by sea.

landscape, *n.*—**Classic landscape,** a term used to describe the landscapes painted in the seventeenth and eighteenth centuries, especially in Italy, which were based on a feeling for architectonic arrangement of lines and masses rather than for the effects and qualities of nature.—**Landscape-architect,** an architect skilled in the arrangement of parks and gardens, and especially of their architectonic features, such as fountains, terraces, etc.—**Landscape architecture,** a term introduced to denote the treatment of landscape in a formal way, with especial attention to the exact disposition of paths, lawns, groups of trees, flights of steps, vases, statues, etc. It implies a more formal style of work than *landscape-gardening*. It may also include the harmonious arrangement of buildings in groups.

landscape-marble (land′skāp-mär″bl), *n.* A dense limestone in which, along cracks or cleavage-planes, there has been deposited oxid of manganese in dendritic forms.

land-scot † (land′skot), *n.* A tax on land for the support of the church, formerly levied in some parishes. [Eng.]

land-sculpture (land′skulp″tūr), *n.* The production of the forms of the land by the various processes of erosion; earth-sculpture.

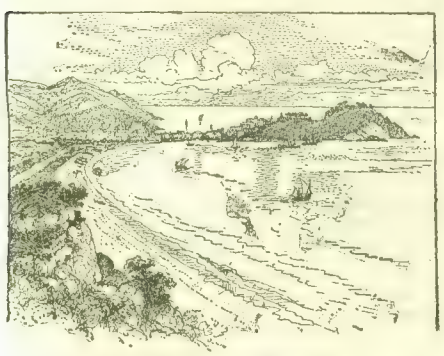
land-service (land′sėr″vis), *n.* 1. The service of the army on land, as opposed to that of the navy on the sea.—2. The army; that branch of the armed forces of a country which serves on land.

landshard (land′shärd), *n.* A strip of grass or unplowed land between two plowed pieces. [Prov. Eng.]

land-side, *n.* 2. The side of the land facing the water; the shore.—3. The side (of an object) which faces the land.

Land-slip terrace, an irregular bench on a slope, resulting from a land-slip.

landslipped (land′slipt), *a.* Marked or damaged by land-slides or -slips.



landslippy (land′slip″i), *a.* Liable to land-slides or -slips. *N. E. D.*

landsmaal, *n.* See ★*maal*.

land-take (land′tāk), *n.* See the extract.

Until a Parliament for Iceland was established in 930 these chieftains were the rulers of the island, each in his district or *land-take* (land-nám), as it was called. *Smithsonian Rep.*, 1906, p. 287.

land-tied (land′tīd), *a.* Said of coast forms which have been joined to the mainland or to

A Land-tied Island near Genoa, Italy.

each other by the growth of reefs or sand-spits. *W. M. Davis*, Elem. Phys. Geog., p. 314.

Landward climate. See ★*climate*.

landward-bred (land′wärd-bred), *a.* Country-bred; rustic. *Scott*, Old Mortality, xiv. [Scotch.]

landwardness (land′wärd-nes), *n.* Country-breeding; rusticity. *Stevenson*, Fam. Stud., 61. [Scotch.]

land-water (land′wâ″tėr), *n.* 1. Fresh water flowing over the land; flood water; the water of lakes, rivers, springs, etc., as opposed to sea-water.—2. Open water between the ice of a frozen sea and a coast.

Fortunately a south-westerly gale sprang up, which opened up the ice, and on September 7 let us through into the *land-water*. *Geog. Jour.* (R. G. S.), XI. 115.

lane[1], *n.* 4. In sprint-races, the space between cords, strung about 18 inches apart, which mark the straight courses of the competitors. The cords are held by iron stakes, about two feet in height, driven into the ground.

Lane's law. See ★*law*[1].

lane-snapper (lān′snap″ėr), *n.* A common name of *Lutianus synagris*, a lutianoid fish found from the Florida keys to Brazil.

Lang. An abbreviation (*a*) of *Languedoc*; (*b*) [*l. c.*] of *language*.

langbeinite (lang′bīn-īt), *n.* [Named after A. *Langbein*.] A potassium-magnesium sulphate ($K_2Mg_2(SO_4)_3$) occurring in colorless isometric crystals. It is found with rock-salt at various localities in Germany.

Lange-James theory. See ★*James-Lange theory*.

Langen's apparatus. See ★*apparatus*.

Langerhans's island. Same as *Langerhans's cell*. See also ★*island*.

Langhian (läng′gē-an), *a.* and *n.* [*Langhe*, in Italy, + *-ian*.] I. *a.* In *geol.*, pertaining to the lowest division of the Miocene Tertiary in France. The formation is also known as the *Burdigalian*. Its deposits are of fluviatile origin and contain a great abundance of terrestrial mammalian remains.

II. *n.* The Langhian division.

langka (läng-kä′), *n.* [Ilocano name.] Same as ★*nangka*, 2.

Langobardic (lang-gō-bär′dik), *a.* See *Longobardian*.

langoor, langour[2], *n.* Variants of ★*langur*, a name applied to several large monkeys of the genus *Presbytis*.

langosta (län-gōs′tä), *n.* [Sp., a locust: see *locust*[1].] Any injurious locust or grasshopper: so called in Spanish America and, to some extent, in the southwestern United States.

langoti (lun-gō′ti), *n.* [Also *langoty*, *langotée*, *lungoti*, < Hind. *langōti*.] In India, a narrow strip of cloth passed between the legs and fastened before and behind to a string around the waist: worn by men and boys.

Langton's forester. See ★*forester*.

language[1], *n.*—**Drum language,** a method of communication by means of drum-signals, employed particularly by the negroes of West Africa.—**Logistic language,** language represented by characters which express quantitative values, such as the plus, minus, and root signs, with many others, in mathematics. Music is written in logistic language. The sciences of astronomy and chemistry have developed elaborate languages of this kind and the other branches of science less complicated ones. Tables of measures are all examples of logistic speech.

The essential characteristic of *logistic language* is that its sematology is universal, so that the meaning of any character depends on the meaning assigned to it by the user—it is the special language of reasoning and avoids all ambiguities of other languages due to the multifarious meanings of single words. *J. W. Powell*, in An. Rep. Bur. Amer. Ethnol., 1898–99, [p. clxix.

Negrito languages, dialects spoken by Negritos, Papuans, or Melanesians.—**Sign language,** a means of communication in which signs made with the hand and other gestures take the place of articulate speech. Sign language is used by deaf-mutes, but also by many primitive tribes. It is highly developed among the Indians of the Great Plains of North America.—**Whistle language,** communication between individuals by means of whistling with the mouth, the sound being varied and used to convey definite ideas: practised on the Canary Islands and among the Berbers in Tunis.—**Zone of language,** the area of the brain in which are located the centers of sight, hearing, vocal speech, and the muscular movements necessary in writing.

language[2], *n.* 2. Same as *languet* (*a*).

langue de bœuf (läng dė bėf′). [F. 'ox-tongue.'] 1. A kind of spear or pike used in the middle ages, which had a rather broad, double-edged, pointed head.—2. A sword or knife having a large, flat, double-edged blade, broad at the base and tapering toward the point.

languidus (lang′gwi-dus), *n.* [L. *languidus*, '(he is) sick': see *languid*[1].] In *law*, a sheriff's return to a process, that the person it requires him to take into custody is too dangerously ill to be moved.

langur (lang-gör′), *n.* [Hind. *laṅgūr*, < Skt. *go-lāṅgūla*, a kind of monkey.] A native name for several large Indian monkeys of the genus *Presbytis*, or *Semnopithecus*, the two best known being the hanuman or entellus, *P. entellus*, the sacred monkey of India, and the black Nilgiri langur, *P. johnii*.

Lang yao glaze. See ★*glaze*.

laniatorial (lan″i-a-tō′ri-al), *a.* [*Laniator-es* + *-al*[1].] Belonging to or resembling the *Laniatores*.

lanific (lā-nif′ik), *a.* [L. *lanificus*, < *lana*, wool, + *facere*, make.] 1. Producing or bearing wool.—2. Spinning wool.

lanifiorous (lā-nif′lō-rus), *a.* [L. *lana*, wool, + *flos* (*flor-*), flower, + *-ous*.] In *bot.*, having woolly flowers.

lanoform (lan′ō-fôrm), *n.* [*lan(ol)* + *form-(aldehyde)*.] Lanolin which contains 1 per cent. of formaldehyde.

lanoresin (lan-ō-rez′in), *n.* [L. *lana*, wool, + *resina*, resin.] A dark-colored resin contained in the waste liquors from wool-washing.

lanosity (lā-nos′i-ti), *n.* [*lanose* + *-ity*.] Woolliness.

lansdowne (lanz′doun), *n.* [Named from a marquis of *Lansdowne*.] A light-weight fabric of silk and wool for women's wear.

lanson (län-sōn′), *n.* Same as *lansa*. [Philippine Islands.]

lant[3], *n.* 2. Specifically, *Ammodytes americanus*. See *sand-eel*, 1.

lantaca (län-tä′kä), *n.* [Bisaya.] Among natives of the Philippine Islands, a piece of artillery.

lantado (län-tä′dō), *n.* Short for *adelantado*.

lantalic (lan-tal′ik), *a.* [(*al*)*lant*(*uric*) + *-al*[3] + *-ic*.] Same as *allanturic*.

lantanine (lan′ta-nin), *n.* [*Lantana* (see def.) + *-ine*[2].] An alkaloid found in *Lantana Brasiliensis*. It is used in medicine as a substitute for quinine.

lantanuric (lan-ta-nū′rik), *a.* [(*al*)*lant*(*uric*) + *-an* + *-uric*.] Same as *allanturic*.

lantern, *n.* 9. The misshapen proboscis (formerly supposed to be luminous) of many tropical *Fulgoridæ* or so-called 'lantern-flies.'—**Ardois lantern,** one of the electric lanterns in an Ardois signaling apparatus. See ★*signal*.—**Ballarat lantern,** a rough-and-ready lantern formed by knocking off the bottom of a bottle and sticking a candle in the neck. [Local, Australia.]—**Navy lantern,** a heavy lantern, well protected against injury by contact with ropes, etc., hung in a ship's rigging as an anchor-light.—**Position-lantern,** a light exhibited from a gaff-end or other conspicuous place, for the purpose of defining a vessel's position at night; a light shown to demonstrate the position of a vessel or other object afloat or ashore.—**Projecting-lantern,** an instrument for throwing upon a screen an enlarged image of a diagram, picture, or object, or of exhibiting by such projection to observers at a distance the progress of a scientific experiment or demonstration. The projecting-lantern is the development of the magic lantern invented by Kircher in 1646 (which see, under *lantern*). The modern form of this instrument as designed for the projection of lantern-slides is known as the *stereopticon* (see *stereopticon*). To adapt the lantern to the general purposes of scientific demonstration,

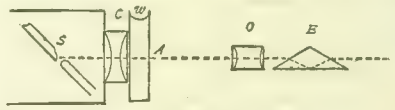


Fig. 1.

the form of the instrument is so modified as to admit of the introduction of apparatus in front of the condensing-lenses. The essential parts of such a lantern are shown in Fig. 1, in which *S* is the source of light, *C* a pair of condensing-lenses, *O* the object-lens, and *A* the field in which the object to be projected is placed. The light employed is usually that of the electric arc; but the lime-light is frequently used, and in some cases other and less powerful sources of light, such as a bank of acetylene burners with reflector, a Nernst lamp, a glow-lamp with coiled carbon filament, or even a gas or oil flame, may be employed. To secure the best possible illumination from the electric arc, the carbons are commonly set at an oblique angle, as shown in Fig. 2, thus exposing the crater, *C*, of the positive carbon to view; or a lamp is used in which the positive carbon is horizontal, as shown in Fig. 3. Arc-lamps for use in lantern work are either provided with an automatic focusing-feed which holds the arc in a constant position as the carbons burn away, or are regulated by hand. The heat from a powerful source of light such as the electric arc is very great, and to prevent damage to lantern-slides, or to pieces of apparatus placed in the field, a glass cell filled with water

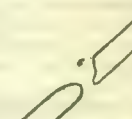

Fig. 2.

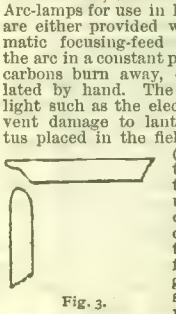

Fig. 3.

(*w*, Fig. 1) is often placed between the condensing-lenses and the object. The real image thrown upon the screen by means of the object-lens is inverted. In the case of transparencies or lantern-slides, the object is therefore placed in the field in an inverted position, thus giving an erect image upon the screen. Where apparatus is to be projected, however, and an erect image is desired, a reflecting-prism (*E*, Fig. 1), known as the erecting-prism, is placed between the object-lens and the screen. Many phenomena, such as capillary action as exhibited with floating needles, cannot be projected upon a screen by means of the ordinary form of lantern. For such experiments the 'vertical attachment' is used,

an arrangement in which the front condensing-lens is removed, and a mirror (*M*, Fig. 4) is mounted in front of the inner condenser so as to throw the light vertically upward. The other condensing-lens is mounted above this mirror, and the apparatus or object the image of which it is desired to project is placed in the path of the vertical ray at *A*. The object-lens, *O*, is placed in the path of the vertical beam at the proper distance and the rays after emerging from it are reflected to a screen by a second mirror or reflecting-prism, *P*. In the forms of lantern already described transmitted light is used, but it is likewise possible by the use of reflected light from the surface of opaque objects to project images of these upon the screen. Various devices for the projection of opaque objects have been employed, and reflecting-lanterns are known under various names, such as the *megascope*, an early form, the *reflectoscope*, and the *epidiascope*. The last-named instrument, in which the difficulties of projection by reflected light have been as completely overcome as in any of the lanterns of this type, will serve to illustrate the features essential to them all. In the epidiascope, Fig. 5, the illuminating arc, *S*, is placed in the focus of a parabolic reflector, *R*, the parallel rays from which pass through a large water-cell or cooling chamber, *W*, and are reflected obliquely downward by a plane mirror, *I*, upon the object at *A*, which is placed in a horizontal position. The principal difficulty in the projection of objects by reflection is that arising from lack of sufficient light, and this is obviated by the use of a powerful arc-lamp requiring from 30 to 50 amperes of current, such as is employed in search-lights and by the use of larger mirrors and prisms than those commonly employed in projecting-lanterns. The greater size of the apparatus makes it possible, moreover, to show upon the screen objects having a diameter of 22 centimeters, whereas in ordinary lanterns the diameter of the field is 10 or 12 centimeters. When transmitted light is to be used, mirror *I*, which is hinged at the top, is swung upward out of the path of the rays, which then fall on mirror *II* and are reflected downward to a third mirror, *III*, at the base of the instrument. From the surface of this mirror the rays pass vertically upward through the condensing-lens and the object, and finally through the object-lens, *O*, to the erecting mirror, *E*, as before. For the projection of microscopic objects by means of a lantern, the ordinary object-lens is removed and a microscope objective is mounted at a suitable distance from the condensing-lenses in the axis of the rays. The real image of the object instead of being formed in the eyepiece of the microscope, which in this case is usually removed entirely, is focused directly upon the screen. For the demonstration by projection of the phenomena of polarized light, polarizing- and analyzing-prisms, which should be of large size, are similarly mounted in the path of the rays in front of the condensing-lens and between it and the objective. For the projection of spectra a vertical slit is mounted in place of the slide-holder and a dispersing-prism is placed in front of the object-lens.—**Projection-lantern.** See *projecting-*★*lantern.*—**Tornado-lantern,** a lantern in which the flame is so protected that it will not be blown out in a heavy wind or tornado.

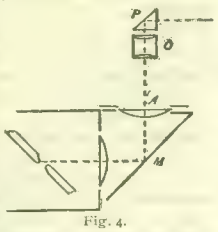

Fig. 4.

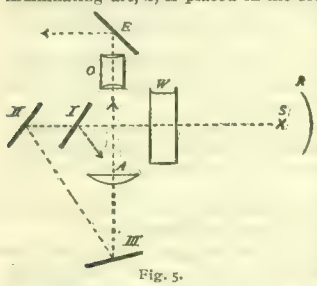

Fig. 5.

lantern-brace (lan'tėrn-brās), *n.* *Naut.*, the metal fixture which secures a lantern in its place.

lantern-brass (lan'tėrn-brȧs), *n.* A skeleton casing placed in the stuffing-box of a steam-engine cylinder and supplied with steam to prevent air from leaking into the cylinder.

lantern-fish, *n.* **2.** Any fish belonging to the family *Myctophidæ:* most of them are of the deep seas, and have luminous spots or photophores.

lantern-gear (lan'tėrn-gēr), *n.* Same as *lantern-wheel.*

lanternist (lan'tėr-nist), *n.* [*lantern* + *-ist.*] One who uses pictures projected on a screen by a magic lantern, in illustration of a lecture, or the like.

lantern-man (lan'tėrn-man), *n.* **1.** One who carries a lantern.—**2†.** One who empties privies by lantern-light; a night-man. *N. E. D.* —**3.** One who operates a projection or magic lantern.

lanternoscope (lan'tėr-nō-skōp), *n.* [*lantern* + Gr. *σκοπεῖν*, view.] In *photog.*, a contrivance for viewing lantern-slides.

lantern-service (lan'tėrn-sėr″vis), *n.* A religious service in which pictures thrown by a magic lantern are used to illustrate the subject of the address. *N. E. D.* [Eng.]

lantern-slide (lan'tėrn-slīd), *n.* A plate prepared for use in a stereopticon.

lanthana (lan'thą-nȧ), *n.* [NL., < *lanthanum.*] In *chem.*, one of the rare earths, lanthanum oxid.

lanthanate (lan'thą-nāt), *n.* [*lanthanum* + *-ate*[1].] In *chem.*, a compound of oxid of lanthanum with the oxid of a more electropositive metal, as sodium lanthanate ($NaLaO_2$).

lanthanin (lan'thą-nin) *n.* [Gr. *λανθάνειν*, escape notice, + *-in*[2].] Same as ★*oxychromatin. Heidenhain*, 1892.

lanthopine (lan'thō-pin), *n.* [Gr. *λανθ(άνειν)*, escape notice, + *ὀπιον*, opium, + *-ine*[2].] A colorless alkaloid. $C_{23}H_{25}O_4N$, contained in opium. It crystallizes in microscopic prisms, melting at about 200° C.

lanugic (lā-nū'jik), *a.* [L. *lanugo*, woolliness, down, + *-ic.*] Derived from wool: noting an acid, a colorless compound, said to be formed by the action of barium hydroxid on wool. It precipitates substantive dyes.

lanzarotte (lan-za-rot'), *n.* [Sp. *Lanzarote*, name of one of the Canary Islands.] A breed of large domesticated pigeons, almost as large as the runt, but having more of the reddish color of the archangel.

laodah (lou'dä″), *n.* [Chin. *lao*, old, venerable, + *ta*, great.] In *Anglo-Chinese*, a chief boatman; a skipper. Also *lowdah.*

lap[3], *v. t.*—**To lap out,** to grind out or enlarge with a lap; hence to grind with anything resembling a lap.

lap[3], *n.* **10.** The tops of trees left in the woods in logging. Also *lapwood.*—**11.** The act of winding or being wound round a drum; the length of rope necessary to go round it once; also, the length of silk, tape, wire, or the like, necessary to go round anything once.—**Lap service,** in the *postal service*, a postal route on a railroad where several mail services pass on the same line for different destinations.—**Negative inside lap,** in a steam-engine: (*a*) The failure of the valve, when in mid-position, to cut off the exhaust from either end of the cylinder. (*b*) The distance by which the valve, when in mid-position, fails to cut off the exhaust, or the distance the valve would have to travel from mid-position before the exhaust would be closed.—**Steam lap,** in a steam-engine: (*a*) A projection on the valve reaching beyond the outside edge of the steam-port when the valve is in its mid-position. It is designed to close the port before the end of the stroke of the piston, thus utilizing the expansive force of the steam. (*b*) Same as *outside lap.* See *lap*[3], 3.

lapacho (lä-pä'chō), *n.* [Native name.] The name, in Argentina and Paraguay, of several trees belonging to the genus *Tecoma*, of the *Bignonia* family, and particularly of *T. Lapacho*, a tree 50 to 70 feet high, yielding a bark used in tanning and a valuable heavy wood, much sought for building and naval construction.

lapachoic (lap-ą-chō'ik), *a.* [*lapacho* + *-ic.*] Pertaining to lapachol.—**Lapachoic acid.** Same as ★*lapachol.*

lapachol (lap'ą-chol), *n.* [*lapacho* + *-ol.*] A yellow compound, $C_6H_4 < \begin{matrix} {}^{1}COCCH_2CH{:}\ C(CH_3)_2 \\ {}^{2}COCO \end{matrix}$, found in lapacho wood from South America, and greenheart wood, *Ocotea Rodiæi*, from Surinam. It crystallizes in monoclinic prisms and melts at 140° C. Also called *hydroxy-amylene-naphthalene-quinone.*

lapactic (la-pak'tik), *a.* and *n.* [Gr. *λαπακτικός*, < *λαπάσσειν*, empty, evacuate.] **I.** *a.* Causing evacuations; laxative.

II. *n.* A laxative.

Lapageria (lap-ą-jē'ri-ȧ), *n.* [NL. (Ruiz and Pavon, 1802), named in honor of the Empress Josephine, Marie Josèphe Rose Tascher de *la Pagerie* (1763–1814), the first wife of Napoleon.] **1.** A monotypic genus of the family *Liliaceæ*, comprising a brilliant-flowered and graceful twining plant, *L. rosea*, a native of Chile. The flowers are lily-like in form, hanging singly from the upper leaf-axils. There is also a white-flowered form in cultivation. Lapagerias are considered to require much skill in the growing, although they thrive well if a cool greenhouse is given them and they become well established. In the southern United States they may be grown in the open.

2. [*l. c.*] A plant of the genus *Lapageria.*

laparocolpotomy (lap″ą-rō-kol-pot'ō-mi), *n.* [Gr. *λαπάρα*, the flank, + *κόλπος*, womb (vagina), + *τομή*, a cutting.] In *surg.*, the operation of opening into the vagina, after the abdominal section, in order to remove a child which cannot be born through the natural channel: a substitute for Cæsarean section in which the uterus is incised.

laparocystidotomy (lap″ą-rō-sis-ti-dot'ō-mi), *n.* [Gr. *λαπάρα*, the flank, + *κίστις*, bladder, + *τομή*, a cutting.] In *surg.*, the operation of opening into the bladder through an incision in the abdominal wall just above the pubes.

laparo-elytrotomy (lap″ą-rō-el-i-trot'ō-mi), *n.* [Gr. *λαπάρα*, the flank, + *ἔλυτρον*, sheath (vagina), + *τομή*, a cutting.] Same as ★*laparocolpotomy.*

Dr. Thomas was a bold and skilful operator. In obstetrics he was an advocate of *laparo-elytrotomy* as a substitute for cæsarean section.

Med. Record, March 7, 1903, p. 383.

laparohysteropexy (lap″ą-rō-his-tę-rop'ek-si), *n.* [Gr. *λαπάρα*, the flank, + *ὑστέρα*, womb, + *πῆξις*, fastening.] Operative fixation of the fundus of the uterus to the anterior abdominal wall for the relief of falling of the womb.

laparoscopy (lap-ą-ros'kō-pi), *n.* [Gr. *λαπάρα*, the flank, + *-σκοπια*, < *σκοπεῖν*, view.] Inspection of the abdomen.

laparotome (lap'ą-rō-tōm), *n.* [Gr. *λαπάρα*, the flank, + *-τομος*, < *ταμεῖν*, cut.] A form of scalpel employed in laparotomy.

lap-bobbin (lap'bob″in), *n.* A spool or bobbin upon which something is wound or lapped, as the fleecy web or lap on a cotton-combing machine.

lap-drum (lap'drum), *n.* A cylinder upon which a lap or web is wound, or which gives motion to a spool or bobbin upon which a lap or web is wound, as on some machines in a textile-mill. *Thornley*, Cotton Combing Machines, p. 17.

lap-end (lap'end), *n.* That end of a cotton-picker or scutching-machine at which the cotton emerges in the form of a web, ribbon, or lap.

lap-game (lap'gām), *n.* Any game in which the scores made on one hand are carried to the next game if more than enough to win the first game; a variation of *railroad euchre.* See *euchre*, 1.

lap-guide (lap'gīd), *n.* A device, in a cotton-combing machine, to guide the unwinding of the laps or webs of cotton.

Lapham or **Laphamite markings.** See ★*marking.*

lap-head (lap'hed), *n.* That end of a scutching- or picking-machine where the cotton lap is formed into a roll.

lapidicolous (lap-i-dik'ō-lus), *a.* [L. *lapis* (*lapid-*), a stone, + *colere*, inhabit, + *-ous.*] Living under stones: a term applicable to many insects, and especially to certain blind ground-beetles so accustomed to this life that they have assumed the characteristics of true cave species.

lapillo (lä-pēl'lō), *n.* [It. *lapillo*, < L. *lapillus*, a stone: see *lapilli.*] Matter ejected from a volcano in the form of lapilli.

lapis[1], *n.*—**Lapis Lacedæmonius,** the name given by the ancients to a basalt found in the Peloponnesus, much used for gem-cutting. *A. J. Evans*, in Jour. of Hellenic Studies, XIII. 220.—**Lapis specularis,** an old name of the mineral selenite, or hydrated calcium sulphate ($CaSO_4.2H_2O$), in distinct crystals, the surfaces of which reflect light regularly as from a mirror.

lapis[2] (lä'pis), *n.* [Tagalog.] A large boat of small draught used for carrying merchandise. [Philippine Is.]

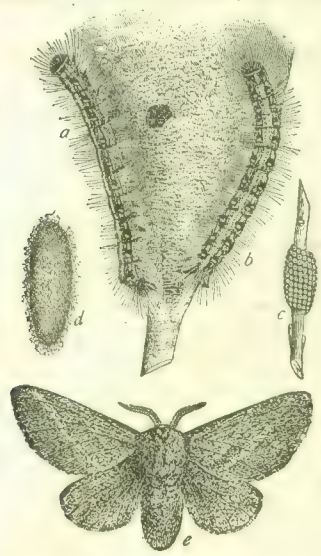
lap-knee (lap'nē), *n.* Same as ★*bosom-knee.*

Laplace's theory of capillarity. See ★*capillarity.*

Laplacian, *a.* **II.** *n.* A Laplace's coefficient; a form Pm (cos γ), where γ stands for the angle between r and the radius vector r_1 of some fixed point.

lap-love (lap'luv), *n.* The small bindweed, *Convolvulus arvensis.*

lap-machine (lap'mą-shēn″), *n.* A machine for preparing cotton in the form of laps for combing.—**Sliver lap-machine,** a machine for consolidating, attenuating, and forming into laps a number of slivers of cotton in the preparatory processes of combing.



lapon (lä-pōn'), *n.* A common name of one of the scorpænoid fishes, *Scorpæna mystes*, of the Pacific coast of Mexico and Central America.

Lapp. An abbreviation of *Lappish.*

lappaconitin (lap-ą-kon'i-tin), *n.* [L. *lappa*, a bur, + E. *aconitin.*] A crystalline alkaloid, $C_{34}H_{48}O_8N_2$, contained in the tubers of *Aconitum septentrionale.*

lappet, *n.* **4.** In *biol.*, a small lobe-shaped organ, such as the lappets of certain nemertean larvæ, etc.—**5.** Same as *tegula.*—**6.** In *paleon.*, an ear-like crest formed in some nautiloid cephalopods, as *Lituites* and *Ophidioceras*, by an extension of the lateral margins of the aperture of the shell.—**American lappet,** a lasiocampid moth, *Malacosoma americana*, common in the Atlantic United States, where its larvæ feed on the foliage of apple, cherry, oak, birch, maple, and ash.—**Esopha-**

geal lappet, in actinozoans, as the sea-anemone, a lobe projecting from the lower, free edge of the gullet at each end of its long diameter.—**Marginal lappet,** in *Scyphozoa*, as the common jellyfish, one of the delicate

American Lappet (*Malacosoma americana*).
a, *b*, larva on section of nest; *c*, egg-mass on twig; *d*, cocoon; *e*, female moth: *a*–*d*, reduced one third; *e*, slightly enlarged.

marginal processes, a pair of which is located in each of eight notches occurring at equal intervals around the edge of the umbrella. In each notch a sense-organ is lodged and is protected by the lappets.

lappet-caterpillar (lap′et-kat″ėr-pil-ăr), *n.* The larva of a lappet-moth.

lappet-loom (lap′et-löm), *n.* A loom for lappet-weaving, in which needle-frames are carried in front of the reed for producing the figured effects.

lappet-moth, *n.*—**Velleda lappet-moth,** an American lasiocampid moth, *Tolype velleda*, found throughout the United States. Its larvæ live on apple, pear, poplar, and other trees.

lappet-muslin (lap′et-muz″lin), *n.* A muslin in which figures have been woven on the lappet-loom.

lappet-shedding (lap′et-shed″ing), *n.* A system of dividing the warp-threads in a loom to allow certain other warp-threads to move transversely to form a figure by means of gaging-needles.

lappet-wheel (lap′et-hwēl), *n.* A part of a lappet-loom for weaving lappet figures.

lappin (lap′in), *n.* A crystalline substance of glucosidal nature, said to be obtained from burdock fruit.

lapping-machine, *n.* 2. In *barrel-making*, a machine for cutting, pointing, and cutting the lap in barrel-hoops, preparatory to placing them in the coiling-machine.

Lapponic (la-pon′ik), *a.* [NL. *Lapponicus*, < *Lapponia*, Lapland.] Same as *Lappish*.

lap-rivet (lap′riv″et), *v. t.* To lap and rivet; to fasten with rivets, as two parts or edges which are lapped one over the other.

lap-riveting (lap′riv″et-ing), *n.* A method of riveting in which two parts are lapped and riveted together. See ★*butt-riveting*.

lap-robe (lap′rōb), *n.* A fur robe or a blanket used to cover one's lap and feet when riding in a carriage or sleigh. [U. S.]

laps, *n.* and *v.* A simplified spelling of *lapse*.

lapse, *v. t.* 2. To be found lapsing or erring. [Rare.]

> Only myself stood out;
> For which, if I be *lapsed* in this place,
> I shall pay dear.
> *Shak.*, T. N., iii. 3.

lap-valve (lap′valv), *n.* A slide-valve with lap, used in an engine or pump.

lap-wheel (lap′hwēl), *n.* Same as *lap*[3], 5.

lap-winding (lap′wīn″diug), *n.* See ★*winding*[1].

lapwing, *n.*—**Wattled lapwing.** Same as *wattled plover* (which see, under *wattled*).

lapwood (lap′wůd), *n.* Same as ★*lap*[3], 10.

laquearian (lak-wē-ā′ri-an), *a.* [L. *laquearius* + *-an*.] Same as ★*laqueary*[2], *a.*

laqueary[1] (lak′wē-ar-i), *n.* Same as *laquear*.

laqueary[2] (lak′wē-ā-ri), *a.* [L. *laquearius*, < *laqueus*, a noose.] Armed with a noose, as a gladiator.

laqueche (lä-kāsh′), *n.* [A Canadian F. form of an Indian name.] A name of *Hiodon alosoides*, a clupeoid fish of the family *Hiodontidæ*, found in the upper Mississippi valley.

Laramide (lar′a-mid), *a.* A descriptive term used by Dana for those mountain-ranges or other rock-foldings which involve the Laramie beds of the Cretaceous as their uppermost member.

> This mountain system of North America, which stands as the Mesozoic time boundary, is the *Laramide* system.
> *Dana*, Manual of Geol. (4th ed.), p. 874.

larbolines, *n. pl.* See *larbowlines*.

larcenic (lär-sen′ik), *a.* Same as *larcenous*.

larch, *n.* 2. A commercial name for the lumber of the noble fir, *Abies nobilis*. See *noble* ★*fir*.—**Larch blister, canker, saw-fly.** See ★*blister*, etc.

larch-scale (lärch′skāl), *n.* A scale-insect found on larch, probably *Aspidiotus abietis*.

Larcoidea (lär-koi′dē-ä), *n. pl.* [NL., < Gr. λάρκος, a charcoal-basket, + εἶδος, form.] A family of spumellarian radiolarians having the skeleton irregularly lenticular or discoid.

Lard butter, compound. See ★*butter*[1], ★*compound*[1].—**Neutral lard,** a product obtained from the leaf-lard of the hog, by treatment similar to that by which oleo oil is made from beef fat, except that no stearin is extracted: used in making the kind of imitation of butter known as *butterine*.—**Rough lard,** lard from the smaller portions of adipose tissue cut away in butchering the hog.

larder[3] (lär′dėr), *n.* One who lards, as meat.

larder-fly (lär′dėr-fli), *n.* Same as *larder-beetle*.

lardiform (lär′di-fôrm), *a.* [L. *lardum*, lard, + *forma*, form.] Same as *lardaceous*.

lardine (lär′din), *n.* [*lard* + *-ine*[2].] An imitation of lard, consisting chiefly of the more solid portion of cotton-seed oil.

larding-money (lär′ding-mun″i), *n.* In *Eng. law*, a small sum paid by the tenants, according to the custom of the manor of Bradford, for the privilege of feeding hogs with acorns in the lord's woods.

lard-insect (lärd′in″sekt), *n.* Same as *bacon-beetle*.

lardite (lär′dīt), *n.* [*lard* + *-ite*[2].] An occasional synonym of steatite, and also of pagodite.

Lardizabala (lär-di-zab′a-lä), *n.* [NL. (Ruiz and Pavon, proposed in 1794, established in 1798), named in honor of Michael *Lardizabal* y Uribe, a Spanish patron of botany.] A genus of plants, type of the family *Lardizabalaceæ*. They are twining shrubs with alternate, once to thrice ternately compound leaves, and dicœcious flowers, the pistillate ones borne singly on axillary axes, the staminate in axillary racemes. There are two species, natives of Chile, one of which, *L. biternata*, is cultivated out of doors in southern California and the warmer parts of Europe.

Lardizabalaceæ (lär″di-zab-a-lā′sē-ē), *n. pl.* [NL. (Lindley, 1847), < *Lardizabala* + *-aceæ*.] A family of dicotyledonous choripetalous plants of the order *Ranales*, based on the genus *Lardizabala*. It has been included by some authors in the *Berberidaceæ*, from which, however, it differs in its many-seeded fruit, extrorse anthers, and diclinous flowers. It contains 7 genera and about 18 species, chiefly Asiatic, but *Lardizabala* and one other genus are Chilean. They are mostly woody climbers, with palmate or pinnate leaves. See *Akebia*.

lardizabalaceous (lär″di-zab-a-lā′shius), *a.* Belonging to the plant family *Lardizabalaceæ*.

lard-worm (lärd′wėrm), *n.* See ★*kidney-worm*.

lardy-dardy (lär″di-där′di), *n.* and *a.* [Another form of **ladidady*, < *la-di-da*: see ★*la-di-da*.]

I. *n.* A swell; a dandy; a fop. The word first appeared in or about the early sixties in the theaters, and later in London music-halls. *N. and Q.*, 9th ser., VIII. 19.

II. *a.* Fashionable; dandified; 'killing.' [Slang.]

> With our *lardy-dardy* garments we were really "on the spot,"
> And Charlie Vain came out so grand in a tall white Chimney-pot.
> *A. C. Hilton*, in The May Exam., quoted in N. and Q., 9th ser., VIII. 270.

lardy-dardy (lär″di-där′di), *v. i.*; pret. and pp. *lardy-dardied*, ppr. *lardy-dardying*. To linger or dangle about in an affected, 'lardy-dardy' way.

larentiid (la-ren′ti-id), *n.* and *a.* **I.** *n.* A member of the lepidopterous family *Larentiidæ*.

II. *a.* Having the characters of or belonging to the family *Larentiidæ*.

large, *n.*—**Statutes at large.** See ★*statute*.

largemouth (lärj′mouth), *n.* Same as *large-mouthed black-bass*. See *black-bass*.

largish (lär′jish), *a.* [*large* + *-ish*[1].] Rather large.

largitional (lär-jish′on-al), *a.* [LL. *largitionalis*, < L. *largitio*(*n*-), bounty: see *largition*.] Of the nature of largess; bountiful

lariat (lar′i-at), *v. t.* [*lariat*, *n.*] To catch or fasten with a lariat; lasso.

laricic (lā-ris′ik), *a.* [L. *larix* (*laric*-), larch, + *-ic*.] Derived from the larch.—**Laricic acid,** a colorless compound, $C_{10}H_{10}O_5$, found in the bark of

the smaller branches of larch-trees which are not more than from 20 to 30 years old. It is volatile with steam and sublimes at 93° C., forming lustrous monoclinic crystals which melt at 153° C.

Larimus (la-rī′mus), *n.* [NL., < Gr. λάριμος, a different reading of λάρινο, some sea-fish.] A genus of fishes belonging to the family *Sciænidæ*, the croakers, found on both coasts of America.

larinoid (lar′i-noid), *a.* [Gr. λαρινός, fat, + εἶδος, form.] Same as *lardaceous*.

laris (lā′ris), *n.* The Atlas cedar, *Cedrus Atlantica*. See *cedar*, 1.

larixinic (lā-rik-sin′ik), *a.* Same as ★*laricic*.

lark[1], *n.*—**Brown song-lark,** *Cinclioramphus cruralis*.

lark-heel (lärk′hēl), *n.* A long projecting heel.

> Neither the colour nor the hair are regarded as important ethnical tests, and the length of the heel alone [Negro "*lark-heel*"] is held to be an undoubted proof of Negro origin. *Keane*, Ethnology, p. 390.

lark-heeled, *a.* 2. Having a long, projecting heel. See ★*lark-heel*.

larking (lär′king), *a.* Larky; frolicsome; of the nature of a lark.

> I have learned to leap, . . . which is a *larking* thing for a don. *J. H. Newman*, Letters, I. 182. *N. E. D.*

larking-glass (lär′king-glȧs″), *n.* A device with mirrors, used to attract larks to the net.

> At that place [Dunstaple], persons go out with what is called a *larking glass*, which is, . . . a machine made somewhat in the shape of a cucumber.
> *S. R. Jackson*, in Hone, Every-day Book, II. 118.

larkish (lär′kish), *a.* [*lark*[2] + *-ish*[1].] Rather larky; inclined to be larky.

larkishness (lär′kish-nes), *n.* The quality or condition of being larkish.

lark's-claw (lärks′klȧ), *n.* See *lark-spur*.

lark's-head (lärks′hed), *n.* A knot made by doubling the bight of a rope, passing it around a spar, or through a ring or hook, and then bending it down, spreading it out, and slipping a toggle through the four parts (across the two outer and under the two inner). It is finished by a half-hitch around the standing part with the loose end so that it will not slip when a strain is put upon it.

Lark's-head.

larksome (lärk′sum), *a.* [*lark*[2] + *-some*.] Disposed to be larky; frolicsome.

larkspur, *n.*—**Azure** or **blue larkspur.** Same as *Carolina* ★*larkspur*.—**Carolina larkspur,** *Delphinium Carolinianum*, a blue-flowered species of the southern United States.—**Dwarf larkspur,** *Delphinium tricorne*, a low but stout species ranging from Pennsylvania to Georgia and west to Minnesota and Arkansas. The flowers are deep blue, but sometimes vary to nearly white.—**Nelson's larkspur,** *Delphinium Nelsoni*, a blue-flowered species of the Great Plains.—**Prairie-larkspur,** *Delphinium albescens*, a species with white flowers slightly tinged with blue and bluish spots on the sepals, found in prairie regions from Illinois to Manitoba and south to Kansas and Arkansas. It was formerly regarded as a white-flowered form of the Carolina larkspur.—**Tall larkspur,** *Delphinium urceolatum*, a tall species with purple or blue flowers, ranging from Pennsylvania to Alabama and west to Minnesota and Nebraska.

larkspurred (lärk′spėrd), *a.* Said of sheep. See the extract.

> The old shepherds had a comical notion, that sheep blind in the summer were *larkspurred;* that the sheep having trod upon a lark's nest, the old one . . . had spurred the intruder in the eye.
> *J. Lawrence*, Cattle, p. 531 (ed. 1809). *N. E. D.*

larmoyant (lär-mwo-yoṅ′), *a.* [F., pp. ppr. of *larmoyer*, be tearful.] Tearful; exhibiting a tearful sentimentality.

larnax (lär′naks), *n.*; pl. *larnakes* (-na-kēz). [Gr. λάρναξ, a box, chest, ark, coffin.] In *Gr. antiq.*, a chest or box; a box-like receptacle of terra-cotta, found in early Greek or Mycenæan tombs: often painted.

Larnax.
Terra-cotta, from Palaikastro, Crete.
(From "Annual of the British School at Athens.")

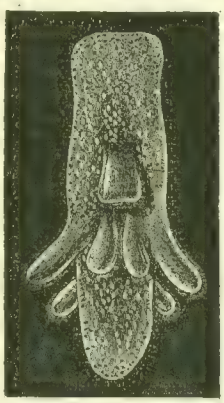
Nearer the city two tombs of the same period were discovered: the one, a square chamber with a dromos, yielded parts of two painted *larnakes*, thoroughly Mycenean in design, a gold ring, a crystal sphere, parts of a silver vase, and a quantity of iron swords.
Rep. Brit. Ass'n Advancement of Sci., 1901, pp. 444, 445.

larrid (lar'id), *n.* and *a.* **I.** *n.* A member of the hymenopterous family *Larridæ*.

II. *a.* Having the characters of or belonging to the family *Larridæ*.

larrigan (lar'i-gạn), *n.* [Origin unknown.] A boot of undressed leather, worn principally by lumbermen. *Cleveland Plain Dealer*, Dec. 21, 1902.

larrikinalian (lar″i-ki-nā'li-ạn), *a.* [*larrikin* + *-alian* as in *bacchanalian*.] Larrikin; characteristic of a larrikin.



In the *larrikinalian* din which prevailed from start to finish.
Evening Standard, July 5, 1893, p. 4, quoted in E. E. [Morris, Austral English.

larry[2] (lar'i), *n.* [Origin obscure.] 1. Confusion; tumult.—2. A scolding; a lecture. [Prov. Eng.]

larry[3] (lar'i), *a.* and *n.* [Origin obscure.] **I.** *a.* Misty: applied in the Teign valley, England, to a land-fog coming down the estuary, as distinguished from a sea-fog running up the river. *Eng. Dial. Dict.*

II. *n.* The fog itself. *Nature*, quoted in *N. E. D.*

larva, *n.*—**Desor's larva,** a type of larva occurring among *Nemertinea*. It resembles a pilidium, but lacks the free-swimming phase.—**Mitraria larva,** in chætopodous annelids, a larva having long provisional setæ which are later replaced by permanent structures.—**Müller's larva,** in some polyclad turbellarians, as *Yungia*, a larva having finger-shaped ciliated lobes, which becomes transformed into the young polyclad by the gradual diminution of the lobes.—**Phantom larva,** the aquatic larva of a non-biting mosquito of the genus *Corethra*, which possesses no hemoglobin and is so nearly transparent that, resting below the surface of a pool of clear water, it can hardly be distinguished.—**Queen larva,** the larva of a queen-bee, a queen-ant, or a queen-termite.

Müller's larva of *Yungia*, seen from the oral surface. (From Lankester's "Zoology," after Lang, from v. Graff.)

larvaceous (lär-vā'shius), *a.* [*larva* + *-aceous*.] 1. Resembling a mask: said of extensive cutaneous diseases of the face.—2. Same as ★*larval*, 2.

larval, *a.* 2. In *pathol.*, masked; not clearly defined: said of a disease of which the symptoms are indeterminate.—**Larval eye.** See ★*eye*[1].

larvalian (lär-vā'li-ạn), *a.* and *n.* Of or pertaining to the *Larvalia*; one of the *Larvalia*.

larvicidal (lär'vi-sī-dal), *a.* [*larvicide* + *-al*[1].] Pertaining to the killing of larvæ or having the property of killing them.

We are practically reduced to the use of oils in this *larvicidal* work. *L. O. Howard*, Mosquitoes, p. 197.

larvicide (lär'vi-sīd), *n.* [NL. *larva* + L. *-cida*, ‹ *cædere*, kill.] One who or that which kills larvæ; specifically, any substance used for the destruction of the larvæ of mosquitos.

The same authorities [Celli and Casagrandi] recommend [for killing mosquitoes] a powder composed of *larvicide* (an aniline substance), chrysanthemum flowers, and valerian root, to be burnt in bedrooms. *Encyc. Brit.*, XXX. 485.

larvicolous (lär-vik'ō-lus), *a.* [NL. *larva* + L. *colere*, inhabit.] Living within insect larvæ: said of many hymenopterous and dipterous parasites.

larvigerous, *a.* 2. Giving birth to living larvæ, as certain flesh-flies.

larvule (lär'vūl), *n.* [NL. *larvula*, dim. of *larva*, larva.] One of the early stages of certain ephemerid larvæ in which there is no circulatory system and no apparent nervous system.

Laryngeal chorea, crisis, vertigo. See ★*chorea*, etc.—**Laryngeal mirror.** See ★*mirror*.

laryngitis, *n.*—**Membranous laryngitis,** croup.—**Phlegmonous laryngitis,** severe inflammation of the submucous connective tissue as well as of the mucous membrane of the larynx.

laryngograph (lā-ring'gō-gràf), *n.* [Gr. *λάρυγξ*, larynx, + *γράφειν*, write.] In *physiol.* and *psychophys.*, an instrument for recording the movements of the larynx, voluntary (in speaking) or involuntary.

laryngometry (lar-ing-gom'e-tri), *n.* [Gr. *λάρυγξ*, larynx, + *-μετρια*, ‹ *μέτρον*, measure.] Measurement of the larynx.

laryngopharyngeal (lā-ring″gō-fā-rin'jē-ạl), *a.* Relating to both larynx and pharynx.

laryngopharyngitis (lā-ring″gō-far-in-jī'tis), *n.* [NL., ‹ Gr. *λάρυγξ*, larynx, + *φάρυγξ*, pharynx, + *-itis*.] Inflammation of both larynx and pharynx.

laryngoplegia (lā-ring-gō-plē'ji-ạ), *n.* [NL., ‹ Gr. *λάρυγξ*, larynx, + *πληγή*, stroke.] Paralysis of the laryngeal muscles.

laryngorrhagia (lā-ring-gō-rā'ji-ạ), *n.* [NL., ‹ Gr. *λάρυγξ*, larynx, + *-ραγια*, ‹ *ῥηγνύναι*, break.] Hemorrhage from the larynx.

laryngospasm, *n.* 2. Same as *laryngismus*.

laryngostasis (lar-ing-gos'tā-sis), *n.* [NL., ‹ Gr. *λάρυγξ*, larynx, + *στάσις*, standing.] Contraction of the vocal cords in spasmodic croup.

laryngostroboscope (lā-ring-gō-strob'ō-skōp), *n.* [Gr. *λάρυγξ*, larynx, + *στρόβος*, a twisting or whirling, + *σκοπεῖν*, view.] A form of stroboscope used in observation of the vibration of the vocal cords. *Scripture*, Exper. Phonet., p. 250.

laryngostroboscopy (lā-ring″gō-strō-bos'kō-pi), *n.* [*laryngostroboscope* + *-y*[3].] Inspection by means of the laryngostroboscope of the vocal cords in action or while vibrating.

laryngotracheitis (lā-ring″gō-trā-kē-ī'tis), *n.* [NL., ‹ Gr. *λάρυγξ*, larynx, + *τραχεία*, trachea, + *-itis*.] Inflammation of the larynx and the trachea.

laryngotyphoid (lā-ring-gō-tī'foid), *n.* [Gr. *λάρυγξ*, larynx, + E. *typhoid*.] Typhoid fever with marked laryngeal complications.

L. A. S. An abbreviation of *Lord Advocate of Scotland*.

lascar, *n.* 3. An artilleryman of an inferior class; a gun-lascar. *N. E. D.*

lascaree, *n.* 2. An East Indian sailor. See *lascar*, 2.

laserpitin (la-sèr'pi-tin), *n.* [*Laserpitium* + *-ine*[2].] A colorless compound, $C_{24}H_{36}O_7$, found in the root of *Laserpitium latifolium*. It crystallizes in rhombic prisms, melts at 114° C., and sublimes without decomposition.

lash-cell (lash'sel), *n.* A cell provided with cilia or flagella. *L. F. Ward*, Dynamic Sociol., I. 343.

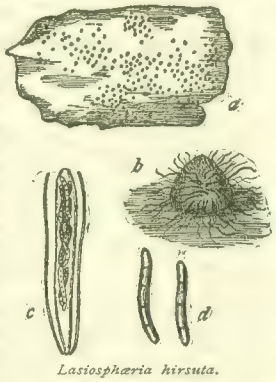
lashing, *n.* 4. *pl.* In *mining*, planks spiked on the inside of shaft-timbering to hold the frames in place. [Eng.]

lashkar (lash'kär), *n.* [Pers. *lashkar*, a camp, an army: see *lascar*.] 1†. A camp of the native Indian regiments.—2. A body of Afridi soldiers: so used in English newspaper accounts of the Afridi campaign, 1897. *N. E. D.*

lash-pole (lash'pōl), *n.* A cross-pole which holds logs together in a raft.

lasianthous (lā-si-an'thus), *a.* [Gr. *λάσιος*, hairy, woolly, + *ἄνθος*, flower, + *-ous*.] In *bot.*, same as ★*laniflorous*.

Lasianthus (lā-si-an'thus), *n.* [NL. (Adanson, 1763). The allusion is to the silky hairs of the calyx; ‹ Gr. *λάσιος*, hairy, woolly, + *ἄνθος*, flower.] A genus of dicotyledonous trees or shrubs of the family *Theaceæ*. See *Gordonia*.



lasiocampid (lā″si-ō-kam'pid), *n.* and *a.* **I.** *n.* A member of the lepidopterous family *Lasiocampidæ*.

II. *a.* Having the characters of or belonging to the family *Lasiocampidæ*.

lasiocarpous (lā″si-ō-kär'pus), *a.* [Gr. *λάσιος*, hairy, woolly, + *καρπός*, fruit.] In *bot.*, having woolly fruit.

Lasiograptus (lā″si-ō-grap'tus), *n.* [NL., ‹ Gr. *λάσιος*, hairy, + *γραπτός*, engraved: see *graptolite*.] A genus of Lower Silurian graptolites of the family *Retiolitidæ*, which is peculiar in so far as the fiber-like processes of the apertures unite to form an outer network.

Lasiosphæria (lā″si-ō-sfē'ri-ạ), *n.* [NL. (Cesati and De Notaris, 1863), ‹ Gr. *λάσιος*, hairy, + *σφαῖρα*, sphere.] A large genus of pyrenomycetous fungi of the family *Sphæriaceæ*, having separate superficial perithecia clothed with brown hairs. The spores are cylindrical, hyaline or brownish, and several-septate. About 40 species have been described, occurring mostly on decaying wood. *L. hirsuta* is a common species in Europe and America.

Lasiosphæria hirsuta.

a, habit of the fungus; *b*, perithecium, enlarged; *c*, ascus with immature spores and paraphyses, magnified; *d*, ascospores, more highly magnified. (From Engler and Prantl's "Pflanzenfamilien.")

lassitudinous (las-i-tū'di-nus), *a.* [L. *lassitudo* (*-din-*), weariness, + *-ous*.] Languid; apt to be languid; showing the effects of languor.

lasso-harness (las'ō-här″nes), *n.* A working-tackle, consisting of a girth with a long rope attached, used especially to enable a cavalry-horse to assist draft-horses in moving field- or siege-guns, etc.

lasting-machine (lás'ting-ma-shēn″), *n.* In *shoe-manuf.*, a machine for drawing, stretching, and bending the upper of a shoe over the last and preparing it to fit and join the sole and heel. It repeats, essentially, the operations performed by hand with a laster, and inserts and drives tacks into the edge of the upper, to hold it in place while the shoe is sewed, wired, or nailed.

lata (lä'tạ), *n.* [Jav. *lata*, Malay *lātah*.] A form of 'hysteria' or nervous disturbance common among the people of Java and other parts of Malaysia, in which they echo or imitate in a silly manner the words or actions of other persons and chatter absurdly.

The nervous affliction called *lātah*, to which many Malays are subject, is also a curious trait of the people. The victims of this affliction lose for the time all self-control and all sense of their own identity, imitating the actions of any person who chances to rivet their attention. *Encyc. Brit.*, XXX. 496.

latch[2] (lach), *n.* A tanners' pit, sunk below the general level of the ground, in which ooze is prepared from tan-bark or other similar material by leaching it with water. A contraction of *latch-* or *leach-pit*.

latch-bolt (lach'bōlt), *n.* Any latch or door-bolt, controlled by a spring and having a beveled head which, when the door is closed, is pressed back by meeting the strike and is thrown out again when the door is shut: the common form of self-locking bolt.

latchet[2] (lach'et), *n.* [Also *latchett*; origin obscure.] A fish, *Trigla cuculus*, of the family *Triglidæ*, found on the west coast of Europe and in the Mediterranean Sea.

latching-key (lach'ing-kē), *n.* *Naut.*, the center lasket which prevents the others from unreaving.

latch-needle (lach'nē″dl), *n.* A knitting-machine needle with a hinged latch or catch so arranged as readily to take on and throw off the yarn-loop in the process of knitting: invented by Matthew Townsend, Leicester, England, in 1849.

Latch-needle.
a, latch; *b*, cheek; *c*, throat; *d*, stem; *e*, butt; *f*, shank; *g*, hinge; *h*, hook.

latch-pin (lach'pin), *n.* 1. A pin for raising the latch of a door.—2. A pin which catches some part of a mechanism and holds it loosely; a catch-pin.

late[1], *a.* 8. Slow or backward in bearing crops, because heavy, clayey, cold, sour, or unfavorably situated as regards the sun, or the like: as, *late* land.

The superfluous water which tended to make the land cold, sour, and "*late*" is removed, thus making the soil warmer and earlier; and by the admission of air the acidity is slowly overcome. *Yearbook U. S. Dept. Agr.*, 1901, p. 436.

Latebrus (lat'e-brus), *n.* [NL., ‹ L. *latebra*, a hiding-place, ‹ *latere*, hide.] A subgenus of fishes, belonging to the *Cheilodipteridæ*, found in the West Indies.

laten[2] (lā'ten), *v. i.* and *t.* [*late*[1] + *-en*.] To grow late, or to cause to grow late.

Latent light, motions. See ★*light*[1], ★*motion*.

latentize (lā'ten-tīz), *v. t.*; pret. and pp. *latentized*, ppr. *latentizing*. To render latent. *G. S. Hall*, Adolescence, I. 266.

Lateolabrax (lā″tē-ō-lā'braks), *n.* [NL., appar. ‹ L. *latere*, hide, + Gr. *λάβραξ*, a sea-fish.] A genus of serranoid fishes found on the coasts of China and Japan.

lateral. I. *a.*—**Lateral aberration.** See ★*aberration*.—**Lateral chain.** Same as ★*receptor*. See also ★*immunity*, 5.—**Lateral masses of the sacrum, lateral organ.** See ★*sacrum*, ★*organ*[1].—**Lateral process.** Same as *parapophysis*.—**Lateral secretion, septum, sinus.** See ★*secretion*, etc.

II. *n.* 3. A small ditch or distributary from a main or principal irrigation ditch.

The location of the *laterals* furnishes an opportunity for the irrigator to show his skill. While the land is new, spreading water over it will be a difficult matter. It may be impossible to properly locate the main *laterals* at first, and supplemental *laterals* and dikes may have to be constructed. *Yearbook U. S. Dept. Agr.*, 1900, p. 505.

4. *pl.* In the pelecypod mollusks, the lateral hinge-teeth, those lying at the sides or ends of the hinge-plate, anterior or posterior to the median or cardinal teeth.—**Farm lateral,** a small distributing-ditch leading to or across the farms to be irrigated.

lateralia (lat-ę-rā'li-ạ), *n. pl.* [NL., neut. pl. of L. *lateralis*, of the side: see *lateral*.] In

the capitulum or head of a barnacle, the lateral plates. These take on various shapes and are usually distinctly designated. Thus in the acorn-barnacles, or *Balanidæ*, there are rostrolateralia and carinolateralia, according to their position near the rostral and carinal plates.

Lateralis accessorius. See ★*accessorius*.

lateralize (lat′ē-ral-īz), *v. t.*; pret. and pp. *lateralized*, ppr. *lateralizing*. [*lateral* + *-ize*.] To turn to the side; place on one side; make lateral. *Therapeutic Gazette*, Feb. 15, 1903, p. 74.—**Lateralized operation.** See *lateral operation* (under *lateral*) and *lithotomy*.

lateralizer (lat′ē-ral-ī-zėr), *n.* A muscle whose action serves to move the jaw sidewise, or laterally. [Rare.]

There can be no doubt that in animals which chew the cud the internal pterygoid acts as a powerful *lateraliser* of the jaw. *Proc. Zool. Soc. London*, 1901, II. 665.

laterifloral (lat″ē-ri-flō′ral), *a.* [L. *latus* (*later-*), side, + *flos* (*flor-*), flower, + *-al*[1].] In *bot.*, having lateral flowers. Also *lateriflorous*.

lateriflorous (lat-ē-rif′lō-rus), *a.* Same as ★*laterifloral*.

lateripulsion, lateriversion. See ★*lateropulsion, lateroversion*.

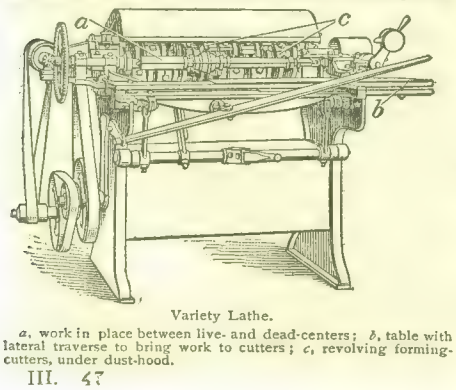
laterization (lat″ē-ri-zā′shon), *n.* In *geol.*, the process of subaërial decay in certain rocks which yields laterite. *Geikie*, Text-book of Geol., p. 169.

lateromedial (lat″ē-rō-mē′di-al), *a.* Toward the middle of the side.

lateroposition (lat″ē-rō-pō-zish′on), *n.* [L. *latus* (*later-*), side, + *positio*(*n-*), position.] Displacement to one or the other side.

lateropulsion (lat″ē-rō-pul′shon), *n.* [Also *lateripulsion*; < *latus* (*later-*), side, + *pulsio*(*n-*), driving.] A constant tendency to lateral movement.

laterotemporal (lat″ē-rō-tem′pō-ral), *a.* [L. *latus* (*later-*), side, + E. *temporal*[2].] Pertaining to the lower or outer part of the temporal region, according as the skull is compressed or depressed.



In contrast to the Synapsida the cranium is short; the temporal region is primitively fenestrated by two distinct openings, the supra- and *latero-temporal* fenestræ, bounded by the supra- and *latero-temporal* arches, one or both of which may secondarily disappear.
Amer. Nat., Feb., 1904, p. 105.

Laterotemporal arch, the lower of the two bony arches found in such a cranium as that of *Hatteria*.—**Laterotemporal vacuity** or **fenestra.** See ★*vacuity*.

lateroventral (lat″ē-rō-ven′tral), *a.* [L. *latus* (*later-*), side, + E. *ventral*.] Situated low down on the side; toward the belly. *Amer. Anthropologist*, Oct.–Dec., 1903, p. 634.

lath[1], *n.* 3. In *mining*, one of the sharpened planks driven in advance of the excavation in sinking shafts in loose ground. See ★*forepale*, 2.

lathe[1], *n.*—**Back-geared lathe,** a lathe in which the work held between the centers is driven by a reducing train of gears from the cone-pulley, so that a high speed of belt is made to give a powerful turning effect against the cutting-tool. The cone-pulley carries a small gear which drives a large pinion on a shaft at the back of the head-stock, and a second small pinion on this back-gear shaft drives a larger gear on the spindle. The back-gear reduces speed and increases power.—**Ball-turning lathe,** a form of turning-lathe fitted with a special arrangement of its tool-holder for turning spherical surfaces.—**Barrel-turning and -smoothing** (or **-sanding**) **lathe.** See ★*sanding-machine*.—**Hat-finishing lathe,** a machine for brushing, ironing, smoothing, and otherwise finishing a hat.—**Jewelers' lathe,** a small precision-lathe for use on a bench: much used by watch-makers and jewelers.—**Lathe test-indicator.** See ★*test-indicator*.—**Necking- and bulging-lathe,** a spinning-lathe which has special attachments for forming the necks of spun-ware vessels and bending them into shapes having a bulge or swell at some point on the sides.—**Slide-rest lathe,** a lathe equipped with a slide-rest, an attachment used principally for turning to exact dimensions and reduplicating sizes. See *duplex lathe*, under *lathe*[1].—**Spherical lathe,** a lathe which has an attachment for turning balls or spheres.—**Variety lathe,** a high-speed wood-working lathe adapted to a variety of work, such as turning wood

Variety Lathe.

a, work in place between live- and dead-centers; *b*, table with lateral traverse to bring work to cutters; *c*, revolving forming-cutters, under dust-hood.

in intricate forms, as in making ornamental chair-legs, balusters, piano-stool posts, etc. The stock to be turned is placed between centers and is rotated as in any lathe, and by means of a sliding table is made to approach a long horizontal cutter-head, parallel to it, which carries a series of cutters. This cutter-head revolves at a high speed, and when the revolving stock is brought to the cutters it is rapidly turned to a form corresponding to the shape of the blades of the cutters. The cutters take the place of the chisels or other tools of the ordinary turning-lathe. Since the cutters admit of many changes, the machine is capable of doing a great variety of work. Capacity, 3,000 pieces in a day.—**V's of a lathe,** the V-shaped ways on a lathe-bed on which the tool-carriage and tail-stock slide.

lathe-bed (lāᴛʜ′bed), *n.* The upper or main part of the framework of a lathe, on which rest the head- and tail-stock and the tool-carriage.

latheman (lāᴛʜ′man), *n.*; pl. *lathemen* (-men). A brass-finisher who is employed solely in turning at the lathe and not in fitting at the bench or vise. *Labour Commission*, Glossary. *N. E. D.*

lathe-race (lāᴛʜ′rās), *n.* In *weaving*, the track in which a shuttle runs.

lather-fungus (laᴛʜ′ėr-fung″gus), *n.* Any of the basidiomycetous fungi belonging to the genus *Clathrus*.

lathery (laᴛʜ′ėr-i), *a.* [*lather*[1] + *-y*[1].] 1. Covered with soapy lather.—2. Covered with sweaty foam, as a horse.—3. Resembling lather; figuratively, unsubstantial, like foam.

lathe-standard (lāᴛʜ′stan″dārd), *n.* A leg or A-frame used as a support for a lathe-bed. See cut under *lathe*[1].

lathing-saw (lāth′ing-sâ), *n.* A saw for cutting metal laths.

lathing-staff (lāth′ing-staf), *n.* A lathing-hatchet; a hammer having a cutting-edge for trimming laths.

lath-rending (lāth′ren″ding), *n.* The process of making laths by splitting.

lathyric (la-thir′ik), *a.* [*Lathyrus* + *-ic*.] Producing lathyrism (which see).

lathyrin (lath′i-rin), *n.* [*Lathyrus* + *-in*[2].] A yellowish compound found in the seeds of *Lathyrus sylvestris*.

latifundian (lat-i-fun′di-an), *a.* [L. *latifundium*, a great estate, + *-an*.] Pertaining to or possessed of great estates or a great estate. See *latifundium*.

latigo (lä′tē-gō), *n.* [Sp. *látigo*.] A strap for tightening a saddle-girth.

latilamina (lat-i-lam′i-nä), *n.*; pl. *latilaminæ* (-nē). [L. *latus*, broad, + *lamina*, a thin plate.] In *paleon.*, a term denoting one of the thick concentric strata of the hydrocoralline *Stromatoporoidea*, in distinction from the thinner laminæ which are formed out of processes given off horizontally by radial pillars.

latimeandroid (lat″i-mē-an′droid), *n.* [*Latimeandra* + *-oid*.] A coral of the genus *Latimeandra*, of the family *Thamasteriidæ* and group *Madreporaria fungida*.

Latin. I. *a.*—**Latin school.** See ★*school*[1].—**Latin square, Latin square problem.** See ★*square*[1].—**Latin union.** See *Latin*. By the treaty (1865), gold coins and a silver coin based upon the five-franc piece, of uniform weight and fineness, were authorized, and it was provided that such coins should be of unlimited legal tender in the countries issuing them, and that these coins issued by any one of the states should be receivable in payment of public dues in all of the signatory states. It was provided that the minor silver coins should be of a uniform fineness of .835, that they should not be issued by any state in excess of six francs per capita of the population, and that they should be legal tender to the extent of fifty francs in any one payment in the issuing state. Each state agreed to accept, in payment of public dues, such coins issued by the other states in payments not exceeding one hundred francs, while the issuing states were required to receive these coins in any amounts. By an agreement of 1874, renewed in 1875 and 1876, the quantities of silver to be coined in the several states were limited. In 1877 the coinage of the five-franc piece practically ceased, and gold became the monetary standard, although the silver five-franc pieces still retain their legal-tender quality.

II. *n.*—**False Latin,** Latin not academically correct; hence, any blunder, as an error in good breeding.

Our captain . . . answered that he would not [put on his hat before the king], that they should not cause him to commit that *false Latine*.
G. Havers, tr. of P. della Valle, Travels in E. India, p. [186. *N. E. D.*

Latin-American (lat′in-ą-mer″i-kąn), *a.* and *n.* I. *a.* Of or pertaining to those peoples of America that speak Romance languages: particularly applied to the nations that speak Spanish or Portuguese.

II. *n.* A native of a Latin-American nation.

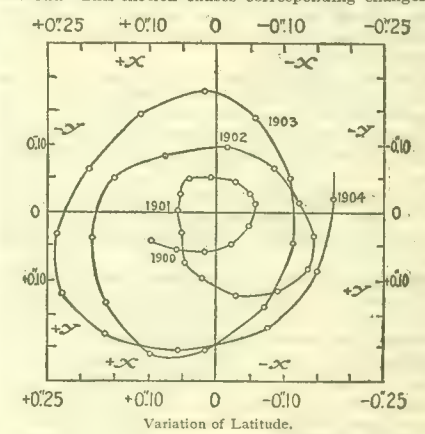
Latinic (la-tin′ik), *a.* [*Latin* + *-ic*.] 1. Latin in a political sense; of or pertaining to the Latin nations, whether ancient or modern.—2. Latin in a large sense; largely Latin: as, "the prevalent *Latinic* character of the vocabulary," *J. A. H. Murray*, in N. E. D.

Latinity, *n.* 2. The condition of being a Roman citizen.

Latinizer (lat′i-nī-zėr), *n.* 1. One who translates into Latin; one who makes conformable to the Latin Church; one who habitually uses Latin forms or idioms.—2. A Latin scholar; a Latinist.

latiplantar (lat-i-plan′tär), *a.* [L. *latus*, broad, + *planta*, sole, + *-ar*[3].] In *ornith.*, having the tarsus rounded behind: contrasted with the *laminiplantar* tarsus of most birds. [Rare.]

latisellate (lat-i-sel′āt), *a.* [L. *latus*, broad, + *sella*, saddle, + *-ate*[1].] Having a broad saddle: used of the first or earliest suture in ammonoid cephalopods, and contrasted with ★*asellate* and ★*angustisellate*. The latisellate condition is not a primitive but a secondary stage in the phylogeny of the ammonoids, and does not appear in the earliest representatives of the group.



latisept (lat′i-sept), *a.* [L. *latus*, broad, + *sæptum*, *septum*, partition.] Same as ★*latiseptate*.

latiseptal (lat-i-sep′tal), *a.* [*latisept* + *-al*[1].] Same as ★*latiseptate*.

latiseptate (lat-i-sep′tāt), *a.* [*latisept* + *-ate*[1].] In *bot.*, having broad partitions, as in the silicles of many cruciferous plants.

latite (lā′tīt), *n.* [*Latium*, an ancient province of Italy, + *-ite*[2].] In *petrog.*, a name given by Ransome (1898) to volcanic rocks intermediate in composition between trachyte and andesite: the lava equivalent of monzonite. They are characterized by the presence of orthoclase and lime-soda feldspar in nearly equal amounts, with subordinate ferromagnesian minerals. The term embraces trachyandesite, trachydolerite, ciminite, and vulsinite.

latitude, *n.*—**Apparent celestial latitude,** the apparent angular distance of a heavenly body from the ecliptic as viewed by an observer, and uncorrected for parallax, etc.—**Geodetic latitude,** latitude as determined by astronomical observations corrected for station error. See ★*error*. The correction seldom exceeds a few seconds.—**Geographical latitude,** the angle between the polar axis of the earth and the direction of a radius drawn to the earth's center: the geodetic or geocentric latitude, as distinguished from the astronomical.—**Kronocentric latitude,** distance on the planet Saturn north or south of its equator.—**Magnetic latitude,** the angular distance north or south of an imaginary line passing around the earth midway between the magnetic poles.—**Mean latitude.** Same as *middle latitude* (which see, under *latitude*).—**Meridional difference of latitude,** the amount which represents the same proportion to the difference of latitude that the difference of longitude represents to the departure.—**Variation of latitude,** a minute change in the latitudes of places on the earth's surface, discovered at Berlin in 1889 and since fully verified. It never exceeds 0.3″, and appears to be made up of two superposed periodic variations with periods of one year and of fourteen months respectively. It is caused by a motion of the earth's axis within the globe, in consequence of which the pole of rotation wanders in an apparently irregular curve around its mean position, never, however, receding from it by more than about 30 feet. See cut. This motion causes corresponding changes of

Variation of Latitude.

Course of the pole of the earth from 1900 to 1904. (Albrecht.)

longitude as well as of latitude. It is supposed to be mainly the result of periodical changes in the distribution of matter on the earth's surface, due to the seasons and other causes; but the exact explanation is still obscure.

latitudinary (lat-i-tū′di-nā-ri), *a.* [NL. *latitudinarius*, < L. *latitudo*, latitude.] Same as *latitudinarian*.

latomy (lat′ō-mi), *n.* [Gr. λατομία, a stone-quarry, < λατόμος, a stone-cutter, < λᾶς, stone, + -τομος, < ταμεῖν, cut.] A stone-quarry: applied especially to one of those of ancient Syracuse.

latreutic (la-trō′tik), *a.* Same as *latreutical*.

latron† (lā′tron), *n.* [L. *latro*(*n-*), a robber. Compare *ladrone*.] A brigand; a robber.

latronage† (lā′trọn-āj), *n.* [*latron* + *-age.*] Brigandage; robbery.

latruncular (la-trung′kū-lăr), *a.* [L. *latrunculus*, a pawn at a game resembling chess, + *-ar*³.] Relating to or like the pawns in a game resembling chess.

latten, *n.* **3.** A sheet-iron plate prepared for tinning, and ranging in thickness from .020 to .016 of an inch. *Phillips and Bauerman,* Elements of Metallurgy, p. 340.—**White latten,** thin sheet-metal of the bronze class, usually in rolled plates, made of an alloy of copper, tin, and zinc: distinguished from black latten, which is a true brass of copper and zinc.

lattermost (lat′ėr-mōst), *a.* Last; latest.

lattice, *n.* **4.** In *textile-manuf.*, an apron or a conveyer made of laths or slats, and designed to carry material into a machine or from one machine to another.—**5.** In *math.*, a net made of straight lines, vertical and horizontal, and inclosing rectangular compartments.

lattice-apron (lat′is-ā″prun), *n.* A flexible feed-table constructed of narrow slats, employed on textile-machinery to carry the raw material into the machine; a lattice.

lattice-bar (lat′is-bär), *n.* In structural work, particularly bridge work, one of the slender diagonal members which connect the two opposite parallel members or flanges of a structural iron or steel beam, column, or strut, and which are arranged in two or more distinct, continuous, zigzag lines, the bars of one line crossing those of the other: in distinction from *lacing-bars*, which form a single, continuous, zigzag line, no two members of which cross one another.

lattice-beam (lat′is-bēm), *n.* A beam, generally of structural iron or steel, composed of a top and a bottom flange, commonly of channel-irons, united on each side by diagonal latticing. See ★*lattice-bar.*

lattice-frame (lat′is-frām), *n.* A frame, resembling a deep and narrow lattice-girder, composed of two parallel members, frequently T-irons, united by a system of diagonal latticing.

lattice-girder, *n.*—**Half-lattice girder,** a girder or truss in which the tension-bars run only one way across the panels. They are symmetrical about the center, as in a Warren truss, and there is a perpendicular compression-member at the end of each panel.

lattice-stitch (lat′is-stich), *n.* In *needlework*, an embroidery stitch formed of straight lines crossing and recrossing.

latticing (lat′is-ing), *n.* In structural work, particularly bridge work, the system of slender diagonal members which connect the two opposite parallel members or flanges of a structural iron or steel beam, column, or strut, and which are arranged in two or more distinct, continuous, zigzag lines, the bars of one line crossing those of the other: in distinction from *lacing*, in which the adjacent bars form a single consecutive, zigzag line, no two bars crossing one another.

latus¹, *n.*—**Latus rectum.** (*c*) The chord through the focus of a conic perpendicular to the transverse axis.

latus² (lā′tus), *n.* [ML. *latus*, Gr. *λάτος.*] A serranoid fish, *Lates niloticus*, found in the Nile. It attains a large size and is used for food.

laudanidine (lâ-dan′i-din), *n.* [*laudan-um* + *-id* + *-ine*².] A colorless alkaloid, $C_{20}H_{25}O_4N$, contained in opium. It forms crystals melting at 177° C.

laudanine (lâ′da-nin), *n.* [*laudan-um* + *-ine*².] A colorless alkaloid, $HOC_{17}H_{15}N(OCH_3)_3$, contained in opium. It crystallizes in small trimetric prisms melting at 166° C.

laudanosine (lâ-dan′ọ-sin), *n.* [*laudan-um* + *-ose* + *-ine*².] A colorless, slightly bitter dextrorotatory alkaloid, $C_{17}H_{15}N(OCH_3)_4$, contained in opium. It crystallizes in needles melting at 89° C.

laudatio (lâ-dā′shiō), *n.* [L.: see *laudation.*] In *law*, evidence tending to prove the good character of one accused.

laudator, *n.* 2†. In *old law:* (*b*) A witness to the good character of an accused person.

Laudianism (lâ′di-ạn-izm), *n.* Same as ★*Laudism.*

laudification (lâ″di-fi-kā′shọn), *n.* [NL. **laudificatio(n-)*, < *laudificare*, praise, < *laus* (*laud-*), praise, + *facere*, make.] The act of praising or extolling with praise.

Laudism (lâ′dizm), *n.* The policy of William Laud, Archbishop of Canterbury in the reign of Charles I. of England. He sought to restore the Church of England to what he regarded as its primitive doctrine and worship, and to this end vigorously persecuted dissenters and nonconformists.

laudist¹ (lâ′dist), *n.* [*laud* + *-ist.*] One who writes lauds or ascriptions of praise.

Laudist² (lâ′dist), *n.* [*Laud* (see def.) + *-ist.*] One who supported the policy of Archbishop Laud. See *Laudian* and ★*Laudism.*

Laugerian (lō-jē′ri-ạn), *a.* [*Laugerie* (see def.) + *-an.*] Of Laugerie-Basse, in France, or of a prehistoric race represented by one skeleton of a man and two skulls of women there found belonging to the later paleolithic (Magdalenian) period, and characterized by thick, dolichocephalic skulls.

After tracing the steps in the industrial evolution of the Paleolithic period, the authors [Gabriel and Adrien de Mortillet] pass in review all the discoveries of fossil human bones supposed to belong to the same period. The existence of two races is recognized—an earlier, referred to the first three epochs of the Paleolithic period and called Neanderthal, and a later, referred to the last three epochs of the same period and named *Laugerian*, or race of Laugerie-Basse. The *Laugerian* race is derived from the Neanderthal without intermixture from any foreign source. The transition may be traced in the human remains from Arcy, Eguisheim, Marcilly and Bréchamps. *Science*, March 1, 1901, p. 344.

Laugerie-Chancelade race. See ★*race*³.

laughful (läf′fůl), *a.* [*laugh* + *-ful.*] Full of laughter or merriment.

laughing-falcon (lä′fing-fâ″kn), *n.* See ★*falcon.*

laughsome (läf′sum), *a.* [*laugh* + *-some.*] Ready to laugh; fitted to excite laughter.

laughy (lä′fi), *a.* [*laugh* + *-y*¹.] Feeling like laughing. [Nonce-word.]

Why need there be a reason for laughing? Let us laugh when we are *laughy*, as we sleep when we are sleepy. *Thackeray,* Ravenswing, i.

lauia (lä-ọ̈-ē′ä), *n.* [Hawaiian.] A native Hawaiian name for several species of the genus *Scarus;* a parrot-fish.

launch, *n.*—**Naphtha-fuel launch,** a launch which generates steam in its boiler for motive power and uses naphtha for firing.

launching-cleat (län′ching-klēt), *n.* A wooden cleat, used either in dry-dock or in the launching of a vessel, secured to the ship in such a manner that it will catch the head of the shore.

launching-planks (län′ching-plangks), *n. pl.* A set of planks forming the platform on each side of the ship on which the bilgeways slide in the launching of the vessel.

launching-ribband (län′ching-rib″band), *n.* See *launching-ways.*

launder, *n.*—**Spinning launder,** a launder which revolves; a device composed of one or more troughs, arranged to be revolved. *Phillips and Bauerman,* Elements of Metallurgy, p. 854.

laundry-net (län′dri-net), *n.* A net used to hold fabrics while they are cleaned by boiling.

laundrywoman (län′dri-wům″an), *n.* A woman employed in a laundry; a laundress.

laurdalite (lâr′da-līt), *n.* [*Laurdal*, Norway, + *-ite*².] A coarse-grained rock composed of soda-orthoclase or soda-microcline, or cryptoperthite, with nephelite, a small amount of lepidomelane, and augite, rarely olivin. *Brögger,* 1894.

laureate, *n.* **3.** In some educational institutions in the United States, a degree given to women instead of 'Bachelor' and 'Master': as, *Laureate* of Science, etc.—**4.** In *numis.*, same as *laurel*, 5.

laurel, *n.* **3.** (*b*) In Porto Rico, Mexico, and Central America, a name applied to many species of *Ocotea, Damburneya,* and allied genera of *Lauraceæ;* especially, in Porto Rico, to *Ocotea fœniculacea, O. floribunda, Damburneya Sintenisii* (*Nectandra Sintenisii* of Mez), *D. Krugii* (*Nectandra Krugii* of Mez), and *D. coriacea* (*Nectandra coriacea* of Grisebach).—**Alexandrian laurel,** *Calophyllum Inophyllum.* See *domba, tamanu* and ★*bitanhol.*—**Black laurel,** the loblolly-bay, *Lasianthus Lasianthus.*—**Camphor-laurel,** the camphor-tree, *Cinnamomum Camphora.*—**Deer-laurel,** the great laurel or rose-bay, *Rhododendron maximum.*—**Diamond-leaf laurel,** an evergreen Australian tree, *Pittosporum rhombifolium.* See *Pittosporum.*—**Dodder laurel.** See ★*dodder-laurel* and ★*devil's-guts,* 3.—**Dog-laurel.** Same as ★*dog-hobble.*—**Dwarf laurel,** the sheep-laurel, *Kalmia angustifolia.*—**Florida laurel,** the sweetleaf, *Symplocos tinctoria.*—**Hairy laurel,** *Kalmia hirsuta,* a shrub with villous-hirsute leaves and rose-purple flowers, found in moist pine-barrens from Virginia to Florida.—**Hedge-laurel.** See *hedge-laurel* and *Pittosporum.*—**Horse-laurel,** the great laurel.—**Lady-laurel,** the spurge-laurel.—**Mexican laurel,** *Litsea glaucescens* and *L. parvifolia,* aromatic shrubs belonging to the *Lauraceæ* and called *laurél* by the Mexicans. The leaves are used as a flavoring for certain dishes and are taken as a tea, sweetened with brown sugar, for medicinal purposes and as a beverage. They are always found for sale in the markets of the larger cities of Mexico.—**Moreton Bay laurel,** *Cryptocarya australis,* a tree of the laurel family. Also called *gray sassafras.*—**Native laurel,** in Australia: (*a*) The Victorian laurel, *Pittosporum undulatum.* Also called *mock-orange.* (*b*) A tree of the ginseng family, *Polyscias elegans,* yielding a light, soft wood. Also called *white sycamore.*—**New Zealand laurel,** *Laurelia Novæ-Zeelandiæ,* a large tree of the family *Monimiaceæ,* having soft, yellowish wood, which is used for boat-building.—**Rose-laurel.** (*a*) The great laurel. (*b*) The American laurel. (*c*) The oleander.—**Sassafras-laurel,** the California laurel, *Umbellularia Californica.*—**Small laurel.** (*a*) The American laurel. (*b*) The laurel-magnolia, *Magnolia Virginiana.*—**Sweet laurel,** the poison-bay, *Illicium Floridanum.*—**To repose** or **rest on one's laurels,** to cease striving for a while and enjoy the honors won.—**To retire on one's laurels,** to cease and be satisfied with the honors won, retiring voluntarily.—**Victorian laurel,** *Pittosporum undulatum.* Also called *native laurel.* See *Pittosporum* and ★*mock-orange,* 3.—**White laurel,** *Cryptocarya glaucescens,* one of the trees called *beech* in Australia. See ★*beech*¹, 2, and *black* ★*sassafras.*—**Winter laurel,** the Carolina cherry-laurel, *Prunus Caroliniana.*

laurel (lâ′rel), *v. t.*; pret. and pp. *laureled, laurelled,* ppr. *laureling, laurelling.* [*laurel, n.*] To crown with, or as with, laurel as a distinction.

Laureled by some exclusive society of select spirits. *Science,* Feb. 5, 1904, p. 232.

laurel-butter (lâ′rel-but″ėr), *n.* Same as *bay-oil.*

laurel-camphor (lâ′rel-kam″fọr), *n.* Same as ★*laurinol.*

laurelic (lâ-rel′ik), *a.* [*laurel* + *-ic.*] Noting an acid, a compound said to occur in bayberries, the fruit of *Laurus nobilis.*

laurel-ivy (lâ′rel-ī″vi), *n.* Same as *big-leaved* ★*ivy.*

laurel-magnolia (lâ′rel-mag-nō″li-ạ), *n.* See *Magnolia.*

laurene (lâ′rēn), *n.* A mixture of hydrocarbons, chiefly ethyl xylenes, $C_2H_5C_6H_3(CH_3)_2$, formed by the distillation of Japan camphor with zinc chlorid.

Laurentia (lâ-ren′shiạ), *n.* [See *Laurentian.*] The land area of Archæan rocks around whose shores the Paleozoic sediments were deposited. See *Laurentian. Amer. Geol.*, Sept., 1903, p. 148.

Laurentide glacier. See ★*glacier.*

Laurer's canal. See ★*canal*¹.

laurestinus (lâ-res-tī′nus), *n.* Same as *laurustinus.*

lauretin (lâ′re-tin), *n.* [L. *laurus*, laurel, + *-et-* + *-in*².] A compound said to occur in bayberries, the fruit of *Laurus nobilis.*

Lauretta whitefish. See ★*whitefish.*

lauric (lâ′rik), *a.* [L. *laurus*, laurel, + *-ic.*] Noting an acid, a colorless compound, $C_{11}H_{23}COOH$, homologous with acetic acid. It is found, in combination with glycerol, in bayberries, the fruit of *Laurus nobilis,* in Pichurim beans, in croton-oil, in spermaceti, and in cocoanut-oil. It crystallizes in tufts of silky needles, melts at 43.6° C., and boils at 225° C. under 100 millimeters pressure. Also called *dodecatoic acid.*—**Lauric ester.** See ★*ester.*

laurinol (lâ′ri-nol), *n.* [L. *laurus*, laurel, + *-in* + *-ol.*] A colorless, odorless, indifferent compound, $C_{22}H_{30}O_3$, obtained from the wood of the bay-tree, *Laurus nobilis.* It crystallizes in prisms. Also called *laurel-camphor.*

lauristic (lâ-ris′tik), *a.* [L. *laurus*, laurel, + *-ist-ic.*] Same as ★*lauric.*

laurolene (lâ′rọ-lēn), *n.* [L. *laurus*, laurel, + *-ol* + *-ene.*] A hydrocarbon, C_8H_{14}, formed by the distillation of camphanic acid. It is probably a 1, 1-*dimethylcyclohexene.*

laurone (lâ′rōn), *n.* [L. *laurus*, laurel, + *-one.*] A colorless ketone, $(C_{11}H_{23})_2CO$, prepared by the distillation of calcium laurate. It is a homologue of acetone, crystallizes in plates, and melts at 69° C.

lauronolic (lâ-rō-nol′ik), *a.* [L. *laurus*, laurel, + *-one* + *-ol* + *-ic.*] Noting an acid, a colorless liquid, $HOCOC(CH_3)\langle_{CH\,CH:CH.C(CH_3)_2}^{\quad\quad\quad\quad\quad\quad}$, prepared by the repeated distillation of camphanic acid. It boils at 233–235° C. Also called *trimethyl-cyclopentene-carboxylic acid.*

laurostearin (lâ-rọ̄-stē′ạ-rin), *n.* [L. *laurus*, laurel, + Gr. *στέαρ*, tallow, + *-in*².] A colorless compound, $C_3H_5(C_{12}H_{23}O_2)_3$, contained in laurel- or bay-leaves (*Laurus nobilis*) and in cocoanut-oil. It crystallizes in needles and melts at 45° C. Also called *trilaurin* and *trilauric glyceride.*

lauroxylic (lâr-ok-sil′ik), *a.* [L. *laurus*, laurel, + *ox(ygen)* + *-yl* + *-ic.*] Noting an acid, a colorless compound, $C_9H_{10}O_2$, prepared by the oxidation of laurene with nitric acid. It forms warty crystals melting at 155° C.

laurvikite (lâr'vik-īt), *n.* [*Laurvik*, Norway, + *-ite*[2].] A coarse-grained syenite composed of flattened feldspars with a somewhat rhombic cross-section which are microperthite or soda-microcline. There are, besides, small amounts of sodalite and nephelite in some varieties, and variable amounts of ferromagnesian minerals—pyroxene, lepidomelane, and barkevikitic hornblende. *Brögger*, 1894.

laurylene (lâ'ri-lēn), *n.* [L. *laurus*, laurel, + *-yl* + *-ene.*] A colorless levorotatory terpene, $C_{10}H_{16}$, contained in bay-oil. It boils at 164° C.

lautarite (lâ'ta-rīt), *n.* [The Oficina *Lautaro*, owner of the deposits, + *-ite*[2].] Calcium iodate, $Ca(IO_3)_2$, occurring in from colorless to yellow monoclinic crystals: found in the sodium-nitrate deposits of Atacama, Chile.

lautite (lou'tīt), *n.* [*Lauta* (see def.) + *-ite*[2].] A metallic mineral containing copper, arsenic, and sulphur, but of doubtful homogeneity: found at Lauta, near Marienberg, Saxony.

lautverschiebung (lout'fer-shē-bŏng), *n.* [G., < *laut*, sound, + *verschiebung*, shifting.] In *philol.*, 'shifting of sounds': applied to the changes which a series of regular Indo-European mute consonants of the same class underwent in the Teutonic languages, as if each consonant were shifted forward one degree in its class. See *Grimm's law*, under *law*[1]. A later shifting, sometimes called the *second lautverschiebung*, appears in the Old High German.

lauwine, *n.* See ★*lawine*. *Byron.*

Lauzon (lō-zoṅ'), *n.* [*Lauzon*, Quebec.] In *geol.*, a term introduced by Logan for a division of the rocks near Quebec, in the Quebec group, the age of which has been shown to extend from the Cambrian to the close of the Lower Silurian.

lava, *n.*—**Block lava**, in *geol.*, a structure sometimes observed in lava-streams, where the surface zone of the flow has been shattered by explosive escape of gases from the cooling rock.—**Ropy lava**, lava with a fluted or corrugated surface due to flowing while viscous and thick.

lavabo, *n.* **4.** The psalm in the mass service which the priest recites at the washing of his hands.

lavabo-dish (lā-vā'bō-dish), *n.* A shallow basin used for the ablution of the priest's hands in the mass service.

lavabrum (lā-vā'brum), *n.* [L.] Same as ★*labrum*[2].

lava-caldron (lä'vä-kâl"drọn), *n.* An open, pit-like crater which contains molten lava. *Geikie*, Text-book of Geol., p. 329.

lava-cone (lä'vä-kōn), *n.* In *geol.*, a volcanic cone built up of successive flows of lava rather than of the fragmental products of explosive outbreaks. Opposed to *tuff-cone*.

Lava-cones, that is, volcanos with a slight angle of inclination, and built up entirely of lava.
Geog. Jour. (R. G. S.), XIII. 504.

lavacret, *n.* [L. *lavacrum*, < *lavare*, wash.] In phrases referring to baptism, a font; a bath: as, the *lavacre* of spiritual regeneration.

lavadero (lä-vä-dā'rō), *n.* [Sp., < *lavar*, < L. *lavare*, wash.] Apparatus for washing silver amalgam from ore. *Phillips and Bauerman*, Elements of Metallurgy, p. 744. [Mexico.]

lava-field (lä'vä-fēld), *n.* A consolidated lava-flow covering a considerable area.

The most extensive *lava-field* in the island.
Geog. Jour. (R. G. S.), XIII. 501.

lava-lake (lä'vä-lāk), *n.* An expanse of molten lava, in a crater, so extensive as to be called a lake. The Hawaiian volcanoes afford the best examples. *Nature*, Sept. 4, 1902, p. 441.

lavallière (lä-val-yãr'), *n.* [F., from a personal name.] A pendent ornament consisting of or set with one, two, or three gems, generally attached to a thin chain.

lava-streak (lä'vä-strēk), *n.* A dike of lava which is contrasted in appearance with its inclosing walls.

lava-stream (lä'vä-strēm), *n.* A flow of lava while it is still molten; also, congealed and cold lava which originally flowed in a stream.

These *lava-streams*, which the Icelanders call apalhraun, are relatively narrow with high edges, looking, when viewed from a distance, like fences or ridges on flat land. *Geog. Jour.* (R. G. S.), XIII. 507.

lava-terrace (lä'vä-ter"ās), *n.* One of the escarpments of lava-sheets which surround the pits of molten lava in some volcanic craters, such as those of the Hawaiian Islands. *Geikie*, Text-book of Geol., p. 329.

lavational (lā-vā'shọn-al), *a.* [*lavation* + *-al*[1].] Pertaining to or of the nature of washing or lavation.

lavatorial (lav-a-tō'ri-al), *a.* [L. *lavatorium*, a lavatory, + *-al*[1].] Pertaining to a lavatory or to washing. [Recent.]

lava-torrent (lä'vä-tor"ent), *n.* A torrential flow of lava, whether molten or congealed.

Large quantities of salt, especially sal ammoniac, are often deposited on the *lava-torrents* during eruptions in Iceland. *Geog. Jour.* (R. G. S.), XIII. 510.

lavatory, *n.* **4.** The ceremonial washing of the hands of the priest in the celebration of the holy communion.—**5.** In *plumbing*, a permanent wash-bowl of marble, enameled iron, or porcelain, fitted with hot- and cold-water pipes, a waste-pipe, and other conveniences and fixtures. It may be affixed to a wall or stand upon the floor.—**6.** A room, especially in a hotel or public building, provided with means for washing the hands and face, and often including a water-closet.

lava-waste (lä'vä-wāst), *n.* A barren area composed of lava.

Notwithstanding the plenteous fall of rain and snow, there is scarcely any water to be found in the *lava-wastes*. *Geog. Jour.* (R. G. S.), XIII. 508.

lave[2] (lāv), *n.* [*lave*[2], *v.*] **1.** The act of washing or laving.—**2.** The sea.

lavender[2], *n.*—**Compound tincture of lavender**, a red, aromatic, hydro-alcoholic tincture of cinnamon, cloves, nutmeg, and red saunders, which contains small quantities of oils of lavender flowers and rosemary. It is carminative in its action.—**Native lavender**, in Tasmania, *Styphelia australis*, a tall, bushy shrub or small tree of the family *Epacridaceæ*. The whole plant when drying smells like new-made hay.

lavendol (lav'en-dol), *n.* [*lavend(er)* + *-ol.*] A colorless liquid, $C_{10}H_{18}O$, contained in lavender-oil. It boils at 197° C.

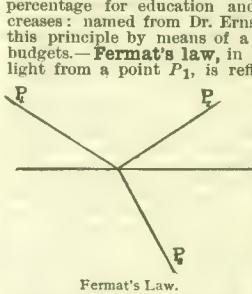
lavendulan (la-ven'dū-lan), *n.* [ML. *lavendula*, lavender, + *-an.*] A hydrated arseniate of copper, cobalt, and nickel occurring in lavender-blue amorphous masses: found with cobalt ores in Saxony and elsewhere.

lavendulite (la-ven'dū-līt), *n.* [ML. *lavendula*, lavender, + *-ite*[2].] Same as ★*lavendulan*.

låvenite (lä'ven-īt), *n.* [Also *laavenite*, *lovenite*; named after the island of *Låven*, in southern Norway.] A silicate and zirconate of manganese, iron, calcium, sodium, and other elements occurring in from yellow to brown monoclinic crystals. It is related to pyroxene and, more closely, to woehlerite.

laver[1], *n.* **3.** Figuratively, the baptismal font; the spiritual regeneration of baptism; any cleansing of the spirit.

Laverania (la-vē-rā'ni-ạ), *n.* [NL.] A genus of sporozoans of the order *Hæmosporidia*, one species of which, *L. malariæ*, is parasitic in the red corpuscles of human blood and is the cause of pernicious malaria. Also *Hæmamœba*. See ★*Hæmamœba* and ★*malaria*. *Grassi et Feletti*, 1890.—**Laverania danilewsky**, a protozoan blood-parasite of pigeons and certain other birds.—**Laverania ranarum**, a protozoan blood-parasite of the frog.



laverick (lav'ẹ-rik), *n.* [Origin obscure.] In the western United States, a contemptuous term for a greenhorn or stranger; a tenderfoot.

lavinia (la-vin'i-ạ), *n.* [NL.] **1.** An American nymphalid butterfly, *Victorina steneles*, formerly known as *V. lavinia*. It occurs in Florida and South America.—**2.** [*cap.*] A genus of minnows inhabiting the coast streams of California.

lavoisium (la-voi'zi-um), *n.* [NL., named after *Lavoisier*, a French chemist.] A supposed new chemical element announced by Prat in 1877 as occurring in pyrite. There is no confirmation of its existence.

lavrovite (lav'rō-vīt), *n.* [G. *lawrowit* (1867), named after N. von *Lavrov*, a Russian.] A variety of pyroxene colored green by vanadium: found near Lake Baikal in Siberia.

law[1], *n.*—**Albite law.** See ★*albite*.—**Antitrust laws**, a name given to statutes enacted for the purpose of regulating trusts or vast combinations of capital.—**Arago's law of polarization.** See ★*polarization*.—**Baer's law.** (*b*) The rule that rivers flowing northward or southward form deposits and sand-banks most frequently on the right-hand side of the stream owing to the influence of the rotation of the earth on the moving water: a rule deduced by K. E. von Baer, in 1860, for the rivers of Russia, and rather hastily generalized for the whole northern hemisphere.—**Balmer's law**, in *spectroscopy*, the law that the bright lines in the spectra of metals occur in series, the frequencies of vibration being in simple numerical relation to one another. The wave-lengths of lines of the visible spectrum of hydrogen, for example, may be computed by multiplying a constant ($h = 3645.6$) by the series of coefficients, $\frac{9}{5}$, $\frac{16}{12}$, $\frac{25}{21}$, $\frac{36}{32}$.—**Baric law of the wind.** See ★*wind*[2].—**Baveno law.** See *Baveno twin*, under *twin*[1].—**Biogenetic law**, the doctrine or opinion that the ancestral history of organisms is recapitulated in their development as individuals. See ★*recapitulation*, 5.—**Biot-Savart law**, the law established by Biot and Savart (1820) for the magnetic force due to an electric current flowing through a straight linear conductor of infinite length. It is given by the formula $H = \frac{2I}{r}$, in which I is the current, r the distance from the conductor, and H the force.—**Brazil law.** See ★*twin*[1], 3.—**Brewster's law**, in *optics*, the law that the tangent of the angle of complete polarization for a substance is equal to the index of refraction of that substance.—**Broun's law.** Same as *Broun's rule*. See ★*rule*[1].—**Buchan's law.** Same as *Buchan's rule*. See ★*rule*[1].—**Buys Ballot's law**, in *meteor.*, the law announced by Buys Ballot, in 1860, that "if on any morning there is a difference between the barometrical readings at any two stations, a wind will blow on that day in the neighborhood of the line joining those stations which will be inclined to that line at an angle of 90° or thereabouts and will have the station where the reading is lowest on its left hand side." See *Buchan's* ★*rule*.—**Carlsbad law.** See *Carlsbad twin*, under *twin*[1].—**Carrington's law of solar rotation**, the law of the 'equatorial acceleration,' the explanation of which is still uncertain. It is generally supposed from the researches of Sampson and Wilsing to be a slowly dying survival from past conditions, but Ebert considers that he has shown it to be a necessary consequence of the sun's radiation of heat.—**Constitutional law.** See ★*constitutional*.—**Cosine law.** See *Lambert's law of* ★*cosines*.—**CR law.** Same as *Kelvin's* ★*law*.—**Coulomb's law**, in *elect.*, the law that the force with which two electrostatic charges attract (or repel) each other is inversely proportional to the square of the distance between them and directly proportional to the product of the two quantities of electricity. The corresponding law for magnetic poles, namely, that two poles of strength m_1 and m_2 respectively attract (or repel) each other with a force directly proportional to their product $m_1 m_2$, and inversely proportional to the distance between them is also known as *Coulomb's law*.—**Donders's law**, in *physiol. optics*, the law, formulated by the Dutch oculist F. C. Donders, that the orientation of the eye for any position of the line of vision is constant, no matter by what path the line of vision may have been brought to this position.—**Dove's law of the rotation of winds.** See ★*wind*[2].—**Draper's law**, the law that all bodies begin to become visibly incandescent at the same temperature—the temperature of initial visibility, stated by Draper to be 525° C., but really dependent upon the condition of the eye. The first visual sensation received is now known to be a sense of brightness, which precedes all color-sensation, instead of the sensation of red as described by him. The first color-sensation, as the body observed increases in temperature, is that of the region of maximum luminosity in the spectrum—a yellow-green.—**Engel's law**, in *polit. econ.*, the principle that with the increase in the income of a family the percentage of expenditure for food decreases; the percentage for clothing remains approximately the same; the percentage for rent, fuel, and light does not vary; and the percentage for education and other higher needs increases: named from Dr. Ernst Engel, who established this principle by means of a detailed study of family budgets.—**Fermat's law**, in *optics*, the law that when light from a point P_1, is reflected to a point P_2, or refracted to a point P_3, the path of the ray is that which can be traversed in a minimum of time. Also called the *principle of least time*.—**Ferrel's law**, in *meteor.*, a law, announced by William Ferrel in 1854, in accordance with which a body moving in any direction along the surface of the rotating earth experiences a deflecting force pushing it toward the right in the northern hemisphere and toward the left in the southern by an amount that varies directly as the velocity of the body and as the sine of the latitude. From this law Ferrel, in 1856, deduced his theory of the general circulation of the atmosphere and the ocean, and the rotation of the winds in storms. Ferrel's law had also been recognized by Poisson in 1827 as applicable to cannon-balls, but its importance to meteorology was first perceived by Ferrel.—**Fourier's law.** (*a*) In *math.*, a law stating that any periodic function of a single variable period p, which does not become infinite at any phase, can be expanded in the form of a series consisting of a constant term together with a double series of terms, one set involving cosines and the other sines of multiples of the phase. Thus, if $\phi(x)$ is a periodic function of the variable x having a period p, then

Fermat's Law.

$$\phi(x) = \sum_1^\infty i\ A_i \cos\frac{2i\pi x}{p} + \sum_1^\infty i\ B_i \sin\frac{2i\pi x}{p}.$$

(*b*) In *acoustics*, the law that "any vibrational motion of the air in the entrance to the ear, corresponding to a musical tone, may be always, and for each case only in a single way, exhibited as the sum of a number of simple vibrational motions, corresponding to the partials of this musical tone." *H. von Helmholtz* (trans.), Sensations of Tone, p. 34.—**Fourier's law of conduction**, the law that the quantity of heat w, passing across a given area, q, within a conducting substance is $w = qk\frac{dx}{dt}$, where k is the conductivity of the substance and $\frac{dx}{dt}$ is the temperature gradient.—**Fresnel-Arago law**, the law that rays polarized at right angles to each other do not interfere when brought into the same plane of polarization, provided that they come from an unpolarized ray. Such rays, if they come from a polarized ray, interfere when brought to the same plane of polarization.—**Fres-**

nel's law, the law that in crystals the velocities of the two light-waves are proportional to the largest and smallest radii vectors of the oval section of the wave-surface, made by a plane through the center of the surface and parallel to the wave-front.—**Froude's law,** in *naval arch.*, a particular case of the general mathematical law of geometrical and dynamic similitude, but independently derived by W. Froude from the study of resistance of ship-models towed in an experimental model basin. In the statement of this law, considering a model and a vessel of identical form but of different dimensions, the corresponding speeds of the model and the vessel are in the same ratio as the square roots of the homologous dimensions (as the lengths). At corresponding speeds, the wave-systems set up in the water are of the same form and, by Froude's law, the wave-making resistances of the model and of the vessel are in the same ratio as the cubes of the linear dimensions, or as the displacements. The frictional resistance of the model and of the vessel are determined by appropriate calculations at the corresponding speeds. From the total measured resistances of the model towed in the experimental basin at various speeds, the curve of resistance (which see, under ★*curve*) of the full-sized ship at corresponding speeds can thus be determined and from it the effective horse-power required to drive the ship at any given speed can be obtained. Also called the *law of comparison.*—**Galton-Pearson law of ancestral heredity.** See *ancestral* ★*inheritance* (*a*) and (*b*).—**Galton's anticyclonic law,** the law that in regions where barometric pressure is above the average, the wind is blowing outward and around in the direction of the movement of the hands of a watch and opposite to the cyclonic circulation. The law was announced by Galton in 1863 from the study of synoptic weather-charts.—**Galton's law of ancestral inheritance.** See *ancestral* ★*inheritance* (*a*).—**General public laws.** Same as ★*statutes at large.*—**Gompertz's law of mortality,** a law of mortality based upon the assumption that there is with increasing age "an increasing inability to withstand destruction," the force of mortality therefore increasing in geometrical progression. This is expressed by the formula $\mu_x = Bc^x$, in which μ_x represents the force of mortality, B the basic constant number, and c the constant number involved in the geometrical increment, x being the age and indicating the power to which c is raised. See *mortality.*—**Graham's law,** the law that the rate of efflux of a gas is inversely proportional to the square root of its density.—**Grassmann's law,** a fact stated by Hermann Grassmann in 1863, to the effect that where in an Indo-European word there were two aspirates in the same or successive syllables the first of these aspirates was in Sanskrit changed into the corresponding media, and in Greek into the corresponding tenuis. An example is Greek **θριχός* (gen. of *θρίξ*, hair), changed to *τριχός*.—**Haeckel's law.** Same as *biogenetic* ★*law.*—**Hann's law,** an expression for the diminution of moisture with altitude in the atmosphere according to the law that the vapor-tension is an exponential function of the altitude above sea-level, quite analogous to the ordinary atmospheric pressure.—**Henry's law,** in *phys. chem.*, the law that a given volume of any solvent at constant temperature will dissolve quantities by weight of a gas in contact with it which are proportional to the pressures of the gas: thus, water at 15° will dissolve five times as much carbon dioxid having a pressure of five atmospheres as of carbon dioxid having a pressure of one atmosphere.—**Hess's law,** in *phys. chem.*, the law that the amount of heat developed in a chemical process is the same whether it takes place in one step or in several steps. It is a special case of the law of the conservation of energy, and was discovered before the latter law was formulated: it is the foundation of thermochemistry.—**Hinrichs's law,** the law of distribution of large and small rainfalls in accordance with the law of chance.—**Hooke's law,** the law that in elastic bodies the ratio of stress to strain is constant. Hooke's law is rigorously true only for very slight deformations of a body.—**Interstate commerce law,** an act of the United States Congress, passed February 4, 1887, and since amended, by which the Interstate Commerce Commission was created. (See *interstate.*) Its principal objects were to prohibit discrimination in freight-charges and the pooling of freights by competing railroads, and to secure the arbitration of differences between corporations and employees.—**Jacobi's law,** in *elect.*, the law that the power of a motor reaches its maximum when the counter electromotive force is one half the impressed electromotive force, or when the speed of the motor is such that the current through the armature is one half that which would flow if the motor were at rest.—**Jevonian law,** the economic law of marginal utility (see ★*utility*), formulated by W. Stanley Jevons (but also by others before and after him), that the satisfaction afforded by successive increments of a commodity, when consumed, diminishes toward zero, or, passing through zero, becomes a negative utility or pain. The descending curve is usually assumed to be hyperbolic in form.—**Judge-made law,** judiciary law. The term is frequently used with some degree of opprobrium to indicate the overriding of the intent of legislatures by judicial construction of statutes.—**Kelvin's law,** in *elect.*, the law that the time-constant which expresses the speed of signaling through cables is proportional to the capacity of the line multiplied by its resistance. Also called the *KR* (or *CR*) *law.*—**Kirchhoff's law.** See *laws of* ★*radiation.*—**Kirkwood's law** or **analogy,** a supposed law, published in 1849, connecting the distances of the planets from the sun with their masses and axial rotations. It is discredited by later and more accurate data.—**Koch's law,** a rule for establishing the specificity of a pathogenic micro-organism: namely, it must be present in every case of the disease; inoculation of a susceptible animal with a pure culture of it must cause the disease; and it must be discoverable in the animal suffering from the disease so acquired.—**Kohlrausch's law,** in *phys. chem.*, the proposition that the molecular conductivity of an electrolyte at infinite dilution is the sum of two numbers, one of which depends solely on the cation and the other of which depends solely on the anion; or, that the velocity with which a given ion travels is constant for a given solvent and a given electromotive force, and does not depend upon the nature of the other ions which are present in the solution.—**KR** (or **CR**) **law.** Same as *Kelvin's* ★*law.*—**Kundt's law,** the law that, in anomalous dispersion, the index of refraction is abnormally increased as we approach an absorption-band from the infra side or side of greater wave-lengths and abnormally diminished as we approach the band from the ultra side.—**Lane's law,** the apparently paradoxical law that a gaseous sphere contracting under its own central gravity on account of the radiation of heat to outer space will rise in temperature as long as it remains purely gaseous, that is, so long as it does not become partially liquid or solid, or so dense that the laws of Boyle and Charles no longer hold good.—**Law of adaptation.** See ★*adaptation.*—**Law of aggregation.** See ★*aggregation.*—**Law of ancestral heredity.** See *ancestral* ★*inheritance.*—**Law of comparison.** Same as *Froude's* ★*law.*—**Law of constant heat sums.** See ★*heat.*—**Law of constant proportion,** in *chem.*, the general fact that any particular compound substance in a pure state consists invariably of the same constituents united in the same proportion by weight.—**Law of Delaroche and Berard,** in *phys. chem.*, the law that for all elementary diatomic gases approximately in the perfect state, and for all gaseous compounds formed without condensation and approximately in the perfect state, the product of the molecular weight and the specific heat at constant pressure has the same value.—**Law of differentiation.** See ★*differentiation.*—**Law of diffusion.** See ★*diffusion.*—**Law of discrimination.** Same as *Weber's law* (which see, under *law*[1]).—**Law of equilibration.** See ★*equilibration.*—**Law of frequency.** See *probability curve,* under *probability,* 2.—**Law of Gladstone and Dale,** a law for the relation between the index of refraction of liquids and their density. The law is expressed by the formula

$$\frac{n-1}{d} = \text{const.};$$

where n is the index of refraction and d the density of the liquid.—**Law of greatest gain.** See ★*gain*[1].—**Law of great numbers,** the law that if a great number of elements, each independently varying according to almost any law, are added, their sum will in general vary according to the ordinary law of error.—**Law of Guldberg and Waage.** Same as ★*law of mass action.*—**Law of integration,** the law that a social population tends to increase by excess of births over deaths, by excess of immigration over emigration, or by annexation of neighboring peoples, according to some relation of its culture and standard of living to its surplus energy. *Giddings,* Prin. of Sociol., p. 370.—**Law of interest,** in *psychol.*, the law or principle that those elements of a past experience are the most effective for recall which at the time of the experience received the greatest share of attention or aroused the highest degree of interest.

> The influence of emotional states must be stated as a principal, but not an exclusive cause. It is summed up in what Shadworth Hodgson has called the *Law of Interest.* *Ribot* (trans.), Psychol. of Emotions, p. 174.

Law of inverse squares, the law governing the relation between the intensity of an effect, which emanates from a center and is transmitted equally in all directions, and the distance from the source. The intensity in such cases is inversely proportional to the square of the distance. The intensity of sound, of light, and of every form of radiation, when transmitted in isotropic media, is determined by the *law of inverse squares.* The gravitational attraction of two masses, the electric attraction or repulsion of two charged bodies, and the attraction or repulsion of two magnetic poles follow the same law.—**Law of least action.** Same as *principle of least action* (which see, under *action*).—**Law of least path.** Same as *Fermat's* ★*law.*—**Law of likeness,** in *psychol.*, the principle of association by similarity.

> This . . . discussion . . . has led to the classification of the associations of memory, and two laws have been formulated: the one called the *law of likeness,* and the other the law of contiguity.
>
> *J. W. Powell,* Truth and Error, p. 303.

Law of Malus, in *optics,* the law that when a beam of light, polarized by reflection, falls upon a second surface at the polarizing angle the intensity of the beam after the second reflection is proportional to the square of the cosine of the angle between the two planes of reflection. The law that "an orthotomic system of rays remains orthotomic after any number of reflections and refractions" (Drude's "Theory of Optics," p. 12) is also sometimes termed the *law of Malus.*—**Law of mass action.** See ★*action.* Also called *law of Guldberg and Waage.*—**Law of mental growth.** See ★*mental*[1].—**Law of migration.** See ★*migration.*—**Law of octaves,** in *chem.*, the generalized fact pointed out by Newlands in 1864 that if the elements are arranged in the order of their atomic weights, each member of the list presents a close analogy in properties with the eighth preceding and the eighth succeeding it. This a few years later in the hands of Mendeléjeff and Lothar Meyer was developed into the now generally recognized periodic law.—**Law of parallelism,** a varying degree of probability that similar stages of human culture, or like institutions, in different parts of the world have sprung from like conditions rather than from any historic intercourse of now separated communities.—**Law of parsimony.** (*b*) The law that conscious beings try to attain a maximum of satisfaction with a minimum of effort or pain.

> But the fundamental law of everything psychic, and especially of everything that is affected by intelligence, is the *law of parsimony.* *Ward,* Pure Sociol., p. 341.

Law of periodicity, the universal law of rhythm (Herbert Spencer, "First Principles") in its organic and social manifestations.—**Law of possession,** in *psychol.*, the principle that what is already in consciousness tends to remain. *Psychol. Rev. Mon. Sup.,* xiv. 85.—**Law of preference.** (*a*) The law of the relative influence of the ideals of force, pleasure, austerity, and self-realization in determining social choice. In populations as they are the lower ideals dominate, but in normal social evolution the higher ideals become increasingly influential. *Giddings,* Elements of Sociol., p. 168. (*b*) In the psychology of association, same as ★*law of interest.*—**Law of priorities,** the body of laws, decisions, and customs giving the distribution of water for irrigation in accordance with the order of first use. This law exists in various forms in most of the western arid States and protects the first users of water for irrigation against subsequent appropriators of it.—**Law of priority,** the principle that in the formal, or Latin, nomenclature of taxonomic or systematic biology the first name published for any group is to be taken as the valid, tenable, or correct name of that group. Any name subsequently applied to the same group is rejected, and is termed a *synonym.* In botany, formal nomenclature is treated as beginning with the general application of binary, or binominal, names to plants in Linnæus's "Species Plantarum" (1753). The law of priority is applied to the names of genera, species, and subspecies, and by some writers to the names of families, but not to the higher groups. A name dates not from the time when it was first used in a public lecture, or in manuscript, or as a garden or herbarium label, or even from its mere occurrence in a printed book, but from the time when it was established by publication in the nomenclatorial sense of that word. A corollary of the law of priority is the principle of the rejection of homonyms. See ★*establish,* 8, ★*publication,* 5, and ★*homonym,* 3.—**Law of progression.** See ★*progression.*—**Law of psychical contrasts.** See ★*contrast.*—**Law of psychical relations,** in *Wundt's psychol.*, one of the three psychological laws of relation. Its essential content is "the principle that every single psychical content receives its significance from the relations in which it stands to other psychical contents," and its most complete expression is to be found in the processes of apperceptive analysis and the simple relating and comparing functions upon which this is based. See *law of psychical* ★*contrasts* and ★*law of psychical resultants. W. Wundt* (trans.), Outlines of Psychol., p. 323.—**Law of psychical resultants,** in Wundt's psychology, one of the three psychological laws of relation. It finds its expression in the fact that every psychical compound shows attributes which may indeed be understood from the attributes of its elements after these elements have once been presented, but which are by no means to be looked upon as the mere sum of the attributes of these elements. *W. Wundt* (trans.), Outlines of Psychol., p. 321.—**Law of psychophysical correlation,** in *psychol.*, the principle that "consciousness is inseparably bound up with the brain-process, and cannot take place in its absence." *C. A. Strong,* Why the Mind has a Body, p. 38.—**Law of rational indexes,** in *crystal.*, the fundamental law which states that the numbers expressing the ratios between the intercepts on the crystallographic axes of a crystal face must be rational: this law holds true for axes taken parallel to any three edges of the crystal.—**Law of recapitulation.** See ★*recapitulation,* 3.—**Law of reciprocal action,** in *sociol.*, the assumption that "social groups exhibit reciprocal effects that are fundamentally the same always and everywhere," and that groups behave toward each other otherwise than individuals normally do. *Gumplowicz.*—**Law of regularity,** the tendency of normal progress toward regularity of developmental change to follow a course mathematically expressed by a smooth curve.—**Law of relativity,** in *psychol.*, same as *the doctrine of the relativity of knowledge* (*c*). The doctrine of relativity goes back to the formula of Hobbes: "sentire semper idem et non sentire ad idem recidunt" (to think always the same thing and not to think at all amount to the same thing). Stumpf, in his "Tonpsychologie," distinguishes and criticizes five forms of the 'law' which plays a considerable part in certain psychological systems, for example in those of Wundt, Lipps, and Höffding.

> We may now subsume all these phenomena—tonal intervals, light contrast, the geometrical increase of stimulus-intensity for equally noticeable sensation-differences—under one general law: the *law of relativity.* . . . We shall expect to find that the *law of relativity* is not restricted to the sphere of sensation, but is applicable in every case where the intensity of a mental process is quantitatively apprehended and compared with that of others.
>
> *W. Wundt* (trans.), Human and Animal Psychol., p. 119.

Law of repetition, in *psychol.*, the principle of association by contiguity.

> The law of association by contiguity would hold that letters or words occurring in relatively close succession, or simultaneously, . . . tend to fuse or coalesce. This is called also the *law of repetition.*
>
> *Psychol. Rev. Mon. Sup.,* xiv. 71.

Law of restraint, the law of the normal restraint of impulsive social action. Impulsive social action varies inversely with the habit of attaining ends by indirect and complex means.—**Law of retaliation.** Same as *lex talionis* (which see, under *lex*).—**Law of segregation.** (*a*) The tendency of like units to collect in one place, group, or arrangement, under the common action of incident forces. (*b*) The numerical law to which the descendants of Mendelian hybrids conform. See *ancestral* ★*inheritance.*—**Law of sensation-intensities,** in *psychophys.*, Weber's law. *W. Wundt* (trans.), Human and Animal Psychol., p. 33.—**Law of slip,** in *phys.*, the law that, at low pressures, the movement of a gas along a solid surface is the same as though the solid were withdrawn to a distance equal to twice the mean free path of the particles and were replaced by a layer of gas at rest.—**Law of storms** (*naut.*). See ★*hurricane distance.*—**Law of substitution,** in *polit. econ.*, the law according to which producers who are not using the most economical methods are impelled to substitute those methods for the more costly ones which they are using; also, the law according to which society substitutes the more efficient employers of labor and capital for the less efficient. *Alfred Marshall,* Prin. of Economics (4th ed.), p. 420.—**Law of sympathy,** the law that "the degree of sympathy decreases as the generality of resemblance increases," *Giddings,* Elements of Sociol., p. 67.—**Law of the circle.** See ★*circle.*—**Law of the Medes and Persians,** something impossible to alter: referring to Dan. vi. 12.—**Law of zones,** a law relating to the appearance of sun-spots on certain zones, at certain times in the period of spot-frequency: often referred to as *Spoerer's law.*—**Laws of imitation,** the laws (formulated by Tarde) of the causes and progress of imitation and of the relation of imitations to one another; especially the laws (1) that in the absence of interference imitations spread in a geometrical progression, and (2) that imitations are refracted by their media, so that the copy never exactly reproduces the original, whence arise

variations and inventions among all social forms and products.—**Laws of liberty,** the laws of the social causes determining the amount of liberty enjoyed in any given population; especially the laws (Giddings, "Elements of Sociology")(1) that liberty is proportional to the predominance of rational over sympathetic and dogmatic like-mindedness, and (2) that coercion diminishes with the decrease of ethnic and moral diversity and of inequality. —**Laws of radiation.** See ★*radiation.*—**Laws of twinning.** See *twin*[1]; also, ★*twin*[1].—**Le Chatelier's law of radiation,** the empirical law that the intensity of radiation of red light is

$$I = 10^{6\cdot7} \cdot T - \frac{3210}{T},$$

where I is the intensity and T is the absolute temperature of the radiating body.—**Listing's law,** in *physiol. optics,* a law of eye movement, first suggested by J. B. Listing, and phrased by Helmholtz as follows: "if the line of regard travel from the primary to any other position, the torsion of the eyeball in this second position is the same as if the eye had turned about a fixed axis at right angles to the first and second directions of the line of regard." *E. B. Titchener,* Exper. Psychol., I. ii. 244. See *Donders's* ★*law.*—**Makeham's law of mortality,** a modification of Gompertz's law, expressed by the formula, $\mu_x = A + Bc^x$, in which A represents chance, or the constant element in the force of mortality.—**Manebach law.** See ★*twin*[1], 3.—**Maxwell-Boltzmann law of the distribution of velocities,** the law, due to Maxwell and, in more general form, to Boltzmann, that the final distribution of the velocities of the molecules of a gas in equilibrium is of the same mathematical form as the distribution of errors of observation as determined by the theory of errors.—**Maxwell's law of partition,** in the kinetic theory of gases, the law that in a mixture of gases the average kinetic energies of the different sets of molecules tend to approach a common value, and that when the mixture is in equilibrium the kinetic energies of the various kinds of molecules are the same.—**Maxwell's law of viscosities,** the law that the viscosity of a gas is independent of its pressure.—**Mendeléjeff's law.** Same as *periodic law.*—**Mendel's law of ancestral inheritance.** See *ancestral* ★*inheritance.*—**Mitscherlich's law.** See the extract.

Already the researches just alluded to have afforded a final and irrefragable proof of the accuracy of Haüy's original conception that to every definite chemical substance there appertains a distinct and characteristic crystalline form, and have reconciled this with Mitscherlich's discoveries in isomorphism by revealing an exquisitely beautiful relationship, connecting very small angular differences which are found to occur between the crystals of the various members of isomorphous series with the atomic weight of the interchangeable elements composing them. This generalisation not only defines the real meaning, extent, and scope of *Mitscherlich's law,* but also proves that the supposed exceptions are not such, and, therefore, the absolute truth of the rule that difference of chemical composition does in all cases involve difference of crystalline form. *Nature,* April 4, 1907, p. 529.

Moses's law, a piratical term for the laying on of thirty-nine lashes on the naked back. The order was, "Lay on forty, less one."—**Müllerian law.** See the extract.

A very interesting set of phenomena are connected with the acanthin skeletons (of Acantharia) where the spicules are not deposited in the calymma, but are formed at the centre of the central capsule, growing out centrifugally into the extra-capsular plasm and resulting in a skeleton of radiating spines. With a few exceptions these spines are twenty in number, and are arranged in a certain geometrical order which has been characterized as the *Müllerian law.* The points of the spines fall in five circles parallel to the equator, and there are four spines to each circle. The spines are named, according to this scheme, polar, tropical, equatorial, sub-tropical, and sub-polar. *Calkins,* Protozoa, p. 77.

Müller's law. Same as *Müllerian* ★*law.*—**Nysten's law,** the rule that rigor mortis appears first in the facial muscles and passes downward, involving the muscles of the lower extremities last.—**Ostwald's dilution law.** See ★*dilution.*—**Oswald's law,** in *Eng. law,* a law, named from Oswald, Bishop of Worcester, passed about 964, which caused the ejection of married priests and the introduction of monks into the churches.—**Pamphlet laws.** Same as ★*statutes at large.*—**Pascal's law,** in *hydros.,* the law that in a fluid at rest the pressure is the same in all directions and that, aside from the differences of pressure produced by the action of gravity, the pressure within the fluid is everywhere the same.—**Paschen's law.** See *laws of* ★*radiation.*—**Pearson's law of ancestral inheritance.** See *ancestral* ★*inheritance.*—**Pericline law.** See *pericline twin,* under *twin*[1].—**Personal-liberty laws.** See *personal.*—**Pflüger's law,** the law that stimulation of a nerve occurs with the disappearance of anelectrotonus and the appearance of catelectrotonus.—**Phonetic law,** a law supposed to govern phonetic changes. The phrase has been taken much too seriously by some writers, who treat it with a reverence not deserved by a figure of speech. The phrase properly expresses the fact that certain changes affect or appear to affect all members of the same class, in the same period of the same language, or universally, and the fact that all phonetic changes and sequences are restricted by physiologic conditions within a certain range of variation. What appear to be exceptions to an ascertained or accepted law are explained by the interference of other laws or facts. In this way there is a basis for the frequent statement that phonetic laws are invariable. The law is often only a general tendency, liable to be checked by any accident of speech or time. Thus, the law that Indo-European *t* shall be Teutonic *th* (as in Latin *tenuis* = E. *thin*) is nullified by the law that an Indo-European *t* after *s* is thereby preserved (Indo-European *sta-,* E. *sta-nd,* etc.).

The word law has been ill chosen for use in this connexion. In *phonetic laws* there is no element which can be identified as coming under the definition of a law as propounded by a jurist like John Austin. *Encyc. Brit.,* XXXI. 674.

Poiseuille's law, the law that the quantity of liquid which will flow through a capillary tube varies directly as the pressure and the square of the cross-section of the tube, and inversely as the length of the tube and the coefficient of viscosity.—**Pole's law,** in *photom.,* an empirical law or rule for the variation in the light from a gas-burner, with the supply of gas. It is given by the formula $L_n = L_o + A\ (c - q)$ where L_n is the intensity when the supply of gas is normal and equal to c, L_o is the intensity when the supply is q and A is a constant depending on the quality of the gas.—**Poynting's law,** in *elect.,* the law that when a conductor carrying current is in an electrostatic field (as in the case of a wire connecting the plates of a charged condenser, or in the case of a cable), the transfer of energy takes place through the dielectric along paths which are the intersections of the equipotential surfaces of the electrostatic field with the equipotential surfaces of the electromagnetic field due to the current.—**Prevost's law,** the law of the exchange of radiation between neighboring bodies by virtue of which a body approaches the temperature of its surroundings and tends to maintain that temperature indefinitely. The radiation received when that condition is reached must then always equal that emitted. See ★*radiation.*—**Public laws.** Same as ★*statutes at large.*—**Purkinje's law,** in *physiological optics,* the law that of two surfaces, differing in color but equally bright when moderately illuminated, the one which sends light of greater wave-lengths to the eye will appear relatively brighter under intense illumination and darker under feeble illumination than the other.—**Quételet's law,** in *phenology,* the law that a given stage of growth requires a given definite preceding climatic condition.—**Raines law,** a law (named from Senator John Raines, its chief promoter), enacted in 1896 and amended in 1897, governing the sale and taxation of liquors in the State of New York. Among its provisions are the abolition of the existing excise boards, the appointment of commissioners of excise, high taxation of the liquor-traffic, local option of towns, etc.—**Raoult's law,** in *phys. chem.,* the important empirical law that if the same number of molecules of different substances be dissolved in a given number of molecules of the solvent the depressions of the freezing-points of the solutions are equal. A similar law is that in the conditions specified the diminutions of the vapor-pressure of the solutions are equal. The importance of these laws consists in the fact that they put us in possession of methods of determining the molecular weights of substances whose vapor densities cannot be measured.—**Religious association** or **corporation law.** See ★*religious.*—**Richter's law of neutralization,** in *chem.,* the general fact pointed out by Richter at the close of the eighteenth century, that when any two neutral salts undergo 'double decomposition' by interchange of their acid and basic constituents the two new salts resulting from such interaction are also neutral in character.—**Rudolphi's dilution law, van t'Hoff's dilution law.** See *Ostwald's* ★*dilution law.*—**Session laws.** Same as ★*statutes at large.*—**Siemens's law,** in *elect.,* the law that the efficiency of a motor approaches unity as the ratio of the counter-electromotive force to the impressed electromotive force increases; or, expressed mathematically, that $\frac{w}{W} = \frac{e}{E}$, where $\frac{w}{W}$ is the efficiency, e the counter-electromotive force, and E the impressed electromotive force.—**Sine law,** in the theory of lenses, the law which defines the conditions under which a system of lenses will produce images free from aberration. The law is that the sines of the angles of inclination of any two conjugate rays passing through a point in the object and the corresponding point in its image must have a constant ratio. Lens systems for which the sine law is fulfilled are said to be *aplanatic.*—**Snell's law,** in *optics,* the law that in the refraction of light the sines of the angles of incidence and refraction bear a constant ratio to each other; the law of refraction.—**Spinel law.** See *spinel twin,* under *twin*[1].—**Spoerer's law.** Same as ★*law of zones.*—**Stefan-Boltzmann law.** Same as *Stefan's* ★*law.*—**Stefan's law,** the empirical law, established by Stefan, that the total radiation from a body varies directly as the fourth power of the absolute temperature of the body. See *laws of* ★*radiation.*—**Stokes's law,** the law that the wave-length of the light emitted by a fluorescent body always exceeds that of the exciting light. See ★*luminescence.*—**Talbot's law, Talbot-Plateau law,** in *psychol. optics,* the principle that the color and brightness of the uniform field produced by a rapid succession of variously colored and variously bright stimuli are the same as they would have been had the reflected light been, from the first, uniformly distributed over the field; and that increase of rapidity of succession, beyond the point required for fusion, produces no change in the result. The law was formulated by Talbot in 1834 and verified by Plateau in the following year. *E. C. Sanford,* Exper. Psychol., p. 146.—**The great law,** a name given to the first code of laws of Pennsylvania. It was established in 1682 and is celebrated for the provisions it contained for liberty of conscience.—**Thomsen's law,** in *phys. chem.,* the supposed rule that the electromotive force of a galvanic cell, in volts, is equal to the chemical energy of the reactions going on in the cell, measured in calories, divided by a constant. The rule holds good when the electromotive force of the cell does not change with change of temperature. Since this is approximately the case with the Daniell cell, which was first studied, the rule obtained a certain recognition.—**To go to law,** to seek legal redress or relief in a court of law.—**Torricelli's law,** in *hydraul.,* the law that the velocity (v) of efflux of a liquid flowing out of a vessel under a constant head *h* is $v = \sqrt{2gh}$, where *g* is the acceleration due to gravity. It follows from this law that the velocity of efflux is that which the liquid would acquire by falling freely under the action of gravity from the level of the surface of the liquid in the vessel to the orifice; also, that for a given head the velocity of efflux is independent of the density of the liquid and for a given pressure at the orifice is inversely proportional to the square root of the density.—**Van der Kolk's law,** in *neurol.,* the law that the motor fibers in any nerve are distributed to the muscles which move the part to which the sensory fibers of the same nerve pass. —**Von Baer's law.** See *Baer's* ★*law* (*b*).—**Watt's law,** the law that the vapor pressure in two connecting vessels, differing in temperature but containing the same liquid, is that determined by the lower temperature.—**Weber-Fechner law,** in *psychophysics,* the Fechnerian statement or formulation of Weber's law, that sensation increases as the logarithm of stimulus.

Fechner gave this law a precise phrasing and a mathematical formulation, and . . . put it to elaborate experimental test. Although his modesty led him to name it after Weber, we might more correctly term it Fechner's Law or the *Weber-Fechner Law.* *E. B. Titchener,* Exper. Psychol., II. i. 29.

Wien's law, the law of the variation of radiation with temperature expressed by the equation

$$I_\lambda = C_1 \lambda^{-5}\, e^{-\frac{c_2}{\lambda T}},$$

where I_λ is the intensity of the wave-length λ in the spectrum of a glowing body, e is the logarithmic base, T the absolute temperature of the body, and C_1, c_2 are constants. See *laws of* ★*radiation.*—**Wundt-Lamansky law,** in *physiol. optics,* the law that the line of vision, in traversing a vertical plane parallel to the frontal plane, follows straight lines in the vertical and horizontal directions, but takes curved paths for all intermediate movements. The law was formulated by Wundt in 1862 and by Lamansky in 1869.

L. A. W. An abbreviation of *League of American Wheelmen.*

law-hand (lâ′hand), *n.* The form of handwriting customarily used in legal documents.

lawine (lâ′win, G. lä-vē′nę), *n.* [G. *lawine* (lawíne), *lauwine* (lauwíne), *lauine, loewin,* < Sw. dial. *lawine* (láwine), *lauine* (laúine), *lauwin, lauwi, laui,* in Appenzell *läuena, läuela,* older *lewe,* in Tyrol *lān, lāne,* in the Bavarian Alps *læuen, læun, læunen, læn, lænen,* etc., an avalanche; OHG. *lewinna,* a torrent, MHG. *lēne,* an avalanche, *liune,* a thaw; appar. < ML. *lavina, lavine,* an avalanche, < L. *labi,* fall: see *lapse.* But the forms in part seem to depend on G. *lau,* tepid: see *lew*[2], *a.*] An avalanche.

law-lordship (lâ′lôrd″ship), *n.* The official position of a law-lord.

lawman, *n.* 3. A lawyer.

law-merchant (lâ′mėr″chant), *n.* See *law*[1].

lawn-grass (lân′gras), *n.* A grass suited to forming lawns and used for this purpose.

A good lawn-grass must make a close and permanent turf and must therefore be a perennial creeping by rootstocks or otherwise; it must be of a pleasing color, a deep rich emerald green (lasting through the season) being the most desirable; and it must be soft in texture, this depending partly on width of leaf and partly on flexibility. The principal lawn-grasses of the United States are Kentucky blue-grass (with which white clover may be mixed), creeping bent, and Rhode Island bent; but where these cannot be grown substitutes are employed, as Bermuda grass in the South, and St. Augustine grass on the South Atlantic and Gulf coasts.—**Charleston lawn-grass.** Same as *St. Augustine* ★*grass.*—**Japanese** or **Korean lawn-grass,** a creeping grass, *Zoysia pungens,* native on the shores of tropical and eastern Asia, Australia, and New Zealand. It is both a good sandbinder and a good grazing-plant, and, though of harsh texture, an excellent lawn-grass for sandy soils: specially prized in the far East for tennis-courts.—**Mexican lawn-grass,** *Opizia stolonifera,* an extensively creeping dicœcious grass, similar in habit to Bermuda grass but more delicate. It forms a thick sod over all exposed surfaces, and is suitable for use in public squares, etc., while it is also liked by cattle and is useful for pasturage.

lawn-hockey (lân′hok″i), *n.* A lawn-game, a modification of field-hockey.

lawn-party (lân′pär″ti), *n.* An outdoor party.

lawsonite (lâ′son-īt), *n.* [Named after Prof. A. C. *Lawson* of the University of California.] A silicate of aluminium and calcium occurring in grayish-blue orthorhombic crystals in crystalline schists in California and elsewhere.

lawyer, *n.* 3. (*b*) Same as *gray snapper.* See *snapper.*—**Bush lawyer.** See *bush-lawyer.*—**Penang lawyer.** See *penang-lawyer.* In England the name is often misapplied to the Malacca cane.

lawyer-cane (lâ′yėr-kān), *n.* Same as ★*lawyer-palm.*

lawyer-palm (lâ′yėr-päm), *n.* In Australia, *Calamus australis,* a strong, climbing palm, with stems several hundred feet long and less than an inch in thickness. Its long leaves and tendrils are covered with sharp, recurved spines and make it a serious obstacle to travelers.

lawyer-vine (lâ′yėr-vīn), *n.* In Australia, any one of several spiny, trailing or climbing vines, as the bush-lawyer, *Rubus australis,* the lawyer-palm, *Calamus australis,* and *Flagellaria Indica.* See *Flagellaria.*

lax-fisher (laks′fish″ėr), *n.* One who catches salmon at the time of their ascent of rivers in the spawning season.

laxifoliate (lak-si-fō′li-āt), *a.* Same as *laxifolious.*

laxism (lak′sizm), *n.* The principles or interpretations of the laxists.

laxitude (lak′si-tūd), *n.* [L. **laxitudo* for *laxitas,* < *laxus,* lax.] Laxity. [Rare.]

Laxmannia (laks-man′i-ă), *n.* [NL. (Forster, 1776), named in honor of Eric *Laxmann* (1737–96), a Finnish priest who made extensive botanical collections in Siberia.] A genus of plants of the family *Asteraceæ*. See *Petrobium*.

lay[1], *v.* **I.** *trans.* 20. To aim or point, as a cannon.

At the moment of firing [coast-defense guns], their positions of course become defined; but the difficulty of locating them sufficiently for accurate *laying* on board ship may nevertheless be considerable.
Encyc. Brit., XXVIII. 452.

To lay away. (*c*) In *tanning*, to spread (hides) in vats with bark between the layers, tan liquor being added. *C. T. Davis*, Manuf. of Leather, p. 179.—**To lay down.** (*g*) In *oyster culture*, to plant, as an oyster-bed.—**To lay in.** (*b*) In oil-painting, to place the first masses of color on a canvas. (*c*) To eat (something) voraciously; tuck in a large amount of: as, he *laid in* dinner enough for two days. [Colloq.]—**To lay on.** (*d*) In *printing*, to place, as paper to be printed, upon the feed-board; also, to place (a chase of type) upon the bed of the printing-press. (*e*) To acquire, as flesh or weight: said of cattle which are being fattened, etc.—**To lay under,** to put or place in a condition specified or indicated by a following complementary word or clause: as, *to lay* (one) *under* the necessity of doing some particular thing; *to lay* (one) *under* obligation (to somebody); etc.

II. *intrans.*—**Lay aft** (*naut.*), an order to the crew to proceed toward the stern of the ship.—**Lay in** (*naut.*), an order to the men on the yards to gather in toward the mast; a command to leave the yard-arms and 'lay in' toward the slings.—**To lay forward** (*naut.*), an order to the crew to go toward the head of the ship.—**To lay in,** (*b*) To shut down or stop work: said of coal-mines.—**To lay out on one's oars** (*naut.*), to pull a more powerful stroke and drive the boat faster through the water.

lay[1], *n.* 9. Terms or conditions, as of a bargain. [U. S.]

Lay, terms or conditions of a bargain; price. Ex. I bought the articles at a good *lay*; he bought his goods on the same *lay* that I did mine. *Pickering*, Vocabulary.

Lang's lay, a method of laying the strands, in making a rope, in which they are twisted in the same direction as the individual wires or fibers instead of in the opposite direction.—**Lay of a cable,** the distance, measured along the axis, within which the helically wound strands of a cable make one complete turn around the axis.

lay-away (lā′ą-wā″), *n.* [*lay away*: see *lay*[1], *v.*] The vat in which hides are laid for tanning; also, the liquor in which they are steeped. *C. T. Davis*, Manuf. of Leather, p. 383.

lay-band (lā′band), *n.* A band or string for tying a skein or lea of thread or yarn.

lay-boat (lā′bōt), *n.* A boat at anchor.

lay-by (lā′bī), *n.* 1. A sluggish place in a river, or still water artificially inclosed, in which barges can be laid by when out of commission.—2. Something laid by or saved, especially money. *N. E. D.*

lay-day, *n.* 2. *pl.* Same as ★*lie-days*.

lay-down (lā′doun), *a.* Said of a collar which is laid or folded over on itself; not standing; lay-over. Also used substantively.

layer, *n.* 7. In *oyster culture*, an artificial oyster-bed.—8. In *cattle-raising*, a field or yard in which cattle ready for shipment are kept.—9. In *phytogeog.*, one of several strata of plants of different vegetation forms met with in some formations, especially in forests. Thus in a forest, beneath the facies, or primary layer consisting of large trees, there may be successively a layer of small trees and shrubs, one of bushes, then upper, middle, and lower herbaceous layers, and finally a ground-layer of mosses, lichens, etc. F. E. Clements regards these layers as vertical zones. See ★*zone*, 6. *Pound and Clements.*—**Baillarger's layer.** Same as *Baillarger's* ★*line*.—**Bowman's layer,** a layer of connective tissue between the cornea and the conjunctiva. Also called *Bowman's membrane*.—**Crookes's layer,** the layer of vapor underlying a liquid in the spheroidal state and insulating it from a hotter surface beneath; also, the dark space at the cathode of a vacuum-tube, usually known as *Crookes's space*.—**Huxley's layer.** Same as *Huxley's* ★*membrane*.—**Langhans's layer,** the epithelial layer of the villi of the chorion.—**Myophan layer,** in certain ciliates, as *Stentor* and *Vorticella*, the fibrillated ectoplasmic or cortical portion of the body or of the contractile stalk. Also *myophane layer*.—**Prismatic layer,** in mollusk-shells, the middle layer, consisting of minute prisms of calcium carbonate separated by thin fibers of conchiolin. It lies between the periostracum and the nacre.—**Rauber's layer,** the outermost of the three cell-layers which form the very

Rauber's Layer.

A vertical section across the embryonal area of the blastodermic vesicle of a rabbit at the end of the fifth day, highly magnified. (After Kölliker.) *a*, outer layer of cells of the embryonal area, or Rauber's layer; *b*, epiblast; *c*, hypoblast.
(From Marshall's "Vertebrate Embryology.")

young mammalian blastodisc. This external layer, which later disappears completely, covers the ectoderm.—**Skeletogenous layer,** in *embryol.*, the layer of condensed mesoderm cells immediately surrounding the notochord of the vertebrate embryo and giving rise to the axial skeleton.—**Sluggish layer,** the portion of the blood-stream, in the smallest vessels, in which the white corpuscles are seen slowly rolling along the wall of the vessel, while in the center of the stream the red corpuscles are propelled rapidly.—**Still layer.** Same as *sluggish* ★*layer*.—**Subcallosal layer,** a layer of nerve-fibers on the ventral or lower side of the callosum.

layerage (lā′èr-ąj), *n.* In *hort.*, the subject of making layers: the process of layering and all that is connected with it. *L. H. Bailey.*

layer-cake (lā′ér-kāk), *n.* A cake made in layers, generally with a filling between the layers and an icing over the top.

layered (lā′èrd), *a.* Arranged in layers; consisting of a specified number of layers; covered with something: as, *layered* with mud.—**Layered formation.** See ★*formation*.

layer-stool (lā′èr-stōl), *n.* A root from which layers are produced. *N. E. D.*

laying-away (lā′ing-ą-wā′), *n.* The process of tanning hides for sole-leather by spreading them in vats with alternate layers of bark. *C. T. Davis*, Manuf. of Leather, p. 179.

laying-house (lā′ing-hous), *n.* In *rope-manuf.*, the building in which the laying of the strands for the completed rope is done.

laying-tool (lā′ing-töl), *n.* A rectangular flat trowel used by plasterers in laying and smoothing plaster.

laying-trowel (lā′ing-trou″el), *n.* Same as ★*laying-tool*.

laying-walk (lā′ing-wâk), *n.* A ropewalk; a long building where ropes are laid.

layka (lä′i-kä), *n.* [Aymará and Quichua.] A society of shamans, among the mountain Indians of Bolivia and Peru, who are diviners by means of coca-leaves, spiders, and other things. They also are shamans of the hunt, and rain-makers.

lay-over (lā′ō″vèr), *n.* 1. In *railroading*, a train, particularly a freight- or local passenger-train, which is detained on a siding to allow an express-train to pass. [Colloq., U. S.]—2. Same as ★*lay-down*.

lay-race (lā′rās), *n.* That part of the loom-lay or lathe upon which the shuttle travels as it is thrown from one side of the lay to the other.

lay-shaft (lā′shâft), *n.* An independent shaft; a shaft which turns independently of the adjacent machinery. Such a shaft, driven by an independent engine, has been used to some extent for operating the valves of marine engines to secure constant speed; hence the term has come to be used for any shaft that operates the valves of an engine, as, for instance, the cam-shaft of a gas-engine.

The one *lay-shaft* paralleling the cylinders operates, through cams, all of the valve movements of the engine.
Elect. Rev., Sept. 17, 1904, p. 456.

lazar, *n.* **II.** *a.* Having a loathsome disease; leprous.

Lazaret fever. Same as *typhus fever*.

lazera (laz′e-rä), *n.* A catfish, *Clarias lazera*, found in African rivers.

lazuli-bunting (laz′ū-li-bun″ting), *n.* Same as *lazuli-finch*.

lazuline (laz′ū-lin), *a.* [*lazuli* + *-ine*[1].] Of the color of lapis lazuli; bluish.

lazulitic (laz-ū-lit′ik), *a.* [*lazulite* + *-ic*.] Pertaining to, resembling, or containing lazulite.

lazurite (laz′ū-rīt), *n.* [ML. *lazur* (*azure lapis lazuli*) + *-ite*[2].] The sodium-aluminium silicate which forms the essential part of the ornamental stone lapis lazuli.

Lazy brand, in *stock-raising*, a cattle-brand so placed on the animal that its longer axis is horizontal, as ⊣, ≺, etc.

lazy-bar (lā′zi-bär), *n.* A portable iron bar placed across the opening of the fire-door of a furnace to serve as a rest for the fire-tools when they are in use in cleaning the fire.

lazy-jack, *n.* 2. *Naut.*, a length of rope rove through a thimble, seized on to the boom-topping lift, and made fast to the boom. When the sail is lowered the jacks prevent the folds of canvas from falling on the deck.

lazy-scissors (lā′zi-siz″ȯrz), *n. sing.* and *pl.* Same as *lazy-tongs*.

L. B. An abbreviation (*b*) of the Latin *Legum Baccalaureus*, Bachelor of Laws.

L-bar (el′bär), *n.* A bar of metal, which has a cross section resembling the capital letter L; an angle-bar; an angle-beam. Also called *L-beam*.

L-beam (el′bēm), *n.* Same as ★*L-bar*.

l. b. w. In *cricket*, an abbreviation of *leg before wicket*. A batsman is out leg before wicket if with any part of his person he stops a ball which, in the opinion of the umpire at the bowler's wicket, has been pitched in a straight line from it to the striker's wicket and would have hit it. *Hutchinson*, Cricket, p. 63.

L. C. An abbreviation (*a*) of *Lord Chamberlain*; (*b*) of *Lord Chancellor*; (*c*) of *Lower Canada*.

l/c. An abbreviation of *letter of credit*.

L. C. B. An abbreviation of *Lord Chief Baron*.

L. C. C. An abbreviation of *London County Council*.

L. Ch. An abbreviation of the Latin *Licentiatus Chirugiæ*, Licentiate in Surgery.

L. C. J. An abbreviation of *Lord Chief Justice*.

l. c. m. An abbreviation of *least common multiple*.

L. C. P. An abbreviation of *Licentiate of the College of Preceptors*.

Ld. An abbreviation of *Lord*.

L. D. An abbreviation (*a*) of *Lady-day*; (*b*) of *Light Dragoons*; (*c*) of *Low Dutch*; (*d*) [*l. c.*] of the Latin *litera dominicalis*, dominical letter; (*e*) same as *L. H. D*.

L. Div. An abbreviation of *Licentiate in Divinity*.

Ldp. Lp. Contractions (*a*) of *Ladyship*; (*b*) of *Lordship*.

L. D. S. An abbreviation (*a*) of *Latter-day Saints*; (*b*) of *Licentiate of Dental Surgery*.

leach[2], *v. t.* 3. To extract metal from (an ore) by subjecting it to chemical reagents which take the metal into solution.

The experiments in the concentration and in the *leaching* of the ore have taken shape in the erection of a small metallurgical plant.
R. D. Salisbury, in Geol. Surv. of New Jersey, 1900, [p. xxvii.

leach[2], *n.* 4. A tank in which hot water is passed through ground bark to obtain tannin. *Mod. Amer. Tanning*, p. 27. Also *latch*.—**Leach brine.** See ★*brine*[1].

leach-hole (lēch′hōl), *n.* A tubular cavity dissolved out of rocks by circulating waters.

leaching (lē′ching), *n.* 1. Same as *lixiviation*.—2. The process of obtaining tannin from bark. *C. T. Davis*, Manuf. of Leather, p. 48.

leach-tank (lēch′tangk), *n.* A tank in which metallic ores are separated by subjecting them to chemical reagents and subsequently washing and draining.

lead[1], *v. i.*—**To lead through,** in *whist* and *bridge*, to make it difficult for the second player on a trick to know what to do: as, *to lead through* a singly guarded king in the dummy, the position of the ace not being known.—**To lead up to.** (*b*) In *card-playing*, to make a player fourth hand in any trick, as, in *bridge* for the pone to lead up to the dummy's weakness in a suit.

lead[1], *n.* 3. (*c*) In Australia, an old or 'dead' river-bed in which gold is found.

7. In *elect.*: (*c*) The advance of phase of one electric wave over another: a term used mainly in alternating-current circuits.—10. In *forestry*, a snatch-block with a hook or loop for fastening it to convenient stationary objects: used for guiding the cable by which logs are dragged.—11. A flock of flying wild-fowl.

After the sportsmen were in the hole and everything was ready, Stewart called "Here comes a *lead* from the west." *Forest and Stream*, Jan. 24, 1903, p. 68.

Albany lead, in *whist*, an opening to show four trumps and three of each plain suit: so named because made popular by the Albany Whist Club.—**American leads,** in *whist*, leads that show the number of cards in the suit led. They are never used in bridge.—**Angle of lead,** in *elect.*, the angular displacement by which an alternating current leads the electromotive force: the opposite of ★*lag* in an alternating-current circuit.—**Angular lead,** in describing a valve-motion operated by an eccentric, or in adjusting it, an angular displacement of the center line of the eccentric ahead of its normal relation to the center line of the crank, which is given so that the opening of the port may precede or lead the beginning of the piston-stroke by a determined amount.—**Blue lead,** a blue-stained stratum of gold-bearing gravel. [California.]—**Deep lead,** in *Australian gold-mining*, an ancient river-course, which is now only disclosed by deep-mining operations.—**Forward lead** in *elect.*, a rotation of the brushes of a generator or motor from the neutral position in the direction of rotation of the commutator.—**Hysteretic lead,** in *elect.*, the difference of phase between the magnetic flux and the magnetomotive force in an alternating circuit containing iron.

Due to the *hysteretic lead* *a*, the lag of the current is less . . .
Steinmetz, Elements of Elect. Engineering, p. 50.

Irregular lead, in *whist* and *bridge*, a lead which is a departure from the usual custom, such as the 8 led from 10, 8, 6, and 4.—**Linear lead,** in a steam-engine, the linear distance by which the port is open when the piston begins its stroke.—**Negative lead,** in a steam-engine: (*a*) The angle through which the crank has turned from the dead-center when the valve opens to admit steam. (*b*) The linear distance which the valve has to travel, after the crank has passed the dead-center, before the valve opens.—**On the lead,** held by a chain or leather thong, as a dog.—**Original lead,** in *bridge* and *whist*, the suit first opened.—**Stringer lead,** a small veinlet, which is followed in the hope that it will conduct to larger bodies of ore.

lead[2], *n.*—**Chemical lead,** lead which is free from alloy of other metals, notably zinc and antimony: used in the assay processes and where the presence of other metals would unfit the lead for the required purpose.—**Corroding lead,** refined lead suitable for the production of white lead by the corroding process.—**Flintshire process of lead-smelting.** The reverberatory furnace employed in this process is provided with a bottom of gray slag and a low roof with a hopper for charging. The fire-bridge is always air-cooled, and there are three working-doors on each side. The cast-iron well in which the metal collects before tapping is placed in front of the middle door at the front of the furnace, and the cast-iron pot into which the metal is tapped is usually heated by a separate fireplace. The ore is roasted for about three hours, and is then reduced, and after being thickened with lime the charge undergoes a second calcination and is finally reduced and tapped. This sequence of operations is varied in accordance with the richness of the ores treated.—**Hard lead,** impure lead as it comes from the smelting-furnace.—**Lead chamber.** See ★*chamber.*—**Lead-chamber crystals, process.** See ★*crystal,* ★*process.*—**Lead chlorid,** $PbCl_2$, a white crystalline substance, soluble in hot water and to a small extent in cold water.—**Lead dioxid,** a heavy dark-brown powder, having the composition PbO_2, obtained by the action of nitric acid on red lead: used in the manufacture of friction-matches and in some forms of storage galvanic batteries. Also called *plumbic dioxid.*—**Lead fume,** the dust which is mechanically carried away with the gaseous products of combustion from a lead-smelting furnace. It consists chiefly of sulphate and oxid of lead, with small quantities of oxidized zinc, arsenic, and antimony, and the ash of the fuel. It is collected by deposition in flues, often of great length, and resmelted to recover the lead.—**Lead iodide.** See ★*iodide.*—**Lead peroxid,** the brown or puce oxid of lead, PbO_2: used in the manufacture of lucifer matches and in some storage batteries for the production of the electric current.—**Lead white.** Same as *white lead* (which see, under *lead*[2]).—**Oleate of lead,** a substance, commonly made by boiling together water, olive-oil, and litharge, which when melted and spread in a thin layer upon cotton cloth forms the lead-plaster or diachylon of the surgeon, valuable on account of its strongly adhesive character.—**Pattinson's white lead,** the trade-name of a white pigment, hydroxy-chlorid of lead (Pb(HO)Cl), made by precipitating a hot solution of lead chlorid with calcium hydroxid.—**Radioactive lead,** a substance formed by the disintegration of radium and the fourth of the series of radioactive disintegration-products following the emanation, for which reason it is known as *radium D.* It has not been found to emit a radiation, but slowly changes into other products, radium E, radium F, and radium G (polonium), which are always present unless the radio-lead has been freshly prepared and are the source of both α- and β-rays. See ★*radio-lead.*—**Silver lead.** See ★*silver-lead.*—**Slag-lead,** an inferior lead obtained from smelting rich lead slag in a slag hearth.—**Spongy lead,** metallic lead separated from a solution of one of its salts in a loosely connected, imperfectly coherent mass, as in the working of some forms of storage galvanic batteries.—**Sublimed white lead,** the trade-name for a white pigment which consists of lead sulphate, made by roasting galena in the air under proper conditions, and collecting and purifying the fume given off. It is sometimes sold with an admixture of lead carbonate and zinc oxid.

leadage (lēd'dāj), *n.* [*lead*[1] + *-age.*] The distance from a coal-mine to the point where the coal is shipped.

lead-bar (lēd'bär), *n.* The swingletree or equalizing-bar used for the leading horses of a four-in-hand team. See *swingletree.*

leaden (led'n), *v. t.* [*leaden, a.,* or *lead*[2] + *-en*[1] (3).] 1†. To fasten or cover with lead. —2. To weigh down with or as with lead, as one's spirits.

leader[1], *n.* 5. (*k*) In marine hardware, an eye, ring, or pulley used as a guide for a rope or chain. It may be a simple casting having an eye and designed to be bound to a wire rope; or an eye in a screw-plate, as the tiller-rope *leader* of a boat; or an eye swiveled to a deck-plate, as a jib-*leader;* or a simple half-ring screwed to the deck, as a sheet-*leader,* a bell chain *leader,* a cross-tree *leader.*

10. The first player on any trick in a game of cards; the player who sits on the dealer's left.

leader-block (lē'dėr-blok), *n.* In marine hardware, a deck-block used to guide or lead a rope from the sail to the cleat, as the jib-sheet *leader-block* of a small yacht where the sheets are led aft to the cockpit.

leaderette (lē-dėr-et'), *n.* A short leader in a newspaper. [Eng.]

lead-flat (led'flat), *n.* A nearly flat roof covered with sheet-lead. A similar roofing, in which tin plates are used instead of lead, is called in the United States a *deck.* [Eng.]

leading[1], *p. a.* 4. In *naval arch.,* said of the edge or end of a surface or blade, as a propeller-blade, which is in advance when moving through water: opposed to ★*following.*

In the case of a plate set obliquely to its line of motion through water, it has been explained that the centre of pressure is nearer the *leading* edge than the after edge (see p. 439). *White,* Manual of Naval Arch., p. 499.

Leading part (*naut.*), the part of a tackle that is hauled upon.

leading-beam (lē'ding-bēm), *n.* One of two or more beams adjusted in position to serve as guides for placing the other beams of the series.

leading-pile (lē'ding-pīl), *n.* One of two or more piles driven into position to serve as guides for driving the other intermediate piles of the series.

leading-staff, *n.* 2. A staff with a hook in one end, used to lead a bull by putting the hook through a ring in his nose.

leading-strings, *n. pl.* 3. *Naut.,* an old name for yoke-lines.

leading-truck (lē'ding-truk), *n.* A fair-lead or guide for leading a rope or cable to a windlass; a leading-block or pulley-block used to lead a rope to a capstan or so that it can be easily hauled.

lead-light (led'līt), *n.* 1. A single piece of glass prepared for a window, to be put in a lead sash, as of a decorative window.—2. The whole of a piece of sash with lead bars prepared to fill a light, that is, a separate window-space.

lead-line[1], *n.* 3. In *pathol.,* a bluish mark at the edge of the gums occurring in cases of lead-poisoning.

lead-line[2] (lēd'līn), *n.* In *lumbering,* a wire rope, with an eye at each end, used to anchor the snatch-block in setting a lead.

lead-off (lēd'ôf), *n.* In *exper. physiol.,* the passage of a constant current through a nerve, while the latter is connected with a galvanometer, by means of two electrodes placed either both along the course of the nerve, or one along its course and the other at its transverse section. *Philos. Trans. Roy. Soc.* (London), 1897, ser. B, p. 7.—**Longitudinal lead-off,** the passage of a constant current through a nerve which has been arranged upon two electrodes so connected with a galvanometer that neither is in contact with a transverse section of the nerve, both touching the nerve along its course.—**Transverse lead-off,** the passage of a constant current through a nerve which has been arranged upon two electrodes so connected with a galvanometer that the transverse section of the nerve lies upon one and its body upon the other.

lead-paper (led'pā″pėr), *n.* White paper which has been dipped into a solution of a colorless salt of lead and dried. It serves as a test for sulphureted hydrogen or for soluble hydrosulphid, being blackened by exposure to these substances.

lead-reeve (lēd'rēv), *n.* In *mining,* an official with whom aggrieved miners lodge complaints. [Prov. Eng.]

lead-reins (lēd'rānz), *n. pl.* In a four-in-hand harness, the reins used to guide the leaders.

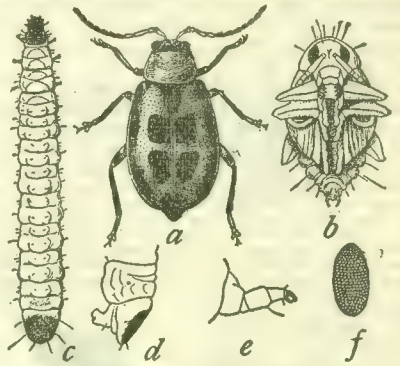
lead-riveting (led'riv″et-ing), *n.* In *mining,* a method of locking a safety-lamp by fastening it with a lead rivet which receives an impression and acts as a seal, so that any tampering with the lamp may be detected.

lead-spar, *n.* 2. Anglesite or other similar lead compound.—**Red lead-spar,** crocoite.

lead-tree, *n.* 2. Arbor Saturni, or tree of Saturn: an old name for the arborescent growth of metallic lead, in thin crystalline leaflets, which forms on a strip of sheet-zinc placed in a solution of a lead salt, as lead acetate or nitrate.

lead-wash (led'wosh), *n.* Same as *lead-water.*

lead-work (led'wėrk), *n.* In *building,* work other than ordinary plumbing, in which lead is used, as in gutters, roofing, etc. [Rare in U. S., but common in Great Britain.]



leaf, *n.* 2. (*j*) The frame or shaft which holds the complement of heddles for weaving; the harness.—**Coppery leaves.** See ★*coppery.*—**Cornute leaf,** a leaf in which the midrib is projected in the form of a horn or spine, sometimes in a different plane.—**Floral leaf,** one of the divisions of the perianth; a petal or sepal; also, less properly, a bract or leaf which subtends a flower.—**French leaf,** a hard yellow-brass leaf, used in overlaying with brass.—**Indian leaves.** See ★*malabathrum.*—**Sibylline leaves.** See *sibylline.*—**Soap leaves.** See ★*soap.*—**Standing leaf,** that leaf of a hinge which is secured to a stationary object, as a door-post.

leaf-areole (lēf'ar″ē-ōl), *n.* Same as ★*leaf-scar.*

leaf-bar (lēf'bär), *n.* A transverse slat or grid, in different parts of the scutching- or picking-machinery in a cotton-mill, for the arrest, and separation from the cotton, of leaves and other foreign matter.

leaf-base (lēf'bās), *n.* That part of a leaf, or rather of its stalk or petiole, which remains within the trunk or stem after the leaf has fallen: used chiefly of fossil trunks, as of *Lepidodendron, Cycadeoidea,* etc.

leaf-beetle, *n.* Particular leaf-beetles (and so with leaf-cutters, root-borers, etc.) are known by some distinctive adjective or attribute prefixed, as *bean leaf-beetle* ('leaf-beetle of the bean'). All such three-word names may be taken also as *bean-leaf beetle* ('beetle of the bean-leaf'), etc.—**Bean leaf-beetle,** a chrysomelid beetle, *Cerotoma trifurcata,* which feeds on the foliage of the bean and pea in the United States, from Maryland and

Bean Leaf-beetle (*Cerotoma trifurcata*).

a, beetle; *b,* pupa; *c,* larva; *d,* anal segments of larva; *e,* leg of same; *f,* egg: *a, b, c,* enlarged about five times; *d, e, f,* more enlarged. (Chittenden, U. S. D. A.)

Illinois southward; also, *Cerotoma caminea.*—**Cherry leaf-beetle,** an American chrysomelid beetle, *Galerucella cavicollis,* which feeds on the foliage of the cherry.—**Clover leaf-beetle.** Same as *clover-weevil.*—**Cottonwood leaf-beetle.** Same as *poplar* ★*leaf-beetle.*—**Elm leaf-beetle,** a European chrysomelid beetle, *Galerucella luteola,* first introduced into the United States near Baltimore about 1840. It has spread north and south, and is

Elm Leaf-beetle (*Galerucella luteola*).

a, eggs; *b,* larvæ; *c,* adult; *d,* eggs (enlarged); *f,* sculpture of egg; *g,* larva; *h,* side view of greatly enlarged segment of larva; *i,* dorsal view of larva; *j,* pupa; *k,* adult; *l,* portion of elytron of beetle (enlarged). (Riley, U. S. D. A.)

the principal enemy to the elms grown as shade-trees in most eastern cities. It is commonly known as the imported elm leaf-beetle, and is frequently referred to in literature as *Galeruca xanthomelæna* and *Galerucella xanthomelæna.*—**Four-marked leaf-beetle,** *Cryptocephalus quadrimaculatus.*—**Larger sugar-beet leaf-beetle,** *Monoxia puncticollis.*—**Linden leaf-beetle.** Same as ★*ladder-beetle.*—**Locust leaf-beetle,** *Odontota dorsalis.*—**Long-horned leaf-beetle,** any member of the genus *Donacia.*—**Orange leaf-beetle.** See ★*leaf-notcher.*—**Peach leaf-beetle.** Same as *plum* ★*leaf-beetle.*—**Plum leaf-beetle,** an American chrysomelid beetle, *Nodonota tristis,* which feeds on the foliage of the pear and the plum.—**Poplar leaf-beetle,** a chrysomelid beetle, *Lina scripta,* which defoliates poplars in the United States. Also called *cottonwood leaf-beetle.*—**Rose leaf-beetle,** *Nodonota puncticollis.*—**Southern corn leaf-beetle.** See ★*corn*[1].—**Spotted strawberry leaf-beetle.** Same as *spotted* ★*paria.*—**Strawberry leaf-beetle,** *Typophorus canellus.*—**Willow leaf-beetle,** an American chrysomelid beetle, *Lina scripta.*

leaf-blight, *n.* A few of the hosts, with their specific leaf-blights, are as follows: buckwheat, *Ramularia rufomaculans;* cabbage, *Macrosporium Brassicæ;* celery, *Cercospora Apii;* cotton, *Cercospora gossypina;* pear, *Entomosporium maculatum;* tobacco, *Cercospora Nicotianæ.*—**Leaf-blight of almond,** a fungous disease of the almond caused by *Cercospora circumscissa.*—**Leaf-blight of corn,** a disease which affects the leaves of corn, causing them to turn yellow and die. It is caused by the fungus *Helminthosporium inconspicuum.*—**Leaf-blight of grape,** a disease of grape-leaves caused by the fungus *Cercospora viticola.*—**Leaf-blight of mignonette,** a disease of the cultivated mignonette, especially when grown under glass, due to the fungus *Cercospora Resedæ,* which causes brownish spots on the leaves.—**Red leaf-blight,** a disease of cotton, due to the impoverished condition of the soil, which produces an autumn-like coloration in the leaves.—**Yellow leaf-blight.** Same as *mosaic* ★*disease.*

leaf-blotch (lēf'bloch), *n.* A blotch on the leaves of plants caused by the attacks of certain fungi.—**Leaf-blotch of rose,** fungous disease attacking the leaves of roses, caused by *Actinonema Rosæ,* which produces dark blotches on the leaves and soon causes them to drop off. See ★*Actinonema.*—**Leaf-blotch of strawberry,** a fungous disease of the strawberry, due to *Ascochyta Fragariæ,* which attacks the leaves, producing dead spots.

leaf-brass (lēf'brȧs), *n.* Very thin sheet-brass.

leaf-bug, *n.*—**Four-lined leaf-bug,** an American capsid, *Pœcilocapsus lineatus,* wide-spread in the United States. It damages gooseberry-bushes, currant-bushes, and many garden plants, puncturing leaves and small twigs and sucking sap. The eggs are inserted in slits cut lengthwise into the stems of plants. Also called the

black-lined plant-bug.—**Pear leaf-bug.** Same as *tarnished plant-bug* (which see, under *plant-bug*).

leaf-cast (lēf′kȧst), *n.* A disease of young pine-trees and seedlings which causes the leaves to fall: due to the fungus *Lophodermium Pinastri.* See ★*Lophodermium*, ★*needle-cast*, and ★*casting*, 11.

leaf-caterpillar (lēf′kat″ėr-pil-ėr), *n.* The cotton-caterpillar, the larva of *Alabama argillacea.* See ★*Alabama.* [Southern U. S.]

leaf-chafer (lēf′chā″fėr), *n.* Any leaf-eating scarabæid beetle.—**Lamellicorn leaf-chafer,** any scarabæid beetle which feeds on leaves; specifically, any member of the subfamily *Melolonthinæ*, which includes the May-beetles, and of the subfamily *Pleurosticta* of Horn. See *pleurostict.*—**Margined leaf-chafer,** a rather small American scarabæid beetle, *Anomala marginata*, which attacks the foliage of fruit-trees and grape-vines in the southern United States.—**Pear leaf-chafer,** an American scarabæid beetle, *Serica tricolor*, which often defoliates pear-trees, especially in the eastern United States.—**Shining leaf-chafer,** the goldsmith-beetle.

Pear Leaf-chafer (*Serica tricolor*). Enlarged.

leaf-climber (lēf′klī″mėr), *n.* A liana in which the petiole or blade of the otherwise unmodified leaf is the irritable supporting organ. Thus *Clematis Vitalba* and other species are petiole-climbers, varieties of *Fumaria officinalis* are leaf-blade climbers, and *Flagellaria Indica* is a leaf-tip climber. See ★*tendril-climber.*

leaf-cover (lēf′kuv″ėr), *n.* Same as ★*litter*, 8, and *duff*[1], 3.

leaf-cure (lēf′kūr), *v. t.* To cure (tobacco) after removing the stalks. See extract under ★*stalk-cure.*

leaf-curl (lēf′kėrl), *n.* A disease of the cherry, peach, and plum, due to various species of *Exoascus.*—**Potato leaf-curl.** Same as *potato early* ★*blight.*

leaf-cushion (lēf′kȕsh″ọn), *n.* See ★*cushion.*

leaf-cutter, *n.* 1. (*b*) A leaf-cutting ant; one of the tropical or subtropical ants which defoliate trees, as *Atta fervens.*—**Maple leaf-cutter,** an American tineid moth, *Incurvaria acerifoliella*, whose larva perforates the leaves of the maple with elliptical holes, using the removed leaf-substance as a case.

leaf-door (lēf′dōr), *n.* A folding door.

leafery (lē′fėr-i), *n.* [*leaf* + *-ery.*] Leafage; foliage.

leaf-fall (lēf′fâl), *n.* The fall of the year; the autumn.

leaf-fat (lēf′fat), *n.* The fat which occurs in folds or leaves in the body-cavity of an animal such as the ox or hog.

leaf-fiber (lēf′fī″bėr), *n.* The fiber of leaves.—**Leaf-fiber machine.** See ★*fiber*[1].

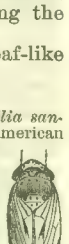
leaf-filter (lēf′fil″tėr), *n.* See ★*filter*[1].

leaf-flea (lēf′flē), *n.* A flea-beetle or any homopterous insect of the family *Psyllidæ;* a flea-louse.

leaf-folder, *n.*—**Lesser apple leaf-folder,** a tortricid moth, *Alceris minuta*, whose larva folds the young leaves of the apple and skeletonizes them. It is common throughout the southern Atlantic United States.

Leaf-foot bug. Same as *leaf-footed* ★*plant-bug.*

leaf-frog (lēf′frog), *n.* A small tree-frog of the genus *Hylodes*, peculiar to tropical America. The most common species, *H. martinicensis*, is noteworthy from the fact that it was the first known instance of a frog the metamorphosis of which took place within the egg.



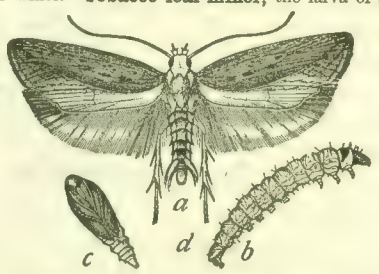
leaf-gall (lēf′gâl), *n.* A gall of leaves.—**Trumpet leaf-gall.** Same as *trumpet-gall.*

leaf-gneiss (lēf′nīs), *n.* Gneiss composed of quartz and feldspar, in which the quartz is disposed in little parallel leaves among the grains of feldspar.

leaf-gold, *n.* 2. Native gold in thin, leaf-like forms.

leaf-green (lēf′grēn), *n.* Chlorophyl.

leaf-hopper, *n.*—**Brown leaf-hopper,** *Agallia sanguinolenta.*—**Destructive leaf-hopper,** an American leaf-hopper of the family *Jassidæ*, *Cicadula exitiosa*, which sometimes seriously damages winter wheat in the southern United States.—**Grain leaf-hopper,** *Diedrocephalus flaviceps.*—**Rose leaf-hopper,** *Empoa rosæ*, frequently swarming on the leaves of the rose.—**Saddle-backed leaf-hopper,** *Thamnotettix clitellarius*, which occasionally damages the plum and other fruit-trees.



Destructive Leaf-hopper (*Cicadula exitiosa*).

leaflet, *n.* 4. (*c*) One of the thin plates or leaves contained in the lung-books of certain spiders. (*d*) One of the leaf-like branchiæ of certain aquatic insect-larvæ.

leaf-midge (lēf′mij), *n.* A midge that infests leaves.—**Clover leaf-midge,** a cecidomyiid fly, *Cecidomyia trifolii*, common to Europe and the United States, whose larvæ live in the folded leaves of white clover, *Trifolium repens.*

leaf-mildew (lēf′mil″dū), *n.* A mildew of leaves.—**Cherry leaf-mildew.** Same as *cherry-blight.*

leaf-miner, *n.*—**Apple leaf-miner,** a tineid moth, *Tischeria malifoliella*, whose larva mines the leaves of the apple, blackberry, raspberry, and other rosaceous plants in the eastern United States, forming its pupa within the folded leaf.—**Beet leaf-miner,** the larva of a fly, *Pegomyia vicina*, of the family *Anthomyiidæ.*—**Cabbage leaf-miner.** (*a*) An American drosophilid fly, *Scaptomyza adusta*, whose larva mines the leaves of cabbage and other cruciferous plants in the southern United States. (*b*) *S. graminum*, a congeneric European insect, also occurring in the United States. It is also called *imported cabbage leaf-miner.*—**Clover leaf-miner.** See ★*Agromyza*, with cut.—**Oak leaf-miner,** any one of several species of tineine moths whose larvæ mine the leaves of oak. More than fifty European species have this habit. *Lithocolletis hamadryadella* and *L. fitchella* are two of the commonest North American examples.—**Palmetto leaf-miner,** the larva of an American tineid moth, *Homaledra sabalella.* It feeds on the upper surface of the leaf of the saw-palmetto in Florida, destroying the skin as well as the fleshy part of the leaf.—**Parsnip leaf-miner,** the larva of a trypetid fly, *Acidia fratria.*—**Pear leaf-miner,** the larva of an American tineid moth, *Ornix quadripunctella.*—**Pine leaf-miner,** the larva of an American gelechiid moth, *Paralechia pinifoliella.* It is very small and eats the interior of the needles or leaves of pitch-pine and other stout-leaved species of *Pinus*, causing the needles to turn white.—**Tobacco leaf-miner,** the larva of a gelechiid moth, *Phthorimæa operculella*, common to the southern United States and Europe. It makes blotches in the leaves of tobacco and other solanaceous plants. It is known to Southern tobacco-planters as the *split-worm.*—**White-blotch oak leaf-miner,** the larva of an American tineid moth, *Lithocolletis hamadryadella.* It mines between the two surfaces of the leaves of several species of oak, making white blotches, which are often so abundant as perceptibly to whiten the foliage of a large tree.

Tobacco Leaf-miner (*Phthorimæa operculella*). *a*, moth; *b*, larva; *c*, pupa: all enlarged. (Howard, U. S. D. A.)

leaf-mite (lēf′mīt), *n.* 1. Any mite of the family *Tetranychidæ;* a red spider.—2. Any blister-mite, rust-mite, or gall-mite of the family *Eriophyidæ* (formerly *Phytoptidæ*).

leaf-mold, *n.* 2. Any one of various fungi which turn brown the leaves of carnations, cotton, grapes, melons, and other plants. Also called *white mold*, because of the white patches produced on the under side of the discolored leaves. Some of the hosts, with their specific leaf-molds, are as follows: carnation, *Heterosporium echinulatum;* cotton, *Ramularia areola;* grape, *Septosporium heterosporum;* horse-radish, *Macrosporium herculeum.*

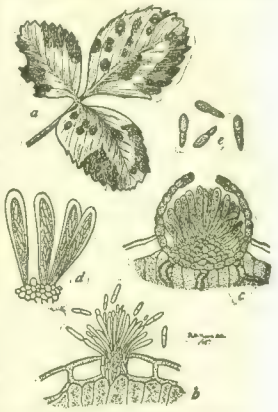
leaf-mosaic (lēf′mō-zā″ik), *n.* Same as *mosaic* ★*disease.*

leaf-notcher (lēf′noch″ėr), *n.* An American curculionid beetle, *Artipus floridanus*, greenish blue or copper brown in color and covered with white scales. It eats jagged notches in the leaves of the orange. Also called *orange leaf-notcher* and *orange leaf-beetle.*

leaf-red (lēf′red), *n.* A red pigment found in leaves; erythrophyl.

leaf-roller, *n.*—**Basswood leaf-roller,** an American pyralid moth, *Pantographa limata*, whose larvæ roll the leaves of basswood into tubes, within which they live. The moth is straw-colored, with olive markings and a purplish iridescence, and occurs in North, Central, and South America.—**Box-elder leaf-roller,** the larva of *Archips semiferana.*—**Fruit-tree leaf-roller,** a moth, *Archips argyrospila*, whose larvæ injure the foliage and fruit of the apple, pear, and strawberry.—**Grape-vine leaf-roller,** a pyralid moth, *Desmia funeralis*, whose larvæ live in folded grape-leaves.—**Neat strawberry leaf-roller,** the larva of *Exartema permundanum.*—**Oblique-banded leaf-roller,** a tortricid moth, *Archips rosaceana*, inhabiting the northern United States from Colorado eastward, where its larvæ roll the leaves of various rosaceous plants, including many important fruit-trees. The adult is brown in color, with its fore wings banded with contrasting shades of the same color.—**Orange leaf-roller,** the larva of *Platynota rostrana.*—**Peach leaf-roller,** the larva of *Archips persicana.*—**Raspberry leaf-roller.** Same as *neat strawberry* ★*leaf-roller.*—**Red-banded leaf-roller,** the larva of *Eulia triferana*, infesting clover.

leaf-rust, *n.*—**Orange leaf-rust,** a disease of wheat and similar grasses, due to *Uredo rubigo-vera.*—**Pine leaf-rust,** a fungous disease of pine-leaves, caused by *Coleosporium Pini.*



leaf-scar (lēf′skär), *n.* The scar left on a trunk after the fall of the leaf. In fossil trunks these are of high diagnostic importance, and the term is chiefly used by paleobotanists. See *scar*[1], 4, and compare *leaf-*★*cushion* and ★*leaf-base.*

> One [specimen] represents an upper portion of the stem with *leaf-scars* and remains of petioles; another a lower portion, with aërial roots.
>
> *Dawson*, Geol. Hist. of Plants, p. 94.

leaf-scorch (lēf′skôrch), *n.* A fungous disease of the leaves of the cherry, causing a scorched and withered appearance. It is most destructive in Europe and is attributed to *Gnomonia erythrostoma.* See ★*Gnomonia*, with cut.

leaf-sewer (lēf′sō″ėr), *n.* Same as *leaf-roller.*—**Chapin's apple leaf-sewer,** an American tortricid moth, *Ancylis nubeculana*, whose larva sews together the leaves of the apple.

leaf-spot, *n.* 2. The common name given to a large number of fungi which produce spots upon the leaves of plants. A few of the hosts, with their specific leaf-spots, are as follows: alfalfa, *Pseudopeziza Medicaginis;* apple, *Phyllosticta pirina;* blackberry, *Septoria Rubi;* egg-plant, *Phyllosticta hortorum;* lettuce, *Septoria consimilis;* maple, *Phyllosticta acericola.*—**Angular leaf-spot,** a bacterial disease of cotton leaves characterized by the formation of watery angular spots bounded by the veinlets of the leaf.—**Black leaf-spot,** the fungous disease of maples produced by *Rhytisma acerinum.*—**Cherry leaf-spot,** a fungous disease of the cherry due to *Cylindrosporium Padi* or *Cercospora cerasella.*—**Clover leaf-spot,** a disease of clover due to the fungus *Phyllachora Trifolii.*—**Leaf-spot of pea,** a fungous disease due to *Ascochyta Pisi*, occurring upon the leaves and vines of the pea. See ★*Ascochyta.*—**Leaf-spot of violet,** a fungous disease of the violet caused by either *Phyllosticta Violæ* or *Alternaria Violæ.* See *spot-*★*disease.*—**Quince leaf-spot,** a fungous disease of quince-leaves caused by *Entomosporium maculatum.*—**Rose leaf-spot,** a fungous disease of rose-leaves caused by *Mycosphærella rosigena.*—**Strawberry leaf-spot,** a fungous disease of strawberry-leaves caused by *Mycosphærella Fragariæ.*

Strawberry Leaf-spot (*Mycosphærella Fragariæ*).

a, diseased leaf (one fourth natural size); *b*, tuft of conidiophores and conidia which have broken through the upper epidermis (enlarged); *c*, section of perithecium, showing asci within (enlarged); *d*, four asci containing ascospores (much enlarged); *e*, ascospores (still further enlarged). (U. S. D. A.)

leaf-table (lēf′tā″bl), *n.* A table with a leaf or flap which can be turned up or down; also, an extension-table, that is, one with leaves which can be slipped in or out to vary its size.

leaf-tier, *n.*—**Green apple leaf-tier.** Same as *lesser apple* ★*leaf-folder.*—**Greenhouse leaf-tier,** the larva of a pyralid moth, *Phlyctænia rubigalis*, common to Europe, Asia, and the United States. It feeds on the leaves of various plants, especially in greenhouses, and ties the leaves together.

leaf-wasp (lēf′wosp), *n.* Any saw-fly.

leaf-worm (lēf′wėrm), *n.* Same as ★*leaf-caterpillar.*

leag, *n.* and *v.* A simplified spelling of *league.*

league-hut (lēg′hut), *n.* A rude shelter for ejected tenants provided by the Land League in Ireland. See *Land League*, under *league*[1].

leaguer[4] (lē′gėr), *n.* [Also *leager*, *legar;* prob. < D. *ligger*, G. *leger*, also *legger*, a large cask; cognate with E. *ligger*, *lier*[1].] A large cask; a tun; specifically (*naut.*), a cask for water holding 159 imperial gallons, carried on vessels before the introduction of water-tanks.

Leaia (lē-ā′yą̈), *n.* [NL., named after Isaac *Lea.*] A genus of fossil phyllopodous crustaceans of the family *Limnadiidæ*, characterized by a bivalved carapace, each valve of which is marked by two diagonal ridges radiating from the anterior end of the dorsal margin. Forms of this genus are very numerous in certain Carboniferous beds of Europe and North America.

leak, *n.*—**Electric leak,** escape of current from a conductor through its insulation.

leakage, *n.*—**Magnetic leakage,** in *elect.*, that part of the magnetic flux of a magnetic circuit which does not traverse the desired path, as in dynamo-electric machines; the magnetism which strays from field-pole to field-pole without passing through the armature; in alternating-current apparatus, the self-inductive flux.

leakance (lē′kąns), *n.* [*leak* + *-ance.*] In *elect.*, conductance due to leakage through a dielectric or insulator.

> It follows that any ordinary telegraph circuit may be made approximately distortionless by adding a certain amount of *leakance*, or leakage conductance.
>
> *Encyc. Brit.*, XXXIII. 215.

leak-stopper (lēk′stop″ėr), *n.* *Naut.*, a device for temporarily covering a hole in the bottom or side of a vessel below water while it is afloat, thus stopping the flow of water into the interior.

The ship must sink: unless the power of her pumps is sufficient to overcome the leak; or some means is devised for checking the inflow, by employing a sail, or a mat, or some other *leak-stopper*.
White, Manual of Naval Arch., p. 24.

leal[1] (lēl), *adv.* [*leal*[1], *a.*] 1. Loyally.—2. Thoroughly; exactly.—3. Lawfully.

leal[2] (lā-äl′), *n.* [Pg., orig. 'legal': see *leal*[1], *a.*] 1. A former silver coin of Portugal, worth 15 cents.—2. A colonial Portuguese copper coin, worth 16 cents, struck at Goa.

leam[3] (lēm), *v.* [Also *leem*, *leme*, *limb*; perhaps ult. identical with *limb*[1], *v.*; cf. Norw. *lema*, *lemma*, *lima*, Icel. *lima*, dismember.] **I.** *trans.* To separate or remove the shell or husk from (nuts); shell; husk.

II. *intrans.* To become separated from the shell, as nuts; to separate easily from the shell or husk. [Prov. Eng.]

leam[3] (lēm), *n.* [Also *limb*; appar. a variant of *limb*[1], with a form and sense depending on the verb *leam*[3].] The shell or husk of a nut. [Prov. Eng.]

leam[4] (lēm), *n.* [Origin obscure.] A drain; a cut; in the fen district, a watercourse. [Eng.]

leaning-stock (lē′ning-stok), *n.* In *organ-building*, a horizontal bar or brace against which the pipes of a stop lean so as to be kept firmly in place: sometimes it is indented to fit the pipes.

leap-day (lēp′dā), *n.* An intercalary day, especially the 29th of February in leap-year.

leaper, *n.* 4. *Naut.*, a sea that breaks on board a vessel; a wave that leaps over the rail.

leaping (lē′ping), *p. a.* [ME. *lepynge*.] That leaps; jumping.—**Leaping cucumber.** Same as *squirting cucumber* (which see, under *cucumber*).

leapingly (lē′ping-li), *adv.* By leaps and bounds.

leaping-pole (lē′ping-pōl), *n.* A pole used to aid a jumper to increase the length or height of his jump.

leaping-spider (lē′ping-spī″dėr), *n.* Any saltigrade spider; a jumping-spider.

leap-work (lēp′wėrk), *n.* Any mechanical device for producing intermittent motion.

Learic (lēr′ik), *n.* [*Lear* (see def.) + *-ic*; in punning allusion to *lyric*.] A name given to a five-line nonsense-verse of the kind used by Edward Lear in his "Book of Nonsense": now called a ★*limerick* (which see).

The Academy (29 July, 1899) and Truth put the word in circulation by proposing competitions on the model of my 'Irish Literary *Learics*,' which they named expressly.
M. Russell, in N. and Q., 9th ser., XII. 8.

lea-rig (lē′rig), *n.* A grassy ridge left unplowed at the end of a plowed field. *N. E. D.* [Eng. dial.]

lease[2], *n.* 4. In *Australian mining*, a mining leasehold; a piece of ground leased for the purpose of mining.—**Reversionary lease,** one which is to become effective at some time in the future.

lease-band (lēs′band), *n.* One of the bands or rods which alternately separate the warp-threads in a loom; a lease-rod.

lease-pin (lēs′pin), *n.* A warping-pin; a pin on a warping-beam for holding the yarn.

leash, *n.* 4. In *physiol.*, an aggregation of similar cord-like structures, such as fibers, nerves, blood-vessels, etc.

A man for many years had chronic ulcers, small *leashes* of vessels running across the cornea to the ulcers.
Lancet, May 30, 1903, p. 1516.

leashing (lē′shing), *n.* 1. The forming of a leash (or lease) in the warp-threads in a loom between the warp-beam and the heddles.—2. Same as ★*shaft-lashing*.

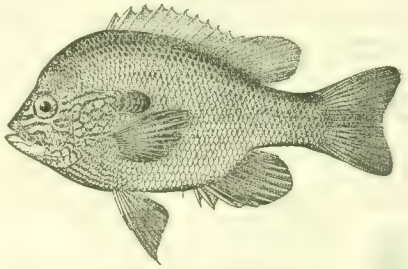
leasing[4] (lē′sing), *n.* An erroneous form of ★*leashing* (in weaving).

leather, *n.* 5. In *cricket*, the ball. [Colloq.]—6. *pl.* (*a*) Wearing-apparel made of leather, as breeches, leggings, etc. (*b*) One who wears 'leathers.'

"All the coaches are full with the men going down," Spavin said. . . . "Get into my yellow; I'll drop you at Mudford. . . . Come along; jump in, old boy—go it, *leathers!*"
Thackeray, Pendennis, xx.

Acid leather, leather which retains an appreciable quantity of sulphuric or other mineral acid used to plump or raise the hide in preparation for tanning. Such leather is objectionable for military purposes, as it corrodes soldiers' socks and causes their accoutrements to rust.—**Bastard leather,** a skin used in binding books. It is as strong as goatskin in resisting tearing, but the surface is tender and shows many imperfections.—**Leather-finishing machine,** a machine for glazing, rolling, or pebbling leather.—**Leather-measuring machine,** a machine for ascertaining the number of square feet in a hide or skin.—**Oil-tanned leather,** leather made, chiefly from the skin of the sheep, calf, or deer, by partly removing or roughening the grain side of the skin, liming, thoroughly saturating with fish- or seal-oil forced in by beating, exposing to heated air until much of the oil has become oxidized, and removing the surplus unaltered oil by expression or by washing with an alkaline solution. The product is very soft and pliant, and is extensively used for lining cases for silverware, etc., for gloves, for lining articles of clothing, and in various other ways.—**Satin leather,** in *shoe-manuf.*, black leather for uppers, made from hide finished on the flesh side. *Modern Amer. Tanning*, p. 112.—**Spanish leather.** (*b*) Decorated leather made in Spain, where the art of stamping and working leather was brought to a high state of perfection.

leather-awl (leᴛʜ′ėr-âl), *n.* A tool for piercing holes in leather.



leather-bark (leᴛʜ′ėr-bärk), *n.* Same as *leather-wood*, 1. [Rare.]

leather-brown, *n.* 2. Same as *Bismarck* or *phenylene brown*.—3. A basic coal-tar color of the disazo type, prepared by combining two molecules of diazotized para-acetanilide with one molecule of meta-phenylene diamine: particularly suited for the coloring of leather and jute.—4. A name occasionally applied to ★phosphene.

leather-buffer (leᴛʜ′ėr-buf″ėr), *n.* A machine for grinding or fleshing hides or skins.

leather-bush (leᴛʜ′ėr-bůsh), *n.* Same as *leatherwood*, 1.

leather-ear (leᴛʜ′ėr-ēr), *n.* One of the sunfishes, *Lepomis megalotis*, having a long dermal

Leather-ear (*Lepomis megalotis*).
(From Bulletin 47, U. S. Nat. Museum.)

opercular flap, found in the fresh waters of the eastern United States.

leather-fish (leᴛʜ′ėr-fish), *n.* The file-fish, *Monacanthus hispidus*.

leather-hunting (leᴛʜ′ėr-hun″ting), *n.* In *cricket*, fielding, especially fielding while a large number of runs are made by the opposing side. [Slang.]

leather-jack, *n.* 2. Any species of the genus *Oligoplites*, fishes of the family *Carangidæ*.

leather-jacket, *n.* 2. In *bot.*: (*b*) In Australia, any one of several other trees, so called from the toughness of their bark; especially the cooper's-wood, *Alphitonia excelsa*, the coach-wood, *Ceratopetalum apetalum*, *Cryptocarya Meissneri* of the laurel family, and *Weinmannia rubifolia* of the family *Cunoniaceæ*.—3. The larva of any one of several species of crane-flies of the family *Tipulidæ*. It lives underground in pasture-lands and has an especially tough skin.

This will kill slugs and *leather-jackets*.
Massee, Plant Diseases, p. 45.

4. In Australia, a thin pancake made of flour and water.

leatherneck (leᴛʜ′ėr-nek), *n.* A marine. [Eng. naval slang.]

When we played ship's theatricals of Vigo, Glass 'ere played Dick Deadeye to the moral, though the lower deck wasn't pleased to see a *leatherneck* interpretin' a strictly maritime part.
R. Kipling, The Bonds of Discipline, in Traffics and Discoveries, p. 47.

leather-paste (leᴛʜ′ėr-pāst), *n.* Paste used in attaching leather to the surface of other materials, as in bookbinding.

leather-powder (leᴛʜ′ėr-pou″dėr), *n.* Scrap leather ground to powder, for use as a manure. The nitrogen which alone gives it value as such is not readily given up in a condition available for plants.

leather-presser (leᴛʜ′ėr-pres″ėr), *n.* In *leather-manuf.*, a press used to remove the grease from skins which are to be used for fancy stock.

leatherwood, *n.* 2. (*b*) The Tasmanian pink-wood, *Eucryphia Billardieri*. See ★*pinkwood*, 2.—3. In the southeastern United States, *Cyrilla racemiflora*, a bush or small, wide-

spreading tree of bottom-lands, with a hard wood and, at the base of the trunk, a spongy pliable bark, recommended for a styptic.

Leatherwood (*Cyrilla racemiflora*).
(From Sargent's "Manual of the Trees of North America.")

More often called *ironwood* and sometimes *he-huckleberry*, *burnwood*, or *burnwood-bark*, and *red* or *white titi*. Sometimes called *Southern leatherwood*. See *Cyrillaceæ*.

leav, *v.* and *n.* A simplified spelling of *leave*.

leave[1], *v. t.*—**To leave over,** to leave for future use, consideration, or decision.

leawill (lē′a-wil), *n.* [Also *leeawell*; < aboriginal Australian *leäwil*, *le-ow-el*, forms of the aboriginal word otherwise represented by ★*leeangle*, q. v.] Same as ★*leeangle*.

Leber's plexus. See ★*plexus*.

lebes (lē′bēz), *n.* [Gr. λέβης.] In *Gr. antiq.*, a metal caldron, usually of bronze, but sometimes of gold and silver, often offered as a prize.

Lebes.

lebis (leb′is), *n.* [Ar. *libis*.] A cyprinoid fish, *Labeo niloticus*, inhabiting the Nile.

Lebistes (le-bis′tēz), *n.* [NL., said to be based on Gr. λεβίας, L. *lebias*, a kind of fish.] A genus of fishes of the family *Pœciliidæ*, found off the island of Barbados.

lebrancho (le-brän′chō), *n.* [Cuban Sp.] A cuban name of *Mugil brasiliensis*, one of the mullets, found in the West Indies and south to Patagonia.

Lecanactidaceæ (lē-ka-nak-ti-dā′sē-ē), *n. pl.* [NL., < *Lecanactis* (*Lecanactid-*) + *-aceæ*.] A family of gymnocarpous lichens named from the genus *Lecanactis*.

Lecanactis (lē-ka-nak′tis), *n.* [NL. (Eschweiler, 1824), < Gr. λεκάνη, a dish, disk, + ἀκτίς, a ray. The name alludes to the form and appearance of the apothecia.] A genus of simple crustaceous gymnocarpous lichens having disciform scattered or gregarious apothecia and hyaline, spindle-shaped, 2- to 16-celled spores. About 50 species are known. They occur on rocks and tree-trunks.

Lecanitida (lek-a-nit′i-dä), *n. pl.* [NL., < Gr. λεκάνη, a dish, + *-ites* + *-ida*.] A subdivision of the ammonoid cephalopods of the suborder *Discocampyli*. It comprises genera with compressed discoidal and involute shells. The primitive representatives have entire sutures with broad, rounded saddles and narrow lobes, while the more complicated have prolonged lateral suture-lines and an indefinite number of inflections of the saddles.

Lecanium, *n.* 2. [*l. c.*] A scale-insect of the genus *Lecanium* or of an allied genus.—**Peach lecanium,** *Eulecanium persicæ*, which occurs in Europe, Australia, Nova Scotia, and the United States.—**Plum lecanium,** *Eulecanium prunastri*, a cosmopolitan species which occurs in Europe, Japan, and the United States.—**Tulip-tree lecanium,** *Eulecanium tulipiferæ*, an American species which occurs on the tulip-tree, magnolia, and rarely on clover. It forms large masses on the twigs of infested trees and secretes a large amount of honeydew.

Lecanocrinus (lek-a-nok′ri-nus), *n.* [NL., < Gr. λεκάνη, a dish, + κρίνον, a lily (see *crinoid*).] A crinoid genus belonging to the family *Ichthyocrinidæ*, which, like *Ichthyocrinus*, appears as a solid body when the arms are closed, except that the posterior rays of the six brachials are not in contact, but are separated by anal plates. The genus occurs in the Silurian of North America.

Lecanoraceæ (lek″a-nō-rā′sē-ē), *n. pl.* [NL., < *Lecanora* + *-aceæ*.] The proper form of the name of the lichen family, based on the genus *Lecanora*. See *Lecanorei*.

Le Chatelier's law of radiation. See ★*law*[1].

leche[2], *n.* Same as ★*lichi*[2].

Lecher system. See ★*system*.

lechosa (lā-chō′sä), *n.* [Sp. *lechosa*, milky, < *leche*, milk.] In Porto Rico, the papaya, or

papaw, *Carica Papaya*, a tree with milky juice and melon-shaped fruit. See *papaw*, 1, and *Carica*.

lechriodont (lek′ri-ō-dont), *a.* [Gr. *λέχριος*, slanting, + *ὀδούς* (*ὀδοντ-*), tooth.] Having the vomerine teeth in transverse or posteriorly converging rows: contrasted with ★*mecodont*.

Lechriodonta (lek″ri-ō-don′tă), *n. pl.* [NL.: see ★*lechriodont*.] A division of tailed amphibians in which the palatal teeth are restricted to the posterior portion of the vomers and form transverse or posteriorly converging rows.

lechuguilla (lā-chō-gēl′yä), *n.* [Sp. *lechuguilla*, dim. of *lechuga*, lettuce, < L. *lactuca*, lettuce: see *lettuce*.] The name of several species of *Agave*, especially of *A. Lecheguilla*, which yield a valuable fiber and a saponaceous substance of various forms called *amole*. They are characterized by comparatively narrow, rigid leaves from 10 to 30 inches long which have along their margin a continuous toothed horny border. The flower-stalk, rising to a height of from 5 to 8 feet, bears a comparatively slender spike of flowers. Generally speaking, these plants grow on the high table-land of northern central Mexico, western Texas, and Arizona. Their fiber is often called *istle*, or *Tampico fiber*.—**Jaumave lechuguilla**, *Agave lophantha*, the source of Jaumave istle.

lecimicroönin (les-i-mī-krō′ō-nin), *n.* [Gr. *λέκι*(*θος*), the yolk of an egg, + *μικρός*, small, + *ᾠόν*, egg, + *-in*².] A substance obtained by Béchamp from the yolk of hens' eggs. It is insoluble in water, but may be dissolved by a weak solution of sodium carbonate, and precipitated from this solution by acetic acid.

lecimicrozymase (les-i-mī-krō-zī′mās), *n.* [Gr. *λέκι*(*θος*), yolk of an egg, + *μικρός*, small, + *ζύμη*, ferment, + *-ase*.] A substance obtained by Béchamp from the yolk of hens' eggs. It is precipitated by alcohol from the acetic-acid filtrate from lecimicroönin, and acts as an enzym, liquefying starch paste.

lecithal (les′i-thal), *a.* [*lecith-in* + *-al*¹.] Of or pertaining to lecithin.

lecithalbumin (les″i-thal-bū′min), *n.* [*lecith-in* + *albumin*.] A compound of lecithin with an albumin: widely distributed in the animal world, but individually little known.

lecithoblast (les′i-thō-blast), *n.* [Gr. *λέκιθος*, yolk, + *βλαστός*, germ.] A name given to the yolk-cells when they constitute a discrete layer in the embryo: same as *endoderm* in many animals.

lecithoönin (les-i-thō′ō-nin), *n.* [Gr. *λέκιθος*, yolk, + *ᾠόν*, egg, + *-in*².] A substance obtained by Béchamp from the yolk of hens' eggs. It is soluble in water, but is coagulated by alcohol.

lecithoproteid (les″i-thō-prō′tē-id), *n.* [Gr. *λέκιθος*, yolk, + E. *proteid*.] Same as ★*lecithalbumin*.

lecithoprotein (les-i-thō-prō′tē-in), *n.* [Gr. *λέκιθος*, yolk, + E. *protein*.] A compound albumin which results from the union of lecithin with a protein radical.

lecithozymase (les″i-thō-zī′mās), *n.* [Gr. *λέκιθος*, yolk, + *ζύμη*, ferment, + *-ase*.] A substance obtained by Béchamp from the yolk of hens' eggs. It is precipitated by alcohol from an aqueous solution, but is not rendered permanently insoluble in water, and acts as an enzym, liquefying starch paste.

leck-stone (lek′stōn), *n.* [*leck*, dial. form of *leak*, + *stone*.] A granular variety of trap-rock found in Scotland and used for the bottom of ovens.

Leclaire limestone. See ★*limestone*.

lec-lex (lek′leks), *n.* [Prob. southwestern American Indian.] An American tenebrionid beetle, *Asida sordida*, found on the alkaline plains of the southwestern United States. *Smithsonian Rep.* (*Nat. Mus.*), 1892, p. 568.

lectica (lek-tī′kă), *n.*; pl. *lecticæ* (-kē). [L. *lectica*, < *lectus*, a couch, bed.] In *Rom. antiq.*, a litter, closed or open, borne by slaves.

lectotype (lek′tō-tīp), *n.* [Gr. *λεκτός*, chosen, + *τύπος*, type.] In the nomenclature of types in natural history, a syntype selected subsequently to the original description, to take the place which in other cases is occupied by a holotype.

lecythidaceous (les″i-thi-dā′shius), *a.* Belonging to the plant-family *Lecythidaceæ*.

Ledbury shales. See ★*shale*².

leden, *a.* A simplified spelling of *leaden*.

ledger¹ (lej′ėr), *v. i.* In *angling*, to fish with ledger-bait.

Ledger bark. See ★*bark*².

ledgering (lej′ėr-ing), *n.* [*ledger*(*-bait*) + *-ing*².] In *angling*, fishing with ledger-bait.

ledger-line (lej′ėr-līn), *n.* In *angling*, an arrangement of fishing-tackle in which the lead rests on the bottom.

ledge-rock (lej′rok), *n.* Rock in place as distinguished from loose fragments.

ledger-stone (lej′ėr-stōn), *n.* A slab covering an altar-tomb.

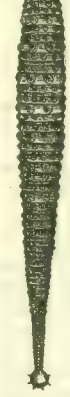
ledger-wall (lej′ėr-wâl), *n.* In *mining*, the wall underneath a vein.

ledgit (lej′it), *n.* [Appar. < *ledge*¹ + dim. *-it* for *-et*.] **1.** The top of the inner half of a window. *Banffshire Glossary.* [Scotch.]—**2.** A slip of paper or parchment projecting from the edge of a leaf in a book, upon which notes or memoranda may be written. [Scotch.]

leditannic (lē-di-tan′ik), *a.* [*Ledum* (see def.) + *tannic*.] Noting an acid, a tannin, $C_{15}H_{20}O_8$(?), obtained from wild rosemary, *Ledum palustre*. It is possibly identical with esculotannic acid.

ledixanthin (lē-dik-san′thin), *n.* [*ledi*(*tannic*) + *xanthin*.] A compound, $C_{30}H_{34}O_{13}$(?), prepared by the action of dilute acids on leditannic acid or on esculotannic acid.

ledouxite (le-dō′īt), *n.* [Dr. A. R. *Ledoux*, of New York City, + *-ite*².] A copper arsenide, Cu_4As, containing cobalt and nickel in small amount: found in the Lake Superior copper region.



Ledum camphor. See ★*camphor*.

lee¹. **I.** *n.* **3.** In *geol.*, the side of a ledge of rocks which is turned away from the approach of an eroding agent, such as a glacier. The other side is the *stoss* or *shock side*.

II. *a.*—**Lee anchor,** the anchor on the lee bow of a vessel when it is under way: when the ship is at anchor, the lee anchor is the one that is not dropped.—**On the lee beam,** bearing to leeward (of a vessel) at or nearly at right angles to the line of the keel.

leeangle (lē′ang-gl), *n.* [Also *leangle*, *liangle*, *langeel*, *leonile*; < Australian *langeel*, *leanguel*; also in other forms, represented by ★*leawill*, q. v.] A club of the native Australians, bent at the striking end: similar to a pickax with a single pick. *E. E. Morris*, Austral English.

leech², *n.*—**Skate leech,** a large, spinose, greenish leech, *Pontobdella muricata*, parasitic upon skates and sharks.

Skate Leech (*Pontobdella muricata*). One half natural size (after Bourne). (From "Cambridge Natural History.")

leechery (lē′chėr-i), *n.* [*leech*¹ + *-ery*.] The healing art.

leech-extract (lēch′eks″trakt), *n.* An extract prepared from leeches: it has hemolytic properties.

leech-glass (lēch′glâs), *n.* A glass tube in which a leech is placed, the open end being applied to the part where it is desired to make the leech take hold.

Leech-line block (*naut.*), a block, secured to the yard, through which the leech-line is reeved.—**Mizzen leech-lines,** the leech-lines which lead from the leeches of the square sails to their respective yards on the mizzen, and thence to the decks, and are used for gathering the sides (leeches) of the sails toward the yards and masts in furling.

leechwort (lēch′wėrt), *n.* The ribwort or ribgrass, *Plantago lanceolata*.

Leeds ware. See ★*ware*².

leefang, *n.* (*b*) A deck-horse. See *horse*¹, 8 (*d*).

leek, *n.* **2.** *Polytelis barrabandi*, a small parrot, green with a scarlet breast. Also called *green-leek*. [Local, Australia.]—**Native leek,** in Australia, *Bulbine bulbosa*, a plant of the lily family, bearing bright-yellow flowers. It is very poisonous to horses and cattle. Called also *native onion* and, in Tasmania, *yellow lily*.

leelite (lē′līt), *n.* [Named (1818) after J. F. *Lee*.] A variety of orthoclase feldspar, from Sweden, having a flesh-red color and waxy luster.

leering (lēr′ing), *n.* [*leer*⁷ + *-ing*¹.] In *glass-manuf.*, subjection to the action of an annealing-oven or leer.

leeringly (lēr′ing-li), *adv.* In a sly, immodest, leering way; with a leer.

"How do you do, Mr. Gagin?" said the old hag *leeringly*. "Eat a bit o' currie-bhaut,"—and she thrust the dish towards me. *Thackeray*, Major Gahagan, i.

leery² (lēr′i), *a.* Empty, in any sense: as, a *leery* cart; to be *leery* and tired.

'I 've been strolling in the Walks and church-yard, father, till I feel quite *leery*.' . . .

'I won't have you talk like that!' he thundered. '"*Leery*," indeed. One would think you worked upon a farm!' *T. Hardy*, Mayor of Casterbridge, xx.

Leeway indicator, a metal segment of a circle marked with the points of the compass and placed on the taffrail of sailing vessels. Its zero-line agrees with the keel line of the ship, and the bearing of the axis of the wake from this zero point shows the leeway, which is reckoned in points and quarter-points.

leg, *n.* **2.** (*b*) In *telephony*, a wire used for connecting a subscriber's line directly with the main switchboard.—**8.** Same as *water-leg*.—**9.** In *mach.*: (*a*) The movable case which contains the bucket-belt or -conveyer of a grain-elevator. (*b*) The tube in which the grain is lifted into an elevator.—**10.** In *mining*, a peculiar form of quartz-reef, forming a nearly vertical prolongation of the saddle. *E. E. Morris*, Austral English.—**11.** A tongue-like portion of some geologic formation which projects from the main mass or intrudes others. The term is a local one used in England for such relationship in different drift deposits. *J. Geikie*, The Great Ice Age, p. 362.—**12.** A play in which 'leg-business' is a prominent feature. [Theat. slang.]—**Deep square leg,** in *cricket*: (*a*) A fielder at right angles with the batsman's wicket and at a distance from it on the legside. (*b*) His position in the field. *Hutchinson*, Cricket, p. 65.—**Good leg** (*naut.*), a satisfactory course.—**Lawn-tennis leg,** rupture of some of the fibers of the muscles of the calf by overstrain in playing lawn-tennis.—**Leg along** (*naut.*), the leading out of a rope that is to be hauled on. [Eng.]—**Legs and wings** (*naut.*), said of a ship when its masts are of extraordinary height and its yards very wide, that is, an oversparred and oversailed vessel.—**Leg ball.** See ★*ball*¹.—**Leg-before-wicket,** in *cricket*. A batsman is out *leg-before-wicket* if with any part of his person he stops the ball which, in the opinion of the umpire at the bowler's wicket, has been pitched in a straight line from it to the striker's wicket and would have hit it.

The law of *leg-before-wicket* has also been much discussed, owing to the general objection to the growing habit of deliberately putting the body or legs in front of a breaking ball instead of playing it with the bat.

Encyc. Brit., XXVII. 277.

Leg-of-mutton sail. Same as *shoulder-of-mutton sail* (which see, under *sail*¹).—**Legs of the martinets** (*naut.*), an old name for the two ropes fastened to the leech-rope of a course and spliced together.—**Off the left leg,** in *golf*, that stance assumed by a player by which the ball is played on a line with the left foot.—**Off the right leg,** in *golf*, that stance assumed by a player by which the ball is played relatively near to the right foot, with the right leg advanced.—**Scissors legs.** Same as ★*scissor-leg*.—**Shear legs,** the spars which form a pair of shears.—**To keep one's legs.** Same as *to keep one's feet* (which see, under *keep*).—**To make a leg.** (*b*) *Naut.*, to sail on a tack.—**To pull a person's leg,** to fool or humbug him; to 'do' or obtain money from a person by imposing on his credulity. [Slang.]

leg. An abbreviation (*b*) of *legislative* or *legislature*; (*c*) of *legal*; (*d*) of *legate*; (*e*) of the Latin *legit*, he reads; (*f*) of *legunt*, they read.

legacy, *n.*—**Absolute legacy,** a legacy, without condition, which vests immediately upon the death of the testator.—**Alternate legacy,** a legacy in which one of two or more things is bequeathed without designating which.—**Conditional legacy,** a legacy which will vest only upon the fulfilment of some condition precedent or subsequent.—**Indefinite legacy,** a legacy in which things not enumerated or ascertained as to amounts, quantities, etc., are bequeathed, as a bequest of unenumerated chattels, or all shares in a certain company, or a fund that may be on deposit in a certain bank, etc. A residuary legacy is usually of this class.—**Lapsed legacy,** a legacy which, by the death of the legatee before the testator dies or before some certain event, can never vest.—**Legacy by damnation,** in *civil law*, a legacy in which the testator charged his heir to give a certain thing to a certain legatee. It afforded the legatee a claim against the heir, but prior to delivery no right of property in the thing bequeathed.—**Modal legacy,** a legacy in which the will directs a particular method of applying the legacy for the benefit of the legatee, as a certain sum to be used for educating a certain person, etc.—**Substitutive legacy,** a gift by will or codicil intended to take the place of one already made in either.—**Universal legacy,** in *civil law*, a single bequest by which a testator disposes of his entire estate.

legacy (leg′ą-si), *v. t.*; pret. and pp. *legacied*, ppr. *legacying*. [*legacy*, *n.*] **1.** To bequeath; assign as a legacy.—**2.** To leave a legacy to.

legalistic (lē-gal-is′tik), *a.* [*legalist* + *-ic*.] Pertaining to legalism or to legalists.

It [book of Jubilees] is really an Haggadic commentary on Genesis, and is practically the sole monument of *legalistic* Pharisaism belonging to the latter half of the 2nd century B.C., and is a characteristic example of that form of religion against which the Pauline dialectic was directed. It has a secret apologetic aim. It defends and justifies the assumption of the high priesthood by the Maccabees. *Encyc. Brit.*, XXV. 487.

legality, *n.* **3.** A gambling game. [Slang.]

Le Gascon style of bookbinding. See ★*style*¹.

legatary, *n.* **II.** *a.* Pertaining to or of the nature of a legacy.

legate (lē-gāt′), *v. t.*; pret. and pp. *legated*, ppr. *legating*. [L. *legare*, pp. *legatus*, send, appoint, bequeath: see *legate*, *n.*] To bequeath; give by will; give and bequeath.

legatee, *n.*—**Residuary legatee.** See *residuary devisee*, under *residuary*.

legationary (lē-gā′shon-ā-ri), *a.* [*legation* + *-ary*¹.] Pertaining to a legation.

legative (leg′ą-tiv), *a.* and *n.* [ML. *legativus*, < L. *legare*, send, depute, appoint: see *legate*, *n.* and *v.*] **I.** *a.* **1.** Possessing power to confer the authority of a legate upon: as, a *legative*

bull; a *legative* commission.—**2.** Same as *legatine*, 1 and 2.

II†. *n.* A legate. [Once, in a figurative use.] *N. E. D.*

Legato touch, a style of playing, especially on the pianoforte or organ, that produces a smooth, legato effect: opposed to *staccato touch*.

legatorial (leg-ạ-tō′ri-ạl), *a.* [*legator* + *-ial*.] Of or pertaining to one who leaves a legacy; pertaining to a legacy.

legatory†, *n.* An obsolete form of *legatary*.

leg-break (leg′brāk), *n.* In *cricket*, a ball which breaks from the leg, that is, a ball which, after it has pitched, alters its course, or twists (as viewed by the bowler), from right to left. *R. H. Lyttelton*, Cricket and Golf, p. 100.

legendarian (lej-en-, or lē-jen-dā′ri-ạn), *n.* [*legendary* + *-an*.] **1.** The writer of a legendary; a chronicler of the saints.—**2.** One who regards early history, especially gospel history, as legendary.

legendry (lej′en-, or lē′jen-dri), *n.* [*legend* + *-ry*.] The realm of legend; legends collectively; mystic inscriptions or symbols.

leg-gland (leg′gland), *n.* A gland in the basal joint of the leg of *Branchippus*, and in the terminal joint of the leg in many insects.

legicide (lej′i-sīd), *n.* [L. *lex* (*leg-*), law, + *-cida*, < *cædere*, kill.] An abolisher or destroyer of law or the laws.

legific (lē-jif′ik), *a.* [L. *lex* (*leg-*), law, + *-ficus*, < *facere*, make.] Law-making.

legiformal† (lej′i-fôr-mal), *a.* [L. *lex* (*leg-*), law, + *forma*, form, + *-al*[1].] Of a legal form or character. *N. E. D.*

leg-ill (leg′il), *n.* An inflammation of the interdigital space of the feet of sheep, followed by swelling, erosions, and severe lameness.

legionry (lē′jọn-ri), *n.* [*legion* + *-ry*.] Gathered legions; legions collectively.

legislation, *n.*—**Attractive legislation**, legislation which puts a premium on socially useful conduct: opposed to *negative* or *repressive legislation*, which enacts penalties for socially harmful conduct; especially, legislation which fosters education and enlightenment. *L. F. Ward*, Dynamic Sociol., II. 235.

legislational (lej-is-lā′shọn-ạl), *a.* Pertaining to, resulting from, or of the nature of legislation.

legitimate, *a.* **II.** *n.* **1.** By ellipsis, legitimate drama (which see, under *legitimate*).—**2**†. An emigrant to Australia who had 'legal reasons' for emigrating. [Slang.]—**3.** A legitimate child.—**4**†. Something to which one has a legal right. *Milton*, Eikon., 31. *N. E. D.*

legitimature (lē-jit′i-mā-tūr), *n.* [*legitimate*, *v.*, + *-ure*.] An office or dignity to which one has a legitimate title. *Carlyle*, Fred. the Great, VI. 144. *N. E. D.*

legitime, *n.* **II.** *a.* **1.** Legitimate.—**2.** Genuine, as opposed to *adulterated* or *spurious*.—**3.** Orderly; conforming to legal usage.

legitimistic (lē-jit-i-mis′tik), *a.* [*legitimist* + + *-ic*.] Maintaining or inclined to the principles of the Legitimists.

legitimity (lej-i-tim′i-ti), *n.* [F. *légitimité*; as *legitime* + *-ity*.] Legitimacy. *Landor*, Imag. Con., III. 457. *N. E. D.*

legoa (lā′gō-ä), *n.* The Portuguese form of *league*[2].

legplek (lāg′plek), *n.* [Cape D., < *leggen*, lie, + *plek*, a place.] A pen or inclosure for cattle. [South African Dutch.]

leg-rope (leg′rōp), *v. t.* In Australia, to rope or lasso by the leg with a noosed rope.

leg-ropes (leg′rōps), *n.* Same as ★*Bauera*, 2.

leg-stump (leg′stump), *n.* See *stump*, 5.

leguan† (le-gwän′), *n.* [D. *leguaan*, < F. *viguane* or *le guane*: *le*, the, *iguana*, *guane*, iguana: see *iguana* and *guana*[1].] The iguana.

legumelin (lē-gū′me-lin), *n.* [*legume* + *-el* + *-in*[2].] A proteid which is said to be present in the pea and other leguminous seeds: it is probably a mixture consisting chiefly of nucleo-albumins.

leg-vise (leg′vīs), *n.* In *mech.*, a bench-vise which is partly supported by a leg reaching to the floor.

leg-worm (leg′wėrm), *n.* A guinea-worm, the female of which lives coiled up in the subcutaneous tissues, usually of the legs, and gives rise to painful tumors.

lehal (le-häl′), *n.* [N. Amer. Indian.] A guessing game of the Indians of Oregon, Washington, and British Columbia, played with two small bones one of which is marked. The bones are hidden in the hands of the players, and the object of the game is to guess in which hand the marked bone is.

lehm (lām), *n* [G.] Loam: sometimes used technically for untransported fragmental products of the superficial decay of rocks which resemble loess.

The true loess is distinguished from another, *lehm*, which Falsan recognizes as the product of atmospheric action, formed, in fact, in place from the disintegration and decomposition of the subjacent rocks.

Smithsonian Rep., 1890, p. 227.

lehua (lā-hō′ä), *n.* [Hawaiian.] A native name for a myrtaceous tree, *Metrosideros polymorpha*, found in the Hawaiian, Marquesas, Society, Samoan, Fiji, and Kermadec islands. It bears beautiful red flowers, which are much prized by the natives. The wood is very hard, furnishes the best fuel, and is also used for building purposes. Many of the old idols were made of it. Also called *ohia-lehua*. See ★*ohia*.

lei (lā′ē), *n.* [Hawaiian.] Any ornamental dress for the head or neck, especially a necklace or a wreath of leaves and flowers.

leibzoll (līp′tsōl), *n.* [G., < *leib*, body (see *life*), + *zoll*, tax (see *toll*[1]).] A personal tax formerly imposed in Germany upon a Jew whenever he crossed the boundary of a city or petty state. It was removed in Prussia in 1790 and in other German states in 1803.

He [Joseph II.] abolished the *Leibzoll*, night-notices, passport regulations, and gave the Jews permission to learn trades, art, science, and, under certain restrictions, agriculture. *Encyc. Brit.*, XIII. 685.

Leicester (les′tėr), *n.* The name of a shire in England: applied distinctively (*a*) to a breed of sheep having a long, tapering head, deep chest, round body, thin skin, and fine white wool; and (*b*) to a breed of cattle, practically the same as the longhorn. This breed, as also the Leicester sheep, was brought into prominence by Robert Bakewell, a noted breeder of the eighteenth century.

Leichhardt's bean. Same as *Queensland* ★*bean*.—**Leichhardt's tree.** See ★*tree*.

leidyite (lī′di-īt), *n.* [Named after Dr. Joseph *Leidy* (1823–91) of Philadelphia.] A hydrous silicate of aluminium, ferrous iron, magnesium, and calcium, occurring in green incrustations consisting of fine silky scales: found in Pennsylvania.

Leimacopsidæ (lī-mạ-kop′si-dē), *n. pl.* [NL., < *Leimacopsis* + *-idæ*.] A family of terrestrial triclad turbellarians, having the dorsal face very convex and the mouth in the anterior part of the body. It contains the genus *Leimacopsis*.

Leimacopsis (lī-mạ-kop′sis), *n.* [NL. (Diesing, 1862), < Gr. *λεῖμαξ*, a snail, + *ὄψις*, appearance.] The typical genus of the family *Leimacopsidæ*.

leimtype (līm′tīp), *n.* [G. **leimtyp*, *leimtypie*, < *leim*, glue, gelatin, + *typ*, type.] In *photog.*, a process in which gelatin prints in high relief are used for direct printing in the ordinary letter printing-press. *Woodbury*, Encyc. Dict. of Photog., p. 259.

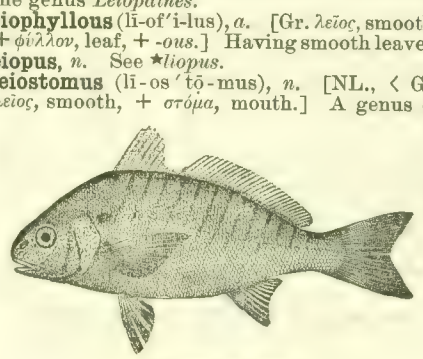
leiocome (lī′ọ-kōm), *n.* [Gr. *λεῖος*, smooth, + *κόμμι*, gum.] Dextrine or starch-gum: made by heating starch cautiously until it becomes entirely soluble in water, furnishing a thick mucilaginous solution.

Leiocottus (lī-ọ-kot′us), *n.* [NL., < Gr. *λεῖος*, smooth, + NL. *Cottus*.] A genus of Pacific shore-fishes belonging to the family *Cottidæ*.

leiodermia, *n.* See ★*liodermia*.

Leio gum. See ★*gum*[1].

leiomyoma, *n.* See *liomyoma*.



Leiopathes (lī-op′ạ-thēz), *n.* [NL. (Gray, 1840), < Gr. *λεῖος*, smooth, + *πάθος*, condition, quality.] The typical genus of the family *Leiopathidæ*.

Leiopathidæ (lī-ō-path′i-dē), *n. pl.* [NL., < *Leiopathes* + *-idæ*.] A family of zoantharians, of the order *Antipathidea*, in which 12 mesenteries are present in the oral cone. It contains the genus *Leiopathes*.

leiophyllous (lī-of′i-lus), *a.* [Gr. *λεῖος*, smooth, + *φύλλον*, leaf, + *-ous*.] Having smooth leaves.

leiopus, *n.* See ★*liopus*.

Leiostomus (lī-os′tọ-mus), *n.* [NL., < Gr. *λεῖος*, smooth, + *στόμα*, mouth.] A genus of sciænoid fishes found on the South Atlantic and Gulf coasts of the United States.

Leiostomus xanthurus.
(From Bulletin 47, U. S. Nat. Museum.)

leiphamic (lī-fam′ik), *a.* [NL. *leiph*(*æmum*) + *am*(*ine*) + *-ic*.] Derived from the lichen *Hæmatomma leiphæmum*.—**Leiphamic acid**, a bitter compound, $C_{22}H_{46}O_5$, contained in the lichen *Hæmatomma leiphæmum*.

Leishman-Donovan body. See ★*body*.

Leiter's coil. See ★*coil*[1].

Leithakalk (lī′t ạ-kälk), *n.* [G., 'Leitha limestone.' The river *Leitha* is a tributary of the Danube.] In *geol.*, a subdivision or phase of sedimentation of the Miocene series in Austria. The rock is a reef limestone largely composed of corals, calcareous algæ, and bryozoans, with great numbers of mollusks, sea-urchins, and other reef-inhabiting animals. At the edges of the Vienna basin, in which it lies, the rock becomes sandy and conglomeritic (*Leithaconglomerate*).

leitmotiv (līt′mō-tēf″), *n.* [Also *leitmotif*, *leitmotive*; < G. *leitmotiv*, < *leiten*, lead, + *motiv*, motive.] In *music*, a leading motive (which see, under *leading*[1]).

leitneriaceous (līt″nē-ri-ā′shius), *a.* Belonging to the plant family *Leitneriaceæ*.

Leitneriales (līt-nē-ri-ā′lēz), *n. pl.* [NL. (Engler, 1897), < *Leitneria* + *-ales*.] An order of dicotyledonous archichlamydeous plants embracing only the family *Leitneriaceæ*.

lek (lek), *n.* [*lek*, *v. i.*] An assemblage of black cocks, *Tetrao tetrix*, during the pairing season, when the birds select their mates.

As many as forty or fifty or even more birds congregate at the *leks*; and the same place is often frequented during successive years. *Darwin*, Descent of Man, p. 460.

lekane (le-kä′nā), *n.* [Gr. *λεκάνη*, a dish.] In *Gr. archæol.*, a covered pottery vessel in the form of a tureen, with two handles, sometimes used as a basket or box.

L. E. L. An abbreviation of *Laureate in English Literature*.

lembergite (lem′bėrg-īt), *n.* [*Lemberg* (see def.) + *-ite*[2].] An artificial mineral, a hydrous silicate of aluminium and sodium, $5NaAlSiO_4 + 2H_2O$, first described by J. F. Lemberg as nephelin hydrate.

lemmanee (lem-ạ-nē′), *n.* [Also *lemone*; from an East Indian source.] A fine cotton material made in India. *Yule and Burnell*, Hobson-Jobson (s. v. *piece-goods*).

"*Lemone* Handkerchiefs" were advertised in the Boston Gazette (in 1755). These were of the India cotton material *lemmanee*.

A. M. Earle, Costume of Colonial Times, p. 124.

lemming, *n.* The North American lemmings, 8 or 10 species of which are now recognized, have been divided into two genera, *Lemmus* and *Dicrostonyx*, and the species once familiar as *Myodes obensis* is now *Lemmus alascensis*. The black-footed lemming, *L. nigripes*, is peculiar to St. George Island, Bering Sea. The common northeastern species is *D. hudsonius*.

lemming-mouse (lem′ing-mous), *n.* One of the small, short-tailed mice of the genus *Synaptomys*, the best known and most widely distributed being *S. cooperi*. Nine species are now recognized, five of which are included in the subgenus *Mictomys*.—**Cooper's lemming-mouse**, *Synaptomys cooperi*, a small mouse resembling the deer-mouse in general appearance, but having a shorter tail. It is common in the eastern United States, and is found from Massachusetts west to Minnesota and south to Georgia.

lemnaceous (lem-nā′shius), *a.* Belonging to the plant family *Lemnaceæ*.

lemniscate, *n.* (*e*) The locus of the point in which the straight through the center and the projection of a point of a circle on a fixed tangent are cut by the perpendicular from this point to the diameter from the contact point. This is the lemniscate of Gerono, a curve of the form of an 8, whose equation in simplest form is $y^4 = y^2 - x^2$.—**Lemniscate of Bernouilli.** See *lemniscate*, *n.* (*a*).

lemniscoid (lem-nis′koid), *n.* [*lemniscus* + *-oid*.] A curve resembling the lemniscate, that is, shaped like a figure eight. *Amer. Jour. Sci.*, July, 1903, p. 55.

lemniscoidal (lem-nis′koi-dal), *a.* [*lemniscoid* + *-al*[1].] Resembling a ★*lemniscoid* (which see). *Amer. Jour. Sci.*, July, 1903, p. 58.

lemniscus, *n.* **4.** A kind of reference-mark such as the modern asterisk, obelisk, etc., consisting of a straight line drawn between two points or dots (÷), formerly used by textual critics in their annotations.

Lemoine circles, parallels, point, straight. See ★*circle*, etc.

lemon, *n.*—**Desert-lemon.** Same as *native* ★*kumquat*.—**Syrup of lemon**, a cane-sugar syrup of lemon-juice flavored with lemon peel. It is used as a vehicle in pharmacy.—**Wild lemon**, in Australia, *Plectronia latifolia*, a small tree of the madder family, yielding a hard, close-grained, streaked, pinkish wood.

lemoncito (lā-mōn-sē′tō), *n.* Same as ★*limoncito*.

lemonet†, *n.* See ★*lemmanee*.

lemoniid (le-mō′ni-id), *n.* and *a.* **I.** *n.* A member of the lepidopterous family *Lemoniidæ*.

II. *a.* Having the character of or belonging to the family *Lemoniidæ*.

lemon-kali, *n.* 2. A mixture of bicarbonate of potash with citric acid (originally obtained from lemon- or lime-juice), both in powder and flavored with a little oil of lemon. On addition of water it effervesces from escape of carbon-dioxid gas and produces a drink of mildly laxative effect. See *lemon-kali*, 1.

lemon-lily (lem′ọn-lil″i), *n.* See ★*lily*.

lemon-lobelia (lem′ọn-lō-bē″liä), *n.* Same as *lemon-balm*.

lemon-monarda (lem′ọn-mō-när″dä), *n.* A plant, *Monarda citriodora*, of the dry plains of the western United States. It has somewhat the odor of lemons.

lemon-rob (lem′ọn-rob), *n.* Lemon-juice that has been thickened or concentrated by evaporation. [Eng.]

lemon-scab (lem′ọn-skab), *n.* See ★*scab*.

lemon-sole, *n.* 3. In New South Wales, *Paraplagusia unicolor*, of the family *Pleuronectidæ* or flatfishes; also, in New Zealand, the New Zealand turbot. *E. E. Morris*, Austral English.

lemonweed, *n.* 2. In the southwestern United States, *Pectis filipes*, *P. papposa*, and *P. longipes*, small yellow-flowered lemon-scented composites with linear leaves dotted with oil-glands. These plants are used medicinally by the Indians and the white settlers, in the form of a decoction. See ★*limoncillo*, 2.

lemon-wood (lem′ọn-wụd), *n.* 1. See *lemon wood*, under *wood*[1].—2. In New Zealand, the hedge-laurel or tarata, *Pittosporum eugenioides*. Also called *mapau* and *New Zealand oak*. See ★*mapau* and ★*tarata*.

lemony (lem′ọn-i), *a.* [*lemon* + *-y*[1].] Like lemon in taste or smell.

lemoparalysis, *n.* Same as ★*læmoparalysis*.

lemuravid (lem-ū-rav′id), *n.* One of the *Lemuravidæ*.

lemuravoid (lem-ū-rav′oid), *a.* Related to or having the characters of *Lemuravus*.

lemurian[2] (lē-mū′ri-ạn), *a.* Resembling or characteristic of a lemur; lemurine: correlated with *cebian*, *pithecian*, etc.

Frontal sinuses well marked, cheek and jaw bones very large, orbits large and distant, an unsymmetrical face, the nasal overture of a pheleiform type, and *lemurian* attachment of the under jaw. *Smithsonian Rep.*, 1890, p. 621.

lemuriform (lē-mū′ri-fôrm), *a.* Resembling a lemur: having the characteristics of a lemur.

lenad (len′ad), *n.* [*le(ucite)* + *n(ephelite)* + *-ad.*] In *petrog.*, in the quantitative system of igneous rocks (see ★*rock*[1]), a standard feldspathoid mineral—leucite, nephelite, or a sodalite.

Lenæa (lē-nē′ä), *n. pl.* See *Lenaia*.

Lenard effect, ray, tube, window. See ★*effect*, etc.

lending-house (len′ding-hous), *n.* A charitable institution for lending money to the poor at a very low rate or gratis.

lendofelic (len-dō-fel′ik), *a.* [*len(ad)* + *do(minant)* + *fel(dspar)* + *-ic.*] In *petrog.*, in the quantitative classification of igneous rocks (see ★*rock*[1]), noting a division in which the normative feldspars are dominant over the normative lenads (leucite, nephelite, sodalite) within the limits ⟨$\frac{7}{8}$⟩ $\frac{5}{8}$.

lenfelic (len-fel′ik), *a.* [*len(ad)* + *fel(dspar)* + *-ic.*] In *petrog.*, in the quantitative classification of igneous rocks (see ★*rock*[1]), a division in which the normative feldspars and lenads are in equal, or nearly equal, proportions, that is, are within the limits ⟨$\frac{5}{8}$⟩ $\frac{3}{8}$.

lengenbachite (leng′en-bäċh-īt), *n.* [G. *Lengenbach*, a small stream in the Binnenthal, Switzerland.] A sulpharsenite of lead with antimony, silver, and copper in small amount; it occurs in thin-bladed crystals, probably triclinic, of steel-gray color and metallic luster: found in the dolomite of the Binnenthal, Switzerland.

length, *n.* 9. (*a*) In the brachiopod shell, the distance from the apex of the more projecting valve axially to the anterior margin. (*b*) In the pelecypod shell, commonly the greatest distance across the shell fore and aft, but more correctly the distance from the beak obliquely along the crescence-line, or line of most rapid growth.—10. In *cricket:* (*a*) The distance between the bowler's wicket and the spot where the ball pitches: said of a ball bowled. (*b*) The proper distance at which a ball bowled should pitch; a good pitch. [Colloq.]—**At arm's length.** See ★*arm*[1].—**Basal length**, in *craniom.*, the distance from the basion to the gnathion.—**Basilar length**, in *craniom.*, the length from the basion to the henselion.—**Clear length.** See ★*clear*.—**Dental length**, in *craniom.*, the combined lengths of the crowns of the premolar and molar teeth.—**Fundamental length**, in *thermom.*, the distance between the fiducial points of a thermometer after correcting these to what they would have been under the standard atmospheric pressure.—**Length ball.** See ★*ball*[1].—**Length bowling.** See ★*bowling*[2].—**Length of an arc.** See ★*arc*[1].—**Measure of length.** See ★*measure*.—**Merchantable length**, in *forestry*, the total length of that portion of the stem of a tree which can be used under given conditions.—**Mesial length**, in *anat.*, the distance between the frontal and occipital points. *Hrdlička*, in Amer. Anthropologist, 1901, p. 491.—**Optical length of a ray**, the product of the distance traversed and the index of refraction.—**Palatal length**, in *craniom.*, the distance from the medial point on the inner side of the alveolar arch to the posterior medial point of the palatal bones, excluding the posterior nasal spine.—**Possible merchantable length.** See *merchantable* ★*length*.—**Prince's lengths**, in *archery*, the ranges of 100, 80, and 60 yards: so named from the Prince of Wales, afterward George IV.—**Rupture length**, a constant used to express the strength of paper. The breaking stress of a sample is measured by stretching, and the length of a strip of the same paper, equal in width to the sample and having a weight equal to the breaking load, is computed. This length, in kilometers, is the *rupture length*.

length-height (length′hīt), *n.* Same as *altitudinal* ★*index*.

Lenham beds. See ★*bed*[1].

lenic (len′ik), *a.* [*le(ucite)* + *n(ephelite)* + *-ic.*] In *petrog.*, in the quantitative classification of igneous rocks (see ★*rock*[1]), having the character of or belonging to the group of lenads (leucite, nephelite, and the sodalites), equivalent to the feldspathoid minerals.

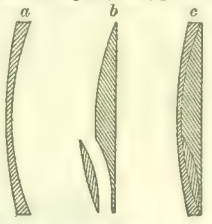
lenigallol (len-i-gal′ol), *n.* [L. *lenis*, smooth, + E. *gallol.*] The trade-name for pyrogallol triacetate, $C_6H_3(C_2H_3O_2)_3$, prepared by the action of acetyl chlorid on pyrogallol.

lenirobin (len-i-rō′bin), *n.* [L. *lenis*, soft, + E. *(chrysa)robin.*] The trade-name for chrysarobin triacetate, $C_{30}H_{23}O_4(OCOCH_3)_3$.

lenition (lē-nish′ọn), *n.* [< L. *lenis*, soft.] The utterance of a consonant with a wider opening of the mouth. *E. McClure*, British Place-Names, p. 16.

lennilite (len′i-līt), *n.* [*Lenni* (see def.) + Gr. *λίθος*, stone.] A greenish orthoclase from Lenni, Pennsylvania.

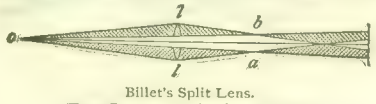
leno-weaving (lē′nō-wē″ving), *n.* Same as ★*gauze-weaving*.



lens, *n.* 5. [*cap.*] [NL. (Stickman, 1754).] A genus of dicotyledonous plants of the family *Mimosaceæ*. There are about 14 species, of which the best-known is *L. phaseoloides*, the match-box bean or simitar-pod. See *Entada*, ★*gogo*, *sea-bean*, 1, and *simitar-pod.*—6. In *entom.*: (*a*) The crystalline lens or cone. (*b*) One of the facets of the compound eye.—7. In *geol.*, a body of ore having a lenticular shape. This type is specially common in metamorphic rocks, such as schists or slates, and is very frequent with magnetic and specular iron ores, pyrites, and some gold-quartz veins. Lenses of magnetite or pyrites often overlap like shingles.

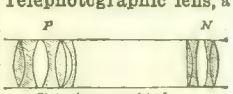
They have revealed valuable ore bodies of two great types, those which occur as *lenses*, roughly parallel to the bedding, and those which occur in fracture or fissure zones. *U. S. Geol. Surv.*, Contrib. to Econ. Geol., 1902, p. 113.

8. A surface-condenser made of two round, dished plates bolted together, resembling in form a double-convex lens. [Local, U. S.]



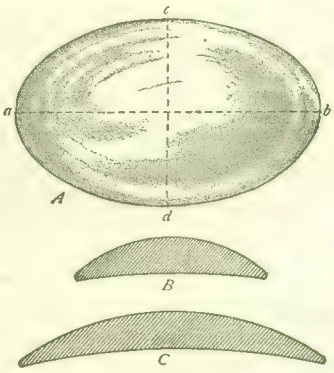
There are no coils in the stills, but the steam is conducted into what are termed "*lenses*," which resemble a double-convex lens. *Sci. Amer.*, Sept. 5, 1903, p. 165.

Bifocal lens, a lens the upper part of which is ground for the correction of distant vision, the lower part for that of near vision in reading, writing, etc. The several parts are either cemented or fused together.—**Billet's split lens**, an instrument for producing interference-fringes, and showing the effect of a plate interposed in the path of one of the interfering pencils in displacing the fringes. It consists of a lens, *l*, *l′*, cut in halves, which can be separated or brought close together at will by means of a micrometer-screw. Light from a luminous source, *o*, produces two images,



Bifocal Lens.

a and *b*, separate parts; *c*, parts joined together.



Billet's Split Lens.
(From Preston's "Theory of Light.")

a and *b*, close together. The light diverging from these images produces fringes on a screen placed anywhere in their common path, and it is easy to interpose plates of any transparent substance in the path of either or of both simultaneously.—**Bull's-eye lens**, a very convex lens used in the bull's-eye lantern.—**Convergent lens**, one which so refracts rays of light that they converge toward a single point.—**Convertible lens**, in *photog.*, a type of objective consisting of three separate systems, each of which can be used alone, each being corrected for spherical and chromatic aberration and for astigmatism.—**Coquille lens**, a lens of uniform thickness, convex on one side and equally concave on the other: used merely as a shield to the eye.—**Dispersion lens**, a diverging lens; any lens having greater thickness in the axis than at the edge.—**Equivalent lens**, a single lens which is equivalent to a given lens system in that the image formed by it is of the same size as that formed by the entire system.—**Field of a lens**, in *photog.*, the illuminated space on a screen produced by any lens working with full aperture. *Woodbury.*—**Midangle lens**, a lens having a focal length greater than that of a wide-angle lens and less than that of a long-focus lens.—**Minus lens**, a negative, concave, or diverging lens.—**Narrow-angle lens**, a photographic lens having an angle of view of from 40° to 50°: opposed to *wide-angle lens.*—**Oil-immersion lens**, a microscope objective of high power which when used is immersed, in focusing, in a drop of oil placed on the cover-glass of the slide.—**Planar lens**, in *photog.*, a special anastigmatic objective. When of short focal length it is well adapted for instantaneous photography, for enlarging and reducing pictures, and for projection apparatus; when of greater focal length it serves for photomechanical reproduction processes.—**Polyscopic lens**, a multiplying lens.—**R. R. lens**, in *photog.*, an abbreviation for *rapid rectilinear lens*. *Woodbury*, Encyc. Dict. of Photog., p. 433.—**Steinheil's periscopic lens**, in *photog.*, a non-achromatized symmetrical doublet introduced by Steinheil in 1865. The lens included an angle of 90°, but neither lens of the combination was corrected for chromatic aberration.—**Telephoto lens.** Same as *telephotographic* ★*lens*.—**Telephotographic lens**, a lens, or more strictly a lens system, for photographing distant objects in detail. Such a system consists of two parts, a positive element (*P*), which may be any ordinary photographic objective, and a negative element (*N*), which increases the effective focal length of the system, giving a greatly magnified image but a correspondingly smaller angle. The figure shows a combination designed by Dallmeyer. Also called *telephoto lens*.—**Telescopic lens**, a lens adapted for use in a telescope.—**Toric lens**, a lens in which the difference of refraction of the two principal meridians is

Telephotographic Lens.

Toric Lens.

A, front; *B*, section on *c*, *d*; *C*, section on *a*, *b*.

ground on one surface, the other surface being ground concave. A periscopic spherocylindric lens is thus produced which is much superior to the universal grindings.

lens-board (lenz′bōrd), *n.* In *photog.*, the board which forms the front of the camera and carries the lens.

The focusing arrangement should be by rack and pinion at the side of the *lensboard*, instead of by a release at the back of the camera, or under the lens and shutter. *Photo-Miniature*, Sept., 1901, p. 243.

lensed (lenzd), *a.* [*lens* + *-ed*[2].] Fitted with a lens or lenses.

lens-hood (lenz′hụd), *n.* Same as ★*lens-screen*.

lens-screen (lenz′skrēn), *n.* In *photog.*, a contrivance fitted to the front of the lens to screen off side-light in making exposure. It may be of cardboard.

lens-star (lenz′stär), *n.* A star-shaped figure formed by radiating fibers of the crystalline lens of the eye.

-lent. [L. *-lentus* (sometimes *-lens*), usually with the vowel of a preceding stem *-u-lentus*, *-o-lentus*, sometimes *-i-lentus*, a compound composed of *-l(o)-* or *-l(i)-*, + *-entus*, *-ento-*, a suffix connected with the participial suffix *-ens* (*-ent-*): see *-ent.*] A suffix in some adjectives of Latin origin, as *flatulent*, *pestilent*, *pulverulent*, *turbulent*, *vinolent*, *violent*, *virulent*, etc. It is not used in new English formations.

lentamente (len-tä-men′tā), *adv.* [It., < *lento*, < L. *lentus*, slow.] In *music*, slowly; with deliberation.

lentelliptical (lent-e-lip'ti-kal), *a.* [L. *lens* (*lent-*), lentil, + E. *elliptical.*] Lenticular and elliptical.

Lenten kail, or pie, broth or pie made without meat. [Scotch.]

lenten-tide (len'ten-tīd), *n.* The season of Lent.

lenticle (len'ti-kl), *n.* [L. *lenticula,* dim. of *lens,* a lentil: see *lentil.*] In *geol.*: (*a*) A stratum of sedimentary rock, which from its central point of maximum thickness tapers to a thin edge in every direction; a common form of limestone in shales. (*b*) A mass of eruptive rock squeezed and sheared into a shape like the typical sedimentary lenticle.

Lenticles or eyes of uncrushed diorite may be traced, round which the more crushed parts have moved and have assumed the schistose condition.
Encyc. Brit., XXVIII. 654.

lenticula, *n.* 4. The lenticular nucleus in the brain.

lenticular, *a.* 3. Of or pertaining to lenses generally.

The lenses revolve at a given speed so proportioned to the diameter of the illuminant, and the *lenticular* apparatus, that the light is made to show continually.
Sci. Amer., Feb. 7, 1903, p. 98.

Lenticular bed, a stratum of sedimentary rock in the form of a broad, thin lens, as in the case (frequently) of limestones in shales: more commonly called *lentil-bed.* See ★*lenticle* (*a*).—**Lenticular loop, ore.** See ★*loop*[1], ★*ore*[1].—**Lenticular rose spots.** See ★*spot.*

lenticularis (len-tik-ū-lā'ris), *a.* [NL.: see *lenticular.*] In *meteor.*, a term adopted by the International Conference at Innsbruck, September, 1905, for clouds having an ovoid form with sharp edges: as, cumulus *lenticularis,* cumulo-stratus *lenticularis.* Such clouds occur especially in connection with sirocco, mistral and foehn winds, and frequently show rainbow colors.

lenticulate (len-tik'ū-lāt), *a.* [NL. **lenticulatus,* < *lenticula,* lentil.] Same as *lenticular.*

lenticuliform (len-tik'ū-li-fôrm), *a.* [< L. *lenticula,* lentil, + *forma,* form.] Lentiform; lenticular.

lenticulo-optic (len-tik″ū-lō-op'tik), *a.* Having reference to the lenticular nucleus.

lenticulothalamic (len-tik″ū-lō-thal'a-mik), *a.* Having reference to the lenticular nucleus and the optic thalamus.

lenticulus (len-tik'ū-lus), *n.* [NL., < L. *lenticula,* lentil.] Same as *os orbiculare.*

lentil, *n.* 4. A body or mass having the general form of a double-convex lens; a lenticular body or mass; a lenticle.

In the southwestern belt there is a line of Devonian limestone *lentils* which may be traced with many interruptions for over 100 miles.
Amer. Jour. Sci., May, 1903, p. 344.

Lentil-bed. See ★*lenticular bed.*

Lentilla (len-til'ä), *n.* [NL. (Wight, 1906), a diminutive of *lens* (*lent-*), the lentil.] A genus of leguminous plants. It contains about 6 species, one of which is the lentil. See *lens,* 4, and *lentil,* 1.

lentil-powder (len'til-pou″dėr), *n.* Finely powdered seeds of the common lentil.

Lentinus (len-tī'nus), *n.* [NL. (Fries, 1825), < L. *lentus,* tough, lasting.] A genus of agaricaceous fungi having a tough, leathery pileus and decurrent gills. The species occur on decaying wood. *L. lepideus* is a common species.

lentisco (len-tis'kō), *n.* An extract of the leaves of the mastic-tree, *Pistacia Lentiscus:* said to be used as a substitute or adulterant for sumac.

lentitis (len-tī'tis), *n.* [NL., < *lens* (*lent-*), lens, + *-itis.*] Same as *phacitis.*

leonina (lā-ō-nē'nä), *n.* [It., < *Leone,* Leo.] A gold coin of 2 scudi, struck by Leo XII., 1823–29.

leonine, *n.* 2. *pl.* Leonine verse.

The Speculum is not . . . written either in classical metre or in *leonines.*
Saturday Rev., Sept. 21, 1861, p. 306. *N. E. D.*

leonite (lē'ō-nīt), *n.* [*Leo*(*pold*) (see def.) + *-n-* + *-ite*[2].] A hydrated sulphate of potassium and magnesium, $K_2SO_4.MgSO_4 + 4H_2O$, analogous to blödite in formula, and hence also called *kaliblödite.* It occurs in massive form, rarely in monoclinic crystals, in the salt regions of Leopoldshall and Westeregeln, Germany.

leontiasic (lē-on-tī'a-sik), *a.* [*leontiasis* + *-ic.*] Marked by or affected with leontiasis.

leontiasis (lē-on-tī'a-sis), *n.* [ML., < Gr. λεοντίασις, < λέων (λεοντ-), lion.] The bloating or enlargement of the head, especially of the face, due to tubercular leprosy: from the fancied leonine aspect produced by it.—**Leontiasis ossea,** nodular enlargement of the bones of the head and face.

leopard, *n.*—**Clouded leopard.** Same as *clouded tiger* (which see, under *tiger*).

leopardite (lep'ärd-īt), *n.* [*leopard* + *-ite*[2].] In *petrog.*, a fine-grained feldspathic quartzite, or quartz-porphyry, spotted with oxid of manganese, occurring in North Carolina.

leopard-lizard (lep'ärd-liz″ärd), *n.* A large, spotted species of lizard, *Crotaphytus wislizenii,* common on the dry plains of the western United States from Nevada to Texas.

leopard-mackerel (lep'ärd-mak″e-rel), *n.* A scombroid fish, *Cybium guttatum,* of East Indian seas.

leopard-marmot (lep'ärd-mär″mọt), *n.* A book-name for the 13-lined spermophile, *Spermophilus tridecemlineatus.*

leopard-plant (lep'ärd-plant), *n.* See ★*Erythrochæte.*

leopard-rock (lep'ärd-rok), *n.* A metamorphosed augite-syenite, characterized by oval spots of granular feldspar encircled by dark-green augite: associated with apatite veins of Ontario.

leopard-shark (lep'ärd-shärk), *n.* A shark, *Scylliorhinus canicula,* a small species abundant in the Mediterranean and vicinity: so named from the spots. See *cat-shark.*

leopard-tree (lep'ärd-trē), *n.* The spotted-tree, *Flindersia maculosa.* See *Flindersia.*

leopold (lē'ọ-pōld), *n.* 1. The gold ducat of Lorraine, under Duke Leopold (1690–97).—2. A Belgian gold coin with an issue-value of 25 francs.

leopoldino (lā″ō-pōl-dē'nō), *n.* [It.] A Tuscan silver coin of the value of 5 paoli.

Leotia (lē-ō'shi-ä), *n.* [NL. (Hill, 1751), < Gr. λεῖος, smooth (λειότης, smoothness).] A genus of ascomycetous fungi having stalked gelatinous, more or less irregular-shaped ascocarps, and hyaline elongate spores. *L. lubrica* is a common species, of a greenish-yellow color.

lepachys (le-pak'is), *n.* [From *Lepachys,* an untenable genus name, < Gr. λεπίς, a scale, + παχύς, thick; in allusion to the thickened apex of the receptacular bracts.] Any species of *Ratibida,* a genus of plants of the family *Asteraceæ,* especially *R. columnaris.* See ★*Ratibida.*

Lepadocrinus (lep-a-dok'ri-nus), *n.* [NL., < Gr. λεπάς, limpet, + κρίνον, a lily (see *crinoid*).] A very peculiar genus of cystids, of the family *Callocystidæ,* with oval or pyriform calyx, consisting of 20 plates (arranged in five rows) and a column which consists of two parts, thereby differing from all other associated genera. The genus occurs in the Upper Silurian of North America.

lepamine (lep'a-min), *n.* [*lep*(*idine*) + *amine.*] A colorless liquid, $C_{20}H_{32}N_2$, prepared from isoamyl iodide and lepidine. It boils at 275° C.

lepard, *n.* A simplified spelling of *leopard.*

lepargylic (lep-är-jil'ik), *a.* [Gr. λεπ(ίς), scale, + ἄργυ(ρος), silver, + *-l-* + *-ic.* The acid crystallizes in white leaflets.] Same as ★*azelaic* (acid).

Lepargyrea (lep-är-jī-rē'ä), *n.* [NL. (Rafinesque, 1818), < Gr. λεπίς, scale, + ἀργύρεος, silvery. The name alludes to the character of the leaf-surface in the type species, *L. argentea.*] A genus of dicotyledonous plants belonging to the family *Elæagnaceæ.* See *Shepherdia.*

leper[1] (lep'ėr), *v. t.* [*leper*[1], *n.*] To strike with leprosy; leperize; taint with leprosy.

Leperditia (lep-ėr-dit'i-ä), *n.* [NL., from a proper name, *Leperdit.*] A genus of fossil ostracode crustaceans, of the family *Leperditiidæ,* characterized by oblong unequal valves with straight dorsal edge and rounded ventral outline, overlapping ventral edge of the right valve, eye-tubercle, and subcentral interior muscular imprint. The genus extends from the Lower Silurian to the Carboniferous.

Leperiza (lep-e-rī'zä), *n.* [NL. (Herbert, 1821), < Gr. λεπίς, scale, + ῥίζα, root.] A genus of monocotyledonous plants of the family *Amaryllidaceæ.* See *Urceolina.*

Lepeta (lep'ē-tä), *n.* [NL. (Gray, 1847).] The typical genus of the family *Lepetidæ.*

Lepetidæ (le-pet'i-dē), *n. pl.* [NL., < *Lepeta* + *-idæ.*] A family of docoglossate gastropods in which the ctenidia, pallial branchiæ, and eyes are absent. It contains the genus *Lepeta.*

Lepidaster (lep-i-das'tėr), *n.* [NL., < Gr. λεπίς, scale, + ἀστήρ, star.] A Silurian genus of the asteroid *Echinodermata,* belonging to the order *Cryptozonia.* It has a rather large disk and 13 arms, and its lower side is covered by imbricating plates which run in two series alongside the ambulacral furrows.

Lepidechinus (lep″i-de-kī'nus), *n.* [NL., < Gr. λεπίς (λεπιδ-), scale, + ἐχῖνος, sea-urchin.] A genus of fossil echinoids or sea-urchins which belong to the family *Archæocidaridæ.* It possesses narrow ambulacra, consisting of two series of imbricating plates and broad interambulacra. The genus is found in the Devonian and Carboniferous of North America.

Lepidesthes (lep-i-des'thēz), *n.* [NL., < Gr. λεπίς (λεπιδ-), scale, + ἐσθής, dress.] A genus of echinoids or sea-urchins of the family *Melonitidæ,* characterized by having a large test and broad ambulacra consisting of eight to eighteen columns of small imbricating plates. The genus is found in the Subcarboniferous rocks of North America.

lepidine[1] (lep'i-din), *n.* [?L. *lepidus,* fine, neat, + *-ine*[2].] A colorless compound,

$$C_6H_4<\begin{matrix}\text{CH}\\ \text{N:CH.CH:CCH}_3\end{matrix}>,$$

obtained by the distillation of cinchonine with potassium hydroxid; py-4-methylquinoline. It has an odor of quinoline, melts below 0° C., and boils at 261–263° C. Also called *quinolepidine.*

lepidine[2] (lep'i-din), *a.* [Gr. λεπίς (*-ιδ-*), scale, + *-ine*[1].] Scaly.

Lepidion (le-pid'i-on), *n.* [NL., < Gr. λεπίδιον, dim. of λεπίς (λεπιδ-), scale.] A genus of fishes related to the codfish, found in deep water in both the Atlantic and the Pacific Ocean.

Lepidocentrus (lep″i-dō-sen'trus), *n.* [NL., < Gr. λεπίς (λεπιδ-), scale, + κέντρον, center.] A genus of Devonian echinoids or sea-urchins which belong to the family *Archæocidaridæ,* characterized by 5 to 11 columns of interambulacral plates and very narrow ambulacra which continue beyond the peristomial margin to the true mouth.

Lepidocoleus (lep″i-dō-kō'lē-us), *n.* [Gr. λεπίς (λεπιδ-), scale, + κολεός, sheath.] A very primitive Paleozoic genus of cirriped crustaceans belonging to the family *Lepidocoleidæ.* It is characterized by the elongate, blade-shaped form of the shell, which is composed of two series of plates interlocking on the dorsal edge but only in apposition on the ventral edge.

Lepidodendraceæ (lep″i-dō-den-drā'sē-ē), *n. pl.* [NL. (Engler, 1892), < *Lepidodendron* + *-aceæ.*] A family of Paleozoic fossil plants of the order *Lycopodiales,* typified by the genus *Lepidodendron* (which see). Several other genera have been described, as *Knorria, Halonia, Ulodendron,* etc., which, however, are now believed to represent so many parts or aspects of *Lepidodendron;* but *Lepidophloios* seems to be a distinct genus. The roots belong to *Stigmaria,* but do not constitute all that is included under that name. See all the above terms.

lepidodendrid (lep″i-dō-den'drid), *n.* Same as ★*lepidophyte.*

Lepidogobius (lep″i-dō-gō'bi-us), *n.* [Gr. λεπίς (λεπιδ-), scale, + NL. *Gobius.*] A genus of fishes of the family *Gobiidæ,* found on the west coast of North America.

Lepidomeda (lep-i-dom'e-dä), *n.* [NL., < Gr. λεπίς (λεπιδ-), scale, + NL. *Meda.*] A genus of minnows found in Arizona.

lepidophyte (lep'i-dō-fīt), *n.* [Gr. λεπίς (λεπιδ-), scale, + φυτόν, plant.] Any fossil plant of the great group supposed to represent the ancestors of the modern order *Lycopodiales,* including the families *Lepidodendraceæ, Sigillariaceæ, Bothrodendraceæ,* etc., or Paleozoic scale-trees.

lepidophytic (lep″i-dō-fit'ik), *a.* Belonging or relating to the lepidophytes.

lepidoporphyrin (lep″i-dō-pôr'fi-rin), *n.* [*lepido*(*tic*) + Gr. πορφύρα, purple, + *-in*[2].] A purple product which results from the yellow pigment in the wings and excrement of butterflies (lepidotic acid) on warming with dilute sulphuric acid.

Lepidopsetta (lep″i-dop-set'ä), *n.* [NL., < Gr. λεπίς (λεπιδ-), scale, + ψῆττα, flounder.] A genus of flounders found on the Pacific coast of the United States. See *Pleuronectidæ,* with cut.

lepidopteric (lep″i-dop-ter'ik), *a.* [*Lepidoptera* + *-ic.*] Pertaining to or derived from *Lepidoptera.*—**Lepidopteric acid,** a derivative of uric acid which forms the green pigment found in several lepidopterous insects. It is converted into uric acid by prolonged boiling in hydrochloric acid.

lepidopterological (lep-i-dop″tẹ-rō-loj′i-kal), *a.* Of or pertaining to lepidopterology.

lepidopterologist (lep-i-dop-tẹ-rol′ō-jist), *n.* Same as *lepidopterist.*

lepidopterology (lep-i-dop-tẹ-rol′ō-ji), *n.* [NL. *Lepidoptera* + Gr. *-λογια*, ‹ *λέγειν*, speak.] That branch of entomology which treats of the *Lepidoptera*, or butterflies and moths.

lepidosis, *n.* 2. A scaly outgrowth; specifically, the 'horn' on the nose of the sand-viper, *Vipera ammodytes.*

Side view of head of sand-viper (*Vipera ammodytes*), showing the nasal horn, or lepidosis.

Lepidospermæ (lep″i-dō-spėr′mē), *n. pl.* [NL. (Ward, 1904), ‹ Gr. *λεπίς* (*λεπιδ-*), scale, + *σπέρμα*, seed.] A class of fossil plants of the phylum *Pteridospermaphyta* (*Cycadofilices*). They have the external aspect of lepidophytes, but bear seeds instead of macrospores. The genus *Lyginodendron*, which is now known to have borne the seeds called *Lagenostoma*, seems to belong to this class.

Lepidosternidæ (lep″i-dō-stėr′ni-dē), *n. pl.* [NL., ‹ *Lepidosternon* + *-idæ*.] A division of the *Amphisbænidæ*, or footless lizards, formed by Gray for the reception of the genus *Lepidosternon* and its relatives.

lepidosternoid (lep″i-dō-stėr′noid), *a.* [*Lepidosternon* + *-oid.*] Relating to or having the characters of *Lepidosternon*, a genus of *Amphisbænidæ.*

lepidotic (lep-i-dot′ik), *a.* [*lepido(p)t(er)ic.*] Noting an acid, similar to uric acid, said to be present in the pigments of many species of *Lepidoptera.*

lepidotrichium (lep″i-dō-trik′i-um), *n.*; pl. *lepidotrichia* (-ä). [NL., ‹ Gr. *λεπίς* (*λεπιδ-*), scale, + *θρίξ* (*τριχ-*), hair.] One of the rays that form the fins of the bony fishes.

In Teleostomi (bony fishes and ganoids), on the other hand, we find small unjointed, horny rays (actinotrichia) on the edges of the fins, which are probably remnants of the ceratotrichia, and, in addition, branched, bony *lepidotrichia*, developed externally to the actinotrichia, and in primitive forms closely resembling the body-scales.
Nature, May 5, 1904, p. 13.

Lepidotus (lep-i-dō′tus), *n.* [NL., ‹ Gr. *λεπιδωτός*, scaled, scaly, ‹ *λεπίς* (*λεπιδ-*), scale.] A genus of fossil ganoid fishes of the family *Semionotidæ*, characterized by thick, deeply imbricating scales with more or less produced overlapping edges, and numerous hemispherical successional teeth which make a revolution of 180° in passing from the incipient to the mature condition. The genus ranges from the Keuper to the Lower Cretaceous, and is widespread in Europe, India, Siberia, and Brazil.

Lepiota (lep-i-ō′tä), *n.* [NL. (Fries, 1821), irreg. ‹ Gr. *λεπίς*, a scale, + *οὖς* (*ὠτ-*), ear. The name refers to the scales on the pileus.] A large genus of agaricaceous fungi having a fleshy pileus, white spores, and an annulate stipe. Over 250 species, distributed throughout the world, have been described. *L. procera*, the parasol mushroom, is a large and beautiful edible species which has a movable annulus.

Parasol Mushroom (*Lepiota procera*). One fourth natural size.

lepismatid (le-pis′ma-tid), *n.* and *a.* **I.** *n.* An insect of the thysanurous family *Lepismatidæ.*

II. *a.* Having the characters of or belonging to the family *Lepismatidæ.* Also *lepismid.*

lepismid (le-pis′mid), *a.* and *n.* Same as ★*lepismatid.*

Lepisosteidæ (lep″i-sos-tē′i-dē), *n. pl.* [NL., ‹ *Lepisosteus* + *-idæ*.] A family of freshwater ganoid fishes commonly known as the garpikes, which are found in North America and China.

Lepisosteus (lep-i-sos′tẹ-us), *n.* [NL., irreg. ‹ Gr. *λεπίς*, scale, + *ὀστέον*, bone.] A genus of ganoid fishes which inhabit fresh waters of North America and China, and are commonly known as garpikes.

lepocytode (lep-ō-sī′tōd), *n.* [Gr. *λέπος*, scale, + *κυτος*, a hollow (a cell), + *εἶδος*, form.] Same as *lepocyte. De Bary.*

lepolite (lep′ō-līt), *n.* [Gr. *λέπος*, scale, + *λίθος*, stone.] A gray to pink variety of anorthite from Finland which occurs in complex crystals. Lindsayite (lindesite, or linseite) is a somewhat altered variety.

Lepominæ (lep-ō-mī′nē), *n. pl.* [NL., ‹ *Lepomis* + *-inæ*.] A subfamily of sunfishes.

Lepophidium (lep-ō-fid′i-um), *n.* [NL., ‹ Gr. *λέπος*, scale, + *Ophidium.*] A genus of fishes of the family *Ophidiidæ;* the cusk-eels: found in deep water on both coasts of America.

Leporidæ, *n. pl.* Somewhat over 150 species and subspecies of this family have been described, just about one half the number being from North America, where the geographic and climatic conditions are favorable for the production of local races. They have been divided, by Dr. Lyon, into 10 genera: *Lepus, Oryctolagus, Sylvilagus, Limnolagus, Brachylagus, Pronolagus, Romerolagus, Nesolagus, Caprolagus*, and *Pentalagus.* The most remarkable of these are *Romerolagus*, which has long clavicles and resembles the pikas somewhat, and the heavily built *Pentalagus* from the Loochoo Islands.

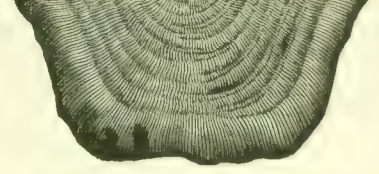
leporine, *a.* **II.** *n.* Same as *leporide.*

lepospondylous (lep-ō-spon′di-lus), *a.* [Gr. *λέπος*, a husk, scale, + *σπόνδυλος*, vertebra.] Having vertebræ consisting of a thin shell of bone surrounding the notochord, a type found in some extinct batrachians.

leprarin (lep′rạ-rin), *n.* [*Lepraria* + *in*2.] A colorless bitter compound, $C_{21}H_{20}O_{10}$, contained in the lichen *Lepraria latebratum.*

leprolin (lep′rō-lin), *n.* A toxin which is obtained from cultures of the leprosy bacillus.

leprologist (lep-rol′ō-jist), *n.* [*leprolog-y* + *-ist.*] One who devotes special attention to the study of leprosy.



leprology (lep-rol′ō-ji), *n.* [Gr. *λέπρα*, leprosy, + *-λογια*, ‹ *λέγειν*, speak.] The pathological study of leprosy.

leproma (le-prō′mä), *n.*; pl. *lepromata* (-ma-tä). [NL., ‹ *lepra* + *-oma.*] One of the tubercles which occur in leprosy.

leprosin (lep′rō-sin), *n.* [See *leprosy.*] A substance, analogous to tuberculin, said to have been prepared from a pure culture of the leprosy bacillus.

leprosy, *n.*— **Anesthetic leprosy.** Same as *lepra nervorum* (which see, under *lepra*, 1).— **Leprosy bacillus.** See ★*bacillus.*— **Lombardian leprosy.** Same as *pellagra.*— **Tubercular leprosy.** Same as *lepra tuberculosa* (which see, under *lepra*, 1).

Leptæna (lep-tē′nä), *n.* [NL., ‹ Gr. *λεπτός*, thin, + *-aina*, a fem. suffix.] A genus of extinct brachiopods of the family *Strophomenidæ*,

Leptæna rhomboidalis Wilckens. Silurian.
(From Nicholson and Lydekker's "Palæontology.")

characterized by convexo-concave shells, the flatter portions of which are covered with corrugations and wrinkles. It ranges from the Silurian to the Carboniferous, and is very common in certain formations.

leptænoid (lep-tē′noid), *a.* [*Leptæna* + *-oid.*] Resembling or related to the brachiopod *Leptæna.*

Leptagonus (lep-tag′ō-nus), *n.* [NL., ‹ Gr. *λεπτός*, thin, small, + NL. *Agonus.*] A genus of agonoid fishes of the North Pacific Ocean.

Leptamnium (lep-tam′ni-um), *n.* [NL. (Rafinesque, 1818), ‹ Gr. *λεπτός*, small, + *ἀμνίον*, a bowl for sacrificial blood. The calyx resembles a cup.] A genus of dicotyledonous plants belonging to the family *Orobanchaceæ.* See *Epiphegus.*

Leptictidæ (lep-tik′ti-dē), *n. pl.* [NL., ‹ *Leptictis* + *-idæ*.] A family of small, extinct insectivorous mammals, having trituberculate molars: found from the Eocene to the Oligocene of North America. *Gill*, 1872.

Leptictis (lep-tik′tis), *n.* [NL., ‹ Gr. *λεπτός*, small, + *ἰκτις*, weasel.] A genus of small *Insectivores* from the Oligocene (White River) of North America.

Leptilon (lep′ti-lon), *n.* [NL. (Rafinesque, 1818), ‹ Gr. *λεπτός*, small, delicate.] A genus of plants of the family *Asteraceæ.* It is closely related to *Erigeron*, but has very small panicled heads, with ray-flowers not longer than the diameter of the disk. There are about 20 species, natives of America and Asia. The name was originally applied to *Leptilon divaricatum*, the dwarf fleabane of the eastern United States. *L. Canadense*, the horseweed or Canada fleabane, is the best-known species. See *horseweed.*

Leptocampyli (lep-tō-kam′pi-lī), *n. pl.* [NL., ‹ Gr. *λεπτός*, thin, + *καμπύλος*, curved.] A suborder of Jurassic or Cretaceous ammonoid cephalopods, characterized by peculiar crenulated ornamentation, discoidal shells, and extremely complex sutures with much reduced saddles and excessively developed lobes.

leptocephalia (lep″tō-se-fā′li-ä), *n.* [NL.] Same as *leptocephaly.*

leptocephalid (lep-tō-sef′a-lid), *n.* and *a.* **I.** *n.* A member of the family *Leptocephalidæ.*

II. *a.* Of or pertaining to the *Leptocephalidæ.*

leptocephalous (lep-tō-sef′a-lus), *a.* Same as *leptocephalic.*

leptocerid (lep-tos′ẹ-rid), *n.* and *a.* **I.** *n.* An insect of the trichopterous family *Leptoceridæ.*

II. *a.* Pertaining to or having the characters of the family *Leptoceridæ.*

leptochlorite (lep-tō-klō′rīt), *n.* [Gr. *λεπτός*, thin, + *χλωρός*, green, + *-ite.*] A name proposed by Tschermak for those members of the chlorite group which commonly occur in fine scales or indistinctly fibrous forms. See also ★*orthochlorite.*

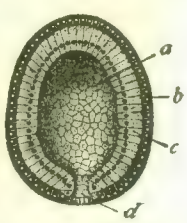
leptoclase (lep′tō-klās), *n.* [Gr. *λεπτός*, thin, + *κλᾶσις*, fracture.] A name proposed by A. Daubrée for the smallest fractures or cracks in rocks. *Geikie*, Text-book of Geol. (4th ed.), p. 658.

Leptoclinus (lep-tok′li-nus), *n.* [NL., ‹ Gr. *λεπτός*, thin, + NL. *Clinus.*] A genus of blennioid fishes found in arctic seas.

Leptocœlia (lep-tō-sē′li-ä), *n.* [NL., ‹ Gr. *λεπτός*, thin, + *κοῖλος*, hollow.] A genus of extinct *Brachiopoda* with plicated shallow valves and an internal spiralium. The genus is widespread throughout the world in the faunas of the early Devonian.

Leptoconger (lep-tō-kong′gėr), *n.* [NL., ‹ Gr. *λεπτός*, thin, + L. *conger.*] A genus of eels of the family *Muræsocidæ*, found in West Indian waters.

Leptocottus (lep-tō-kot′us), *n.* [NL., ‹ Gr. *λεπτός*, thin, + NL. *Cottus.*] A genus of cottoid fishes found on the Pacific coast of North America.



Leptodera intestinalis or **stercoralis,** synonyms for the more common term *Strongyloides intestinalis*, an intestinal parasite occasionally found in man.

leptodermia (lep-tō-dėr′mi-ä), *n.* [NL., ‹ Gr. *λεπτός*, thin, fine, + *δέρμα*, skin.] Fineness or delicacy of the skin.

leptodermic (lep-tō-dėr′mik), *a.* Having a thin skin; relating to leptodermia.

leptodermous (lep-tō-dėr′mus), *a.* Leptodermic: specifically, in *bot.*, thin-coated: applied especially to the capsules of mosses.

leptogastrula (lep-tō-gas′trō-lä), *n.*; pl. *leptogastrulæ* (-lē). [NL., ‹ Gr. *λεπτός*, thin, small, + NL. *gastrula.*] In *embryol.*, a gastrula, like that of *Amphioxus*, which has no food-yolk in the gastrocele and in which the entoderm consists of a simple layer of cells.

Leptogastrula.

The fully formed gastrula of *Amphioxus* bisected horizontally: the ventral half is represented as seen from above. Magnified. (After Hatschek.) *a*, gastrocele; *b*, ectoderm; *c*, entoderm; *d*, blastopore. (From Marshall's "Vertebrate Embryology.")

leptoid (lep′toid), *n.* [Gr. *λεπτός*, thin, + *-oid.*] A cell of an alga which is differentiated in some way from the surrounding cells.

leptom (lep′tom), *n.* [See *leptome.*] A specialized conducting tissue in marine algæ, whose function it is to transmit organic nitrogenous substances.

The tissue developed to meet the demands for conduction in such cases always shows some of the characters described. It is known as *leptom*, each constituent cell being a leptoid. *Encyc. Brit.*, XXV. 409.

leptomatic (lep-tō-mat′ik), *a.* [NL. **leptoma* (*t-*) + *-ic.* See *leptome.*] Of, pertaining to, or of the value of leptome.

The primary leptome is no longer visible, but three secondary *leptomatic* strands have become developed outside each of the primary and secondary rays of hadrome. *Amer. Jour. Sci.*, Sept., 1907, p. 246.

leptomeningeal (lep″tō-mē-nin′jē-ăl), *a.* [Gr. λεπτός, thin, + μῆνιγξ, membrane, + *-al*[1].] Relating to the pia mater and the arachnoid membrane.

leptomeninx (lep-tō-mē′ningks), *n.* The singular of *leptomeninges*.

leptomere (lep′tō-mēr), *n.* [Gr. λεπτός, thin, small, + μέρος, part.] One of the innumerable minute particles of which Asclepiades supposed the body to be composed.

Leptomeria, *n.* 2. [*l. c.*] A delicacy of bodily structure.

Leptomitaceæ (lep″tō-mī-tā′sē-ē), *n. pl.* [NL., < *Leptomitus* + *-aceæ*.] A family of fungi of the order *Saprolegniales:* named from the genus *Leptomitus*.

Leptomitus (lep-tom′i-tus), *n.* [NL. (Agardh, 1824), < Gr. λεπτόμιτος, of fine threads, < λεπτός, thin, + μίτος, thread (filament).] A genus of aquatic fungi, typical of the family *Leptomitaceæ*, containing the single species *L. lacteus*, which occurs on the bottoms of watercourses and on submerged branches, etc.

Leptonacea (lep-tō-nā′sē-ă), *n. pl.* [NL., < Gr. λεπτόν, the small intestine, neut. of λεπτός, thin, small.] A superfamily of teleodesmaceous pelecypods which is characterized by having the incurrent and excurrent openings between the mantle-lobes at opposite ends of the body. It comprises Tertiary and recent species, and numerous commensal and parasitic forms.

leptonacean (lep-tō-nā′shian), *a.* and *n.* **I.** *a.* Of or pertaining to the *Leptonacea*.

II. *n.* A mollusk of the superfamily *Leptonacea*.

leptopellic (lep-tō-pel′ik), *a.* [Gr. λεπτός, thin, + πέλλα, bowl (pelvis), + *-ic*.] Relating to or characterized by narrowness of the pelvis; dolichopelvic. *Brinton*, Races and Peoples, p. 49.

Leptophidium (lep-tō-fid′i-um), *n.* [NL., < Gr. λεπτός, thin, small, + ὀφίδιον, dim. of ὄφις, serpent.] A genus of fishes of the family *Ophidiidæ*, found in deep water on both coasts of North America.

leptophonia (lep-tō-fō′ni-ă), *n.* [NL., < Gr. λεπτός, thin, + φωνή, sound, voice.] Weakness or thinness of voice.

leptophonic (lep-tō-fon′ik), *a.* [*leptophonia* + *-ic*.] Having a voice of small volume or carrying power; pertaining to leptophonia.

leptophyllous (lep-tō-fil′us), *a.* [Gr. λεπτός, slender, + φύλλον, leaf, + *-ous*.] In *bot.*, having slender leaves.

leptoprosope, *n.* 2. A leptoprosopic skull or individual.

leptoprosopous (lep-tō-pros′ō-pus), *a.* [Gr. λεπτός, thin, small, + πρόσωπον, face, + *-ous*.] In *anthrop.*, having a skull with a facial index of 90 and over. [German anthropologists.] See *leptoprosopic*.

leptoprosopy (lep-tō-pros′ō-pi), *n.* [*leptoprosop-ous* + *-y*[3].] The quality or condition of being leptoprosopous. *W. R. Macdonell*, in Biometrika, March–July, 1904, p. 214.

leptopterous (lep-top′tẹ-rus), *a.* Having small, fine, delicate wings. *Encyc. Dict.*

Leptopuccinia (lep″tō-puk-sin′i-ă), *n.* [NL., < Gr. λεπτός, thin, + NL. *Puccinia*.] A division of the genus *Puccinia*, proposed by Schroeter to include those species which form only teleutospores.

leptorrhinian, *a.* **II.** *n.* A person or race having narrow nasal bones. *Deniker*, Races of Man, p. 63.

Leptosphæria (lep-tō-sfē′ri-ă), *n.* [NL. (Cesati and De Notaris, 1863), < Gr. λεπτός, thin, small, + σφαῖρα, sphere.] A large genus of pyrenomycetous fungi of the family *Pleosporaceæ*. The perithecia are small at first and embedded in the host, but finally become more or less superficial. The spores are elongate, three or more septate, and colored. Nearly 500 species have been described. *L. Doliolum* and many other species are found on dead herbaceous stems. *L. Tritici* and a few other species are regarded as the cause of certain plant-diseases.

Leptospondyli (lep-tō-spon′di-lī), *n. pl.* [NL., < Gr. λεπτός, thin, + σπόνδυλος, vertebra.] A subgenus of the stegocephalous *Amphibia* having a persistent notochord inclosed in constricted bony cylinders and simple conical hollow teeth. The group includes chiefly small lizards from the Carboniferous and Permian formations.

leptospondylous (lep-tō-spon′di-lus), *a.* [*Leptospondyl-us* + *-ous*.] Having the notochordal characters of the genus *Leptospondylus*.

leptosporangium (lep″tō-spō-ran′ji-um), *n.*; pl. *leptosporangia* (-ă). [NL., < Gr. λεπτός, slender, + NL. *sporangium*.] A sporangium of the leptosporangiate ferns, that is, one derived from a single epidermal cell.

leptostaphyline (lep-tō-staf′i-lin), *a.* [Gr. λεπτός, thin, small, + σταφυλή, the uvula.] In *anthrop.*, having a skull with a narrow palate the width of which is 80 per cent. or less of its length.

leptostaphylinic (lep″tō-staf-i-lin′ik), *a.* Same as ★*leptostaphyline*. *Jour. Anthrop. Inst.*, 1901, p. 258.

leptostaphyly (lep-tō-staf′i-li), *n.* [*leptostaphyl-ine* + *-y*[3].] The quality or condition of being leptostaphyline. *W. R. Macdonell*, in Biometrika, March–July, 1904, p. 237.

leptostracous (lep-tos′trā-kus), *a.* [Gr. λεπτός, thin, + ὄστρακον, shell.] Having a thin shell, as *Nebalia*.

Leptostroma (lep-tō-strō′mă), *n.* [NL. (Fries, 1815), < Gr. λεπτός, thin, + στρῶμα, layer (see *stroma*).] A genus of fungi, typical of the family *Leptostromataceæ*, having dimidiate pycnidia which suggest a thin stroma, whence the name. The pycnidia open by a more or less elongate slit. The spores are hyaline and one-celled. The species occur chiefly on dead leaves and stems. *L. punctiforme* is regarded as a parasite on leaves of the willow, rose, etc.

Leptostromataceæ (lep″tō-strō-mā-tā′sē-ē), *n. pl.* [NL., < *Leptostroma* (*Leptostromat-*) + *-aceæ*.] A family of *Fungi Imperfecti* of the order *Sphæropsidales*, characterized by the dimidiate or shield-shaped pycnidia.

Leptostrophia (lep-tō-strō′fi-ă), *n.* [NL., < Gr. λεπτός, thin, + στροφή, a turning, < στρέφειν, turn, twist.] A genus of Devonian *Brachiopoda* of the family *Strophomenidæ*, remarkable for its large plano-convex or flat shells. It has two pustulose diverging ridges in the pedicel-valve which bound the sides of the muscular area, and broad and flabellate cardinal scars.

Leptothyrium (lep-tō-thī′ri-um), *n.* [NL. (Kunze, 1823), < Gr. λεπτός, thin, + θυρεός, an oblong shield.] A genus of *Fungi Imperfecti* of the family *Leptostromataceæ*, closely related to *Leptostroma*, from which it differs chiefly in the irregular manner in which the pycnidia rupture. About 100 species have been described, mostly found on leaves. *L. acerinum* occurs on maple leaves in Europe.

leptynite (lep′ti-nīt), *n.* [F. *leptynite* (Haüy, 1822), irreg. < Gr. λεπτύνειν, grow thin, + *-ite*[2].] In *petrog.*, same as *granulite*.

leren, *n.* See ★*lleren*.

lern, lernd, lerning. Simplified spellings of *learn, learned, learning*.

lerpamylum (lėr-pam′i-lum), *n.* [*lerp* + Gr. ἄμυλον, fine flour.] A compound resembling manna, said to be present in lerp, the sweet exudation of the leaves of the Australian mallee, *Eucalyptus dumosa*.

lerp-insect (lėrp′in″sekt), *n.* Any one of a number of Australian homopterous insects of the family *Psyllidæ* whose larval cases are composed of a secretion known as 'lerp' or 'laap' and are eaten by the natives. The genera *Spondyliaspis* and *Cardiaspis* are especially noted.

lerret (ler′it), *n.* [Also *lerrett, lerrit;* etym. unknown.] A boat of great strength, built for the heavy seas: used about the Isle of Portland.

> The trip in the stern of the *lerret* had quite refreshed her. *T. Hardy*, Trumpet-Major, xxxiv.

leshalom (le-shä-lōm′), *n.* [Heb. (Yiddish, l'shō'lem): *le*, prep. to, unto, + *shalōm*, lit. peace.] A toast among the Jews. The one who treats says (in Yiddish), "*lehayim.*" The reply is, "*lesholem,*" "unto peace," equivalent to "your welfare." Sometimes both terms are used: as, "*lehayim u-lesholem,*" "to your life and peace."

lesion, *n.*—**Trophic lesion,** a morbid change due to alteration in the blood supply of the part, which causes a disturbance of nutrition.

Lesquerella (les-kẹ-rel′ă), *n.* [NL. (Watson, 1888), named in honor of Leo *Lesquereux*, an American botanist of Swiss birth.] A genus of plants of the family *Brassicaceæ*. See *Vesicaria* and *bladder-pod*, 2.

lessive (le-sēv′), *n.* [F. *lessive*, < L. *lixiva*, lye.] An adopted French name for lye: used mainly for an alkaline lye with soap, employed in washing.

lesson-piece (les′n-pēs), *n.* A piece of material on which to practice needlework. *N. E. D.*

leste (lās′tā), *n.* [Pg. *leste*, east wind: *l'*, the, *este*, east: see *east*.] The dry, hot, and dusty east wind of the Madeira Islands in the winter season.

lestiwarite (les-ti-wä′rīt), *n.* [*Lestiware*, Finland, + *-ite*[2].] In *petrog.*, a phanerocrystalline granular syenite composed of microperthite, with very subordinate amounts of pyroxene or amphibole. These rocks have also been called syenite-haplites, and are associated with nephelite-syenite in Norway and Finland. *Rosenbusch*, 1896.

Lestrigon (les-trī′gon), *n.*; pl. *Lestrigones* (les-trig′ō-nēz). [An early modern E. spelling of *Lestrygon*, < L. *Læstrȳgon, Lestrȳgon*, < Gr. Λαιστρυγών, pl. Λαιστρυγόνες, a legendary people.] In *Gr. legend*, one of a race of cannibal giants mentioned in Homer's Odyssey; hence, any inhuman monster.

Lestrigonian† (les-tri-gō′ni-ạn), *a.* and *n.* [L. *Læstrygonius*, < Gr. Λαιστρυγόνιος, < Λαιστρυγόνες: see ★*Lestrigon*.] **I.** *a.* Of or pertaining to the Lestrigones.

II. *n.* Same as ★*Lestrigon*.

Lesueuria (les-ū-ū′ri-ă), *n.* [NL., < *Lesueur*, a French naturalist.] The typical genus of the family *Lesueuridæ*. *Milne-Edwards*.

Lesueuridæ (les-ū-ū′ri-dē), *n. pl.* [NL., < *Lesueuria* + *-idæ*.] A family of lobate ctenophorans having the lobes and the lobe-windings of the vessels rudimentary, and the auricles long and ribbon-shaped. It contains the genus *Lesueuria*.

let[1], *v. t.*—**To let draw** (*naut.*), to slack away the sheets of the head-sails when tacking ship, so as to let the clues travel across the deck ready to be sheeted down again to leeward when on the new tack.—**To let go and haul** (*naut.*), when tacking a square-rigged vessel, to let go the fore-bowline and lee-head braces, and to haul around the head-yards.—**To let go by the run** (*naut.*). Same as *to let run* (which see, under *run*[1]).—**To let go under foot** (*naut.*), to let go (the anchor) so that it drops and remains directly beneath the hawse-pipe.—**To let in,** (*a*) To fit, as one timber or plank into another.—**To let into.** (*b*) To pitch into; 'go for.' [Slang.]—**To let off.** (*a*) To lease in portions; let. [Eng.] (*b*) In *cricket*, to miss a chance of catching (a batsman) out.—**To let** (one) **down gently,** to let one know something derogatory to himself (letting him down to a lower plane of self-esteem) without damaging his self-respect; spare.—**To let one's self go,** to abandon self-restraint; allow imagination, animal spirits, or emotion full course. [Colloq.]

> He fretted under the severe drudgery of copying plaster casts, and yearned "*to let himself go*" in a color way, . . . and so, . . . he set himself to painting that which his fancy dictated.
> *J. C. Van Dyke*, Modern French Masters, p. 133.

let[2], *n.* 2. In *lawn-tennis, hand-tennis*, and other games played with a net, a service-ball which strikes the top of the net and then goes into the proper court; also, any unforeseen or accidental hindrance of a like nature which the umpire may on appeal so designate.

Let., Lett. Abbreviations of *Lettish*.

let-down (let′doun), *n.* A blow to one's self-esteem; a 'come-down'; a circumstance calculated to let one down, or to act as a drawback. [Colloq.]

Lethal chamber, a chamber filled with noxious gases in which animals are put to death painlessly.—**Lethal coefficient.** See ★*coefficient*.

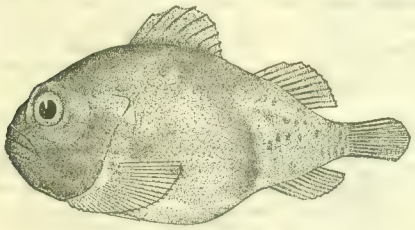
lethality, *n.* 2. Mortality.

lethalize (lē′thal-īz), *v. t.*; pret. and pp. *lethalized*, ppr. *lethalizing*. [*lethal* + *-ize*.] To put to death by placing in a lethal chamber.

Letharchus (lē-thär′kus), *n.* [NL., < Gr. λήθεσθαι, λανθάνειν, escape notice, + ἀρχός, rectum. The anal fin is wanting.] A genus of ophichthyoid eels found in rather deep water on the Florida coast.

letheomania (lē″thē-ō-mā′ni-ă), *n.* [Gr. λήθη, forgetfulness, + μανία, madness.] Addiction to a narcotic drug.

lether[2]**, lethern.** Simplified spellings of *leather, leathern*.



lethiferal (lē-thif′e-ral), *a.* [L. *lethum*, prop. *letum*, death, + *ferre*, bear, + *-al*[1].] Death-bringing; deadly; fatal.

> A singular loadstone for theologians, also, is the Beast of the Apocalypse, whereof, in the course of my studies, I have noted two hundred and three several interpretations, each *lethiferal* to all the rest.
> *J. R. Lowell*, Biglow Papers, 1st ser., vii.

lethomania, *n.* See ★*letheomania*.

Lethostole (le-thos′tō-lē), *n.* [NL., < Gr. λήθεσθαι, escape notice, + στολή, stole.] A genus of atherinoid fishes found in fresh waters of Mexico.

Lethotremus (le-thot′rē-mus), *n.* [NL., < Gr. *λήθεσθαι*, escape notice, + *τρῆμα*, aperture.] A

Lethotremus muticus.
(From Bulletin 47, U. S. Nat. Museum.)

genus of fishes of the family *Cyclopteridæ*, found on the north Pacific coast of North America.

letificant (lē-tif′i-kant), *a.* [L. *lætificans* (*-ant-*), ppr. of *lætificare*, make glad: see *letificate*.] Tending to stimulate or make cheerful: said of a medicine.

let-off, *n.* 3. A festive occasion; a let-off of youthful spirits.—4. Part of a property which is leased or let off. [Eng.]—5. A failure to utilize some manifest advantage in a game; for example, in *cricket*, the failure on the part of a fielder to get the batsman out when he has the opportunity. *N. E. D.*

Lett, *n.* 2. The Lettish language; Lettic. See *Lettish*.

letten (let′en), *p. a.* Let; rented; leased. [Rare.]

Lettenkohle (let′en-kō″lę), *n.* [G., < *letten*, loam, + *kohle*, coal.] In *geol.*, a division of the Keuper in the Triassic system in Germany. The name, though usually applied to the formation otherwise termed the *Kohlenkeuper*, has special reference to the thin seams of earthy coal which this formation contains.

letter[3], *n.*—**Before the letter** or **before letters.** See *proof before letter*, under *proof*.—**Chromatic letter.** Same as *chromatic type*.—**Letter of absolution,** in *eccles. law*, a writing whereby formerly an abbot dismissed a monk to another religious order.—**Letter of indication.** See ★*indication*.—**Letter of recall,** an official notice from one government to another, that an ambassador or other diplomatic representative sent by the former to the latter has been recalled.—**Letter of recredentials,** an official communication in reply to a ★*letter of recall* (which see). It is delivered to the recalled representative by the government to which he is accredited and addressed to the executive of the representative's country.—**Letters of safe-conduct,** in *law*, passports issued under the great seal of England to citizens of a country at war with her, whereby the bearers and their merchandise were free from molestation. English ambassadors can now issue passports having equal value.—**Letters of supplement.** See *supplement*.—**Letters requisitory.** Same as *letters rogatory* (which see). [Rare.]—**Night letter,** a telegraphic message of 50 words or less sent at a special (low) rate, if received before midnight, for delivery on the morning of the next business day.—**To affect the letter,** to devote oneself to alliteration.

> I will something *affect the letter*, for it argues facility.
> *Shak.*, L. L. L., iv. 2.

letter-ballot (let′ėr-bal″ọt), *n.* See ★*ballot*[1].

letter-bound (let′ėr-bound), *a.* Bound by the letter and not the spirit of a law, a text, etc.

letter-card (let′ėr-kärd), *n.* A card (not a postal card) which can be closed, stamped, and sent as a letter.

letter-head, *n.* 3. A postage-stamp. [Dialect, Eng.]

letter-high (let′ėr-hī), *a.* In *printing*, descriptive of an engraving in relief, properly mounted, as high as the type about it.

lettering, *n.* 3. Specifically, in *bookbinding*, the act or process of affixing the alphabetical letters to the notched front margin of an indexed book; also, the addition of the name of the book on its back.

lettering-block (let′ėr-ing-blok), *n.* The stamp, usually of engraved brass, which contains the letters stamped on the cover of a book.

lettering-book (let′ėr-ing-bůk), *n.* A draftsman's, card-writer's, or sign-painter's sample-book, showing styles and varieties of letters used in lettering and (sometimes) also the conventional signs used in map-making, surveys, etc.

lettering-pen (let′ėr-ing-pen), *n.* A steel or quill pen adapted to making letters for signs or on cards and maps.

lettering-templet (let′ėr-ing-tem″plet), *n.* A guide used in making letters on cards, signs, or maps with a pen or pencil. It is marked with the letters that can be formed with each of the angles in which the guide is cut.

lettering-triangle (let′ėr-ing-trī″ang-gl), *n.* A form of lettering-templet.

lettiga (le-tē′gä), *n.* [It. *lettiga*, *lettica*, < L. *lectica*, a litter, sedan: see *litter*, *n.*] A kind of sedan-chair, for two persons, who sit facing each other: carried on long poles by two mules. *W. Irving*, in Life and Letters, I. 114.

Lettonian (le-tō′ni-an), *a.* and *n.* Same as *Lettish*.

lettuce, *n.*—**American lettuce.** Same as *wild lettuce* (*b*).—**Arrow-leaved lettuce,** *Lactuca sagittifolia*, of eastern North America, the lanceolate-acuminate stem-leaves of which are sessile with a sagittate clasping base.—**Canada** or **Canadian lettuce.** Same as *wild lettuce* (*b*).—**Canker-lettuce,** the round-leaved wintergreen, *Pyrola rotundifolia*.—**Florida lettuce,** *Lactuca Floridana*, of the eastern and southern United States, with blue flowers and lyrate-pinnatifid leaves.—**Hairy lettuce.** Same as *red wood* ★*lettuce*.—**Indian lettuce.** (*b*) Same as *miner's* ★*lettuce*.—**Liverwort-lettuce.** Same as *canker-*★*lettuce*.—**Miner's lettuce,** *Claytonia perfoliata*, an annual American plant, ranging from British Columbia to Mexico and now established at one locality in Ohio. It is remarkable for the pair of large, connate upper leaves forming a cup out of which the panicle rises. It is used by the Indians as a salad plant and has long been grown in England for this use.—**Red wood lettuce,** *Lactuca hirsuta* of the eastern and southern United States, having reddish-yellow flowers, more or less hairy stems, and sinuate pinnatifid leaves. The involucre is often red or purple.—**Spanish lettuce.** Same as *miner's* ★*lettuce*.—**Tall lettuce.** Same as *wild lettuce* (*b*).—**Tall blue lettuce,** *Lactuca spicata* of eastern North America, a tall, blue-flowered species with large, deeply pinnatifid or lobed leaves.—**Western lettuce,** *Lactuca Ludoviciana*, of the prairies and plains of the western United States. It is a biennial plant with spinulose-denticulate leaves and showy yellow heads, the rays reflexed.

Miner's Lettuce (*Claytonia perfoliata*). One third natural size.

lettuce-shark (let′is-shärk), *n.* See *shark-moth*.

lettuce-water (let′is-wâ″tėr), *n.* A decoction of crushed lettuce-leaves.

leubra, *n.* Same as ★*lubra*.

Leucæthiop, *n.* See ★*Leucethiop*.

leucæthiopia, *n.* See ★*leucethiopia*.

leucæthiopic, *a.* See ★*leucethiopic*.

leucaniid (lū-kā′ni-id), *n.* and *a.* **I.** *n.* A member of the lepidopterous family *Leucaniidæ*.

II. *a.* Having the characters of or belonging to the family *Leucaniidæ*.

Leucascidæ (lū-kas′i-dē), *n. pl.* [NL., < *Leucascus* + *-idæ*.] A family of heterocœlous calcareous sponges having the flagellated chambers branched and opening into the exhalant canals which converge toward the oscula, the outer ends being covered over by a dermal poriferous membrane, and the skeleton being composed of irregular radiate spicules. It includes the genus *Leucascus*.

Leucascus (lū-kas′kus), *n.* [NL. (Dendy, 1892), < Gr. *λευκός*, white, + *ἀσκός*, a bag.] The typical genus of the family *Leucascidæ*.

leucaurin (lū-kâ′rin), *n.* A colorless compound, $CH(C_6H_4^4OH)_3$, prepared by the reduction of aurin by means of zinc dust and sodium hydroxid. It crystallizes in prisms and is readily reconverted into aurin. Also called *triphenylolmethane*.

leucein (lū′sē-in), *n.* [Gr. *λευκός*, white, + *-ein*.] One of a group of substances related to the leucins, but differing from them in having two atoms of hydrogen less: they are possibly amido-acrylic acids.

Leucethiop (lū-sē′thi-op), *n.* [L. *Leucæthiopes*, otherwise *Leucocæthiopes*, and *Leucœ Æthiopes*, 'white Ethiops,' < Gr. *λευκός*, white, + *Αἰθίοπες*, Ethiopians: see *Ethiop*.] 1. One of a people located by Pliny south of the Mauritanian Getulians: identified by some authors as the nanistic people of the northern Sahara.—2. [*l. c.*] An albino negro; also, more generally, an albino.

leucethiopia (lū-sē-thi-ō′pi-ą), *n.* [NL. *leucæthiopia*, < *leucothiop*, *n.*, 2.] Albinism occurring in negroes.

leucethiopic (lū-sē-thi-ō′pik), *a.* [*leucæthiop* + *-ic*.] Characterized, as a negro, by leucethiopia or albinism.

leucic (lū′sik), *a.* [Gr. *λευκός*, white, + *-ic*.] Pertaining to leucin or leucic acid.—**Leucic acid,** a colorless compound, $CH_3(CH_2)_3CH(OH)COOH$, prepared by the action of nitrous acid on leucin. It crystallizes in needles, melts at 73° C., and sublimes at 100° C. Also called *2-hexanolic acid*.

leucinic (lū-sin′ik), *a.* [*leucin* + *-ic*.] Derived from leucin: as, *leucinic* acid.

leucinosis (lū-si-nō′sis), *n.* [NL., < *leucin* + *-osis*.] Acute yellow atrophy of the liver, in which there is an excessive production of leucin.

leucite, *n.* 1. This mineral has been shown by C. Klein (1903) to be an essential constituent of the meteoric stone which fell at Schafstädt, in Saxony, in June, 1861. It is associated with anorthite and augite in a brown, glassy ground-mass, and this type has been named *leucituranolite*. Leucite probably also occurs in the Pavlovka meteoric stone (1882).

2. A small yellowish body found in the cotyledons of a germinating plant that has not been exposed to sunlight.

leucitis (lū-sī′tis), *n.* [NL., < Gr. *λευκός*, white, + *-itis*.] Same as *sclerotitis*.

leucitophyric (lū″si-tō-fir′ik), *a.* [*leucite* + (*por*)*phyr*(*itic*) + *-ic*.] Noting a porphyritic rock whose phenocrysts are leucite. *Dana*, Manual of Geol. (4th ed.), p. 77.

leucituranolite (lū″sit-ū-ran′ō-līt), *n.* [Gr. *λευκός*, white, + *-ιτης*, E. *-ite*[2], + *οὐρανός*, heaven, + *λίθος*, stone.] A rock type represented in the meteoric stone of Schafstädt, Saxony (1861). See ★*leucite*, 1, and ★*meteorite*.

Leuckartia (lū-kär′ti-ą), *n.* [NL., named after Prof. *Leuckart* of Leipzig.] The typical genus of the family *Leuckartiidæ*. *Monicz*, 1878.

Leuckartiidæ (lū-kär-tī′i-dē), *n. pl.* [NL., < *Leuckartia* + *-idæ*.] A family of dibothridiate cestoid worms, of the order *Pseudophyllidea*, lacking evident bothria. It includes the genera *Leuckartia* and *Blanchardella*, parasitic in fishes.

leuco-agglutinin (lū″kō-a-glō′ti-nin), *n.* An agglutinin directed against the leucocytes.

leucobase (lū′kō-bās), *n.* A colorless base which gives a dye on oxidation and which is formed by the reduction of the dye.

leucoblastic (lū-kō-blas′tik), *a.* Relating to a leucoblast. *Buck*, Med. Handbook, II. 23.

leuco-body (lū′kō-bod″i), *n.* Same as ★*leuco-compound*.

leucochalcite (lū-kō-kal′sīt), *n.* [Gr. *λευκός*, white, + *χαλκός*, copper, + *-ite*[2].] A basic copper arseniate which occurs in white silky acicular crystals.

leucochroi (lū-kok′rō-ī), *n. pl.* [NL. pl., < Gr. *λευκόχροος*, of white complexion, < *λευκός*, white, + *χρόα*, color, complexion.] In *anthrop.*, persons of a white skin.

> In this essay ["Geographical Distribution of Mankind"] Mr. Dallas proposes *Leucochroi*, Mesochroi and Æthochroi as substitutes for White, Yellow and Black respectively. *Keane*, Ethnology, p. 234, note.

leucochroic (lū-kō-krō′ik), *a.* [As *leucochroi* + *-ic*.] 1. In *anthrop.*, having a light-colored skin: contrasted with ★*mesochroic* and *æthochroic* ('black-colored').—2. Abnormally light in color; albinotic: contrasted with *melanochroic*.

leucocidic (lū-kō-sid′ik), *a.* [*leuco*(*cyte*) + L. *-cida*, < *cædere*, kill. + *-ic*.] Causing the destruction of leucocytes.

leucocidin (lū-kō-sid′in), *n.* [*leucocid-ic* + *-in*[2].] A bacterial cytotoxin which causes the destruction of leucocytes.

leuco-compound (lū-kō-kom′pound), *n.* A colorless organic compound formed by the reduction of a dye and giving the dye again by oxidation.

leucocratic (lū-kō-krat′ik), *a.* [Gr. *λευκός*, white, + *κρατεῖν*, dominate, + *-ic*.] In *petrog.*, a term proposed by Brögger (1896) to designate igneous rocks characterized by a preponderance of light-colored minerals, or rather of minerals that are normally light-colored (chiefly feldspar and feldspathic minerals, and quartz), as contrasted with those (*melanocratic*) in which there is a preponderance of dark-colored minerals.

leucocyclite (lū-kō-sik′līt), *n.* [Gr. *λευκός*, white, + *κύκλος*, circle, + *-ite*[2].] A variety of apophyllite. See ★*chromocyclite*.

leucocytal (lū′kō-sī-tal), *a.* [*leucocyte* + *-al*[1].] Same as *leucocytic*.

leucocythemic, leucocythæmic (lū″kō-sī-thē′mik), *a.* Same as *leucemic*.

Leucocytic crystals. See ★*crystal*.

leucocytiform (lū-kō-sit′i-fôrm), *a.* [*leucocyte* + L. *forma*, form.] In *histol.*, shaped like a leucocyte, as the cells found in the reticular tissue of the phagocytic organs of the *Gryllidæ* and certain *Locustidæ*.

leucocytolysis (lū″kō-sī-tol′i-sis), *n.* [*leucocyte* + Gr. *λύσις*, dissolution.] The destruction of leucocytes by specific leucocytotoxins.

leucocytolytic (lū-kō-sī-tō-lit′ik), *a.* [*leucocytolysis* (*-lyt-*) + *-ic.*] Having reference to the action of leucocytotoxins.

leucocytopenia (lū″kō-sī-tō-pē′ni-ą), *n.* [NL., < *leucocyte* + Gr. *πενία*, poverty.] Same as ★*leucopenia*.

leucocytopenic (lū″kō-sī-tō-pen′ik), *a.* [*leucocytopenia* + *-ic.*] In *pathol.*, of or relating to a decreased number of leucocytes, or colorless blood-corpuscles.

leucocytosis, *n.* 2. The number, actual or relative, of white corpuscles in a given specimen of blood, an excess being designated *hyperleucocytosis*, and a number below the normal *hypoleucocytosis* or *leucopenia*.

The highest leucocyte count observed in this case was 22,000, and occurred on January 10; the average had been 17,000, and at present the *leucocytosis* was 16,600.
Med. Record, Jan. 24, 1903, p. 159.

leucocytotic (lū″kō-sī-tot′ik), *a.* [*leucocytosis* (*-ot-*) + *-ic.*] Of or pertaining to leucocytosis, or the production of leucocytes.

leucocyturia (lū″kō-sī-tū′ri-ą), *n.* [NL., < *leucocyte* + Gr. *οὖρον*, urine.] The presence of leucocytes in the urine.

leucoderivative (lū″kō-dē-riv′ą-tiv), *n.* Same as ★*leuco-compound*.

leucodermatous (lū-kō-dėr′mą-tus), *a.* [Gr. *λευκός*, white, + *δέρμα*(*τ-*), skin, + *-ous.*] Marked by deficient pigment in the skin.

leucodrin (lū′kō-drin), *n.* [*Leucod*(*endron*) + *-in*².] A colorless, very bitter, levorotatory compound, $C_{18}H_{20}O_9$, contained in the leaves of *Protea concinna* (*Leucodendron concinnum* of Robert Brown). It crystallizes in prisms and melts at 212° C.

leucoencephalitis (lū″kō-en-sef-ą-lī′tis), *n.* [NL., < Gr. *λευκός*, white, + *ἐγκέφαλος*, brain, + *-itis.*] Same as ★*forage-poisoning*.

leucogallol (lū-kō-gal′ol), *n.* [Gr. *λευκός*, white, + E. *gallol.*] A colorless compound, $C_{18}H_8O_{12}Cl_{12}.2H_2O$, prepared by the action of chlorin on pyrogallol. It crystallizes in small needles which melt at 104° C.

leucolinic (lū-kō-lin′ik), *a.* [*leucoline* + *-ic.*] Pertaining to leucoline or leucol.—**Leucolinic acid,** a colorless compound, $C_9H_9NO_3$, prepared by the oxidation of quinoline from coal-tar (leucoline). It crystallizes in needles which melt at 162° C.

leucolysin (lū-kol′i-sin), *n.* [*leucolys-is* + *-in*².] A substance that produces leucolysis.

leucolysis (lū-kol′i-sis), *n.* [*leuco*(*cyte*) + Gr. *λύσις*, dissolution.] The destruction of leucocytes by means of specific leucotoxins or leucolysins.—**Venom leucolysis,** the destruction of leucocytes by means of snake-poison.

leucolytic (lū-kō-lit′ik), *a.* [*leucolysis* (*-lyt-*) + *-ic.*] Causing the destruction of leucocytes.

leucomaine, *n.*—**Toxic leucomaine,** a leucomaine having toxic properties.

leucomelanic (lū-kō-me-lan′ik), *a.* Same as *leucomelanous*.

leucomyelitis (lū″kō-mī-e-lī′tis), *n.* [NL., < Gr. *λευκός*, white, + *μυελός*, marrow, + *-itis.*] Inflammation of the spinal cord confined wholly or chiefly to the white matter.

Leucon (lū′kon), *n.* [NL. (Kröyer, 1846), < Gr. *λευκός*, white.] 1. The typical genus of the family *Leuconidæ*.—2. [*l. c.*] Any sponge belonging to the group *Leuconaria*.

leuconecrosis (lū″kō-ne-krō′sis), *n.* [NL., < Gr. *λευκός*, white, + NL. *necrosis.*] A form of dry gangrene in which the dead tissue is white instead of black.

leuconic (lū-kon′ik), *a.* [Gr. *λευκός*, white, + *-n-* + *-ic.*] Noting an acid, a colorless sweet compound, $C_5H_8O_9$, prepared by the action of chlorin or nitric acid on an alkali croconate. It crystallizes, with $1H_2O$, in small needles which become anhydrous at 100° C.

Leuconidæ (lū-kon′i-dē), *n. pl.* [NL., < *Leucon* + *-idæ.*] A family of cumacean crustaceans which have an elongated body and no telson. It contains the genera *Leucon*, *Eudorella*, and *Eudorellopsis*.

leuconoid (lū′kō-noid), *a.* [*leucon* + *-oid.*] Pertaining to or resembling a leucon: as, the *leuconoid* type of canal system in sponges. Contrasted with ★*syconoid*.

Leuconostoc (lū-kō-nos′tok), *n.* [NL. (Van Tieghem, 1878), < Gr. *λευκός*, white, + E. *nostoc.*] A genus of bacteria. The cells are spherical and united in chains which are inclosed in a slimy envelop. *L. mesenterioides* occurs in beet-juice and syrups, forming gelatinous masses.

leuconuclein (lū-kō-nū′klē-in), *n.* [Gr. *λευκός*, white, + NL. *nucleus* + *-in*².] A decomposition-product of nucleohiston.

leuconychia (lū-kō-nik′i-ą), *n.* [NL., < Gr. *λευκός*, white, + *ὄνυξ* (*ὀνυχ-*), nail.] The condition of having white lines or patches beneath the nails.

leucopenia (lū-kō-pē′ni-ą), *n.* [*leuco*(*cyte*) + Gr. *πενία*, poverty.] A diminution in the number of white corpuscles in the blood. Also called *hypoleucocytosis*.

The *leucopenia* is of diagnostic value, especially in children, in whom most febrile affections produce a leucocytosis. More data are needed to determine the priority of appearance of a "positive" serum reaction or a *leucopenia*.
Med. Record, July 11, 1903, p. 66.

leucopenic (lū-kō-pen′ik), *a.* [*leucopenia* + *-ic.*] Relating to or characterized by leucopenia or paucity of the white corpuscles of the blood.

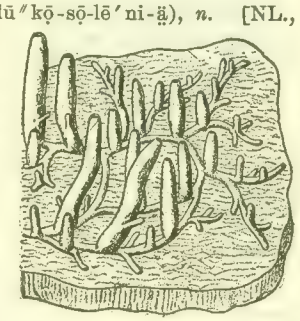
leucophanite (lū-kof′ą-nīt), *n.* [*leucophane* + *-ite*².] Same as *leucophane*.

leucophlegmasia (lū″kō-fleg-mā′si-ą), *n.* [NL., prop. *leucophlegmatia:* see *leucophlegmacy.*] Same as *leucophlegmacy*.

leucophœnicite (lū-kō-fen′i-sīt), *n.* [Gr. *λευκός*, white, + *φοινίξ* (*φοινικ-*), purple, + *-ite*².] A basic orthosilicate of manganese chiefly, also zinc and calcium, related to humite in formula. It occurs in crystalline masses of a raspberry-red color at Franklin Furnace, New Jersey.

leucophyllous (lū-kō-fil′us), *a.* [Gr. *λευκόφυλλος*, white-leaved (< *λευκός*, white, + *φύλλον*, leaf), + *-ous.*] In *bot.*, having white leaves.

leucophyre (lū′kō-fīr), *n.* [Gr. *λευκός*, white, + (*por*)*phyr*(*y*).] In *petrog.*, a name given by Gümbel (1874) to certain light-colored altered diabases, with saussuritized feldspars, pale-green augite, and much chlorite. The name having fallen into disuse it has been proposed in the quantitative system of classification of igneous rocks (1902) to apply it, in the classification for field use, to any light-colored porphyry, in distinction to a dark-colored porphyry (*melaphyre*).



leucorrhagia (lū-kō-rā′ji-ą), *n.* [NL., < Gr. *λευκός*, white, + *-ραγια*, < *ῥηγνύναι*, break.] Profuse leucorrhea.

leucoryx (lū′kō-riks), *n.* [NL., < Gr. *λευκός*, white, + *ὄρυξ*, an antelope.] The specific name of the saber-horned antelope, *Oryx leucoryx*, adopted as a common name.

leucosin (lū′kō-sin), *n.* [Gr. *λευκός*, white, + *-ose* + *-in*².] An albuminous substance found in various cereals.

leucosism (lō′kō-sizm), *n.* [Gr. *λεύκωσις*, a whitening, a white spot, < *λευκοῦν*, whiten, < *λευκός*, white.] The presence of white coloring in parts of the bodies of animals in which the normal coloring is not white; partial albinism.

Leucosolenia (lū″kō-sō-lē′ni-ą), *n.* [NL., < Gr. *λευκός*, white, + *σωλήν*, pipe.] The typical genus of the family *Leucosoleniidæ*. *Bowerbank*, 1862.

Creeping colony of *Leucosolenia variabilis*. H., with numerous erect, and for the most part simple, oscular tubes, arising from a basal creeping stolon. About four times natural size. (From Lankester's "Zoology.")

Leucosoleniidæ (lū-kō-sō-lē-nī′i-dē), *n. pl.* [NL., < *Leucosolenia* + *-idæ.*] A family of homocœlous, calcareous sponges having an erect form, with monaxon spicules always present, the triradiate, if present, alate, the collar-cells with an apical nucleus, and the larva an amphiblastula. It contains the genera *Leucosolenia* and *Ascyssa*.

leucosphenite (lū-kō-sfen′īt), *n.* [Gr. *λευκός*, white, + *σφήν*, wedge, + *-ite*².] A titanosilicate of barium and sodium, which occurs in wedge-shaped monoclinic crystals, white to grayish blue in color, with vitreous to pearly luster: obtained from southern Greenland.

leucosphere (lū′kō-sfēr), *n.* [Gr. *λευκός*, white, + *σφαῖρα*, sphere.] A name coined by Lockyer for the inner portion of the sun's corona: so called because of its whiteness, in contrast with the scarlet chromosphere.

leucospheric (lū-kō-sfer′ik), *a.* [*leucosphere* + *-ic.*] Of or pertaining to the leucosphere.

leucotephrite (lū-kō-tef′rīt), *n.* [*leucite* + *tephrite.*] Same as *leucite-tephrite*. See *tephrite*. *Nature*, March 24, 1904, p. 492.

leucotin (lū′kō-tin), *n.* [Gr. *λευκός*, white, + E. *coto* + *-in*².] In *chem.*, a crystalline substance which forms the chief constituent of the extract of paracoto bark. See *Coto bark*.

leucotoxic (lū-kō-tok′sik), *a.* [*leucotox-in* + *-ic.*] Same as ★*leucolytic*.

leucotoxin (lū-kō-tok′sin), *n.* [Gr. *λευκός*, white, + E. (*cyto*)*toxin.*] A cytotoxin specifically directed against leucocytes.

leucotrichia (lū-kō-trik′i-ą), *n.* [NL., < Gr. *λευκός*, white, + *θρίξ* (*τριχ-*), hair.] Marked diminution or absence of pigment in the hair.

leucoturic (lū-kō-tū′rik), *a.* [Gr. *λευκός*, white, + (?) L. *tus* (*tur-*), incense, + *-ic.*] Noting an acid, a colorless crystalline compound, $C_6H_6O_6N_4$, prepared by the reduction of parabanic acid in acid solution.

leukemia, leukæmia (lū-kē′mi-ą), *n.* Same as *leucemia*.

leukopenia, *n.* Same as ★*leucopenia*.

Leuresthes (lū-res′thēz), *n.* [NL., said to allude to the toothless jaws, irreg. < Gr. *λευρός*, smooth, + *ἐσθίειν*, eat.] A genus of atherinoid fishes found on the coast of California.

Leuroglossus (lū-rō-glos′us), *n.* [NL., < Gr. *λευρός*, smooth, + *γλῶσσα*, tongue.] A genus

Leuroglossus stilbius.
(From Bulletin 47, U. S. Nat. Museum.)

of fishes of the family *Argentinidæ*, found in rather deep water off the coast of California.

leva (lā′vą), *n.* [Bulg.] A current silver coin of Bulgaria, of the value of 20 cents. One hundred stotinki equal one leva.

levancy (lev′ąn-si), *n.* [See *levant*¹.] The act or state of rising up. See *levant and couchant*, under *couchant*.

It may be measured, like a manorial right, by *levancy* and couchancy, or it may be limited to a fixed number of animals.
Encyc. Brit., XXVII. 168.

levant², *n.* 4. In *leather-manuf.*, artificial blood used instead of real blood for obtaining a perfect black. *Mod. Amer. Tanning*, p. 109.

Levantine stage. See ★*stage*.

levator, *n.*—**Levatores capitis,** in *entom.*, the extensor muscles of the head. There are two pairs: one arises from the middle of the pronotum, diverges, and is inserted on the anterior upper margin of the occipital foramen; the other arises from the prophragma and is inserted near the middle of the upper margin of the occipital foramen. This applies to the European Maybeetle, *Melolontha vulgaris*, and doubtless to many other *Coleoptera*.

levee¹, *n.* 3. In *irrigation*, one of the small continuous ridges of earth surrounding the fields, or compartments, of land that is to be irrigated. The levees are usually from three to five feet wide at the bottom, and a foot or more in height, being broad and low, so that wheeled agricultural implements can pass over them without injury.

levee-check (le-vē′chek), *n.* Same as ★*check*¹, 20.

level¹, *n.* 1. (*b*) The correction for level of an astronomical instrument; the deviation of its axis from exact horizontality. *Science*, Jan. 4, 1901, p. 13.—4. (*b*) In *landscape-gardening*, one of the horizontal surfaces in which an irregular piece of land may be arranged. By the use of different levels the designer may place various features of his design above or below the eye.—**Level of no strain,** a neutral surface, within the crust of the earth, in which the strains due to temperature and the action of gravity neutralize each other.—**Piezometric level,** the relative level or altitude of two layers of air measured in standard barometric pressures, as distinguished from *orometric levels*, which are measured in linear units; or *thermometric levels*, which are measured in temperature units; or *pycnometric levels*, which are measured in density units.

level¹, *v. t.*—**To level out** (*naut.*), to continue a horizontal line from a given base or point.

levelage (lev′el-āj), *n.* [*level*¹ + *-age.*] In *mining*, leveling.

level-constant (lev′el-kon″stant), *n.* The deviation from exact horizontality of the axis of an astronomical instrument. It should be sensibly constant if the instrument is well made and firmly mounted. *Science*, Jan. 4, 1901, p. 13.

level-course (lev′el-kōrs), *a.* In *mining*, in the direction of the strike; at right angles to the line of dip or rise.

leveler, *n.* **3.** [*cap.*] (*b*) One of a secret society of rebels in Ireland in the latter half of the eighteenth century: named from their principles and the leveling of park palings and walls, practised by them.—**6.** In *currying*, a composition used to eradicate the grease before leather is dyed. *Mod. Amer. Tanning*, p. 151.—**7.** In *golf*, a hole of such length that no player can reach the green in one stroke and any player can reach it in two strokes.—**8.** A person who uses an engineer's level; a member of an engineering or surveying party.

level-error (lev′el-er″ọr), *n.* In work with astronomical and geodetic instruments, the small error in a quantitative observation made with a transit instrument due to the fact that the horizontal axis is not truly level.

level-free (lev′el-frē), *a.* In *mining*, drained by a water-level.

leveling, *n.*—**Geodetic leveling**, the method of determining the difference of level or elevation between two distant points on the earth's surface, by observing at one point the angle of elevation or depression of the other and calculating therefrom the vertical lineal distance of one point above the other after correcting for refraction and for curvature of the earth.

leveling-machine (lev′el-ing-mą-shēn″), *n.* In *shoe-manuf.*, a machine for pressing down the sole of a shoe while on the last, to give the shoe its correct form. Some machines employ a roll that passes over the sole of the shoe under heavy pressure. In others, direct pressure is used. Also called *beating-out machine.*

leveling-stand (lev′el-ing-stand), *n.* An instrument for supporting glass plates or vessels in a horizontal position.

level-line (lev′el-līn), *n.* In *naval arch.*, the curved line cut by a horizontal plane on the surface of the hull. A series of such lines cut by equidistant horizontal water-planes is used to define the form of the vessel in the half breadth plan of the sheer-draft. Also called *water-line.*

levelman (lev′el-mąn), *n.* Same as ★*leveler*, 8.

level-point (lev′el-point), *n.* **1.** Any fixed point, as a bench-mark, stake, point of rock, or point on any permanent material or structure, whose elevation above a given datum, as the sea-level, is determined and referred to in comparisons of elevations.—**2.** One of two or more points having the same elevation above sea-level.

level-stone (lev′el-stōn), *n.* In *mining*, one of the stones on the surface marking the direction of levels underground.

lever[1], *n.*—**Change-speed lever.** See ★*change-speed.*—**Compensating-lever,** a beam or lever with equal or unequal arms, used to obtain a mean effect of two equal or unequal efforts. In the locomotive the weight of the frame is applied at the fulcrum of such a lever, and the ends of the lever are attached to the springs which transmit the load on each to the axle-bearing. Any unequal reaction of the track is followed by a descent of one or the other end of the lever, and hence the load on each spring is always the same, no matter how the track-surface varies. This compensating-lever is usually called the *equalizing-lever*, and it not only mitigates shocks by dividing them between the two springs but also delivers to each wheel its share of the weight for adhesion, and slipping is lessened. The whiffletree of a two-horse wagon is a compensating-lever. The arms may be unequal, if the loads are unequal.—**Dead lever.** See *live lever*, under *live*[2].—**Equalizing-lever.** See *compensating-*★*lever.*—**Locking-lever,** a lever connected with the faller of a spinning-mule, which locks the faller in position at the beginning of the winding of the yarn on the cop or bobbin.—**Mendoza lever,** a hinged lever on a cotton-spinning mule connected with the backing-off motion of the spindle-carriage.—**Optical lever,** a device for the measurement of angles by means of a beam of light reflected from a mirror, the amount of deflection being shown on a scale over which the light travels. Such a lever is used in the tangent galvanometer.

lever-fly (lev′ėr-flī), *n.* A machine for punching or shearing metal plates, in which a constantly running fly-wheel is temporarily connected to the punch or shear by moving a lever; a power-punch.

lever-motion (lev′ėr-mō″shọn), *n.* A motion transmitted by one or more levers; a motion taken from a moving lever.

leverrierite (le-ver′i-ėr-īt), *n.* [Named for *Le Verrier*, a French mining engineer.] A hydrated silicate of aluminium, allied to kaolinite: it occurs at several localities in France.

lever-scales (lev′ėr-skālz), *n. pl.* Same as *steelyard*[2].

lever-shears (lev′ėr-shērz), *n. sing.* and *pl.* Hand- or power-shears, for cutting metal, in which the necessary force is obtained by the use of levers.

leviathanic (lē-vī-ą-than′ik), *a.* Like a leviathan; vast or monstrous.

levir (lē′vėr), *n.* [L. *levir*, brother-in-law.] A brother-in-law; a male relative of a man who, after the latter's death, has the right, and the duty, to marry his widow.

levirate, *n.* **II.** *a.* Of or pertaining to the levirate: as, *levirate* marriage; *levirate* law.

Levit. An abbreviation of *Leviticus.*

levitant (lev′i-tạnt), *n.* [*levit-ate* + *-ant.*] One who exhibits or professes to exhibit the spiritualistic phenomena of levitation.

levitative (lev′i-tā-tiv), *a.* [*levitate* + *-ive.*] Having the power of using or causing other things to rise in the air; having the alleged power of levitation.

Leviticism (lē-vit′i-sizm), *n.* [*Levitic* + *-ism.*] Same as *Levitism.*

levocamphene, lævocamphene (lē″vọ-kam-fēn′), *n.* See ★*camphene*, 1.

levo-compound, lævo-compound (lē′vọ-kom″pound), *n.* In *chem.*, that isomeric form of a substance which produces left-handed rotation of the plane of polarization of light.

levogyral, lævogyral (lē-vọ-jī′rąl), *a.* Same as *levogyrate.*

levolactic, lævolactic (lē-vọ-lak′tik), *a.* [L. *lævus*, left, + E. *lactic.*] Noting an acid, the variety of lactic acid which rotates the plane of a ray of polarized light to the left.

levoracemate, lævoracemate (lē″vọ-ras′ē-māt), *n.* [L. *lævus*, left, + E. *racema* + *-ate*[1].] A salt of levotartaric acid.

levorotation, lævorotation (lē″vọ-rō-tā′shọn), *n.* [L. *lævus*, left, + E. *rotation.*] The rotation of the plane of polarization of light toward the left.

A minute difference in the *lævorotation* of two fractions seems insufficient evidence for the assumption that aromadendral exists in the oil of E. corymbosa.
Nature, April 2, 1903, p. 525.

levosin, lævosin (lev′ọ-sin), *n.* [? L. *lævis*, smooth, + *-ose* + *-in*[2].] A colorless amorphous compound, $(C_6H_{10}O_5.H_2O)_4$, obtained from grain. It becomes anhydrous at 110° C., and melts at about 160° C.

levotartaric, lævotartaric (lē″vọ-tär-tar′ik), *a.* [L. *lævus*, left, + E. *tartaric.*] Noting an acid, a form of tartaric acid which turns the plane of polarized light to the left.

levotartrate, lævotartrate (lē-vọ-tär′trāt), *n.* [*lævotart(a)r(ic)* + *-ate*[1].] A salt of levotartaric acid.

levulan, lævulan (lev′ū-lan), *n.* [*levul(ose)* + *-an.*] A colorless, amorphous, levorotatory carbohydrate, $C_6H_{10}O_5$, found in beet-sugar molasses. It is quantitatively converted into levulose by boiling with dilute acids, and melts at about 250° C.

levulosan, lævulosan (lev-ū-lō′san), *n.* [*levulose* + *-an.*] A colorless syrup, $C_6H_{10}O_5$, prepared by rapidly heating cane-sugar at 160° C. It is optically inactive, and is converted into levulose by boiling with water.

levulosuria, lævulosuria (lev″ū-lō-sū′ri-ą), *n.* [*levulose* + Gr. *οὖρον*, urine.] Presence of levulose in the urine when voided.

levynite (lev′i-nīt), *n.* [*levyne* + *-ite*[2].] Same as *levyne.*

Lewisian (lū-is′i-ąn), *a.* Noting the oldest rocks in Great Britain: so named by Murchison from the island of Lewis where they are exposed. They consist chiefly of gneisses similar to the Laurentian types of North America. See *Lewisian* ★*group.*

These lines of movement traverse the *Lewisian* plateau in various directions, producing planes of disruption, molecular rearrangement of the minerals and the development of foliation.
Rep. Brit. Ass'n Advancement of Sci., 1901, p. 617.

lewisite (lū′is-īt), *n.* [Named for Professor W. J. *Lewis* of Cambridge.] A titano-antimonate of calcium occurring in minute yellow to brown octahedrons: found in the gravels of Tripuhy, Minas Geraes, Brazil.

Lewis's counter-gambit. See ★*counter-gambit.*

lewisson (lū′i-sọn), *n.* Same as *lewis*, 1.

lex, *n.* **2.** In *numis.*, the money standard fixed by imperial or other constituted authority. *W. C. Hazlitt.*

Lexell's circle. See ★*circle.*

lexiarchus (lek-si-är′kus), *n.*; pl. *lexiarchi* (-kī). [Gr. *ληξίαρχος*, < *λῆξις*, assignment by lot, + *ἀρχειν*, rule.] One of a board of six officers at Athens who attended to the registration of citizens, assigned the young men to their place on the list of the deme, and were stationed at the entrance to the Pnyx, to prevent the intrusion of those who were not citizens. They were assisted by thirty armed officers. *Jour. Hellenic Studies*, VIII. 107.

lexic (lek′sik), *a.* [Gr. *λεξικός*, of or for words, < *λέξις*, a saying, speech, phrase, word, a particular word, < *λέγειν*, say, speak: see *lexicon*, etc.] Of or pertaining to words, as to the vocabulary of a language; consisting of words; lexical.

Primitive languages are essentially structural or morphologic, only incidentally *lexic*. . . . With the attainment of writing, the function of linguistic association largely disappears, and speech becomes essentially *lexic*, only incidentally morphologic.
Rep. Bur. Amer. Ethnol., 1897–98, p. 832.

lexicalic (lek-si-kal′ik), *a.* Same as *lexical.* *G. P. Marsh*, Lect. Eng. Lang., p. 141.

lexicog. An abbreviation (*a*) of *lexicographer*; (*b*) of *lexicography.*

lexicografer, lexicografy. Amended spellings of *lexicographer, lexicography.*

lexigraphically (lek-si-graf′i-kạl-i), *adv.* In such a manner that each character represents a word.

ley[2], *n.* *Ley* in this spelling (see *lea*[1]) is used specifically of a plantation of grasses or other plants grown for their herbage (clovers, etc.), to serve either as meadow or as pasture. Leys are planned for one or a few years or for permanency, their composition being governed accordingly. [Great Britain.]

The extended duration of the *ley* justifies the addition of timothy and an increase of cocksfoot.
M. H. Sutton, Permanent and Temporary Pastures, [p. 125.

Leyden's crystals. Same as *Charcot's crystals* (which see, under *crystal*).

L. F. P. S. An abbreviation of *Licentiate of the Faculty of Physicians and Surgeons.*

L. G. An abbreviation (*a*) of *Life Guards*; (*b*) of *Low German* (often *LG.*).

L. Gr. An abbreviation of *Late Greek* (often *LGr.*).

L. H. A. An abbreviation of *Lord High Admiral.*

L. H. C. An abbreviation of *Lord High Chancellor.*

lhiamba (lē-äm′bä), *n.* [Native African name.] Indian hemp, *Cannabis Indica.* See *bhang*, ★*dagga*, *Cannabis* and *hashish.*

The imported gin keeps the African . . . from his worse intoxicant, *lhiamba* (Cannabis Indica).
Mary Kingsley, West African Studies, p. 667.

L. H. T. An abbreviation of *Lord High Treasurer.*

L. I. An abbreviation (*a*) of *Light Infantry*; (*b*) of *Licentiate of Instruction*; (*c*) of *Long Island.*

liana, *n.* In *phytogeog.*, a liana is a plant which roots in the ground and, by means of long stems with long internodes and the assistance of various devices, climbs over other plants and, more rarely, over rocks. The name was formerly given only to woody plants; but its use has been broadened to include herbaceous annuals and perennials, thus becoming synonymous with *climber.* See ★*leaf-climber*, ★*root-climber*, ★*scrambler*, 2, *twiner* (*b*), and phrases under ★*tendril-climber.*

liangle, *n.* Same as ★*leeangle.*

Liassian (lī-as′i-ąn), *n.* [F. *liassien*: as *Lias* + *-ian.*] In *geol.*, a term applied by d'Orbigny and other French geologists to the middle division of the Lias in France.

Liassic, *a.*—**Upper Liassic clay,** the upper member of the Lias, which is itself the lowest division of the Jurassic.

With the aid of other shallow wells in the Lincolnshire Limestone, this rock is shown to have a decided dip to the west down the face of the escarpment, as though it had settled down upon the eroded surface of the *Upper Liassic Clay.*
Nature, Nov. 27, 1902, p. 95.

lib. An abbreviation (*b*) of *librarian*; (*c*) of *library*; (*d*) of the Latin *libra*, pound.

libaniferous (lib-ą-nif′ẹ-rus), *a.* [LL. *libanus*, frankincense, + *-fer*, < *ferre*, bear, + *-ous.*] Same as *libanotophorous.*

libanophorous (lib-ą-nof′ọ-rus), *a.* [Gr. *λίβανος*, frankincense, + *-φορος*, < *φέρειν*, bear, + *-ous.*] Same as *libanotophorous.*

libate, *v. i.* **2.** To take a drink. [Slang.]

Gents, this is shorely the sociablest crowd I've crossed up with as yet. Let's *libate*! *A. H. Lewis*, Sunset Trail, xi.

libational (lī-bā′shọn-ąl), *a.* [*libation* + *-al*[1].] Pertaining to libations; of the nature of a libation.

libation-table (lī-bā′shọn-tā″bl), *n.* A peculiar form of altar connected with the tree-and-pillar cult of Mycenæan civilization. It has four legs surrounding a sacred pillar or bætylus.

Libation-table. (From "Journal of Hellenic Studies," by permission of the Council.)

libel, *n.* **7.** In *law*, a petition for a decree in divorce.—**Mutation of libel,** in *admiralty* and *eccles. law*, an amendment allowed which changes the substance of a libel, so that a new cause of action is introduced, or another remedy demanded.

libelee, libellee (lī-be-lē′), *n.* In *law*, the defendant in actions or suits in which the complaint or first pleading is libel. See *libel*, 2.

libella, *n.* **5.** A Roman brass coin, the as of diminished weight.

Libellatic (lī-be-lat′ik), *n.* [L. *libellatici*, pl., < L. *libellus*, a paper, a certificate: see *libel*.] One of the class of Christian apostates who, during the Decian and Valerian persecutions, secured from the magistrates by bribery a false certificate (libellus) testifying that they had satisfied the requirement of sacrificing to the heathen gods.

liberal. **I.** *a.*—**Liberal-Republican party.** See *Republican.*—**Liberal science.** See *science.*

II. *n.* **3.** One who holds liberal views in theology. [U. S.]

In Boston a minister is called a *liberal* when he rejects the Andover creed, and, perhaps, the Apostles' creed.
The Beacon (Boston), Jan. 8, 1887. *N. E. D.*

liberal-legal (lib″ẹ-rạl-lē′gạl), *a.* Noting a stage of civilization marked by freedom of thought and criticism, liberty of personal action, freedom of contract, and the establishment of constitutional law and government. Compare ★*religious-military*. *Giddings*, Prin. of Sociol., p. 309.

liberative (lib′e-rā-tiv), *a.* [*liberate* + *-ive.*] Same as *liberatory*.

liberticidal (lib′ėr-ti-sī″dạl), *a.* [*liberticide* + *-al*[1].] That destroys liberty.

liberticide[1], *n.* **II.** *a.* That destroys liberty; liberticidal.

libertin, *n.* and *a.* A simplified spelling of *libertine*.

libertine, *n.* **8.** At Aberdeen University, a free scholar; one who has no bursary. See *bursary*, 2. *N. E. D.*

liberty, *n.*—**Laws of liberty.** See ★*law*[1].

liberty-day (lib′ėr-ti-dā), *n.* *Naut.*, a day on which liberty is granted.

liberty-liquor (lib′ėr-ti-lik″ọr), *n.* Formerly, a certain limited amount of liquor (rum) which a member of the crew of an English man-of-war was permitted to purchase from the purser for the purpose of entertaining a visitor.

liberty-party (lib′ėr-ti-pär″ti), *n.* Members of a ship's company to whom leave to go ashore has been granted.

liberty-ticket (lib′ėr-ti-tik″et), *n.* A written or printed paper given to a man-of-war's-man, on which is specified the date and period of his liberty. The possession of it insures him against arrest as a deserter.

liberty-tree (lib′ėr-ti-trē), *n.* See *Tree of Liberty*, under *tree*.

Libonia (li-bō′ni-ạ), *n.* [NL. (C. Koch, 1863), named in honor of *Libon*, a traveler in Brazil.] An untenable generic name still frequently used by florists for certain species of *Jacobinia*, a genus of plants of the family *Acanthaceæ*. They are half-shrubby greenhouse subjects bearing a profusion of slender, tubular, irregular red or orange flowers. The commonest species is *Jacobinia pauciflora*, often known by florists as *Libonia floribunda*, a native of Brazil. It is a very floriferous plant, with small, and entire, elliptic-oblong leaves and drooping, or declined, scarlet, yellow-tipped flowers an inch long. The plant known to florists as *Libonia Penrhosiensis* is a hybrid between *Jacobinia pauciflora* and *J. Ghiesbreghtiana*, with still more showy flowers.

libra, *n.* **4.** A money of account at Alicante in Spain; the peso, worth 10 reals.—**5.** A new gold coin of Peru, struck under a decree of January 10, 1898, and of the same standard and weight as the pound sterling.

library, *n.*—**Traveling library,** a selected set of books sent from a central source to a club or school in some place where there is no public library. The books are returned when read and another collection is sent to take its place.

librational (lī-brā′shọn-ạl), *a.* [*libration* + *-al*[1].] Pertaining to or of the nature of a libration; in *astron.*, pertaining to the librations of the moon or of the planets Mercury and Venus.

libroplast (lī′brọ-plạst), *n.* [L. *liber*, free, + Gr. *πλαστός*, formed.] A stabiloplast which lies free from the chromatophore along the middle line of some diatom cells.

Libyo-Teutonic (lib″iō-tū-ton′ik), *a.* Libyan as related (in theory) to Teutonic peoples: applied to the blond type of man in Morocco and Algiers in its supposed physical relationship with the blond Teutonic type of northern Europe. *Brinton*, Races and Peoples, p. 106.

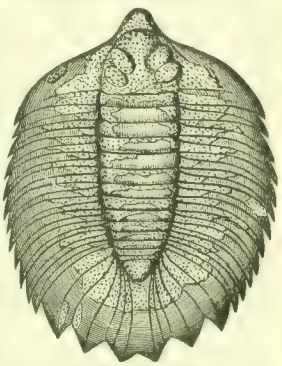
licarene (lik′ạ-rēn), *n.* A colorless cyclic, optically active hydrocarbon, $C_{10}H_{16}$, prepared by the dehydration of licareol. It is a limonene.

licareol (li-kar′i-ol), *n.* Same as ★*linalool*.

Licea (lī′sē-ạ), *n.* [NL. (Schrader, 1797), < L. *licium*, thrum, thread.] A genus of slime-molds which have sessile sporangia containing brownish or reddish spores and no capillitium. Nine species have been described.

Liceaceæ (lī-sē-ā′sē-ē), *n. pl.* [NL., < *Licea* + *-aceæ*.] A family of slime-molds named from the genus *Licea*.

license, *n.* **1.** (*f*) *Naut.*, a certificate issued to a merchant-marine officer showing him to be qualified for the position named on the paper; also, a certificate issued to a vessel testifying that it has been inspected by government officials and pronounced seaworthy in hull, boilers, machinery, and equipment.—**License system,** a term used to denote the laws governing the conditions under which the sale of alcoholic or intoxicating beverages may, or may not, be carried on.—**Steamship license,** a document granted to a steam-vessel, specifying the waters on which she is permitted to sail, the pressure of steam allowed, etc.



lichadid (lī′kạ-did), *n.* and *a.* **I.** *n.* A member of the family *Lichadidæ*.

II. *a.* Pertaining to or resembling the *Lichadidæ*.

Lichadidæ (lī-kad′i-dē), *n. pl.* [*Lichas* (*Lichad-*) + *-idæ*.] A family of trilobites typified by the genus *Lichas*.

lichadoid (lī′kạ-doid), *a.* Allied to or resembling the trilobite genus *Lichas*.

Lichas (lī′kas), *n.* [NL., < Gr. Λίχας, a personal name.] A genus of trilobites of the family *Lichadidæ*, including some of the largest known of these organisms. All are thin-shelled, and so loosely articulated that entire specimens are extremely rare. The anterior lobe of the glabella dominates the other lobes, which are reniform and small. The genus occurs in the Silurian and Devonian of Europe and North America.

Lichas Boltoni (Hall). One fourth natural size.

Lichen planus, in *pathol.*, a form of lichen, occurring on the forearm and on parts of the body which are constricted by the clothing, in which the papules are flattened and smooth and are the seat of much itching.

lichen (lī′ken), *v. t.* [*lichen, n.*] To lichenize.

lichenal (lī′ken-ạl), *a.* Of or pertaining to the *Lichenales* or lichens. *Lindley.*—**Lichenal alliance,** the name proposed by Lindley for the *Lichenales* or lichens.

Lichenales (lī-ke-nā′lēz), *n. pl.* [NL., < *lichen* + *-ales*.] Same as *Lichenes*.

Lichenalia (lī-ke-nā′li-ạ), *n.* [NL., < Gr. λειχήν, a lichen, + *-alia*.] A genus of cyclostomatous bryozoans of the family *Fistuliporidæ*. They possess massive or ramose zoaria, the zoœcia of which have ovoid or pyriform apertures, thin walls, and complete horizontal diaphragms. The genus extends from the Silurian to the Permian. Also *Fistulipora*.

lichenate (lī′ken-āt), *n.* [*lichen-ic* + *-ate*[1].] A salt of lichenic acid.

lichen-fungus (lī′ken-fung″gus), *n.* Any fungus which enters into combination with an alga to form a lichen.

lichenification (lī-ken-i-fi-kā′shọn), *n.* [NL. *lichen*, lichen, + *-ficatio*(*n*), < *-ficare*, make.] Conversion of a portion of the skin, usually about the flexures of the joints, into a condition resembling lichen planus.

In some cases the lesions had flattened and left a state of marked *lichenification*. *Lancet*, July 18, 1903, p. 165.

lichenivorous (lī-ke-niv′ọ-rus), *a.* [L. *lichen*, lichen, + *vorare*, eat, + *-ous.*] Feeding on lichens, as reindeer.

lichenize (lī′ken-īz), *v. t.*; pret. and pp. *lichenized*, ppr. *lichenizing*. [*lichen* + *-ize.*] To cover with lichens.

lichenologic (lī″ken-ọ-loj′ik), *a.* Same as *lichenological*.

Lichenopora (lī-ke-nop′ọ-rạ), *n.* [NL. (Defrance), < Gr. λειχήν, lichen, + πόρος, pore.] The typical genus of the family *Lichenoporidæ*.

Lichenoporidæ (lī″ke-nọ-por′i-dē), *n. pl.* [NL., < *Lichenopora* + *-idæ*.] A family of cyclostomatous ectoproctous polyzoans. The zoarium is discoid, simple or composite, adnate or partially free and stipitate; the zoœcia are tubular, erect or nearly so, arranged in more or less distinct series radiating from a free central area; and the intermediate surface is cancellate or porous. It contains the genera *Lichenopora* and *Domopora*.

lichi[2] (lē′chi), *n.* [Also *leche*; S. African.] *Kobus lichi* (*leche*), one of the larger antelopes of South Central Africa: related to the waterbuck, but with shorter, more recurved horns. See *kob*.

Lichnophora (lik-nof′ọ-rạ), *n.* [NL., < Gr. λίχνος, a glutton, + *-φορος*, < φέρειν, bear.] The typical and only genus of the family *Lichnophoridæ*. It occurs as an ectoparasite on various marine animals, as arthropods, medusæ, snails, and worms. *Claparède*, 1867.

Lichnophoridæ (lik-nọ-for′i-dē), *n. pl.* [NL., < *Lichnophora* + *-idæ*.] A family of peritrichous, ciliate infusorians. They have a secondary circlet of cilia around the opposite end in addition to the adoral zone, which is a left-wound spiral, and the hinder end of the body forms a sucker for attachment. The family contains the genus *Lichnophora*.

Lichnophorina (lik″nọ-fọ-rī′nạ), *n. pl.* [NL., < *Lichnophora* + *-ina*[2].] Same as ★*Lichnophoridæ*.

licht-coal (liċht′kōl), *n.* Cannel-coal; gas-coal. [Scotch.]

Lichtenberg's alloy, an alloy of cadmium, bismuth, tin, and lead which has a low melting-point.

lick, *v. i.* **2.** To tear along; ride at full gallop. [Colloq.]

lick, *n.* **7.** An aberration of the appetite, with a morbid desire to eat foreign substances having no food value, which attacks nearly all the domestic animals. In the ox it is called *pica*, in the sheep *wool-eating*, etc.

lickety-whittle (lik′ẹ-ti-hwit′l), *adv.* Recklessly fast. *Dialect Notes*, II. vi. [Vulgar.]

lick-fingers (lik′fing″gėrz), *n.* **1.** A greedy fellow; a glutton.—**2.** A cook: often used by the Elizabethan dramatists as the personal name of a cook.

licking, *n.* **3.** The adhesion of textile fibers (cotton) to any surface in the process of manufacture.

lick-ladle (lik′lā″dl), *n.* A parasite; a lick-platter.

Lic. Med. An abbreviation of *Licentiate in Medicine*.

licorice, *n.*—**Wild licorice.** (*c*) In the West Indies and British Guiana, any one of several species of trees belonging to the genus *Cassia*, having fruits which contain a sweet pulp tasting somewhat like licorice; especially *C. fistula* and *C. grandis*.

licorice-juice (lik′ọ-ris-jōs), *n.* The extract of Spanish or Russian licorice-root, *Glycyrrhiza glabra*.

licorice-powder (lik′ọ-ris-pou″dėr), *n.* Finely ground licorice-root: used as a mild laxative.

licorice-sugar (lik′ọ-ris-shủg″ạr), *n.* Glycyrrhizine-ammonia, the sweet principle of licorice and monesia bark. *Sci. Amer. Sup.*, Jan. 18, 1908, p. 43.

lid (lid), *v. t.*; pret. and pp. *lidded*, ppr. *lidding*. [*lid, n.*] To put a lid on (something); put a cover on; hide.

lie[1], *v. i.*—**To lie to the dogs** or **to the gun,** to permit the near approach of a dog or a sportsman before flying: said of game-birds.

lie[1], *n.* **4.** In *golf*: (*a*) The angle which the shaft of a club makes with the head. A club has a *flat lie* when the angle is very obtuse, and an *upright lie* when it is less obtuse. (*b*) The position of a ball at rest on the course.—**Hanging lie,** in *golf*, the position of a ball when it rests on a slope downward in the direction of play.

liebenerite (lē′ben-ėr-īt), *n.* [Named after L. *Liebener*.] An alteration-product, probably of nephelite, allied to gieseckite.—**Liebenerite-porphyry,** a nephelite-porphyry which occurs near Predazzo in Tyrol, and in which the nephelite has been altered to a dense aggregate called liebenerite, approaching muscovite in composition.

lie-days (lī′dāz), *n. pl.* See ★*lie-time*.

liefly (lēf'li), *adv.* [*lief* + *-ly*2.] Willingly; gladly. [Archaic.]

And *liefly*, mine own vassal folk
Do yield their fealty.
M. J. Preston, Cartoons, Bishop's Ban, st. 7.

lie-key (lī'kē), *n.* In *well-boring*, a tool on which boring-rods are hung when being raised or lowered. [Scotch.]

lien2, *n.*—**Tax lien**, a charge or encumbrance upon property which attaches by reason of failure to pay taxes duly assessed thereon; the claim of the state upon property to the amount of unpaid taxes and interest thereon. It has precedence over all other encumbrances on the property. The property may be sold by the state to satisfy the claim.

lienitis (lī-e-nī'tis), *n.* [NL., < L. *lien*, spleen, + *-itis*.] Inflammation of the spleen.

lienogastric (lī″e-nō-gas'trik), *a.* [L. *lien*, spleen, + Gr. γαστήρ (γαστρ-), stomach, + *-ic*.] Same as *gastrosplenic*; specifically, in *ichth.*, noting an artery which supplies the stomach, spleen, and part of the pancreas of sharks and other fishes.

lienomyelogenous (lī″e-nō-mī-e-loj'e-nus), *a.* [L. *lien*, spleen, + Gr. μυελός, marrow, + *-γενης*, -producing.] Originating in the spleen and bone-marrow: said of a form of leucocythemia. *Buck*, Med. Handbook, II. 69.

lie-time (lī'tīm), *n.* In *mining*, the time for making up accounts, payment for which has to lie over till the following pay-day. Also *lying-time*. [Scotch.]

Lieut.-Col. An abbreviation of *Lieutenant-Colonel* as a title.

lieutenancy, *n.* 4. In *archery*, a rank or prize at a shooting-match: usually awarded to the archer who makes the second greatest number of hits without regard to score, or who first hits the second or next to the innermost circle of the target.

lieutenant, *n.* 3. In *archery*, the winner of a lieutenancy in a shooting-match.—**Additional second lieutenant**, a supernumerary second lieutenant in the United States army: a grade created by Congress, and filled only when the number of graduates in any class of the United States Military Academy exceeds the number of vacancies in the grade of second lieutenant in the army.

lieutenant-at-arms (lū-ten'ant-at-ärmz'), *n.* An old English term for the junior lieutenant, on a man-of-war, whose duty it was to drill the crew in musket and broadsword exercise.

Lieut.-Gen. An abbreviation of *Lieutenant-General* as a title.

Lieut.-Gov. An abbreviation of *Lieutenant-Governor* as a title.

life, *n.* 17. In *base-ball*, an opportunity given to the batsman or base-runner, through an error of the opponents, of continuing without being put out; in sports in general, an unexpected or undeserved opportunity.—**Good life**, in *ins.*, an insurable risk; one who, according to his present age and condition of health, can secure ordinary life-insurance.—**Joint lives**, in *law*, the duration of an estate limited upon the natural lives of two or more persons.—**Life zone.** See ★*zone*.—**Natural life**, in *law*, life the duration of which is determined by actual rather than civil death.

life-buoy, *n.*—**Luminous life-buoy**, a buoy which is self-lighting when thrown into the sea, or one which is coated with a phosphorescent paint and shows against the water.

life-class (līf'klȧs), *n.* A class in an art school or academy for which the living model, usually nude, is posed.

life-form (līf'fôrm), *n.* In *phytogeog.*, same as ★*vegetation-form*.

Œcological Plant Geography, which considers the *life-forms* of species, their associations, and their relations to the life conditions. *R. Smith*, Nat. Science, XIV. 110.

life-guard, *n.* 3. A man employed on a bathing-beach to guard against accidents to bathers. [U. S.]

life-holder (līf'hōl″dėr), *n.* One who holds property for a life or lives.

life-horizon (līf'hō-rī″zon), *n.* In *geol.*, a stratum characterized by one or more fossils which in their range are restricted to it.

life-kite (līf'kīt), *n.* *Naut.*, a kite flown from a vessel wrecked on a lee shore, for the purpose of sending a line to the beach, when, owing to the severity of the wind, a line cannot be shot to the ship.

life-line, *n.* 2. A line used by firemen to lower people from a burning building.—**Life-line gun.** See ★*gun*1.

life-net (līf'net), *n.* A large net, attached by steel springs to a stiff ring, held by firemen at the height of their shoulders, into which persons may jump from a burning building.

life-of-man (līf'ov-man″), *n.* The name of several plants: (*a*) The live-forever, *Sedum Telephium*. (*b*) The American mountain-ash, *Sorbus Americana*. (*c*) The American spikenard, *Aralia racemosa*. (*d*) The bush-honeysuckle, *Diervilla Diervilla*.

life-plasma (lif'plas″mȧ), *n.* The fundamental plasma or substance in which life or vital force resides.

It is possible that the first *life-plasma* was stationary.
L. H. Bailey, Survival of the Unlike, p. 17.

life-ring (līf'ring), *n.* *Naut.*, the ring to which the under part of a breeches-buoy is attached.

life-safe (līf'sāf), *n.* A safe-conduct.

The Advocate . . . has wrung your *life-safe* out of Simon and the Duke. *R. L. Stevenson*, Catriona, ix.

life-saver (līf'sā″vėr), *n.* A man employed in the life-saving service.

Life-saving station. See *station*.

life-school (līf'sköl), *n.* See ★*life-class*.

life-slide (līf'slīd), *n.* A shallow glass cell used to retain minute living organisms while they are under microscopic examination.

lifesomely (līf'sum-li), *adv.* In a lively way; with abounding animal life.

life-zone (līf'zōn), *n.* See ★*zone*.

lift2, *v. t.* 10. In *cricket*, to hit (the ball) high into the air.—11. In *archery*, to shoot at an elevation, or with a high trajectory, in order to cover the required distance: said of an arrow.—12. In *forestry*, to pry up (seedlings in a seed-bed), so that they may be pulled up by hand for transplanting.—13. To pay off; take off (a mortgage). [U. S.]

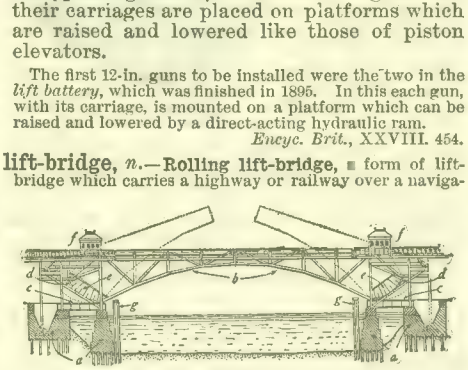
So then the spectral mortgage could never be *lifted*.
F. R. Stockton, the Spectral Mortgage.

14. To bring (a constellation) above the horizon in sailing, etc. *N. E. D.* [Colloq.]

It's the Barralong, to Australia. She'll *lift* the Southern Cross in a week,—lucky old tub!
R. Kipling, Light that Failed, vii.

15. To drive (sheep or cattle) to market. [Australia.]

Well, Masther John, . . . I won't deny that I have n't *lifted* a finer mob this season.
Rolf Boldrewood, Squatter's Dream, iv.



Lifting magnet. See ★*magnet*.

lift2, *n.* 7. (*c*) In *coal-mining*, a slice or cut taken off a pillar in stoping. [Scotch.]—9. In *textile-manuf.*, the extent of the traverse of a guide-eye or bobbin, as on a spinning-frame.—10. In *lawn-tennis*, a little added power at the end of the stroke.—**Hydraulic lift**, a hydraulic elevator; an elevator or lift worked by hydraulic pressure on a piston or plunger. [Eng.]—**Main lifts**, *naut.*, the lifts of the yards on the mainmast; the supports for the yards: specifically, the lifts of the main yard.—**Mizzen lifts**, *naut.*, the lifts of the yards on the mizzenmast; the supports for the yards.

lift-battery (lift'bat″ėr-i), *n.* A coast-defense disappearing battery in which the guns and their carriages are placed on platforms which are raised and lowered like those of piston elevators.

The first 12-in. guns to be installed were the two in the *lift battery*, which was finished in 1895. In this each gun, with its carriage, is mounted on a platform which can be raised and lowered by a direct-acting hydraulic ram.
Encyc. Brit., XXVIII. 454.

lift-bridge, *n.*—**Rolling lift-bridge**, a form of lift-bridge which carries a highway or railway over a navigable channel or other passage to be temporarily opened, in which one end of the lift-bridge remains on the abutment and the other lifts or revolves vertically about the stationary end, which is curved like a hoop and rolls backward along a track on the abutment. Frequently the bridge is divided at the center into two half-bridges, each half revolving vertically about the end of the abutment.

Rolling Lift-bridge.

a, foundation of concrete resting on piles; *b*, *b*, spans of bridge, closed and forming a cantilver arch; *c*, track on which span rolls in rising to open position; *d*, curved face or tread that rolls on track; *e*, *e*, counterweights; *f*, house for motor and control; *g*, *g*, fender-piles. Dotted lines show spans rolling backward and upward and half open.

lifter1, *n.* 2. (*b*) In *founding:* (1) A tool used by molders for lifting loose sand from the bottoms of flange-and rib-molds. (2) One of the hooks suspended from the bars of a molding-box into the mold to support the sand.

lifting-arms (lif'ting-ärmz), *n. pl.* 1. A pair of arms in a locomotive valve-gear for lifting the links.—2. Arms for raising valves which are opened by the action of cams, as in some internal-combustion motors.

lifting-cam (lif'ting-kam), *n.* A cam or lobe on a revolving or rocking shaft which imparts a lifting movement to valves or other mechanism.

lifting-cog (lif'ting-kog), *n.* A curved lever or cam-shaped arm for lifting a poppet-valve in an engine.

lifting-crane (lif'ting-krān), *n.* 1. A crane for lifting weights.—2. A swing-crane or derrick in which the arm moves up and down to raise and lower the load, the hook being attached directly to the arm without the interposition of a hoisting-device.

lifting-jet (lif'ting-jet), *n.* The steam-jet which lifts and forces the water in an ejector or injector.

lifting-nozle (lif'ting-noz″l), *n.* The combining or forcing nozle in an injector or inspirator.

lifting-pallet (lif'ting-pal″et), *n.* A pawl or projection on a lever or other part of a mechanism used for lifting.

lifting-poker (lif'ting-pō″kėr), *n.* Same as ★*poker*1 (*d*).

lifting-sail (lif'ting-sāl), *n.* A head-sail the tendency of which is to lift or raise a vessel's bows out of water.

lifting-shaft (lif'ting-shȧft), *n.* The shaft in a locomotive valve-gear which carries the arms for raising and lowering the links or link-blocks.

lifting-toe (lif'ting-tō), *n.* The revolving arm of the rock-shaft of a valve-gear. It takes against the toe on the lifting-rod and transmits motion.

lifting-valve (lif'ting-valv), *n.* See *valve*, 2.

lift-jigger (lift'jig″ėr), *n.* A double and a single block-tackle made fast to the hauling part of a lift to multiply its purchase.

liftman (lift'man), *n.*; pl. *liftmen* (-men). An elevator attendant. [Eng.]

lift-smoke (lift'smōk), *n.* A game of cards played by from four to six persons, with the full pack. The cards are dealt one at a time, six to four players, five to five, and four to six. The last card that comes to the dealer is the trump. The play is as at whist. The winner of each trick draws the top card from the stock and leads again. As soon as a player's cards are exhausted he withdraws from the game. The one who outlasts the others, having a card when his adversary has none, wins the pool.

lig (lig), *n.* *Naut.*, a combination fish-hook and sinker.

ligament, *n.*—**Cervical ligaments**, two ligaments, the anterior of which connects the basilar fissure of the occipital bone with the bodies of the first few cervical vertebræ, and the posterior of which is the same as the ligamentum nuchæ.—**Douglas's ligament.** See *Douglas's* ★*fold*.—**Gastropancreatic ligament, gastrophrenic ligament.** See ★*gastropancreatic*, ★*gastrophrenic*.—**Hepatic ligaments**, folds of peritoneum, passing from the liver to adjacent parts, which serve to prevent displacement of the organ.—**Hepatocolic ligament**, a peritoneal fold passing between the liver and the colon.—**Hepatorenal ligament**, a peritoneal fold stretching from the liver to the right kidney.—**Iliopubic ligament.** Same as *Poupart's ligament* (which see, under *ligament*).—**Interossicular ligament**, a ligament connected with the Weberian ossicles of certain fishes.—**Ligament of Bertin**, the iliofemoral ligament.—**Ligament of Henle**, the internal portion of the rectus abdominis muscle.—**Ligaments of Cooper**, fibers passing between the skin and the mammary gland; that part of the fascia of the transversalis which passes from the ileopectineal eminence to the spine of the pubes: fibers passing, on the inner side of the elbow, from the coronoid process to the olecranon.—**Metacarpal ligament**, a ligament connecting the lower ends of the last four metacarpal bones.—**Pancreaticosplenic ligament**, a fold of peritoneum passing between the tail of the pancreas and the spleen.—**Rhomboid ligament.** (*b*) A ligament passing from the lower end of the radius to the unciform and cuneiform bones.

ligation, *n.*—**Distal ligation**, the tying of an artery, for the cure of aneurism, on the side of the dilatation farthest from the heart.—**Immediate ligation**, the tying of an artery by a ligature passed around the isolated vessel which takes in none of the surrounding tissue.—**Mediate ligation**, the tying of an artery by a ligature which includes also some of the surrounding tissues.—**Proximal ligation**, the tying of an artery, for the cure of aneurism, by a ligature around the vessel between the heart and the dilated portion of the artery.

Ligature forceps, needle. See ★*forceps*, ★*needle*.—**Ligatures of Stannius**, two ligatures, one of which is placed between the sinus venosus of a frog's heart and the auricles, causing both auricles and ventricle to cease beating while the veins and the remains of the venous sinus continue, and the second of which is then placed between the auricles and ventricle, causing the latter to begin to beat again while the auricles remain quiescent.—**Pro-**

visional ligature, a broad ligature passed around a large artery and tied during an operation, but removed when this is completed.—**Soluble ligature,** a ligature, made of catgut or other animal material, which is absorbed after remaining a time in the tissues.

Ligerian (lī-jē′ri-an), *n.* [L. *Liger* (F. *Loire*) + *-ian.*] In *geol.*, a substage of the Cretaceous system on the continent of Europe taking its name from the Loire river. It constitutes the lower division of the Turonian stage, and lies immediately above the Cenomanian beds. Also used attributively.

light[1], *n.* **15.** In *mech.*, an opening; a space clear of obstructions.—**16.** In an acrostic puzzle, each of the words which are to be guessed, their initials (or initials and finals) forming the word or words in which the answer to the puzzle consists. *N. E. D.*—**Actinic light,** light capable of affecting a photographic film or of producing other chemical effects. This property belongs chiefly, but not exclusively, to the violet and ultra-violet regions of the spectrum. The longer wave-lengths, such as those transmitted by ruby glass, are chemically so inactive as to be commonly termed *non-actinic.*—**Ashen light,** a translation of *lumière cendrée*, a French term for the earth-shine seen on the moon when it is a narrow crescent.—**Astral light.** See ★*astral.*—**Auer light,** an Auer or Welsbach burner.—**Borrowed light.** See ★*borrowed.*—**Combination light,** a lantern for a launch which shows a bow-light in front and red and green side-lights.—**Cone of light.** Same as ★*light-spot.*—**Costen lights** (*naut.*), colored fireworks of special design used for signaling at sea. They are named from their inventor. Also called *Costen signals.*—**Efficiency of a source of light.** See ★*efficiency.*—**Electro-ethereal theory of light.** See ★*electro-ethereal.*—**Feast or Festival of Lights.** See ★*Hanukah.*—**Finsen light treatment,** the treatment of diseases of the skin by exposure to the violet and ultra-violet rays of the spectrum, a method devised by Dr. Niels Finsen of Copenhagen. Either sunlight or the electric arc-light may be used, but the latter is usually preferred. See ★*apparatus.*—**Holme's light,** a device used, in practice, to show the movements of a locomotive torpedo. It is an arrow-headed canister pierced with several holes and filled with phosphide of calcium. The contact of water with this chemical produces bubbles which burst into flame on reaching the surface and also emit dense smoke having the odor of garlic.—**Latent light,** in *photog.*, the light or actinic influence (sufficiently powerful to affect a photographically sensitive surface even after the lapse of several months) which is found to be stored up in paper that has been saturated with uranium nitrate exposed to sunlight, and inclosed in an opaque tube.—**Light-contrast.** Same as *brightness-contrast.* See ★*contrast*, 5.—**Light induction** (*simultaneous* and *successive*). See ★*induction.*—**Light-sensation,** in *psychol.*: (*a*) A visual sensation, whether of color or of brightness. (*b*) A brightness-sensation; a member of the achromatic (black-gray-white) series of visual sensations.—**Light standard,** a source of light used as a standard of intensity in the photometry of the various flames and other sources employed for artificial illumination. The properties essential to a light standard are constancy of illuminating power and a quality of light as nearly as possible identical with that of the light sources with which the standard is to be compared. It is also important that a light standard be reproducible. Aside from the standard candle (see ★*candle*), which has been abandoned in practice on account of its unreliability, although it is still the legal British and American unit, the earliest well-known light standard is the *Carcel lamp*, a modified form of Argand burner with a central draft. Colza-oil is supplied to the wick by means of a pump driven by clockwork. The character of the wick, the diameter of the wick-tube and air-duct, and the dimensions of the chimney are specified exactly in order to secure the greatest attainable constancy of performance. The behavior of the Carcel lamp depends upon a multitude of factors, and it has been found a difficult standard to manage except in expert and experienced hands. The brightness of the flame is approximately 8 candle-power. According to Mounier, the British standard candle is equal to 0.120 carcels. Various types of petroleum flame have likewise been used as photometric standards, and an Argand burner—supplied with ordinary illuminating-gas and provided with a screen (S S, Fig. 1) having an opening (*a*) of such size as to permit the passage of an amount of light from the center of the flame sufficient to give an intensity approximately equal to twice the light from a standard candle—has been widely employed in gas-photometry. This device is known as the *Methven screen.* On account of the variable character of the fuel employed, it affords results but little better than those obtained with the standard candle or with ordinary oil or gas flames, all of which are deficient in constancy. It is now universally recognized that in order to obtain a flame suitable for a light standard it is necessary to use a fuel of definite chemical composition in a lamp of accurately specified construction. The only light standard thus far produced which fulfils these conditions is that obtained by the use of the lamp invented by the late Von Hefner Alteneck and known as the *Hefner lamp.* The fuel employed is amyl acetate ($C_5H_{11}C_2H_3O_2$), a volatile organic liquid which burns with a luminous flame similar in color to the flame of petroleum and gas, but of slightly greater relative intensity in the red than the latter. The *Hefner lamp* (Fig. 2) is of simple construction. It has a wick-tube (*w*) of German silver, the length, diameter, and thickness of wall of which are carefully specified, since the brightness of the flame depends upon these details. The flame (*f*), which burns in free air, is similar in size and shape to a candle flame, and its height, which under normal conditions should be precisely 40 millimeters, is controlled by turning the wick up and down and is measured by means of a flame-gage (*g*). (See ★*flame-gage.*) The principal variation in the brightness of the flame of this standard is that due to atmospheric moisture, the intensity in dry air being about 10 per cent. greater than in air containing 20 liters of moisture to the cubic meter. The effect of the temperature and pressure of the air and of the amount of carbon dioxid present are scarcely appreciable under working conditions. It has been found that Hefner lamps constructed in accordance with the mechanical specifications give light-values which when corrected for the humidity of the atmosphere agree with each other within 2 per cent., and since this is the best result obtained with any primary light standard, this lamp has been adopted as the reference standard in photometry. To reduce measurements made with the Hefner lamp to British standard candle-power, the relation 1 hefner = 0.88 British standard candles is used. This ratio has been obtained by averaging many thousands of comparisons of the two sources. The *Harcourt pentane-lamp*, extensively used in gas-photometry in England and in a modified form in the United States, has a flame of pentane-vapor burning within a metal chimney. An aperture in the chimney is so adjusted as to give light of either 1 or 10 candle-power. The pentane-lamp is not reproducible with accuracy, and is usually calibrated by means of some other standard, such as the Hefner lamp. *Violle's platinum standard* was proposed by Violle to avoid the uncertainties to which all flame standards are necessarily subject. The primary standard of light is the light emitted from a square centimeter of surface of a mass of platinum at its temperature of solidification. The brightness of this standard, which is called the *violle*, is approximately 20 candle-power. The *bougie décimale* or *pyr*, which was intended to supplant various standard candles as a unit, was defined by the Geneva Congress in 1896 as one twentieth of a violle. It was, however, found impracticable to determine this unit accurately by means of the platinum standard, and the bougie décimale was accordingly provisionally defined as equal to one hefner. The light from the crater of the electric arc issuing through an aperture of one square millimeter has likewise been proposed as a standard of photometric intensity, but the use of this as a standard has been found to be impracticable. Incandescent glow-lamps supplied with steady current afford the most convenient and reliable standards for secondary use. Such lamps can be brought into perfect agreement with one another, and when one such standard lamp has been carefully compared with a primary standard it can be copied or reproduced indefinitely.—**Magnesium light,** the intensely white light obtained by burning metallic magnesium. The source of this light is the combined incandescence and luminescence of the solid magnesium oxid formed by the combustion of the metal, and has, therefore, a continuous spectrum. The magnesium light is of extraordinary actinic power because of the great intensity of the violet and ultra-violet regions of its spectrum. It is the only known light having a continuous spectrum of greater energy in these regions than in the regions of less refrangibility.—**Masthead light** (*naut.*), the white light carried in front of the foremast by steamships when under way. It shows over an unbroken arc of the compass from right ahead to two points abaft the beam on either side.—**Mechanical equivalent of light.** See ★*equivalent.*—**New Lights.** Specifically—(*a*) The Campbellites. See *Campbellite*, 1. (*b*) The Socinian party in the west of Scotland during the last part of the eighteenth century. See *Socinianism.* (*c*) The Fifth Monarchy Men in England. See *fifth.* (*d*) The Freewill Baptists, an American sect. See *baptist*, 2. (*e*) The Separates, a sect of Calvinistic Methodists in America (1750). See *Separate*, 2. (*f*) The Edwardsians. See ★*Edwardsian.* (*g*) The champions of the revival in New England and other Eastern States in the middle of the eighteenth century.—**Non-actinic light.** See *actinic* ★*light.*—**Patent light,** a light or window for pavements or vaults, consisting of thick translucent glass fixed in a metal frame so as to resist weights and blows, while transmitting light. A pavement or vault-light.—**Platinum standard light.** See ★*light standard.*—**Pyramid of light.** Same as ★*light-spot.*—**Sodium light,** the light emitted by sodium vapor in a state of incandescence. It is yellow in color and nearly monochromatic. Its source is the pair of bright lines, in the spectrum of the metal, of wave-lengths .5896 μ and .5890 μ. It is produced by volatilizing a salt of sodium or the metal itself in the flame of the Bunsen burner or in the electric arc.—**Strontium light,** the intense red light emitted by glowing vapor of strontium. It is by no means monochromatic, there being many bright lines in the spectrum of the vapor. It owes its color chiefly, however, to the lines of wave-length .6550 μ, .6408 μ, and .6386 μ, lying in the red of the spectrum.—**Thallium light,** the monochromatic light emitted by the green line, of the wave-length .5350μ in the spectrum of the metal thallium.—**Ultra-violet light,** radiations of a wave-length shorter than that of visible light, but still of sufficiently great wave-length to be reflected and refracted. Many substances, as glass, are opaque for ultra-violet light. Ultra-violet light acts on the photographic plate and produces powerful fluorescence.—**Velocity of light,** the velocity of progression of the wave-motion to which luminous sensations are due. The first estimations of the velocity of light were made by

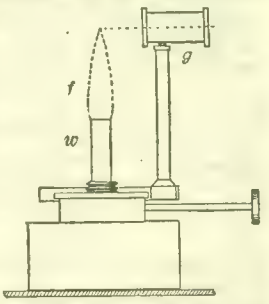


Fig. 2. Hefner Lamp.

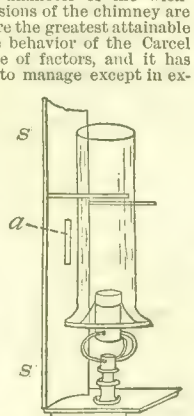

Fig. 1. Methven Screen.

Römer (1676) from observations upon the eclipses of the moons of Jupiter. The observed times when the satellites of Jupiter disappear behind the disks of the planet and reappear again are several minutes earlier when Jupiter and the earth are in conjunction than when they are in opposition. From such observations Römer found the time required for a wave of light to cross the earth's orbit to be 16½ minutes. The diameter of the earth's orbit being known, the velocity of light could then be computed. The velocity as thus determined was 302,300,000 meters per second, a value now known to be too large. Another astronomical method of computation (*Bradley's method*) is based upon aberration, a phenomenon consisting in the apparent displacement of a star due to the motion of the earth in its orbit. This displacement depends upon the velocity of light, which, computed from such observations, is found to be 299,300,000 meters. The first direct measurements of the velocity of light by a method independent of the motion of the earth in its orbit, was made by Fizeau (*Fizeau's method*), who introduced into the path of a beam of light a rapidly revolving toothed wheel. Light passing between two adjacent teeth of this wheel is reflected back upon its path by means of a distant mirror, and when the wheel is driven at a certain speed the returning light is intercepted by the adjacent tooth. To an observer looking through the teeth of the wheel toward the mirror the light coming from the mirror to the eye will be extinguished when the proper speed has been attained. The arrangement of the essential features of the apparatus is shown in Fig. 1, in

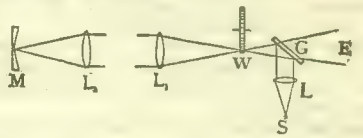

Fig. 1. Velocity of Light—Fizeau's method.

which S is the source of light, G an unsilvered glass plate reflecting the light in a horizontal direction, W the revolving wheel, so placed that the apertures between its teeth lie in the focus of the lens L_1. This lens renders the beam of light parallel, and L_2 focuses it upon a concave mirror M. This mirror returns the light through the lenses L_2 and L_1, and a portion is transmitted through the glass plate G to the eye at E. At the proper speed, as mentioned above, the returning light is intercepted by the wheel. In 1850 Foucault devised another method of determination (*Foucault's method*). He employed a revolving mirror driven at a high rate of speed by means of an air-turbine. The essential features of this method are indicated in Fig. 2. A beam of light from S, thrown

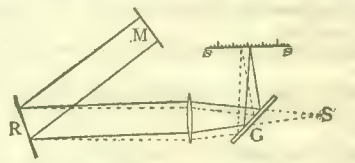

Fig. 2. Velocity of Light—Foucault's method.]

upon the revolving mirror R, is reflected to a distant mirror M, thence back to the revolving mirror, and thence to the glass plate G, from the surface of which a portion is reflected to the scale *ss*. If in the interval occupied by the beam of light in traveling from the revolving mirror to the fixed mirror M and back again the revolving mirror moves through an appreciable angle, the portion of the scale reached by the returning ray will not coincide with that which it would have reached had the revolving mirror been at rest. From the deflection of this beam of light along the scale, the angular velocity of the mirror, and the distance between the revolving mirror and the fixed mirror, the velocity of light is computed. In 1874 Cornu made a determination of the velocity of light by a refinement of Fizeau's method, and obtained the value 300,400,000 meters per second in vacuo. In 1879 Michelson repeated Foucault's measurements with a greatly improved apparatus set up upon a sea-wall at the Naval Academy in Annapolis. The speed of the revolving mirror was 256 revolutions per second, and this was determined with great accuracy by comparison with the period of a standard tuning-fork. The distance between the revolving mirror and the fixed mirror was very great (about 500 meters) and the deflection of the returning ray was 133 millimeters. Michelson's result for the velocity of light was 299,944,000 meters per second. These experiments were afterward repeated by Newcomb. That the velocity of light in vacuo and in air is nearly the same, whatever be the wave-length of the light, is well established. Any considerable difference of velocity would show itself in Michelson's observations by dispersion of the different colors of the spectrum of the returning ray, but no such effect was observed. That the different wave-lengths reaching the eye from the stars travel at the same rate is shown by the fact that no momentary color effects are produced in the occultation of the stars by the moon or in the eclipse of Jupiter's satellites. In refracting media such as glass, however, the velocity varies with the wave-length, the shorter wave-lengths being more retarded than the longer, a fact which gives rise to the phenomenon of dispersion.—**Zircon light,** the light produced by the incandescence of a disk or cylinder of zirconium oxid heated in the oxyhydrogen flame. The light is very similar in color and intensity to the calcium light or lime-light, but zircon is much less rapidly disintegrated by the action of the flame, and does not slake, like lime, on exposure to moist air.

light[3], *v. i.*—**To light in,** to run lightly or easily: applied to the inward traverse of the spindle-carriage of a spinning-mule.

lightage (lī′tāj), *n.* [*light*[1] + *-age.*] **1†.** A toll paid by a ship coming to a port where there is a lighthouse. *N. E. D.*—**2.** A system

of lighting; the supply of gas, electricity, or other illuminant used for lighting.

light-buoy (līt′boi), *n.* A life-buoy which automatically ignites a flare upon striking the water, or a channel buoy which carries a light from sunset to sunrise.

light-contrast (līt′kon″trast), *n.* Same as *brightness-contrast*. See ★*contrast*, 5.

lightening-hole (līt′ning-hōl), *n.* In *iron shipbuilding*, a hole cut in a plate which forms a part of a vessel's structure, to reduce its weight without reducing its strength for the purpose intended. See cut at ★*keel*[1], 2.

light-equation, *n.*—**Constant of light-equation.** See ★*constant*.

light-filter (līt′fil″tėr), *n.* In *photog.*, a screen which transmits light selectively and is used to control the composition of the radiation which falls upon the sensitized plate.

light-horseman, *n.* **2.** A fish, *Chætodipterus faber*, of the family *Ephippidæ:* found from Cape Cod to Rio de Janeiro. See *Chætodipterus*, with cut.

lighting-station (lī′ting-stā″shọn), *n.* An establishment for the generation of electric current to be used in lighting.

light-line (līt′lin), *n.* *Naut.*, the water-line at which a vessel floats when at light displacement. See ★*displacement*, 3. *White*, Manual of Naval Arch., p. 47.

light-liquor (līt′lik″ọr), *n.* The liquid obtained in the manufacture of glucose or starch-sugar by sufficiently boiling starch with dilute sulphuric acid, neutralizing the acid with calcium carbonate, and separating the calcium sulphate by subsidence, before filtration and the concentration which produces 'heavy-liquor.'

light-mill (līt′mil), *n.* Same as *radiometer*, 2. *Encyc. Brit.*, XXXII. 128.

lightning[1], *n.*—**Dark lightning,** dark lines which sometimes appear on photographs of lightning. They are sometimes due to the excessive actinic intensity of the light from the flash which causes a reversal, giving a positive or bright line on the negative plate and a black line on the positive.

lightning-beetle (līt′ning-bē″tl), *n.* Same as *lightning-bug*.

lightning-bone (līt′ning-bōn), *n.* Same as *fulgurite*.

lightning-gap (līt′ning-gap), *n.* The air-gap of a lightning-guard placed in an electric circuit.

lightning-hopper (līt′ning-hop″ėr), *n.* A homopterous American insect of the family *Fulgoridæ*. See *Fulgora*.—**Frosted lightning-hopper,** a lightning-hopper, *Ormenis pruinosa*, of a pale green or lead color, covered with a whitish powder which makes it seem frosted.

lightning-pains (līt′ning-pānz), *n. pl.* Sharp darting pains of brief duration experienced in locomotor ataxia.

lightning-recorder (līt′ning-rẹ̄-kôr″dėr), *n.* A modification of the Marconi apparatus for wireless telegraphy which serves to record automatically the occurrence of distant lightning or weaker electric discharges. The natural electric discharge produces an induced current in a local receiving radioconductor or circuit of wire including some form of coherer, tapper, and relay. The latter actuates the recording apparatus proper. Various forms of the lightning-recorder are in use.

lightning-stone (līt′ning-stōn), *n.* Same as *fulgurite*.

lightning-tree (līt′ning-trē), *n.* In the Bahamas, the West Indian coral-tree, *Erythrina Corallodendron*. Its leaves are deciduous and at certain seasons the bright scarlet flowers cover the tree before the new leaves have appeared. See *coral-tree* and *Erythrina*.

light-port (līt′pōrt), *n.* *Naut.*, a port-hole; an opening in the side of a vessel for admitting light into a cabin, state-room, or other compartment.

light-pressure (līt′presh″ụr), *n.* The mechanical pressure due to the impact of light-waves upon a body placed in their path. See *pressure*, 2 (*b*).

light-sensation (līt′sen-sā″shọn), *n.* See ★*light*[1].

lightskirts (līt′skėrtz), *n.* A woman of lax behavior. [Rare.]

> Hath not Shor's wife although a *light skirts* she,
> Given him a chast long lasting memory?
> *Return from Parnassus*, II. i. 2.

light-spot (līt′spot), *n.* **1.** See the extract.

> In view of the recent work of Haberlandt on the light sense-organs of leaves, it may be of interest to record the discovery of similar organs in xerophilous stems. Certain of the epidermal cells of the young stems of the Ephedreæ have on their external wall conical structures of the nature of papillæ, the core of the papilla being mucilaginous. This structure acts as a collecting lens focussing the incident rays of light, and a definite area of the cytoplasm of the back wall of the cell is thereby illuminated. Fig. 1, which is a photomicrograph taken in diffuse light of a mounted preparation of epidermis, shows the appearance of these *light-spots* as seen under ⅓ objective. Of any object held in the path of the incident rays an image is formed by each of these light sense-organs.
> *R. J. D. Graham*, in Nature, April 4, 1907, p. 535.

2. A cone-shaped area of reflected light on the drum-membrane. Also called *cone of light* and *pyramid of light*.

light-stuff (līt′stuf), *n.* A trade-name for a volatile liquid obtained in rectifying commercial coal-tar benzine in aniline-dye works: used to some extent as a solvent for india-rubber.

light-telephony (līt′tel″ẹ̄-fō-ni), *n.* See ★*telephony*.

light-vector (līt′vek″tọr), *n.* A vector or line which indicates by its length and direction the magnitude and character of the disturbance of the ether (the so-called *light-disturbance*) at any point in a region traversed by polarized light. The light-disturbance s is defined by the equation

$$s = A \sin\left(2\pi\frac{t}{T} + \vartheta\right),$$

where A is the amplitude, t the time, T the period of the disturbance, and ϑ the constant of phase

light-year (līt′yēr), *n.* The distance traversed by light in one year; the unit usually employed in expressing the distances of the fixed stars: for example, the distance of *a* Centauri is $4\frac{3}{10}$ light-years. In terms of the smaller astronomical unit (the mean distance of the earth from the sun), it is found by dividing the number of seconds in a sidereal year by the number of seconds occupied by light in coming from the sun to the earth. According to our best present determinations, it is 62,243 astronomical units. It bears to the smaller astronomical unit very nearly the ratio of the mile to the inch.

Ligia, *n.* **3.** A genus of plants of the family *Daphnaceæ*. See *Thymelæa*.

lignicolous (lig-nik′ọ̄-lus), *a.* [L. *lignum*, wood, + *colere*, inhabit.] Living in wood: applied to certain bivalve mollusks, as *Teredo*, the ship-worm.

lignilite (lig′ni-līt), *n.* A columnar or cylindrical structure in limestone. It occurs across the bedding and is due to pressure. Same as *stylolite*. *Geikie*, Text-book of Geology, p. 420.

Lignin dynamite. See ★*dynamite*.

ligniriose (lig-nir′i-ōs), *n.* A term applied to a substance said to be a variety of lignin.

lignite, *n.*—**Bovey Tracey lignites,** a deposit of sands and clays containing lignite, of Oligocene age, occurring at Bovey Tracey in Devonshire. These beds are from 200 to 300 feet thick, and are isolated, lying on a granite base, the deposits having been formed in an old lake-basin. The organic remains are chiefly of terrestrial plants, on the basis of which the age of the beds was inferred by Heer to be equivalent to that of the Molasse of Switzerland.—**Hötting lignites,** lignitic beds in the Inn valley, near Innsbruck in the Tyrol, which overlie ancient moraine stuff and are surmounted by scattered erratic blocks. They are thought to represent an interglacial period. They contain plant remains of species still growing in the surrounding country.—**Utznach lignites,** beds of the Pleistocene or glacial series in Switzerland (St. Gall) which are intercalated in moraine deposits and represent an interglacial period. The lignites contain pines, firs, larch, yew, oak, sycamore, and other trees, and bones of *Elephas*, *Rhinoceros etruscus*, *Bos taurus* (var. *primigenius*), and other mammals.

lignocellulose (lig″nọ̄-sel′ū-lōs), *n.* [L. *lignum*, wood, + E. *cellulose*.] The material of which woody tissue principally consists. It is commonly associated with more or less cellulose proper, but is distinguishable from it by several reactions, among others by being stained yellow or brown by iodine. Also called *bastose*.

lignoceric (lig-nọ̄-sē′rik), *a.* [L. *lignum*, wood, + *cera*, wax, + *-ic*.] Noting an acid, a colorless compound, $C_{24}H_{48}O_2$, contained in beech-wood tar and in the saponification-products of earthnut-oil. It crystallizes in needles and melts at 80.5° C.

ligno-eosin (lig-nọ̄-ē′ọ̄-sin), *n.* A trade-name for a product said to be the sodium salt of lignone-sulphonic acid. It is obtained from the waste digester-liquor of the sulphite process for making wood-pulp, and has been proposed for use as a reducing agent in chrome-mordanting wool for dyeing.

lignoin (lig′nọ̄-in), *n.* [L. *lignum* (*ligno-*), wood, + *-in*[2].] A brown compound, $C_{20}H_{23}O_8N$, prepared from old Huanaco cinchona bark.

lignone (lig′nōn), *n.* [L. *lignum*, wood, + *-in*[2].] Same as *lignin*.

lignose, *n.* **2.** [L. *lignum*, wood, + *-ose*.] A colorless compound, $C_{18}H_{26}O_{11}$, prepared by the action of dilute acids on glucolignose.

lignosity (lig-nos′i-ti), *n.* [*lignos(e)* + *-ity*.] The character or condition of being ligneous or woody.

lignosulphite (lig-nọ̄-sul′fīt), *n.* [L. *lignum*, wood, + *sulph(ur)* + *-ite*[2].] A brown liquid obtained as a by-product in the manufacture of cellulose. It consists of sulphur dioxid and aromatic compounds which are probably derived from the fir. It is used for inhalation in cases of tuberculosis, the air of the room in which the patient remains being saturated with a 10-per-cent. solution of the sulphite.

lignosulphuric (lig″nọ̄-sul-fū′rik), *a.* Pertaining to lignin and sulphuric acid, or to sulpholignic acid.—**Lignosulphuric acid,** a syrupy compound formed by treating cellulose with concentrated sulphuric acid.

lignum[1], *n.* **2.** A contraction for *lignum-vitæ*: applied in Australia to several species of trees because of their tough and hard wood. See the Australian species mentioned under *lignum-vitæ*.

lignum[2] (lig′num), *n.* [An abbreviated pronunciation of *polygonum*.] Any species of the wiry plants of the genus *Polygonum*. [Australia.]

ligulate-flowered (lig′ū-lāt-flou″ėrd), *a.* Same as *liguliflorous*.

liguloid (lig′ū-loid), *a.* [L. *ligula*, a var. of *lingula*, a little tongue, + *-oid*.] Having the form of a ligula or little tongue; tongue-shaped.

Ligurian. I. *a.* **2.** Pertaining to a division of the Oligocene Tertiary in the southern Alps and the Rigi. These beds lie at the base of the series, consist of marls and limestones with marine fossils, and form a part of the great series of deposits termed *Molasse* or *Flysch*. Included in the division are the Glarus shales, celebrated for their abundant fish fauna.

II. *n.* **2.** The Ligurian division. Also known as the *Rigi beds*.

Ligurianize (li-gū′ri-ạn-īz), *v. t.*; pret. and pp. *Ligurianized*, ppr. *Ligurianizing*. [*Ligurian* + *-ize*.] To render Ligurian; specifically, make (an apiary or a colony of bees) Ligurian by introducing Ligurian queen bees.

ligustrone (li-gus′trōn), *n.* [*Ligustrum* (see def.) + *-one*.] A colorless bitter compound contained in the bark of *Ligustrum vulgare*. It crystallizes in needles, melts a little above 100° C., and boils at 260–280° C.

lija (lē′hä), *n.* [Sp., a dogfish, etc., orig. a fish whose dried skin was used for polishing wood, < *lijar*, polish, make smooth.] Any one of several fishes of the genus *Monacanthus*. See *leather-jacket*, 1 (*b*).—**Lija barbuda,** *Alutera monoceros*, a fish widely distributed in tropical seas.—**Lija colorada,** *Cantherines pullus*, a fish found from the West Indies to Brazil.—**Lija trompa,** *Alutera scripta*, a fish found in tropical waters along both coasts of America and in the East Indies.

likari (lē-kä′rē), *n.* A native name of the Cayenne cedar.—**Essence de likari.** See *linaloa-★oil*.

like[2], *n.* **2.** In *golf*, a stroke which equalizes the number played by the other side.

like[2], *adv.* **5.** As well as; as also.

> I can counterfeit the deep tragedian; . . .
> Tremble and start at wagging of a straw,
> . . . ghastly looks
> Are at my service, *like* enforced smiles.
> *Shak.*, Rich. III., III. 5.

Like a lamplighter, with long, rapid strides. *Dialect Notes*, II. vi. [Colloq.]—**Like all possessed,** as if bewitched. *Dialect Notes*, II. vi. [Colloq.]—**Like anything, like everything,** with such rapidity and intensity of effort as to preclude comparison. [Colloq.]

> The Walrus and the Carpenter
> Were walking close at hand:
> They wept *like anything* to see
> Such quantities of sand.
> *Lewis Carroll*, Through the Looking Glass, Walrus and Carpenter, st. 4.

Like Sam Hill. Same as ★*like sin*.—**Like sin,** intensely; very hard: as, to work *like sin*. [Slang.]—**Like smoke.** See *smoke*.

likeness, *n.*—**Law of likeness.** See ★*law*[1].

lil, lill (lil), *n.* [Said to be Romany.] **1.** In Gipsy language, a book; a pocket-book.—**2.** A five-pound note. *Farmer*. [Slang.]—**3.** A bad bill. *Farmer*. [Slang.]

lilac, *n.* **3.** A fanciers' name for a peculiar bluish-gray color shown in the coats of some domesticated mice.—**California lilac,** the blue myrtle, *Ceanothus thyrsiflorus*.—**Cape lilac,** in Australia, a variety of *Melia Azedarach*, the tree called *white cedar* by the colonists. See *Melia*.—**Native lilac,** in Tasmania, *Prostanthera rotundifolia*, a strong-smelling bush of the mint family, bearing quantities of deep-lilac-colored flowers.—**Summer lilac,** the dame's-rocket, *Hesperis matronalis*. See cut under *rocket*[2], 2.

lilial (lil′i-ạl), *a.* [NL. **lilialis*, < L. *lilium*, lily.] Designating plants of the lily kind or related to the lily: as, the *lilial* alliance. *Lindley*.

Liliales (lil-i-ā′lēz), *n. pl.* [NL. (Lindley, 1833), < *Lilium* + *-ales*.] A large order of monocotyledonous plants. It includes the lily

family and 11 others, the most important being the *Juncaceæ* (rushes), *Convallariaceæ* (lilies-of-the-valley), *Smilacaceæ*, *Amaryllidaceæ*, *Dioscoreaceæ* (yams), and *Iridaceæ*. The lilial alliance of Lindley embraced only the *Liliaceæ*, and the *Pontederiaceæ*, the latter of which is now referred to the order *Xyridales*.

liliated† (lil'i-ā-ted), *a.* [L. *lilium*, lily, + *-ate*[1] + *-ed*[2].] Ornamented with lilies, especially with the lilies of France.

Lille pottery. See ★*pottery*.

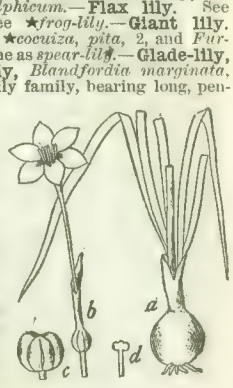
lillianite (lil'i-an-īt), *n.* [*Lillian*, name of a mine in Colorado, + *-ite*[2].] A lead sulphobismutite, $Pb_3Bi_2S_6$, which occurs in steel-gray crystalline masses: found in Sweden and in Colorado.

Lillienthal coefficients. See ★*coefficient*.

lillikin (lil'i-kin), *n.* [Also *lellicins*, *lellokans*; origin obscure.] A special size of pin the name for which began to be common in New England about 1775.

Harriot Paine . . . had "corkins, middlings, short whites, *lillikins*, and lace pins."
A. M. Earle, Costume of Colonial Times, p. 186.

lilliputianize (lil-i-pū'shan-īz), *v. t.*; pret. and pp. *lilliputianized*, ppr. *lilliputianizing*. To make like the Lilliputians in size; dwarf.



lilt, *v. i.* 3. To sway up and down, as a bird on a spray.

Young — of a reddish face — with blue eyes, and he *lilted* a little on his feet when he was pleased, and cracked his finger-joints. . . . He went to England, and he became a young man, and back he came, *lilting* a little in his walk.
R. Kipling, A Sahibs' War, in Traffics and Discoveries, [p. 73.

lily, *n.* — **Asa Gray's lily**, *Lilium Grayi*, a delicate plant with oblong-lanceolate leaves and long-peduncled red flowers tinged at the base and spotted within; found on the Peaks of Otter and on high mountain summits of North Carolina. — **Barbados lily**, the common name of *Hippeastrum equestre*, a member of the family *Amaryllidaceæ*. It is a globular bulb 2 inches in diameter, producing offsets, with brown scales and a short neck; the leaves are from 6 to 8 in number and develop fully after the flowers. It is an old garden-plant, and one of the best for winter and spring blooming. The varieties *splendens*, *fulgidum*, and *ignescens* are some of the more common forms of this species. The Barbados lily is found in the region extending between Mexico, Chile, and Brazil. — **Beaver-lily**, the yellow pond-lily, *Nymphæa advena*. Also called *beaver-root*. — **Bermuda lily**, the Easter lily, a cultural form of *Lilium longiflorum*: so named because it is extensively grown in Bermuda. — **Brisbane lily**, *Eurycles Cunninghami*, a Queensland plant of the amaryllis family. — **Bullhead lily.** Same as *beaver-★lily*. — **Canada lily**, *Lilium Canadense*. See *lily*, 1. — **Carolina lily**, *Lilium Carolinianum*, of the southeastern United States, a rather showy species with orange-red flowers nodding on long peduncles, the long, acuminate, recurved perianth-segments purple-spotted below. — **Chamise-lily**, the name on the Pacific coast of America for plants of the genus *Erythronium*. See ★*fawn-lily*. — **Chaparral-lily**, a true lily, *Lilium rubescens*, of the northern half of California in the Coast Range. Its stem sometimes rises 7 feet or more and often bears as many as 25 flowers, these at first pure white dotted with purple, soon pink, and finally of a deep ruby-purple. It is said to be the most fragrant of lilies. Near the coast called *redwood-lily*; inland by this name. Also *ruby lily*. — **Clinton's lily**, *Clintonia borealis*, a plant of northeastern North America related to the lily-of-the-valley. See *Clintonia*. — **Corn-lily**, the small bindweed, *Convolvulus arvensis*. — **Cow-lily.** (*a*) Same as *beaver-★lily*. (*b*) The marsh-marigold. — **Darling lily**, *Crinum flaccidum*, a handsome white-flowered Australian plant of the amaryllis family. Its bulbs contain starch in such quantity that it is sometimes extracted for food. Also called *Murray lily*. — **Day-lily.** (*b*) See *Funkia*. — **Dog lily.** See ★*dog-lily*. — **Easter lily.** (*a*) *Lilium longiflorum*, a showy, fragrant lily, native of China and Japan, much cultivated and now exhibiting several varieties. (*b*) *Lilium candidum*, the white or annunciation lily: originally from the Mediterranean region, but long in cultivation. (*c*) The daffodil. (*d*) The atamasco lily, *Atamosco Atamasco*. — **Fairy-lily**, the atamasco lily. — **Field lily.** Same as *Canada ★lily*. — **Flame-lily**, the red lily, *Lilium Philadelphicum*. — **Flax lily.** See ★*flax-lily*. — **Frog lily.** See ★*frog-lily*. — **Giant lily.** (*a*) *Furcræa fœtida*. See ★*cocuiza*, *pita*, 2, and *Furcræa*. (*b*) In Australia, same as *spear-lily*. — **Glade-lily**, the red lily. — **Gordon lily**, *Blandfordia marginata*, a Tasmanian plant of the lily family, bearing long, pendulous racemes of conical, orange-red flowers; also other species of the same genus: so named from George Gordon, Marquis of Blandford. — **Great yellow lily**, the American nelumbo or water-chinkapin, *Nelumbo lutea*. — **Guernsey lily**, *Imhofia Sarniensis*. See *Nerine*. — **Gunebo lily**, *Mentzelia decapetala*, of the family *Loasaceæ*, native of the Great Plains. It has very large and showy, mostly solitary, and terminal yellowish-white flowers. — **Harvest-lily**, the hedge-bindweed, *Convolvulus sepium*. — **Hedge-lily.** Same as *harvest-★lily*. — **Horse-lily.** Same as *beaver-★lily*. — **Huckleberry-lily**, the red lily. — **Jamestown lily**, the jimson-weed, *Datura Stramonium*; also the purple stramonium, *D. Tatula*. — **Lemon-lily**, the day-lily, *Hemerocallis fulva*. — **Liver-lily**, the blue flag or flag-lily, *Iris versicolor*. — **Lotus-lily**, any species of *Nelumbo*. — **May-lily**, the lily-of-the-valley. — **Meadow-lily.** Same as *Canada ★lily*. — **Mound-lily**, *Yucca gloriosa*. See *Yucca* (with cut). — **Murray lily.** Same as *Darling ★lily*: so named from the Murray river in Victoria. — **Nodding lily**, either the Canada lily or the American Turk's-cap lily. — **Northern lily.** Same as *Clinton's ★lily*. — **Philadelphia lily**, the red lily, *Lilium Philadelphicum*. — **Pine-lily.** See *bear-★grass* (*c*). — **Prairie-lily.** (*a*) Either of the two species of *Cooperia*, *C. Drummondii* and *C. pedunculata*, of the southwestern United States and Mexico. They are bulbous amaryllidaceous plants, with narrow, grass-like leaves, and one-flowered scapes, the large terminal flower having a salver-form, white or pinkish perianth. (*b*) Same as *gunebo ★lily*. — **Red lily**, *Lilium Philadelphicum*, of the eastern United States, one of the commonest and most attractive of American lilies. The flowers are red or orange-red, the perianth segments reflexed and purple-spotted below. The *southern red lily* is *L. Catesbæi*. — **Redwood-lily.** See *chaparral-★lily*. — **Rice-root lily.** Same as ★*mission-bells*. — **Ruby lily.** See *chaparral-★lily*. — **Snake-lily**, the blue flag, *Iris versicolor*. — **Spear-lily.** See *spear-lily*. — **Spider-lily**, the spiderwort, *Tradescantia Virginiana*. — **Spotted lily**, in the West Indies, *Cordyline hyacinthoides*: so named from the spotted leaves. See *Sansevieria*. — **Spring lily**, the white dog-tooth violet or adder's-tongue, *Erythronium albidum*, which flowers in early spring. — **Straw-lily**, the sessile-leaved bellwort, *Uvularia sessilifolia*. — **Trinity lily**, the large-flowered wake-robin, *Trillium grandiflorum*. — **Trout-lily**, the yellow dog-tooth violet or adder's-tongue, *Erythronium Americanum*. — **Yellow lily.** (*b*) In Tasmania, same as *native ★leek*.

Red Lily (*Lilium Philadelphicum*).
(From Britton and Brown's "Illustrated Flora of the Northern States and Canada.")

Prairie-lily (*Cooperia Drummondii*).
One fourth natural size.
(From Britton and Brown's "Illustrated Flora of the Northern States and Canada.")

lily-disease (lil'i-di-zēz″), *n.* See ★*disease*.

lilywort (lil'i-wėrt), *n.* A plant of the lily family.

lim, *n.* and *v. t.* A simplified spelling of *limb*.

limacin (lim'a-sin), *n.* [L. *limax*, snail, + *-in*[2].] An organic substance obtained by Braconnot from the garden-snail (*Limax agrestis*).

limacodid (lim-a-kō'did), *a.* and *n.* **I.** *a.* Having the characters of or belonging to the lepidopterous family *Limacodidæ*.

II. *n.* A member of the family *Limacodidæ*.

lima-lima (lē-mä″lē-mä'), *n.* [Tagalog *lima-lima*, a reduplication of *lima*, five, = Bisaya *lima* = Samoan, etc., *lima*, Maori *rima*, five.] See ★*galamai-amo*.

liman (lē-män'), *n.* [Russ. *limanŭ*, an estuary, = Turk. *liman*, harbor, < NGr. λιμάνι, Gr. λιμήν, harbor.] A marsh, usually salt, at the mouth of a river; especially applied to the delta of the Dnieper river, Russia.

Limanda (li-man'dä), *n.* [NL., < L. *limus*, mud.] A genus of flounders found on both coasts of northern North America and in eastern Asia: known as "*dabs*."

Lima oil. See ★*oil*.

Limatula (lī-mat'ū-lä), *n.* [NL., dim. of *Lima*.] A genus of Jurassic prionodesmaceous pelecypods, characterized by valves which are medially ribbed, laterally smooth, and without gape.

limb[1], *n.* 6. In *geol.*, that portion of an anticline or syncline which lies on either side respectively of the arch or trough. Also called *leg* and *flank*. — **Pectoral limb, pelvic limb.** See *pectoral*, *pelvic*.

limb[2], *n.* 4. In *bot.*: (*b*) The blade or broad part of a leaf.

limbation (lim-bā'shon), *n.* [NL. *limbatio(n-)*, < L. *limbatus*, edged, bordered, < *limbus*, edge: see *limb*[2].] 1. The formation of a distinct border or margin. — 2. A margin or border. *Smithsonian Rep.* (*Nat. Mus.*), 1897, p. 331.

limber-hook (lim'bėr-hůk), *n.* Same as *pintle-hook*.

limber-passage (lim'bėr-pas″āj), *n.* A channel on each side of the keelson of a wooden vessel to permit the bilge-water to flow to the pumps. Same as *limber*[2], 3. See cut under *keel*[1], 2.

limber-plate (lim'bėr-plāt), *n.* Same as *limber-board*.

limbo[1], *n.* — **Limbo of fools** (*limbus fatuorum*), a fools' paradise.

limbo[2] (lim'bō), *n.* [Zulu *ulembu*, web.] A kind of coarse cotton cloth worn by South Africans.

limbous (lim'bus), *a.* [NL. **limbosus*, < L. *limbus*, edge; see *limb*[2].] Having a definite border.

limb-ray (lim'rā), *n.* A comprehensive term for the limb of a vertebrate. [Rare.]

Those [muscles] which extend to the first, second, or to the terminal elements of the *limb ray*.
Encyc. Brit., XXV. 399.

limbus, *n.* 3. In *conch.*, the circumference of the valves of a bivalve shell from the disk to the border or margin. *Syd. Soc. Lex.*

lime[1], *n.* 3. In *leather-manuf.*, a vat containing a solution of lime for unhairing skins. *C. T. Davis*, Manuf. of Leather, p. 331. — **Bicarbonate of lime**, calcium acid-carbonate, $CaH_2(CO_3)_2$, assumed by some chemists to exist in water which contains carbonic acid and in consequence has dissolved a quantity of calcium carbonate greater than could be taken up by the water alone. It is very doubtful whether such an acid salt really exists; it has never been obtained in separate form. — **Caustic lime**, calcium hydroxid; also, calcium oxid. — **Chlorid of lime.** Same as *bleaching-powder*. It probably has the composition $Ca\{^{ClO.}_{Cl.}$: not to be confounded with chlorid of calcium ($CaCl_2$). See *calx chlorata*, under *calx*[1]. — **Dead-burnt lime.** See ★*dead-burnt*. — **Dead lime**, a lime that does not slake with water: opposed to *quicklime*. — **Lime cylinder**, lime in the form of a cylinder which is from time to time revolved, and upon which a jet of oxyhydrogen flame is thrown in producing the so-called calcium light. See *calcium light*. — **Lime silicate.** Same as ★*calcium silicate*. — **Lime, sulphur, and salt wash.** See ★*wash*. — **Lime uranite.** Same as *autunite*. — **Overburnt lime**, lime made from limestone containing silicious matter, such as clay, and heated so strongly in the kiln that silica and alumina have entered into combination with a part of the lime, causing it to slake slowly and imperfectly. — **Permanganate of lime**, the chief ingredient in the mixture recommended by Crookes for use in purifying the dangerous drinking-water which was encountered by British troops in the Ashanti campaign of 1873–74. The mixture, intended also to clarify the water, consisted of 1 part of lime (or calcium) permanganate, 10 parts of aluminium sulphate, and 30 parts of fine clay. — **Vienna lime**, a mixture of caustic potash and slaked lime used surgically as an escharotic, and also in scouring metals to remove grease. See *Vienna caustic*.

lime[3]. — **Finger-lime**, *Citrus Australasica*, a small tree of eastern Australia, bearing slender thorns, and ellipsoid or almost cylindrical fruits, 2–4 inches long, tasting like lemons. — **Native lime**, in Australia: (*a*) The finger-lime; (*b*) An evergreen tree, *Citrus australis*, which reaches a height of from 30 to 50 feet and bears globular, acid fruits about the size of walnuts. Its beautiful light-yellow wood is hard, close-grained, and takes a high polish. Called also *native orange*. — **Queensland lime**, *Citrus inodora*, bearing sharply acid fruits and inodorous flowers. — **Lime-oil.** See ★*oil*.

lime-berry (līm'ber″i), *n.* In the East Indies, same as ★*lime-myrtle*.

lime-bug (līm'bug), *n.* A scale-insect found on the lime-tree, either *Eulecanium tiliæ* or *Pulvinaria tiliæ*.

lime-coal (līm'kōl), *n.* Small coal used for lime-burning: one of the grades formerly made at collieries in the east of Scotland.

lime-craig (līm'krāg), *n.* Limestone rock in situ: the face of a limestone quarry. [Scotch.]

lime-juicer, *n.* Hence — 2. A British ship on which the lime-juice law is carried out.

The working of the ship, the life of the men, their trials and amusements are all combined in the story; in fact, the book gives a better idea of the life on a "*lime-juicer*" than any previous work we have seen.
Forest and Stream, Feb. 21, 1903, p. 153.

3. In Australia, a new-comer; one who has made the voyage on a lime-juicer; a greenhorn; a 'new chum.'

lime-liniment (līm'lin″i-ment), *n.* A mixture or emulsion consisting of equal parts of a solution of lime or lime-water and linseed-oil; carron-oil: used for burns.

lime-mud (līm'mud), *n.* Same as ★*lime-sludge*.

lime-myrtle (līm'mėr″tl), *n.* In the West Indies, *Triphasia trifoliata*. See *Triphasia*.

limen (lī'men), *n.*; pl. *limens* (-menz), L. *limina* (lim'i-nä). [L. *limen*, threshold.] 1. In *exper. psychol.* and *psychophys.*, the threshold; the dividing line between noticeableness and unnoticeableness of stimulus. The limen is defined in physical or physiological terms as that amount of stimulus or degree of excitation (or as that stimulus difference or difference of excitation) which, after complete elimination of all errors, remains just noticeable to an accurate observer; or again as that amount of stimulus (or stimulus difference) which, after elimination of constant errors, remains just noticeable to the observer in one-half of a long series of observations. The term may be applied to any one of the four possible aspects of stimulus and excitation (intensity, quality, duration, extension), and to any stimulus that serves as the condition of mental state or process; so that we may speak of the intensive limen, the temporal limen, the affective limen, the limen of attention, etc. It is clear that the correlate of the limen, upon the mental side, is not a part of real experience, not a state or process that can be ideated and remembered and voluntarily reproduced: liminal values are always ideal values.

The object of these experiments was to determine the *limens* of approach and recession of the fixation-object for various distances.
Amer. Jour. Psychol., April, 1903, p. 173.

The term *limen* (Schwelle, threshold) was introduced into psychology by Herbart in 1811; a liminal stimulus,

or liminal stimulus difference, is that which lifts the sensation or the sense-difference over the threshold of consciousness.

E. B. Titchener, Exper. Psychol., II. i. 37.

2. In *anat.*, the portion of brain-substance situated between the base and the island of Reil. —**Absolute differential limen** or **difference limen.** See ★*absolute* and ★*difference.*—**Discriminative limen** or **threshold,** in *psychophys.*, the just noticeable stimulus difference or difference limen.—**Limen nasi,** the line of junction in the nasal cavity between the cartilaginous and the bony portions.—**Limiting limen,** in *psychophys.*, the upper or lower limit of the stimulus limen or differential limen. Thus, in esthesiometric determinations, the upper limiting limen is given with the least separation of the compass-points which invariably evokes the judgment 'two points': while the lower limiting limen is given with that separation below which the observer always reports 'one point,' and above which he always reports 'doubt' or 'two points.' The value of the lower limiting limen may be accurately determined; the determination of the upper appears to be dubious. *E. B. Titchener*, Exper. Psychol., II. ii. 19.—**Mixture limen,** in Fechnerian *psychophys.*, a limen which is modified by the addition of a qualitative to a merely quantitative change of stimulus, or by the concurrence of other stimuli (or excitations) with the stimulus or stimuli to be sensed or compared. The mixture limen includes the ordinary homogeneous stimulus limen and differential limen as limiting cases.—**Partial limen,** in *psychophys.*, the positive or negative division of the total limen in Fechner's method of right and wrong cases.—**Quotient limen, quotient mixture limen.** See ★*quotient.*

limene (lī′mēn), *n.* [*lime*[3] + *-ene.*] A sesquiterpene, $C_{15}H_{24}$, contained in oil of limes and in bergamot-oil. It boils at 130–140° C. under 17 millimeters pressure.

lime-nitrogen (līm′nī″trō-jen), *n.* See the extract.

Prof. Adolf Frank and Dr. Caro, of Berlin, found that when nitrogen is passed over red-hot calcium carbide it is absorbed with formation of calcium cyanamide. This latter, when treated with water under high pressure, is made to yield ammonia; but it is not necessary to do this, since the crude product, which they have called "*lime-nitrogen*," can serve directly as nitrogenous fertiliser, and is in that respect equivalent to its own weight of ammonium sulphate. *Nature*, April 25, 1907, p. 619.

lime-pot (līm′pot), *n.* A pot for holding lime, which was formerly employed in naval engagements for blinding boarders.

limerick (lim′e-rik), *n.* [Said to have originated in the words "Will you come up to Limerick," occurring in the chorus of convivial songs of the character described in def. 1. See N. and Q., 9th ser., II. 470 (Dec. 10, 1898).]

1. A nonsense song or verse, one of a series of impromptu productions of a free character, sung at convivial parties in Ireland.

"But come, give us a *Limerick*. Cheer us up now! give us a good *Limerick*. You must know thousands."

"I assure you I do not. I have never been in Ireland."

The Duke burst out into a mirthless laugh. "Well, upon my—What's Ireland got to do with it?"

R. Hichens, The Londoners, xvi.

2. A nonsense verse of a fixed type, more or less amusing, of the pattern of those written by Edward Lear in his "Book of Nonsense." See ★*Learic.* The following is an example:

There was a young lady of Niger,
Who rode, with a smile, on a tiger:
They returned from their ride,
With the lady *inside*,
And the smile on the face of the tiger.

limerickite (lim′e-rik-īt), *n.* A name given by Meunier to the type of gray chondritic meteorite illustrated by the meteorite which fell in Adare, in the county of Limerick, Ireland, in 1813. See ★*meteorite.*

lime-rock (līm′rok), *n.* Any rock in which calcite is a prominent constituent.—**Vermicular lime-rock,** in *New York geol.*, a name given by A. Eaton to certain impure dolomites appertaining to the Salina formation which are perforated by numerous small irregular cavities produced by the crystallization and removal of salt, gypsum, and celestite.

lime-shells (līm′shelz), *n. pl.* Calcined limestone.

lime-sludge (līm′sluj), *n.* A manufacturers' name for the precipitate of more or less impure calcium carbonate produced in the conversion, by means of lime, of sodium-carbonate liquor into solution of caustic soda. Also called *lime-mud.*

lime-soap (līm′sōp), *n.* Same as *calcium soap.* See *soap.*

limestone, *n.*—**Agoniatite limestone.** See ★*agoniatite.*—**Anseremme limestone,** a division of the Lower Carboniferous formation in Belgium and northern France.—**Augusta limestone,** a name introduced by Keyes to include the Burlington and Keokuk limestones in Iowa as exposed along the Mississippi river from Burlington to the mouth of the Des Moines river. These rocks are of Lower Carboniferous age and equivalent to Osage limestone.—**Austin limestone,** a limestone lying near the middle of the Cretaceous series in Texas.—**Aymestrey limestone,** in the Silurian system of England and Wales, a subdivision of the uppermost or Ludlow group, lying between the Upper and Lower Ludlow rock. It is an argillaceous limestone having a total thickness of 50 feet, but is essentially a lentil in the vicinity of Aymestrey, Herefordshire. It abounds in fossils, but less so than the Wenlock limestone beneath, and in the faunæ of these two there is relatively little difference.—**Bachant limestone,** a division of the Lower Carboniferous formation in Belgium and northern France.—**Barnegat limestone,** a name given by the early New York geologists to the limestone which, intercalated in shale, crosses the Hudson river near Newburgh and which was correlated by them with the Calciferous sandstone. It is now known to consist of Cambrian, Beekmantown, and Trenton limestones. Its thickness is probably not less than 500 feet.—**Becraft limestone.** [Name taken from *Becraft* Mountain, near the city of Hudson, New York, where the rock has long been quarried.] A limestone in the New York series of formations, originally called the *Scutella* and *Upper Pentamerus limestones* of the Lower Helderberg group of strata. It belongs to the lowest or Helderbergian division of the Lower Devonian, lying near the top, beneath the Port Ewen beds and above the New Scotland limestone. It abounds in fossil remains, and from its purity is highly esteemed both as a construction stone and as a flux in smelting.—**Beekmantown limestone.** [Named from *Beekmantown*, in Clinton county.] A division of the Lower Silurian of New York State and the adjoining regions, originally termed by Eaton the "*Calciferous sandrock.*" It is regarded as the lowest member of the Lower Silurian, resting on and graduating by easy changes from the Potsdam sandstone beneath. The rock in northern New York and the Lake Champlain basin is largely a limestone, at times magnesian, and carries a profuse and highly interesting marine fauna. In the Mohawk valley the beds are almost devoid of organic remains, are highly dolomitic, and have been locally designated as the *Little Falls dolomite.*—**Black River limestone,** a division of the Lower Silurian of New York lying below the Trenton and above the Lowville limestone. It is well developed only on the western side of the Adirondacks and typically along the Black river.—**Blacksville limestone,** a subdivision of the Carboniferous system in Pennsylvania. It is regarded by Pennsylvania geologists as equivalent to a part of the Dunkard series (Permocarboniferous).—**Bossardville limestone,** a subdivision of the Upper Silurian in Pennsylvania and New Jersey, regarded by some geologists as equivalent to the Lewistown limestone and to the Lower Helderberg formation, while others place it below the Cobleskill limestone of New York. It attains a thickness of 100 feet and is underlain by the Poxono Island shale and overlain by the Decker Ferry formation. It is barren of fossils.—**Briasse limestone,** a division of the Upper Silurian in northwest France.—**Caprina limestone,** a division of the Cretaceous system in Texas, regarded by Texas geologists as equivalent to a part of the Fredericksburg group. It is underlain by the Comanche Peak chalk and overlain by the Wichita division, and is characterized by an abundance of caprinas, *Ichthyosarcolithes* (*Caprina*) *anguis, I. cranifibra,* and *I. planatus.*—**Caprotina limestone,** a subdivision of the Lower Cretaceous rocks of Texas, regarded as the lower part of the Wichita division and characterized by the fossil *Requienia* (*Caprotina*) *texana.*—**Cedarville limestone,** a subdivision of the Upper Silurian formation of Ohio, regarded as equivalent to the Guelph beds of Canada. Its thickness varies from 50 to 200 feet. It is underlain by the Niagara limestone and overlain by the Hillsboro sandstone.—**Chester limestone,** a division of the Lower Carboniferous beds of the Mississippi valley or the Mississippian series, regarded as the uppermost member of the Subcarboniferous and essentially equivalent to the Kaskaskia limestone.—**Choteau limestone,** a local subdivision of the Kinderhook group, the lowest division of the Subcarboniferous formation in the Mississippi valley. It attains a maximum thickness of 100 feet.—**Cobleskill limestone,** a stage of the Cayugan group of the Silurian, in New York, characterized by its abundant corals and recurrent Guelph forms. Formerly known as *coralline limestone.*—**Coeymans limestone,** in the geology of New York, the lowest element of the Devonian formation, named by the early geologists the *Lower Pentamerus limestone.*—**Columbus limestone,** a division, of Lower Devonian age, of the Onondaga or Corniferous limestone of Ohio, constituting the lower part of this formation.—**Comanche Peak limestone,** a division of the Cretaceous formations in Texas.—**Coralline limestone,** in the geology of New York, a formation of Upper Silurian age, so named because of the abundance of its corals. Now termed the *Cobleskill limestone.*—**Dayton limestone,** a local bed of compact crystalline limestone in southwestern Ohio, constituting a very valuable building-stone. It is inclosed in the Niagara shales of Upper Silurian age, has a variable thickness, and its fauna is that of the Niagara formation.—**Delthyris limestone.** See ★*Delthyris.*—**Diphya limestone,** a Jurassic limestone in the Alps, Carpathians, and Apennines, which is largely composed of the shells of the brachiopod *Terebratula* (*Pygope*) *diphya.*—**Dun limestone.** Same as *Redesdale* ★*limestone.*—**Echinosphærite limestone,** a subdivision of the Lower Silurian of the Baltic provinces in Russia, regarded by Russian geologists as equivalent to the uppermost orthoceratite limestone of Sweden. It has a thickness of from 20 to 50 feet, and is underlain by the Vaginaten limestone and overlain by the Kuckers shale. It is characterized by the abundance of the fossil cystid *Echinosphærites aurantium.*—**Encrinal limestone,** any limestone in the composition of which a chief element is the comminuted remains of encrinites. In New York the name was originally used for a subdivision of the Hamilton (Devonian) formation lying beneath the Moscow shale; but this is now called the *Tichenor limestone.*—**Encrinite limestone,** a term denoting a rock composed in great part of crystalline joints of encrinites, with *Foraminifera*, corals, and mollusks. It is especially abundant among Paleozoic formations.—**Eolian limestone,** a subdivision of the Silurian rocks in Vermont, taking its name from Mount Eolus. It is regarded as equivalent to the Chazy and Trenton limestones of New York and probably to the Stockbridge limestone of Massachusetts.—**Fetid limestone,** a limestone which gives off a fetid smell (sulphureted-hydrogen gas) when struck with a hammer. Such rocks contain either decomposable sulphids or organic matter.—**Foraminiferal limestone,** a limestone essentially composed of the calcareous exoskeletons or exuviæ of the *Foraminifera.* Such limestones are comparable in origin and mode of formation to the organic deep-sea oozes which cover the floor of the present oceans.—**Fresh-water limestone,** a compact deposit formed in lakes and ponds by the accumulation of the remains of fresh-water algæ, shells, and *Entomostraca.*—**Glenrose limestone,** a subdivision of the Lower Cretaceous beds in Texas constituting the middle part of the Trinity formation, underlain by the Trinity sands and overlain by the Paluxy sands.—**Grenville limestone,** a limestone occurring at Grenville, Canada, the chief member of the Grenville series: Precambrian in age. In it was found the supposed early fossil *Eozoön canadense.*—**Gutenstein limestone,** a subdivision of the Triassic system in the northern Alpine basin in upper and lower Austria, which is underlain by the Reichenhall limestone, overlain by the Reifling limestone, and equivalent to the lower Muschelkalk of Germany.—**Hippurite limestone,** a limestone which contains in abundance the singular pelecypod genus *Hippurites.* Such beds occur at various horizons in the Upper Cretaceous strata and give a distinctive facies to certain developments of these rocks as contrasted with the Chalk facies. The beds with *Hippurites* are highly developed in southern Europe, where they have been rather closely subdivided according to the prevailing species. They also extend into southern Asia, and a hippurite limestone has been determined in the Lower Cretaceous beds of Texas.—**Hollies limestone,** a subdivision of the Upper Silurian in England, consisting of limestone beds composed of shells (mostly the brachiopod *Pentamerus*) and intercalated in the May Hill sandstone (Upper Llandovery).—**Hosselkus limestone,** the uppermost division of the Triassic system in California. It is underlain by the Halobia bed and is referred by American geologists to the Lower Carnian of the Alpine Trias. It abounds in cephalopods, and its upper part contains *Rhabdoceras, Tropites,* and *Halorites.*—**Hurlet limestone,** a term applied to a seam of encrinal limestone in the Carboniferous limestone series of Scotland. It attains a thickness of 100 feet, lies near the base of the series, and is underlain by a seam of coal and overlain by shales. It is the great repository of the fossils of the series and consists in some parts of sheets of lithodendron corals.—**Hydraulic limestone,** a limestone which contains 10 per cent. or more of silica, and usually alumina, and, when burnt and mixed with water, forms a cement that hardens under water. See *hydraulic lime.*—**Leclaire limestone,** a division of the Upper Silurian rocks in Iowa, partly equivalent to the Lockport limestone of New York and containing a representation of the Guelph fauna.—**Limestone sink.** Same as *sink-hole,* 3.—**Limont limestone,** a subdivision of the Carboniferous system in France, lying just below the Visé limestone at the top of the lower division or Dinantian. It is the Napoleon marble of Boulonnais and abounds in marine fossils.—**Lockport limestone.** Same as *Niagara limestone.* See *limestone.*—**Lowville limestone,** a division of the Lower Silurian series in the Appalachian region, underlying the Black River limestone and equivalent to the formation designated by Emmons the bird's-eye limestone.—**Main limestone.** Same as *Scaur* ★*limestone.*—**Manlius limestone,** one of the New York series of formations lying at the summit of the Upper Silurian, between the Helderberg or Oriskany above and the Rondout or Cobleskill water-lime below.—**Newland limestone,** a series of strata 2,000 feet thick in the Belt Mountain region of Montana, regarded by Walcott as of Precambrian age.—**Paludina limestone,** any fresh-water limestone containing large numbers of shells of *Paludina,* a fresh-water gastropod. Examples are the paludina limestone of the Upper Purbeck and Wealden of Sussex, England, much used for architectural marble, and the marly limestones, with paludinas, of the Pliocene series of Austria.—**Pentremital limestone,** an old name for the *Pentremites*-bearing limestones of the Chester or Kaskaskia group of the Mississippian series of the North American Carboniferous system. See *Kaskaskia* ★*group.*—**Phrygania limestone,** a series of limestone beds, with associated marls, in the Oligocene series of the Paris basin, which are crowded with the cases of caddisfly larvæ, *Phrygania.* These beds contain an abundant vertebrate fauna.—**Port Ewen limestone,** a series of argillaceous limestones forming the uppermost member of the Helderbergian series of Lower Devonian age in southeastern New York and northern New Jersey. Its typical occurrence is at Port Ewen, near Kingston, Ulster county, New York, where it is about 150 feet thick. Its fossils are more closely related to those of the underlying Becraft limestones than to those of the superjacent Oriskany beds.—**Redesdale limestone,** a subdivision of the Carboniferous limestone series in Northumberland, England, forming the base of the Lower Calcareous group and resting on the Scremerston coals. It is the same as the Dun limestone.—**Sandusky limestone.** See *Columbus* ★*limestone.*—**Scaur limestone,** in the Carboniferous limestone series in the south and center of England and Ireland, a thick limestone which passes northward into sandstones, shales, and coals. Also termed the main limestone.—**Stockbridge limestone,** a belt of crystalline metamorphic limestone in western Massachusetts, probably largely of Lower Silurian age, though in part Cambrian, but without fossils. It is regarded by Dana as coextensive with the Eolian limestone of Vermont.—**Stringocephalus limestone,** a subdivision of the Middle Devonian formation in the Eifel, characterized by the presence of the brachiopod *Stringocephalus Curtini.*—**Styliola limestone,** a more or less nodular limestone in the Genesee shales of the lower Upper Devonian in western New York, chiefly composed of the exuviæ of the pteropod *Styliola fissurella,* and representing an ancient pteropod ooze. It also carries a pelagic fauna like that of the overlying Portage shales. Also named *Genundewa limestone.*—**Taconic limestone,** a general name for a series of mostly dolomitic limestones intercalated between shales, slates, sandstones, or their metamorphic equivalents, along the line of the Taconic Mountains in eastern New York and western Vermont, Massachusetts, and Connecticut, the lower part of which belong to Emmons's Taconic system. Their ages as determined from their fossil contents range from Lower Cambrian to middle Trenton, but the larger part of them forms the transitional series of Upper Cambrian to Beekmantown age. These limestones outcrop in roughly parallel belts along the line indicated

and various local names have been given them. In places they are of great economic value as marbles. The more important varieties are the Stockbridge limestone of Vermont and Massachusetts, the Eolian limestone of Vermont (which affords the marble beds), the Wappinger limestone of Dutchess county, New York, the Neelytown limestone of Orange county, New York, the Kittatinny limestone of New Jersey and Pennsylvania, and the Dover and Tuckahoe marbles of southeastern New York. —**Torinosu limestone,** a limestone at the base of the Cretaceous system of Japan, containing an abundant marine fauna, apparently of Neocomian age.—**Tuscumbia limestone,** a member of the Mississippian series of the Carboniferous system of Alabama. It forms the upper part of the Fort Payne chert and is supposed to be equivalent to the St. Louis limestone of the interior States.—**Twelve-fathom limestone,** a member of the Carboniferous limestone series of Yorkshire and Northumberland, England.—**Ute limestone,** a formation in the Wahsatch Mountains regarded as equivalent to the Beekmantown limestone (Lower Silurian) of New York.—**Virgloria limestone,** a division of the Triassic system in the southern Alps, lying on the Werfen beds and below the Prezzo limestones: regarded as representing the Muschelkalk in the Carinthian Alps and southern Tyrol. —**Visé limestone,** the uppermost division of the Lower Carboniferous (Culm or Dinantian) series in Belgium, attaining a thickness of about 200 feet.—**Warsaw limestone,** a division of the Lower Carboniferous or Mississippian series of Iowa and adjoining territory, lying above the typical Keokuk beds or the 'geode-bed' of that formation. See *geode.*—**Willow River limestone,** a division of the Lower Silurian in Iowa, of the age of and included in the St. Peter's sandstone group, and regarded as in part equivalent in age to the Chazy limestone of New York.—**Winooski limestone,** a reddish mottled limestone of Lower Cambrian age in eastern Vermont, worked for marble at Swanton and elsewhere. —**Woolhope limestone,** in the geology of England, the lowest division of the Wenlock group of the Upper Silurian, lying beneath the Wenlock shale and resting on the Upper Llandovery rocks. This limestone takes a lenticular form, swelling and decreasing in thickness through its course in the typical Upper Silurian district of Shropshire and adjacent counties.

lime-tower (lim′tou″ėr), *n.* A piece of apparatus used in chemical laboratories for drying gases or absorbing from them acid gases or vapors. It consists of an upright cylinder of glass, with two tubulures, one at the top, the other at one side at the bottom. This being loosely filled with fragments of lime, the gas is brought in at the one tubulure, usually at the bottom, and drawn out at the other, and is thus brought into contact with a large surface of lime, which acts as a drying and purifying agent. The same apparatus is often filled with calcium chlorid instead of lime when desiccation only is desired.

limettic (li-met′ik), *a.* [NL. *limetta* (*Citrus limetta*) + *-ic.*] Noting an acid, a crystalline compound, $C_{11}H_8O_6$, obtained by the oxidation of oil of limes or oil of rosemary. It is crystalline and volatilizes without decomposition.

limettin (li-met′in), *n.* [NL. *limetta* + *-in*[2].] A colorless compound, $(CH_3O)_2C_6H_2{<}^{O-CO}_{CH=CH}{>}^{3,5}$, contained in the ethereal oil of *Citrus limetta.* It crystallizes in small prisms or needles melting at 147.5° C.

liminal, *a.* Specifically—2. In *psychophys.*, pertaining to the stimulus limen or differential limen. See ★*limen.*

We may also introduce the concept of the limen, defining the just noticeable deviation from indifference as a *liminal* pleasantness or unpleasantness.
O. Külpe (trans.), Outlines of Psychol., p. 243.

The average *liminal* value obtained in these preliminary series gives us a norm or standard for the later work.
E. B. Titchener, Exper. Psychol., I. i. 85.

liminary (lim′i-nā-ri), *a.* [L. *liminaris,* ‹ *limen,* threshold: see *liminal.*] Being at the threshold; introductory; preliminary.

liming-box (lī′ming-boks), *n.* A vessel for holding a thin solution of lime to be used in the process of bleaching cotton cloth and the like.

liming-machine (lī′ming-ma-shēn″), *n.* In *bleaching,* a machine for washing cotton cloth in a solution (or milk) of lime.

limit, *n.* 7. In *poker,* an amount, agreed upon before play begins, by which any one player may increase his bet over that of another. Sometimes called the *raise.*—**Limit class,** a class or division limited to animals possessing certain qualifications or characters: usually employed with reference to some exhibition or contest in which prizes are given. —**Limit of resolution,** the smallest visual angle which two points may subtend if they are to be separated in the image formed in the eye or by any optical instrument. The actual limit for the eye is about a minute of arc; for a telescope having an objective of 20 centimeters in diameter it is 0.7 seconds of arc.—**Natural limit,** a limit beyond which the series representing a function cannot be continued.—**The limit,** the utmost that is possible; the worst there is; as applied to a person, one so queer or so objectionable as to be almost beyond toleration. [Colloq.]

"What with your spook horses and cats you've got me going, I can tell you. You're *the limit.* You—you—" he sputtered, so furious he could not finish the sentence.
C. S. Pearson, Romance of the Race Course, iv.

Uniform limit, in *math.*, a one-valued limit.

limit, *v. t.*—**Limiting point.** (*b*) See ★*point*1.

limital (lim′i-tal), *a.* Pertaining to or of the nature of a limit or boundary.

Limited administration, express. See ★*administration,* ★*express.*

limit-line (lim′it-līn), *n.* In the Bolyai geometry, a circle with infinitely great radius. Called by Lobachevski *boundary-line* (*Grenzlinie*) or *oricycle;* by Bolyai, the *L line of S.* See extract under ★*limit-surface.*

limit-man (lim′it-man), *n.* In *athletics,* the man who has the farthest distance to go in a race, or the greatest handicap to overcome; a scratch-man.

limitrophe (lim′i-trōf), *a.* and *n.* [LL. *limitrophus,* prop. *limitotrophus,* applied to lands (*agri.*) set apart for the support of the soldiers on the frontier (*limitanei*), ‹ LGr. λιμιτότροφος, ‹ λίμιτον, ‹ L. *limes* (*limit-*), border, limit, + Gr. *-τροφος,* ‹ τρέφειν, nourish, feed, support. The modern use is slight, literary, and erroneous.] **I.** *a.* Situated on the borders; on the frontier line (of another country); bordering.

II. *n.* A bordering country; a frontier land.

limit-surface (lim′it-sėr″fās), *n.* In the Bolyai geometry, a sphere with infinitely great radius. Called by Lobachevski *boundary-surface* (*Grenzfläche*) or *orisphere;* by Bolyai, the *surface F in S.* The characteristic geometry of the orisphere is Euclidean, with the oricycle as its straight.

When the radius of the circle or sphere becomes infinite all these normals become parallel, but the circle or sphere does not become a straight line or plane. It becomes what Lobatchewsky calls a limit-line or *limit-surface.*
Encyc. Brit., XXVIII. 665.

limivorous (lī-miv′ō-rus), *a.* [L. *limus,* mud, + *vorare,* eat, + *-ous.*] Feeding on mud in order to get the organisms contained in it, as certain worms.

limnanthaceous (lim-nan-thā′shius), *a.* Belonging to the plant family *Limnanthaceæ.*

Limnatis (lim-nā′tis), *n.* [NL., an error or altered form for **Limnitis,* ‹ Gr. λιμνῆτις, fem. of λιμνήτης, living in marshes, ‹ λίμνη, marsh, lake: see *Limnetis.*] A genus of leeches of the family *Gnathobdellidæ,* found in the Nile. Its members are small in size and if swallowed may become attached to the hinder part of the mouth-cavity and cause various objectionable results, such as spitting of blood and retarded respiration.

limnean, limnæan (lim-nē′an), *a.* [Gr. λιμναῖος, of or from the marsh or standing water (‹ λίμνη, a marsh, lake, pool), + *-an.*] In *phytogeog.*, same as ★*limnetic.*

These all, with floating stems and leaves, form with Eleocharis interstincta, E. mutata, and E. cellulosa a mingling of the Hydrocharidian and *Limnæan* classes of hydrophytes. *C. Mohr,* Plant Life in Alabama, p. 126.

limnemia, limnæmia (lim-nē′mi-ạ), *n.* [NL. *limnæmia,* ‹ Gr. λίμνη, marsh, + αἷμα, blood.] Malarial cachexia.

limnemic, limnæmic (lim-nē′mik), *a.* [*limnemia* + *-ic.*] 1. Relating to or suffering from malarial cachexia.—2. In *biol.,* adapted to live in marshes or marshy places.

Limnerpeton (lim-nėr′pē-tọn), *n.* [NL., ‹ Gr. λίμνη, marsh, + ἑρπετόν, reptile.] A genus of branchiosaurian *Amphibia* with naked body and broad frog-like skull, from the Permian rocks of Bohemia.

limnetic (lim-net′ik), *a.* [Gr. λιμνήτης, living in marshes, + *-ic.*] 1. Living in fresh water; pertaining to fresh-water life.

The development of *limnetic* copepods.
Amer. Nat., July, 1903, p. 503.

Specifically—2. Noting the free-floating or free-swimming microscopic organisms found in rivers, lakes, pools, and other bodies of fresh water. Sometimes used synonymously with *pelagic.*

The *limnetic* or pelagic organisms are those that make their home in the open water. They float or swim freely and are drifted about by every current. . . . Then there are organisms that may be said to be facultative *limnetic* forms, that is, they are sedentary or free-swimming at will.
G. C. Whipple, Microscopy of Drinking-water, p. 105.

Limnetic plankton. See ★*plankton.*

limnigraph (lim′ni-gráf), *n.* An erroneous form of ★*limnograph.*

limnimeter (lim-nim′e-tėr), *n.* An erroneous form of ★*limnometer.*

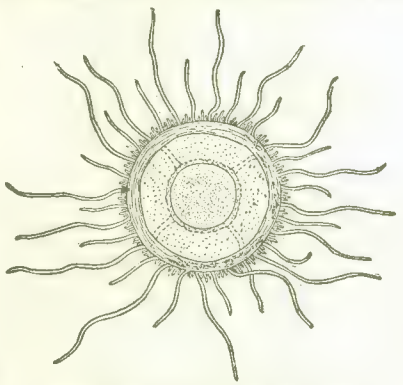
limnimetric, *a.* An erroneous spelling of ★*limnometric.*

limnobatid (lim-nob′ạ-tid), *n.* and *a.* **I.** *n.* A member of the heteropterous family *Limnobatidæ.*

II. *a.* Having the characters of or belonging to the family *Limnobatidæ.*

limnobiologic (lim″nō-bī-ō-loj′ik), *a.* [*limnobiology* + *-ic.*] Of or pertaining to limnobiology or the scientific study of the animals and plants that live in fresh water. *Smithsonian Rep.,* 1898, p. 510.

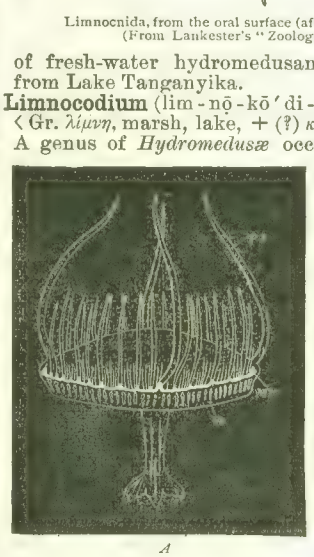
limnobiological (lim″nō-bī-ō-loj′i-kạl), *a.* Same as ★*limnobiologic.*



limnobiology (lim-nō-bī-ol′ō-ji), *n.* [Gr. λίμνη, marsh, lake, + E. *biology.*] That branch of science which deals with the animals and plants which live in fresh water as contrasted with those of the ocean.

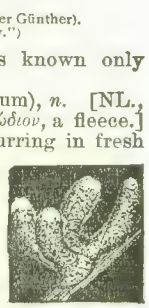
From having been the special study of geologists in its physical aspects, limnology is now rapidly becoming the peculiar study of biologists, and attempts are even being made to limit the meaning of the word to the study of organic life in lakes, which would be denoted more correctly as *limno-biology.* *Encyc. Brit.,* XXX. 272.

limnobios (lim-nō-bī′os), *n.* [NL., ‹ Gr. λίμνη, marsh, lake, pond, + βίος, life.] The animals and plants of fresh water considered collectively and in contrast with the animals and plants of the ocean and those of the land. *Haeckel* (trans.), Planktonic Studies, in Rep. U. S. Fish Com., 1889–91, p. 580.



limnobious (lim-nō′bi-us), *a.* [Gr. λιμνόβιος, living in a marsh or lake, ‹ λίμνη, a marsh, lake, + βίος, life.] Living in marshes or pools.

Limnocnida (lim-nok′ni-dạ), *n.* [NL., ‹ Gr. λίμνη, marsh, lake, + κνίδη, nettle.] A genus of fresh-water hydromedusans known only from Lake Tanganyika.



Limnocnida, from the oral surface (after Günther). (From Lankester's "Zoology.")

Limnocodium (lim-nō-kō′di-um), *n.* [NL., ‹ Gr. λίμνη, marsh, lake, + (?) κώδιον, a fleece.] A genus of *Hydromedusæ* occurring in fresh water and found up to the present time only in the *Victoria regia* tank of the Royal Botanical Society of London.

A

B

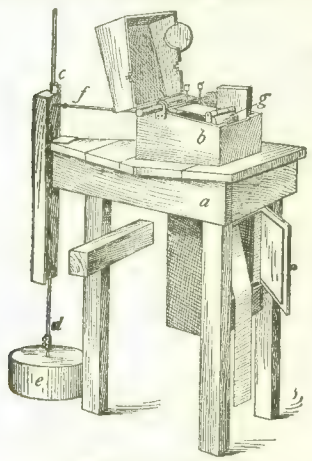
A, Limnocodium as seen floating; about three times natural size. MR, marginal nerve and cnidoblast ring; Ve, velum; PT, perradial tentacle. (After Lankester.) *B,* polyps of Limnocodium on weed. (After A. G. Bourne.) (From Lankester's "Zoology.")

The discovery and description of the Okapi, Cænolestes, Nyctotherus, Rhabdopleura, Cephalodiscus, *Limnocodium,* and Pelagohydra, . . . were the work of British zoologists. *Rep. Brit. Ass'n Advancement of Sci.,* 1903, p. 673.

limnogram (lim′nō-gram), *n.* [Gr. λίμνη, marsh, lake, + γράμμα, a writing.] The curve of height of water for each moment of time as recorded automatically by a limnograph.

limnograph (lim′nō-gráf), *n.* [Gr. λίμνη, marsh, lake, + γράφειν, write.] An apparatus for keeping a continuous record of the height of water, especially in a lake. See ★*limnometer.*

In order to study the seiches in Loch Ness, a *limnograph,* constructed in Geneva under the supervision of Dr. Ed. Sarasin, was set up. *Nature,* Jan. 7, 1904, p. 236.



limnologic (lim-nō-loj′ik), *a.* [*limnolog-y* + *-ic.*] Of or pertaining to limnology. *Smithsonian Rep.,* 1898, p. 506.

limnological (lim-nō-loj′i-kạl), *a.* Same as ★*limnologic.*

limnology (lim-nol′ō-ji), *n.* [Gr. *λίμνη*, marsh, lake, pond, + *-λογια*, ‹ *λέγειν*, speak.] The scientific study of lakes and ponds, with especial reference to the organisms which live in them.

In the last quarter of the 19th century the study of lakes . . . was raised to the rank of a special science, mainly by the exertions of Prof. F. A. Forel, to whom is due the generally accepted name *limnology*. *Limnology* includes the complete study of lakes, geographical, physical, chemical, and biological, so conducted as to throw light on the mutual relations of all the natural conditions affecting them. *Encyc. Brit.*, XXX. 271.

limnometer (lim-nom′e-tėr), *n.* [Gr. *λίμνη*, a marsh, lake, + *μέτρον*, measure.] A form of

Sarasin's Limnometer.

a, table supporting box *b*, containing the self-registering apparatus, whence a rotating rod *f* extends to a pulley-wheel near *c*, around which is wound a flexible copper band attached to the rod *d*, and moving with the float *e* which is surrounded by a large cylinder (not shown in figure), to ward off objectionable waves, ripples and winds. The rotations of *f* are recorded on a long sheet of paper wrapped about the roller *g*, which revolves by clockwork.

tide-gage, first devised by Forel and Sarasin for recording small oscillations in Swiss lakes and applied by Nakamura and Yoshida to tidal oscillations in Japanese harbors; specifically, Sarasin's limnometer of 1901, which is properly a ★*limnograph* (which see).

limnometric (lim-nō-met′rik), *a.* [Also *limnimetric*; ‹ Gr. *λίμνη*, marsh, lake, + *μέτρον*, measure, + *-ic*.] Pertaining to the measurement of bodies of fresh water, such as lakes or ponds.

A Federal hydrographic office has, with the help of some Cantonal governments, spread over the territory of Switzerland a net of *limnimetric* stations, where observations on the slope, depth, discharge, width, and variations of the watercourses are regularly carried on.
Geog. Jour. (R. G. S.), IX. 318.

The following table gives some of the *limnometric* values communicated by the author or obtained provisionally from the material now available.
Geog. Jour. (R. G. S.), XVI. 219.

limnophilid (lim-nof′i-lid), *n.* and *a.* **I.** *n.* A member of the trichopterous family *Limnophilidæ*.

II. *a.* Having the characters of or belonging to the family *Limnophilidæ*.

limnoplankton (lim-nō-plangk′ton), *n.* [NL., ‹ Gr. *λίμνη*, marsh, lake, + NL. *plankton*.] The floating and swimming organisms of fresh water, considered collectively and as contrasted with the floating and swimming fauna and flora of the ocean, or haliplankton. See ★*haliplankton*.

The totality of the swimming and floating population of the fresh-water may be called *limnoplankton*, as opposed to the marine haliplankton which we here briefly call plankton.
Haeckel (trans.), Planktonic Studies, in Rep. U. S. Fish [Com., 1889–91, p. 580.

limon[2] (lē-môṅ′), *n.* [F. *limon*, OF. *limun*, ‹ ML.**limo(n-)*, ‹ L. *limus*, mud, slime: see *lime*[1] and *limous*.] A deposit of detritus along the borders of rivers; loess.

At the foot of the Alps, where black schists are largely developed, the loess is dark gray; but west of the secondary chain the same deposit is yellowish and composed almost entirely of silicious materials, with only a very little carbonate of lime. This *limon*, or loess, . . . is generally modified towards the top by the chemical action of rain. *Smithsonian Rep.*, 1890, p. 226.

limoncillo (lē-mōn-thēl′yō), *n.* [Sp. dim. of *limón*, lemon.] 1. In Porto Rico, any one of several trees of the myrtle family, especially *Pimenta racemosa*, from the leaves of which is distilled the oil used for making bay-rum.—2. In the southwestern United States and Mexico, any one of several species of *Pectis*, especially *P. papposa*, *P. diffusa*, and *P. uniaristata*, small, yellow-flowered composites, with linear glandular-dotted leaves, and a strong odor of lemon. In many localities these plants are used for making beverages and are administered in the form of decoctions as a remedy for fever and ague and for other maladies. Also called *lemonweed* and *romerillo*.

limoncito (lē-mōn-thē′tō), *n.* [Sp. *limoncito*, diminutive of *limón*, lemon.] In the Philippine Islands, Guam, and on the west coast of Mexico, the orangeberry, *Triphasia trifoliata*, a shrub with glossy, dark-green, trifoliate leaves, white flowers with the fragrance of hyacinth, and globular berries of an orange-scarlet color filled with a somewhat gummy, bitter-sweet pulp, which has the flavor of curaçao liqueur. The plants send up many shoots from the root and form dense thickets if undisturbed. They are much used for hedges, and from the fruit marmalade and jelly are made, of an orange-like flavor, but having a constipating effect if eaten in any quantity. Also called *limoncito de China* and *lemoncito*.

Dense thicket of *lemoncito* (Triphasia aurantiola) not now in bloom, thorny shrubs with glossy trifoliate leaves, sending up shoots from the roots and consequently well adapted for hedges. Found a few *lemoncito* berries remaining on the bushes, orange-scarlet in color, filled with a somewhat gummy, bitter-sweet pulp, with a flavor like Curaçoa liquor. *Plant World*, Feb., 1903, p. 26.

limonene (lī′mō-nēn), *n.* [NL. *limonum*, lemon, + *-ene*.] A general term applied to certain terpenes, $C_{10}H_{16}$. The dextrorotatory derivative is also called *hesperidene*, *carvene*, and *citrene*. The inactive compound is termed *dipentene*, *cajuputene*, *cinene*, *diisoprene*, *isoterebentene*, etc.

limonillo (lē-mō-nēl′yō), *n.* [Amer. Sp., dim. of Sp. *limón*, lemon: see *lemon*.] A composite plant, *Picradenia odorata*, of the southwestern United States. It exhales the odor of lemons. Also *limonilla*.

limonitization (lī″mō-nī-ti-zā′shọn), *n.* [*limonite* + *-ize* + *-ation*.] In *petrog.*, the change of a mineral or rock into limonite.

Limonium (lī-mō′ni-um), *n.* [NL. (Miller, 1759) (L. *limonion*, *lemonion*), ‹ Gr. *λειμώνιον*, sea-lavender or snakeweed, prop. neut. of *λειμώνιος*, adj., ‹ *λειμών*, a moist meadow.] A genus of dicotyledonous plants of the family *Plumbaginaceæ*.

Limont limestone. See ★*limestone*.

limophthisis (li-mof′thi-sis), *n.* [NL., ‹ Gr. *λιμός*, hunger, + *φθίσις*, wasting.] Emaciation due to inability to take sufficient nourishment.

limotherapy (lī-mō-ther′ạ-pi), *n.* [Gr. *λιμός*, hunger, + *θεραπεία*, medical treatment.] The treatment of disease by reduced diet.

limousine (lim-ö-zēn′), *n.* [F., fem. of *limousin*, *a.*, of Limousin (or Limoges).] 1. A cloak of goats' hair or coarse wool worn by peasants and wagon-drivers.—2. A type of automobile body, in which the rear seats are inclosed by fixed sides, back, and top. The front seats are commonly separated from the rear part of the body by movable glass windows.

limpet-hammer (lim′pet-ham″ėr), *n.* In *prehistoric archæol.*, one of the oblong flaking-hammers found in kitchen-middens and believed to have been used to knock limpets off rocks.

limu (lē′mö), *n.* [= Polynesian *limu*, or *rimu*, moss or seaweed, Chamorro and Malay *lumut*.] Throughout Polynesia, a generic name for mosses and seaweeds.—**Limu fuafua**, in Samoa, *Caulerpa clavifera*, an alga with a pepper-like taste similar to that of *Laurencia pinnatifida*: used by the natives for food and said to be much relished by turtles.—**Limu lipoa**, in Hawaii, *Dictyopteris plagiogramma*, the favorite seaweed of the natives, who always have it at their feasts and celebrate it in their songs.

limule (lim′ūl), *n.* [NL., ‹ *Limulus*.] A king-crab, *Limulus*.

limulid (lim′ū-lid), *n.* One of the *Limulidæ*.

lin[4] (lin), *n.* A provincial pronunciation of *lind*[1].

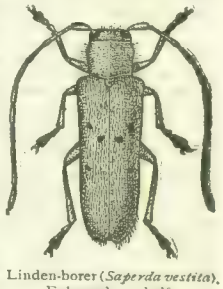
linage[2] (lī′nāj), *n.* [Also *lineage*; ‹ *line*[2] + *-age*. Compare *lineage*[1].] 1. Lining; arrangement in line.—2. In *printing*: (*a*) The quantity of matter estimated in lines. (*b*) Payment or rate of payment by the line.

linaloa-oil (lin-ạ-lō′ạ̈-oil), *n.* See ★*oil*.

linalool (lin-ạ-lō′ol), *n.* [*linaloa* + *-ol*.] A name of two chemical compounds, differing in their effect on polarized light. The dextrorotatory isomer is identical with coriandrol. The levorotatory derivative, which is also called licareol, is contained in linaloa-oil, from the white cedar of Cayenne, and in the oils of spike, lavender, thyme, sassafras-leaf, and many other plants. It is a colorless liquid, boiling at 190–195° C.

linamarin (li-nam′ạ-rin), *n.* [L. *linum*, flax, + *amarus*, bitter, + *-in*.] A bitter glucoside contained in *Linum usitatissimum*. It crystallizes in needles, melts at 134° C., and yields hydrocyanic acid when hydrolyzed.

Linc., Lincs. Abbreviations of *Lincolnshire*.



linch[3] (linch), *v. t.* [*linch(-pin)*, *n.*] To fasten with a linch-pin.

lincrusta (lin-krus′tạ̈), *n.* [*lin(seed-oil)* + L. *crusta*, crust.] A trade-name for a kind of linoleum or oil-cloth, embossed and colored in various designs, intended as a covering for the surface of walls and ceilings. It is made with wood-fiber, oxidized linseed-oil, resinous matter, and pigment. In full, *lincrusta Walton*.

lindackerite (lin-dak′ẹ-rīt), *n.* [*J. Lindacker*, name of the first analyzer, + *-ite*[2].] A hydrous arseniate and sulphate of copper and nickel, occurring in green tabular crystals and reniform masses: from Joachimsthal, Bohemia.

Linden inchworm. See ★*inchworm*.—**Linden leaf-beetle.** Same as ★*ladder-beetle*.—**Southern linden**, *Tilia pubescens*, a small tree of the eastern United States, chiefly southward, but ranging from Long Island to Florida and Texas. It has small leaves, often not heart-shaped, and sometimes densely woolly beneath.—**White linden**, the white basswood, *Tilia heterophylla*, a large tree of the Appalachian region, having large leaves which are white beneath and have a fine downy pubescence.

linden-borer (lin′den-bōr″ėr), *n.* An American cerambycid beetle, *Saperda vestita*, whose larvæ bore into the trunks and branches of the basswood or linden.

Linden-borer (*Saperda vestita*). Enlarged one half.

linden-worm (lin′den-wėrm), *n.* Any one of several lepidopterous larvæ which feed on the foliage of the linden, notably the larva of the lime-tree winter-moth (which see, under *winter*[1]), the larva of the notodontid *Datana ministra*, and that of the pyralid *Pantographa limata*.

Lindernia (lin-dėr′ni-ạ̈), *n.* [NL. (Allioni, 1755), named in honor of F. B. von *Lindern* (1682–1755), a German botanist and physician.] A genus of plants of the family *Scrophulariaceæ*. See *Vandellia*, *bitter-blain*, and ★*haimarada*.

Lindia (lin′di-ạ̈), *n.* [NL.] A genus of freshwater rotifers, of the family *Notommatidæ*. The body is elongated and cylindrical, with a projecting tail, but not annulose, the corona is obliquely truncated, the head bears auricles, and the trophi are virgate. Also *Notommata*.

lindiform (lin′di-fôrm), *a.* [*Lindia* + L. *forma*, form.] In *entom.*, having the shape of the genus of rotifers *Lindia*: said of certain insect larvæ.

Lindleyan (lind′li-ạn), *a.* Relating to John Lindley, professor of botany at the University of London, 1829–60, and author of a "Natural System of Botany," which was published in several editions, the first in 1830. The system was based on that of De Candolle. It was characterized by the use of a new style of nomenclature, with uniform suffixes, from which corresponding English terms were formed.

The discovery of the exogenous structure in many Carboniferous Pteridophytes (Calamites, Stigmaria, Sigillaria, even Lepidodendron) overthrew the old *Lindleyan* classification into endogens and exogens, which was supposed to be fundamental. *Science*, July 1, 1904, p. 26.

lindoite (lin′dō-īt), *n.* [*Lindö*, an island near Christiania, Norway, + *-ite*[2].] In *petrog.*, a name given by Brögger to certain fine-grained syenites, sometimes having a trachytic texture, composed chiefly of alkali-feldspar, with little or no ferromagnesian constituents. They are in part highly feldspathic facies of sölvsbergite. Rosenbusch classes them with bostonites.

Lindsæa (lind-zē′ạ̈), *n.* [NL. (Dryander, 1793), named after John *Lindsay*, a surgeon in Jamaica.] A genus of small polypodiaceous ferns of the tribe *Davallieæ*, with mostly pinnate or bipinnate fronds, having oblong or lunate, unilateral pinnæ or pinnules with linear marginal sori borne in a continuous or interrupted line at the summit of the radiat-

ing forked veins, and uniting two or more of them. There are about 30 species, mainly tropical, in appearance closely resembling *Adiantum* of the tribe *Pterideæ*, but readily distinguished by the presence of a special indusium attached on the interior side, forming with the plane margin a bilabiate furrow within which the sori are borne.

lindsayite (lind′zā-īt), *n.* [From a proper name, *Lindsay*, + *-ite*2.] See ★*lepolite*.

line2, *n.* 4. Specifically—(*b*) *pl.* In *naval arch.*, the form of a vessel as shown by the lines formed by the intersections of its surface with three sets of parallel planes. The intersections with the transverse vertical planes give the square stations or frame-lines corresponding to the frames shown in their true form in the body-plan; the intersections with the horizontal planes give the water-lines or level-lines shown on the half-breadth plan; and the intersections of the vertical longitudinal planes give the bow- and buttock-lines shown on the sheer-plan. Besides these three sets of planes, diagonal planes are used to assist in defining the form by the diagonal lines (which see, under ★*diagonal*). See cut showing the lines of the forward half of a vessel, under *forebody*.

18. In *elect.*: (*a*) Short for *line of magnetic force*. See *magnetic* ★*circuit* and *magnetic force*, under *magnetic*.

This machine has a flux of 2,100,000 *lines*. At this flux the density in the pole piece will be 2,100,000 divided by 47½ equals 44,210. *Practical Electricity*, p. 68.

(*b*) That part of an electric circuit which connects generating and receiving stations or apparatus. It may be overhead and consist of electric conductors supported by insulators on poles and brackets, or it may be underground and consist of insulated cables.

19. In *fencing*, that part of the body directly opposite to the enemy, in which the central part of the right side, the right arm, and the sword ought always to be found, and in which are also to be placed the feet, at the distance of 18 inches from each other. In this sense, a fencer is said to be in his *line*, to go out of his *line*, etc. *Chambers.*—20. In *printing*, a straight row of type or of print as it appears in the page of a book or the column of a newspaper. With letters or characters it is a *line of print*; without them it is a *white line*; if partly print and partly blank it is a *broken line*.

21. In *boat-* or *yacht-racing*, an imaginary line extending between two fixed points and marking the beginning or end of the course, or both.—22. In *art*, the conventional representation of the theoretical limits of surfaces or of their elements. It is usually a mark made by a dark substance upon a light one; but the reverse may be true. It may represent the contour of an object, in which case it is called *outline*, or the direction of action, or be simply decorative. A series of lines may give the impression of light and shade, as in engraving or etching.

At the present time all criticism of art is determined by the "*line*." All caprices and whims of the "*line*" are now ridden as much to death, and with the same enthusiasm, as were formerly those of "light."
Encyc. Brit., XXXII. 448.

All along the line. (*a*) *Milit.*, from one end to the other of the line in a military formation. Hence—(*b*) At every point.—**Baillarger's line,** a band of nerve-fibers in the cortex of the brain. Also called *Baillarger's layer*. *Encyc. Brit.*, XXXI. 544.—**Basal lines.** Same as *basal* ★*straights*.—**Blackiston's Line,** an imaginary line passing through Tsugaru Strait, between the main island of Japan (Hondo) and the island of Hokkaido (formerly called Yezo), separating the temperate and semitropical fauna of southern Japan from its subarctic fauna. This line marks the northern limit of monkeys, pheasants, catfishes, and numerous other forms of life of warm regions.—**Black line.** See ★*black*.—**Blood line, blue line.** See ★*blood*, ★*blue*.—**Bottom-set line.** Same as ★*bottom-line*.—**Break line.** See ★*full line* (*b*).—**Brocard line.** Same as *Brocard* ★*straight*.—**By line,** with perfect accuracy.

Yes, sir, to carry quarrels,
As gallants do; to manage them *by line*.
B. Jonson, The Alchemist, ii, 1.

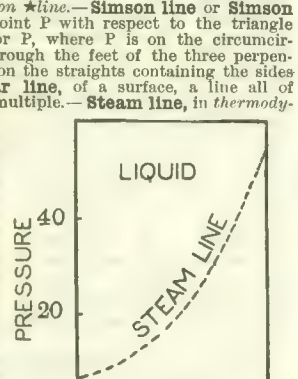
Center-line. (*a*) See ★*center-line*. (*b*) In *ship-building*, the central fore-and-aft line of a vessel at any level: loosely used for the central vertical longitudinal plane.—**Conjugate lines on a surface,** in *geom.*, lines whose directions at any point are those of the conjugate diameters of the indicatrix at that point.—**Dimension lines,** the lines on a mechanical drawing which indicate the points or planes whose distance apart is expressed by a given dimension. These lines are drawn very lightly, or with colored ink, to distinguish them from the outlines of the figure.—**Douglas's line.** See *Douglas's* ★*fold*.—**Dressed line,** hackled flax, consisting of the long fibers.

Nearly all of the best grade of long fiber, "*dressed line*," is used for making twines, yacht cordage, etc.; cheaper grades are made into binder twine.
Yearbook U. S. Dept. Agr., 1901, p. 542.

Enhanced line, a line which is made more conspicuous relatively to other lines in the same spectrum by substituting a strong electric spark for the electric arc in producing the spectrum. It has been very generally assumed that the spark is hotter than the arc and that the enhancement is due to the increase in temperature, but this is not true in all cases.—**Euler's line.** Same as *Euler's* ★*straight*.—**Farre's line,** a whitish mark on the ovary indicating the line of attachment of the mesovarium.—**Fast line,** in *surv.*, a line determined in position and measured.—**Frégier line.** Same as *Frégier* ★*straight*.—**Halleyan line,** an imaginary line which passes through all points on the earth's surface that have the same magnetic declination; an isogonic line.—**Influence line,** in *engin.*, a line or curve having as abscissæ the distances of a load from one end of a girder and as ordinates the bending moment or shear due to the load.—**In line,** in *stock-breeding*, from a particular or definite family: as, to breed *in line*.

Seek your stock bull with little regard to whether he is bred strictly "*in line*" or not. Don't be afraid of any good outcross.
Rep. Kan. State Board Agr., 1901–02, p. 56.

Isopiestic line, in *thermodynam*, a curve showing the relation between volume and temperature in a body or system the pressure of which remains constant; an isobar.—**Lemoine line.** Same as *Lemoine* ★*straight*.—**Light water-line.** See *water-line*.—**Line-complex.** See ★*complex*.—**Line-of-battle ship.** Same as *ship of the line* (which see, under *ship*).—**Line of departure,** in *gunnery*, the line in which a projectile is moving when it leaves the muzzle of the gun.—**Line of march,** the route followed, as by a column of troops or other body of people.—**Line of regard,** in *optics*, the line of vision or line of sight.—**Line of slope,** on a surface, the line of least inclination to the horizontal plane.—**Line of syzygies,** in *astron.*, in an orbit, the diameter containing the syzygies.—**Line of Vicq d'Azyr,** a continuation, near the calcarine fissure, of the line of Baillarger. Also called *Vicq d'Azyr's band*.—**Line of weakness,** in *geol.*, a line of disturbance on the earth's surface, so called because along it relief has been afforded for internal strains. Lines of weakness are marked by upheavals (as of mountains), faults, and volcanoes.—**Line with intervals,** a line of forts, redouts, or other disconnected field-works.—**Loaded line,** in *elect.*, a telephone-line or cable in which distributed inductance is made to counteract distributed capacity, thus improving the conditions for the transmission of speech.



To the electrical engineer there is no such word as "fail," and the "*loaded line*" in which objectionable inductance is made to counterbalance and neutralize equally destructive capacity, has produced a circuit whereby even trans-oceanic telephony seems within grasp.
Elect. World and Engin., March 5, 1904, p. 447.

Load water-line. See *water-line*.—**Mammary line.** Same as *mammillary* ★*line*.—**Mammillary line,** an imaginary vertical line bisecting the nipple.—**Median line.** See ★*median*.—**Meridian line.** (*a*) See *meridian, a.* (*b*) A north-and-south line.—**Moment of two straight lines,** the product of the sine of their angle and the length of their common perpendicular.—**Multistation line,** in *telephony*, a line which connects several stations; a party-line. Also called a *polystation line*. *Abbott*, Telephony, v. 395.—**Nasal line,** a line running on each side from the point of junction of the ala nasi and the cheek downward, encircling the corner of the mouth: noted prominently in intra-abdominal disease.—**Nasolabial line,** the furrow marking the boundary between the lip and the cheek on each side, extending from the ala nasi to the angle of the mouth.—**Nebular line,** a bright line in the spectrum of a nebula.—**Neumann lines.** These lines are due to the presence of fine twinning lamellæ (perhaps of secondary origin) parallel to the faces of the trisoctahedron (221). It is uncertain whether the twinning-plane is a face of the octahedron or of this trisoctahedron.—**Neutral line,** in *elect.* See *neutral points*, under *point*1.—**One-way line,** in *telephone practice*, a line or trunk wire designed to transmit messages in one direction only.—**On the line.** See *the* ★*line*.—**Oppel's lines,** in *exper. psychol.*, a figure which embodies

Oppel's Lines.

a variable optical illusion of extent, described by J. Oppel in 1856–57. The two lines of the accompanying figure are objectively equal; but the 'filled' line to the right appears longer than the 'unfilled' line to the left. See Fig. 3, under ★*illusion*, 2.—**Paris line,** an unit of length, equal to $\frac{1}{144}$ of a Paris foot.—**Party-line,** in *telephone practice*, a circuit which supplies several customers.—**Pascal line** or **Pascal straight,** the three opposite pairs in every complete set of connectors of a hexastigm whose dots are in a conic intersect in three co-straight codots whose bearer is called a Pascal straight. This hexastigm has 60 Pascal straights.—**Philo's line** or **Philo's sect,** the smallest sect between two given intersecting straights through a given point in their plane. The given point and the foot of the perpendicular upon the Philo sect from the cross of the given straights are equidistant from the mid-point of the Philo sect.—**Polystation line.** Same as *multistation* ★*line*.—**Simson line** or **Simson straight,** of the point P with respect to the triangle ABC or of ABC for P, where P is on the circumcircle, the straight through the feet of the three perpendiculars from P upon the straights containing the sides of ABC.—**Singular line,** of a surface, a line all of whose points are multiple.—**Steam line,** in *thermodynam.*, a curve which indicates the pressure corresponding to any temperature at which a liquid and its vapor are in equilibrium and at which consequently both phases may be in contact without change of proportion.—**Telluric line,** any line in a solar or stellar spectrum that is produced by selective absorption in the earth's atmosphere.—**The line.** (*b*) In art-exhibitions, a line opposite the spectator's eye where objects may best be seen and where the best pictures, etc., are usually placed.—**To bring into line.** (*a*) *Milit.*, to aline. (*b*) Figuratively, to bring into accord; cause (a number of persons) to agree.—**Tonal line,** in *psychol.*, the continuous series of tonal sensations, bounded by the highest and lowest audible tones. See *Drobisch's* ★*spiral*.

Steam Line.

Music has selected at option from this continuity single sensations separated by considerable intervals, thus substituting a tonal scale for the tonal line.
W. Wundt (trans.), Outlines of Psychol., p. 51.

To ride the line. See *line-riding*.—**Vicq d'Azyr's line.** See ★*line of Vicq d'Azyr*.—**Wollaston line.** Same as *Fraunhofer line*. See *spectrum*.

line2, *v.* **I.** *trans.*—**To line out,** to transplant (seedlings) from the seed-bed to rows in the forest nursery.

II. *intrans.* 2. To form in a line: usually with *up*.

line3, *v. t.* 6. In *bookbinding*, to cover the inner sides of (a book-cover) with paper; support the back of the folded sections of a book with thin lawn or linen in the process of binding.

linea, *n.*—**Linea aspera.** (*b*) A line which marks the separation of the dorsal surface of the optic thalamus from the adjoining surface of the tænia and caudate nucleus.—**Linea semicircularis.** Same as *temporal* ★*crest*.—**Linea thalassinica,** a groove or crack which runs lengthwise on each side of the cephalothoracic carapace in certain crustaceans of the tribe *Thalassinidea*.—**Lineæ albicantes,** white lines in the skin after stretching, as in the skin of the abdomen after pregnancy.

lineage2 (lī′nāj), *n.* Same as ★*linage*2.

lineal, *a.* 5. Of or pertaining to the line or officers of the line in the army or navy.

There is a growing belief that the most effective solution of the engineering problem lies in the formation of a corps of line officers for engineering duty exclusively, or one of engineer officers having positive rank and *lineal* titles, either corps to be recruited yearly by Annapolis graduates in sufficient numbers to maintain it at full strength.
Cassier's Mag., quoted in Army and Navy Jour., Nov. 18, [1905, p. 315.

lineamentation (lin″ē-ā-men-tā′-shon), *n.* [*lineament* + *-ation*.] The grouping and forms of lineaments.

Linear acceleration. See ★*acceleration*.—**Linear capacity,** in *elect.*, the electrostatic capacity per unit of length of a linear condenser, such as a cable or a line or wire.—**Linear projection,** in *crystal.* See ★*projection*.—**Linear set.** See ★*set*1.—**Linear space.** (*b*) See ★*space*.

linearifolious (lin″i-ar-i-fō′li-us), *a.* In *bot.*, having linear leaves.

linearize (lin′ē-a-rīz), *v. t.*; pret. and pp. *linearized*, ppr. *linearizing*. [*linear* + *-ize*.] To represent by means of lines; transform from pictographic to linear characters.

Finally, in 1900, his [Dr. Evans's] discovery of the clay archives in the prehistoric Palace of Cnossus had supplied conclusive evidence of the existence of both a semi-pictorial and a *linearized* system of writing of a highly developed kind. The relations of the two scripts, however, had remained obscure. *Athenæum*, Dec. 5, 1903, p. 757.

linearoid (lin′ē-a-roid), *a.* [*linear* + *-oid*.] In group theory, quasi-linear.

On differential equations belonging to a ternary *linearoid* group. *Science*, April 24, 1903, p. 666.

lineature† (lin′ē-a-tūr), *n.* [*lineate* + *-ure*.] Outline.

line-ball (līn′bâl), *n.* In *billiards*, a ball with its base on a line.

line-bar (līn′bär), *n.* In the customary printing of hymn-tunes and similar music, a heavy bar to mark the end of a line of the words and of the corresponding musical phrase or strain. Its place may often be in the midst of a measure, but if it falls at the end of a measure it then takes the place of the ordinary bar (see *bar*1, 11). When a line-bar needs to be distinguished from the usual bar the latter is called a *measure-bar*.

line-boat (līn′bōt), *n.* A boat used for hand-line fishing in the sea.

line-breeding (līn′brē″ding), *n.* Another name for *in-and-in breeding*.

line-car (līn′kär), *n.* A freight-car owned by a fast-freight company, or by an association of railways, and designed to be used on several different roads or through-freight routes. A line-car is thus often a foreign car. See *foreign* ★*car*.

line-cod (līn′kod), *n.* See *line-fish*.

line-cut (līn′kut), *n.* A photomechanical reproduction on metal, for relief-printing purposes, of an illustration drawn in outline, showing the object in its relation to white and black only.

line-cutting (līn′kut″ing), *n.* The cutting of lines of magnetic flux by the conductors of the electric circuit of a generator, considered, in accordance with the conceptions of Faraday, as the source of the induced electromotive force. *Encyc. Brit.*, XXVII. 574.

line-displacement (līn′dis-plās″ment), *n.* Displacement of the lines in the spectrum of a star, due, generally, to motion of the star in

the line of sight. Displacements may also occur from intense pressures in stellar atmospheres, but in that case different lines are not affected alike.

The *line-displacements* of the bright star acquaint us merely with its rate of motion as projected upon the visual plane; they correspond to a mean orbital radius of 620,000 miles, the real path being perhaps six or eight times wider than that spectroscopically indicated, while the companion-ellipse traversed by the dark satellite may be of any imaginable size.
A. M. Clerke, Problems in Astrophysics, p. 321.

line-firing (līn′fīr″ing), *n.* In *vet. surg.*, a method of treating chronic inflammations, consisting in burning parallel lines in the skin, over the seat of inflammation, with a feather-edge firing-iron or thermocautery: used principally in cases of chronic tendinitis, spavin, etc., of the horse. *U. S. Dept. Agri.*, Rep. on Diseases of the Horse, 1903, p. 331.

line-hunter (līn′hun″tėr), *n.* A hound which trails the game by scent alone.

line-hunting (līn′hun″ting), *a.* Trailing game by the scent alone, as distinguished from hunting by sight.

The old slow *line-hunting* staghound.
Saturday Rev., Feb. 1, 1890, p. 135.

line-knife (līn′nīf), *n.* In *whaling*, a knife used for cutting the harpoon-line when it is foul.

lineless (līn′les), *a.* [*line*[2] + *-less.*] Having no lines; without lines.

line-linkage (līn′ling″kāj), *n.* See ★*linkage.*

linen-drapery (lin′en-drā″pėr-i), *n.* The establishment, occupation, or goods of a linen-draper.

linenette (lin-en-et′), *n.* [*linen* + *-ette.*] A cotton fabric made in imitation of linen.

linen-tester (lin′en-tes″tėr), *n.* Same as *linen-prover.*

lineocircular (lin″ē-ō-sėr′kū-lăr), *a.* [L. *linea*, line, + *circularis*, circular.] A term used by Sylvester as descriptive of the Peaucellier adjustment or linkage for converting circular into rectilinear motion, or vice versa.

line-officer (līn′of″i-sėr), *n.* See *line*[2], 14.

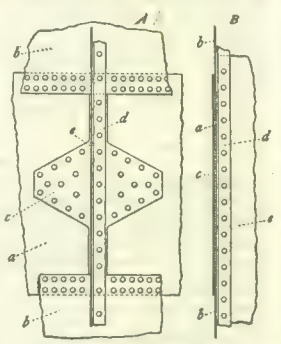
lineoid (lin′ē-oid), *n.* [L. *linea*, line, + *-oid.*] In *math.*, the assemblage of points of an ordinary (linear) 3-space (space of three dimensions) of point 4-space.

lineole (lin′ē-ōl), *n.* A lineola.

line-pair (līn′pār), *n.* **1.** A degenerate form of a conic, consisting of two straight lines which together form a locus of the second degree.

Of sections of the cone, he [Kepler] says, there are five species from the "recta linea" or *line-pair* to the circle.
Encyc. Brit., XXVIII. 658.

2. A curve of the second order which breaks up into two straight lines.



line-pusher (līn′pŭsh″ėr), *n.* The appliance in the monotype type-setting and -casting machine that pushes the finished lines from the type-channel to the galley.

For "leading" matter automatically there is a receptacle — which the operator can easily keep supplied with leads — out of which, by the action of a small lever, a lead can be delivered behind each line as the *line-pusher* carries it into the galley.
Census Bulletin 216, June 28, 1902, p. 61.

liner[1], *n.* **6.** A fine-pointed red sable brush, with a metal ferrule and wooden handle.—**7.** A vessel engaged in line-fishing at sea.—**8.** One who writes items for the press, which are paid for by the line; a penny-a-liner.—**9.** A picture hung 'on the line,' at an exhibition. [Colloq.] *N. E. D.*—**10.** In *law*, one whose legal domicile must be determined by some specific legislative or judicial act, by reason of the fact that his place of residence is situated upon a boundary line between different jurisdictions.

That J.... M. N..., a *liner* between the counties of Chambers and Lee, is declared to be a citizen of Lee County.
Laws of Alabama, 1866–67, p. 175.

liner[2], *n.* **3.** In *mach.*: (*b*) A cylinder or vessel placed inside another cylinder or vessel as a lining: frequently used in engines or pumps to protect the main cylinder from wear and injury and to facilitate making repairs.—**5.** In *iron ship-building*, a piece of plate used to fill up a narrow space between a plate and a bar or in the seam of two plates so that they can be riveted solidly together in places where, owing to the arrangement of the parts, the adjoining surfaces cannot be brought into close contact. A *frame-liner* is one whose width is that of the flange of the frame-bar, extending between the edges of adjacent sunken strakes of outside plating and filling the space between the frame-bar and the raised strake of outside plating. A *wide liner* or *water-tight bulkhead-liner* is one fitted in the space between the bounding-bar of a water-tight bulkhead and the raised strake of outside plating. It is much wider than the flange of the bar to compensate for the weakness in the outside plating due to the close spacing of rivets necessary for water-tightness. See cut. A *taper liner* is one having a wedge shape to fill up a triangular space.

Water-tight Bulkhead-liner.
A, elevation; B, section; *a*, raised or outer strake of outside plating; *b*, *b*, sunken or inner strakes of outside plating; *c*, liner; *d*, bulkhead bounding-bar; *e*, water-tight bulkhead plate.

line-scale (līn′-skāl), *n.* In *printing*, a measure, similar to a foot-rule, used to show the length of a line.

A line of matter is progressively perforated and charged until, as the end is approached, the *line-scale* shows that the next word or syllable can not go into that line.
Census Bulletin 216, June 28, 1902, p. 58.

line-screen (līn′skrēn), *n.* In *photog.*, a screen upon which fine lines are ruled, used in photo-engraving for the manufacture of half-tone blocks. The lines are ruled with a diamond, and are filled in with black pigment. Two sheets of such ruled glass are cemented together, face to face, with the lines crossing at right angles, to form the screen.

line-shaft (līn′ shâft), *n.* A main shaft: (*a*) A long shaft, in a factory or shop, which furnishes power to the countershafts for the various machines. It may be driven directly by the engine, by a belt from the engine, or by a motor. (*b*) In *marine engin.*, the part of the propeller-shaft which reaches from the thrust-shaft to the tail-shaft.

line-shafting (līn′ shâf″ting), *n.* Same as ★*line-shaft.*

linesman, *n.* **2.** In *Amer. foot-ball*, one of the forwards; also, the man who has charge of the measurements of the distance gained and assists the umpire in various ways.—**3.** A workman engaged in the erection or maintenance of the line-wires of a telegraphic or telephonic system, or of electric circuits of any sort.

line-spectrum (līn′spek″trum), *n.* A spectrum consisting of bright lines, as distinguished from a band-spectrum or continuous spectrum. A continuous spectrum, like that of the sun, crossed by the dark lines of Fraunhofer is also sometimes referred to as a *line-spectrum.* See *spectrum.*

line-sphere (līn′ sfēr), *a.* Pertaining to or connecting the straight line and the sphere.

line-switch (līn′swich), *n.* In *elect.*, a switch for opening and closing the main line of an electric circuit.

line-up (līn′up), *n.* In athletic games such as base-ball and foot-ball, the order in which the players take their positions.

linework (līn′wėrk), *n.* In *art*, drawing executed with a pen or pencil, as opposed to 'wash.'

ling[1], *n.* **6.** Same as ★*beardy*, 3.—**Ling-liver oil.** See ★*oil.*

ling[2], *n.*—**Draw-ling, pull-ling.** Same as *hare's-tail*, 1.—**Wire-ling,** the crowberry.

lingasarira (ling″gä-sä-rē′rä), *n.* [Skt. *linga-çarīra*, the imagined typical or subtle body, < *linga*, mark, token, image, in the Vedanta philosophy the typical or subtle body (the supposed indestructible original of the gross visible body), + *çarīra*, body.] The Sanskrit name for the supposed astral body.

ling-gowan (ling′gou″an), *n.* See ★*gowan.*

lingo[3] (ling′gō), *n.* [Cf. Pg. *linga*, a strap by which anything is suspended. See *lingo*[1].] The weight attached to the heddle-cord in a Jacquard loom. *R. Marsden*, Cotton Weaving, p. 149.

linguale, *n.* **2.** In *craniom.*, the upper terminal point of the symphysis of the lower jaw on its lingual surface. *Von Török.*

lingualize (ling′gwą-līz), *v. t.*; pret. and pp. *lingualized*, ppr. *lingualizing.* [*lingual* + *-ize.*] To make lingual.

The final i or u of a preposition or other like prefix ordinarily *lingualizes* the initial s of the root to which it is prefixed. *Whitney*, Sansk. Gram., p. 185.

linguist, *n.* **4.** An interpreter. *N. E. D.*

linguistic, *a.* **II.** *n.* Same as *linguistics.*

linguistical (ling-gwis′ti-kąl), *a.* Same as *linguistic.*

Lingula flags. See ★*flag*[4].

Lingulella (ling-gū-lel′ą), *n.* [NL., < *Lingula*, 2, + dim. *-ella.*] A genus of atrematous brachiopods having a linguloid form and characterized by a more or less elevated ventral cardinal area which is bisected medially by a narrow pedicel-furrow. It occurs in the Cambrian of North America and Europe.

Lingulepis (ling-gū′lę-pis), *n.* [NL., *Lingula*, 2, + Gr. λεπίς, a scale.] A genus of atrematous linguloid brachiopods characterized by having the pedicel-valve much produced at the beak with no distinct cardinal area. It occurs in the Cambrian of North America.

linguliform (ling-gū′li-fôrm), *a.* [L. *lingula*, lingula + *forma*, form.] Resembling a lingula.

linguolabial (ling-gwō-lā′bi-ąl), *a.* and *n.* [Prop. **linguilabial*, < L. *lingua*, tongue, + *labium*, lip, + *-al*[1].] **I.** *a.* Of, pertaining to, or formed by the tongue and lips, as a sound or letter. *Stud. Yale Psychol. Lab.*, X. 113.

II. *n.* A letter or articulation produced by the tongue and lips.

linguonasal (ling-gwō-nā′ząl), *a.* and *n.* [Prop. **linguinasal*, < L. *lingua*, tongue, + *nasus*, nose, + *-al*[1].] **I.** *a.* Of, pertaining to, or formed by the tongue and the nose, as a sound or letter.

II. *n.* A sound or letter formed by the tongue and nose.

linguopalatal (ling-gwō-pal′ ā-tąl), *a.* and *n.* [Prop. **linguipalatal*, < L. *lingua*, tongue, + *palatum*, palate, + *-al*[1].] **I.** *a.* Of, pertaining to, or formed by both tongue and palate: said of various sounds or letters.

II. *n.* A sound or letter produced by the tongue and palate. *Keane*, Man Past and Present, p. 124.

linie (lin′i-ę), *n.* [G., MHG. *linea*, OHG. *linea*, < L. *linea*, line: see *line*[2].] The twelfth part of the zoll or inch; a line. *C. Hering*, Conversion Tables, p. 33.

linin, *n.* **2.** The substance which forms the reticulum of the nucleus and incloses the chromatin.

lining-cloth (lī′ning-klôth), *n.* Extra pieces of canvas sewed on the back of square sails to take the chafe.

lininoplast (lī′nin-ō-plast), *n.* [*linin* + Gr. πλαστός, < πλάσσειν, form.] The plasmosome or true nucleolus. *G. Eisen*, 1899.

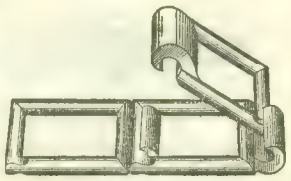
linity (lin′i-ti), *n.* [*line*[2], *n.*, + *-ity.*] See the extract.

The theory of the "*linity*," analogous to the linear vector function in quaternions or to the matrix in algebra, is developed in considerable detail.
Nature, April 25, 1907, p. 623.

link[1], *n.* **8.** In *math.*: (*a*) A piece of a straight line joining two given points. (*b*) A double tangent.—**9.** In *music*, a connecting passage of one or more measures, intervening between two well-defined sections or phrases.—**Link polygon.** Same as *funicular polygon.*—**Open link,** a chain-link having an opening in one side, the ends lapping but not in contact; a chain-link in which the ends are brought together and butted against each other, but not fastened; an open ring.—**Stephenson link,** a slotted link or bar in an engine valve-gear, each end of which is connected to an eccentric by a rod. A slider or sliding-block on the link is connected to the valve-stem and may be shifted so that it is moved by either of the two eccentrics, one of which makes the engine revolve in one direction and the other in the opposite direction: so called from its inventor, George Stephenson. See *Stephenson* ★*link-motion.*

link[1], *v. t.*—**To link up.** (*a*) In an engine fitted with Stephenson link-motion, to shorten the cut-off (of the engine) by shifting the link-blocks nearer to the middle of the links, thereby increasing the expansion of the steam. (*b*) To join or connect with other parts of the same or similar systems: as, in topography, to connect two isolated surveys or systems of points and geometrical lines, with one another, by joining one point in each of the two systems by a line of measured length and direction. *Geog. Jour.* (R. G. S.), IX. 364.

link[2], *n.* **3.** *pl.* The ground on which golf is played.



linkage, *n.* **3.** In *chem.*, the hypothetical connection between two atoms. Same as *bond*[1], 11.—**4.** In *elect.*, the product obtained by multiplying the magnetic flux through a coil by the number of turns which the coil contains.—**Hart's linkage.** Same as *Hart's* ★*cell.*—**Line linkage,** in *elect.*, the linkage of the lines of force of the magnetic circuit of a generator, motor, transformer, or other apparatus, with the electric circuit in which current is induced.

We may, with Faraday, make the transition from *line-linkage* to the precisely equivalent conception of "line-cutting" as the source of E. M. F. *Encyc. Brit.*, XXVII. 574.

Peaucellier's linkage. Same as *Peaucellier cell* (which see, under *cell*).

link-belt (lingk'-belt), *n.* Same as ★*link-belting*.

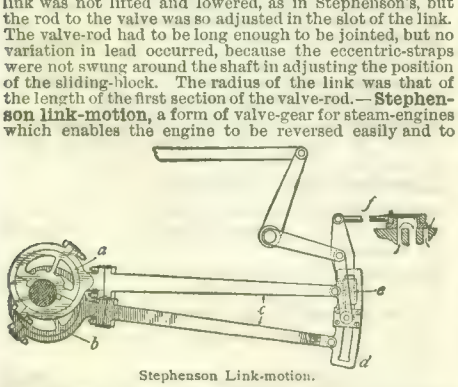
link-belting (lingk'bel″-ting), *n.* A belt for the transmission of power, composed of a series of detachable links.

Link-belt.

link-carrier (lingk'kar″i-ėr), *n.* A metal piece which carries the link in a locomotive valve-gear; a stirrup.

link-form (lingk'fôrm), *n.* A transitional form between two races or groups of organisms.

Some stress was laid on Haeckel's discovery of Ctenaria as a possible *link-form* between Hydromedusæ and Ctenophora. *Encyc. Brit.*, XXVII. 301.



link-grate (lingk'grāt), *n.* An endless grate made up of links so that it can be run like a belt over sheaves or pulleys. The coal is put on the grate at one end or over one sheave, and is burned while traveling to the end where the ashes are dumped off. *Elect. World and Engin.*, May 7, 1904, p. 863.

link-hanger (lingk'hang″ėr), *n.* In a locomotive, the suspension-rod fastened to the link-saddle in a Stephenson link-motion valve-gear by which the weight of the link and of the eccentric-rods is borne, and by which the link itself is raised and lowered.

Linkia (ling'ki-ą), *n.* [NL. (Cavanilles, 1797), named after Heinrich Friedrich *Link* (1767–1851), professor of botany at Berlin.] A genus of dicotyledonous shrubs of the family *Proteaceæ*. See *Persoonia* and ★*geebung*.

linking-up (ling'king-up), *n.* The act or process of altering the position of the links or link-blocks in a reversing and cut-off engine fitted with Stephenson links, to produce an earlier cut-off and greater expansion; hence, the making of the cut-off earlier in any engine. Also called *hooking-up*.

link-motion, *n.*—**Allan's link-motion,** a form of valve-gear for steam-engines in which the link is raised as in Stephenson's and the valve-rod lowered as in Gooch's, to reverse and produce cut-off; but since the link and slider-block are both moved, each need only be moved half as far as in either of the other forms. The link is straight and not a part of a circular arc, and is more easily manufactured.—**Gooch's link-motion,** a form of link-motion, derived from Stephenson's, in which the slot-link was not lifted and lowered, as in Stephenson's, but the rod to the valve was so adjusted in the slot of the link. The valve-rod had to be long enough to be jointed, but no variation in lead occurred, because the eccentric-straps were not swung around the shaft in adjusting the position of the sliding-block. The radius of the link was that of the length of the first section of the valve-rod.—**Stephenson link-motion,** a form of valve-gear for steam-engines which enables the engine to be reversed easily and to

Stephenson Link-motion.

operate with a variable cut-off. It was first designed by Howe and was used by Stephenson in early English locomotives. The elements consist of (*a*) one eccentric set at the proper angle ahead of the engine-crank for forward movement; (*b*) another set for backward motion; (*c*) two eccentric-rods or -blades from these two eccentrics to the top and bottom respectively of (*d*) the link or slot-link; and (*e*) the sliding-block in the slot of this link which carries the pin to which the valve-stem (*f*) is fitted, either directly or through a rocker-shaft and arms. When the link is lowered, the forward eccentric (*a*) drives (*f*); when the link is raised, the backward eccentric (*b*) drives (*f*). In intermediate positions the block (*e*) is actuated partly by both (*a*) and (*b*), and, as these are in opposite phase or nearly so, the motion of (*f*) becomes less, and the port is opened during a smaller portion of the piston-stroke, and an earlier cut-off results. Stephenson's is differentiated from other link-motions by having the link raised and lowered, and with it the eccentric-blades or -rods, to vary cut-off and reverse; hence, the slot-link has a curvature formed by an arc struck with the center of the engine-shaft as a center. The swing of the eccentric-straps and -blades around the eccentrics in the cutting-off and reversing adjustments of the link makes the lead of the valve increase, as the cut-off in forward gear is made earlier.

link-saddle (lingk'sad″l), *n.* The plate or bar bolted to the side of the link and to which the link-hanger is attached on a locomotive or other engine fitted with the Stephenson valve-gear.

link-slot (lingk'slot), *n.* In a steam-engine, the slot or opening in the curved member of a Stephenson link-motion for a locomotive or other reversing-engine. This member is called the *link*, and in the opening or slot slides the link-block by which the valve is operated as the two eccentrics operate the link itself. See *Stephenson* ★*link-motion*.

link-slotter (lingk'slot″ėr), *n.* A machine or attachment for slotting or finishing the curved links for steam-engine valve-gears.

link-staff (lingk'stáf), *n.* A slender staff or rod graduated into feet or links, used in surveying: employed both as a visible object to sight to when held vertically over a given point, and also as a rough linear measuring-scale for short distances such as offsets from a given line or point; a flag-staff or flag-pole.

link-vine (lingk'vīn), *n.* In the Bahamas, *Vanilla articulata*, a tall, leafless climber of the orchid family, growing over trees and shrubs: so called from its stems, the joints of which are smooth, fleshy, and from 8 to 10 inches long.

linkwork, *n.* 2. A mechanism or device in which motion or power is transmitted by rods and levers, instead of by gearing or by pulleys and belts; a linkage; a link-motion.

link-worming (lingk'wėr″ming), *n.* *Naut.*, the operation of worming rope-cables with chain, as a protection against cutting on a rocky bottom.

linky (ling'ki), *a.* [*link*^{2} + -*y*^{1}.] Link-like; having the character or appearance of links. See *link*^{2}.

Steering by this . . . we made our way across country, and won forth at last upon the *linky*, boggy muirland that they call the Figgate Whins. *R. L. Stevenson*, Catriona, xii.

linn^2, *n.* Same as ★*lin*^{4}.—**Black linn, yellow linn,** the cucumber-tree, *Magnolia acuminata*.

Linn. An abbreviation (*a*) of *Linnæus*; (*b*) of *Linnæan*.

linography (li-nog'rą-fi), *n.* [L. *linum*, flax (see *linen*), + Gr. *γράφειν*, write.] The process of photographing the outlines of a picture on linen or cotton cloth, as a basis for painting it in oil. *Jour. Soc. Chem. Industry*, VII. 588.

linolenic (lin-ō-len'ik), *a.* [L. *linum*, flax, + *oleum*, oil, + *-ene* + *-ic*.] Noting an acid, a colorless liquid, $C_{18}H_{30}O_2$, obtained from various oils, such as linseed and cotton-seed. It has an odor of blubber and combines with six atoms of bromine.

Linophryne (lin-ō-frī'nē), *n.* [NL., < Gr. *λίνον*, a net, + *φρύνη*, a toad.] A genus of fishes of the family *Ceratiidæ*, found in the mid-Atlantic.

Linopteris (lī-nop'tę-ris), *n.* [NL. (Presl, 1838), < Gr. *λίνον*, net, + *πτέρις*, fern.] A genus of fossil ferns with bipinnate fronds, the pinnæ oblong and multijugate, and the pinnules subfalcate, obtuse at the summit and cordate at the base, with a reticulate nervation. It was called *Dictyopteris* by Gutbier in 1835, but that name was preoccupied. See *Dictyopteris*, with cut, and ★*Dictyopteris*, 2.

linotype (lī'nō-tīp or lin'ō-tīp), *n.* and *a.* **I.** *n.* A machine in which stereotyped lines (of words) are produced, for use in printing. See cut in next column.

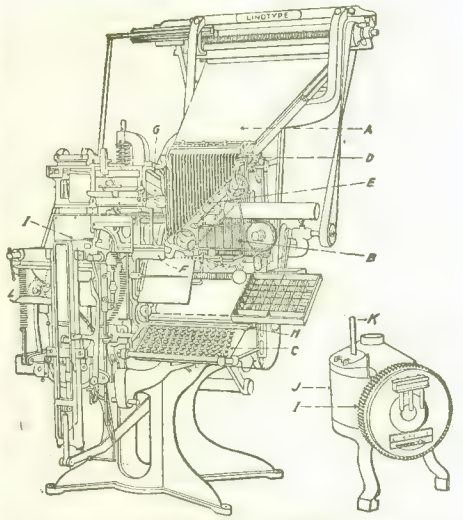
II. *a.* Composed with the linotype machine.

linotype (lī'nō-tīp or lin'ō-tīp), *v. t.*; pret. and pp. *linotyped*, ppr. *linotyping*. [*linotype*, *n.*] To set with a linotype machine.

linotyper (lī'nō-tī-pėr or lin'ō-tī-pėr), *n.* One who uses the linotype machine.

Among the trades in which the workers are exposed to the danger of plumbism are the following: lead miners, painters, potters, calico printers, compositors, pressmen, stereotypers, *linotypers*, printers.

Buck, Med. Handbook, VI. 325.



linoxyn (lin-ok'sin), *n.* [L. *linum*, flax, + *ox*(*ygen*) + -*in*^{2}.] The name given by Mulder to the amorphous, tough, and elastic material, somewhat resembling india-rubber, which is left as the product of the 'drying' of linseed-oil which has been exposed to the air, from which it absorbs oxygen. He found it to be a chemically neutral substance which on analysis gave figures leading to the formula $C_{32}H_{54}O_{11}$, but later researches have made it doubtful whether it is a single, definite substance.

linseed-tea (lin'sēd-tē″), *n.* An infusion of linseed; flaxseed-tea. It contains mucilage, and is therefore demulcent.

lint^1, *n.*—**Fairy lint, Laverock's lint,** the mountain-flax or purging-flax, *Linum catharticum*.—**Lint cotton.** See ★*cotton*^{1}.—**Patent lint.** Same as ★*sheet-lint*.

lint-bells (lint'belz), *n.* The flax plant, *Linum usitatissimum*.

lint-box (lint'boks), *n.* That part of a cotton-baling press in which the lint (ginned cotton) is packed.

Mergenthaler Linotype Machine.

A, matrix magazine; *B*, rods from finger-keys to matrix-releasing device; *C*, keyboard; *D*, matrix channels; *E*, traveling-belt to convey matrices to *F*; *F*, assembling-stick for matrices; *G*, rack containing spaces; *H*, space-releasing bar; *I*, mold-wheel *J*, melting-pot; *K*, pump-plunger for forcing metal into mold; *L*, receiving galley for finished lines.

linter^1, *n.* 2. Same as *lint-doctor*.—3. *pl.* The short fibers of cotton which are removed by a second ginning process, from cotton-seed which has been once ginned. Also called *regins*.

Linters, or delint, as the short fiber is also called, find extensive application in the arts.

L. L. Lamborn, Cottonseed Products, p. 34.

lintonite (lin'tǫn-īt), *n.* [Named after Miss L. A. *Linton*, who analyzed it.] A variety of thomsonite, occurring in green spherical forms, derived from the amygdaloid of Grand Marais, Lake Superior.

linty (lin'ti), *a.* [*lint*^{1} + -*y*^{1}.] 1. Like lint or flax; soft.—2. Covered with or full of lint.

linusic (li-nū'sik), *a.* Noting an acid, a colorless compound, $C_{17}H_{29}(OH)_6COOH$, prepared by the oxidation of linoleic acid with potassium permanganate. It crystallizes in rhombic plates or needles and melts at 203° C. Also called *hexahydroxystearic acid*.

Liocetus (lī-ō-sē'tus), *n.* [Gr. *λεῖος*, smooth, + *κῆτος*, a large sea-animal.] A genus of deep-sea fishes of the family *Ceratiidæ*.

liodermia, leiodermia (lī-ō-dėr'mi-ą), *n.* Glossiness of the skin.

Lioglossina (lī″ō-glo-sī'nā), *n.* [NL., < Gr. *λεῖος*, smooth, + *γλῶσσα*, tongue, + *-ina*.] A genus of flounders known only from the Gulf of California.

Liognathus (lī-og'nạ-thus), *n.* [NL., < Gr. *λεῖος*, smooth, + *γνάθος*, jaw.] Same as *Coccosteus*.

lion, *n.* 5. (*c*) A silver and a gold coin of the Belgian provinces, struck in 1790. The value of the gold lion was about $6.50.—**Essex lion,** a calf.—**Order of the Golden Lion,** an order for civil and military merit in Luxemburg: founded in 1858.

lion-fish (lī'ǫn-fish), *n.* A name applied to *Pterois lunatus*, *Scorpæna grandicornis*, and other stinging fishes of the family *Scorpænidæ*, from their mane-like spines.

lion-gate (lī'ǫn-gāt), *n.* An entrance portal decorated above by a pair of sculptured lions

Lion-Gate at Mycenæ, Greece.

facing each other. The motive appears in early Hellenic or Mycenæan decoration and is especially common in early Phrygian art. The most important example is at Mycenæ in the Peloponnesus.

lionization (lī″ŏn-i-zā′shŏn), *n.* The act of lionizing or making a 'lion' of some one.

The *lionization* of the German marines by the Russians at Vladivostock some time ago.
The Forum, Jan.–March, 1904, p. 470.

lion-monkey, *n.* 2. The wanderoo, *Silenus veter:* so called on account of its tufted tail and neck-ruff. — 3. *Macacus leoninus* of India, which is of a yellowish cast.

Liopistha (lī-ō-pis′thä), *n.* [NL., < Gr. *λεῖος*, smooth, + *ὀπισθε*, behind.] A genus of Cretaceous anomalodesmaceous pelecypods characterized by equivalve, oval, thin shells which are gaping in front and compressed behind and are held together by a hinge with a nymph and projecting process on each side.

Liopleurodon (lī-ō-plö′rō-don), *n.* [NL., < Gr. *λεῖος*, smooth, + *πλευρόν*, rib, + *ὀδούς* (*ὀδοντ-*), a tooth.] Same as *Pliosaurus*.

Liopropoma (lī-ō-prop′ō-mä), *n.* [NL., < Gr. *λεῖος*, smooth, + *πρό*, before (pre-), + *πῶμα*, lid (operculum).] A genus of Serranoid fishes found only on the coast of Cuba.

Liopsetta (lī-op-set′ä), *n.* [NL., < Gr. *λεῖος*, smooth, + *ψῆττα*, flounder.] A genus of flounders found on both sides of the Arctic Pacific.

liopus, leiopus (lī′ō-pus), *n.* [NL., < Gr. *λεῖος*, smooth, + *ποῦς*, foot.] One who has flat feet.

liotheid (lī-oth′ē-id), *n.* and *a.* **I.** *n.* A member of the mallophagous family *Liotheidæ*.

II. *a.* Having the characters of or belonging to the family *Liotheidæ*.

liotrichan, leiotrichan (lī-ot′ri-kan), *a.* and *n.* [*liotrich-ous* + *-an.*] **I.** *a.* Same as *liotrichous*.

II. *n.* A liotrichous person. See *Liotrichi*.

liotrichian, leiotrichian (lī-ō-trik′i-an), *a.* Same as *liotrichous*.

lip, *n.* **6.** In *zoöl.*: (*b*) In the *Blastoidea*, one of the distal ends of the radial sinuses. (*c*) In the *Gastropoda*, the outer or thickened inner margin of the aperture of the shell. — **12.** In *metal.*, the part of a ladle or forehearth over which the metal flows. *Phillips and Bauerman*, Elements of Metallurgy, p. 673. — **Baelz's disease of the lip,** an infiltration and ulceration of the mucous glands of the lips. *Buck*, Med. Handbook, I. 722.

lip, *v.* **I.** *trans.* **4.** In *mach.*, to flange; turn over a lip on (a piece of sheet-metal).

The oil box covers are *lipped* and hinged, and fitted with springs that keep the lids tightly closed or hold them open as desired.
Elect. World and Engin., March 28, 1903, p. 533.

5. To lap; touch the edge of (anything) with a slight rippling sound.

We left the dying ebb that faintly *lipp'd*
The flat red granite. Tennyson, Audley Court, 11.

The dory heeled until the water *lipped* the rail.
J. C. Lincoln, Partners of the Tide, xviii.

II. *intrans.* **2.** To project in the form of a broad tab or lip. — **3.** To have an irregularity of the surface caused by overlapping of molds: said of a casting.

lipacidæmia (lip″as-i-dē′mi-ä), *n.* [NL., < Gr. *λίπος*, fat, + NL. *acidum*, acid, + Gr. *αἷμα*, blood.] The presence of fatty acids in the blood.

lipaciduria (lip″as-i-dū′ri-ä), *n.* [NL., < Gr. *λίπος*, fat, + NL. *acidum*, acid, + Gr. *οὖρον*, urine.] The elimination of fatty acids in the urine.

lipanin (lip′a-nin), *n.* [Gr. *λίπος*, fat, + *-an* + *-in*2.] A mixture of 94 parts of olive-oil and 6 parts of oleic acid, used as substitute for cod-liver oil.

liparid (lip′a-rid), *n.* and *a.* **I.** *n.* A member of the lepidopterous family *Liparidæ*.

II. *a.* Having the characters of or belonging to the family *Liparidæ*.

liparoid (lip′a-roid), *a.* [Gr. *λιπαρός*, fatty, + *εἶδος*, form.] Fatty.

Liparops (lip′a-rops), *n.* [NL., < Gr. *λιπαρός*, fatty, + *ὤψ*, eye, face.] A genus of fishes belonging to the family *Cyclopteridæ*; it is found in Kamchatka.

liparous (lip′a-rus), *a.* [Gr. *λιπαρός*, fatty, + *-ous.*] Same as ★*liparoid*.

lipase (lī′pās), *n.* [Gr. *λίπος*, fat, + *-ase.*] A widely distributed ferment occurring in both the animal and the vegetable world, which splits fats into fatty acids and glycerin, is also capable of bringing about the synthesis of fats, and is thus reversible in its action. The synthetic activity of this ferment was first demonstrated by Kastle and Loevenhart, and Hanriot.

Since the discovery of diastase, in 1814, a large number of enzymes have been recognized, and what is of still greater interest and physiological significance, a large number of them, such as diastase, *lipase*, trypsin, etc., etc., have been found in both the vegetable and the animal organism, and, for that matter, in nearly every living cell.
Science, May 17, 1901, p. 767.

lip-brace (lip′brās), *n.* A brace or stay having a lip or flange to provide means for fastening: used in a steam-boiler or tank.

lip-bulb (lip′bulb), *n.* In *phonetics*, a rubber bulb placed between the lips and connected with a recording apparatus: used to teach the lip-pressure proper for a certain articulation. *Scripture*, Exper. Phonetics, p. 398.

lipemia, *n.* See *lipæmia*.

lip-fern, *n.* — **Hairy lip-fern,** *Cheilanthes lanosa*, a species of the eastern United States which has its segments more or less closely covered with rusty hairs.

lipic (lip′ik), *a.* [Gr. *λίπος*, fat, + *-ic.*] Noting an acid, a colorless compound, probably identical with succinic acid, said to be formed by the oxidation of oleic acid.

lip-key (lip′kē), *n.* In *psychophys.*, a form of key used in the reaction-experiment, in which an electric circuit is made or broken by a movement of the lips. *Amer. Jour. Psychol.*, XIII. 257.

liplap (lip′lap), *n.* A half-caste, the offspring of a native of the Dutch East Indies and a Dutchman.

The question is, therefore, not as to the acclimatisation of the Dutch race, whose numbers apart from the officials and military, are insignificant, but as to that of *liplaps*, signos, and mannas, as the Dutch half-castes are variously called. *Academy*, Feb. 11, 1893, p. 122.

lipochrin (lī′pō-krin), *n.* [Gr. *λίπος*, fat, + *ὠχρός*, yellow, + *-in*2.] A yellowish-green pigment found in the fat-droplets which occur in the retinal epithelial cells of some of the lower animals: for example, the frog.

lipochrome (lī′pō-krōm), *n.* [Gr. *λίπος*, fat, + *χρῶμα*, color.] A pigment found in fatty tissue, commonly of a yellow or red color. Such products occur widely distributed both in the animal and the vegetable world. The yellow color of the blood-serum, of the corpora lutea, and of the yoke of birds' eggs, and the reddish pigment of carrots and tomatoes belong to this order. Their composition is for the most part unknown.

lipochromic (lī-pō-krō′mik), *a.* [*lipochrome* + *-ic.*] Of the nature of a lipochrome.

lipochromogen (lī-pō-krō′mō-jen), *n.* [*lipochrome* + *-gen*, -producing.] A substance which gives rise to the formation of a lipochrome.

lipochromoid (lī-pō-krō′moid), *n.* [*lipochrome* + *-oid.*] A pigment of the order of, or resembling, the lipochromes.

lipocyanine (lī-pō-sī′a-nin), *n.* [Gr. *λίπος*, fat, + *κυανος*, blue, + *-ine*2.] A blue lipochrome.

lipodystrophy (lī-pō-dis′trō-fi), *n.* [Gr. *λίπος*, fat, + E. *dystrophy.*] In *pathol.*, a disturbance of the metabolism of fat.

A new clinical entity — intestinal *lipodystrophy*.
Med. Record, Nov. 16, 1907, p. 821.

lipogastrism (lī-pō-gas′trizm), *n.* [NL., < Gr. *λίπος*, fat, + *γαστήρ* (*γαστρ-*), stomach, + *-ism.*] Lipogastrosis.

lipogastry (lī′pō-gas-tri), *n.* [Gr. *λίπος*, fat, + *γαστήρ* (*γαστρ-*), stomach, + *-y*3.] In sponges, the temporary obliteration of the gastral cavity by the contraction of the surrounding walls. See ★*lipostomy*, 2.

In the first place, any sponge, whether of simple or complex form, may under certain conditions contract itself and close up its pores and osculum. In extreme cases even the gastral cavity becomes obliterated. Such changes of form are of course only of temporary duration and are of no morphological or classificatory value. Sooner or later the sponge expands again. . . . Nevertheless, sponges in a state of contraction have . . . been described . . . as a distinct species, genus or family; while the temporary obliteration of the osculum or gastral cavity has been dignified by the coinage of the terms *lipostomy* and *lipogastry* respectively. *Lankester*, Zoology, II. 4.

lipogenic (lī-pō-jen′ik), *a.* [Gr. *λίπος*, fat, + *-γενης*, -producing, + *-ic.*] Forming or tending to form fat; relating to lipogenesis.

Lipogenyidæ (lī″pō-jē-nī′i-dē), *n. pl.* [NL. < *Lipogenys* + *-idæ.*] A family of fishes known only from a single specimen taken in the Gulf Stream in the deep sea.

Lipogenys (lī-poj′e-nis), *n.* [NL., < Gr. *λείπειν*, leave off, + *γένυς*, jaw.] A genus of deep-sea

Lipogenys gillii.
(From Bulletin 47, U. S. Nat. Museum.)

fishes of the family *Lipogenyidæ*, found only in the Gulf Stream.

lipography (lī-pog′ra-fi), *n.* [Gr. *λείπειν*, *λιπεῖν*, leave out, + *γράφειν*, write, + *-y*3.] Same as *dittography*.

lipohæmia (lī-pō-hē′mi-ä), *n.* Same as *lipæmia*.

lipoid (lip′oid), *a.* and *n.* [Gr. *λίπος*, fat, + *εἶδος*, form.] **I.** *a.* Having the appearance of fat.

II. *n.* The fat of the nerve-cells. It consists chiefly of cholesterol and lecithin.

lipolysis (lī-pol′i-sis), *n.* [NL., < Gr. *λίπος*, fat, + *λύσις*, dissolution.] The cleavage of fats into fatty acids and glycerin.

Since the bile salts are known to increase *lipolysis*, the effects of the sodium salts of cholic, glycocholic and taurocholic acids in *n*/500 solutions were tested on lipolytic hemolysis. *Science*, Sept. 27, 1907, p. 413.

lipolytic (lip-ō-lit′ik), *a.* [Gr. *λίπος*, fat, + *λύσις*, dissolution, + *-ic.*] Capable of causing the cleavage of fats into fatty acids and glycerin; for example, lipase.

lipomatoid (lī-pom′a-toid), *a.* [*lipoma*(*t-*) + *-oid.*] Resembling a lipoma.

lipomorph (lī′pō-môrph), *n.* [Gr. *λείπειν*, *λιπεῖν*, leave out, + *μορφή*, form.] An organism which characterizes a district by its absence from it. See the extract.

In many cases the absence of certain forms of animal life in countries where they might be naturally expected to occur is a marked feature of certain parts of the world's surface. For example, bears (Ursus) and deer (Cervus) are altogether absent from the Æthiopian regions, and cats (Felis) from Australia, though these forms are widely distributed over other lands. It is proposed to designate such forms as "*lipomorphs*" (*λειπω*, deficio, and *μορφή*, forma) as regards the particular areas in which they are not found.
P. L. Sclater, in Geog. Jour. (R. G. S.), IX. 673.

liporhodin (lī-pō-rō′din), *n.* [Gr. *λίπος*, fat, + *ῥόδον*, rose, + *-in*2.] A red lipochrome.

lipostomism (lī-pos′tō-mizm), *n.* [*lipostom-y* + *-ism.*] Lipostomosis.

lipostomy, *n.* **2.** In sponges, the temporary obliteration of the osculum by the contraction of the walls. Compare ★*lipogastry*.

lipothymial (lī-pō-thī′mi-al), *a.* Relating to lipothymy; syncopal.

lipotropic (lī-pō-trop′ik), *a.* [*lipotrop-y* + *-ic.*] Promoting an increase of fat.

lipotropy (lī-pot′rō-pi), *n.* [Gr. *λίπος*, fat, + *-τροπια*, < *τρέπειν*, turn.] The increase of fat in the body.

Lipowitz's alloy. See ★*alloy*.

lipoxanthin (lī-pō-zan′thin), *n.* [Gr. *λίπος*, fat, + *ξανθός*, yellow, + *-in*2.] A yellow lipochrome.

lipperings (lip′ėr-ingz), *n. pl.* The mixture of oil, water, and blood that drains from the blubber when cutting in a whale, and the pieces of blubber used to wipe up the deck. See *lipper*2, 1.

After the solid matter has been disposed of, both the deck *lipperings* and blubber-room *lipperings* are usually deposited in barrels or tubs and there scalded with hot oil. *Sci. Amer. Sup.*, March 5, 1904, p. 23552.

lip-speaking (lip′spē″king), *n.* Speaking to a deaf person, with a somewhat emphasized movement of the lips, in the course of instruction known as lip-reading.

lip-stop (lip′stop), *n.* In *organ-building*, same as *flue-stop*. See *stop*1, 6.

lip-turner (lip′tėr″nėr), *n.* In *shoe-manuf.*, a machine for cutting and turning back a lip on the in-sole of a shoe, to form a shoulder against which the sewing-machine sews the upper and the welt.

lipuria (lī-pū′ri-ä), *n.* [NL., < Gr. *λίπος*, fat, + *οὖρον*, urine.] The elimination of fat in the urine: a pathological event.

lip-worship (lip′wėr″ship), *n.* Insincere worship, coming from the lips and not from the heart.

lip-worshiper (lip′wėr″ship-ėr), *n.* One who worships with the lips only; an insincere worshiper.

liq. An abbreviation (*a*) of *liquid*; (*b*) of *liquor*.

liquation, *n.* **4.** In mixtures of fluids, a sepa-

ration by differences of specific gravity. The lightest rises to the top and the heaviest goes to the bottom.

liquefaction, *n.* **1.** Of the gases, chlorin, ammonia, and others were first liquefied by Faraday. The experiment of Andrews with carbon dioxid led to the conclusion that for every gas there is a certain temperature such that if the temperature of the gas is above it, no increase in pressure, however great, will produce visible liquefaction. This is called the *critical temperature.* If the gas has this temperature a certain pressure, the *critical pressure,* will produce liquefaction, and the volume per unit mass at this instant is the *critical volume.* If the temperature of the gas is below the critical value compression produces gradual increase in pressure until (the temperature being kept constant) liquefaction begins at a definite pressure. Further decrease in volume produces very slight increase in pressure until all the gas is liquefied, after which a slight decrease in volume necessitates a large increase in pressure, liquids being, in general, almost incompressible. From these experiments it was predicted that all the so-called permanent gases could be liquefied if they could be cooled below their critical temperatures, and in fact, this has been accomplished (including **helium,** which was first liquefied in 1908). The critical constants of some of the most important gases are as follows:

	Crit. Temp. °C.	Crit. Temp. °F.	Boiling-Point. °C.	Boiling-Point. °F.	Crit. Pressure. Atmosphere.
H	−234	−389	−246	−411	20
O	−119	−182	−181	−295	51
N	−146	−231	−194	−317	35
Air	−140	−220	−191	−312	39
CO_2	+ 31	+ 88	− 80	−112	77
Argon	−121	−186	−187	−305	50.6

For the liquefaction of gases having only moderately low critical temperatures, freezing mixtures produce sufficient cold. Gases thus liquefied, if allowed to evaporate under low pressure, produce still greater cold, which can be used in the liquefaction of other gases; or, the gas to be liquefied can be compressed, cooled as much as possible, and allowed suddenly to expand. In many cases this sudden expansion will cool the gas sufficiently to produce partial liquefaction and even solidification. By such methods Pictet and Cailletet succeeded in 1877 in liquefying oxygen, nitrogen, and hydrogen. More recently Wroblewski, Dewar, and Olzewski produced these liquids in quantities large enough to permit their critical constants to be studied. In the process later perfected by Linde, Dewar, Hampson, and others, and applied most notably to the liquefaction of air, the gas to be liquefied is compressed to a pressure of from 1,200 to 3,000 pounds per square inch, cooled to the ordinary atmospheric temperature, and then led through a long coil of pipe and allowed to escape through a small orifice. The escaped gas, cooled by expansion, is led back around the coil of pipe, cooling the compressed gas on its way to the orifice. This cooled compressed gas therefore after expansion becomes colder than the gas preceding it, and upon flowing back around the pipe produces still greater cooling of the incoming gas; hence the temperature of the escaped gas will gradually diminish until equilibrium is reached either by gain of heat from the surroundings or by liquefaction of part of the gas. If there is sufficient protection from influx of heat from the outside the liquid will accumulate and can be drawn off, in some machines at the rate of several gallons an hour. If air thus liquefied be exposed to the atmosphere the nitrogen, having the lowest boiling-point, boils away first, leaving nearly pure liquid oxygen, which boils away with sufficient rapidity to keep itself at a temperature of −181° C., its boiling-point at atmospheric pressure. Liquid air will probably find its greatest commercial application in various refrigerative processes and in operative surgery. It cannot be a source of power, for a theoretically perfect process of liquefaction would require the expenditure of more energy than could be obtained by the evaporation of the liquid product, and practical methods are necessarily even less efficient.

liquefier, *n.* Specifically—**2.** An apparatus for the liquefaction of gases, especially of air. See *Hampson's liquid-*★*air apparatus,* and ★*liquefaction,* 1.

liquesce (li-kwes'), *v. i.*; pret. and pp. *liquesced,* ppr. *liquescing.* [L. *liquescere,* become liquid: see *liquescent.*] To become liquid; liquefy.

liqueur (li-kėr'), *v. t.* To flavor or treat (wine) with a liqueur.

liquid. **I.** *a.*—**Liquid assets or liquid securities,** property instantly convertible into cash, as stocks, bonds, or other securities upon which banking institutions will at once advance loans.—**Liquid crystal.** See ★*crystal.*

II. *n.*—**Crystalline liquid.** See *liquid* ★*crystal.*—**Elasticity of liquids.** See ★*elasticity.*—**Fuming liquid** or **spirit of Libavius.** Same as *libavius.*—**Grison liquid,** a fungicide preparation designed for application (by spraying) to plants in treating them for mildew. One of the recipes for making it calls for 3 pounds of flowers of sulphur, 3 pounds of quicklime, and 6 gallons of water, to be boiled together until reduced to 2 gallons. The yellow solution so obtained is allowed to settle, and the clear part preserved in well-stoppered bottles: one part of the solution is to be diluted with 100 parts of water when required for use.

liquidate, *v. t.*—**Liquidating partner.** See ★*partner.*

Liquidator of vessels, one of a number of officials belonging to the New York Custom-house.

liquidogenous (lik-wi-doj'e-nus), *a.* [L. *liquidus,* liquid, + *-genus,* -producing.] Of or pertaining to the liquid phase of matter: opposed to ★*gasogenous.*

Liquidus curve. See ★*curve.*

liquiform (lik'wi-fôrm), *a.* [For ★*liquidiform,* < L. *liquidus,* liquid, + *forma,* form.] Resembling a liquid.

liquor, *n.*—**Caustic liquor.** See ★*caustic.*—**Heavy liquor,** in the manufacture of glucose or grape-sugar from starch, the solution which has been neutralized and once filtered through animal charcoal and concentrated in a vacuum-pan to a density of 28° or 30° Baumé, preparatory to a second filtration and final concentration.—**Liquor adhæsivus,** a solution of nitrated cellulose in acetone containing a small amount of a fatty oil: a vehicle for the application of external remedies. It forms a film like collodion.—**Liquor arsenicalis,** the liquor potassii arsenitis of the United States Pharmacopœia, containing 1 per cent. arsenious acid; *Fowler's solution* (which see, under solution).—**Liquor epipasticus,** a 50 per cent. acetic ether tincture of cantharides: used for making blistering collodion; a blistering liquid.—**Liquor folliculi,** the liquid which fills the ovarian or Graafian follicle of the mammal, especially in man.—**Liquor opii sedativus.** Same as *Battley's* ★*solution.*—**Liquor picis alkalinus,** an alkaline aqueous liquid consisting of pine-tar 2 parts, potassium hydroxid 1 part, and water 5 parts: used in dilute solution externally for eczema.—**Red liquor.** (*b*) In the manufacture of carbonate of soda from common salt by the Leblanc process, the mother liquor from evaporation in open pans of the first crude solution obtained by leaching 'black ash,' and removal of 'black salt'; the red color is due to the presence of iron and organic matter as impurities.—**Sulphite liquor,** the waste liquor from the digesters in which the process of making wood-pulp for paper is carried out. This liquor, produced upon a very large scale, and as a rule disposed of by discharge into neighboring streams, has caused trouble on account of the yellowish-brown color it gives to the water. It is not, however, a very seriously polluting material, being discharged at a boiling temperature, so that it is sterile; and being almost destitute of nitrogen, it is not a good culture medium for the more dangerous bacteria. Various attempts have been made to utilize the organic matter of this liquor and it is said that the liquor itself may be advantageously used in dry weather for watering roads or streets.—**Tower-liquor,** the liquor obtained from the washing of roasting-furnace gases in a tower: used in the lixiviation of copper. It is a dilute sulphuric acid in composition. Also called *weak liquor.*—**White liquor,** in *sugar-manuf.,* a concentrated solution of sugar in water. It is added to the sugar in a centrifugal to wash it out and assist the process of throwing out the water held in the sugar. Sometimes called *clairce.*—**Wilson's liquor.** See ★*aluminium hypochlorite.*

liquor-log (lik'ȯr-log), *n.* In *tanning,* a hollow log used for conveying liquor from one vat to another.

liquorous[2] (lik'ėr-us), *a.* [*liquor* + *-ous.*] Liquid; like liquor.

lira[1], *n.*—**Lira Dalmata,** the lira current at Zara, Cattaro, and throughout Servia and the adjacent regions, worth about one third less than the Venetian.

lira[3] (lī'rä), *n.*; pl. *liræ* (-rē). [L., a ridge, also a furrow. Compare *delirium.*] One of the grooves or furrows on a shell.

Three out of the four examples examined have a number of fine *liræ* within the outer lip, a feature not present in the 'Challenger' shell.
Annals and Mag. Nat. Hist., June, 1904, p. 459.

lirate (lī'rāt), *a.* [NL. ★*liratus,* < L. *lira,* a furrow: see ★*lira*[3].] Bearing liræ; marked by liræ, as a shell.

A very delicate species, vitreous, 10-whorled, delicately spirally *lirate;* the liræ distant, few, and conspicuously once acutely keeled at the centre of each whorl.
Proc. Zool. Soc. London, 1901, II. 357.

liration (lī-rā'shọn), *n.* [NL. ★*liratio(n-),* < ★*liratus:* see ★*lirate.*] A system or collection of liræ on a shell.

This *liration* bears small tubercles connected by short cross-ridges with the dentations of the keel.
Annals and Mag. Nat. Hist., June, 1904, p. 459.

lirazza (lē-rät'zä), *n.* [It. dial., pejorative of *lira;* see *lira*[1].] A Venetian base silver coin (1762–97), equal to 30 soldi, and worth about 1s. 3d. or 10 gazzettas.

lirellous (li-rel'us), *a.* [*lirella* + *-ous.*] Same as *lirellate.*

L-iron (el'ī″ėrn), *n.* A piece of structural iron or steel which has an L-shaped cross-section.

lirone (lē-rō'ne), *n.* [It., aug. of *lira,* a lyre: see *lira*[2].] The largest size of the viol, having sometimes as many as 24 strings.

lis[2], *n.* **2.** A gold piece of Raymond IV., Prince of Orange (1340–93).—**3.** A silver coin of France in 1655; also, a gold coin of the same period with two angels on the reverse, supporting the shield.

lis[3] (lis), *n.* [Also *liss:* < Ir. *lios,* OIr. *liss, less,* W. *llŷs,* a hall, palace, court, = Bret. *lez, les,* also *lis, leis,* a court; recorded in OCeltic as a place-name, L. *Lissus,* Gr. Λίσσος, a city in Illyricum, now *Lisso* or *Lješ.*] In *Irish antiq.,* a round inclosure walled with earth, sometimes used as a fort.

lisa (lē'sä), *n.* [Also *liza;* < Sp. *lisa, liza,* a mullet.] The Spanish (and American Spanish) name of several species of mullet.

lisena (li-sē'nä), *n.* [NL. *lisena,* G. *lisene, laschene,* a pilaster-strip.] A pilaster with very slight projections.

lisita (lē-sē'tä), *n.* [Mex. Sp., dim. of Sp. *lisa:* see ★*lisa.*] A name, in Mexico, of *Mugil hospes,* a mullet found on the Pacific coast of Mexico and Central America.

lispound (lis'pound), *n.* [Also *lispund, lispond, lesh pund;* < D. and LG. *lispund,* a contraction of *Livsch pund* (ML. *Livonicum talentum,* 'Livonian pound'): see *Livonian.*] A unit of weight used around the Baltic, varying at different times and places: in Denmark, 17.4 pounds avoirdupois; in Sweden, 18.7 pounds; at Riga, 18.4 pounds. In the Shetland Isles and the Orkneys it was used especially for butter and other provisions, and gradually increased from 12 pounds avoirdupois to 30 pounds, and even more.

lissactinic (lis-ak-tin'ik), *a.* See ★*lysactinic.*

lissamphibian (lis-am-fib'i-an), *n.* A member of the *Lissamphibia,* a division of the *Amphibia* which contains those species which are covered with a smooth skin.

lisse, *n.* **2.** A fine, sheer fabric of either silk or cotton, used for women's neckwear and for ruching.

lissoneoid (li-son'ē-oid), *n.* [Appar. based on Gr. λισσός, smooth (?).] The stream-line curve of least resistance.

lissotrichi (li-sot'ri-kī), *n. pl.* [NL., pl. of *lissotrichus,* < Gr. λισσός, smooth, + θρίξ (τριχ-), hair.] In *anthrop.,* races of man with smooth hair; lissotrichous races of man.

lissotrichian (lis-ō-trik'i-an), *a.* [*lissotrichous* + *-i-an.*] Same as *lissotrichous.*

list[4], *n.* **11.** A division or lock of the hair or beard.

And lissome Vivien . . .
. . . letting her left hand
Droop from his mighty shoulder as a leaf,
Made with her right a comb of pearl to part
The *lists* of such a beard as youth gone out
Had left in ashes. *Tennyson,* Vivien, l. 94.

listen, *v. t.*—**To listen in,** in *telephony,* to restore (circuits) after connection with subscribers to a condition for subsequent use.

The removal of the operator's plug end of line, or her "*listening in,*" restores the circuits to their proper condition for subsequent use.
Elect. World and Engin., May 7, 1904, p. 875.

listening (lis'n-ing), *n.* The act of one who listens.

listening-cam (lis'n-ing-kam), *n.* In *telephony,* a form of ★listening-key (which see).

listening-key (lis'n-ing-kē), *n.* In *telephony,* a key used by the operator to make the connections necessary to enable him to listen to a subscriber.

listerine (lis'tėr-in), *n.* [Named from Sir Joseph *Lister,* an English surgeon, the founder of antiseptic surgery.] An antiseptic preparation consisting of a solution of benzoic acid, boric acid, thymol, etc.

listing-machine (lis'ting-ma-shēn″), *n.* A computing-machine which prints a list of numerical items, and indicates their sum. *Engin. Mag.,* July, 1904, p. 607.

Listing's law. See ★*law*[1].

listrium (lis'tri-um), *n.*; pl. *listria* (-ä). [Gr. λίστριον, a little shovel, dim. of λίστρον, a shovel.] A chitinous plate which closes the progressive track of the pedicel opening in some neotrematous brachiopods, posterior to the apex of the ventral valve: especially characteristic of the *Discinidæ.*

listvanite (list'van-īt), *n.* [Appar. G. ★*listwänit,* < Russ. *listvenuïi,* leafy, + *-it,* E. *-ite*[2].] In *petrog.,* a granular schistose rock, green or yellow, resembling talc-schist, and rich in quartz and dolomite: found in Ural mines.

lit. An abbreviation (*b*) of *liter.*

litaneutical (lit-a-nū'ti-kal), *a.* [Gr. λιτανευτικός, for supplication, < λιτανεύειν, supplicate, < λιτανεία, litany.] Having the form or character of a litany.

litany, *n.*—**Greater litany,** in the *Rom. Cath. Ch.,* the Litany of the Saints, as chanted on the feast of St. Mark, April 25.

Lit. B., Litt. B. Abbreviations of the New Latin *Litterarum Baccalaureus,* Bachelor of Letters or Literature.

litchfieldite (lich'fēld-īt), *n.* [*Litchfield,* Maine, + *-ite*[2].] In *petrog.,* a name proposed by Bayley (1892) for nephelite-syenite occurring at Litchfield, Maine. It is composed of albite and nephelite, with lepidomelane, and has variable amounts of orthoclase, cancrinite, and sodalite.

liter[2], *n.*—**Mohr liter,** the volume of 1,000 grams of distilled water at the temperature of 17.5° C., as weighed with brass weights without correction for displaced air. It really contains, at that temperature, 1,002.3 cubic centimeters, instead of 1,000. Flasks graduated according to this measure have been much used by chemists in volumetric analysis, owing to a fancied advantage in having the weight contained equal to a round number, rather than having the volume a round number.

literal. **I.** *a.* 6. Affecting or relating to a letter: as, *literal* errors, *literal* rhymes.

The manuscript miscellanies of the time of James I. and Charles I. contain several copies of *literal* rhymes not very unlike "A, B, C, tumble down D."
Halliwell, Nursery Rhymes, p. 135.

Literal agraphia. See ★*agraphia*.

II. *n.* 2. In *printing*, a literal error; that is, a wrongly placed letter; a misprint.

literalistic (lit″e-ral-is′tik), *a.* [*literalist* + *-ic.*] Having the characteristics of a literalist or of literalism.

literate, *n.* 3. One who can read and write: opposed to *illiterate*.

literatesque (lit″e-rā-tesk′), *a.* [*literate* + *-esque.*] Having a literary quality; fit to be considered literature. [Rare.]

literator, *n.* 3. One who concerns himself with verbal and textual criticism. [Rare.] *N. E. D.*

literature, *n.* Specifically.—5. In scientific usage, the body of monographs, original papers, etc., dealing with a particular topic: as, the *literature* of the scale-insects and mealy bugs; the *literature* of the reaction experiment.—6. Printed matter of any kind intended for circulation, as the circulars and pamphlets of a political party, of an insurance company, or of a quack advertiser. [Colloq.]

Lith. An abbreviation (*a*) of *Lithuanian;* (*b*) [*l. c.*] of *lithograph* and *lithography*.

litham (lē′täm?), *n.* [Tuareg?] A cloth wound twice around the head and face, so as to leave exposed only the eyes and nose: used by the Tuaregs of the Sahara.

The Touareg always keeps his face covered with a *litham*, a sort of mask; he lives in it, he sleeps in it, and when eating or drinking merely pulls it away from the lower part of his face and passes the food or cup up to his mouth from beneath it. The *litham* was undoubtedly originally intended as a protection against the sun and the scorching winds, and according to Sir Frederick Lugard, especially against the impalpable dust of the Sahara, but the original use of this garment has been so forgotten through the abuse of custom that the Touareg now considers it immodest to show his face even to members of his own family. *Jour. Franklin Inst.*, May, 1904, p. 326.

lithanthracic (lith-an-thras′ik), *a.* [*lithanthrax* (*-ac-*) + *-ic.*] Of lithanthrax; noting an extract formed of those portions of coal-tar which are soluble in benzol and ether.

lithatic (li-thā′tik), *a.* [*lithate* + *-ic.*] Pertaining to or consisting of a lithate.

Lithia water, mineral water containing a considerable portion of lithia salts, found in natural springs in the United States. The name is also applied to artificial mineral waters of similar constitution.

lithic[1]. **I.** *a.*—**Lithic age,** the stone age. See *archæological ages*, under *age*[1].

II. *n.* A remedy supposed to cause the solution of stone in the bladder or kidney.

lithical (lith′i-kal), *a.* [*lithic*[1] + *-al*[1].] In *petrog.*, a term proposed by Fletcher (1895), for the texture of rocks, including the size, shape, and arrangement of the component minerals; textural.

lithify (lith′i-fī), *v.*; pret. and pp. *lithified*, ppr. *lithifying.* [Gr. λίθος, stone, + *-fy.*] **I.** *trans.* To convert into stone: more commonly *petrify*.

Both the sedimentaries and the eruptives undergo a further change, which to a greater or less extent obscures their origin, for the original formations are metamorphosed, that is, recrystallized and *lithified;* so that the planes of sedimentation are partly or largely obscured and the beds of lacolites, intrusive sheets, coulées, dikes, chimneys, and tuffs have a new structure imposed upon them, and are then known as metamorphic rocks.
Powell, Truth and Error, p. 49.

II. *intrans.* To become converted into stone.

lithionite (lith′i-o-nīt), *n.* [Gr. λίθιον, dim. of λίθος, stone, + *-ite*[2].] In *mineral.*, a lithia mica; lepidolite. Lithionite is used as a prefix before the names of rocks characterized by it: as, *lithionite*-granite.

lithiophorite (lith-i-of′o-rīt), *n.* [NL. *lithium* + Gr. *-φορος*, -bearing, + *-ite*[2].] An impure hydrated manganese ore related to psilomelane, but peculiar in yielding lithium.

lithite (lith′īt), *n.* [Gr. λίθος, stone, + *-ite*[2].] In *zoöl.*, a calcareous particle contained in a sac, as an otolith, especially of medusæ. *Parker and Haswell*, Textbook of Zool., I. p. 125.

lithobiid (li-thō′bi-id), *n.* and *a.* **I.** *n.* A member of the myriapodous family *Lithobiidæ*.

II. *a.* Having the characteristics of or belonging to the family *Lithobiidæ*.

lithobilic (lith-o-bil′ik), *a.* [Gr. λίθος, stone, + L. *bilis*, bile, + *-ic.*] Noting an acid, a colorless compound, $C_{30}H_{58}O_6$, contained, together with lithofellic acid, in oriental bezoars, the gall-stones of an antelope. It forms microscopic crystals, melts at 199° C., and gives an intense red-violet color with hydrochloric acid.

lithobolia (lith-o-bō′li-ą), *n.* [Gr. λιθοβολία, < λιθοβόλος, throwing stones, < λίθος, stone, + βάλλειν, throw.] Stone-throwing, as a superstitious ceremony or traditional custom. This custom was common in ancient Greece, but was especially associated with the Damia and Auxesia at Trœzen, in which the women pelted each other with stones. There seems to have been also a lithobolia at the Eleusinia. The custom appears in the Roman festivals of the Nonæ Caprotinæ and Lupercalia. It has been found in Poland and other countries.

lithocarbon (lith-o-kär′bon), *n.* [Gr. λίθος, stone, + E. *carbon.*] An asphalt-like material which is extracted from a bituminous limestone occurring in Uvalde county, Texas: used in making varnish and in insulating electric conductors.

lithochromography (lith″o-krō-mog′ra-fi), *n.* [Gr. λίθος, stone, + χρῶμα, color, + *-γραφια*, < γράφειν, write.] Same as *chromolithography*.

lithochromy (lith′o-krō-mi), *n.* [Gr. λίθος, stone, + χρῶμα, color.] Same as *chromolithography*. Also *lithochrome*.

lithoclase (lith′o-klāz), *n.* [Gr. λίθος, stone, + κλάσις, breaking.] A fracture in a rock. See ★*diaclase*.

The occurrence in many areas of similarly regular networks of streams in which the elements are essentially straight lines in parallel series over considerable distances has now long been known, and has been given an adequate explanation by Daubrée as conditioned by the system of fractures (*lithoclases*) of the region, in part by the faults (paraclases) and in part by the joints (diaclases).
W. H. Hobbs, in Jour. of Geol., Nov.–Dec., 1902, p. 886.

lithoclasty (lith′o-klas-ti), *n.* [Gr. λίθος, stone, + κλαστός, broken, < κλᾶν, break.] The crushing of a stone in the bladder; lithotrity.

lithocolla (lith-o-kol′ą), *n.* [Gr. λίθος, stone, + κόλλα, glue.] A trade-name for a cement used to unite broken pieces of marble or other stone.

lithoculture (lith′o-kul-tūr), *n.* [Gr. λίθος, stone, + L. *cultura*, culture.] In *anthrop.*, that type of culture in which stone is used as the most important material for making implements.

The Seri Indians of the Gulf of California as typical of the beginnings of *lithoculture*.
Amer. Anthropologist, 1902, p. 561.

lithodesma (lith-o-des′mą), *n.*; pl. *lithodesmata* (*-ma-tą*). [Gr. λίθος, stone, + δέσμα, a bond.] In certain pelecypod mollusks, a deposit of lime in the form of an accessory shelly piece which serves for the reinforcement of the resilium. Also called *ossiculum*. *W. H. Dall.*

lithodialysis (lith″o-dī-al′i-sis), *n.* [NL., < Gr. λίθος, stone, + διάλυσις, separation.] The solution or reduction to a pulverulent condition of a biliary or vesical calculus.

lithofellic (lith-o-fel′ik), *a.* [Gr. λίθος, stone, + L. *fel* (*fell-*), gall, + *-ic.*] Pertaining to gall-stones.—**Lithofellic acid,** a colorless compound, $C_{20}H_{36}O_4.H_2O$, contained, together with lithobilic acid, in oriental bezoars, the gall-stones of an antelope. It forms microscopic hexagonal crystals, melts at 204° C., and gives an intense red-violet color with hydrochloric acid.

lithog. An abbreviation of *lithograph* or *lithography*.

lithogenesis (lith-o-jen′e-sis), *n.* [Gr. λίθος, stone, + γένεσις, origin.] 1. The production or origin of minerals or rocks; lithogenesy.—2. In *pathol.*, the formation of concretions in the body.

lithogenetic (lith″o-je-net′ik), *a.* [*lithogenesis* (*-et-*) + *-ic.*] Of or pertaining to lithogenesis.

lithografy, lithografer, etc. Amended spellings of *lithography, lithographer*, etc.

lithograph, *n.*—**Scraped lithograph,** a lithographic impression in which the design is worked out in white on black instead of black on white. The entire stone is first covered with lithographic ink and the lights are scraped or picked out. *Singer and Strang*, Etching, Engraving, etc., p. 124.

Lithographic slates. See ★*slate*[2].

lithoidite (lith′oi-dīt), *n.* [*lithoid* + *-ite*[2].] In *petrog.*, a rhyolite having a lithoidal groundmass, that is, one like fine porcelain, aphanitic, and not vitreous.

lithol. An abbreviation of *lithology*.

Lithologic individual, an important geological formation in a given district, consisting of one kind of rock.

A map whose cartographic units were discriminated solely on the lithologic characters of the so-called '*lithologic individuals*' was not entitled to be called a geologic map. It was really a lithologic map.
Science, Feb. 28, 1902, p. 351.

Lithological heterogeneity. See ★*heterogeneity*.

litholysis (li-thol′i-sis), *n.* [Gr. λίθος, stone, + λύσις, dissolution.] Same as ★*lithodialysis*.

lithometer (li-thom′e-tėr), *n.* [Gr. λίθος, stone, + μέτρον, measure.] An instrument for determining the size of a stone in the bladder.

lithometra (li-thom′e-trą), *n.* [NL., < Gr. λίθος, stone, + μήτρα, uterus.] A condition in which there are more or less extensive calcareous or osseous concretions in the wall of the uterus.

lithonephritis (lith″o-nef-rī′tis), *n.* [NL., < Gr. λίθος, stone, + νεφρῖτις, inflammation of the kidney.] Inflammation of the kidney caused by the irritation of calculi.

lithonephrotomy (lith″o-nef-rot′o-mi), *n.* [Gr. λίθος, stone, + νεφρός, kidney.] In *surg.*, incision into the kidney for the purpose of removing a stone.

lithopædion, lithopedion (lith-o-pē′di-on), *n.* Same as *lithopædium*.

lithophany (li-thof′a-ni), *n.* [G. *lithophanie;* as *lithophane* + *-y*[3].] The art of making porcelain transparencies for lamp-shades or windows, by intaglio and relief modeling: invented at the Berlin Royal Porcelain Manufactory. See *lithophane*.

lithophil, lithophile (lith′o-fil), *a.* [G. *lithophil*, < Gr. λίθος, stone, + φιλεῖν, love.] Lithophilous.

lithophilous (li-thof′i-lus), *a.* [Gr. λίθος, stone, + φιλεῖν, love.] Living among, under, or upon stones: said of certain insects and plants.

lithophin (lith′o-fin), *n.* [Formation not obvious.] A trade-name for a solution of asphalt in benzin, used in the transfer of a design to the surface of a plate of zinc or aluminium from which impressions are afterwards to be printed. *Elect. World and Engin.*, Sept. 12, 1903, p. 442.

lithophone (lith′o-fōn), *n.* [Gr. λίθος, stone, + φωνή, sound.] A surgical instrument which gives forth a plainly audible sound when it touches a calculus in the bladder.

lithophotogravure (lith″o-fō-to-grą-vūr′), *n.* [Gr. λίθος, stone, + E. *photogravure.*] A photomechanical printing-process in which a lithographic stone is uniformly etched with fine lines; a photographic transfer is then applied, and the stone etched a second time, and a print is taken as in ordinary lithography.

lithophyte, *n.* 2. In *phytogeog.*, any plant which grows upon the surface of rocks or stones, aërial or submerged, with or without the presence of humus: sometimes opposed to ★*chasmophyte* (which see).

lithosiderite (lith-o-sid′e-rīt), *n.* [Gr. λίθος, stone, + σίδηρος, iron, + *-ite*[2].] A meteorite intermediate in character between the stones (aërolites) and the irons (siderites), characterized by nickeliferous iron which forms a coherent mass even in sections, the silicates present appearing as separate grains: by many authors included under the broader term *siderolite* (which see). See also ★*meteorite*.

lithosis (li-thō′sis), *n.* [NL., < Gr. λίθος, stone, + *-osis.*] Same as *pneumonoconiosis*. *Encyc. Brit.*, XXXI., Fig. 16, opposite p. 513.

lithosperm (lith′o-spėrm), *n.* A plant of the genus *Lithospermum*.

Lithotomy forceps. See ★*forceps*.

lithotype, *n.* 3. (*a*) The art of reproducing type-writing print on lithographic stone or aluminium plate. (*b*) An apparatus or machine that combines these operations. (*c*) The print so produced.

Lit. Hum. An abbreviation of the Latin *Litteræ Humaniores*, humane letters.

lithuresis (lith-ū-rē′sis), *n.* [NL., < Gr. λίθος, stone, + οὔρησις, urination.] In *pathol.*, the passage of calculi in the urine.

lithuric (li-thū′rik), *a.* [*lithuria* + *-ic.*] Pertaining to or affected with lithuria.—**Lithuric acid,** an organic acid of the composition $C_{15}H_{19}O_9N$, which has been found in the urine of oxen.

lithywale (lith′i-wāl), *n.* Same as ★*littlewale*.

Lit. M., Litt. M. An abbreviation of the Latin *Litterarum Magister*, Master of Letters (or Literature).

Litmus-milk, in *bacteriol.*, a medium used for detecting acid-producing organisms.

Litopterna (lit-op-tėr′nä), *n. pl.* [NL., so named in allusion to the character of the calcaneum; < Gr. λιτός, smooth, plain, + πτέρνα, heel.] A suborder of extinct ungulate mam-

mals from the Miocene and Pleistocene of South America of which *Macrauchenia* is a typical example. The canines are small or wanting, ends of cervicals flattened, femur with a third trochanter, bones of carpus and tarsus not interlocking or alternating. In general build the members of the group resembled horses or llamas. *Ameghino*, 1889.

Lit-par-lit (lē′pär-lē′) **injection** or **saturation.** See ★*injection*.

litron (lē-trôn′), *n.* [F., < *litre*, liter.] A dry measure formerly used in France, equal to about $\frac{4}{5}$ of a liter. *C. Hering*, Conversion Tables, p. 55.

Litt. An abbreviation of the French *littérateur*, a literary man.

litter, *n.* **8.** In *forestry*, the rubbish of dead leaves and twigs scattered upon the floor of the forest.

litteratrice (lit-e-ra-trēs′), *n.* [F. *littératrice*, < NL. **litteratrix*, fem. of *litterator:* see *literator*.] A woman engaged in literary work; a woman whose profession is literature.

little-good (lit′l-gůd), *n.* **1.** See *little-gude.*— **2.** The sun-spurge or wart-spurge, *Euphorbia Helioscopia.*

little-peach (lit′l-pēch), *n.* See ★*peach*[1].

littlewale (lit′l-wāl), *n.* The gromwell, *Lithospermum officinale.* Also *lithywale.*

Littoral benthos. See ★*benthos.*—**Littoral race.** See ★*Atlanto-Mediterranean.*

Lituaria (lit-ū-ā′ri-ą), *n.* [NL. (Valenciennes, 1850), < L. *lituus*, a crooked staff, a curved trumpet: see *lituus*.] The typical genus of the family *Lituaridæ*.

Lituaridæ (lit-ū-ā′ri-dē), *n. pl.* [NL., < *Lituaria* + *-idæ*.] A family of sea-pens with short spicules. It contains the genera *Lituaria, Veretillum, Policella*, and *Clavella*, found mostly in the Atlantic and Indian Oceans.

lituitoid (li-tū′it-oid), *a.* [*Lituites* + *-oid*.] Resembling or related to the genus *Lituites.*

Liturg. An abbreviation of *liturgics.*

liturgician (lit-ėr-jish′an), *n.* [*liturgic* + *-ian*.] A student of liturgies or liturgics.

liturgiological (li-tėr″ji-ǫ-loj′i-kal), *a.* [*liturgiology* + *-ical*.] Of or pertaining to liturgiology.

liturgistical (lit-ėr-jis′ti-kal), *a.* [*liturgist* + *-ic-al*.] Of or pertaining to liturgists.

liturgize (lit′ėr-jīz), *v. i.*; pret. and pp. *liturgized*, ppr. *liturgizing*. [*liturg-y* + *-ize*.] To perform a liturgical act; celebrate liturgically. [Rare.] *N. E. D.*

Litvak (lit′väk), *n.* [Yiddish, < Pol. *Litwak*, a Lithuanian.] A name given to Jews of the Lithuanian provinces, by their coreligionists of the Polish government. The former, in turn, call the latter *Pollacks* or *Pollackim.* See ★*Pollack.* There is a marked difference in the Yiddish jargon as well as in the mannerisms of the two classes.

liv. A simplified spelling of *live.*

liv. An abbreviation (*a*) of the French *livre*, book; (*b*) of the French *livre*, pound (weight or coin).

live[1], *v. i.*—**To live with hounds,** in *hunting*, to keep up with the hounds; live the pace.

The check . . . was most welcome to the contingent who still *lived with hounds.*
St. James's Gazette, Nov. 15, 1898. *N. E. D.*

live[2], *a.* **7.** In *mach.*, having motion, as distinguished from *fixed* or *stationary:* as, a *live* axle.

Of course, this construction carried with it the *live* rear axle, a large majority of the cars shown being equipped with these, which has led to a close fight for supremacy between the spur and bevel differential gear, the spur, however, being still in the lead.
Sci. Amer., Feb. 7, 1903, p. 91.

8. In *elect.*, connected directly or indirectly with a source of electric power, whether carrying current or not: said of a circuit.—**Live load,** a moving load; a load which is not fixed in position, but may move: as, the load on a bridge when a vehicle passes over it, as distinguished from the load due to the weight of the bridge itself, called the *dead load.*

It is designed that these stiffening trusses shall carry their own weight, neither more or less—the *live load*, that is the elevated cars, trolley cars, etc., and the load of the floor system, being carried by the main cables.
Sci. Amer., Jan. 16, 1904, p. 38.

Live primer (*naut.*), a loaded primer; one that has been filled and not used or discharged.—**Live rock.** See ★*rock*[1].—**Live roller,** a roller which moves along a path or track as it turns, instead of merely rotating on a spindle: used for roller-bearings, etc.

live-car (līv′kär), *n.* Same as *live-box.*

livedo (li-vē′dō), *n.* [L. *livedo*, < *livere*, be bluish or livid: see *livid*.] Cyanosis.

liveingite (liv′ing-īt), *n.* [Named after G. D. *Liveing*, an English chemist.] A lead sulpharsenite, $Pb_4As_6S_{13}$, which occurs in monoclinic crystals in the dolomite of the Binnenthal, Switzerland.

lively, *a.* **7.** In *golf, base-ball*, and similar games, elastic: applied to a ball possessing special elasticity.

lively-ardent (līv′li-är″dent), *a.* In *psychol.*, noting a mixed type of character. See the extract.

Perez has proposed a classification of characters, based solely on an objective phenomenon,—viz., the movements, their rapidity and energy. He distinguishes, in the first place, the lively, the slow, and the eager; further, as mixed types, the *lively-ardent* (*vifs-ardents*), the slow-ardent, and the deliberate (*pondérés*).
Ribot (trans.), Psychol. of Emotions, p. 384.

liven, *v.* **II.** *intrans.* To become lively or more lively; generally with *up:* as, he *livened up* a bit after dinner.

liveness (līv′nes), *n.* [*live*[2], *a.*, + *-ness*.] The quality of being alive; energetic; alert.

The '*liveness*' of the New Scholarship. *N. E. D.*
Saturday Rev., March 22, 1890, p. 357.

live-oak, *n.*—**Cañon live-oak,** *Quercus chrysolepis*, an evergreen oak of the Pacific coast, which ranges from southern Oregon to Lower California, New Mexico, Arizona, and Sonora, but attains its maximum development in central California, both in the Coast Ranges and the Sierras. It is a very valuable tree, its wood being extensively used in the manufacture of agricultural implements and wagons. The under surface of the leaves is fulvous with a thick tomentum of stellate hairs. Also called *golden oak, maul-oak*, and *Valparaiso oak.*

liver[2], *n.* **3.** Temper, or irritation, as a result of a disorder of the liver. [Slang.]

The Colonel . . . carries a power av *liver* undher his right arrum whin the days are warm an' the nights chill. . . . 'Tis he sez so. 'I'm all *liver* to-day,' sez he; an' wid that he ordhers me ten days.
R. Kipling, The God from the Machine, in Soldiers [Three, p. 11.

Aberrant duct of the liver. See ★*aberrant.*—**Brimstone liver,** a condition observed in certain cases of congenital syphilis in which the liver is enlarged and is of a deep-yellow color.—**Gin-drinkers' liver,** cirrhosis of the liver.—**Iced liver.** See ★*iced.*—**Liver loaf.** See ★*loaf*[1].—**Livers of antimony.** See ★*thio-antimonite.*—**Nutmeg liver,** a liver which on section presents a mottled appearance, the result of cirrhosis.—**Sago liver,** a liver which is the seat of amyloid degeneration, the changed acini resembling boiled sago.—**Wandering liver.** Same as *floating liver.*

liver-berry (liv′ėr-ber″i), *n.* Any plant of the genus *Streptopus.* See *Streptopus.*

liver-cylinder (liv′ėr-sil″in-dėr), *n.* In *embryol.*, one of the originally solid cords of cells proliferated from the walls of the liver diverticulum in the embryos of higher vertebrates.

liver-fluke, *n.*—**Asiatic liver-fluke,** *Opisthorchis sinensis* (Cobbold, 1875), a trematoid worm 10 to 20 millimeters long, found in the liver, spleen, and intestine of man and of cats, in Asia, and producing a serious incurable disease known as *opisthorchiasis.*

liverish (liv′ėr-ish), *a.* [*liver*[2] + *-ish*[1].] **1.** Like liver in consistency or color.—**2.** Having symptoms of a disordered liver; bilious. [Colloq.] Hence—**3.** Bad-tempered; irritable, as if having a disordered liver. [Colloq.]

liver-lily (liv′ėr-lil″i), *n.* See ★*lily.*

liver-pancreas (liv′ėr-pan″krē-as), *n.* A hepatopancreas.

liverpool (liv′ėr-pōl), *n.* [Named in reference to the 'Liverpool Grand National' steeplechase, run at Aintree near Liverpool, since 1839.] In *steeple-chasing*, a jump constructed (according to the rules of the National Steeplechase and Hunt Association) of a ditch five feet wide and two feet deep, guarded on the taking-off side by a single rail, and having on the landing side a fence of not less than four feet and six inches in perpendicular height.

Liverpudlian (liv-ėr-pud′li-an), *a.* and *n.* [*Liver*(*pool*) + *puddle* (humorously substituted for *pool* in allusion to the city's muddy waters) + *-ian*.] **I.** *a.* Of or pertaining to Liverpool.

II. *n.* An inhabitant of Liverpool.

liver-rock (liv′ėr-rok), *n.* Homogeneous sandstone devoid of planes of stratification. [Scotch.]

liver-shark (liv′ėr-shärk), *n.* Same as *basking-shark.*

liver-starch (liv′ėr-stärch), *n.* Same as *glycogen.*

liverwort-lettuce (liv′ėr-wėrt-let″is), *n.* See ★*lettuce.*

livery[2], *n.*—**Court of Wards and Liveries.** See ★*court.*

livery-fine (liv′ėr-i-fīn), *n.* The fine paid on entering one of the livery companies in London: the entrance fee. *N. E. D.*

live-trap (līv′trap), *n.* Same as *live-box*, 2.

living-wage (liv′ing-wāj), *n.* A wage on which it is possible for a wage-earner to live.

livlong, *a.* and *n.* A simplified spelling of *live-long.*

livor, *n.* **3.** Lividity; the mark of a blow.

livyere (liv′yēr), *n.* [Also *liveyere;* lit., one of those who 'live here.'] In Labrador, and hence in Newfoundland and elsewhere, a native or a permanent resident of that country: a term universally used between themselves and others. [Local.]

Even tea and molasses, usually found amongst the "*livyeres*" (live-heres) of the coast, were lacking.
Dillon Wallace, The Long Labrador Trail, xxiii.

liza, *n.* See ★*lisa.*

lizard, *n.*—**Bearded lizard.** See ★*jew-lizard.*—**Bowline-lizard** (*naut.*), a short pendant with a thimble spliced in each end: a part of the bowline-bridle on the leeches of square sails.—**Buntline-lizard,** a piece of rope having two legs, with thimbles spliced into the ends, through which the buntlines reeve.—**Greaved lizard,** an American lizard of the family *Teiidæ*, a group characterized by the absence of a bony roof to the temporal fossæ, and by the shields of the head being completely free from the underlying bones; while there are no bony plates on the body.

The *greaved lizards* comprise over one hundred species, arranged in thirty-five genera.
R. Lydekker, Nat. Hist., p. 153.

Horned lizard, a book-name for the *horned toad*, coined with the idea of correcting the wrong impression that might be conveyed by the commonly used name.—**Knob-nosed lizard,** *Lyriocephalus scutatus*, a Ceylonese species.—**Pine-tree lizard,** *Sceloporus undulatus:* more commonly known as *fence-lizard* (which see).—**Ring-necked lizard,** *Crotaphytus collaris*, a common and beautiful species of the southwestern United States, which has a conspicuous black mark just above the front legs.—**Rough-tailed lizard.** Same as *starred* ★*lizard* (*a*).—**Sail-tailed lizard,** *Lophurus amboinensis*, a large species from Java, Celebes, and the Moluccas, having a high crest on the front half of the tail.—**Scale-footed lizard,** any one of the family *Pygopidæ* in which the fore limbs are wanting and the hind legs are represented externally by rounded, scaled flaps.—**Spiny lizard,** *Moloch horridus*, a curious little Australian species. Also called *mountain devil.*—**Starred lizard.** (*a*) *Agama stellio*, of southeastern Europe and northern Africa. Also known as the *rough-tailed lizard.* (*b*) The thorn-tailed lizard, *Uromastix acanthinurus.*

lizard-canary (liz′ärd-ka-nā″ri), *n.* A breed of canary-birds having the top of the head marked with a well-defined cap of clear gray or yellow. The body feathers have dark centers, and are almost black at the tips; they are edged with the color of the cap and their overlapping gives the bird a spangled appearance.

lizard-catcher (liz′ärd-kach″ėr), *n.* One of the larger American cuckoos, *Saurothera dominicensis*, found in Hayti: a near relative of the rain-bird, of Cuba, *S. vetula.*

L. J.; pl. *L. JJ.* An abbreviation of *Lord Justice.*

L. L. An abbreviation of *limiting linen.*

LL., L. L., L. Lat. Abbreviations (*a*) of *Late Latin;* (*b*) of *Law Latin;* (*c*) of *Low Latin.*

L. L. A. An abbreviation of *Lady Literate in Arts.* See the extract.

The St. Andrews diploma of *L. L. A.*—which means 'lady literate in arts'!—has been given this year on examination to 101 candidates. *Science*, Aug. 9, 1904, p. 256.

llama-twill (lä′mä-twil), *n.* A three-harness twill. Also called *drilling-, regatta-, jean-, jeanette-* (etc.) *twill.*

Llanberis (thlan-ber′is), *n.* [W., a local name.] In *geol.*, the lowest sedimentary division of the Lower Cambrian in Wales. It rests on volcanic rocks.

llanchama (lyän-chä′mä), *n.* [Native name.] On the upper waters of the Marañon river in Peru, *Couratari Tauari*, a forest-tree belonging to the family *Lecythidaceæ*, widely spread in tropical South America. It yields an excellent bast-fiber, and the inner bark is used by the Indians for blankets, sleeping-mats, and clothing, after having been prepared by soaking, washing, and pounding, somewhat in the same manner as tapa is prepared from the bark of the paper-mulberry by the Polynesians. Articles of clothing and ornament made of llanchama bark exhibited at the World's Columbian Exhibition, are now in the collection of the United States National Museum. Also called *tahuari* and *tauari.*

Llanvirn (thlan-vērn′), *n.* [W., a local name.] In *geol.*, a term introduced by Hicks to include certain Lower Siluric strata in Wales, which comprise the upper part of the Arenig and the lower part of the Llandeilo, about 2,000 feet in all.

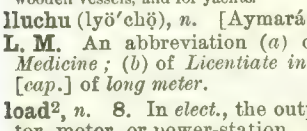
Llb. An abbreviation of the Latin *libræ*, pounds.

lleren (lyā-rān′), *n.* [Native name.] In Porto Rico, *Calathea allouia*, a plant about three feet high, belonging to the *Marantaceæ.* It bears numerous crisp, egg-shaped, edible tubers having an agreeable nutty flavor. Also written *leren.*

L. L. I. An abbreviation of *Lord Lieutenant of Ireland.*

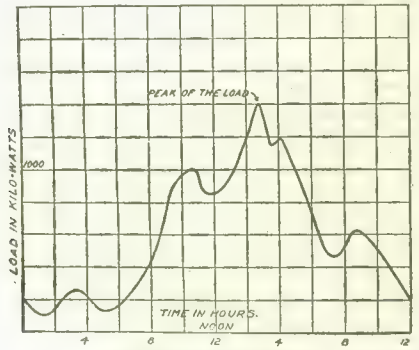
LL. M. An abbreviation of the Latin *Legum Magister*, Master of Laws.

Lloyd's numbers. Same as ★*Lloyd's numerals.*—**Lloyd's numerals,** in *ship-building*, numbers used in determining the scantlings of all parts of a merchant ship of any given size and type according to Lloyd's rules (see ★*Lloyd's rules*). The *first, transverse,* or *framing numeral* is the number obtained by adding together the depth, half-breadth, and half-girth of the vessel measured in feet; by entering the tables in the rules with this number, the sizes of all transverse parts such as frames, floors, and bulkheads may be found. The *second, longitudinal,* or *plating numeral* is the product of the *first numeral* by the length of the vessel in feet; this number is used in a similar manner to determine the sizes of longitudinal parts such as outside plating, keel, keelsons, etc. Also called *Lloyd's numbers.*—**Lloyd's Rules,** a book issued by Lloyd's Register containing detailed rules and regulations for the building and classification of merchant vessels. In this book the sizes of all parts of the various types of vessels are specified in detail and requirements as to the qualities of material used and methods of inspection and classification are given. Separate sets of rules are published for iron vessels, for steel vessels, for wooden vessels, and for yachts.



lluchu (lyö′chö), *n.* [Aymará.] See ★*chullu.*

L. M. An abbreviation (*a*) of *Licentiate in Medicine;* (*b*) of *Licentiate in Midwifery;* (*c*) [*cap.*] of *long meter.*



load[2], *n.* **8.** In *elect.*, the output of a generator, motor, or power-station. The load of a direct-current generator depends upon the ohmic resistance of the receiving circuit and is measured in watts, kilowatts, horse-power, or any convenient unit of activity or power. If the electromotive force of the generator is E and the current in the line is I, the product EI gives the load in watts. If there be any source of counter-electromotive force in the circuit, the electromotive force used in overcoming resistance, E′, is less than E and the load is E′ I. In the case of a direct-current motor the load, w, or useful output, is given by the equation

$$w = 2\pi nT,$$

where T is the effective torque and n is the speed of the motor. The load of such a motor varies with the current supplied to it and is expressed by means of a *load curve.* In the case of a series-motor on a constant-potential circuit the load curve has the form shown in Fig. 1. It rises to a maximum for a certain value of the current and then falls gradually to zero as the current is further increased. Such a curve is sometimes called the *load characteristic.* The term *load curve* is also applied to any curve indicating the load of a machine, as a function of its speed, electromotive force, field excitation, or of any factor upon which in operation it may depend. In the case of an alternating-current machine, as a generator or transformer, the energy consumed in the receiving circuit, which measures the load of the machine, depends on the impedance of the circuit, the difference of phase between the electromotive force and current, and the wave form. We have therefore to distinguish, in such cases, between the *inductive load* of a circuit having inductance as well as resistance and the *non-inductive load* of a circuit whose impedance is solely that due to resistance. The load of a power-station or lighting-station, which varies with the time of day, is likewise represented by a load curve. The maximum of this curve, which indicates the time when the demand for power is greatest, is called the *peak of the load.* The area inclosed by the curve affords a measure of the total energy supplied from the station.

Load Curve of a Series-motor.

Load Curve of a Power-station.

—**Curve of loads.** See ★*curves of ship calculations.*—**Dead load.** (*a*) A load which stays in the position in which it is placed; a stationary load; a fixed load. (*b*) In a bridge or other structure, the fixed weight of the structure due to the material of which it is made, and which is not removable, or affected by movable weights on the floor or roof. (*c*) In railway service, the weight of cars, trucks, engine, and tender, which must be hauled in order to carry the *paying load* of freight or passengers.—**Inductive load,** in *elect.*, load due to the inductance in the receiving circuit of a generator. See ★*load*[2], 8.—**Lighting-load,** that portion of the load of a generating station which is used for the supply of electric lamps.—**Load characteristic,** in *elect.*, a curve showing the power output or load of an alternating-current machine, generator, or motor, as a function of the current. See ★*load*[2], 8. **Load current,** the current in the receiving circuit of an electric generator. See ★*load*[2], 8.—**Load curve.** See ★*curve* and ★*load*[2], 8.—**Load-diagram of a station,** a curve which represents the output of a station for a given time, say for the twenty-four hours of the day. *Houston,* Elect. Dict.—**Load factor.** See ★*factor.*—**Load of a dynamo,** the current delivered by a dynamo.—**Motor load,** that portion of the load of an electric generating station which is used in operating motors.—**Non-inductive load,** in *elect.*, load due to the ohmic resistance of the receiving circuit of a generator. See ★*load*[2], 8.—**Paying load,** in railway service, the net weight of freight or passengers which is productive of income. See *dead* ★*load* (*c*).—**Peak load.** See ★*peak-load.*—**Rolling load,** a weight on a bridge or other structure borne upon the wheels of a train or wagon which passes over it. Also called the *moving load.*—**Tidal load,** the pressure, weight, or load imposed on any portion of the earth's crust by the inflow of an oceanic tidal wave; also the increase of pressure, either upward or downward, due to the tidal stress produced by the action of the sun and moon on the rotating crust of the earth.—**Top load,** in *lumbering*, a load of logs piled more than one tier high, as distinguished from a ★*bunk-load.*

load[2], *v. t.* **8.** To add to (the net amount of the premium fixed as the actual cost of issuing a policy of insurance) such an amount as will cover the office expense of carrying the policy.

loaded[2], *p. a.* **3.** Filled with extraneous substances, especially for the purpose of fraudulently increasing the weight.

To compare the difference between a pure and *loaded* sponge, take a 2 ounce sponge of each grade, wetting them both up, and it will be found that the pure article will measure about nineteen inches in circumference, or thereabout. The *loaded* article in comparison will only measure about sixteen inches in circumference and less.
Sci. Amer. Sup., Feb. 14, 1903, p. 22670.

4. Coated or furred: noting a condition of the tongue.—**Loaded line.** See ★*loading,* 7.—**Loaded nucleus.** See ★*nucleus.*

loader, *n.*—**Top loader,** in *lumbering*, that member of a loading-crew who stands on the top of a load and places logs as they are sent up.

load-factor (lōd′fak″tọr), *n.* The ratio of the average to the maximum demand for power from an engine, motor, or power-plant. See ★*factor.*

The *load-factor* of most public hydraulic power supplies is considerably under 30 per cent.
Encyc. Brit., XXXI. 894.

load-governor (lōd′guv″ėr-nọr), *n.* A governor which operates when the load on the engine changes: it does not keep the speed of the engine very uniform.

loading, *n.* **6.** The process of filling silk with metallic compounds, for which it has a great attraction when in solution, in order to increase its weight.—**7.** In *elect.*, a method invented by M. J. Pupin, of reducing the attenuation of telephonic currents in underground cables and long-distance lines (and therefore improving the operation). It consists in inserting into the telephone-line at certain definite intervals self-induction coils, which neutralize the deleterious effect of the electrostatic capacity of the line.—**8.** The exorbitant profit exacted from workmen under the truck system (which see, under *truck*[1]). [Trade-union slang.]

Notwithstanding a nominal uniformity of rate, both labor, cost and real wages will vary according to the extent of the truck business in each firm, the economy and ability with which this subsidiary store-keeping is managed, and the profit or "*loading*" which each employer chooses to exact, the latter amounting, in effect, to a fraud upon the workman.
Webb, Industrial Democracy, I. 318.

loading-berth (lō′ding-bėrth), *n.* *Naut.*, a wharf or other place where a vessel takes in her cargo; a place convenient for a vessel to ship her freight.

loading-chain (lō′ding-chān), *n.* In *lumbering*, a long chain used in loading or piling logs with horses. Also called *decking-chain.*

loading-jack (lō′ding-jak), *n.* A platformed framework upon which logs are hoisted from the water for loading upon cars.

load-panel (lōd′pan″el), *n.* In *elect.*, the panel of a central-station switchboard provided with apparatus for indicating the total station-load. *Houston,* Elect. Dict.

load-spring (lōd′spring), *n.* A spring on an engine-governor by compressing which a greater load can be put on the governor, thus changing the speed at which it allows the engine to run.

loaf[1], *n.*—**Chicken-loaf,** chicken prepared somewhat like veal-loaf, but without ham, and with slices of hard-boiled egg in the bottom of the mold, so that they appear imbedded in the loaf when the mold is taken off.—**Cottage loaf.** See ★*cottage.*—**Liver-loaf,** a preparation somewhat like a *pâté de foie gras,* but with flour panada and butter mixed in it: served cold, in slices.—**Mushroom-loaf,** a loaf of bread hollowed out and filled with a preparation of mushrooms, with seasoning.—**Oyster-loaf,** an article of food made like mushroom-loaf with oysters in place of the mushrooms.—**Veal-loaf,** minced veal with ham and various spices, made into the form of a loaf and baked: eaten sliced and cold.

loam-casting (lōm′kas″ting), *n.* A casting made by the use of a loam-mold.

loaming (lō′ming), *n.* In *mining*, a method of prospecting for gold-veins the outcrop of which is covered and concealed, by washing numerous samples of earth and thus tracing the gold to its source. [Australia.]

loam-mill (lōm′mil), *n.* A mixing and pulverizing mill used to mix loam for foundry molds.

Loan for use. Same as *commodate.*—**Maritime loan,** a loan of money upon the security of a vessel or its contents. The contract provides that if the security is unavoidably lost the loss shall fall upon the lender, unless a part is saved equaling the value of the loan. Such a loan is exempt from usury laws.

Loanda thimbles. See ★*thimble.*

loan-form (lōn′fôrm), *n.* In *philol.*, a form that is borrowed from another language. Compare *loan-word.*

Wechkawo selijil (obviative) is a Passamaquoddy *loan-form;* in Passamaquoddy wechkoyalijil.
Amer. Anthropologist, Jan.–March, 1902, p. 31.

loan-god (lōn′god), *n.* An alien god adopted in the worship of a particular tribe or people.

The reply to me takes the form of ignoring, or disabling the evidence, or of asserting that these superior beings are '*loan-gods,*' borrowed by savages from Europeans or Islamites. *A. Lang,* Magic and Religion, ii.

loan-myth (lōn′mith), *n.* An alien myth adopted by a people.

Their mythologies . . . resembled each other in some points . . . but the inference that many Greek myths are "*loan-myths,*" as certain Homeric words are "loan-words," from Phoenicia, must not be too hastily drawn.
A. Lang, Myth, Ritual, and Religion, I. 322, note.

loathsum, *a.* A simplified spelling of *loathsome.*

lob[1], *n.*—**Dealer in lobs,** in *cricket*, an underhand bowler.

lob[1], *v. t.* **3.** In *mining*, to break (ore, etc.) into pieces with a hammer for sorting.

Lobachevskian (lō-bä-chef′skē-an), *a.* Pertaining to or created by the Russian geometer Nicolai Ivanovich Lobachevski (1793–1856).—**Lobachevskian geometry, space.** See ★*geometry,* ★*space.*

lobal (lō′bal), *a.* [*lobe* + *-al*[1].] Having lobes; lobed: said of wheels or cams.

lobaric (lō-bar′ik), *a.* [NL. *Lobaria* + *-ic.*] Noting an acid, a colorless compound, $C_{17}H_{16}O_5$, contained in the lichen *Lobaria adusta.* It forms warty aggregates.

lobbyism (lob′i-izm), *n.* The practices of a lobbyist; the system of lobbying. [U. S.]

lobe, *n.* (*e*) In the septate cephalopods like *Nautilus* and the ammonites, any division of the septal suture which makes a convex curve toward the apex: contrasted with *saddle,* which is a curvature toward the aperture. (*f*) In the trilobites, one of the divisions of the glabella; a glabellar lobe. (*g*) In *geol.*, a projection from a glacier, like a peninsula: especially used of the continental ice-sheet of the glacial epoch. See ★*ice-lobe.*—**Adipose lobe.** Seee ★*adipose.*—**Antennal lobe,** in *entom.*, one of two hemispherical lobes forming a part of the brain. They are connected with a medullary mass and also in part attached to the optic ganglia. Also called *olfactory lobe.*—**Columellar lobe.** See ★*columellar.*—**Electric lobe,** a lobe of the medulla oblongata of the electric ray, from which originate nerves running to the electric apparatus.—**Esophageal lobes,** the tritocerebrum of an insect's brain; two lobes situated far apart in front of the mouth and connected by a bundle of fibers passing behind the esophagus. From them the labrum and viscera are innervated.—**External lobe,** in the ammonoid cephalopods, the sutural lobe formed on the outer or ventral side of the septum and divided by the mesal plane.—**Olfactory lobe.** (*b*) Same as *antennal* ★*lobe.*—**Oral lobes,** in lamellibranchs, the labial palps.—**Palpebral lobe,** in the trilobites, that portion of the cranidium which projects into the ocular curve of the free cheeks; usually, the depressed curved area behind and within the crest of the eye. In primitive Cambrian types (*Paradoxides*) it is long and crescentic; in secondary derived types (*Bronteus* and *Phacops*) it is short and semicircular; in certain highly specialized types (*Encrinurus* and *Acidaspis*) it is elevated to form the inner side of a peduncle upon the raised summit of which is the visual surface of the eye.—**Paranal lobes,** in *entom.*, two subtriangular plates placed on either side of the anus in the cockroach and other insects, and in the nymphs of the dragon-flies.—**Pedal lobe,** in *Peromedusæ*, one of a series of lobes on the marginal region or crown adjacent to the cone.—**Prefrontal lobe,** the portion of the frontal lobe of the brain anterior to the ascending convolution.—**Procerebral lobes,** a region of the optic segment of the brain of an insect giving origin to the nerves of the ocelli.—**Pyriform lobe.** Same as ★*lobus pyriformis.*—**Riedel's lobe,** a portion of liver substance occasionally found covering the gall-bladder in cases of gall-stone disease.—**Siphonal lobe,** in the ammonoid cephalopods, an azygous sutural lobe on the siphonal side or venter of the shell: same as *ventral* ★*lobe.*—**Ventral lobe,** in the septate tetrabranchiate *Cephalopoda*, the sutural lobe at the venter or on the periphery. It is a single unpaired lobe, sometimes termed the siphonal lobe. It is not a primitive character in any cephalopods, but appears very early in the ontogeny of derived forms and persists to maturity only in the simpler forms of the goniatites.

lobe-angle (lōb'ang″gl), *n.* The angle at the center of a shaft occupied by a cam or by a lobe on a wheel attached to the shaft; the angle through which the shaft turns while the cam or lobe is acting.

lobelacrin (lō-be-lak′rin), *n.* [*Lobel(ia)* + *acr(id)* + *-in*2.] Said to be the acrid lobelic-acid salt of the alkaloid lobeline, contained in *Lobelia inflata*.

Lobelia, *n.*—**Bladder-pod lobelia,** the official lobelia, *Rapuntium inflatum.*—**Blue lobelia,** *Rapuntium siphiliticum.* Also called *great lobelia* and *blue cardinal-flower.*—**California lobelia,** *Bolelia pulchella,* a low-spreading annual plant of the Sacramento Valley, Nevada, and Oregon, closely related to *Rapuntium.* It has intensely azure-blue flowers with a large whitish or yellow center.

lobelianin (lō-bē′li-ą-nin), *n.* [*Lobelia* + *-an* + *-in*2.] A volatile oil contained in commercial lobelia from Indian tobacco, *Lobelia inflata.* It is crystalline and melts at 71° C.

lobelic (lō-bē′lik), *a.* [*Lobelia* + *-ic.*] Pertaining to lobeline.—**Lobelic acid,** a colorless compound, present in combination with lobeline in Indian tobacco, *Lobelia inflata.* It forms non-volatile acicular crystals.

Lobites (lō-bī′tēz), *n.* [NL., < Gr. *λοβός,* a lobe, + *λίθος,* a rock.] A genus of ammonoid cephalopods from the Alpine Trias, constituting the family *Lobitidæ.* It is an isolated group with a phylogerontic construction of the living-chamber like the *Anarcestidæ* and sutures like the *Prolecanitidæ;* with entire saddles, but bifid lateral lobes in the young.

loblolly-wood (lob′lol-i-wůd), *n.* See ★*guara*3.

lobola (lō′bō-lą), *n.* [Zulu?] A present, usually of cattle, given by the bridegroom to the father of the bride, as is customary among the Zulus and other tribes of South Africa; also, the custom itself. *Rep. Brit. Ass'n Advancement of Sci.,* 1900, p. 905.

lobous (lō′bus), *a.* Same as *lobose.*

lobscouser (lob′skou-sėr), *n.* One who eats lobscouse; a sailor.

lobster1, *n.* **6.** A dull fellow, who is easily imposed upon; an irritating blockhead; a foolish bore; a chump: a vague term for contempt. [Slang.]—**Unboiled lobster,** in England, a policeman, so called from his blue coat: in distinction from a *boiled lobster,* or red-coated British soldier. See def. 5. [Slang.]

lobster2 (lob′stėr), *n.* [*lob*1, *v.,* + *-ster;* in humorous allusion to *lobster*1, *n.,* 5 or 6.] In *cricket,* a bowler of lobs or underhand balls. See *lob*1, 8.

lobster-basket (lob′stėr-bȧs″ket), *n.* A basket-trap for catching lobsters.

lobster-boat (lob′stėr-bōt), *n.* A boat used in lobster-fishing.

The *lobster boats* may be conveniently divided into two classes; first, the smaller boats, with or without sails, . . . used by the fishermen in tending their pots, and, secondly, the smacks acting as carriers to the different markets. *Fisheries of the U. S.,* Sec. 5, II. 669.

lobster-caterpillar (lob′stėr-kat″ėr-pil-ą̈r), *n.* The larva of the lobster-moth.

lobster-crab (lob′stėr-krab), *n.* A porcelain-crab.

lobster-flower (lob′stėr-flou″ėr), *n.* The Christmas flower, or *flor de Pascua,* of Mexico and Central America, *Poinsettia pulcherrima:* so called on account of its conspicuous bright floral bracts. See *Poinsettia,* 2.

lobsterling (lob′stėr-ling), *n.* [*lobster* + *-ling*1.] A young, undeveloped lobster at about the fifth molt, at which time it more nearly resembles the adult in shape and habits than at earlier stages.

After one failure 5,000 larvæ were successfully hatched; but of these, despite every care, very few attained the "*lobsterling*" stage. *Nature,* Jan. 12, 1905, p. 255.

lobster-net (lob′stėr-net), *n.* **1.** A hoop-net for catching lobsters.—**2.** A lobster-pot of netting supported upon a framework of hoops.

lobster-toad (lob′stėr-tōd), *n.* A species of crab.

lobule, *n.* **2.** A terminal bronchus, with the air-cells, vessels, and nerves related to it.—**3.** In *bot.,* same as ★*disculus.*—**Hippocampal lobule.** See ★*lobus pyriformis.*—**Petrosal lobule,** the flocular appendage of the cerebellum; the flocculus. *Trans. Linnean Soc. London,* Zool., Feb., 1903, p. 333.

lobulet, lobulette (lob′ū-let, lob-ū-let′), *n.* [*lobule* + dim. *-et*1.] An ultimate bronchial twig, with the air-cells in relation with it. *Buck,* Med. Handbook, V. 580.

lobulization (lob″ū-li-zā′shọn), *n.* [*lobule* + *-ize* + *-ation.*] Same as *lobulation.*

lobulose (lob′ū-lōs), *a.* [*lobule* + *-ose.*] Having lobules.

lobulous (lob′ū-lus), *a.* [*lobule* + *-ous.*] Same as ★*lobulose.*

Lobulus appendicularis. Same as ★*lobus flocculi.*

lobus, *n.*—**Lobi inferiores,** small lobes or diverticula in the brain of fishes, which arise from the floor of the mesencephalon and lie just behind the infundibulum.

In fishes the so-called *lobi inferiores* appear behind the infundibulum. *Buck,* Medical Handbook, II., 271.

Lobus anticus, the anterior azygous lobe of the cerebellum. *Trans. Linnean Soc. London,* Zool., Jan., 1899, p. 363.—**Lobus flocculi,** a lateral appendage of the cerebellum in mammals supposed to correspond with the flocculus in the human brain. Also known as *lobulus appendicularis. Trans. Linnean Soc. London,* Zool., Jan., 1899, p. 362.—**Lobus posticus,** the posterior azygous lobe of the cerebellum. *Trans. Linnean Soc. London,* Zool., Jan., 1899, p. 365.—**Lobus pyriformis.** (*a*) The base of the hemisphere of the mammalian brain, which is of a pyriform shape, broadest at the posterior end and tapering to the olfactory bulb. By some the term is restricted to the posterior area which has been variously known as *natiform eminence* and *hippocampal lobule.* (*b*) A small elevation near the middle of the inferior vermiform process of the cerebellum, between the biventral lobes.—**Lobus pyriformis anticus,** the tapering portion of the pyriform lobe anterior to the vallecula Sylvii.—**Lobus pyriformis posticus,** the expanded portion of the pyriform lobe posterior to the vallecula Sylvii. Also known as *natiform eminence, hippocampal lobule.*

local. I. *a.*—**Complex, simple local sign, local death, local express, local stamp.** See ★*sign,* ★*death,* ★*express,* ★*stamp.*

II. *n.* **3.** A local train; an accommodation train which stops at all stations.—**4.** A local examination: as, the university *locals.*

local (lō′kạl), *v. t.*; pret. and pp. *localed, localled,* ppr. *localing, localling.* [*local, a.*] In *Scots law:* (*a*) To apportion (an increase of the stipend of a minister of the established church) among the different heritors or landholders. *Jamieson.* (*b*) To lay the charge of such a stipend on or upon (a landholder or his land). *N. E. D.*

localist (lō′kạl-ist), *n.* [*local* + *-ist.*] One who has much regard for local conditions; one who studies what is local, or is inclined to treat things from a local viewpoint; specifically, in *med.,* one who regards every disease as having a local origin.

locality, *n.* **5.** In *phytogeog.,* the approximate geographic position of an individual specimen: less definite than *station. F. V. Coville.*—**Bump of locality,** a phrase borrowed humorously from phrenology, to denote the power of finding one's way easily and certainly amid novel surroundings: as, I have absolutely no *bump of locality.*—**Sense of locality.** (*a*) In general, the power of finding one's way easily and certainly amid novel surroundings, as in a city visited for the first time. (*b*) In *psychol.,* a phrase loosely formed on the analogy of 'sense of space,' 'sense of time,' etc., to denote the power of cutaneous localization, that is, of referring a cutaneous stimulus to the area of the skin to which it is applied.—**Type locality,** in *zoöl.,* the place where an animal which was described as a new species was taken; the locality where a type specimen was obtained.

Canis latrans Say [Coyote]. *Type locality.*—Vicinity of Council Bluffs, Pottawattamie County, Iowa. *Proc. Bost. Soc. Nat. Hist.,* Dec., 1901, p. 208.

localization, *n.*—**Germinal localization.** See ★*germinal.*

localize, *v. t.*—**Localized capacity,** electrostatic capacity introduced at given points in an electric circuit by means of condensers, as distinguished from the distributed capacity of the circuit itself.—**Localized inductance,** inductance introduced into an electric circuit by means of properly wound coils, as distinguished from the distributed inductance of the circuit itself.

locate, *v.* **I.** *trans.* **3.** In the *Meth. Ch.,* to appoint to a fixed charge or station.

II. *intrans.* **2.** In the *Meth. Ch.,* to settle as a permanent preacher; cease to be itinerant.

location, *n.* **6.** An intuitive perception of distance and direction.

These birds [penguins] must have a wonderful power of *location,* as the male dived when about 600 yards from the vessel, reappearing close by the floe where his mate was seated, the intervening space being covered with ice-floes. *Geog. Jour.* (R. G. S.), XVI. 382.

locational (lō-kā′shọn-ąl), *a.* [*location* + *-al*1.] Of or pertaining to location; locative.

locative, *a.* **3.** Serving to indicate the location of anything: as, a *locative* object in the neighborhood.

lochage (lōk′ąj), *n.* [Gr. *λοχαγός, λοχηγός,* < *λόχος,* lochus, + *ἄγειν,* lead.] In *Gr. antiq.,* the commander of a lochus. See ★*lochus.*

lochiorrhagia (lō″ki-ọ̄-rā′ji-ą), *n.* [NL., < Gr. *λόχια,* lochia, + *-ῥαγια,* < *ῥηγνύναι,* break, burst.] An excessive lochial flow.

lochioschesis (lō-ki-os′kē-sis), *n.* [NL., < Gr. *λόχια,* lochia, + *σχέσις,* retention.] Arrest of the lochial flow.

lochometritis (lō″kō-mē-trī′tis), *n.* [NL., < Gr. *λόχος,* childbirth, + *μήτρα,* uterus, + *-itis.*] Metritis following childbirth.

lochoperitonitis (lō″kō-per-i-tō-nī′tis), *n.* [NL., < Gr. *λόχος,* childbirth, + NL. *peritonitis.*] Puerperal peritonitis.

lochopyra (lō-kō-pī′rą), *n.* [NL., < Gr. *λόχος,* childbirth, + *πυρ(ετός),* fever.] Puerperal fever.

lochus (lō′kus), *n.*; pl. *lochi* (-kī). [NL., also *lochos;* < Gr. *λόχος,* a company of men, an ambush.] In *Gr. antiq.,* a body of infantry; in Sparta, one of the larger divisions in which able-bodied men capable of bearing arms were grouped.

lock1, *n.* **10.** A receiver of stolen goods; also, the house in which such a 'fence' receives stolen goods. [Thieves' slang.]—**11.** A transposition or duplication of pages on the printed sheet of a book.—**Builders' lock,** the general name of a class of house- and store-locks.—**Chubb lock,** a lock of a special type made by an English inventor of that name.—**Cuvelier lock,** a lock for safety-lamps, consisting of a curved tubular catch which can be opened by hydraulic pressure which expands the tube and springs it open.—**Duplex lock,** a lock of the cylinder type, having two keyways and requiring two keys to open it, one of which is a master-key opening all of a series, and the other is adapted to its particular lock and no other. See ★*guard-lock,* 2.—**Magnetic lock,** in *mining,* a lock for safety-lamps which can only be opened by the application of a powerful magnet.—**Pasquil lock,** a roll-top desk lock having two long bolts that engage the sides of the desk, the lock itself being in the center of the roll-top, at the middle of the desk.—**Vacuum lock,** a locking device operated by a vacuum; a device for utilizing the pressure of the atmosphere to hold a movable piece in position.

lock2, *n.*—**In the lock,** with the tufts unopened, as wool. Also *in the fleece.*—**Palate lock,** a lock of hair over the frontal fontanelle, tied up firmly by negroes of the Southern States in cases of sore throat, because it is believed to draw up the palate and thus to give more breathing-space.

lock-bedder (lok′bed″ėr), *n.* A machine or tool for making a recess in a gun-stock for the lock and tangs.

lock-culvert (lok′kul″vėrt), *n.* A culvert or conduit below the floor of a hydraulic lock, connecting the lock-chamber with the sections of the canal or basin both above and below the lock. The flow of water to or from the lock-chamber is regulated by two wickets placed in the culvert, one on each side of the outlet or connection from the culvert to the lock-chamber.

lock-gate, *n.* There are various forms of lock-gates, the more common of which are the miter gate and the sliding gate. In the former, the gate at each end of the lock is composed of two leaves, each turning about a vertical axis at the side wall of the lock, when open standing parallel with the side wall, and when closed abutting together at an obtuse angle, the surface of contact between the two gates forming a miter. A sliding lock-gate is one which, when the lock is to be opened, slides horizontally into a recess in the masonry.

locking (lok′ing), *n.* A split pin. *Barrow-man,* Glossary.

locking-bar (lok′ing-bär), *n.* **1.** A bar or rod used to lock a door or mechanism.—**2.** In *railroading,* same as ★*detector-bar.*

locking-bolt (lok′ing-bōlt), *n.* Same as ★*locking-pin.*

locking-pin (lok′ing-pin), *n.* A pin that locks one piece of a mechanism to another; specifically, *naut.,* a pin used to lock the forward rudder of a double-ended ferry-boat in a line with the keel. Also *locking-bolt.*

lockless (lok′les), *a.* [*lock*1 + *-less.*] Without a lock or locks.

lock-lug (lock′lug), *n.* The raised portion on the upper surface of a gun to which the lock is secured.

lock-net (lok′net), *n.* A large cylindrical hoop-net used to catch crawfish.

lock-seat (lok′sēt), *n.* **1.** The excavation, pit, or foundation for a hydraulic lock.—**2.** The general location or place intended or suitable for a hydraulic lock. Also *lock-site.*

lock-site (lok′sīt), *n.* Same as ★*lock-seat,* 2.

lock-turbine (lok′tėr″bin), *n.* A hydraulic turbine placed in or near the walls of a hydraulic lock, driven by water flowing from the upper to the lower level of the basin, used for the purpose of furnishing power with which to operate the wickets and gates of a lock and to draw boats into or out of a lock.

lock-wicket (lok′wik″et), *n.* A wicket, gate, or valve placed in a lock-gate or in a lock-culvert, for the purpose of regulating the flow of water into or out of a hydraulic lock.

loco1, *n.* **II.** *a.* Derived from loco-weed.—**Loco acid,** a compound isolated from loco-weed, to which the poisonous properties of the plant are attributed.

loco1, *v. t.* Hence—**2.** To make crazy or in any way eccentric: as, *he's plumb locoed.* [Slang, western U. S.]

loco[2] (lō′kō), *n.* An abbreviated form of *locomotive.* [Little used in the United States.]

Locofocoism (lō-kō-fō′kō-izm), *n.* [*locofoco* + *-ism.*] The principles of the Locofoco party.

locoism (lō′kō-izm), *n.* A disease of cattle in the semi-arid region of the western United States, due to eating certain weeds known as loco-weeds, and characterized by peculiar nervous symptoms which are followed by paralysis, emaciation, and finally death.

locomarine (lō″kō-ma-rēn′), *a.* [*loco(motive)* + *marine.*] Of a locomotive type, but used in a ship: as, a *locomarine* boiler.

locomobile (lō-kō-mō′bil), *a.* and *n.* [L. *locus,* place, + *mobilis,* movable.] **I.** *a.* Having the power to change its place by its own motor, or without the aid of power or apparatus outside of itself.

II. *n.* A commercial name for a form of motor-car.

locomobility (lō″kō-mō-bil′i-ti), *n.* [*locomobile* + *-ity.*] The character of being locomobile; the capacity or power to move from one place to another.

locomote (lō′kō-mōt), *v. i.*; pret. and pp. *locomoted,* ppr. *locomoting.* [A back-formation from *locomotor.*] 1. To move from one place to another. [Humorous.]—2. In *biol.,* to effect a change of place: as, a medusa which *locomotes* toward the light.

locomotility (lō″kō-mō-til′i-ti), *n.* [L. *locus,* place, + E. *motility.*] Same as *locomotivity.*

locomotive. **I.** *a.*—**Locomotive chair.** See ★*chair.*—**Locomotive crane.** See *railway-crane* (*b*), under ★*crane*[2].—**Locomotive-rod boring-machine.** See ★*boring-machine.*

II. *n.*—**Camel-back locomotive.** Same as ★*camel-back,* 2.—**Fairlie locomotive,** a double-ended locomotive having four cylinders, two boilers with a double fire-box between them, and, a swiveling arrangement for the trucks to allow it to run around curves: designed for use on narrow-gage roads where high tractive power is called for with small diameter of boiler.—**Forney locomotive,** a locomotive in which the tank and coal-bunker are carried on an extension of the engine-frame, back of the fire-box, supported by a swiveling-truck. These locomotives were used in suburban traffic and on the elevated railways in New York city before the introduction of electricity.—**Mason locomotive.** Same as *double-truck tank-locomotive* (which see, under *locomotive*).—**Rack-rail locomotive,** a locomotive for use on a rack-railroad; one having a pinion, driven by engines, to engage with a stationary rack on the road-bed instead of depending on the adhesion of smooth wheels to rails: used on roads which have excessive grades, as on mountain ascents.—**Single-driver locomotive,** one having only one pair of driving-wheels, and intended for high speed with low tractive power. It avoids the use of side- or coupling-rods.—**Strong locomotive,** a locomotive (named for its inventor), which had gridiron slide-valves, separate exhaust- and steam-valves, and a valve-gear by which it could be run either forward or backward, with only one eccentric for each side. It also had a cylindrical fire-box, arranged to form a twin furnace, corrugated to resist collapse, and with a combustion-chamber to secure complete combustion before the gases entered the tubes.

locomotive-balance, *n.* 2. A weight placed in the driving-wheel of a locomotive to balance, as much as possible, the inertia of the reciprocating parts.

locomutation (lō″kō-mū-tā′shon), *n.* [L. *locus,* place, + *mutatio(n-),* change.] Change of place; moving from place to place. [Nonce-word.]

I should be glad to speculate also on the effect of the tendency of population towards great cities; no new thing, but intensified as never before by increased and increasing ease of *locomutation.*

Lowell, Latest Lit. Essays and Addresses, p. 184.

locor (lō′kor), *n.* [L. *loc(us),* place, + E. *(vect)or.*] A vector which has definite position, but does not indicate rotation or any rotative function.

In the review of Prof. Henrici's "Vectors and *Rotors*" in NATURE of October 29 (p. 617), it was mentioned that Prof. A. Lodge had suggested the use of the word "*locor*" to indicate a vector which has definite position, but does not indicate rotation or any rotative function. Prof. R. H. Smith writes to say that the word "*locor*" is used in this way throughout his book "Graphics," published by Messrs. Longmans in 1888, "*rotor*" being used for rotative quantities. *Nature,* Nov. 19, 1903, p. 64.

locoto (lō-kō′tō), *n.* [Sp. corruption of Aymará *locoti,* Quichua *roccoto,* erroneously described by Tschudi as green pepper.] A variety of the ají or red pepper, botanically known as *Capsicum pubescens* (Raimondi), growing in the warmer valleys of Peru and Bolivia. It is plum-shaped and has but one large seed.

loculamentous (lok″ū-la-men′tus), *a.* Full of loculaments, or little cells.

loculus, *n.* 1. In *zoöl.*: (*c*) Same as ★*air-chamber,* 4.

locum (lō′kum), *n.* [*locum(-tenens).*] 1. A locum-tenens (in medical practice). *The Lancet,* June 6, 1903 (advt.).—2. The temporary place occupied by a locum-tenens. *The Lancet,* June 6, 1903 (advt.).

locum-tenent (lō″kum-tē′nent), *n.* Same as *locum tenens* (which see).

I met with a serious accident . . . in consequence of which I had to engage a *locum-tenent,* as I was obliged to leave home for a complete rest.

Lancet, Aug. 19, 1899, p. 547.

locupletative† (lok-ū-plē′tā-tiv), *a.* [L. *locupletatus,* pp. of *locupletare,* make rich, < *locuples,* rich: see ★*locuplete.*] Tending to make rich.

locuplete† (lok′ū-plēt), *a.* [L. *locuples* (*-plet-*), rich in lands, rich, opulent, < *locus,* a place, + √*ple-* in **plere,* fill, *plenus,* full.] Rich; wealthy; well stored. *Blount.*

locus[1], *n.* 6. The words and figures, in the signature to a quotation or in a reference to a passage, which designate the particular place or division of the work (book, chapter, page, section, verse, line, etc.) where the passage in question occurs. The locus properly follows the title of the work or piece cited, and the title follows the name of the author.—7. In *geom.,* the place of all the points, and of only those points, which satisfy a given condition.

All points in a plane which satisfy a single geometric condition make up often a single straight or a single circle, in rare cases more than one. Neglecting these rare cases, we may call such straight or circle the *locus* (place) of the points satisfying the given condition.

G. B. Halsted, Rational Geometry, p. 269.

Cusp-locus. Same as *cuspidal locus.*—**Lexell's locus.** Same as *Lexell's* ★*circle.*—**Locus communis,** a commonplace.

locus[2] (lō′kus), *v. t.*; pret. and pp. *locused* or *locussed,* ppr. *locusing* or *locussing.* [Appar. adapted from *loco*[1], *v.,* associated with *hocus, v.*] To stupefy with drink.—**To locus away,** to carry off while stupefied. [Slang.]

locus[2] (lō′kus), *n.* [See ★*locus*[2], *v.*] Something which stupefies, as liquor. [Slang.]

locust[1], *n.*—**American locust,** *Schistocerca americana,* one of the largest of the long-winged American

American Locust (*Schistocerca americana*). Reduced.

grasshoppers, allied to several of the most destructive migratory locusts in other parts of the world.—**California devastating locust,** a western American acri-

California Devastating Locust. (*Melanoplus devastator*).

diid, *Melanoplus devastator,* which frequently does great damage to grasses and grains in California.—**Carolina locust,** an American acridiid, *Dissosteira carolina,* of wide distribution, rust-brown in color, found commonly along dusty country roads in August.—**Clear-winged locust,** *Camnula pellucida.*—**Clouded locust,** an American acridiid, *Encoptolophus sordidus,* dirty brown in color and occurring abundantly in pastures in the eastern United States in the autumn.—**Differential locust,** a common North American grasshopper, *Melanoplus differentialis,* chiefly notable from the

Differential Locust (*Melanoplus differentialis*). (Sanderson, U. S. D. A.)

great damage it occasionally does to cotton-plants in certain of the southern United States.—**Dog-day locust,** an American cicadid insect, *Tibicen pruinosa.* Also called *harvest-fly* and *lyreman.*—**Dudley locust,** a local name in England for the Dudley trilobite (which see, under *trilobite*).—**Green-faced locust,** an American acridiid grasshopper or locust, *Chortophaga viridifasciata,* common in meadows and pasture-lands in many of the United States.—**Hooded locust,** a curious locustid of the genus *Typhoptera,* inhabiting the Malay Peninsula, which has a bladder-like membrane between head and thorax, which when alarmed it can throw out into a hood-like organ over the head.—**Leather-colored locust,** *Schistocerca alutacea.*—**Lesser migratory locust,** an American acridiid, *Melanoplus atlanis,* occasionally injurious to crops, especially in a restricted region in southern New Hampshire.—**Migratory locust.** See *Rocky Mountain locust,* under *locust*[1].—**Red-legged locust,** *Melanoplus femur-rubrum.* See *red-thighed locust,* under *locust*[1].—**Sprinkled locust,** *Chloealtis conspersa.*—**Two-striped locust,** *Melanoplus bivittatus.*

locust†[2], *n.*—**Locust leaf-beetle.** See ★*leaf-beetle.*—**Locust saw-fly.** See ★*saw-fly.*—**River-locust,** *Amorpha fruticosa,* a North American leguminous shrub with spike-like racemes of violet-purple flowers. Better known as *bastard* or *false indigo.*—**Sweet locust, thorn-locust,** the honey-locust.

locustal (lō-kus′tal), *a.* Of or pertaining to locusts.

locust-beetle (lō′kust-bē″tl), *n.* An American cerambycid beetle, *Cyllene robiniæ,* whose larva bores in the trunks and branches of locust-trees.

locust-bird, *n.* 2. In South Africa, applied to several very different birds, specifically to one of the grackles, *Creatophora carunculata.*—**Great locust-bird,** the stork, *Ciconia alba.*—**Little locust-bird,** *Glareola nordmanni,* a pratincole, or member

Little Locust-bird (*Glareola nordmanni*).

of the plover family, which has something the appearance of a long-legged swallow.

locustid (lō-kus′tid), *n.* and *a.* **I.** *n.* A member of the orthopterous family *Locustidæ.*

II. *a.* Having the characters of or belonging to the family *Locustidæ.*

locust-lobster (lō′kust-lob″stėr), *n.* A crustacean belonging to the family *Scyllaridæ.*

locust-mite (lō′kust-mīt), *n.* A red mite, *Trombidium locustarum,* which destroys grasshopper eggs in the United States.

locust-moth (lō′kust-môth), *n.* An American tineid moth, *Depressaria robiniella,* whose small, green, black-headed larva defoliates locust-trees in June.

locust-tree, *n.* 2. In New Zealand, *Sophora tetraptera.* See ★*kowhai.*—**African locust-tree,** *Parkia Africana.* Also called *nitta-tree.* See *Parkia.*

locutory, *n.* **II.** *a.* Pertaining to or producing speech.

lode[1], *n.*—**Comstock lode,** a very noted mineral lode formerly worked on a large scale at Virginia City, Nevada. It is a great fissure-vein, four miles long, through igneous rocks of Tertiary age, on the western flank of Mount Davidson. This lode has produced more than $325,000,000 in gold and silver.—**Live lode,** a lode containing ore which it is profitable to work.—**Peachy lode,** a lode which has a bluish-green color that, in some lights, presents a deep pink color.—**Right-running lode,** a lode which runs parallel, or nearly so, to the axis of elevation of the district.

lode-light (lōd′līt), *n.* See the extract.

Appearances of flame above mineral veins are said to have been seen, and at all events are sufficiently well established to have received a special name '*lode lights*' in Cornwall. *C. Le N. Foster,* Ore and Stone Mining, p. 107.

lode-mining (lōd′mī″ning), *n.* The taking out of ore which occurs in lodes or veins.

lodge, *n.* 8. In Cambridge, England, the residence of the head of a college.—9. In *mining,* a cabin at the pit-head for workmen. *Barrowman,* Glossary.—**Cavate lodge,** a dwelling cut out of soft rock. Such dwellings are found, for instance, in the cañons of the southwestern United States. See ★*cavate.*

Cavate lodges comprise a type of structures closely related to cliff houses and cave dwellings. The term is a comparatively new one, and the structures themselves are not widely known. They differ from the cliff houses and cave dwellings principally in the fact that the rooms are hollowed out of cliffs and hills by human agency, being cut out of soft rock, while the former habitations are simple, ordinary structures built for various reasons within a cove or on a bench in the cliffs or within a cave. The difference is principally if not wholly the result of a different physical environment, *i. e., cavate lodges* and cave dwellings are only different phases of the same thing; but for the present at least, the name will be used and the *cavate lodges* will be treated as a separate class.

Smithsonian Rep., 1892, p. 217.

lodge-moraine (loj′mō-rān″), *n.* See ★*moraine.*

lodge-pole (loj′pōl), *n.* A pole used in the framework of a lodge.

Lodge wave. See ★*wave*[1].

lodging-money (loj′ing-mun″i), *n.* In the British service, a money allowance in lieu of quarters. Called *commutation of quarters* in the United States.

lodgment, *n.* 5. In *mining,* same as *lodge,* 7. [Scotch.]

lodgment-level (loj′ment-lev″el), *n.* Same as ★*lodgement,* 5, and *lodge,* 7.

lodhranite, lodranite (lōd′ra-nīt), *n.* [Formation not ascertained.] A type of meteoric stone or aërolite. See ★*meteorite.*

lodja (lōd-yä′), *n.* [Also *lodia, ladia* (see ★*ladia*); < Russ. *lodĭyá, lodiyá,* also *ladĭyá, ladiyá,* = Pol. *lodzia* (barred *l*) = Bohem. *lodí* = Serv. *ladya* = Bulg. *ladya* = OBulg. *ladiya, alŭdiya* = Lith. *eldiya, aldiya,* a ship.] A Russian boat, long, flat-bottomed, and propelled by oars, but in some forms provided with a deck and a mast.

Thursday at ñ of the clocke in the morning there came abeord of us one of the Russe *Lodiaes,* rowing with twentie oares, and there were foure and twentie men in her. *Steven Burrowe,* in Hakluyt, Voyages, I. 276.

loess, *n.*—**Remodified loess,** loess which has been redeposited after its first formation.

All that we know of the loess and its fossils compels us to include this accumulation as a product of the Pleistocene period. It is not of post-glacial age, even much of what one may call the "*remodified loess*" being of Late Glacial or Pleistocene age.

Smithsonian Rep., 1890, p. 227.

loessial (lès′i-al), *a.* [*loess* + *-ial.*] In *geol.,* belonging to or derived from loess.

loessic (lès′ik), *a.* [*loess* + *-ic.*] Same as ★*loessial.*

loeweite (lē′vē-īt), *n.* [G. *löweit* (1847), named after A. *Loewe* of the Austrian mint.] A hydrated sulphate of magnesium and sodium, found at the Ischl salt-mine, Austria.

loewigite (lē′vig-īt), *n.* [G. *löwigit* (1861), named after K. J. *Loewig,* who first analyzed it.] A hydrated sulphate of aluminium and potassium, occurring in straw-yellow rounded masses.

loft[1], *n.* 5. (*a*) A pigeon-house. (*b*) The flock of pigeons kept in it.

loft[2] (lôft), *v. t.* [*loft*[1], *n.*] To lift; in *golf,* to play (the ball) into the air in making a stroke. [Scotch.]

loft[2] (lôft), *n.* In *golf:* (*a*) The act of lofting. (*b*) The stroke so made. (*c*) The degree of slope from the vertical of the face of a club.

loft-dried (lôft′drīd), *a.* A trade-term applied to hand-made paper air-dried, usually in lofts or rooms arranged for the purpose.

lofter (lôf′tėr), *n.* A lofting-iron.

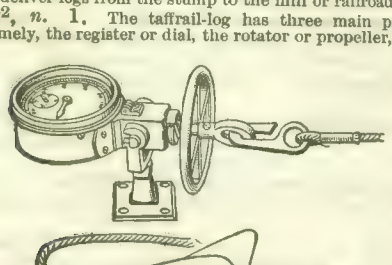
lofting, *n.* 2. In *mining,* lagging or longitudinal timber resting on caps to support the roof of a working. [Eng.]

lofting-iron (lôft′ting-ī″ėrn), *n.* In *golf,* a form of club used in lofting a ball. See cut under *golf-club.*

log[1], *n.* 3. *pl.* A jail (formerly built of logs). [Slang, Australia.]

'Let's put him in the *logs,*' says Jim. 'My word! just for a lark; turn for turn.' . . .

We pushed him into the farthest cell and locked both doors. . . . The lock-up, like most bush ones, was built of heavy logs.



Rolf Boldrewood, Robbery under Arms, xxv.

In the log, before cutting into planks or boards; unhewn.

One connected with lumbering operations at Bangor told me that the largest pine . . . was worth ninety dollars *in the log.* *Thoreau,* Maine Woods, p. 148.

Prize logs, in *lumbering,* logs which come to the sorting-jack without marks denoting ownership.—**To stock logs,** to deliver logs from the stump to the mill or railroad.

log[2], *n.* 1. The taffrail-log has three main parts, namely, the register or dial, the rotator or propeller, and

Taffrail-log.

the braided line. The rotator is towed astern, and owing to the pitch of its blades it revolves as the vessel moves ahead. These revolutions turn the line which connects with the horizontal bar of the register, which in turn revolves a series of cog-wheels, and these move the hands in the respective circles on the face of the register, on the principle of the gas-meter. Some registers are provided with two, and some with three hands. In the latter case the first hand marks quarters, each division representing one quarter of a mile, or two furlongs; the second marks even miles, recording as high as ten miles; and the third marks ten-mile divisions and is graduated to one hundred miles. When the century point is reached, the three hands all indicate zero. Where the register has only two hands, as shown in the engraving, one of the hands marks either quarter-miles or tenths of a mile, and the other hand marks single miles extending as high as one hundred.

3. In *tailoring,* a document which fixes the time to be credited to journeymen for making a specified kind of garment, the men being paid nominally by the hour. *N. E. D.* Also attributive: as, a *log* shop.—**Boat's log,** an instrument used in surveys for measuring the distance run by a boat. It is a small copy of the taffrail-log employed generally at sea for recording the number of miles logged by a vessel.—**Current-log,** Same as *ground-log* (which see, under *log*[2]).—**Harpoon log,** a distance-recorder named from its peculiar shape, which resembles that of a harpoon.—**Patent log,** one of a large variety of patented instruments for recording the speed of and distance run by a vessel.—**Spring log,** a speed-measurer constructed on the principle of a common spring-scale, the strain upon the spring marking the velocity of the vessel through the water. This log has a specially designed chip which is towed astern by a fine silk cord, the other end being hitched to the hook on the spring.—**Submarine log.** Same as *submerged* ★*log.*—**Submerged log,** a log with a propeller and dial in one length, both towed astern: it is necessary to haul in the entire instrument when it is required to read the distance run.—**Taffrail-log.** See ★*log*[2], 1.

log[2], *v. t.* 1. (*b*) *Naut.,* to enter in a log-book the name of a man, with his offense and the penalty attached to it; hence, to fine.

logagraphia (log-a-graf′i-ä), *n.* Agraphia, or loss of the power to express ideas in writing.

logan[2] (lō′gan), *n.* [Algonkian *pokologan,* etc.: see ★*pokeloken.*] See ★*pokeloken.*

Bogan: A word very much used by guides and others who go into the New Brunswick woods is bogan—a still creek or bay branching from a stream—exactly the same thing the Indians call a pokologan—and I think the former is a corruption of the latter word. Now curiously enough, exactly the same thing is generally called in Maine a *logan*—which must be another form of the same word. These words are in good local use, and occur in articles on sporting, etc.

Jour. Amer. Folk-lore, April–June, 1903, p. 128.

logan-apple (lō′gan-ap″l), *n.* A small Queensland tree of the rue family, *Jambolifera acidula,* bearing acid fruits.

loganberry (lō′gan-ber″i), *n.* [Named for Judge J. H. *Logan,* the originator.] A dewberry-like plant said to be a hybrid between *Rubus vitifolius* (the dewberry of the Western States) and *R. Idæus* (the European raspberry). It originated in California in 1881. The fruit is blackberry-like, very large, dark red in color, and promises well as a garden fruit in some localities.

loganetin (lō-ga-nē′tin), *n.* [*logan(in)* + *-et* + *-in*[2].] A cleavage-product of the glucoside loganin.

loganiaceous (lō-gā-ni-ā′shius), *a.* Pertaining to or having the characteristics of the *Loganiaceæ.*

loganin (lō′gan-in), *n.* [Appar. < *Logan,* a person's name (?), + *-in*[2].] A colorless glucoside, $C_{25}H_{34}O_{14}$, contained in the pulp which embeds the seeds of *Strychnos Nux-vomica.* It crystallizes in prisms and melts at 215° C.

loganite (lō′gan-īt), *n.* [Named after Sir William *Logan* (1798–1875), at one time director of the Geological Survey of Canada.] An altered amphibole from Calumet Falls, Quebec: akin to penninite in composition.

logaphasia (log-a-fā′zhi), *n.* [NL., < Gr. λόγος, word, + NL. *aphasia.*] Loss, through brain-disease, of the power to express ideas by articulate speech.

logarithmetically (log″a-rith-met′i-kal-i), *adv.* An erroneous form for *logarithmically.*

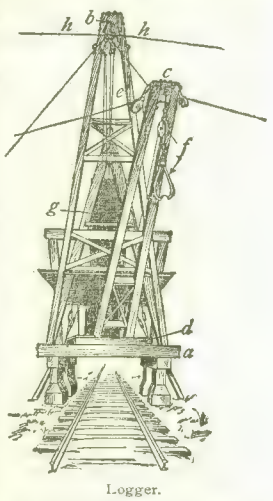
logarithmic, *a.* 2. Pertaining to the logarithmic curve.—**Logarithmic decrement, differentiation, paper,** etc. See ★*decrement,* etc.

II. *n.* A logarithmic curve.

Log-cabin china. Same as *Columbian star* ★*china.*

log-deck (log′dek), *n.* 1. In a sawmill, the main floor, where the logs arriving by the log-slide are turned out of the slide by the flipper and assembled ready for sawing. It consists of a sloping floor down which the logs roll on rails to the log-loader, which delivers them one at a time to the saw-carriage. See ★*saw-carriage,* ★*log-slide,* ★*flipper,* 5, and ★*log-loader.*

2. The platform on a loading-jack.



loge[2] (lōzh), *n.* [F.: see *lodge* and *loggia.*] 1. A booth or stall.—2. The French name for a private box in a theater, used in English with the French pronunciation.

logeion (lō-gī′on), *n.*; pl. *logeia* (-ä). [Gr. λογεῖον, speaking-place (L. pulpitum), < λόγος, speaking, speech.] The speaking-place or stage of the ancient Greek theater.

-loger. The ending of some words which denote the person concerned with the indicated science or subject ending in *-logy.* It is equivalent to *-logue,* which represents the original Greek noun, or *-logist,* which is more used than either. It occurs first in *astrologer* (which was probably formed from *astrology* + *-er*[1], after *astronomyer, astronomer,* rather than directly from L. *astrologus* + E. *-er*[1]), *chronologer, geologer, philologer* (obsolescent), *theologer.* The suffix is no longer a living formative, being superseded by *-logist.*

log-gatherer (log′ga*TH*″ėr-ėr), *n.* A hauling-device for collecting logs into piles ready for shipment.

logger[1], *n.* 2. A machine for gathering freshly cut logs and loading them upon railroad flat-cars. It consists of two derricks having A-frame booms, the larger and taller, called the *hauling-boom,* being fixed to the machine, and the smaller, called the *loading-boom,* standing under it upon a sluing-table. The machine, with its two engines, rests upon a base which is as long as a flat-car and as wide as the whole length of a railroad-tie. Placed upon a flat-car, it can be taken to the logging-camp, where the logs lie upon the ground on each side of the way anywhere within a thousand feet of the track. It is then jacked up and the car removed. Guy-lines are run out on each side of the track to hold the hauling-boom in place, and lines are run out on each side and the logs are hauled over the ground to the track, ready to be lifted and loaded upon flat-cars by the loading-boom, empty cars being added to the train by running them under the loader.

Logger.

a, temporary base or bridge over track; *b,* hauling-boom; *c,* loading-boom; *d,* sluing-table; *e,* hauling-ropes; *f,* lifting- and loading-block, ropes and hook; *g,* engine-house; *h,* guy-ropes. About 35 feet high.

loggerhead, *n.* 4. (*b*) In the southern United States, the common snapping-turtle, *Chelydra serpentina.*—6. Specifically—(*b*) in the British West Indies, a name applied to two large tyrant flycatchers, *Pitangus caudifasciatus,* and *Myiarchus crinitus.*—10. The steamer-duck, *Tachyeres cinereus,* a flightless water-fowl of the Falkland Islands and Straits of Magellan.—11. A lever or walking-beam which connects the piston-rod of an engine to the pump-plunger.—12. A pewter inkstand, circular and very heavy.

Pewter is now chiefly used for office inkstands and public-house or other tankards. The inkstands of this large collection are most varied, and include many of the prototypes of the circular heavy inkstand, still used, and known to many under the old name of "*loggerheads.*"

Athenæum, Feb. 27, 1904, p. 280.

13. A large, heavy head, out of proportion to the body.

Why, dear madam, did you not spare your especially? said Mr. Greville. Come, Fenwick, let us retire and lay our two *loggerheads* together, and live over again the past hour, and then hang ourselves.

Richardson, Grandison, I. Letter iv.

logging-car (log′ing-kär), *n.* In *car-building,* a car having two trucks which support an underframe but no floor or car-body. It is used on light- and standard-gage roads for logs and lumber. Another type, for narrow-gage roads, consists of a truck supporting a pivoted bridge for carrying long logs and telegraph-poles, the load being supported between two cars.

logging-wheels (log′ing-hwēlz), *n. pl.* A pair of wheels, usually about 10 feet in diameter, for transporting logs. Also called *big-wheels, katydid,* and *timber-wheels.*

loggy (log′i), *a.* [Appar. *log*[1] + *-y*[1]; but perhaps only a variant of *logy.*] 1†. Of strong growth; rank: said of a crop.—2. Heavy; stiff; sluggish: said usually of movement.

They were beat, however, by their oars, and by their slow, *loggy* stroke, and by their cheekiness.

Illus. London News, Aug., 1847, p. 142.

log-haul (log′hâl), *n.* In a sawmill, the conveyer used to lift logs from the water on which they float into and through the mill to the saws. It consists of a V-shaped spout or guideway open at the bottom. In this slot travels an endless conveyer-chain. A log floated into the open end of the conveyer is caught by

points on the chain and drawn upward in the spout until it rests on the chain, when it slides along the spout until it reaches the end of the conveyer; there the chain turns downward, leaving the log free to be rolled off sidewise upon the rails, down which it rolls to the saw-carriage. The capacity of a log-haul is about 1,800 logs in a day.

logia, *n.* Plural of ★*logion*.

-logian. An ending occurring in *theologian* and some later words that form nouns of agent going with names of sciences in *-logy*. Examples are *theologian* (the first of the type), *geologian, philologian*, etc. See ★*-loger*, ★*-logist*.

logic, *n.*—**Byzantine Logic,** a name given to a development of logic which Dr. Carl Prantl supposes to have taken place in Constantinople, solely on the evidence of one book which he supposes to be written in Byzantine Greek, but which Professor E. A. Sophocles regarded as plainly belonging to a later stage of the language. It is loaded with Latinisms and appears to show plain marks of the influence of Priscian. It was possibly written in Italy after the fall of Constantinople. This work and the Latin *Summulæ Logicales* of Petrus Hispanus are identical; one is a literal translation of the other.

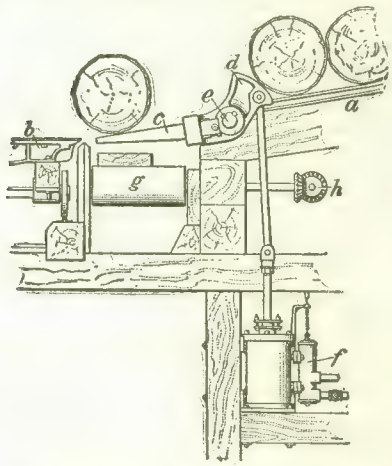
Logical aggregate, sequence. See ★*aggregate*, 4, ★*sequence*.

logie[2] (lō′ji or -zhi), *n.* [D., < F. *loge:* see *lodge*, *n.*] In British Guiana, a shed or hut open at the sides.

logion (log′i-on), *n.*; pl. *logia* (-ä). [Gr. λόγιον, a saying, < λόγος, a saying, a speech, a word: see *Logos*.] A saying or maxim, as of a teacher, handed down traditionally: specifically used with reference to sayings attributed to Jesus. Collections of such sayings are supposed to have existed in the first century. Fragments of such a collection, ascribed to the third century or earlier, have been discovered in Egypt.

A great store of fragments of literary works, among which occur the now well-known "*Logia*" or "Sayings of Our Lord." *Encyc. Brit.*, XXXI. 441.

-logist. An ending forming nouns of agent used in connection with abstract nouns in *-logy*. The formation is mainly English.



logistic. I. *a.* **4.** In *math.*: (*a*) Logarithmic. (*b*) Pertaining to a logarithmic curve.—**Logistic language.** See ★*language*[1].—**Logistic numbers**†, ratios or fractions.

II. *n.* **2.** A logistic curve. See cut under *logistic*.

log-jack (log′jak), *n.* Same as ★*gangway*, 4.

log-kicker (log′kik″ėr), *n.* In a sawmill, an appliance, operated by steam, for throwing the logs out of the log-slide upon the log-deck. It performs, in a different way, the same work as the flipper.

log-loader (log′lō″dėr), *n.* In a sawmill, a device, operated by steam, placed at the bottom

Log-loader.

a, inclined log-deck of sawmill (logs roll down on rails); *b*, saw-mill-carriage; *c*, log-loader delivering log to carriage; *d*, log-stop combined with loader, holding back next log; *e*, pivot on which loader and stop turn; *f*, steam-motor operating combined log-loader and stop through piston-rod and connecting-rod: descent of piston draws stop down, allowing log to roll on loader; ascent of piston lowers arm of loader, allowing log to roll down to carriage and interposing stop to check advance of next log; *g*, roller-conveyer removing planks from saw, plank passing under loader; *h*, gearing operating live roller.

of the log-deck, which selects one log at a time from the mass of logs on the deck and delivers it to the saw-carriage.

logodædalus (log-ō-ded′a-lus), *n.*; pl. *logodædali* (-lī). [Gr. λογοδαίδαλος, < λόγος, speech, + δαίδαλος, skilled.] One who is cunning in words. *N. E. D.*

logogrammatic (log″ō-gra-mat′ik), *a.* [*logogram* + *-atic* (cf. *grammatic*).] Of or relating to logograms.

logograph (log′ō-gràf), *v. t.* [*logograph*, *n.*] To print with logotypes.

logogriphic (log-ō-grif′ik), *a.* Of or relating to logogriphs.

logolatry (lō-gol′a-tri), *n.* [Gr. λόγος, word, + λατρεία, worship.] A blind regard for words or verbal truthfulness.

logolept (log′ō-lept), *n.* [Gr. λόγος, word, + λῆπτός, taken.] One who has a mania for using words in extraordinary, striking senses. *N. Y. Independent*, June 8, 1899 (quoted).

logology (lō-gol′ō-ji), *n.* [Gr. λόγος, the Logos, + *-λογια*, < λέγειν, speak.] The doctrine of the Logos.

logomach (log′ō-mak), *n.* A logomachist.

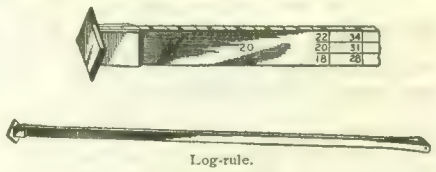
logomachic (log-ō-mak′ik), *a.* [*logomach-y* + *-ic*.] Characterized by logomachy or verbal fencing. *Biometrika*, April, 1903, p. 321.

logomachical (log-ō-mak′i-kạl), *a.* Same as ★*logomachic*.

logomachize (lō-gom′a-kīz), *v. i.*; pret. and pp. *logomachized*, ppr. *logomachizing*. To engage in verbal fencing or a war of words.

logomania, *n.* **2.** A form of mental unsoundness characterized by excessive garrulity.

logomaniac (log-ō-mā′ni-ak), *n.* [Gr. λόγος, word, + E. *maniac*.] One who is insanely devoted to words rather than ideas.



The customs of those *logo-maniacs* or word-worshipers. *H. Green*, Shakspeare and the Emblem Writers, p. 103.

logoneurosis (log″ō-nū-rō′sis), *n.* [NL., < Gr. λόγος, word, + νεῦρον, nerve, + *-osis*.] A nervous disorder which impairs the enunciation of words.

logopathy (lō-gop′a-thi), *n.* [Gr. λόγος, word, + πάθος, disease.] A defect in speech due to cerebral disease. *Baldwin*, Dict. of Philos. and Psychol., II. 30.

logorrhea (log-ō-rē′ạ), *n.* [Gr. λόγος, word, + ῥοία, flux.] Morbid loquacity and rapidity of speech. *Baldwin*, Dict. of Philos. and Psychol., II. 30.

log-rule (log′röl), *n.* **1.** Same as *log-scale*.—**2.** A graduated stick for measuring the diam-

Log-rule.

eters of logs. The number of board-feet in logs of given diameters and lengths is shown on the stick.

log-runner (log′run″èr), *n.* An Australian bird of the genus *Orthonyx*, formerly considered as related to the lyre-bird, but now placed in that heterogeneous group the *Timeliidæ*. There are about half a dozen species, the type of the genus being *O. spinicauda*. They are almost as large as sparrows, and have large feet, straight claws, and a spiny tail, whence the name *spine-tail*, frequently given to them.

log-slide (log′slīd), *n.* In a sawmill, a long, narrow wooden channel up which logs are drawn by a chain. It leads from the place where the logs are floating or lying up to the log-deck.

-logue. [Also *-log, -loge;* ME. *-loge* (in *catalloge*); F. *-logue*, < L. *logus*, < Gr. *-λογος, -λογ-ος*, the verb stem (in some cases a separate word, λόγος) in composition.] An element in several words from the Greek, as *analogue, catalogue, decalogue, dialogue, duologue, epilogue, prologue*. It occurs also (instead of *-loger* or *-logist*) in some obsolescent designations of persons, related to abstract nouns in *-logy*, as *Assyriologue, astrologue, philologue, Sinologue, theologue*, etc.

logway (log′wā), *n.* Same as ★*gangway*, 4.

logwood, *n.*—**Cream of logwood,** a concentrated liquor extracted from logwood chips, used for blackening leather. *C. T. Davis*, Manuf. of Leather, p. 559.

loi (lō′ē), *n.* [Hawaiian.] A taro-patch; an artificial pond where taro is cultivated.

Loja bark. Same as *Loxa bark* (which see, under *bark*[2]).

loka (lō′kä), *n.* [Skt. *loka*, an open space, a place, a region, a division of the universe, a world.] In *Hindu philos.*, a division of the universe; a world. The three chief lokas or divisions are heaven, the earth, and the lower regions, of which there are seven; but the term is more particularly applied to seven superior worlds inhabited by different orders of beings, which, beginning with *Bhūr-loka*, the earth, rise in succession one above the other above the lower world, and culminate in *Satya-loka*, or *Brahmā-loka*, the abode of Brahmā and the superior deities. Buddhism adopted a similar classification.

lokaëtin (lō′ka-e-tin), *n.* [*loka(in)* + *-et* + *-in*[2].] A reddish-brown compound, $C_9H_8O_5$, prepared by the action of dilute acids on lokain.

lokain (lō′kā-in), *n.* [*loka(o)* + *-in*[2].] A glucoside, $C_{28}H_{34}O_{17}$, found in lokao, or Chinese green, a lake prepared in China from the buckthorn, *Rhamnus utilis* and *R. chlorophorus*.

lokanic (lō-kan′ik), *n.* [*loka(o)nic*.] Noting an acid, a violet-black pulverulent crystalline compound, $C_{36}H_{36}O_{21}$, prepared by the action of dilute acid on lokaonic acid. It assumes a bronze luster when rubbed.

lokao (lō-kä′ō), *n.* [Chinese *luh kao*, green dye wafers prepared in the province of Chekiang: *luh*, green; *kao*, fat, grease, ointment.] A green dyestuff of Chinese origin, obtained from a decoction of the bark of *Rhamnus chlorophorus* and *R. utilis*, apparently by precipitation as an aluminium lake. It has been used by European dyers, but is now laid aside in favor of the artificial coal-tar colors. Also called *Chinese green* and *green indigo*.

lokaonic (lō-kā-on′ik), *a.* [*lokao* + *-n-* + *-ic*.] Noting an acid, a dark blue-black compound, $C_{42}H_{48}O_{27}$, constituting the coloring-matter of lokao.

lokaose (lō′kā-ōs), *n.* [*loka(o)* + *-ose*.] An optically inactive sugar, $C_6H_{12}O_6$, formed by the action of dilute acids on lokaonic acid. It crystallizes in needles.

Lollardize (lol′ạr-dīz), *v. i.*; pret. and pp. *Lollardized*, ppr. *Lollardizing*. [*Lollard* + *-ize*.] To think or act with the Lollards.

lolling-bit (lol′ing-bit), *n.* A bit with a device attached at the center of the mouthpiece to prevent the horse's tongue from protruding from his mouth or getting over the bit.

lollop (lol′ọp), *n.* [*lollop, v.*] A sprawl; a flop.

loll-shraub (lol-shrôb′), *n.* [Englishmen's Hind. *lāl shrāb*, 'red wine': see *shrub*[2].] In India, a name for claret.

loma[2] (lō′mä), *n.* [Sp., a hill, ridge, slope, < *lomo*, loin, back, ridge, < L. *lumbus*, loin: see *loin*.] In Spanish-speaking countries, a minor hill or ridge; a foothill.

The vegetation [of Peru] diminishes and varies as soon as the coast is left behind and the foothills or *lomas* of the Cordillera are reached. *Nat. Geog. Mag.*, Aug., 1904, p. 315.

Lomanotidæ (lō-mā-not′i-dē), *n. pl.* [NL., < *Lomanotus* + *-idæ*.] A family of nudibranchiate gastropods having a slug-like body, the dorsum prominent, undulating or lobed, with one row of small cerata, no tentacles, and the rhinophores much foliated. It contains the single European genus *Lomanotus*.

Lomanotus (lō-mā-nō′tus), *n.* [NL., < Gr. λῶμα, fringe, + νῶτος, back.] The typical and only genus of the family *Lomanotidæ*. *Vérany*, 1844.

Lomatium (lō-mā′shium), *n.* [NL. (Rafinesque, 1819), in allusion to the wing surrounding the fruit; < Gr. λωμάτιον, dim. of λῶμα, the border of a robe, a fringe.] A genus of dicotyledonous plants belonging to the family *Apiaceæ*. They are nearly or quite acaulescent perennial herbs, with fusiform or tuberous roots, lobed or dissected leaves, and yellow, white, or purple flowers. The genus differs from *Peucedanum*, to which it has sometimes been referred, in its acaulescent habit, usually single umbels, and in the absence of a stylopodium. About 60 species are known, all natives of the drier regions of western North America. The roots of several, called *cous, cowish*, or *biscuit-root*, were eaten by the Indians and early settlers. See *cowish*[2].

Lombardesque (lom-bär-desk′), *a.* [*Lombard* + *-esque*.] Having the characteristics of Lombardic art, especially architecture.

Lombardian (lom-bär′di-ạn), *a.* Same as *Lombardic*.

Lombardism (lom′bär-dizm), *n.* [*Lombard* + *-ism*.] An idiom characteristic of Lombardy or the Lombardic dialect.

lomentariaceous (lō-men-tā-ri-ā′shius), *a.* Belonging to the family of seaweeds *Lomentariaceæ*.

lomita (lō-mē′tä), *n.* [Sp., dim. of *loma*, a ridge.] In Spanish-American countries, a hillock.

Lon. An abbreviation of *London*.

Lonchiurus (long-ki-ū′rus), *n.* [NL., < Gr. λόγχη, a spear, + οὐρά, tail.] A genus of sciænoid fishes found from the West Indies to Guiana.

Lonchopisthus (long-kō-pis′thus), *n.* [NL., < Gr. λόγχη, spear, + ὀπισθε, at the back.] A genus of fishes of the family *Opisthognathidæ*, known only from Cuba.

Lond. An abbreviation of *London*.

Londinensian (lun-di-nen′si-ạn), *a.* [ML. *Londinensis*, < *Londinium*, London.] Of or characteristic of London.

He feels them big; he thinks them human in their bulk; they are *Londinensian*.
G. Meredith, One of our Conquerors, i.

Londinian (lun-din′i-ạn), *a.* [NL. **Londinianus*, < L. *Londinium*, London.] Of or pertaining to London: in *geol.*, same as ★*Ypresian*.

London-lace (lun′dun-lās), *n.* The reed canary-grass, *Phalaris arundinacea*. Also *lady's-laces*, *bride's-laces*.

London particular. See ★*particular*.

long[1]. **I.** *a.* **9.** Having a long time to run before maturing: as, a *long* bill; *long* (commercial) paper.—**10.** Well- or over-supplied: as, to be *long* in some commodity or stock. See *long of stock*, under *long*[1].—**Long and short work, long odds, price, train, vacation.** See ★*work*, etc.—**Long-distance telephone.** See ★*telephone*.

II. *n.*—**Longs and shorts,** cards trimmed at different lengths, so that in such games as cribbage a sharper can lift off a portion of the pack and leave a known card on the top of the cut; also used in blind hookey, so that the dealer may always get a high card.

longbeak, *n.* **2.** Any butterfly of the family *Lybytheidæ*: so called from their very long, appressed, beak-like palpi.

long-butt (lông′but), *n.* The longest of four cues employed in English billiards. It was also employed in American games until tables were reduced in size from 11 x 12 to 5½ x 11 feet and then to 5 x 10 feet as the standard.

longe[3] (lonj), *n.* An abbreviated form of *maskalonge*.

long-ell (lông′el), *n.* A coarse woolen cloth made in long pieces.

Square acres of Yorkshire lastings and *long-ells*, wrecked cargo spread out to dry. *Geog. Jour.* (R. G. S.), X. 195.

Longevity pay. See ★*pay*[1].

longfin (lông′fin), *n.* A common name given to *Caprodon longimanus*, a serranoid fish found in Australian waters.

longhead (lông′hed), *n.* In *anthrop.*, one who is dolichocephalous.

long-hop (lông′hop), *n.* Same as ★*long-hopper*.

long-hopper (lông′hop″ėr), *n.* In *cricket*, a ball bowled or thrown so that it reaches the batsman or wicket-keeper after a long flight from the pitch.—**Rank long-hopper,** a ball bowled much short of the proper length.

longhorn, *n.* **4.** An English breed of cattle with long, drooping horns. They are large and rather clumsily built, but are good beef cattle and fair milkers. In the United States the name is also applied to the long-horned Texas cattle, now almost entirely replaced by breeds with shorter horns.—**5.** An old inhabitant, shrewd and knowing. [Slang, western U. S.]

There was a big chief on the range, an old *longhorn* called Abraham, and his lil' ole squaw Sarah. They'd a boy in their lodge like me, another woman's kid, not a son, but good enough for them.
N. Y. Times, May 28, 1905.

long-house (lông′hous), *n.* A house of great length, particularly a communal dwelling of the Iroquois and of other North American tribes, or a communal house of the natives of Borneo.

This paper contains a detailed account of the life in a Kayan *long-house* in Sarawak.
Geog. Jour. (R. G. S.), XI. 195.

longicone, *a.* **II.** *n.* A long straight or slightly curved cephalopod shell with a slow rate of growth, as in *Orthoceras*.

longicostate (lon-ji-kos′tāt), *a.* [L. *longus*, long, + *costa*, rib, + *-ate*[1].] Having long ribs, as the wings of insects.

longilabrous (lon-ji-lā′brus), *a.* [L. *longus*, long, + *labrum*, lip, + *-ous*.] In *entom.*, having a long labrum.

longing-mark (lông′ing-märk), *n.* A birthmark; a strawberry-mark.

longipalatal (lon-ji-pal′ā-tal), *a.* [L. *longus*, long, + *palatum*, palate, + *-al*[1].] Same as ★*dolichuranic*. *Turner*.

longipalpate (lon-ji-pal′pāt), *a.* [L. *longus*, long, + NL. *palpus* + *-ate*[1].] In *entom.*, having long palpi.

longipedate (lon-ji-ped′āt), *a.* [L. *longipes* (*ped-*), long-footed (applied to insects, and so in effect equivalent to 'long-legged'), < *longus*, long, + *pes* (*ped-*), foot, + *-ate*[1].] In *entom.*, having long legs.

longitarsal (lon-ji-tär′sạl), *a.* In *entom.*, having long tarsi.

longitude, *n.*—**Circle of longitude.** See ★*circle*.—**Longitude rime** (*naut.*), a mnemonic couplet for naming the longitude when working a chronometer sight. It runs as follows:

Greenwich time best [ahead], longitude west;
Greenwich time least [behind], longitude east.

Longitude star, a term used to denote certain bright stars which have been selected for use in determining the longitude by the method of lunar distances—now nearly obsolete.—**Mean longitude.** See ★*mean*[3].

longitudinal, *a.*—**Longitudinal aberration, magnetization.** See ★*aberration*, ★*magnetization*.

II. *n.* In *iron ship-building*, one of the fore-and-aft members in the framing of a cellular double bottom, consisting of a plate, an inner angle-bar by which it is connected to the inner bottom, and an outer angle-bar by which it is connected to the outside plating. In warships, the plate and inner bar are usually continuous; in merchant vessels the plate and both bars are more frequently worked intercostally between the frames. Also called *longitudinal frame*. See cuts under *double* ★*bottom*.

long-jack (lông′jak), *n.* The Queensland yellow-wood, *Flindersia Oxleyana*. See *Flindersia* and *yellow-wood*. [Australia.]

longjaw (lông′jâ), *n.* **1.** A fish, the "lake herring," *Argyrosomus prognathus*, found in the Great Lakes.—**2.** A fish of the genus *Tylosurus*; a garfish.

long-jawed (lông′jâd), *a.* Extended; long-drawn: said of a long-winded person or a great talker; also (*naut.*), of a rope that has been stretched out until its lay is lengthened.

long-legged, *a.* **2.** Having a great draft of water: said of a vessel of great length, or long in comparison with its beam.

long-legs, *n.* **2.** The European stilt, *Himantopus candidus*.

Longmyndian (lông-min′di-ạn), *a.* [*Longmynd* (see def.) + *-ian*.] In *Eng. geol.*, noting a series of sedimentary strata, constituting Longmynd ridge in Wales, which are assumed to be of Cambrian age. See *Longmynd group*.

Longobard (long′gō-bärd), *n.* and *a.* [L. *Longobardus*, in pl. *Longobardi*: see *Lombard*[1].] **I.** *n.* A Lombard.

II. *a.* Of the Longobards or Lombards; Longobardian.

Longobardian, *a.* **II.** *n.* In *geol.*, a division of the pelagic Trias in the Mediterranean basin equivalent to the Upper Noric or the Wengen beds and constituting one of the lower elements of the Upper Trias.

Longobardic (long-gō-bär′dik), *a.* Same as *Lombardic*.

long-pated (lông′pā″ted), *a.* Same as *long-headed*.

Long-range forecast. See ★*forecast*.

longshucks (lông′shuks), *n.* The loblolly-pine, *Pinus Tæda*.

long-sleeves (lông′slēvz), *n.* In Australia, a long, slender drinking-glass; also, the drink contained in such a glass. [Slang.]

long-spoon (lông′spön), *n.* In *golf*, a wooden club with a long, lofted, face and a shaft slightly longer than a baffy-spoon. See cut at ★*baffy-spoon*.

longspur, *n.*—**Painted longspur, Smith's longspur,** *Calcarius pictus*, a bird found in the interior of North America: so named from its black, white, and yellowish markings.

longstone (lông′stōn), *n.* A menhir.

long-timbers (lông′tim″bėrz), *n. pl.* *Naut.*, timbers in the cant-bodies which reach from the dead-wood to the head of the second futtock.

long-tom (lông′tom), *n.* In Sydney, a name given to *Tylosurus ferox*, a species of garfish which has both jaws prolonged to form a slender beak. *E. E. Morris*, Austral English.

longueur (lông-gėr′), *n.* [F., < *long*, long.] Something that is long-drawn-out and tedious, as a passage in a book.

Longwy enamel, pottery. See *Cluny* ★*enamel*, ★*pottery*.

lonja (lōn′hä), *n.* [Sp., a shop, warehouse, exchange, orig. a booth or shed, = Pg. *loja* = F. *loge*, E. *lodge*, *n.*] In *Sp. arch.*, a public building nearly corresponding to the English exchange or the French bourse: often an important architectural monument.

Lonsdaleia (lons-dā-lē′yạ), *n.* [NL., < *Lonsdale*, a local name.] A genus of fossil corals belonging to the family *Cyathophyllidæ*. It consists of composite coralla the corallites of which are characterized by a large columella composed of vertically rolled lamellæ and an interior dissepimental wall. The genus is very characteristic of the Carboniferous rocks.

loo[2], *n.*—**Domino loo,** a game resembling loo, played with dominoes instead of cards.

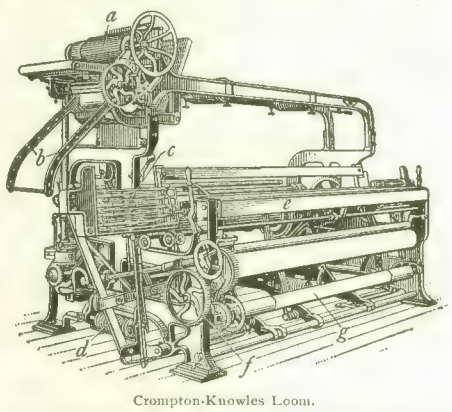
loofa, loofah (lö′fạ), *n.* The sponge-gourd, *Luffa Luffa*. See *Luffa*.

look[1], *v. i.*—**To look out of wind** (*naut.*), the act of sighting several objects with the eye to ascertain if they are in alinement, such as in the lining up of the propeller-shaft.—**To look up.** (*a*) Said of a ship when, by the shifting of the wind, it is enabled to point closer to the point of its destination. (*b*) To cheer up; take courage. (*c*) To advance; improve: as, business is *looking up*. [Colloq.]

looker-out (lůk′ėr-out′), *n.* In faro-banks, the person who sits at the dealer's right hand and sees that all bets are properly taken and paid.

look-in (lůk′in), *n.* **1.** A hasty look or glance; a short stay.—**2.** A chance of success. [Sporting slang.] *Bell's Life*.

Looking-glass bush, the bush karamu, *Coprosma lucida*: so called from its shining leaves.—**Looking-glass ore.** See ★*ore*[1].

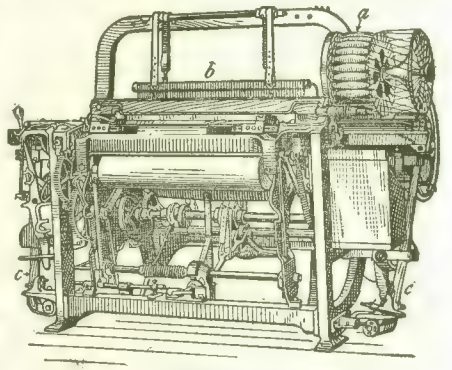


lookout, *n.* **6.** In *car-building*, a glazed clear-story on the roof of a caboose, designed to enable the train-hands to obtain a clear view over the tops of the cars in a train.

lookout-platform (lůk′out-plat″fôrm), *n.* A small platform built high up on the forward side of the foremast for the use of the *lookout*; a crow's-nest.

lookout's-nest (lůk′outs-nest), *n.* Same as *crow's-nest*.

lool (löl), *n.* In *mining*, a receptacle for ore-washings.



loom[1], *n.*—**Crompton loom,** a power-loom, for weaving fancy designs, having a so-called 'head-motion'

Crompton-Knowles Loom.

a, head-motion for operating the harnesses or warp-threads; *b*, rack for sustaining the warp pattern-chain; *c*, shuttle-boxes; *d*, picker-stick; *e*, breast-beam; *f*, take-up; *g*, cloth-roller.

mechanism for raising and lowering the harnesses at will by means of levers operated upon by a pattern-chain consisting of shifting rollers or pegs: invented by William Crompton in 1837.—**Cross-border Jacquard loom,** a Jacquard loom built to weave handkerchiefs and other bordered fabrics with the least number of cards.—**Northrop loom,** an automatic loom invented

Northrop Loom.

a, hopper with cops of yarn; *b*, harness; *c*, *c*, picker-sticks.

by James H. Northrop and accepted as a practical success in 1895. Its advent established a new epoch in power-loom weaving. Its principal feature is its mechanism for automatically supplying weft to the running shuttle.—**Pneumatic loom,** a loom in which the beating up of the weft in weaving is effected by compressed air acting on the forward motion of the slay.

loom[1], *v. t.* **2.** To put into or adjust in a loom.—**To loom the warp** or **web,** to make ready the warp, or web, in a loom for weaving.

loomed (lömd), *p. a.* Made in a loom.

loomer (lö′mėr), *n.* In *weaving*, one who takes the warp as it comes from the taper and prepares it for the loom.

loom-race (löm′rās), *n.* The raceway or track over which the shuttle is thrown in a loom.

loom-weight (löm′wāt), *n.* A weight used in primitive looms to stretch the warp; frequently found in excavations.

One small tomb containing only red ware and a discoidal *loom-weight*.
J. L. Myres, in Jour. Hellenic Studies, XVII. 143.

loon[2], *n.* 2. A name used locally for several very different birds: in England, for some of the grebes, including the large *Podiceps cristatus* and the little dabchick, *P. minor*; by sailors often in the form *loom*, for the murre, *Lomvia arra*.

loop[1], *n.* 2. (*j*) In brachiopods: (2) The calcareous support of the brachia which assumes various loop-like forms in the *Terebratulidæ*, a superfamily of the brachiopods. (*k*) The circuit formed by the path in a centrifugal railway or loop-the-loop incline, around part of which the performer or passenger travels with head downward. See *to* ★*loop the loop*. (*l*) In *archery*, the eye of a bowstring, which is slipped over and held by the neck when the bow is strung. (*m*) A recurved sand-spit which, having developed through the form of a hook, again joins the shore in a closed curve. *Chamberlin and Salisbury*, Geol., I. 341.

7. In *phys.*, that region, in a standing wave system, for which the amplitude of vibration is a maximum: opposed to *node*, which is the region of zero amplitude.—**Binocular loop**, an instrument consisting of two loops whose fields of view accurately superpose, giving a magnification of about four diameters: used in the examination of specimens.—**Flemish loop.** Same as *Flemish eye* (which see, under *eye*[1]).—**Henle's loops**, portions of the uriniferous tubules in the kidneys which are turned upon themselves, forming loops.—**Hysteresis loop.** See *magnetic* ★*loop*.—**Lenticular loop**, nerve-fibers which pass between the lemniscus and lenticular nucleus.—**Magnetic loop**, the area inclosed between the ascending and descending arms of the curve of magnetization of a piece of iron or steel. Also called *hysteresis loop*. See *magnetic* ★*hysteresis*.—**Potential loop**, the antinode of a curve showing the fluctuations of electromotive force in an alternating-current circuit.—**Shelly loop**, in brachiopod shells, one of the delicate calcareous ribbons, each in the form of a loop, attached by its two ends to the calcareous process on either side of the base of the latter and forming the brachial skeleton.—**Trail-wheel loop**, the aperture in the trail of a field-carriage into which the wheel enters.

loop[1], *v. t.*—**To loop the loop** [an imitation of the phrase *to shoot the chute*], to pass round the inner side of a circular path or track set vertically: originally in a car on what was known, about 1840, as the *centrifugal railway*, of which such a loop formed a part. The car started at the top of an incline, and its momentum carried it at great speed around the loop. About 1900 the feat was revived, and was performed on a bicycle. In 1904 the upper part of the loop was removed, and the rider leaped the gap of open space. In 1905 this feat was successfully performed by a woman in an automobile. Other variations of the act have followed. See ★*autobolide*.

G. E. Mogridge ('Old Humphrey's Walks in London, . . . 1843') [says]: "First a pail of water, next a hundred-weight piece of metal, and, lastly, a human being . . . passed round the circle. . . . The water was unspilt, the weight unmoved, and the attendant uninjured, though he passed round the upright circle, head over heels, performing a complete summerset, at the rate . . . of a hundred miles an hour." *N. and Q.*, 9th ser., X. 366.

loop-bolt, *n.* 2. *Naut.*, the bolt which passes through the loop and the lugs of the carriage when a howitzer is secured in position.

loop-cut (löp′kut), *n.* The puncturing of a surface followed by a cross-cut so as to excise a piece. Also called *retrosection*.

looper[2] (lö′pėr), *n.* [D. *looper*, lit. runner (see *loper*).] In the plural, buck-shot of large size.

loopful (löp′fůl), *n.* [*loop*[1] + *-ful*.] In *bacteriol.*, the amount of liquid which can be held within the loop of platinum wire used for transferring cultures.

looping (lö′ping), *n.* In *metal.*, the running together or fusing of ore when heated for calcination.

loop-lace (löp′lās), *n.* 1. A lace which has a ground of very fine net.—2. A braided ornament formed of loops.

loop-pin (löp′pin), *n.* The pin that holds the wheel of a howitzer in place.

loop-plug (löp′plug), *n.* In *teleg.*, a device for connecting or disconnecting a loop-circuit; a loop-switch.

loop-stitch (löp′stich), *n.* 1. In *needlework*, an open stitch through which the needle draws the thread and leaves a loop on its way to the next stitch.—2. A stitch with loops; a kind of fastening stitch.

loop-switch (löp′swich), *n.* In *teleg.*, a switch which introduces a loop into the main circuit or disconnects it. See *switch*, 2 (*b*).

loor (lör), *n.* [Also *loore*, *lore*, *lure*, *lower*, etc.; origin and normal form unknown.] Foot-rot. [Prov. Eng.]

Loor, Loo, Lo, sb. Sore on a cow's hoof.
Gloucestershire Glossary, 1890.

loose. I. *a.* 11. In *chem.*, not combined with anything else: as, carbon dioxid *loose* in the blood. The word *free* is more commonly used in this sense.—12. In *geol.*, incoherent, as unconsolidated sands. *Geikie*, Text-book of Geol. (4th ed.), p. 138.—13. In *coal-mining*, free at the ends or sides: applied to a working-place when the coal has been previously mined on both sides: as, *loose* at one end, *loose* at one side, etc.—**Loose card**, a card of no value; hence, the best to discard. *Hoyle*.

II. *n.* 5. In *Rugby foot-ball*, that part of the play in which the ball travels freely from player to player, as distinguished from the scrimmage. *N. E. D.*—6. In *mining*, the end of a shift. Also *loosing-time*. When the workmen leave, the pit is said to be 'loosed out.' [Eng.]—7. In *archery*: (*a*) The act of releasing the bow-string and discharging the arrow. (*b*) The mode of performing this act, which differs among different peoples. In the *primary* or *finger-and-thumb loose* the arrow is grasped by the finger and thumb and pulled back against the string to draw the bow. The *secondary* and *tertiary looses* are similar, but the second and third fingers aid in pulling the bowstring. In the *Mediterranean* or *finger-loose*, in use by European archers, the arrow is held between the first and second fingers, and the string is pulled by the fingers, usually three, without the aid of the thumb. In the *Mongolian loose* the string is drawn by the thumb, usually by the aid of a drawing-ring. See ★*drawing-ring*.—**Dull** or **wooden loose**, a sluggish, poorly executed loose.—**Fisher loose**, a finger-loose with the first three fingers placed in a slanting direction on the string.—**In the loose**, in bulk; not made up in any particular shape for the trade: as, tobacco *in the loose*.—**Keen loose**, in *archery*, a quick, well-executed loose.—**On the loose**, with no restraint; ready for anything; 'on a spree'; 'on a loose keel.'

loose, *v. t.* 5. In *archery*, to release (the bow-string) after the bow is drawn, thus discharging the arrow.—**To loose for sea**, to loose sails for getting under way; cast off gaskets, etc., and have the sails ready for spreading.

loose-fall (lös′fâl), *n.* A lost opportunity for harpooning a whale.

loose-shaft (lös′shâft), *n.* A barbed harpoon-head which fits into a socket of the foreshaft and which becomes detached when it strikes the game.

loosestrife, *n.*—**Bulb-bearing loosestrife**, *Lysimachia terrestris*, of eastern North America, which sometimes bears no flowers, but has peculiar bulblets in the axils of the leaves.—**Creeping loosestrife**, the moneywort, *Lysimachia Nummularia*.—**Fringed loosestrife**, *Steironema ciliatum*, of North America. It is closely related to the true loosestrifes, and has ovate leaves and strongly ciliate petioles.—**Hyssop-loosestrife**, *Lythrum Hyssopifolia*, of the Old World, naturalized in both North and South America. It is sometimes called *grass-poly*.—**Southern loosestrife**, *Steironema tonsum*, of the southeastern United States.—**Spotted loosestrife**, *Lysimachia punctata*, of Europe, adventive in America from Nova Scotia to New Jersey.—**Trailing loosestrife**, *Steironema radicans*, of the southern United States. It has a more or less decumbent habit.—**Whorled loosestrife**, *Lysimachia quadrifolia*. See ★*five-sisters* and cut under *loosestrife*.—**Wing-angled loosestrife**, *Lythrum alatum*, of eastern North America. It has wing-angled stems.

loosing-hand (lö′sing-hand), *n.* In *archery*, the hand which looses the bowstring in discharging the arrow, ordinarily the right hand: opposed to *bow-hand*. Also *drawing-hand*, *shaft-hand*.

loosing-time (lö′sing-tīm), *n.* Same as ★*loose*, 6.

loosish (lös′ish), *a.* [*loose* + *-ish*[1].] Rather loose; tending toward looseness.

lop[5] (lop), *v. i.*; pret. and pp. *lopped*, ppr. *lopping*. [Vaguely imitative, and associated with *chop*[2]. Hence ★*loppy*[3].] To break in short, 'loppy' waves.

lop[5] (lop), *n.* [*lop*[5], *v.*] A short, 'loppy' sea.

lop-comb (lop′kōm), *n.* In poultry, a comb that turns over to one side. This may be a merit or a defect, according to the breed or sex. The black Leghorn cock has an upright comb, the hen a lop-comb.

lophine (lof′in), *n.* [Appar. < Gr. λόφος, a crest, + *-ine*[2].] A colorless, feebly basic compound,

$$C_6H_5C \lessdot \begin{matrix} NHCC_6H_5 \\ \| \\ N \quad CC_6H_5 \end{matrix},$$

prepared by the distillation of hydrobenzamide; triphenylimidazole. It crystallizes in slender needles, melts at 275° C., and boils at a high temperature without decomposition.

lophioderm (lō′fi-ō-dėrm), *n.* [Gr. λόφιον, dim. of λόφος, a crest, + δέρμα, skin.] The fold which forms the beginning of the vertical fins in the development of fishes.

The abdominal region comprises a short stretch of body between atriopore and anus, the termination of the alimentary canal. It is characterized by the presence of a special development of the *lophioderm* or median fin-system, namely the ventral fin. *Encyc. Brit.*, XXV. 386.

lophiodermic (lō″fi-ō-dėr′mik), *a.* Of or pertaining to the lophioderm.

The median "*lophiodermic* raphe" of the limbs constitutes a sufficient apparatus of support to admit of the regeneration of the cord. The connective fibrous neural and aortic canals are powerless, with the organs they inclose, to supply the place of the missing cord or to regenerate it. *Jour. Roy. Micros. Soc.*, Feb., 1905, p. 35.

lophiodontous (lō″fi-ō-don′tus), *a.* [Gr. λόφιον, crest, mane, bristled back, + ὀδούς (ὀδοντ-), teeth, + *-ous*.] Having hairy or bristly teeth. *Syd. Soc. Lex.*

Lophiomus (lō-fi-ō′mus), *n.* [NL., < Gr. λόφιον, crest, + ὦμος, shoulder.] A genus of fishes of the family *Lophiidæ*, found in rather deep waters of China and Japan and off Panama. It is allied to the goose-fish (*Lophius*), but has fewer vertebræ.

lophocaltrop (lō-fō-kal′trop), *n.* [Gr. λόφος, crest, + E. *caltrop*.] A tetraxon sponge-spicule in which all of the rays are branched. Also *lophotriæne*.

lophocephalic (lō″fō-se-fal′ik), *a.* [*lophocephalus* + *-ic*.] In *anthrop.*, having a high head with a sagittal crest; scaphocephalic. *G. Sergi* (trans.), Var. of the Human Species, p. 43.

lophocephalus (lō-fō-sef′a-lus), *n.* [NL., < Gr. λόφος, crest, + κεφαλή, head.] In *anthrop.*, a high head or cranium with a sagittal crest.

lophocercal (lō-fō-sėr′kal), *a.* [Gr. λόφος, crest, + κέρκος, tail, + *-al*[1].] Pertaining to or characterized by lophocercy.

The second stage of development of the median fin system of Ichthyopsida is what I have called *lophocercal*, when it consists of continuous, or exceptionally of discontinuous folds, which do not include permanent rays, but may at about the close of this phase contain the numerous fine embryonic rays.
J. A. Ryder, in Rep. U. S. Fish Com., 1884, p. 987.

lophocercy (lō′fō-sėr-si), *n.* [Gr. λόφος, crest, + κέρκος, tail, + *-y*[3].] A degenerate or embryonic condition of the caudal-fin elements of certain fishes.

lophocome (lō′fō-kōm), *n.* [NL. *lophocomus*.] One of the lophocomi. *Deniker*, Races of Man, p. 41.

lophocomi (lō-fok′ō-mī), *n. pl.* [NL., < Gr. λόφος, crest, tuft, + κόμη, hair.] In *anthrop.*, races of man with tufted hair.

Ulotriches (Woolly-haired): *Lophocomi* (Tufted): Papuans; Hottentots. *Keane*, Ethnology, p. 167.

lophoderm (lō′fō-dėrm), *n.* [Gr. λόφος, crest, + δέρμα, skin.] In *ichth.*, a crested or spiny back.

Lophodermium (lō-fō-dėr′mi-um), *n.* [NL. (Chevallier, 1826), < Gr. λόφος, crest, + δέρμα, skin.] A genus of ascomycetous fungi of the family *Hypodermataceæ*, which resemble *Hypoderma*, but have filiform uniseptate spores. *L. Pinastri* is a species common on pine-needles, causing casting. See ★*casting*, 11, and ★*Hypoderma*, 4.

Lophogaster (lō-fō-gas′tėr), *n.* [NL., < Gr. λόφος, crest, + γαστήρ, belly.] The typical genus of the family *Lophogastridæ*. It contains but one species, *L. typicus*, known only from the North Atlantic and the South Atlantic, but not from intermediate positions. *M. Sars*, 1856.

Lophogastridæ (lō-fō-gas′tri-dē), *n. pl.* [NL., < *Lophogaster* + *-idæ*.] A family of schizopodous crustaceans. They have a large, more or less calcareous carapace, loosely covering the trunk, the first maxillipeds robust, with the exopod small or wanting, and the epipod large, the second maxillipeds with the terminal joint obtuse and the six following pairs of appendages uniform and ambulatory. The branchiæ are large and arborescent. It contains the genera *Lophogaster*, *Ceratolepis*, *Gnathophausia*, and *Chalaraspis*.

Lophogobius (lō-fō-gō′bi-us), *n.* [NL., < Gr. λόφος, crest, + NL. *gobius*, goby.] A genus of gobioid fishes found in West Indian waters, the head having a fleshy crest.

Lophophora (lō-fof′ō-rą), *n.* [NL. (Coulter, 1894), < Gr. λόφος, tuft of hair, + φορός, bearing. A genus of plants of the family *Cactaceæ*. There is but one species, *L. Williamsii*, a native of southwestern Texas and northern Mexico, known to the Mexicans as *peyote*. It has a thick, fleshy subterranean stem, the part above ground appearing as a small, depressed, green, spineless cushion, growing singly or a few in a cluster and bearing pink flowers. The seedling plants bear spines, but the mature plants have none, the areolæ being occupied by tufts of soft, white hairs. The dried tops of the plant are used by several aboriginal tribes as an intoxicant. See ★*mescal-buttons*.

lophophore, *n.* 2. A pheasant of the genus *Lophophorus*; the Impeyan pheasant. See cut under *Impeyan*.

lophophorine (lō-fof′ō-rin), *n.* [NL. *Lophophora* (Coulter), a genus name of cactus, + *-ine*[2].] A colorless, oily, poisonous alkaloid, $C_{13}H_{17}NO_3$, contained in the cactus *Lophophora* (*Anhalonium*) *Lewinii* and other species of *Anhalonium*.

lophophyte (lō′fō-fīt), *n.* [Gr. λόφος, crest, + φυτόν, a plant.] In the sponges, a special appliance, such as a bundle or tuft of spicules, which serves for the attachment of the sponge body to extraneous objects.

lophophytic (lō-fō-fit′ik), *a.* [*lophophyte* + *-ic.*] Characterized by or possessing lophophytes.

Lophopsetta (lō-fop-set′ä), *n.* [NL., < Gr. λόφος, crest, + ψῆττα, flounder.] A genus of flounders which inhabit the Atlantic coast of the United States; the window-panes.

Lophoseridæ (lō-fō-ser′i-dē), *n. pl.* [NL., < *Lophoseris* + *-idæ.*] A family of madreporarian corals consisting of simple forms with the wall neither perforated nor echinulated. It contains a score or more of genera, among them *Lophoseris*, *Agaricia*, *Bathyactis*, and *Pachyseris*.

Lophoseris (lō-fō-sē′ris), *n.* [NL. (Edwards and Haime, 1849), < Gr. λόφος, crest, + σῆρες (σηρικά), silks.] The typical genus of the family *Lophoseridæ*.

lophospore (lō′fō-spōr), *n.* [Gr. λόφος, crest, plume, + σπορά, seed.] In *phytogeog.*, a plant whose fruit is provided with a plume, usually the modified style, to assist in dissemination. *F. E. Clements.*

lophotriæne (lō-fō-trī′ēn), *n.* [Gr. λόφος, crest, + τρίαινα, trident.] Same as ★*lophocaltrop.*

lophotrichic (lō-fō-trik′ik), *a.* [Gr. λόφος, crest, tuft (cilia), + θριξ (τριχ-), hair, + *-ic.*] Having polar flagella in tufts of two or more, as in *Spirillum* (which see).

Fischer distinguishes two types of polar flagella, i. e. monotrichic, where they occur singly as in Pseudomonas, and *lophotrichic*, where they occur in tufts of two or more, as in Spirillum.

Chester, Manual of Determinative Bacteriol., p. 6.

lophotrichous (lō-fot′ri-kus), *a.* [*lophotrich-ic* + *-ous.*] Having a tuft of several flagella at one end of the body, as certain bacteria.

Strict reliance cannot be placed on the distinction between the Monotrichous, *Lophotrichous*, and Amphitrichous conditions, since one and the same species may have one, two, or more cilia at one or both poles.

Encyc. Brit., XXVI. 52.

loppy[3] (lop′i), *a.* [*lop*[5] + *-y*[1].] Short; lumpy: said of the sea. See ★*lop*[5].

loq. An abbreviation of the Latin *loquitur*, he (or she) speaks. See ★*loquitur.*

loquat, *n.*—**Native loquat**, in Queensland, *Rhodomyrtus macrocarpa*, a shrub of the myrtle family, bearing fruits about one inch long and yielding a hard, tough wood of a light-gray color.

loque (lōk), *n.* [F. *loque*, a piece of cloth, a rag, tatter, also a disease of bees.] An infectious disease of bees caused by a small bacillus found in the intestines of the diseased insects and in the honey of the hive.

V. Lambotte finds that the Bacillus alvei, described by Watson-Cheyne and Cheshire as the cause of the "*loque*" disease of bees, is merely a variety of the widespread Bacillus mesentericus. The bacillus occurs in healthy hives, being found in the comb and in the intestinal contents of the bees. The characteristic appearance of the disease is brought about by the budding of the bacillus in the tissues of the larva.

Jour. Roy. Micros. Soc., Feb., 1903, p. 77.

loquent (lō′kwent), *a.* [L. *loquens* (*loquent-*), ppr. of *loqui*, speak.] Speaking; that speaks. [Rare.]

loquently (lō′kwent-li), *adv.* By way of speech; in speech. [Rare.]

An imposed secretiveness, . . . which comes of an experience of repeated inefficiency to maintain a case in opposition, on the part of the *loquently* weaker of the pair. *G. Meredith*, One of our Conquerors, xii.

loquitur (lok′wi-tėr). [L., 3d pers. pres. ind. of *loqui*, speak: see ★*loquent*, *locution.*] 'He (she) speaks': in plays, a stage direction indicating that the person named enters and speaks: as, Enter Marlitt, *loquitur*. Abbreviated *loq.*

Loral shield. See ★*shield.*

lorandite (lor′an-dīt), *n.* A rare sulpharsenide of thallium, $TlAsS_2$, which occurs in complex monoclinic crystals of a cochineal-red color: found with realgar at Allchar, Macedonia.

lord, *n.* **8.** In *astrol.*, a planet that exercises dominion: thus, the ruler of the sign or the cusp of the first house in a nativity is termed *lord* of the ascendant or of the geniture. See *lord of the ascendant*, under *ascendant*, 1.—**9.** [A punning use, resting upon Gr. λορδός, bent backward.] A hunchback. [Slang.]—**As a lord** or **like a lord**, in a superlative state of the condition noted: as, to live *like a lord*, to live in luxury; drunk *as a lord*, entirely drunk; to swear *like a lord*, to drink *like a lord*, etc.—**Civil lord.** See ★*civil.*—**Irish lord**, a common name of various species of fish of the genus ★*Hemilepidotus* (which see), especially *H. Jordani.*—**Lord ordinary.** See *ordinary.*—**Lord Rector.** See ★*rector.*—**Lords appellant**, the five peers who superseded Richard II. in his government, and whom he superseded after a brief control of the government. *Bouvier*, Law Dict.—**Lords in waiting.** See *waiting.*—**Lords of creation**, men.—**Naval Lord**, one of the commissioners of the British Admiralty who is also a naval officer. See ★*admiralty*, 1 (*b*).—**Sea Lord.** Same as *Naval* ★*Lord.* See ★*admiralty*, 1 (*b*).—**Very lord**, one from whom the tenant takes directly, and to whom he is *very tenant*. The lord paramount is not very lord to the tenants of a mesne lord.

lord-borough (lôrd′bur″ō), *n.* One who has quasi-manorial rights in certain English boroughs. *N. E. D.*

lord-farmer (lôrd′fär″mėr), *n.* One who holds an episcopal manor by a rent paid to the bishop. *N. E. D.*

lordotic (lôr-dot′ik), *a.* [*lordosis* (*-ot-*) + *-ic.*] Pertaining to or affected with lordosis; caused by lordosis: as, *lordotic* curvature.

lord-rectorship (lôrd-rek′tọr-ship), *n.* The office of Lord Rector of a Scottish university. See *Lord* ★*Rector.*

lordship, *n.* **5.** In *mining*, a mineral property.

lorenite (lō′re-nīt), *n.* A yellow compound, $HO^{5}C_9H_4N^{6}I^{8}SO_3H$, prepared by the action of iodine on 5-hydroxyquinoline-8-sulphonic acid. It crystallizes in needles or leaves, and melts and decomposes above 210° C.

lorenzenite (lō-ren′zẹ-nīt), *n.* [Named after J. *Lorenzen*, a mineralogist of Copenhagen.] A rare silicate containing titanium, zirconium, and sodium (perhaps $Na_2(Ti, Zr)_2Si_2O_7$), occurring in violet to brown needle-like orthorhombic crystals: from southern Greenland.

loretine (lor′e-tin), *n.* A yellow, very stable, crystalline compound, $HO^{8}C_9H_4N^{7}I^{5}SO_3H$, prepared by the action of iodine on 8-hydroxyquinoline-5-sulphonic acid: used as a substitute for iodoform.

lorettism (lō-ret′izm), *n.* [*lorette* + *ism.*] The condition or characteristics of the lorettes.

The brilliant ball given by the aristocracy of the Parisian lorettes — for even *lorettism* has its aristocracy.

Pall Mall Gazette, Sept. 9, 1865.

lorica, *n.* **4.** An old name for a paste or lute with which vessels were coated in order to protect them when very strongly heated.—**5.** In *bot.*: (*a*) Same as *testa*, 2. [Obsolete.] (*b*) The silicious covering of the frustules of diatoms.

Loricati (lor-i-kā′tī), *n. pl.* [NL.: see *loricate.*] A suborder of fishes characterized by the development of a bony stay from the suborbital bones backward across the cheek: commonly known as the mail-cheeked fishes.

lorilet (lō′ri-let), *n.* [Dim. of *lory.*] Any one of several small parrots of the genus *Cyclopsittacus* and allied genera, found in New Guinea, North Australia, and some of the adjacent islands.

Lorinseria (lō-rin-sē′ri-ä), *n.* [NL. (Presl, 1852), named for Gustav *Lorinser*, a Bohemian physician (1811–1863).] A genus of polypodiaceous ferns allied to *Woodwardia* but well distinguished by its dimorphous fronds and copious areolate venation. There is a single species, *L. areolata* (*Woodwardia angustifolia*), of the eastern and southern United States. It grows 2 feet or less high, and has green-stemmed, deeply pinnatifid, ovate-deltoid, sterile fronds, much resembling those of the sensitive fern, and fertile fronds longer and stiffly erect, with dark castaneous stipe and rachis and much contracted pinnæ. The linear sori are borne as in *Woodwardia.*

loriped (lor′i-ped), *n.* [Also *loripede*; L. *loripes* (*-ped-*), < *lorum*, a strap, thong, + *pes* (*ped-*), foot.] A bivalve mollusk which has a very long, strap-shaped or vermiform foot, as *Lucina.*

loro (lō′rō), *n.* [Sp., a parrot, a parrot-fish. Cf. *lory.*] A Spanish name of different fishes of the genus *Scarus.*

lorry, *n.* **3.** A trolley for carrying coal, ore, etc., upon an overhead railway. Also written *larry.*

lorum (lō′rum), *n.*; pl. *lora* (-rä). [NL. See *lore*[4].] Same as *lore*[4], 2, 3, 4.

lory, *n.* **2.** In Africa, the white-crested turakoo, *Turacus corythaix* or *T. albo-cristatus*, one of the plantain-eaters: probably so called on account of its green color and high crest, which suggest a parrot.

lose-out (lōz′out), *n.* In *faro*, a card that loses the last time out of the box.

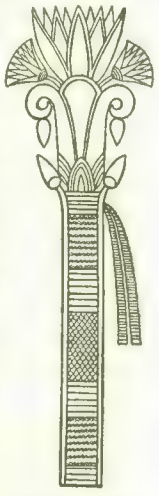
losong, *n.* See ★*lusong.*

losophan (lō′sō-fan), *n.* The trade-name of a tri-iodometacresol, $HO^{3}C_6HI_3{}^{1}CH_3$, formed by the action of iodine on metacresol. It is used in medicine as an antiseptic in certain skin-diseases.

loss, *n.*—**Dead loss**, a loss that cannot be recovered or made good, either directly or indirectly.—**Iron loss**, the loss of energy in the operation of motors, generators, transformers, or other electrical apparatus, due to the existence of hysteresis and of eddy-currents within the iron parts of the machine.—**Utter loss**, in *marine insurance*, an actual total loss, as distinguished from a constructive total loss (which see, under *constructive*).

lossenite (los′e-nīt), *n.* [G. *lossenit* (1894), named after Professor C. A. *Lossen* of Berlin.] A mineral near scorodite in form, but consisting of lead sulphate and ferric arseniate with water: from Laurium, Greece.

lost, *p. a.*—**Lost or not lost**, in *marine insurance*, a phrase in a policy signifying that the risk is assumed whether or not the vessel insured is lost at the time the policy is made, provided that neither the insured nor the insurer has at the time any knowledge or information of the fact not equally known or available to the other.—**The lost tribes.** See ★*tribe.*



lot, *n.* **10.** An individual person: usually with *bad.* [Colloq.]

I 'm a *bad lot*, I know,—well, an idle *lot*—I don't think I am a *bad lot*. *Mrs. Humphry Ward*, Marcella, iv. 5. 345.

lotase (lō′tās), *n.* [*Lotus* + *-ase.*] A ferment found in the plant *Lotus arabicus.* It decomposes lotusin (a glucoside) into prussic acid, glucose, and a yellow pigment, lotoflavin.

Lotella (lō-tel′ä), *n.* [NL., dim. of *Lota.*] A genus of gadoid fishes found in the deep seas.

lotiform (lō′ti-fôrm), *a.* [L. *lotus*, lotus, + *forma*, form.] Similar to the lotus: noting a large class of decorative motives found in Egyptian and Oriental art.

Egyptian Lotiform Decoration.

lotio (lō′shiō), *n.* [L.] A lotion.—**Lotio flava.** Same as *yellow* ★*lotion.*—**Lotio nigra.** Same as *black* ★*lotion.*

lotion, *n.* **4.** Drink (humorously conceived as a 'wash' or 'remedy'). [Slang.]—**Black lotion.** Same as *black-wash.*—**Yellow lotion.** Same as *yellow wash* (which see, under *wash*).

lotoflavin (lō′tō-flav-in), *n.* A yellow coloring-matter, $C_{15}H_{10}O_6$, obtained by the hydrolysis of the glucoside lotusin from the leaves of *Lotus arabicus.*

lotophagous (lō-tof′ạ-gus), *a.* [Gr. λωτοφάγος: see *Lotophagi.*] Lotus-eating; pertaining to or characteristic of the Lotophagi.

lotophagously (lō-tof′ạ-gus-li), *adv.* In the manner of lotus-eating or of the lotus-eaters.

lotur (lō′tụr), *n.* Same as *lodh-bark.*

loturidine (lō-tū′ri-din), *n.* [*lotur*, a form equiv. to *lodh*, + *-id* + *-ine*[2].] A yellowish-brown amorphous alkaloid contained in Indian lotur-bark, *Symplocos racemosa.* Its solutions in mineral acids exhibit a strong blue-violet fluorescence.

loturine (lō′tū-rin), *n.* [*lotur* + *-ine*[2].] A colorless alkaloid contained in Indian lotur-bark, *Symplocos racemosa.* It crystallizes in lustrous prisms, melts at 234° C., and sublimes.

lotus, *n.*—**American lotus**, *Nelumbo lutea.* See *Nelumbo.*—**Egyptian lotus.** (*b*) The sacred lotus, *Nelumbo Nelumbo.*—**European lotus**, the lotus-tree, *Zizyphus Lotus.*—**Indian Lotus**, the sacred lotus.—**Lotus capital** or **column.** See ★*capital*[3].—**Sacred lotus.** (*a*) See *sacred* and *lotus*, 1. (*b*) *Nelumbo Nelumbo*, a native of the warmer parts of Asia and of Australia, apparently not of Egypt, though long cultivated there and often called *Egyptian lotus.* It is a superb plant with large, showy pink or sometimes white flowers. It is very common in cultivation, and figures extensively in Indian mythology.—**Lotus ware.** See ★*ware*[2].

lotus-bird (lō′tus-bėrd), *n.* The Australian jacana, *Parra* (*Hydralector*) *gallinacea*, a small water-bird with enormously long toes, related to the rails: so named from being found about the lotus and water-lily. Its long toes enable it to run over the leaves of the water-lilies.

lotusin (lō′tu-sin), *n.* [Irreg. < *lotus* + *-in*[2].] A yellow glucoside, $C_{22}H_{19}O_{10}N$, contained in *Lotus arabicus*, a poisonous leguminous plant indigenous to Egypt. It yields hydrocyanic acid, d-glucose, and lotoflavin when hydrolyzed.

lotus-lily (lō′tus-lil″i), *n.* See ★*lily.*

lou (lō or lou), *n.* [Chin.] In China, a two-story house, or the upper story of such a house; also, a tower, of square or oblong section and one, two, or three stories in height, which surmounts a city gateway or ornaments the angles of a city wall.

Among the later representatives of the t'ai are the towers of the great wall, which are built of stone with arched doors and windows — the Chinese would seem always to have employed the arch in stone architecture — the storied buildings dominating the gateways and angles of the city walls, often used to store arms, and the observatory of Peking, which is also a square tower mounted upon the city wall. When the tower is planned of oblong section, broader than it is deep, it is technically called a "*lou*." *S. W. Bushell*, in Smithsonian Rep., 1904, p. 679.

Lou. An abbreviation of *Louisiana*.

loubra, *n.* Same as ★*lubra*.

louche (lösh), *a.* [F. *louche*, OF. *lousche*, < L. *lusca*, fem. of *luscus*, one-eyed.] Squinting; not straightforward; sinister.

There is something *louche* about him, which does not accord with the abandon of careless intimate intercourse. *Lady Morgan*, Autobiography, p. 318. *N. E. D.*

louden (lou'dn), *v.* [*loud* + *-en*[1].] **I.** *intrans.* To become loud or louder: also figuratively.

I can recall, nay, they are present still,
Parts of myself, the perfume of my mind,
Days that seem farther off than Homer's now
Ere yet the child had *loudened* to the boy.
Lowell, The Cathedral, l. 17.

II. *trans.* To make loud or louder: as, to *louden* one's voice.

lougheen (loch'ēn), *n.* [*lough*[1] + *-een*, Ir. *-ín*, dim. suffix.] A small lough.

Louisianian area. Same as *austroriparian* ★*area*.

Louis Philippe porcelain. See ★*porcelain*[1].

loukoum (lö-köm'), *n.* [A French spelling of Turk. *luqūm*, a name for various kinds of small cake and confections, lit. mouthfuls, pl. of *loqma*, a mouthful.] Fig-paste.

lound (lound), *a.* Same as *lown*[2].

loup[3], *n.* 2. A sort of grapple used in ancient times by the defenders of a fortress to seize and lift a battering-ram and thus prevent its action.

loupe, *n.* 2. A lens or magnifying-glass. *Optical Jour.*, Sept., 1903, p. 384.

Loup Fork beds. See ★*bed*[1].

loupthu (loup'thö), *n. pl.* [Samoyed ?] Stockings made of fawn-skins, worn by the Samoyeds.

As the result of his experience, Mr. Jackson fitted out his party for Franz Josef Land with furs cut in London on the Samoyede pattern. These models have evidently come to stay, for one of the London equipment stores now advertises soviks, malitzas, *loupthu* and pimmies. *Jour. Franklin Inst.*, May, 1904, p. 323.

loutron (lö'tron), *n.*; pl. *loutra* (-trä). [Gr. λουτρόν (also λουτρών), < λούειν, wash, bathe.] In *Gr. antiq.*, a bathing-place; a bath: sometimes a solid structure in masonry, like that discovered at Salamis in Cyprus in 1890; more often a large shallow terra-cotta basin with or without a support.

loutrophoros (lö-trof'ō-ros), *n.*; pl. *loutrophoroi* (-roi). [Gr. λουτροφόρος, bringing water, < λουτρόν, a bath, water for a bath, + *-φορος*, < φέρειν, bear.] In *Gr. antiq.*, a vase used to carry water to a bath, especially the nuptial bath. It is an amphora of a special form, both body and neck being much elongated. The subjects found upon black-figured loutrophoroi are usually funereal; those upon red-figured loutrophoroi have reference to marriage. A loutrophoros, sometimes carved in marble, was frequently placed upon the grave of a young person who died unmarried.

Funerary Loutrophoros. (From "Die Attischen Grabreliefs.")

louver-work (lö'vėr-wėrk), *n.* Same as *louver*, 3.

lovably (luv'a-bli), *adv.* In a lovable way.

He imagined her coming towards him in her radiant majesty, made so *lovably* mortal by her soft hazel eyes. *George Eliot*, Romola, xvii.

lovanenty (luv-a-nen'ti), *interj.* [Also *lovenenty*, *loveanendie;* an extension of *love anend* (see *an-end*, 3), that is, 'almighty love!' 'good gracious!'] An exclamation of surprise. [Scotch.]

Lovenenty me! but she'll hae gi'en ye anither kind o' a kiss than an auld wife like me. *Crockett*, Raiders, xxi.

love[1], *n.* 12. In Tasmania, the blue-creeper, *Comesperma volubile*.—**Lesbian love,** lewd practices between women.—**Love all.** See *love*[1], *n.*, 9.

love-entangle, love-entangled (luv'en-tang-gl, -gld), *n.* 1. The wall-pepper or mossy stonecrop, *Sedum acre*.—2. The virgin's-bower, *Clematis Vitalba*.

love-grass, *n.* In the southern United States, one of several species of *Eragrostis* forming part of the natural pasturage. *E. secundiflora* is designated as purple love-grass, *E. Elliottii* as shining love-grass, and *E. glomerata* as many-flowered love-grass.

love-hood (luv'hůd), *n.* 1†. Same as *love*[1], *n.*, 8. It was worn by persons in mourning.

I shall make no more dark things; after three months black silk is worn with *love hood*.
Mrs. Delany, to Mrs. Dewes, in Life, p. 478. *N. E. D.*

2. A light hood made of silk and gauze, worn in colonial days in New York. *A. M. Earle*, Costume of Colonial Times, p. 133.

love-in-a-chain (luv'in-a-chān'), *n.* The reflexed stonecrop, *Sedum reflexum*.

love-in-winter (luv'in-win'tėr), *n.* The pipsissewa or prince's-pine, *Chimaphila umbellata*.

Lovejoy china. Same as *anti-slavery* ★*china*.

lovelihead (luv'li-hed), *n.* Loveliness; the quality of being lovely.

love-me (luv'mē), *n.* The forget-me-not, *Myosotis palustris*.

lovenite (lov'e-nīt), *n.* See ★*lāvenite*.

love-pea (luv'pē), *n.* The Indian licorice or rosary-pea, *Abrus Abrus*.

loverliness (luv'ėr-li-nes), *n.* The condition and quality of a lover; loverhood. *G. Meredith*, The Egoist, I. 154.

lover's-pride (luv'ėrz-prīd″), *n.* The heart's-ease or lady's-thumb, *Polygonum Persicaria*.

love-shell (luv'shel), *n.* A species of *Cypræa*.

love's-test (luvz'test), *n.* The plantain-leaved everlasting, *Antennaria plantaginifolia*.

love-vine (luv'vin), *n.* Any species of dodder (*Cuscuta*).

love-worthiness (luv'wėr″ᴛʜi-nes), *n.* The quality of being worthy of love.

The nobility and *loveworthiness* of human nature. *Daily News* (London), May 27, 1899.

lovey (luv'i), *n.* [*love*[1] + *-y*[2].] Love: a term of affection, used especially to children.

You don't look pretty in it, *lovey*, indeed you don't. *Fielding*, Letter Writers, etc., i. 5.

low[2], *a.* 3. Specifically, in *phonetics*, of a vowel sound, produced with the tongue, or part of it, in a low position.—**Low and aloft** (*naut.*), under all sail; with full spread of canvas.—**Low glass.** See ★*glass*.

lowan (lō'an), *n.* The Australian brush-turkey or mallee-bird, *Leipoa ocellata*, one of the megapods or mound-birds.

lowbell, *v. t.* 2. To serenade with noisy, rough music. See *charivari*.

low-doors (lō'dōrz), *n. pl.* In *mining*, the lowest of two or more landings in a shaft. *Barrowman*, Glossary. [Scotch.]

löweite, *n.* See ★*loeweite*.

Lower Helderberg group. See ★*group*[1].

Lowestoft decoration, porcelain. See ★*decoration, armorial* ★*porcelain*.

löwigite, *n.* See ★*loewigite*.

Lowitz, arcs of. In *meteor.*, two short oblique bands of rainbow colors attached to the parhelia of the halo of 22° and inclined to the horizontal parhelic circle: due to sunlight passing through ice prisms whose axes are oscillating about a normal vertical position. First observed by Lowitz at St. Petersburg in 1790.

low-pitched (lō'picht), *a.* 1. Pitched in a low key, as a voice.—2. Of a low or degraded nature: as, *low-pitched* desires.—3. Having very little angular elevation, as a roof.—4. Having a low ceiling, as a room.

lowrie, *n.* Another form of *lory* (which see).

Loxian[2] (lok'si-an), *n.* [Gr. Λοξίας, an epithet of Apollo, commonly supposed (perhaps wrongly) to be connected with λοξός, oblique, ambiguous.] An epithet of Apollo.

The coffer-lid
Is fastened, and the coffer safely hid
Under the *Loxian's* choicest gifts of gold.
Browning, Sordello, i. 80.

loxic (lok'sik), *a.* [Gr. λοξός, slanting, oblique, + *-ic*.] Distorted; drawn to one side.

Loxoceras (lok-sos'e-ras), *n.* [NL., < Gr. λοξός, slanting, + κέρας, horn.] A genus of fossil nautiloid cephalopods of the family *Loxoceratidæ* (suborder *Cyrtochoanites*), including orthoceracones and cyrtoceracones having highly nummuloidal central siphuncles with short and crumpled funnels. It ranges from the Lower Silurian to the Carboniferous.

loxodograph (lok-sod'ō-grâf), *n.* [Gr. λοξός, slanting, oblique, + ὁδός, way, + γράφειν, write.] An apparatus for electrically recording, by the aid of photography and magnetism, the actual course of a ship.

loxodromically (lok-sō-drom'i-kal-i), *adv.* In a loxodromic curve or line; according to loxodromic rules.

Loxomma (lok-som'ä), *n.* [NL., < Gr. λοξός, slanting, oblique, + ὄμμα, eye.] A genus of stegocephalian *Amphibia* from the coal-measures. See ★*Gastrolepidotidæ*.

Loxonema (lok-sō-nē'mä), *n.* [NL., < Gr. λοξός, oblique, + νῆμα, thread.] A genus of extinct platypodous gastropods of the family *Pyramidellidæ*, which have turreted shells with arched whorls bearing sigmoid growth-lines and a long aperture. It ranges from the Silurian to the Trias and is particularly abundant in the Carboniferous.

loxonemoid (lok-sō-nē'moid), *a.* [*Loxonema* + *-oid*.] Resembling or related to *Loxonema*.

loxophthalmus (lok-sof-thal'mus), *n.* [Gr. λοξός, oblique, + ὀφθαλμός, eye.] Same as *squint*.

loxotic (lok-sot'ik), *a.* [Gr. λοξότης, obliquity (< λοξός, oblique), + *-ic*.] Same as ★*loxic*.

loyalist, *n.* 2. [*cap.*] Specifically, in the American Revolution, a Tory.

lozenge, *n.*—**Spherical lozenge,** in *geom.*, an equilateral spherical quadrilateral.—**Ursine lozenge,** the triangular area of the cerebral cortex between the cruciate and precruciate fissures in certain carnivora, especially the bear.

Lp., Ldp. Contractions (*a*) of *Ladyship;* (*b*) of *Lordship*.

L. P., l. p. An abbreviation of *low-pressure*.

L-piece (el'pēs), *n.* A piece of metal tubing bent to a sharp turn; an elbow.

L. P. M. An abbreviation of *long particular meter*.

L. P. S. An abbreviation of *Lord Privy Seal*.

L. R. An abbreviation of *Lloyd's Register*. See *Lloyd's* and ★*free-board*.

L. R. C. P. An abbreviation of *Licentiate of the Royal College of Physicians*.

L. R. C. P. E. An abbreviation of *Licentiate of the Royal College of Physicians, Edinburgh*.

L. R. C. S. An abbreviation of *Licentiate of the Royal College of Surgeons*.

L-rest (el'rest), *n.* An L-shaped rest for hand-turning, used when the ordinary T-shaped rest would be inconvenient.

L. S. An abbreviation (*b*) of *Linnean Society;* (*c*) [*l. c.*] of *left side*.

L. S. A. An abbreviation of *Licentiate of the Society of Apothecaries*.

L. S. B. An abbreviation of *London School-board*.

L. T. An abbreviation (*a*) of *lira Turca*, the Turkish pound; (*b*) [*l. c.*] of *long ton*.

Lt. Batt. An abbreviation of *light battery*.

Lt.-Col. An abbreviation of *Lieutenant-Colonel*.

Lt.-Gen. An abbreviation of *Lieutenant-General*.

Lt.-Gov. An abbreviation of *Lieutenant-Governor*.

L. Th. An abbreviation of *Licentiate in Theology*.

Lu. The symbol for ★*lutecium*.

L. U. An abbreviation (*a*) of *Liberal Union;* (*b*) of *Liberal-Unionist*.

luau (lö-ä'ö), *n.* [Hawaiian *luau*, boiled herbs (kalo-leaves), the leaf of the kalo, the petal of a plant.] In the Hawaiian Islands, a dish or dinner of boiled herbs with additions.

A *luau* is a square meal with roast pig and poi in it. *Hartford* (Conn.) *Courant*, quoted in [N. Y. Times, April 27, 1905.

Lubber's mark. Same as *lubber-line*.

lubber-fiend (lub'ėr-fēnd), *n.* In *folk-lore*, a house-elf or brownie who repays tolerance or kindness by doing the harder part of the housework, in the night, for his benefactors.

lubberland[2] (lub'ėr-land), *n.* The place of future existence of lubbers: a kind of nautical purgatory.

lubber-lift (lub'ėr-lift), *v. t.* In *lumbering*, to raise the end of a log by means of a pry, and by the use of weight instead of strength.

Lubish (lö'bish), *a.* [G. *lübisch*, < *Lübeck.*] Of or pertaining to Lübeck (Lubeck), one of the Hanse towns of North Germany: applied particularly to certain moneys of account in mercantile use there: as, the mark *Lubish*; the shilling *Lubish*.

lubra (lö'brą), *n.* [Also *loubra*, *leubra*; native Australian, but prob. orig. Tasmanian, from Tasmanian *loa* or *lowa*, woman.] A native Australian woman: originally used in Tasmania, but later adopted in Australia south of the Murray. North of the Murray the term *gin* was in use. Both terms are now used without geographical restriction. *H. Kingsley*, Geoffrey Hamlyn, xxxix. *E. E. Morris.*

lubrication, *n.*—**Forced lubrication**, lubrication in which oil is furnished to the bearings under pressure.—**Splash lubrication**, a method of supplying oil to the bearings of an engine-mechanism, by inclosing the crank and connecting-rod in an oil-tight case filled with oil to such a level that the crank dips into it and spatters the oil upward over the surfaces to be lubricated: much used in small high-speed motors, and especially in engines for motor-cars.

lubricator, *n.*—**Displacement lubricator**, a device for feeding oil in which the difference in specific gravity of the oil and water is utilized to regulate the feed.

Lucan (lū'kan), *a.* [Also *Lukan*; < L. *Lucas*, Luke, + *-an.*] Of or pertaining to Luke the Evangelist.

Lucania (lū-kā'ni-ą), *n.* [NL., a meaningless term.] A genus of fishes of the family *Pœciliidæ*, found in the coastwise swamps of the eastern United States.

lucanid (lū-kan'id), *n.* and *a.* **I.** *n.* A member of the coleopterous family *Lucanidæ*.

II. *a.* Having the characters of or belonging to the family *Lucanidæ*.

Lucasian (lū-kā'zi-an), *a.* Pertaining to or founded by Henry Lucas (d. 1663). See the extract.

The opportunity which gave to the world the 'Philosophiæ Naturalis Principia' was not due to the state subvention of the deputy mastership of the mint, but to the modest provision of a professorship by one Henry Lucas, of whose pious benefaction Cambridge has made such wonderful use in her *Lucasian* professors.
Science, Oct. 16, 1903, p. 490.

lucca (lök'ką), *n.* [Appar. named from *Lucca* in Italy.] A cotton fabric printed in imitation of an East Indian shawl.

lucently (lū'sent-li), *adv.* Clearly; translucently; luminously.

lucerne, *n.*—**Native lucerne**, in Australia, *Sida retusa*, a weed of the mallow family, which yields a fiber somewhat like jute. Also called *paddy-lucerne*. See *Sida*, 1.—**Paddy-lucerne**, Same as *native* ★*lucerne*.—**Sand-lucerne**, *Medicago media*, a deep-rooted perennial forage-plant, closely related to lucerne, of which it is sometimes regarded as a variety. It is less stiff in habit, its flowers are sometimes yellow, and its pods less coiled. In Michigan it has proved to possess the great advantage of enduring the winters.—**Tree-lucerne**, *Medicago arborea*, a shrubby alfalfa cultivated in the Old World from ancient times, now wild in Greece. It serves for forage and as a bee-plant.—**Yellow lucerne**, *Medicago falcata*, botanically close to alfalfa and sand-lucerne, but valued only on dry and barren soils.

lucerne-dodder (lū-sėrn'dod″ėr), *n.* See ★*dodder*[1].

Lucianic, Lucianical (lū-shi-an'ik, -i-kal), *a.* Of or pertaining to Lucian, a Greek satirist of the second century, or characteristic of his writings and style.

Lucianist[2] (lū'shian-ist), *n.* An imitator of Lucian, the Greek satirist.

lucible (lū'si-bl), *a.* [LL. *lucibilis*, < *lucere*, be light: see *lucent.*] Emitting light; lucent.

luciferase (lū-sif'e-rās), *n.* [L. *lucifer*, light-bringing, + *-ase.*] One of the two special substances by the reactions of which light is supposed to be produced by fireflies. It is supposed to be of the nature of an enzym and to exist in the form of minute granules only in the luminous organs. The other substance, *luciferine*, exists in the blood, and light is produced as the blood enters the luminous area.

It is affirmed by Dubois that luminescence is due to the reactions of two special substances, *luciferase* and *luciferine*.
Encyc. Brit., XXIX. 499.

luciferine (lū-sif'e-rin), *n.* [L. *lucifer*, light-bringing, + *-ine*[2].] See ★*luciferase*.

luciferose (lū-sif'e-rōs), *n.* [L. *lucifer*, light-bringing, + *-ose.*] Same as ★*luciferase*.

Lucifuga (lū-sif'ū-gą), *n.* [NL., fem. of L. *lucifugus*, shunning light: see *lucifugous.*] A genus of blind brotuloid fishes inhabiting cave streams in Cuba. These fishes are not related to the blind cave-fishes of the United States, but are derived from marine types.

lucifugal (lū-sif'ū-gal), *a.* Same as *lucifugous*.

lucigraph (lū'si-graf), *n.* [L. *lux* (*luc-*), light, + Gr. *γράφειν*, write.] An apparatus for displaying the letters and numbers of the international maritime code: used in signaling. It consists of a powerful electric light, the rays of which are focused by suitable lenses, and of a series of stencils, manipulated by a keyboard, placed in the path of the rays. The letters and numbers are projected on a screen. *Electricity*, XV. 226.

luciite (lö'si-it), *n.* [G. *luciit* (Chelius, 1892), < *Luci(berg)*, Hesse, Germany, + *-it*, E. *-ite*[2].] In *petrog.*, a fine-grained phaneric, igneous rock, composed of lime-soda feldspar and hornblende, sometimes with a little quartz. The texture is panidiomorphic to hypidiomorphic granular. Luciite is the same as malchite and orbite, aplitic forms of diorite.

lucimeter, *n.*—**Bellani lucimeter**, a form of actinometer devised by Bellani, consisting of a bright and a blackened glass bulb connected by a glass tube and partly filled with water. The higher temperature of the black bulb causes the liquid within it to evaporate more rapidly than that in the bright bulb, where the surplus is condensed.

lucinoid (lū'si-noid), *a.* [*Lucina*, 2, + *-oid.*] Related to or resembling the pelecypod genus *Lucina*.

Luciocharax (lū-si-ok'a-raks), *n.* [NL., < L. *lucius*, a pike, + Gr. *χάραξ*, a sea-fish (see *Characinus*).] A genus of fishes of the family *Characinidæ*, found in streams near Panama.

lucium (lū'si-um), *n.* [NL., < L. *lux* (*luc-*), light.] The name given by Barrière to a supposed new chemical element obtained from the yttria of monazite. Its existence has not been confirmed.

lucivee (lū-si-vē'), *n.* [Also *lucifee*; a corruption (simulating *Lucifer*) of *loup-cervier*, q. v.] The Canada lynx, *Lynx canadensis*. See *loup-cervier*.

The *lucifee's* eyes snapped fire, and she advanced right along the log to within fifteen feet of the sitter.
Forest and Stream, Jan. 24, 1903, p. 67.

Lucullan (lū-kul'an), *a.* [L. *Lucullanus*, < *Lucullus* (see def.).] Of or pertaining to L. Licinius Lucullus (110–57 B.C.), a Roman, whose luxurious banquets became proverbial.

Lucullean (lū-kul'ē-an), *a.* [L. *Luculleus*, < *Lucullus.*] Same as ★*Lucullan*.—**Lucullean marble** [L. *marmor Luculleum*], fire-marble: same as *lumachelle*.

Lucullian (lū-kul'i-an), *a.* [L. *Lucullianus*, < *Lucullus.*] Same as ★*Lucullan*.

lucullite (lū-kul'īt), *n.* [L. *Lucullus* + *-ite*[2].] Same as ★*Lucullean marble* or *lumachelle*.

lucumony (lū'kū-mō-ni), *n.* The domain of a Lucumo, or ancient Etruscan prince. [Modern.]

It [Santa Tarsilla] was a dreary place at the best of times; antiquaries said that the sea had receded nearly a mile since the days when the Etruscan pirates had sailed from that bay, and Etruscan *lucomonies* had had their fortresses and their tombs away yonder where the shoreline grew dusky with thickets of bay and rosemary and the prickly marucca, or holy thorn, so common here.
Ouida, In Maremma, ii.

luderick (lū'de-rik), *n.* [Also *ludrick*; aboriginal Australian (Gippsland in Victoria).] A local variety of the Australian blackfish, *Incisidens simplex*. *E. E. Morris*, Austral English.

Ludian (lö'di-an), *n.* [Named from *Ludes*, in the Montagne de Rheims, France.] In *geol.*, the uppermost division of the Eocene Tertiary in the Paris basin, consisting of gypsum and marls, and containing mammalian remains in great abundance (dormice, opossums, pachyderms, and various carnivora which partly have marsupial characters). Also called *Priabonian* and *Paris gypsum*.

ludibund† (lū'di-bund), *a.* [L. *ludibundus*, < *ludus*, play, sport.] Playful; sportive. *N. E. D.*

ludicrosity (lū-di-kros'i-ti), *n.* Ludicrousness.

Ludisia (lū-dis'i-ą), *n.* [NL. (A. Richard, 1825), of unknown significance.] A genus of monocotyledonous plants of the family *Orchidaceæ*. See *Hæmaria*.

Ludolf number, *π*. Same as *Ludolphian number* (which see, under *number*).

ludrick (lö'drik), *n.* See ★*luderick*.

l. u. e. An abbreviation of *left upper entrance*.

luf, *n.* and *v.* A simplified spelling of *luff*.

luff[2], *n.*—**To hold the luff**, to keep the vessel's sails shivering.—**Rigging-luffs**, a tackle used for setting up lower rigging.—**To choke the luff**. See ★*choke*[1].—**To hold a good luff**, to steer so as to keep a vessel's sails trembling along the leeches, or along the luffs.

luff[2], *v.* **I.** *trans.* 2. To lift (the boom of a derrick).

II. *intrans.*—**To luff and lie**, to luff and remain close to the wind.—**To luff and touch her**, to luff until the sails shake.

luff-cringle (luf'kring″gl), *n.* An iron ring spliced into the bolt-rope of a gaff-sail at the junction of the head and luff.

luffing-match (luf'ing-mach), *n.* In *yacht-racing*, a struggle to get to the windward of a competitor.

lug[1], *n.*—**Standing lug**, a lug-sail that does not require the yard to be lowered and shifted to leeward of the mast in tacking.

lug[2], *n.*—**Eccentric lug**, a seat or projection on an eccentric-strap to which the eccentric-rod is attached.

lug-chair (lug'chār), *n.* A high-backed easy-chair with side-pieces for the head.

luge[2] (lö'ge), *n.*; pl. *lugen* (-gen). [Swiss (Grisons).] A Swiss form of coasting-sled of small size, steered by short iron-pointed sticks. Two of these lugen are often combined into a bob-sled with steel frames of tubular construction and fitted with a wheel steering apparatus.

The "*luge*" is a small sled peculiar to the Grisons (Switzerland), which recalls the schlittes of the Vosges, and which up to the present has been steered by hand through the intermedium of short, iron-pointed sticks.
Sci. Amer. Sup., April 15, 1905, p. 24488.

luggar, luggur, *n.* Same as *lugger*[2].

lug-hooks (lug'hūks), *n. pl.* In *lumbering*, a pair of tongs, attached to the middle of a short bar, used to carry small logs.

Lug-hooks.

lug-pole (lug'pōl), *n.* A pole on which a kettle is hung over a fire.

lujaurite (lö'you-rīt), *n.* [*Lujaur* mountain, Kola Peninsula, Finland, + *-ite*[2].] In *petrog.*, a variety of nephelite-syenite composed of tabular alkali-feldspars in parallel arrangement, with nephelite, abundant ægirite in thin needles, and variable amounts of eudialyte. *Ramsay*, 1894.

lul, *v.* and *n.* A simplified spelling of *lull*.

lulab (lö-läb'), *n.* [Syr. *lulaba.*] A green palm-branch. It is intertwined with boughs of myrtle and willow, and carried, together with a perfect and spotless ethrog, during the morning services of the Feast of Tabernacles. See ★*ethrog*.

lullaby, *n.* Hence—**3**†. Good night; good-by.

Duke. You can fool no more money out of me at this throw: if you will let your lady know I am here to speak with her, . . . it may awake my bounty further.

Clo. Marry, sir, *lullaby* to your bounty till I come again.
Shak., T. N. v. 1.

lull-bag (lul'bag), *n.* A canvas chute used on whale-ships for guiding the blubber into casks.

Lullianist (lul'yan-ist), *n.* A Lullist.

lulliloo (lul-i-lö'), *v. t.* and *i.* [Imitative; cf. *halloo*, *hullabaloo*, etc.] To utter a shrill cry, with vibrations made by hitting the mouth with the hand: used in reference to African aborigines.

The women [of a tribe in northwestern Rhodesia], when saluting an important stranger, do so by *lullilooing*, a word coined by Livingstone to express a peculiar shrill scream, the sound being made to vibrate by hitting the mouth with the hand. *Geog. Jour.* (R. G. S.), XVIII. 74.

lulu (lö'lö), *n.* [W. African.] A cyprinoid fish, *Labeo longipinnis*, which reaches a large size: found in the Kongo river.

lumbago, *n.* 2. Same as ★*chine-gall*.

lumbago (lum-bā'gō), *v. t.*; pret. and pp. *lumbagoed*, ppr. *lumbagoing*. To afflict with lumbago.

lumbang (lum'bäng), *n.* [Tagalog *lumbang*, Bisaya *lombang.*] In the Philippine Islands, the candlenut-tree, *Aleurites Moluccana*. See ★*kukui*.

lumbang-oil (lum'bäng-oil), *n.* Same as ★*candlenut-oil*.

Lumbar index, puncture. See ★*index*, ★*puncture*.

lumber[3] (lum'bėr), *v. t.* [*lumber*[3], *n.*] To put in pawn; hence, to put in prison. *N. E. D.*

lumberer[2] (lum'bėr-ėr), *n.* [*lumber*[1] + *-er*[1].] 1. One who lumbers clumsily about.—2. A swindling tipster. *Barrère and Leland.*

lumberer[3] (lum'bėr-ėr), *n.* [*lumber*[3] + *-er*[2].] A pawnbroker.

lumbering[1] (lum'bėr-ing), *p. a.* 1. Awkward; cumbrous; heavy in action; encumbering.—2†. Rumbling.

lumbering[2] (lum'bėr-ing), *n.* The business of cutting timber in a forest and preparing it for market.

lumberjack (lum'bėr-jak), *n.* One who works in a logging-camp. [Eastern U. S.]

lumber-piet (lum'bėr-pī), *n.* Same as *lumbard-pie*.

lumbersome (lum'bėr-sum), *a.* [*lumber*[1] + *-some*.] Cumbrous; lumbering.

lumboabdominal (lum″bō-ab-dom'i-nal), *a.* [L. *lumbus*, loin, + *abdomen*, abdomen, + *-al*[1].] Relating to both the lumbar and the abdominal regions.

lumbodorsal (lum-bō-dôr'sal), *a.* [L. *lumbus*, loin, + *dorsum*, back, + *-al*[1].] Relating to both the lumbar and the dorsal regions of the spine.

lumbovertebral (lum-bō-vėr'tē-bral), *a.* Relating to the lumbar vertebræ.—**Lumbovertebral index.** See ★*index*.

lumbricaria (lum-bri-kā'ri-ä), *n. pl.* [NL., < L. *lumbricus*, an earthworm.] In *paleon.*, a name under which are included certain obscure remains from the Jurassic Lithographic slates, which may best be regarded as the excrements of *Annelida*. They occur as irregularly contorted bands or strings, and are usually of considerable length.

Lumbriconereidæ (lum″bri-kō-nē-rē'i-dē), *n. pl.* [NL., < *Lumbriconereis* + *-idæ*.] A family of phanerocephalous *Polychæta*, without branchiæ or tentacles and with the cirri reduced or wanting. It includes the genera *Lumbriconereis*, *Arabella*, *Drilonereis*, *Notocirrus*, *Laranda*, and *Ophryotrocha*.

Lumbriconereis (lum″bri-kō-nē'rē-is), *n.* [NL., < *Lumbricus* + *Nereis*.] The typical genus of the family *Lumbriconereidæ*: a marine group, though one species has been found in fresh water in Trinidad. *Grube*, 1840.

lumbrous (lum'brus), *a.* [*lumber*[1] + *-ous*.] Lumbering. [Rare.]

> Six hours after Hommy-beg had set out on his six-mile journey, a *lumbrous*, jolting sound of heavy wheels came from the road below the Curragh, and soon afterwards the Archdeacon entered the room.
>
> *Hall Caine*, The Deemster, ii.

lumen, *n.* **3.** The unit of flux of light; the flux of light in a beam subtending unit solid angle where the source has an intensity of one hefner. See ★*illumination*, 1, and *light* ★*flux*.—**4.** The hollow tube of an operating-needle or of a hypodermic syringe.

> In all such operations the difficulty is the tendency the paraffin has to solidify in the *lumen* of the needle.
>
> *Lancet*, Aug. 29, 1903, p. 611.

Lumen philosophicum, an early name for the flame of a jet of hydrogen gas allowed to burn in the air as the hydrogen is generated by the interaction of zinc and dilute sulphuric acid.

lumen-hour (lū'men-our), *n.* A compound unit, one lumen of light flux for one hour. See ★*lumen*, 3.

Lumière process. See *color-* ★*photography*.

luminal (lū'mi-nal), *a.* [L. *lumen* (*lumin-*), a light, air-hole, + *-al*[1].] Relating to the lumen of any tubular organ or cell.

luminance (lū'mi-nans), *n.* [*luminan(t)* + *-ce*.] Luminousness: as, the *luminance* of the stars.

luminarious (lū-mi-nā'ri-us), *a.* Same as *luminous*.

luminative (lū'mi-nā-tiv), *a.* [*luminate* + *-ive*.] Illuminating; illuminative.

> Cat fear is more readily understandable than mouse fear, for in the peculiar formation and *luminative* quality of the cat's eye there is, as in the eye of the tiger, a species of fascination.
>
> *N. Y. Com. Advertiser*, May 7, 1903, p. 7.

luminator (lū'mi-nā-tor), *n.* [L. *luminator* (cf. OF. *luminier*), an official who kept the accounts of expenditure for the lighting of a church, < L. *luminare*, lighten: see *luminate*.] In St. Andrews University, a student (one in each class) who was privileged to attend the professor's lectures without payment, and to receive certain dues from the other students, in return for services rendered by him. *N. E. D.*

luminesce (lū-mi-nes'), *v. i.*; pret. and pp. *luminesced*, ppr. *luminescing*. [L. *lumin-are*, shine, + *-esce*.] To emit light other than that due to ordinary incandescence. See ★*luminescence*. *Smithsonian Rep.*, 1899, p. 147.

luminescence (lū-mi-nes'ens), *n.* [*luminescen(t)* + *-ce*.] The emission of light from causes other than that which produces incandescence. Radiation is emitted by all bodies at all temperatures; but below a certain temperature, that of the red heat, the wave-lengths emitted do not affect the eye. At that temperature (about 450° C) wave-lengths of the visible spectrum begin to have sufficient intensity to produce luminous effects. The body is then said to be *incandescent*. The luminous intensity of incandescent bodies increases rapidly with further rise of temperature, the total radiation being proportional to the fourth power of the temperature, and the luminous intensity increasing at an even greater rate. See ★*radiation*, 1. There are numerous cases in which bodies emit light at temperatures below that of incandescence, and in which at higher temperatures the intensity and character of the light emitted differs from that which we should expect from the law of ordinary radiation. All such cases of extraordinary light-emission are included under the term *luminescence*, and the phenomenon is variably described as *photoluminescence*, *thermoluminescence*, *chemiluminescence*, *triboluminescence*, *piezoluminescence*, *lyoluminescence*, *cathodoluminescence*, *X-luminescence*, or *autoluminescence*, according to the exciting cause to which the phenomenon is ascribed. Luminescence produced by the exposure of the substance to light or to ultra-violet rays is called *photoluminescence*. When observed while the substance is still under exposure to light, it is known as *fluorescence*, a name proposed by Stokes (1857), who first systematically studied the luminescence of fluor-spar, whence the name. However, the phenomenon had previously been observed by Herschel and others. When, as is sometimes the case, photoluminescence persists after the removal of the exciting light, the phenomenon is termed *phosphorescence*, on account of an imagined analogy to the power of phosphorus to shine in the dark. The glow of phosphorus is, however, a form of chemiluminescence. Since the luminous energy emitted by a photoluminescent body has its source in the exciting light, it follows that a portion of this light must have been absorbed by the body; and, in fact, it is found that photoluminescence is associated with the presence of an absorption-band in the transmission-spectrum of the substance, and that light of wave-lengths corresponding to this band is chiefly active in producing the luminescence. Luminescent light is not monochromatic, but forms an emission-band in the spectrum having a well-defined maximum the wave-length of which is always greater than the wave-length corresponding to the minimum of the absorption-band to which the luminescence is due. It was thought by Stokes that the shortest wave-length of the fluorescent light always exceeded the longest wave-length of the exciting light (Stokes's law), but subsequent measurements have shown that the absorption-band and the luminescence-band frequently overlap. Photoluminescence is exhibited not only by fluor-spar, but by numerous other solids, of which zinc sulphid and calcium sulphid are perhaps the best-known examples. The phenomenon of fluorescence is more readily observed, however, in the case of the solutions of certain organic dyestuffs, such as eosin, resorcin blue, and naphthalene red. One of these substances has received the name *fluorescein* on account of the extraordinary green fluorescence exhibited by it. The color of the fluorescent light depends upon the position of the absorption-band to which it is due; but it is noteworthy that not all substances the spectra of which show absorption-bands are fluorescent, and that a substance may have several absorption-bands only one of which has the corresponding fluorescence-band. The cause of fluorescence in organic solutions has not been satisfactorily determined, but it is known that the photoluminescence of most, if not all, inorganic solids is due to the admixture in minute quantities of certain impurities, such as the salts of copper, manganese, bismuth, lead, nickel, antimony, zinc, etc., and that each of these metallic salts produces its own characteristic photoluminescence. Many inorganic compounds, when exposed to light or to the action of cathode rays and then heated, emit light far below the temperature of incandescence, or, when red-hot, radiate light other than that due to ordinary incandescence. Such emission of light, in which previously stored energy is set free, is termed *thermoluminescence*. Many specimens of fluorite and of flint and crown-glass exhibit the phenomenon, as do the haloid salts of the alkalis and the sulphates of zinc, calcium, barium, magnesium, etc. Frequently a substance which shows thermoluminescence will emit light when, instead of being heated, it is rubbed (*triboluminescence*), or is subjected to pressure (*piezoluminescence*), or is dissolved in water (*lyoluminescence*). Thus Wiedemann and Schmidt observed all three types in the case of sodium chlorid and potassium chlorid: thermoluminescence and lyoluminescence in the case of lithium chlorid; and thermoluminescence and triboluminescence in the case of potassium bromide. The salts had in all cases been previously exposed to the cathode rays. Many substances, when exposed to the electric discharge within a vacuum-tube, emit light. Such luminescence, which is sometimes spoken of as *electroluminescence*, is, however, due either to the ultra-violet or visible rays from the discharge (in which case it is to be classed as photoluminescence) or to the action of cathode rays (in which case it is cathodoluminescence). Röntgen rays are also capable of exciting luminescence (*X-luminescence*) in many substances, such as calcium tungstate, platinocyanide of barium, and Sidot-blende, from which the screens of fluoroscopes are made. The glow of radium, and other radioactive substances, which appears to be independent of excitation from without, is termed *autoluminescence*. The term *chemiluminescence* is applied to all cases in which chemical changes accompany the emission of light by a luminescent body. When, for example, sodium chlorid is exposed to cathode rays, unstable subchlorids, giving the surface a brown or blue color, are formed. Heating or friction restores the substance to its original color and composition, and the thermoluminescence or triboluminescence, respectively, which accompanies the reaction is classed as *chemiluminescence*. Whether all luminescence is of the nature of chemiluminescence has not, as yet, been definitely determined.

luminist (lū'mi-nist), *n.* [L. *lumen* (*lumin-*), light, + *-ist*.] A painter who affects brilliancy of light in *plein-air* effects.

> His [Courbet's] canvases hang more harmoniously on a wall with Rousseau and Diaz than with the high-keyed productions of the *luminists*, impressionists, and other eccentrics of to-day.
>
> *J. C. Van Dyke*, Mod. French Masters, p. 200.

luminometer (lū-mi-nom'e-tėr), *n.* [L. *lumen* (*lumin-*), light, + Gr. *μέτρον*, measure.] An instrument for the measurement of the intensity of illumination at any point in a field of light flux. The method employed in most luminometers, of which there are various forms, is to expose a white mat surface to the light the illumination from which is to be measured, and to compare its brightness with that of a similar surface illuminated by a source of known intensity placed at a known distance. Also called *illuminometer*.

Luminous arc. See *electric* ★*arc*.—**Luminous efficiency.** See ★*efficiency*.—**Luminous organ**, an organ for the production of light: often termed *phosphorescent organ*. Luminous organs are present in many groups of animals, those commonly called fireflies being the most familiar.

Lummer-Brodhun body. See ★*spectrophotometer*.

lump[1], *n.* **7.** In *mining*, a coarse fragment of ore, coal, phosphate rock, or any useful mineral, as contrasted with the *fines*, *spalls*, or otherwise designated smaller pieces. *Rep. U. S. Geol. Surv.*, 1897–98, vi. 550.

II. *a.* Noting the coarser grade of bituminous coal which is picked out as it comes from the mine.

lump[1], *v. i.* **2.** To appear larger by aggregation; bulk: as, he *lumped* large in public imagination. [Colloq.]

lunambulism (lū-nam'bū-lizm), *n.* [L. *luna*, moon, + *ambul-are*, walk, + *-ism*.] Somnambulism or sleep-walking supposed to be induced by the influence of the moon. [Rare.] *N. E. D.*

lunar, *a.* **8.** In *Arabic gram.*, a fanciful term applied to the class of consonants before which the *l* of the article *al* is not assimilated in pronunciation: so called because including *q*, the initial of *qamar*, moon. Opposed to *solar*.—**Lunar day, hour.** See ★*day*[1], ★*hour*.

lunarium, *n.* **2.** In *paleon.*, a more or less thickened portion of the posterior wall in many Paleozoic bryozoans which is curved to a shorter radius and usually projects above the plane of the zoœcial aperture.

luncart (lung'kärt), *n.* In *mining*, a lenticular mass, nodule, or ball. Also called *lunker*. [Scotch.]

lundyfoot (lun'di-fût), *n.* [Named after *Lundy Foot*, a tobacconist of Dublin in the last quarter of the eighteenth century.] A kind of snuff.

lüneburgite (lü'ne-bör-gīt), *n.* [G. *lüneburgit* (1870), < *Lüneburg* + *-it*, E. *-ite*[2].] A hydrated phosphate and borate of magnesium occurring in masses with from crystalline to earthy structure: found at Lüneburg in northern Germany.

lunel[2] (lū-nel'), *n.* [F. *lunel*, < Sp. *lunel*, < *luna*, L. *luna*, moon: see *lunel*[1].] In *her.*, a figure formed by four crescents placed point to point, resembling a rose with four leaves.

lunetta (lū-net'ä), *n.* Same as *lunette*, 4.

lunette, *n.* **12.** The circular hole in a guillotine in which the neck of the condemned rests.

Lunéville pottery. See ★*pottery*.

lung, *n.*—**Black lung**, anthracosis.—**Grinders', masons'**, or **millers' lung**, pneumonoconiosis.—**Lung suction mask**, a mask-like apparatus, fitting over the mouth and nose, provided with valves by means of which respiration is slightly impeded; this causes a negative air-pressure in the lungs and consequent congestion: used in the application of Bier's hyperemic method to the treatment of pulmonary tuberculosis. *Med. Record*, Nov. 9, 1907, p. 757.—**Miners' lung**, anthracosis.

lung-book (lung'bůk), *n.* Same as *lung*, 2.

lunge[1], *n.* **3.** A long rope used to train a horse; also, the circular track or ring where horses are trained by cantering them around the edge of the ring in one direction with the aid of a lunge.

lungee, *n.* See *loonghee*.

lunger[2] (lung'ėr), *n.* One who comes to a climatic resort on account of his lungs; a consumptive. [Slang.]

lung-juice (lung'jös), *n.* Serous fluid obtained from the lung.

lungoti, *n.* Same as ★*langoti*.

lung-plague (lung'plāg), *n.* Contagious pleuropneumonia or lung-sickness. See *pleuropneumonia*, 1. It is a highly fatal, epizoötic disease which affects bovine animals only and is characterized by an extensive inflammation of the lungs and pleura. It was eradicated from the United States in 1892.

lung-sac (lung'sak), *n.* One of the paired respiratory organs of a spider: as, "the *lung-sacs* on the epigastric region," *Proc. Zool. Soc. London*, 1903, I. 49.

lung-sick (lung'sik), *a.* Noting cattle suffering from contagious pleuropneumonia, an extremely contagious and deadly disease of these animals.

lung-sickness (lung'sik-nes), *n.* Contagious pleuropneumonia of cattle. See ★*lung-plague.*

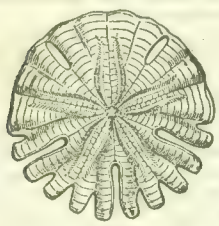
lunicurrent (lū-ni-kur-ent), *a.* Changing periodically with the position of the moon.

luniolatry (lū-ni-ol'a-tri), *n.* [Irreg. < L. *luna*, moon, + Gr. λατρεία, worship.] Moon-worship. *Amer. Jour. Psychol.*, XIII. 314.

lunkah (lung'kä), *n.* [Hindi *lañka*, 'islands,' the local term for the islands of the Godavery delta, where the tobacco is grown (*Yule*, Hobson-Jobson).] A kind of strong cheroot. *N. E. D.*

If you can say . . . that some murder has been done by a man who was smoking an Indian *lunkah*, it obviously narrows your field of search. *Doyle*, Sign of the Four, i.

lunker (lung'kėr), *n.* Same as ★*luncart.*



lunn (lun), *n.* A tea-cake: short for *sally-lunn.*

lunoid (lū'noid), *a.* [L. *luna*, moon, + *-oid.*] Shaped like the new moon; somewhat resembling the new moon; crescentiform.

lunula, *n.* (*g*) In *entom.*, a small depression on the frons of a dipterous insect.—**Lunulæ Hippocratis,** the lunes of Hippocrates.

lunular, *a.* 2. In *conch.*, pertaining to the lunule of pelecypods.

lunule, *n.* (*e*) One of the perforations formed by the union of digitate processes of the test of certain thin forms of echinoids, as *Rotula Augusti.*

Lunule.

Rotula Augusti, with posterior digitations and a pair of anterior lunules. (From Lankester's "Zoology.")

Lunulicardium (lū″nū-li-kär'di-um), *n.* [NL., < L. *lunula*, lunule, + NL. *Cardium*, a genus of shells.] A genus of extinct prionodesmaceous pelecypods with triangular shells in which the anterior surface is flattened and carries a very large byssal opening. It occurs in the Silurian and Devonian formations.

lunuliform (lū'nū-li-fôrm), *a.* [L. *lunula*, lunule, + *forma*, form.] Having the form of a lunule.

Lunz sandstones. See ★*sandstone.*

lupamaric (lū-pa-mar'ik), *a.* [*lup(ulus)* + *amaric.*] Noting a white crystalline acid contained in lupulin.

lupanar (lū-pā'när), *n.* [L., < *lupa*, a prostitute, a she-wolf, fem. of *lupus*, a wolf: see *wolf.*] In *Rom. antiq.*, a brothel.

lupanarian (lū-pa-nā'ri-an), *a.* [*Lupanaris*, < *lupanar*, a brothel: see ★*lupanar.*] Of or pertaining to a brothel; fit for the surroundings of a brothel.

lupanine (lū'pa-nin), *n.* [L. *lup(inus)*, lupine, + *-an* + *-ine*2.] A pale-yellow syrupy alkaloid, $C_{15}H_{24}ON_2$, contained in the seeds of blue lupines, *Lupinus angustifolius.* It has an extremely bitter taste and exhibits ▪ blue fluorescence.

lupeol (lū'pē-ol), *n.* [L. *lup(inus)*, lupine, + *-e-* + *-ol.*] A crystallizable substance, analogous to cholesterol or cholesterin, extracted from the husk of the seed of the yellow lupine, *Lupinus luteus.*

lupeose (lū'pē-ōs), *n.* [L. *lup(inus)*, lupine, + *-ose.*] An amorphous sugar, $C_{12}H_{22}O_{11}$, from the seeds of *Lupinus luteus.* It is not changed by Fehling's solution or by diastase. Dilute acids hydrolyze it to galactose and fructose. Also called *β-galactan.*

lupetazin (lū-pet'a-zin), *n.* [*lup(inin)* + *-et-* + *azu-* + *-in*2.] A trade-name for dimethylpiperazin, $NH<\begin{matrix}CH_2CH(CH_3)\\CH_2CH(CH_3)\end{matrix}>NH$, a white crystalline powder used in medicine as a substitute for piperazin. Also called *dipropylene-diamine* and *dimethyl-diethylene-diamine.*

lupiform (lū'pi-fôrm), *a.* [L. *lupus*, lupus, + *forma*, form.] Resembling lupus.

lupigenin (lū-pij'e-nin), *n.* [*lupi(nin)* + *-gen* + *-in*2.] A yellow crystalline compound, $C_{17}H_{12}O_6$, formed by the action of dilute mineral acids on the glucoside lupinin.

lupine2, *n.*—**False lupine,** any plant of the leguminous genus *Thermopsis;* the bush-pea. The plants of this genus are perennial herbs, unlike lupines in having but three leaflets to the leaf. The prairie false lupine, *T. rhombifolia* (known in Montana as *yellow pea*), is often so abundant as to give a yellow hue to large areas during its flowering time. It is suspected of being poisonous to stock. See ★*bush-pea.*

lupinidine (lū-pin'i-din), *n.* [*lupine* + *-id* + *-ine*2.] A viscid, oily, intensely bitter alkaloid, $C_8H_{15}N$, contained in the yellow lupine. It has an odor of hemlock.

lupinosis (lū-pi-nō'sis), *n.* [*lupine*2 + *-osis.*] A disease of cattle, supposed to be caused by poisoning with one of the lupines, usually the white lupine. It is probable that the symptoms (fever, weakness, and distention of the abdomen) are due to the poisonous action of a fungus on the plants, rather than to any principle in the lupine itself.

lupoid (lū'poid), *a.* [*lupus*1 + *-oid.*] Resembling lupus.

The sphere of x-ray treatment should be limited to the treatment of *lupoid* growths.
Med. Record, Feb. 7, 1903, p. 234.

lupoma (lū-pō'mä), *n.*; pl. *lupomata* (-ma-tä). [*lup-us* + *-oma.*] The initial lesion of lupus vulgaris, consisting of a discolored elevation above the surface.

lupous, *a.* 2. Relating to lupus.

lupulic (lū-pū'lik), *a.* [*Lupul-us* + *-ic.*] Same as *lupulinic.*

Lupulinic acid, a bitter crystalline compound, $C_{25}H_{36}O_4$, contained in the bitter principle of hops.

lupus1, *n.* 3. (*c*) *Lupus exedens*, a form of lupus in which there is ulceration of the affected parts.—**Butterfly lupus,** lupus erythematosus of the skin of the nose and cheeks.—**Lupus verrucosus,** a form of lupus in which the surface is warty instead of smooth. Called also *tuberculosis verrucosa cutis.*

lurch3, *v. t.* 5. To take (game) with a lurcher. See *lurcher*1, 2.

lureful (lūr'fûl), *a.* Full of enticement; alluring.

lurefully (lūr'fûl-i), *adv.* In an alluring way.

luresome (lūr'sum), *a.* [*lure*1 + *-some.*] Enticing; alluring.

lurk, *n.* 2. The act of lurking or prowling.—**On the lurk,** on a swindling or fraudulent prowl. [Slang.]

lurryman (lur'i-man), *n.*; pl. *lurrymen* (-men). In *mining*, one who handles or manages a lurry. See *lurry*2.

Lusatian (lū-sā'shian), *a.* and *n.* [NL. *Lusatia*, F. *Lusace*, G. *Lausitz.*] **I.** *a.* Of or pertaining to Lusatia (G. Lausitz), a district, or two districts (Upper and Lower Lausitz), in Germany, belonging in part to Prussia and in part to Saxony.

II. *n.* 1. An inhabitant of Lusatia.—2. The native language of Lusatia. Same as *Sorbian*, 2.

lush-crib (lush'krib), *n.* [*lush*3 + *crib.*] A low public-house or bar-room. [Slang.]

lush-ken (lush'ken), *n.* Same as ★*lush-crib.*

lushy, *a.* 2. Luxuriant; tender; soft. Also used figuratively.

lusingando (lö-sin-gän'dō), *a.* [It., ppr. of *lusingare*, flatter, wheedle, < *lusinga*, flattery, = OF. *losenge*, flattery: see *lozenge.*] Flattering; coaxing; in *music*, noting passages to be rendered in an affectionate or coaxing style. Compare *amoroso.*

lusingato (lö-sin-gä'tō), *a.* [It., pp.: see ★*lusingando.*] Same as ★*lusingando.*

Lusitano-American (lū-si-tā'nō-a-mer'i-kan), *a.* and *n.* **I.** *a.* Of mixed Portuguese and American Indian descent, as the Portuguese-speaking people of Brazil.

II. *n.* A person of mixed Portuguese and American Indian descent; a Brazilian.

The present inhabitants of Central and South America, the immense majority of whom are confessedly mixed peoples—*Lusitano-Americans* with a considerable strain of Negro blood in Brazil. *Keane*, Ethnology, p. 151.

lusive (lū'siv), *a.* [L. *lus(us)*, pp. of *ludere*, play, + *-ive.*] Playful.

lusol (lō'sol), *n.* The trade-name of impure benzene, obtained by distilling coal-tar: used as an illuminant. *Sci. Amer.*, Dec. 29, 1906, p. 484.

lusong (lö-song'), *n.* [Also *losong.* Tagalog and Bisaya *losong.*] A wooden mortar for pounding or husking rice. [Philippine Is.]

The grain is separated from the straw by thrashing, or by use of wind whenever possible, and is finally separated from the husk by pounding two or three times in ▪ wooden mortar, called a '*lusong*,' or by making use of a sort of hand-mill, called 'guilingan.'
Gaz. Philippine Is., 1902, p. 71.

lussatite (lö-sä'tīt), *n.* [F. *lussatite* (1890), < *Lussat*, Puy-de-Dome, France, + *-ite*2.] A peculiar form of quartz which resembles chalcedony but differs from it in optical character: it has been referred to tridymite.

lust1, *n.* 5†. Pleasure; delight; a source of pleasure.

The lookers now at me, poore wretch, be mocking,
With mowes and nodds they stand about me flocking:
Let God help him, say they, whom He did trust;
Let God saue him in whom was all his *lust.*
Sir P. Sidney, Psalmes of David, xxii. 5.

luster2, *n.* 7. A material applied to the surface of something in order to produce a lustrous appearance.—**Brianchon luster,** in *ceram.*, a nacreous luster formed of salts of bismuth mixed with resin and oil of lavender, colored with metallic oxids: patented by J. J. H. Brianchon, a French potter, in 1857. A similar luster is used on Belleek ware.—**Copper luster,** in *ceram.*, a coating of copper applied to a red pottery body.—**Gold luster.** (*a*) See *gold.* (*b*) In *ceram.*, ▪ metallic glaze containing gold applied to pottery or porcelain.—**Marbled luster,** ▪ pink-and-white mottled luster often seen on old Sunderland (English) earthenware. The ground is a clouded, lustrous pink, and the white spots are surrounded by heavy outlines of metallic luster.—**Mexican luster,** an iridescent, lustrous glaze, usually of a green color, found on some of the pottery of the native tribes of Mexico.—**Pearl luster,** in *ceram.*, an iridescent luster imparted to the glaze by applying salts of bismuth colored with metallic oxids and firing in the enamel-kiln, as seen in Belleek china and some of the so-called majolica ware made at Phoenixville, Pennsylvania. See *Brianchon* ★*luster* and *madreperla luster*, under *luster*2.—**Pink luster,** in *ceram.*, a thin wash of gold, of a pink color, on old English cream-colored ware and porcelain. Also called *rose luster, Sunderland luster,* and *purple luster.*—**Purple luster,** a metallic glaze of a purplish color, darker than gold luster, on English pottery.—**Rose luster.** Same as *pink* ★*luster.*—**Spotted luster.** Same as *marbled* ★*luster.*—**Steel luster.** Same as *platinum luster* (which see, under *luster*2).—**Sunderland luster.** See *marbled* ★*luster.*

Marbled Luster.

Candlestick, Sunderland, about 1800. In the Pennsylvania Museum, Philadelphia.

Lustered ware. See ★*ware*2.

luster-mottlings (lus'tėr-mot″lings), *n. pl.* The mottling of the cleavage-surface of a mineral produced by numerous inclusions of other minerals: compare *pœcilitic.*

lust-house (lust'hous), *n.* [G. *lusthaus.*] 1. A pleasure-house; a country-house; ▪ summer-house in a garden.—2. A tavern with ▪ beer-garden. *N. E. D.*

lustracellulose (lus-tra-sel'ū-lōs), *n.* [*lustr-(ous)* + *cellulose.*] A peculiar derivative of cellulose.

lustrative (lus'tra-tiv), *a.* [*lustrate*1 + *-ive.*] Pertaining to purification by lustration; pertaining to washing.

lustratory (lus'tra-tō-ri), *a.* [*lustrate*1 + *-ory.*] Pertaining to lustration; lustral.

lustrify (lus'tri-fī), *v. t.*; pret. and pp. *lustrified*, ppr. *lustrifying.* [*luster*2 + *-i-fy.*] To give luster to: as, to *lustrify* the complexion.

lutaceous (lū-tā'shius), *a.* [NL. **lutaceus*, < L. *lutum*, mud: see *lute*2.] Pertaining to or composed of mud.

lutany (lū'ta-ni), *n.* [ML. *lutana*, lute, + *-y*3.] Lute-music. *N. E. D.*

[Minstrels] without end
Reel your shrill *lutany.*
F. Thompson, New Poems, p. 41.

lute2, *n.*—**Linseed-meal lute,** linseed-meal made into a paste with water, milk, glue, or lime-water.—**Lute d'Ane,** a mixture of recently slaked lime with strong glue and a subsequent addition of white of egg.—**Willis's lute,** a paste made with slaked lime and a solution of two ounces of borax in one pint of water. This paste is applied to earthenware with a brush, and, when dry, is covered with a pasty mixture of slaked lime and linseed-oil.

lutecine (lū'tē-sin), *n.* [L. *luteus*, of mud, + *-c-* + *-ine*2.] A form of anhydrous silica, SiO_2, which has a fibrous structure and which differs from quartz in lower density and in optical characters. Also called *quartzine.*

lutecite (lū'tē-sīt), *n.* Same as ★*lutecine.*

lutecium (lö-tē'sium), *n.* [L. *Lutetia*, Roman name of Paris.] See the extract.

A New Element, *Lutecium.*—By means of a long series of fractional recrystallizations of the nitrate of Marignac's ytterbium, using nitric acid of density 1·3 as a solvent, G. Urbain has succeeded in separating the material into two distinct substances, one of which gives ▪ characteristic spark spectrum. This new element he calls *lutecium*, Lu, from an ancient name for Paris, and he finds that its atomic weight is not much greater than 174. The other element present he calls neo-ytterbium, Ny, in order that it may not be confused with Marignac's ytterbium. Its atomic weight cannot differ much from 170. Two spec-

trum bands obtained by Lecoq de Boisbaudran's method are probably characteristic of neo-ytterbium, while a third band appears to belong to *lutecium*.
Am. Jour. Sci., Feb., 1908, p. 146.

luteic (lū-tē′ik), *a.* [L. *lute-us*, of mud, + *-ic*.] Noting an acid, a yellow compound, $C_{20}H_{20}O_{12}$ (?), resembling luteoleine, contained in the flowers of *Euphorbia cyparissias*. It crystallizes in slender needles, sublimes at 220° C., and melts at 273–274° C.

lutein (lū′tē-in), *n.* [(corpus) *lute* (*um*) (see def.) + *-in*^{2}.] A yellow pigment contained in the yolk of eggs, in the tissue of the corpus luteum, in blood-serum, etc. It forms orange crystals.

luten (lū′ten), *n.* Same as ★*lutein*.

luteocobaltic (lū″tē-ō-kō-bâl′tik), *a.* In *chem.*, containing a cobalt-hexammine constituent: as, a *luteocobaltic* salt.

luteofilin (lū-tē-of′i-lin), *n.* [L. *luteus*, of mud, + *filum*, thread, + *-in*^{2}.] A compound said to occur in monocotyledons and in *Lobeliaceæ*.

Lutetian, *a.* **II.** *n.* In *geol.*, the Middle Eocene Tertiary of the Paris basin, which takes its name from Lutetia, the Roman name of Paris. This stage is regarded as the probable equivalent of the Lower Bagshot and Bracklesham beds of England.

Luth. An abbreviation of *Lutheran*.

Lutheranic (lū-thėr-an′ik), *a.* Same as *Lutheran*.

Lutheranize (lū′thėr-an-īz), *v.*; pret. and pp. *Lutheranized*, ppr. *Lutheranizing*. **I.** *trans.* To render Lutheran in character; convert to Lutheranism.

II. *intrans.* To become Lutheran; favor Lutheranism.

Lutianidæ (lū-ti-an′i-dē), *n. pl.* [NL., ⟨ *Lutianus* + *-idæ*.] A family of fishes related to the percoids and commonly known as snappers.

Lutianus (lū-ti-ā′nus), *n.* [NL., also *Lutjanus*, ⟨ *lutjang*, D. spelling of Malay **luchang*: see ★*lutjang*.] A genus of fishes of the family *Lutianidæ*.

lutidine (lū′ti-din), *n.* [L. *lutum*, mud, + *-id*^{1} + *-ine*^{2}.] The collective name of the various isomeric dimethylpyridines, $(CH_3)_2C_5H_3N$. They are present in coal-tar oil and in animal- and bone-oil, and resemble pyridine in general properties.

lutite (lū′tīt), *n.* [L. *lutum*, mud, + *-ite*^{2}.] In *petrog.*, a term introduced by Grabau (1904) for an indurated rock of any composition or origin.

lutjang (lö′chang), *n.* [A D. spelling of Malay *luchang* in *ikan lūtjang* (*luchang*), appar. lit. 'bell-fish.'] A Malayan name (*ikan lutjang*) of the fish *Lutianus lutianus*.

lutrin (lū′trin), *n.* [F.: see *lectern*.] Same as *lectern*.

lutulence (lū′ tū-lens), *n.* [*lutulent* + *-ce*.] Muddiness; turbidity.

luv, *v.* and *n.* An amended spelling of *love*.

luvar (lö-vär′), *n.* Same as ★*luvaro*.

luvaro (lö-vä′rō), *n.* [Sp.] A pelagic scombroid fish, *Luvarus imperialis*. See *Luvarus*.

luvly, *a.* and *adv.* An amended spelling of *lovely*.

lux^3, *n.* 2. The unit of illumination; the illumination received by a surface at a distance of one meter from a light-source the intensity of which is one hefner. See ★*illumination*, 1.

luxograph (luk′sō-grâf), *n.* [A trade-name; irreg. ⟨ L. *lux*, light, + Gr. *γράφειν*, write.] In *photog.*, a large lantern-like device with a tissue-paper front, in which pyrotechnic materials can be burned to give an artificial light for portraiture. *Wall*, Dict. of Photog., p. 456.

luxus (luk′sus), *n.* [L. *luxus*, excess: see *lux*^{2}.] In *physiol.*, the consumption of more nitrogenous food-material than is necessary to maintain nitrogenous equilibrium, that is, to cover the actual wear and tear of the nitrogenous constituents of the body tissues: in such an event the term 'luxus consumption' is used.

luzonite, *n.* This supposed independent species has been shown to be only a variety of enargite.

lv. A contraction (*a*) of *leave*; (*b*) of *livres*.

LXX. The Roman numeral for 'seventy'; hence, the 'Seventy' (L. *Septuaginta*) who, according to tradition, translated the Hebrew Scriptures into Greek; also the translation—the Septuagint itself. See *Septuagint*.

Lyæan (lī-ē′an), *n.* See ★*Lyæus*.

Lyæus (lī-ē′us), *n.* [L., ⟨ Gr. *Λυαῖος*, appar. ⟨ *λύειν*, release.] The looser or deliverer: an epithet of Bacchus.

lycaconitin (lī-ka-kon′i-tin), *n.* [(*g*)*lyc*(*erol*) (?) + *aconite* + *-in*^{2}.] An amorphous alkaloid of undetermined composition, obtained from the tuberous roots of *Aconitum lycoctonum* and *A. septentrionale*.

lycænid (lī-sē′nid), *n.* and *a.* **I.** *n.* A member of the dipterous family *Lycænidæ*.

II. *a.* Having the characters of or belonging to the family *Lycænidæ*.

lyceal (lī-sē′al), *a.* [*lyce-um* + *-al*^{1}.] Pertaining to a lyceum, in any sense.

Marro tabulated the conduct of 3012 boys in gymnasial and *lyceal* classes in Italy from 11 to 18 years of age.
G. S. Hall, Adolescence, I. 345.

Lycenchelys (lī-seng′kē-lis), *n.* [NL., ⟨ Gr. *λύκος*, wolf, + *ἐγχελυς*, an eel.] A genus of fishes of the family *Zoarcidæ*, found in deep water on both coasts of North America.

Lycengraulis (lī-seng-grâ′lis), *n.* [NL., ⟨ Gr. *λύκος*, wolf, + NL. *Engraulis*.] A genus of fishes of the family *Engraulididæ*, found on both coasts of tropical America.

lycetol (lī′sē-tol), *n.* [(*g*)*lyc*(*erol*) + *-et-* + *-ol*.] The trade-name for dimethylpiperazin tartrate, $NH\langle^{CH_2.CH(CH_3)}_{CH_2.CH(CH_3)}\rangle NH.H_2C_4H_4O_6$, which is prepared from glycerol. It is a white odorless powder and is used in medicine to effect the elimination of uric acid, with which it forms a readily soluble compound.

lyceum, *n.*—**United States Naval Lyceum,** an association organized in 1833, at the Brooklyn navy-yard, by naval and marine officers.

lychnisk (lik′nisk), *n.* [Gr. *λυχνίσκος*, applied to a kind of fish, dim. of *λύχνος*, a lamp.] One of the swollen nodes formed at the junction of the rays in the skeletal structure of the dictyonine hexactinellid sponges, especially when these nodes are hollow and inclose an octahedral space.

ly-chow (lī′chou), *n.* [Origin not ascertained.] Roasted potato starch, similar to crommelin and leio gum, used as a thickener in calico-printing. *Georgievics* (trans.), Chem. Technol. of Textile Fibres, p. 251.

Lycian^2 (lis′i-an), *a.* [Gr. *λύκειος*, of a wolf, ⟨ *λύκος*, wolf. Also taken as *Lycian*^{1}.] Wolf-slaying: an epithet applied to Apollo.

lycine (lī′sin), *n.* [(*g*)*lyc*(*erol*) + *-ine*^{2}.] A colorless compound, $HON(CH_3)_3CH_2COOH$, or, in the anhydrous form, $(CH_3)_3N\langle^{O}_{CH_2}\rangle CO$, contained in sugar-beet juice, cotton-seeds, and other vegetable products, and in urine. It forms large crystals which become anhydrous at 100° C. and attract moisture from the air, and is of considerable importance in plant physiology. Also called *betain*, *hydroxyneurine*, or *trimethylglycin*.

Lycocara (lī-kok′a-rä), *n.* [NL., ⟨ Gr. *λύκος*, wolf, + *κάρα*, head.] A genus of fishes of the family *Zoarcidæ*, found in Baffin Bay.

lycoctonine (lī-kok′tō-nin), *n.* [*Lycoctonum* (see def.) + *-ine*^{2}.] A substance resembling aconitin, found in *Aconitum Lycoctonum*. It is possibly a mixture, and not a chemical individual.

Lycodalepis (lī-kō-dal′ē-pis), *n.* [NL., ⟨ *Lycodes* + Gr. *ἀλεπις*, without scales.] A genus of fishes of the family *Zoarcidæ*, found in the Arctic Ocean.

Lycodapodidæ (lī-kō-da-pod′i-dē), *n. pl.* [NL., ⟨ *Lycodapus* (*-pod-*) + *-idæ*.] A family of deep-sea fishes found in North Pacific waters, which includes one genus and four known species.

Lycodapus (lī-kod′a-pus), *n.* [NL., ⟨ *Lycodes* + Gr. *ἄπους*, footless.] A genus of deep-sea fishes of the family *Lycodapodidæ*, found in the North Pacific.

Lycodontis (lī-kō-don′tis), *n.* [NL., ⟨ Gr. *λύκος*, wolf, + *ὀδούς* (*ὀδοντ-*), tooth.] A genus of eels of the family *Murænidæ*, found in shallow water about rocks and reefs: properly called *Gymnothorax*.

Lycodonus (lī-kod′ō-nus), *n.* [NL., ⟨ *Lycodes* with term. *-onus*.] A genus of zoarcoid

Lycodonus mirabilis.
(From Bulletin 47, U. S. Nat. Museum.)

fishes, found in the deep sea off the New England coast.

Lycodopsis (lī-kō-dop′sis), *n.* [NL., ⟨ *Lycodes* + Gr. *ὄψις*, view, appearance.] A genus of fishes of the family *Zoarcidæ*, found on the Pacific coast of the United States.

Lyconectes (lī-kō-nek′tēz), *n.* [NL., ⟨ Gr. *λύκος*, wolf, + *νήκτης*, swimmer.] A genus of fishes of the family *Cryptacanthodidæ*, found in rather deep water on the Alaska coast.

Lyconema (lī-kō-nē′mä), *n.* [NL., ⟨ Gr. *λύκος*, wolf (see *Lycodes*), + *νῆμα*, thread.] A genus of zoarcoid fishes, found in rather deep water on the coast of Alaska.

Lycoperdales (lī″kō-pėr-dā′lēz), *n. pl.* [NL., ⟨ *Lycoperdon* + *-ales*.] An order of gasteromycetous fungi, including the single family *Lycoperdaceæ*. See *Lycoperdaceæ*.

lycoperdoid (lī-kō-pėr′doid), *a.* [*Lycoperdon* + *-oid*.] Resembling the fungus *Lycoperdon*.

lycopin (lī′kō-pin), *n.* [*Lycop-us* + *-in*^{2}.] A colorless amorphous compound obtained from bugleweed, *Lycopus*. It has astringent, styptic, and sedative properties.

Lycopodiales (lī-kō-pō-di-ā′lēz), *n. pl.* [NL. (Engler, 1892), ⟨ *Lycopodium* + *-ales*.] An order of vascular cryptogamic plants of the phylum *Pteridophyta*, coördinate with the *Filicales* and *Equisetales*. It is divided into two groups, according to the presence or absence of the ligule in the leaves. It contains four families of living and two of fossil or extinct plants. The *Lycopodiaceæ* and *Psilotaceæ* are destitute of the ligule (*Lycopodiales eligulatæ* of Engler). The *Selaginellaceæ* and *Isoëtaceæ* are ligulate (*Lycopodiales ligulatæ* of Engler). The two extinct families, *Lepidodendraceæ* and *Sigillariaceæ*, are placed by Engler in the ligulate group.

lycopodine (lī-kop′ō-din), *n.* [*Lycopod-ium* + *-ine*^{2}.] A colorless bitter alkaloid, $C_{32}H_{52}O_3N_2$, contained in club-moss, *Lycopodium complanatum*. It crystallizes in long, monoclinic prisms and melts at 114–115° C.

Lycopodium, *n.* 2. [*l.c.*] A fine powder consisting of the spores of *Lycopodium clavatum* and other species, used in pharmacy as a dusting-powder on the skin and on excoriated surfaces, and in other ways. On the application of a flame, it burns with a flash, and does not become wet in contact with water. It is used in physical experiments, especially with sound.

lycorexia (lī-kō-rek′si-ą), *n.* [NL., ⟨ Gr. *λύκος*, wolf, + *ὄρεξις*, appetite.] In *pathol.*, a morbid state characterized by a constant, excessive hunger.

lycorine (lik′ō-rin), *n.* [*Lycoris* + *-ine*^{2}.] A colorless crystalline alkaloid, $C_{32}H_{32}O_8N_2$, contained in *Lycoris radiata* (*Nerine japonica*), melting at 250° C. It affects the central nervous system.

Lycoris (lī-kō′ris), *n.* [NL. (Herbert, 1821), ⟨ *Lycoris*, a Roman actress celebrated in Vergil.] A small genus of bulbous plants of Japan and China, of the family *Amaryllidaceæ*, distinguished from *Hippeastrum* by its turgid seeds, few in a compartment. Four species are known in gardens, usually as greenhouse subjects, but in mild climates as border plants. The flowers are lily-like, red, lilac, or orange, in umbels on long scapes, appearing without the leaves. In the United States they bloom in summer or autumn. *L. sanguinea*, *L. radiata*, *L. aurea*, and *L. squamigera* are grown, the last being sometimes known to florists as *Amaryllis Halli*.

Lycosaurus (lī-kō-sâ′rus), *n.* [NL., ⟨ Gr. *λύκος*, wolf, + *σαῦρος*, lizard.] A genus of fossil theromorphous reptiles belonging to the family *Galeosauridæ*. Only the skull is known, and this shows, like that of other reptilian genera from the Karoo formation in South Africa, a remarkable similarity to the carnivorous mammals. In this genus the molariform teeth are all in single cones, though more or less compressed and with finely serrated edges.

lycosid (lī-kos′id), *n.* and *a.* **I.** *n.* A member of the araneid family *Lycosidæ*.

II. *a.* Having the characters of or belonging to the family *Lycosidæ*.

lycotropous (lī-kot′rō-pus), *a.* Same as *lycotropal*.

Lycurgan (lī-kėr′gan), *a.* [*Lycurg-us* + *-an*.] Pertaining to or characteristic of Lycurgus, the Spartan lawgiver, or to his laws, which are proverbial for their severity.

lyddite (lid′īt), *n.* [So called from *Lydd*, in Kent, England.] An explosive, consisting of picric acid melted and cast into a shell. It is difficult to detonate.

lydine (lī′din), *n.* A violet compound, prepared by the action of potassium ferricyanide on aniline hydrochlorid. Also called *mauvein*.

lydite (lid′īt), *n.* [L. *Lydia*, ⟨ Gr. *Λυδία*, an ancient country of Asia Minor, + *-ite*^{2}.] In *petrog.*, Lydian stone, a black or dark-colored compact, hard rock composed of minute grains of quartz with carbonaceous matter. It was used by the ancients as a touchstone for testing gold.

lye[3], *n.* 2. In a general sense, water charged with soluble solid matter by contact with a mixture of solid substances, partly soluble, partly insoluble.—**Concentrated lye,** the trade-name in the United States for caustic soda, sold for scouring.—**Solid lye,** a trade-name for a very impure caustic soda (two-thirds common salt), sold for domestic use in scouring, etc.

lye-boil (lī'boil), *n.* The boiling of cotton cloth in a dilute solution of soda-ash, preparatory to bleaching.

Lyellian (lī-el'i-an), *a.* Of or pertaining to Sir Charles Lyell (1797–1875) or to his geological theories and investigations.

The old *Lyellian* theory of the marine origin of the boulder clay thus finds confirmation.
Geog. Jour. (R. G. S.), XV. 173.

Lyellism (lī-el'izm), *n.* [Sir Charles *Lyell*, a distinguished geologist, + *-ism.*] In *geol.*, uniformitarianism (which see) or the general doctrine, advocated by Lyell, that the events of the past are to be explained by the processes of the present, and that the course of nature has been essentially uniform.

Indeed, *Lyellism*, with its essential doctrine of the alternate elevation and subsidence of the land under the agency of local causes, seemed inconsistent with the existence of any general cause governing the geographical evolution of the globe as a whole.
Geog. Jour. (R. G. S.), XIII. 226.

lyer (lī'ėr), *n.* [Cape D. *leier*, a reduction of *leider* = E. *leader.*] In South Africa, the lad who walks before a team of oxen, guiding the leaders with a rope.

lygæid (lī-jē'id), *n.* and *a.* **I.** *n.* A member of the heteropterous family *Lygæidæ.*

II. *a.* Having the characters of or belonging to the family *Lygæidæ.*

Lygeum (lī-jē'um), *n.* [NL. (Linnæus, 1753, adopted from Löfling), < Gr. *λυγόειν*, bend, tie fast.] A genus of grasses, containing but one species, *L. Spartum*, found on stony soils in the Mediterranean region, particularly in Spain and Algeria. It is often called *esparto* because of confusion with the true esparto, *Stipa tenacissima*, but its proper name is *albardin.* Its tough, slender leaves are used in making baskets and for other coarse textile purposes. See ★*albardin.*

Lygodesmia (lī-gō-des'mi-ä), *n.* [NL. (Don, 1829), < Gr. *λύγος*, withe, + *δέσμη*, bundle; in allusion to the fastigiate, naked stems of the type species, *L. juncea.*] A genus of plants of the family *Cichoriaceæ*, perennial or annual herbs with usually rush-like stems, inconspicuous linear or scale-like leaves, and mostly terminal, narrow, erect heads of pink flowers. There are about six species, all North American. The best-known is *L. juncea* (often called *skeleton-weed* and *germ-weed*), a native of the Great Plains, which now occurs as a weed in the cultivated fields of that region.

lygosinate (lī'gō-sin-āt), *n.* [*lygosin* + *-ate*[1].] The trade-name for an antiseptic compound of lygosin.

lygosin (lī'gō-sin), *n.* The trade-name of diorthocumaketone.

lying-time (lī'ing-tīm), *n.* Same as ★*lie-time.*

lying-wall (lī'ing-wâl), *n.* Same as *foot-wall.*

lymantriid (lī-man'tri-id), *n.* and *a.* **I.** *n.* An insect of the lepidopterous family *Lymantriidæ.*

II. *a.* Having the characteristics of, or belonging to, the *Lymantriidæ.*

Lymantriidæ (lī-man-trī'i-dē), *n. pl.* [NL., < *Lymantria* + *-idæ.*] A family of lepidopterous insects founded on the type genus *Lymantria* and its allies.

lyme-grass, *n.* 2. In *entom.*, a British collectors' name for a noctuid moth, *Tapinostola elymi.*—**Great lyme-grass,** *Elymus robustus*, a coarse species of the interior, without special value.—**Sea lyme-grass,** a stout species, *Elymus arenarius*, found northward on the shores of Europe and on both coasts of North America. It is useful as a sand-binder, especially in conjunction with beach-grass (maram), making fast the sand which the latter arrests. Its seeds yielded food to the Indians of Northwestern America, and, springing up about deserted lodges, it has been called by the settlers *rancheria grass.* Also *upright*, or *upright sea, lyme-grass.* The soft sea lyme-grass is *E. innovatus*, a similar species, downy below the spike, found along the Great Lakes and northward on both American coasts.

lymexylonid (lī-mek-si-lon'id), *n.* and *a.* **I.** *n.* A member of the coleopterous family *Lymexylonidæ.*

II. *a.* Having the characters of or belonging to the family *Lymexylonidæ.*

lymf, lymfatic. Amended spellings of *lymph, lymphatic.*

lymph, *n.* 3. Any antitoxic serum, as vaccine virus.—**Glycerinated lymph.** See ★*glycerinate.*—**Glycerinized lymph.** Same as ★*glycerinated lymph.*—**Koch's lymph,** essentially a solution for the metabolic products of the tubercle bacillus grown for from 4 to 6 weeks in nutrient bouillon containing 5–6 per cent. of glycerin. The bacilli are removed by filtration through porcelain filters. Inoculation with this fluid constitutes an attempt at active immunization. The material is extensively utilized in the diagnosis of tuberculosis, and is of great value in the recognition of the disease in cattle. Same as *tuberculin*, 1.—**Plastic lymph,** lymph, exuded during inflammation, which shows a tendency to become organized.

lymphadenia (lim-fa-dē'ni-ä), *n.* [NL., < L. *lympha*, water (lymph), + Gr. *ἀδήν*, gland.] Enlargement of the lymphatic glands in general: a symptom of Hodgkin's disease.

lymphadenosis (lim-fad-e-nō'sis), *n.* [NL., < L. *lympha*, water (lymph).] Same as ★*lymphadenia.*

lymphagogue (lim'fa-gog), *n.* [L. *lympha*, water (lymph), + Gr. *ἀγωγός*, leading.] A therapeutic agent which promotes the formation of lymph.

It seems highly probable that the reparative lymph exudation which follows exercise is produced by the agency of chemical substances generated by muscular contraction, just as the digestive lymph flow is caused by exogenous *lymphagogues.* Creatin and lactate of ammonium produce the double curve of arterial pressure induced by exercise and rest.
Nature, May 26, 1904, p. 92.

lymphangiectodes (lim-fan-ji-ek'tō-dēz), *n.* [NL., < L. *lympha*, water (lymph), + *angiect(asia)* + *-odes* (see *-oid*).] Hypertrophy of the skin associated with dilatation of the lymph-spaces.

lymphangiomatous (lim-fan-ji-om'a-tus), *a.* [*lymphangioma(t-)* + *-ous.*] Relating to or affected with lymphangioma. *Buck*, Med. Handbook, I. 227.

lymphangiotomy (lim-fan-ji-ot'ō-mi), *n.* [L. *lympha*, water (lymph), + Gr. *ἀγγεῖον*, vessel, + *τομή*, section.] Dissection of the lymphatic vessels.

lymphatic[1], *a.*—**Waldeyer's lymphatic throat-ring.** See ★*throat-ring.*

lymphatism (lim'fa-tizm), *n.* [*lymphat-ic* + *-ism.*] 1. A depressed physical condition, marked by low vitality, associated with the lymphatic temperament. *Buck*, Med. Handbook, VII. 446.—2. Scrofula.

lymphatolysin (lim-fa-tol'i-sin), *n.* [*lymphat-ic* + *lysin.*] A cytotoxin directed against lymphatic tissue.

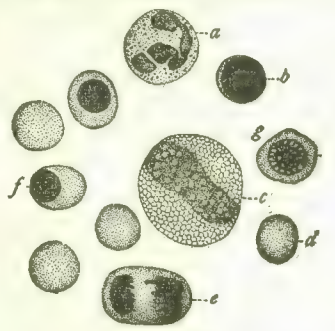
lymphatolytic (lim-fa-tō-lit'ik), *a.* [*lymphatolysin* (*-lyt-*) + *-ic.*] Relating to the action of a lymphatolysin.

lymphedema (lim-fē-dē'mä), *n.* [L. *lympha*, water (lymph), + Gr. *οἴδημα*, swelling.] A dropsical condition of the tissues due to obstruction to the flow of lymph.

lymph-gill (limf'gil), *n.* In certain worms, as the *Capitellidæ* and the *Glyceridæ*, one of the parapodial respiratory processes containing continuations of the body-cavity, and carrying hemolymph: in starfishes, the dermal branchiæ or papulæ.

lymph-gland (limf'gland), *n.* Same as *lymphatic gland.*—**Marrow-lymph glands,** a form of hemolymph glands found in the retroperitoneal adipose tissue near the brim of the pelvis and in relation with the great vessels.

lymph-node (limf'nōd), *n.* One of numerous roundish, somewhat resistant bodies found along the course of the lymphatic vessels and composed of a mass of round cells in a delicate fibrous network.



lymphoblast (lim'fō-blast), *n.* [L. *lympha*, water (lymph), + Gr. *βλαστός*, germ.] A leucocyte of lymph-gland origin, which possesses feeble phagocytic properties: distinguished from the ★*myeloblast.*

lymphoblastic (lim-fō-blas'tik), *a.* [*lymphoblast* + *-ic.*] Relating to a lymphoblast; giving origin to lymphocytes. *Jour. Med. Research*, Dec. 1907, p. 261.

lymphocele (lim'fō-sēl), *n.* [L. *lympha*, water (lymph), + Gr. *κήλη*, tumor.] A cystic tumor containing lymph.

lymphocyte (lim'fō-sīt), *n.* [L. *lympha*, water (lymph), + *κύτος*, a hollow (a cell).] A type of leucocyte found in the blood of all vertebrate animals. It is colored blue or purple with Ehrlich's triple stain, and occurs, in man, normally in the proportion of about 30 per cent.

of the entire number of white blood-cells. There are two varieties, the large (11 to 14

Lymphocyte.

Cover-glass preparation from the bone-marrow of a dog, highly magnified (from preparation of H. F. Müller). *a*, mast-cell; *b*, lymphocyte; *c*, eosinophil cell; *d*, red blood-cell; *e*, erythroblast in process of division; *f*, normoblast; *g*, erythroblast. (From Huber's trans. of Böhm-Davidoff, "Histology.")

microns in diameter), and the small (7.5 microns in diameter), the latter being the more numerous.

Abscess of some variety was suspected, but later a differential count of the white blood cells showed the *lymphocytes* in a proportion of 93 per cent.; the second case was that of a young woman who had been delivered of a child a short time before, in whom the leucocytes ranged between 200,000 and 400,000, the *lymphocytes* were later found to be in a proportion of 98 per cent.
Med. Record, May 30, 1903, p. 810.

lymphocythemia (lim″fō-sī-thē'mi-ä), *n.* [NL., < L. *lympha*, water (lymph), + Gr. *κύτος*, a hollow (a cell), + *αἷμα*, blood.] Same as ★*lymphocytosis.*

lymphocytic (lim-fō-sit'ik), *a.* Pertaining to or of the nature of lymphocytes.

lymphocytosis (lim″fō-sī-tō'sis), *n.* [NL., < L. *lympha*, water (lymph), + Gr. *κύτος*, a hollow (a cell), + *-osis.*] The formation of lymph-cells; specifically, increase, actual or relative, in the number of lymphocytes in the blood.

There may be an increase in the proportions present in the blood of lymphocytes (*lymphocytosis*).
Encyc. Brit., XXXI. 558.

lymphocytotic (lim'fō-sī-tot'ik), *a.* Relating to lymphocytosis, or the formation of lymph-cells.

lymphocytotoxin (lim-fō-sī-tō-tok'sin), *n.* [*lymphocyte* + *toxin.*] A cytotoxin directed against lymphocytes.

lymphœdema, *n.* [NL.] Same as ★*lymphedema.*

lymphogenic (lim-fō-jen'ik), *a.* [L. *lympha*, water (lymph), + Gr. *-γενης*, -producing.] Producing lymph or lymphocytes.

lymphogenous (lim-foj'e-nus), *a.* Same as ★*lymphogenic.*

lymphogonion (lim-fō-gō'ni-on), *n.*; pl. *lymphogonia* (-ä). [L. *lympha*, water (lymph), + Gr. *γόνος*, generation.] A more or less hypothetical ancestral cell of the lymphocytes.

Lymphoid tuberculosis. See ★*tuberculosis.*

lymphopenia (lim-fō-pē'ni-ä), *n.* [L. *lympha*, water (lymph), + Gr. *πενία*, poverty.] A diminution in the number of the lymphocytes of the blood.

lymphorrhagia (lim-fō-rā'ji-ä), *n.* [L. *lympha*, water (lymph), + Gr. *-ραγια*, < *ῥηγνύναι*, break.] Discharge of lymph from a wounded lymphatic vessel.

lymphorrhea, lymphorrhœa (lim-fō-rē'ä), *n.* [L. *lympha*, water (lymph), + Gr. *ῥοία*, flow.] Same as ★*lymphorrhagia.*

lymphostasis (lim-fos'ta-sis), *n.* [L. *lympha*, water (lymph), + Gr. *στάσις*, standing.] Arrest of the flow of lymph.

lymphous (lim'fus), *a.* [*lymph* + *-ous.*] Containing lymph; of or relating to lymph.

lymph-scrotum (limf'skrō″tum), *n.* Elephantiasis of the scrotum.

lymphuria (lim-fū'ri-ä), *n.* [L. *lympha*, water (lymph), + Gr. *οὖρον*, urine.] The presence of lymph in the urine when voided.

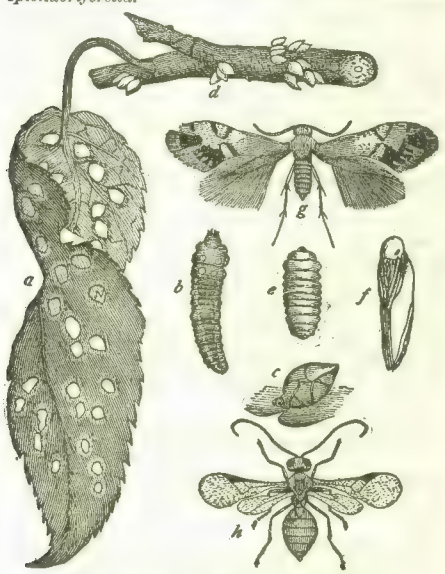
lymph-vascular (limf'vas″kū-lär), *a.* Relating to or containing lymphatic vessels.

Lynceidæ (lin-sē'i-dē), *n. pl.* [NL., < *Lynceus* + *-idæ.*] A family of cladocerous phyllopod crustaceans, having 3-jointed antennal branches and a convoluted intestine. It includes the genera *Lynceus* and *Eurycercus.*

Lynceus, *n.* 2. The typical genus of the family *Lynceidæ.* *Müller*, 1785.

lynch-court (linch'kōrt), *n.* A so-called 'court' hastily but illegally organized by an enraged mob for the trial and summary punishment, according to lynch-law, of some obnoxious person.

lyncher (lin'chėr), *n.* [*lynch*[2], *v.*, + *-er*[1].] One who lynches or takes part in a lynching.



lynching (lin'ching), *n.* [*lynch*[2], *v.*, + *-ing*[1].] The act of executing lynch-law upon a person; the killing of a person by a mob under pretense of summary justice.

Lynton group. See ★*group*[1].

lynx, *n.*—**Isabelline or Tibet lynx,** *Lynx isabellina,* the Tibet wildcat, of a pale-yellowish color.—**Pardine lynx,** *Felis* (*Lynx*) *pardina,* of southern Europe. It is rufous above, white below, with black spots on the body, limbs, and tail.

lyoluminescence (lī″ō-lū-mi-nes′ens), *n.* [Irreg. < Gr. *λύειν,* dissolve, + E. *luminescence.*] The emission of light by certain substances when in process of solution. See ★*luminescence.*

Lyonetia, *n.*—**Apple lyonetia,** a tineoid moth of the family *Elachistidæ, Coptodisca splendoriferella* (formerly known as *Lyonetia saccatella*), whose larva lives on apple-leaves, forming a sac-like case which it carries about with it. Also formerly referred to as *Aspidisca splendoriferella.*

Apple Lyonetia (*Coptodisca splendoriferella*).

a, work on apple leaf; *b*, summer larva; *c*, larva in case traveling; *d*, cases tied to twig for hibernation; *e*, hibernating larva; *f*, chrysalis; *g*, moth; *h*, parasite: all much enlarged except *a* and *d*, which are slightly reduced. (Comstock, U. S. D. A.)

lyonetiid (lī-ō-net′i-id), *n.* and *a.* **I.** *n.* A member of the lepidopterous family *Lyonetiidæ.*

II. *a.* Having the characters of or belonging to the family *Lyonetiidæ.*

Lyonsia (lī-on′si-ą), *n.* [NL., (Turton, 1822).] The typical genus of the family *Lyonsiidæ.*

Lyonsiidæ (lī-on-sī′i-dē), *n. pl.* [NL., < *Lyonsia* + *-idæ.*] A family of anatinacean bivalve mollusks having a cylindrical byssiferous foot and short siphons. It contains the genus *Lyonsia.*

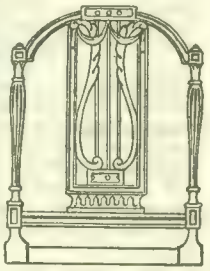
Lyopomi (lī-op′ō-mī), *n. pl.* [NL., irreg. < Gr. *λύειν,* loosen, + *πῶμα,* lid (operculum).] An order of deep-sea fishes, containing the single family *Halosauridæ.*

Lyopsetta (lī-op-set′ą), *n.* [NL., < Gr. *λύειν,* loosen, + *ψῆττα,* flounder.] A genus of flounders found on the west coast of the United States.

Lyosphæra (lī-ō-sfē′rą), *n.* [NL., irreg. < Gr. *λύειν,* loosen, + *σφαῖρα,* ball, sphere.] A genus of fishes of the family *Diodontidæ,* found on the Atlantic coast of the United States.

lypemania (lī-pē-mā′ni-ą), *n.* [NL., irreg. < Gr. *λύπη,* grief, + *μανία,* madness.] Insanity marked by an extreme degree of melancholy.

lypothymia (lī-pō-thim′i-ą), *n.* [NL., < Gr. *λύπη,* grief, + *θυμός,* spirit, mind.] Extreme depression of spirits.



lyr. An abbreviation of *lyric.*

lyrachord (lī′rą-kōrd), *n.* [Irreg. < Gr. *λύρα,* lyre, + *χορδή,* string.] A form of pianoforte invented in England about 1850, in which the hammers were directed against the middle point of the strings. Compare ★*cembalo d'amore,* which may have suggested the idea.

lyre[1], *n.* 4. (*e*) In *pianoforte-making,* the lyre-shaped frame to which the pedals are attached and through which the pedal-rods work.—6. The posterior portion of the under surface of the fornix of the brain, marked by a number of lines bearing a fancied resemblance to a lyre. Also called *lyre of David* or *lyra Davidis.*

lyre-backed (līr′bakt), *a.* In old English furniture, said of a chair in which the centerpiece of the back has the form of a lyre.

lyre-fish (līr′fish), *n.* A gurnard, *Trigla lyra,* of the family *Triglidæ,* found in the Mediterranean and on the coasts of England and France.

A Sheraton Lyre-back.

lyre-flower (līr′flou″ėr), *n.* A handsome, hardy perennial plant, *Bikukulla spectabilis,* with rosy-crimson flowers arranged in graceful racemes. See *Dicentra* and *bleeding-heart,* 2.

lyre-tree (līr′trē), *n.* The tulip-tree, *Liriodendron Tulipifera:* so called from a distant resemblance in the shape of the leaves to a lyre.

lyrically (lir′i-kal-i), *adv.* In a lyric manner.

lyricize (lir′i-sīz), *v. i.*; pret. and pp. *lyricized,* ppr. *lyricizing.* [*lyric* + *-ize.*] To write lyrics or write lyrically.

lyrid (lī′rid), *n.* [*Lyra* + *-id*[2].] Same as *lyraid,* and now the more usual form of the name. *Nature,* April 23, 1903, p. 584.

Lyrodesma (lī-rō-des′mą), *n.* [NL., < Gr. *λύρα,* a lyre, + *δέσμα,* band, hinge.] A genus of fossil prionodesmaceous pelecypods having an oval shell with narrow cardinal border and a hinge-armature which radiates like a fan from below the umbones. It is restricted to the Silurian of Europe and America.

lyrula (lir′ū-lą), *n.* [NL. dim. of *lyra,* lyre.] In polyzoans, a tooth-like process behind the avicularium. *Annals and Mag. Nat. Hist.,* July, 1903, p. 120.

lysactinic (lis-ak-tin′ik), *a.* [Gr. *λύσ(ις),* solution, + *ἀκτίς* (*ἀκτιν-*), ray, + *-ic.*] In echinoderms, as the starfishes, having the podia limited to the lower surface of the body. Also, erroneously, *lissactinic.* Compare ★*desmactinic.*

lysalbic (li-sal′bik), *a.* [Gr. *λύσ(ις),* solution, + *alb(umen)* + *-ic.*] Noting an acid, a compound prepared by the action of caustic alkali (alkali hydroxid) on egg-albumin. With compounds of the heavy metals it gives precipitates which are soluble in alkali, the metal passing into the colloidal state.

Lysarete (li-sar′e-tē), *n.* [NL., < Gr. *Λυσαρέτη,* a feminine personal name.] The typical genus of the family *Lysaretidæ.*

Lysaretidæ (lis-ą-ret′i-dē), *n. pl.* [NL., < *Lysarete* + *-idæ.*] A family of polychætous annelids having a prestomium with three tentacles and four eyes, the first two segments without appendages, the parapodia uniramous with one set of setæ, and the dorsal cirri foliaceous and branchial. It includes the genera *Lysarete, Danymene,* and *Halla.*

lysatine (lis′ą-tin), *n.* [*lys(in)* + *-ate*[1] + *-ine*[2].] A colorless basic compound, $C_6H_{13}O_2N_3$, obtained, together with lysatinine, by the action of stannous chlorid and hydrochloric acid on albuminous compounds. It is said to yield urea when decomposed, and it may be a mixture of arginin and lysin.

lysatinine (li-sat′i-nin), *n.* [*lysatine* + *-ine*[2].] A colorless basic compound, $C_6H_{11}ON_3$, obtained, together with lysatine, by the action of stannous chlorid and hydrochloric acid on albuminous compounds.

lysidine (lis′i-din), *n.* [*lys(in)* + *-id*[1] + *-ine*[2].] A bright red basic compound, $CH_3C{<}\begin{matrix}NHCH_2\\ |\\ N-CH_2\end{matrix}$, prepared by the action of ethylenediamine hydrochlorid on sodium acetate. It melts at 105° C., boils at 195–198° C., and is used medicinally in cases of gout to remove uric acid, its salt with which is extremely readily soluble. Also called *ethylene ethenyldiamine* and *μ-methylglyoxalidine.*

lysimeter, *n.* 2. An instrument for determining the quantity of matter held in solution in a liquid.

lysin (lī′sin), *n.* [Gr. *λύσ-ις,* loosening, solution, dissolution, + *-in*[2].] 1. In *physiol. chem.,* one of the hexon bases; a diamino acid of the composition $C_6H_{14}N_2O_2$, resulting on decomposition of most albumins, including the protamines. It is the mother-substance of the ptomaïne cadaverin.—2. A substance, found in blood serum, which, when injected into the body of an animal, will cause the dissolution or destruction of cellular elements. Such lysins may be produced artificially by immunization with various cells in animals of different species, and are then lytic for the corresponding cells. Such bodies are the hemolysins, the leucolysins, endotheliolysins, etc.

lysine (lī′sin), *n.* [Gr. *λύσ-ις,* loosening, solution, dissolution, + *-ine*[2].] A colorless compound, $CH_2(NH_2)CH_2CH_2CH_2CH(NH_2)$-COOH, formed by the action of dilute acids or of trypsin on albuminous substances of both vegetable and animal origin. It crystallizes in slender needles and forms salts with both acids and bases. Also called *a-ε-diaminocapric acid.*

lysis, *n.* 3. The dissolution of various cells by means of lysins.

That complete agglutination has no effect upon subsequent solution (*lysis*) of the corpuscles will be shown when treating of the latter phenomena.
Jour. Exper. Med., March 17, 1902, p. 4.

lysoform (lī′sō-fôrm), *n.* [*lyso(l)* + *form-* (*aldehyde*).] A clear, yellowish, odorless, soapy liquid containing formaldehyde and lysol: used as an antiseptic.

lysogenesis (lī-sō-jen′e-sis), *n.* [*lys(in)* + Gr. *γένεσις,* production.] The production of a lysin, or the initiation of the process of lysis.

It has been completely established that in this phenomenon of *lysogenesis* there are two substances concerned, one specially developed or developed in excess, and the other present in normal serum.
Encyc. Brit., XXVI. 68.

lysogenetic (lī″sō-jē-net′ik), *a.* [*lysogenesis* (*-et-*) + *-ic.*] Of or pertaining to lysogenesis.

Sera from those bacteria which produce, so far as we know, no soluble poison, are not antitoxic, having no effect upon the toxines already formed in the system in case of disease, but bactericidal acting directly upon the bacteria causing their disintegration and complete solution, to which the term bacteriolysis or *lysogenetic* action has been applied, and to this really marvellous property we have no analogy in the whole domain of chemicals, antiseptics or disinfectants.
Columbus Med. Jour., Jan., 1903, p. 14.

lysogenic (lī-sō-jen′ik), *a.* [*lys(in)* + Gr. *-γενης,* -producing, + *-ic.*] Same as ★*lysogenetic.*

The first of these is the *lysogenic* action, which consists in the production of a change in the corresponding bacterium whereby it becomes granular, swells up, and ultimately may undergo dissolution.
Encyc. Brit., XXVI. 68.

lysol (lī′sol), *n.* [Gr. *λύσ-ις,* solution, + *-ol.*] A 50 per cent. solution of the cresols of tar-oil in neutral soap: used as an antiseptic, in 0.25 to 2 per cent. aqueous solution, and also in histological work, as a macerating and isolating medium.

lyssi (lis′ī), *n. pl.* [NL., < *lyssa,* q. v.] Little blisters on the tongue, occurring in the early stage of rabies.

lyssic (lis′ik), *a.* Relating to lyssa or rabies; hydrophobic; rabic.

lysulfol (lī-sul′fol), *n.* [*ly(sol)* + *sulf(ur),* *sulph(ur),* + *-ol.*] A thick, black, viscous liquid containing lysol and sulphur. It is miscible with water and is used externally in certain skin diseases.

lysuric (lī-sū′rik), *a.* [*lys-in* + *uric.*] Noting an acid, $C_6H_{12}(COC_6H_5)N_2O_2$, a derivative of lysin.

Lythrulon (lith-rō′lon), *n.* [NL., < Gr. *λίθρον,* gore, + *οὐλον,* gum (of the mouth).] A genus of fishes of the family *Hæmulidæ,* found on the Pacific coast of tropical America.

lytic (lit′ik), *a.* [Gr. *λυτικός, adj.,* < *λύσις,* loosening, *λυτός,* loosed; see *lysis.*] Relating to lysis or the destruction of the cells of a part; producing lysis.

The factors required for producing solution of cells are similar to those for causing solution of bacteria under like conditions. Only when the *lytic* serum is very fresh will solution be effected; the addition, however, of peritoneal exudate or fresh normal serum to immune serum which has lost the solvent property, suffices to restore it.
Jour. Exper. Med., March 17, 1902, p. 281.

Lyttonia (li-tō′ni-ą), *n.* [NL., from the surname *Lytton.*] A genus of very peculiar brachiopods of the family *Thecidiidæ,* occurring in the Carboniferous formation of China and India. It possessed very large and highly inequivalve, irregular shells, with broad lateral expansion and numerous laterally directed brachial ridges in the ventral valve, with corresponding grooves in the dorsal valve.

lyttonioid (li-tō′ni-oid), *a.* [*Lyttoni(a)* + *-oid.*] Related to or resembling the genus *Lyttonia.*

M **3.** As a symbol: (*c*) M denotes (1) magnetic moment: usually printed in old English; (2) a gaseous pressure of the millionth of an atmosphere. (*d*) μ denotes (1) magnetic permeability or the specific conductivity of any substance for lines of magnetic force; (2) the coefficient of friction. (*e*) *m* stands for the intensity or strength of a magnetic pole. (*f*) m^2 stands for *square meters*, m^3 for *cubic meters*.—**4.** As an abbreviation: (*a*) In titles, M. stands also for *Marquis*, *Matthew* (a book of the New Testament), and *Monsieur*. (*g*) In a ship's log-book, *m.* is an abbreviation (2) of *moderate*. (*h*) In a chart, *m.* stands for *mud;* in *meteor.*, for *mist;* in *ophthalmol.*, for *myopia*. (*i*) In *phar.*, M. or *m.* stands for *macerare* (macerate), *manipulus* (a handful), *mensura* (measure or by measure), *minimum* (minim), *misce* (mix), *mistura* (mixture). (*j*) In astronomical tables, M. or *m.* (abbreviation of L. *meridies*) indicates meridian or meridional: 12 M. stands for noon. See *A.M.* and *P.M.* (*k*) In *astron.*, M. stands for *Messier*, referring to his catalogue of 103 nebulæ and star-clusters: thus, 51M. or M.51 is the famous whirlpool nebula. (*l*) M. stands for *Monday;* M. or *m.*, for *mile* or *miles*, *mill* or *mills*, *month* or *months*, *moon*, *muster;* *m.*, for *married*, *masculine*, *middle*, *minutes*, *morning*, and the Latin *mille* (a thousand).

maal (mâl), *n.* [Norw. Dan. *maal* = Sw. *mål* = Icel. *mál*, speech, language.] In Norway, language: a term occurring in several compounds of some historic note, as *maalstræv*, 'the language struggle,' namely, the struggle to substitute the *landsmaal*, or 'popular speech,' as partly normalized by Aasen in his grammar (1848) and dictionary (1858 and 1873), in place of the *rigsmaal*, or 'national speech,' the literary Norwegian, nearly identical with Danish.

The close of 1899 and the beginning of 1900 were occupied by a discussion, which drowned all other interests, and in which every Norwegian author took part, as to the adoption of the *landsmaal*, or composite dialect of the peasants, as the national language in place of the *rigs-maal* or Dano-Norwegian. Political prejudice greatly embittered the controversy, but the proposition that the *landsmaal*, which dates from the exertions of Ivar Aasen (*q. v.*) in 1850, should oust the language in which all the classics of Norway are written, was opposed by almost every philologist and writer in the country, particularly by Björnson and Sophus Bugge (born 1833). On the other side, Arne Garborg's was almost the only name which carried any literary weight. *Encyc. Brit.*, XXXI. 275.

ma'am, *n.* At the British Court it is used, instead of 'madam,' in addressing the queen or a royal princess.

ma'amselle (mäm-zel'), *n.* An Englished form of *mademoiselle*.

maar (mär), *n.* [G. dial., a form of *meer*, sea: see *mere*[1].] In *geol.*: (*a*) A local German name originally applied to certain small crater-lakes in the recently extinct volcanic region of the Eifel, near Bonn, on the Rhine. The craters were believed to have resulted from explosive outbreaks, without emissions of lava. (*b*) Technically, any crater which has been produced by an explosion unaccompanied by lava. *Annals and Mag. Nat. Hist.*, Feb., 1904, p. 135.

maara-shell (mä'rä-shel), *n.* A large ornamental top-shell, *Turbo margaritaceus*, found in the South Pacific.

maatje (mät'ye), *n.* [D., a small measure, a deciliter, dim. of *maat*, measure: see *mete*[1], *n.*] The name given in Holland to the deciliter.

mabi (mä-bē'), *n.* [Carib.; cf. *mabby*, *mobby*, *mobee*.] **1.** A name in Porto Rico for a West Indian tree of the buckthorn family, *Colubrina reclinata*, yielding a heavy, hard, strong, dark-brown wood and a medicinal bark. See *naked-wood*.—**2.** A drink prepared from the bark of the mabi and also from that of *Colubrina Colubrina*. It is commonly sold in the markets and peddled in the streets of Porto Rico, where it is used as a beverage and as a remedy for indigestion.

mabolo (mä-bō'lō), *n.* [Bisaya *mabolo*.] In the Philippine Islands, the kamagon, *Diospyros discolor*, which bears an edible fruit covered with down. Also called *talang*. See ★*kamagon*.

mac (mak), *n.* Short for *macadam*. [Colloq.]

Until of late years little attention was paid to "*Mac*," for it was considered in no way distinct from other kinds of street-dirt. *Mayhew*, London Labour, II. 197.

Mac., Macc. Abbreviations of *Maccabees*.

macabi (ma-kä'bi), *n.* The ladyfish.

macadam, *n.* **2.** The material used for a macadam pavement.—**Tar-macadam,** the material used in a form of macadam roadway or pavement in which the broken stone for the upper courses is treated with coal-tar for the purpose of increasing the strength and durability of bond, preventing the formation of dust, and rendering the surface of the roadway impervious to moisture.

macadamite (mak-ad'am-īt), *n.* An alloy containing about 72 per cent. of aluminium, 24 per cent. of zinc, and 4 per cent. of copper. It is said to possess a tensile strength of more than 44,000 pounds to the square inch. *Mineral Resources of U. S.*, 1902, p. 233.

macadoub (mak'a-döb), *n.* [Etym. uncertain; probably S. A. Indian.] A name given by natives of British Guiana to a luminous larviform insect, probably the larviform female of a coleopterous insect of the tribe *Phengodini*. Probably same as ★*railway-beetle* (which see).

Mr. C. W. Anderson exhibited a specimen of a light-giving larva brought by him from near the boundary of British Guiana with Brazil, exhibiting when living a ruby light in its head, and a double row of phosphorescent spots along the body, two on each segment. These lights were not intermittent, but glowed continuously. This presumed coleopterous larva was called "*macadoub*" by the natives, and is not uncommon in the region named. *Athenæum*, Nov. 30, 1907, p. 694.

macana (mä-kä'nä), *n.* [Arawak of the Greater Antilles *macana*, a war-club; also in various idioms of the isthmus of Panama.] **1.** A war-club made of heavy wood, or sometimes of stone, formerly used by the Indians in parts of the West Indies. Through the Spaniards the word was circulated in many parts of Spanish America and became incorporated as a designation for Indian war-club in general in many Indian tongues, alongside of original native terms. It is used chiefly by Spanish authors, although the Indians occasionally use it also.

2. A common name of *Eigenmannia humboldti*, a fish of the family *Gymnotidæ*, found in rivers near Panama.

macaroni, *n.* **5.** A vulgar name in Jamaica for a Mexican quarter-dollar, or, afterward, for an English shilling. [Spelled *maccaroni;* also called *macaroni-piece*.]

macaronicism (mak-a-ron'i-sizm), *n.* [*macaronic* + *-ism*.] The literary style known as macaronic. See *macaronic*, *a.*, 3.

macaronism (mak-a-rō'nizm), *n.* [*macaron-i* + *-ism*.] The style and manners of a macaroni; dandyism. See *macaroni*, 3.

macasla (mä-käs'lä), *n.* [Bisaya *macasla*.] A shrub whose root affords a counterpoison, and whose fruit is poisonous to fish. A mixture containing the poison is thrown into the water. The fish are stupefied, rise to the surface, and are easily caught.

macauco (mä-kä-ō'kō), *n.* [W. Ind.] In Guiana and the British West Indies, the larva of a cerambycid beetle of the genus *Prionus*. This larva is, or was, eaten by both whites and blacks, after cleaning and roasting.

Macaulayese (ma-kâ-lā-ēs'), *n.* The literary style of the historian and essayist, T. B. Macaulay (1800–1859).

maccaluba (mak-a-lö'bä), *n.* [Sicilian name.] An eruptive vent whence gases (usually hydrocarbons), brines, mud, and, less often, boulders are blown out, building small cones which resemble normal volcanoes. Such vents have no apparent connection with true volcanoes but are due to the generation of gas in the depths.

On the other hand, solfataras and pits of boiling mud (*maccalubas*) are very common in the volcanic regions where tuff is the predominating rock. The solfataras at Krisuvik and Mývatn [in Iceland] are very well known. *Geog. Jour.* (R. G. S.), XIII. 513.

M. Acct. An abbreviation of *Master of Accounts*.

mace[4] (mās), *n.* [Origin obscure.] Swindling; a swindler; a swindling loan-office.—**On mace,** on tick.

mace[4] (mās), *v. t.* and *i.*; pret. and pp. *maced*, ppr. *macing*. [See ★*mace* [4], *n.*] To swindle.

Maced. An abbreviation of *Macedonian*.

macédoine (mä-sā-dwon'), *n.* [F., a medley, a mess, lit. Macedonia; in allusion perhaps to the chronic confusion in modern Macedonia.] **1.** A mold of jelly containing a mixture of fruits; also, a mixture of vegetables served as a garnish to meat or, with a sauce, as a vegetable dish or as a salad.—**2.** Hence, figuratively, any mixture of unrelated things.

That strange *macedoine* of mental and moral qualities—the late Count Gurowski—once remarked to James Russell Lowell, with that easy superiority of knowledge about this country which is the monopoly of foreigners, that we have no singing birds. *Springfield Republican*, June 23, 1902.

macene (mā-sēn'), *n.* [*mac(e)*[2] + *-ene*.] A colorless liquid terpene, $C_{10}H_{16}$, contained in oil of mace. It has an odor of thyme.

macer[2] (mā'sėr), *n.* [*mace*[4] + *-er*[1].] A swindler.

Maceration process. See ★*process*.

mach., machin. Abbreviations (*a*) of *machinery;* (*b*) of *machinist*.

machæracanthus (mā-kē-ra-kan'thus), *n.* [NL., < Gr. *μάχαιρα*, knife, + *ἄκανθα*, thorn.] The fin-spines of a genus of Devonian selachians or sharks of large size: the only parts of these fishes yet known.

machærodontine (mā-kē-rō-don'tin), *a.* [*Machærodus* (*-odont-*) + *-ine*[1].] Related to or having the characters of *Machærodus*.

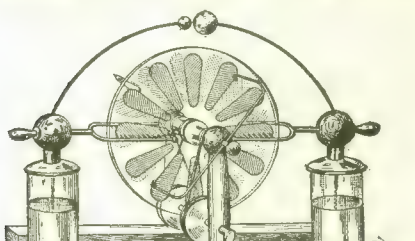
machairomancy (ma-kī'rō-man-si), *n.* [Gr. *μάχαιρα*, knife, sword, + *μαντεία*, divination.] Divination by means of a sword.

machan (ma-chän'), *n.* [Also *muchan;* < Hind. *machán*, an elevated platform.] In *tiger-shooting*, a high platform or some device to protect and conceal the hunter while he is watching for the tiger. The machan is usually built in a tree and is concealed by the branches.

We stayed three days, trying every means which might enable us to shoot a specimen [buffalo], but without luck. We tried *machans* at night; we tried walking round the outskirts in bright moonlight, and nearly with success. *Geog. Jour.* (R. G. S.), XVIII. 262.

machete, *n.* **2.** (*b*) Same as *cutlas-fish*.—**3.** A small guitar with four strings, common in Portugal. Its usual tuning is an octave above that of the ordinary guitar.

machetero (má-chā-tā'rō), *n.* [Sp., < *machete*, machete.] A person who carries and uses a machete or cutlass.



machicot (mäsh-i-kō'), *n.* [OF. *machicot*, a minor singer in a choir.] In *music*, a singer who is skilful in machicotage.

machicotage (mäsh-i-kō-täzh'), *n.* [F., < *machicot;* see ★*machicot*.] In *medieval music*, the practice or effect of adding passing-notes and other embellishments to a plain-song melody.

machilla (mä-chil'ä), *n.* [East African.] A hammock or chair slung on a pole and carried by porters.

machine, *n.*—**Beating-out machine.** Same as ★*leveling-machine*.—**Belt-machine.** See ★*sandpapering-machine*.—**Bornhardt's machine,** a portable frictional electrical machine much used in France for firing explosives in blasting.—**Compound machine,** a dynamo-electric machine which has two field-windings, a shunt-winding which receives a small branch current at full voltage, and a series-winding having only a few turns of large size, which receives the full armature current, or a

large part thereof, before it passes to the external circuit. —**Convertible cutting-machine,** an apparatus used by cracker-bakers. It can be changed from a cutting-machine into a panning-machine, or vice versa.—**Expanding machine,** a machine for expanding the end of a pipe or tube to secure it in a flange or tube-sheet.—**Fiber-cleaning machine.** See *leaf-*★*fiber machine.*—**Garnett machine,** a machine similar to a wool-carding machine, with two large cylinders and a number of small top-rollers, but with stronger carding-teeth, used for opening wool waste, especially yarn waste: named after the original builders, P. and C. Garnett, of Cleckheaton, England. See cut at ★*garnett.*—**Magneto-electric machine.** See *electric machine,* under *electric.*—**Matrix-rolling machine.** See *matrix.*—**Moving-picture machine.** See ★*picture.* —**Nail-making machine,** a machine for making cut nails, by cutting them from a strip and forging the heads; also, a machine in which wire nails are formed from wire of the same diameter as the body of the nail.—**Paper-cutting machine,** a machine with a long and heavy blade of steel that quickly cuts many sheets of paper to the required length or width.—**Rounding-and-backing machine,** in *bookbinding,* same as *rounding-machine (b).*—**Sand-disk machine.** See ★*sandpapering-machine.*—**Sash-sticking and -plowing machine.** See ★*sticker*[1], 4.—**Screw-measuring machine,** a machine having a microscope and micrometer for measuring the diameters and pitch and angle of thread on a screw.—**Series-machine,** in *elect.,* a dynamo-electric machine in which the field exciting-coils are connected in series to the armature, so that the whole or a large part of the armature current traverses the field-coils, but only a small part of the voltage generated by the machine (or supplied to it, in a motor) is consumed by the field-coils, which then consist of relatively few turns of large wire or copper bars.—**Shunt-machine,** in *elect.,* a dynamo-electric machine in which the field exciting-coils are connected in shunt to the armature, and so receive only a small part of the total machine current, at full or nearly full machine voltage. The field-coils then contain very many turns of relatively small wire.—**Sigsbee machine.** Same as *Sigsbee* ★*sounding-machine.*—**Strip-covering machine.** See ★*strip-machine.*—**Synchronous machine,** in *elect.,* an alternating-current machine revolving in step with the alternations of the current traversing the machine. —**Tin-pickling machine,** a machine for hoisting and lowering the metal plates into the acid bath in the process of pickling and washing.—**Truing-up machine,** a machine for turning rollers to a uniform diameter, as those on a drawing-frame in cotton-manufacturing.—**Universal machine,** a name applied to certain types of milling and emery grinding-machines that perform various operations within the sphere of milling, gear-cutting, and grinding.—**Wimshurst machine,** a simple, self-exciting, highly efficient induction electrical machine. It consists of two well-varnished glass disks which are rotated in opposite directions about a fixed horizontal spindle.

Wimshurst Machine.

These disks carry, on their outer surfaces, narrow sections of tin-foil placed radially at equal angular distances apart. The electrical charge developed is collected by combs and condensed in Leyden jars which support the discharging-rods. Two bent conducting-rods, at an angle of 45° to the combs, are provided with fine wire brushes, and twice during each revolution two diametrically opposite sections of tin-foil are put in connection with each other.—**Wire-forming machine,** in *sheet-metal work,* a general name for power-automatic machines for measuring, straightening, cutting, and forming wire into handles, ears, bails, and rings of the sizes and forms used in sheet-metal ware.—**Zig-zag machine.** See ★*overseaming-machine.*

machine-cut (ma-shēn′kut), *a.* Cut or finished by machinery; specifically, of files, cut in a file-cutting machine, instead of by hand.

machine-fitted (ma-shēn′fit″ed), *a.* Finished or brought to an exact size in a machine-tool, instead of by hand.

machinely (ma-shēn′li), *adv.* By or as if by a machine; correctly. [Rare.]

> To the legion of the lost ones, to the cohort of the damned,
> To my brethren in their sorrow overseas,
> Sings a gentleman of England, cleanly bred, *machinely* crammed,
> And a trooper of the Empress, if you please.
> *R. Kipling,* Gentlemen-Rankers, in Barrack-room [Ballads, p. 63.

machine-screw (ma-shēn′skrö), *n.* A bolt or screw having a moderately fine machine or standard bolt-thread, a blunt end, and a fillister, flat, or button head to be set home by a screw-driver rather than a wrench: used for holding together parts of machines or other metal-work.

machine-thread (ma-shēn′thred), *n.* Cotton thread made especially for use on the sewing-machine; sewing-machine thread.

machinism (ma-shēn′izm), *n.* [*machine* + *-ism.*] The methods of the 'machine' in party politics, in the United States. *Kansas City Daily Star,* April 9, 1903.

machinization (ma-shē-ni-zā′shon), *n.* [*machinize* + *-ation.*] The process or the result of machinizing.

machromin (ma-krō′min), *n.* [*ma*(*clurin*) + Gr. *χρῶμα,* color, + *-in*[2].] A yellow substance, soluble in water, formed, together with phloroglucin, when maclurin is reduced with zinc and sulphuric acid. When oxidized it turns blue.

machuelo (mä-chö-ā′lō), *n.* [Sp., a small he mule.] Same as *thread-herring,* 2.

machuto (mä-chö′tō), *n.* [Sp.] The common mullet.

macies (mā′shi-ēz), *n.* [L.: see *meager, emaciate.*] Marasmus; emaciation.

macilence (mas′i-lens), *n.* Same as *macilency.*

macilent, *a.* 2. Of literary products, thin; dry; jejune.

mackerel[1], *n.* In Australia, a fish, *Scomber antarcticus,* Castln., similar to the chub mackerel, *Scomber Japonicus,* Houttuyn; in New Zealand, *Scomber australasicus,* Cuv. and Val. *E. E. Morris,* Austral English.—**Monterey Spanish mackerel,** a scombroid fish, *Scomberomorus concolor,* found on the California coast.

mackerel-bird (mak′e-rel-bėrd″), *n.* A local English name for young kittiwake gulls, *Larus tridactylus,* which begin to fly about the time that the mackerel come on the coast.

mackerel-breeze (mak′e-rel-brēz), *n.* A fresh breeze which has good sailing power. Compare *mackerel gale* (which see, under *gale*[2]).

mackerel-pocket (mak′e-rel-pok″et), *n.* A bag of netting immersed in the water to hold mackerel and keep them alive.

mackerel-spiller (mak′e-rel-spil″ėr), *n.* Same as ★*mackerel-pocket.*

mackintoshite (mak′in-tosh-īt), *n.* [Named after J. B. *Mackintosh,* New York, who died in 1891.] A silicate of uranium and thorium, occurring in black nodular masses and also, rarely, in square prisms: found with gadolinite in Llano County, Texas. It exhibits radioactivity in a marked degree.

mackite (mak′īt), *n.* [From a surname (?) + *-ite*[2].] A trade-name for a material said to consist essentially of a mixture of asbestos and plaster of Paris, intended for use in house-construction as a fire-proof substitute for wood in floors, partition walls, pipe-coverings, etc.

Maclaurin expansion. Same as *Maclaurin's theorem* (which see, under *theorem*).—**Maclaurin's configuration.** See ★*configuration.*

macleyine (mak-lā′in), *n.* Same as ★*protopine.*

Maclurea (mak-lö′rē-ą), *n.* See *Maclurites.*

maclurin (mak-lö′rin), *n.* [*Maclura* + *in*[2].] A pale yellow crystalline compound, $(OH)_3C_6H_2.CO.C_6H_3(OH)_2 + H_2O$; protocatechuphloroglucinol. It occurs in yellow-wood, *Morus tinctoria* (or *Maclura aurantiaca*). When boiled with concentrated caustic potash or when heated with dilute sulphuric acid to 120° C., it yields phloroglucinol and protocatechuic acid. It loses its water of crystallization at 130° C. and melts at 200° C. See ★*morintannic acid.*

Macquaria (ma-kwā′ri-ą), *n.* [NL., from the river *Macquarie.*] A genus of serranoid fishes found in rivers of southeastern Australia.

macro-æsthesia (mak″rō-es-thē′si-ą), *n.* [NL., < Gr. *μακρός,* long, large, + *αἴσθησις,* perception.] A form of paræsthesia in which objects give the sensation, when touched, of being larger than they really are.

macro-axis (mak′rō-ak″sis), *n.* [NL., < Gr. *μακρός,* long, + L. *axis,* axis.] In *crystal.,* the macrodiagonal axis.

Macrobdella (mak-rob-del′ą), *n.* [NL., < Gr. *μακρός,* large, + *βδέλλα,* leech.] A genus of large leeches belonging to the family *Ichthyobdellidæ. M. decora* is sometimes used for blood-letting.

macrobian[1] (ma-krō′bi-an), *a.* and *n.* [Gr. *μακρόβιος,* long-lived, < *μακρός,* long, + *βίος,* life.] **I.** *a.* Long-lived.

II. *n.* One who has a long life; a macrobiote.

Macrobian[2] (ma-krō′bi-an), *a.* [LL. *Macrobius,* < Gr. *Μακρόβιος,* a personal name, lit. 'long-lived.'] Pertaining to Aurelius Theodosius Macrobius, a writer who lived probably in the first part of the fifth century after Christ. —**Macrobian sketches,** special map-illustrations furnished by Macrobius in connection with various passages in his commentary on Cicero's "Dream of Scipio," which discuss especially the question of the terrestrial zones, to which most of the sketches refer.

> Macrobius shares with Sallust the peculiarity of special map-illustration, arising out of specific passages in the works of each; but whereas the Sallust maps stand comparatively apart, these *Macrobian sketches,* as we have seen, are clearly members of a large and interesting family. *Geog. Jour.* (R. G. S.), XV. 383.

macrobiostigmatic (mak″rō-bī-ō-stig-mat′ik), *a.* [Gr. *μακρόβιος,* long-lived, + *στιγμα,* point (stigma): see *stigmatic.*] In *bot.,* having the stigma long-lived: said of a proterogynous flower in which the stigma continues receptive to pollen until the anthers mature.

macrobiostigmatous (mak-rō-bī-ō-stig′ma-tus), *a.* Same as ★*macrobiostigmatic.*

macrobrachia (mak-rō-brā′ki-ą), *n.* [NL., < Gr. *μακρός,* long, + *βραχίων* (L. *brachium*), arm.] A condition in which the arms are abnormally long or large.

macrobranchiate (mak-rō-brang′ki-āt), *a.* [Gr. *μακρός,* large, + *βράγχια,* gills, + *-ate*[1].] Having large gills; also, of or pertaining to the large gill: as, the *macrobranchiate* segment, which contains the greater gill, in the body of *Nautilus.* Opposed to ★*microbranchiate.*

> In the body of the animal [Nautilus] two metameres are recognized—the microbranchiate segment, containing the smaller gill, the outer osphradium, pericardial gland, kidney, and kidney opening, with the generative opening on the right side and the opening of the pear-shaped body on the left; and the *macrobranchiate* segment, containing the greater gill and the inner osphradium, pericardial gland, kidney, and renal opening. *Annals and Mag. Nat. Hist.,* Jan., 1903, p. 135.

macrocentrosome (mak-rō-sen′trō-sōm), *n.* [Gr. *μακρός,* long, + E. *centrosome.*] In *cytol.,* the centrosome of Boveri, that is, a centrosome containing a central granule: probably the equivalent of the ★*entosphere* (which see). *Ziegler,* 1898.

macrocephalia (mak″rō-se-fā′li-ą), *n.* [NL.] Same as ★*macrocephaly.*

macrocephalism (mak-rō-sef′a-lizm), *n.* [*macrocephal*(*ous*) + *-ism.*] Same as ★*macrocephalia.*

macrocephalus (mak-rō-sef′a-lus), *n.*; pl. *macrocephali* (-lī). [NL., < Gr. *μακροκέφαλος,* long-headed: see *macrocephalous.*] One who has an abnormally large head.

macrocephaly (mak-rō-sef′a-li), *n.* [NL. *macrocephalia,* < Gr. *μακροκέφαλος,* long-headed. See *macrocephalous.*] The condition of having an abnormally, or unusually, large head; macrocephalia.

> The evolution of man from microcephaly to *macrocephaly* has been associated with the passages from macrodontic to a microdontic condition. *Science,* Oct. 30, 1903, p. 550.

macrochæta (mak-rō-kē′tą), *n.*; pl. *macrochætæ* (-tē). [NL., < Gr. *μακρός,* long, + *χαίτη,* mane (bristle).] One of certain large bristles on the body of dipterous insects, used in classification. See ★*chætotaxy.*

macrochemistry (mak-rō-kem′is-tri), *n.* [Gr. *μακρός,* long, large, + E. *chemistry.*] The chemistry of substances as observed in quantities easily perceptible by the unassisted eye: opposed to *microchemistry,* which deals with the chemical behavior of substances as seen under the microscope.

macrochilia (mak-rō-kī′li-ą), *n.* [NL., < Gr. *μακρός,* long, large, + *χεῖλος,* lip.] Abnormal thickness of the lips.

macrochiria (mak-rō-kī′ri-ą), *n.* [NL., < Gr. *μακρός,* long, large, + *χείρ,* hand.] Abnormal size of the hands.

macrocnemia (mak-rok-nē′mi-ą), *n.* [NL., < Gr. *μακρός,* long, large, + *κνήμη,* tibia.] The condition in which the legs, especially below the knee, are of abnormal length or size.

macrocnemic (mak-rok-nē′mik), *a.* [*macrocnem*(*ia*) + *-ic.*] Same as ★*dolichocnemic.*

macrocosmology (mak″rō-koz-mol′ō-ji), *n.* [*macrocosm* + *-ology.*] A description or an account of the macrocosm.

macrocranial (mak-rō-krā′ni-al), *a.* [Gr. *μακρός,* long, + *κρανίον,* skull, + *-al*[1].] In *anthrop.,* characterized by or exhibiting a skull of more than middle length.

> Dolichocephaly and chamaecephaly in both races are associated with *macrocranial* characters. *Biometrika,* Aug., 1902, p. 462.

macrocytase (mak-rō-sī′tās), *n.* [Gr. *μακρός,* long, large, + E. *cytase.*] A cytase (complement) in the sense of Metchnikoff, derived from the large lymphocytes of the lymph-nodes, etc.

macrocyte (mak′rō-sīt), *n.* [Gr. *μακρός*, long, large, + *κύτος*, a hollow (a cell).] A red blood-corpuscle of abnormally large size.

In secondary anæmias . . . microcytes . . . disappear as convalescence sets in, and give place to *macrocytes*.
Buck, Med. Handbook, I. 204.

macrocythemia (mak″rō-sī-thē′mi-ą), *n.* [Gr. *μακρός*, long, large, + *κύτος*, a hollow (a cell), + *αἷμα*, blood.] The occurrence of large red corpuscles in the blood.

macrocytosis (mak″rō-sī-tō′sis), *n.* [NL., < Gr. *μακρός*, long, large, + *κύτος*, a hollow (a cell), + *-osis*.] Same as ★*macrocythemia;* also, the process of formation of macrocytes: a tendency to over-size of the red blood-corpuscles.

macrodactylia (mak″rō-dak-til′i-ą), *n.* [NL., < Gr. *μακροδάκτυλος*, long-fingered: see *macrodactyl.*] Abnormal length or thickness of the fingers or toes.

macrodactylism (mak-rō-dak′ti-lizm), *n.* [*macrodactyl* + *-ism.*] Same as ★*macrodactylia.*

Macrodon (mak′rō-don), *n.* [NL., < Gr. *μακρός*, long, + *ὀδούς* (*ὀδοντ-*), tooth.] A genus of fishes belonging to the family *Erythrinidæ*, found in fresh waters of South America.

macrodontic (mak-rō-don′tik), *a.* [*macrodont* + *-ic.*] Same as ★*megadont*, 2.

macroërgate (mak-rō-ėr′gāt), *n.* [Gr. *μακρός*, long, large, + *ἐργάτης*, worker.] A very large ergatoid ant (See ★*ergatoid.*) Wheeler has shown that the enormous size of some of the macroërgates of *Pheidole commutata* is a swollen condition caused by the presence in the body of a parasitic worm of the genus *Mermis.*

These *macroërgates* are compared with phenomena observed among other species, the author concluding that the character of the adult ants is not due to the efforts of the attendant workers alone, but also to a certain amount of initiative in the larvæ.
Science, Dec. 13, 1901, p. 932.

macroflora (mak′rō-flō-rą), *n.* [Gr. *μακρός*, large, + NL. *flora.*] See the extract.

The Italian botanists, Messieurs Levier and Sommier, have given a vivid account of what they call the *makroflora* of the Central Caucasus—those wild-flower beds, in which a man and a horse may literally be lost to sight, the product of sudden heat on a rich and sodden soil composed of the vegetable mold of ages. Has any competent hand celebrated the mikroflora of the highest ridges, those tiny, vivid forget-me-nots and gentians and ranunculuses that flourish on rock-island 'Jardins' like that of Mont Blanc, among the eternal snows, and enamel the highest rocks of the Basodano and the Lombard Alps?
Smithsonian Rep., 1904, p. 351.

macrogamete (mak-rō-gam′ēt), *n.* [Gr. *μακρός*, long, + E. *gamete.*] A female germ-cell or ovum.

Coccidium differs further from Monocystis in that the conjugating gametes are sexually differentiated, the small, active one, or microgamete, functions as the male cell, and the larger, quiescent one, or *macrogamete*, as the female or egg cell, while in the gregarine, on the other hand, the conjugating gametes are of equal size.
Pop. Sci. Mo., June, 1901, p. 192.

macrogametocyte (mak-rō-gam′e-tō-sīt), *n.* [Gr. *μακρός*, long, large, + E. *gametocyte.*] In sporozoans, the mother-cell of a macrogamete or a female element: opposed to ★*microgametocyte.*

Macroglossini (mak″rō-glo-sī′nī), *n. pl.* [NL., < Gr. *μακρός*, long, + *γλῶσσα*, tongue, + *-ini.*] A group of hawk-moths, or *Sphingidæ*, all of which have a remarkably long proboscis. They are called the *humming-bird hawk-moths.*

macrognathism (ma-krog′na-thizm), *n.* [*macrognath(ic)* + *-ism.*] The character or state of being macrognathic.

macrographic (mak-rō-graf′ik), *a.* [*macrograph(y)* + *-ic.*] Relating to or characterized by large or coarse handwriting.

macrography (mak-rog′ra-fi), *n.* [Gr. *μακρός*, long, large, + *-γραφια*, < *γράφειν*, write.] The use of very large characters in writing, sometimes carried to such an extreme by the insane that a word of three or four letters will run across the entire page.

macrogyne (mak′rō-jin), *n.* [Gr. *μακρός*, long, large, + *γυνή*, female.] A female, or queen, ant of conspicuously larger stature than the normal female form of the species. *Wheeler*, 1907.

macrohemozoite, macrohæmozoite (mak″rō-hem-ō-zō′īt), *n.* [Gr. *μακρός*, large, + *αἷμα*, blood, + *ζῷον*, animal, + *-ite*2.] The large form of schizont in the development of the hemogregarine *Drepanidium serpentium*, which infests various snakes. Compare ★*microhemozoite. Lutz.*

macro-illuminator (mak′rō-i-lū′mi-nā-tor), *n.* [Gr. *μακρός*, long, large, + E. *illuminator.*] In a microscope, a single achromatic combination of 1¼-inch clear aperture and 2-inch focus. This lens is mounted to fit into the substage, close to the object, so as to focus the image of the source of light on the objective. Objects up to fully 1 inch in diameter may be thus illuminated with absolute uniformity. It is valuable for photography with the holostigmat and planar types of lenses. *Jour. Roy. Micros. Soc.*, Feb. 1903, p. 91.

macrolecithal (mak-rō-les′i-thal), *a.* [Gr. *μακρός*, long, large, + *λέκιθος*, yolk of an egg.] Containing a large amount of food-yolk: said of certain eggs, like those of birds, reptiles, sharks, many insects, crustaceans, etc.: opposed to ★*microlecithal* or ★*alecithal.*

macrolepidopterous (mak″rō-lep-i-dop′te-rus), *a.* Of or pertaining to the *Macrolepidoptera.*

macrolophic (mak-rō-lof′ik), *a.* [Gr. *μακρός*, long, large, + *λόφος*, crest, + *-ic.*] In *craniom.*, having a high incisor crest in the anterior nasal aperture and a sharp alveolar line. *Harrison Allen*, in *Jour. Acad. Nat. Sci. Phila.*, N. S., X. 419.

macromania (mak′rō-mā″ni-ą), *n.* [NL., < Gr. *μακρός*, long, large, + *μανία*, madness.] **1.** Same as *megalomania.*—**2.** The persistent delusion that surrounding objects, including one's own body, are larger than they really are.

macromastia (mak-rō-mas′ti-ą), *n.* [NL., < Gr. *μακρός*, long, large, + *μαστός*, breast.] Abnormal size of the breasts or nipples.

macromazia (mak-rō-mā′zi-ą), *n.* [NL., < Gr. *μακρός*, long, large, + *μαζός*, breast.] Same as ★*macromastia.*

macromelia (mak-rō-mē′li-ą), *n.* [NL., < Gr. *μακρός*, long, large, + *μέλος*, limb.] Abnormal size of one or more of the limbs.

macromere, *n.* In *embryol.*: (*b*) One of the large yolk-laden cells, found about one pole of an egg in case of unequal segmentation, such as occurs in the hagfish, *Myxine:* contrasted with ★*micromere.*

macromerite (mak-rom′e-rīt), *n.* [Gr. *μακρός*, long, + *μέρος*, a part, + *-ite*2.] In *petrog.*, a rock whose component crystals are large enough to be seen by the unaided eye. Same as ★*phanerite. Vogelsang.*

macromerozoite (mak″rō-mer-ō-zō′īt), *n.* [Gr. *μακρός*, large, + *μέρος*, part, + *ζῷον*, animal, + *-ite*2.] In sporozoans, a macrosporozoite: contrasted with ★*micromerozoite.*

macromesentery (mak-rō-mez′en-ter-i), *n.* [Gr. *μακρός*, large, + E. *mesentery.*] In anthozoans, a large complete mesentery bearing gonads and filaments: contrasted with ★*micromesentery.*

The first twelve mesenteries are disposed in couples, and do not differ from those of Actinia except in size. The mesenterial pairs, I, II, and III, are attached to the stomodæum, and are called *macromesenteries* . . ., but IV, V, and VI are much shorter, and are called micromesenteries. *Encyc. Brit.*, XXV. 458.

macromicrometer (mak″rō-mī-krom′e-tėr), *n.* [Gr. *μακρος*, long, + *μικρός*, small, + *μέτρον*, measure.] Dolland's micrometer, with wires not magnified by the eyepiece. [Obsolete.]

macrophage (mak′rō-fāj), *n.* [Gr. *μακρός*, long, large, + *φαγεῖν*, eat.] A very large phagocyte or wandering amœboid cell that devours other cells. Macrophages develop from small lymphocytes and are found in the lymphoid tissues of the alimentary canal.

macrophagocyte (mak-rō-fag′ō-sīt), *n.* [Gr. *μακρός*, long, large, + E. *phagocyte.*] Same as ★*macrophage.*

macrophonous (mak-rof′ō-nus), *a.* [Gr. *μακρόφωνος*, < *μακρός*, large, + *φωνή*, sound, voice.] Having a loud, stentorian voice.

macrophotography (mak″rō-phō-tog′ra-fi), *n.* [Gr. *μακρός*, long, + E. *photography.*] The production of an enlarged negative from a negative by means of the camera. *Woodbury*, Encyc. Dict. Photog., p. 274.

macrophysical (mak-rō-fiz′i-kal), *a.* [Gr. *μακρός*, long, large, + E. *physical.*] Of or pertaining to the physics of matter in the mass: opposed to *microphysical*, which relates to the ultimate structure of matter. *P. Drude*, Theory of Optics, p. vii.

macrophysics (mak-rō-fiz′iks), *n.* The physics of the relations of large masses, or of bodies as a whole, the problems of ultimate structure being ignored.

macrophyte (mak′rō-fīt), *n.* [Gr. *μακρος*, long, + *φυτόν*, plant.] A plant visible to the unassisted eye: contrasted with *microphyte.* See quotation under ★*dysphotic.*

macrophytic (mak-rō-fit′ik), *a.* [*macrophyte* + *-ic.*] Having the character of a macrophyte: pertaining to macrophytes.

macropia (mak-rō′pi-ą), *n.* [NL., < Gr. *μακρός*, long, large, + *ὤψ* (*ὠπ-*), eye.] Same as *megalopsia.*

macropine (mak′rō-pin), *a.* [*Macropus* + *-ine*1.] Pertaining to or having the characters of the kangaroos, *Macropodidæ.*

macroplasia (mak-rō-plā′si-ą), *n.* [NL., < Gr. *μακρός*, long, large, + *πλάσις*, a forming.] Overgrowth of a part of the body, or of any special tissue.

macropodal, *a.* **2.** In *bot.*, same as *macropodous.*

Macropodia, *n.* **2.** [*l. c.*] The condition of having abnormally large feet.

macroprosopia (mak″rō-prō-sō′pi-ą), *n.* [NL., < Gr. *μακρός*, long, large, + *πρόσωπον*, face.] The condition of having a disproportionately large face.

macroprosopous (mak″rō-prō-sō′pus), *a.* Characterized by macroprosopia.

macropsia (mak-rop′si-ą), *n.* [NL., < Gr. *μακρός*, long, large, + *ὄψις*, view.] A state in which a visual defect makes objects appear to be of too great size. Also called *macropia* and *megalopsia.*

Macropterygidæ (mak-rop-tę-rij′i-dē), *n. pl.* [NL., < *Macropteryx* (*-yg-*) + *-idæ.*] A family of birds containing the tree-swifts of southeastern Asia. They have the vomer narrow; palatines exteriorly unnotched; posterior margin of sternum concave, with two perforations; and the tarsus shorter than the first digit.

Macropteryx (mak-rop′tę-riks), *n.* [NL., < Gr. *μακρός*, long, + *πτέρυξ*, wing.] A genus of birds containing the tree-swifts of southeastern Asia and the larger adjoining islands. They are distinguished from other swifts by many anatomical peculiarities and are placed in a separate family, the *Macropterygidæ.*

macrorhinia (mak-rō-rin′i-ą), *n.* [NL., < Gr. *μακρός*, long, large, + *ῥις* (*ῥιν-*), nose.] The condition of having a disproportionately large nose.

macrosceles (mak-ros′e-lēs), *n.* [NL., < Gr. *μακροσκελής*, long-legged: see ★*macroscelia.*] One who is long-legged.

macroscelia (mak-rō-sē′li-ą), *n.* [NL., < Gr. *μακροσκελής*, long-legged, < *μακρός*, long, large, + *σκέλος*, leg.] Same as ★*macrocnemia.*

macroscelic (mak-rō-sē′lik), *a.* Pertaining to or characterized by macroscelia.

What is more, in a race like the French, there are two distinct types, each having the same measurement, but the one class is long-legged (*macroscelic*, in the term of the anthropologists), the other short-legged (microscelic).
Smithsonian Rep., 1904, p. 528.

macroscope (mak′rō-skōp), *n.* [Gr. *μακρός*, long, large, + *σκοπεῖν*, view.] An imaginary instrument, antithetic to the microscope, which should bring vast regions of the universe within the range of vision. See the extract.

We may imagine a *macroscope*, which should shrink experience as the microscope expands it, thus disclosing to us more and more of immensity at once.
C. A. Strong, Why the Mind has a Body, p. 230.

macroseism (mak′rō-sīzm), *n.* [Gr. *μακρός*, long, large, + *σεισμός*, an earthquake.] A great earthquake; a heavy or intense earthquake.

Prof. Milne pointed out the distinction which exists between *macroseisms*, or large earthquakes, and microseisms, or small earthquakes. The former he described as world-shaking disturbances, while as regarded the latter, there were about thirty thousand such disturbances every year, each of which disturbs from ten up to several hundreds of square miles of the earth's surface.
Sci. Amer. Sup., May 2, 1903, p. 22855.

macroseismic (mak-rō-sīs′mik), *a.* [*macroseism* + *-ic.*] Of the nature of a macroseism; relating to an intense earthquake, or to one of great area or of long continuance.

In the earthquakes with distant origins, the periods of the preliminary tremors do not depend upon their duration, the duration of preliminary tremors being proportional to the distance such earthquake motion may have travelled. This is probably true for other phases of motion, and it has also been shown to exist for *macroseismic* disturbances. *Nature*, July 9, 1903, p. 235.

macroseismograph (mak-rō-sīs′mō-grȧf), *n.* [Gr. *μακρός*, long, large, + *σεισμός*, earthquake, + *γράφειν*, write.] A seismograph adapted for recording large movements of the earth, or macroseisms.

macrosepalous (mak-rō-sep'ą-lus), *a.* [Gr. *μακρός*, long, large, + NL. *sepalum*, sepal, + *-ous.*] In *bot.*, having long or large sepals.

macrosis (mak-rō'sis), *n.* [NL., < Gr. *μάκρωσις*, lengthening, enlarging, **μακροῦν*, lengthen, enlarge, < *μακρός*, long, large.] In *pathol.*, increase in size.

macrosmatic (mak-ros-mat'ik), *a.* [Gr. *μακρός*, long, large, + *ὀσμή*, smell, + *-atic*[2].] Having the organs of smell, especially the ethmoturbinals, well developed: contrasted with ★*microsmatic*. According to Turner, the application of this and related terms depends largely upon the number of ethmoturbinals, five being characteristic of most osmatic animals, anosmatic animals having four or less, and macrosmatic animals from six to eight.

Echidna, on the other hand, is, to use Turner's nomenclature, "*macrosmatic.*"
Proc. Zool. Soc. London, 1894, p. 9.

macrosmatism (mak-ros'mą-tizm), *n.* [*macrosmat(ic)* + *-ism.*] A characteristic condition in mammals which consists in their having the organs of smell well developed. *Trans. Linnean Soc. London*, Zool., Jan., 1899, p. 298.

macrosomatia (mak″rō-sō-mā'shią), *n.* [NL., < Gr. *μακρός*, long, large, + *σῶμα* (*τ*-), body.] Great size of the body; gigantism.

macrosomatous (mak-rō-sō'mą-tus), *a.* [Gr. *μακρός*, long, large, + *σῶμα* (*τ*-), body, + *-ous.*] In *anat.*, having a large body.

macrosome (mak'rō-sōm), *n.* [Gr. *μακρός*, long, large, + *σῶμα*, body.] In *cytol.*, one of the larger granules scattered among the smaller ones (microsomes) in certain cell-nuclei.

Some cytologists regard the macrosomes as composed of chromatin, the microsomes of achromatic substance. According to others, the macrosomes are true nucleoli, whereas the microsomes are true chromatin granules.

macrosomia (mak-rō-sō'mi-ą), *n.* [NL.: see ★*macrosome.*] Abnormal size of the body: gigantism.

macrosporic (mak-rō-spō'rik), *a.* [*macrospore* + *-ic.*] Relating to or of the nature of a macrospore.

macrosporozoite (mak″rō-spō-rō-zō'īt), *n.* [Gr. *μακρός*, large, + E. *sporozoite.*] In *Sporozoa*, a large endogenous sporozoite; a macromerozoite. Compare ★*microsporozoite*. *Podwyssotzki.*

The discovery by Schaudinn and Siedlecki of a true fertilization in a certain number of Sporozoa, for which the present writer's announcement in 1896 of the sexual dimorphism of *macrosporozoites* and microsporozoites prepared the way. *Encyc. Brit.*, XXXII. 814.

Macrostoma, *n.* 2. *sing.* A genus of deep-sea fishes of the family *Myctophidæ*.—3. *sing.* The typical genus of the family *Macrostomidæ*. *M. hystrix* is found in stagnant water. *Van Beneden.*

Macrostomatidæ (mak″rō-stō-mat'i-dē), *n. pl.* [NL.] Same as ★*Macrostomidæ*, 2.

macrostomatous (mak-rō-stom'ą-tus), *a.* [Gr. *μακρός*, long, large, + *στόμα* (*τ*-), mouth, + *-ous.*] Having a mouth of unusually large size.

macrostomia (mak-rō-stō'mi-ą), *n.* [NL.] The state of having an abnormally large mouth.

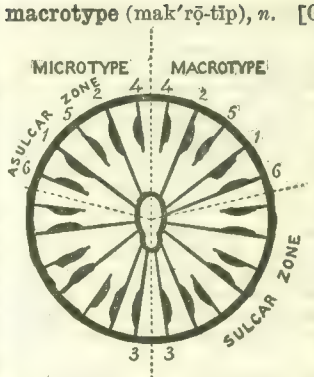
Macrostomidæ, *n. pl.* 2. A family of rhabdocœlous turbellarians in which the female gonad is an ovary and the female pore is in front of the male pore. It contains the genera *Macrostoma*, *Omalostoma*, and *Mecynostoma*. Also called *Macrostomatidæ*.

macrostomoid (mak-ros'tō-moid), *a.* Resembling the *Macrostomidæ*; having a large mouth or aperture, as a shell.

macrostomous (mak-ros'tō-mus), *a.* Same as ★*macrostomatous*.

macrostomus (mak-ros'tō-mus), *n.*; pl. *macrostomi* (-mī). [NL.] One who has a very large mouth.

macrostructural (mak-rō-struk'tū-ral), *a.* [Gr. *μακρός*, large, + E. *structure* + *-al*[1].] Of or pertaining to gross, as distinguished from microscopic, structure.—**Macrostructural metamorphism.** See ★*metamorphism*.



macrostylous (mak-rō-stī'lus), *a.* [*macrostyle* + *-ous.*] Same as *macrostyle*.

macrotia (mak-rō'ti-ą), *n.* [NL., < Gr. *μακρός*, long, large, + *οὖς* (*ὠτ*-), ear.] Abnormal size of the ears.

macrotrachelous (mak″rō-trā-kē'lus), *a.* [Gr. *μακρός*, long, + *τράχηλος*, neck, + *-ous.*] Having the preintestinal longer than the postanal part of the body, as certain rotifers.

macrotypal (mak'rō-tī-pal), *a.* [*macrotype* + *-al*[1].] Relating or pertaining to a macrotype: as, the *macrotypal* arrangement of the mesenteries in anthozoans.

macrotype (mak'rō-tīp), *n.* [Gr. *μακρός*, large, + *τύπος*, type.] A modification of the usual arrangement of the mesenteries in certain *Zoanthidea*, in that the mesenteries 6, 6, which form couples with 1, 1, are macromesenteries: contrasted with ★*microtype*.

Macrotype.

Diagram of the final arrangement of the mesenteries in the *Zoanthea*. The left of the figure shows the microtypal; the right, the macrotypal arrangement. The five mesenterial pairs, 1, 1; 2, 2; 4, 4; 5, 5; 6, 6, occupy the asulcar aspect of the zoöid, and it is seen that in this region the macromesentery of each couple is furthest from the sulcar directives. In this remaining sulcar region the macromesentery of each couple is nearest the directives. (From Lankester's "Zoology.")

Some such relationship may perhaps hold between the complete (*macrotype*) or incomplete (microtype) sixth protocnemic pair and the enlarged or diminutive alar septa. *Annals and Mag. Nat. Hist.*, May, 1902, p. 393.

Macrourus (mak-rō'rus), *n.* Same as *Macrurus*, 1.

macrovariolitic (mak″rō-vā-ri-ō-lit'ik), *a.* [Gr. *μακρός*, large, + E. *variolitic*]. Coarsely variolitic or spotted: applied to certain variolitic eruptive rocks. *Amer. Geol.*, Sept., 1904, p. 139.

macruran, *n.* **II.** *a.* Relating or pertaining to the *Macrura*.

Spence Bate maintained that the Schizopoda ought not to form a separate order but to be ranged as a *macruran* tribe. *Encyc. Brit.*, XXX. 479.

macula-ring (mak'ū-lą-ring), *n.* A ring which surrounds the macula or spot of most acute vision in man and some of the apes. *Philos. Trans. Roy. Soc.* (London), 1901, ser. B, p. 74.

maculature, *n.* 3. In *etching*, an impression or proof taken upon a sheet of common absorbent paper laid upon the plate.

One of these [the Hundred Guilder Plate], in the Museum of Amsterdam, is a '*maculature*,' an impression on a sheet of ordinary paper passed over the plate to remove the ink. *Rose Kingsley*, in Burlington Mag., V. 70.

macule, *n.* 2. In *pathol.*, same as *macula*.

A *macule*, excoriation, or bulla on the site of the destruction. *Buck*, Med. Handbook, I. 147.

maculicolous (mak-ū-lik'ō-lus), *a.* [L. *macula*, a spot, + *colere*, inhabit, + *-ous.*] In *bot.*, found in definite spots upon the surface of leaves or stems: applied to fungi.

maculiferous (mak-ū-lif-ę-rus), *a.* [L. *macula*, spot, + *ferre*, bear, + *-ous.*] Covered with spots; bearing spots.

maculopapular (mak″ū-lō-pap'ū-lăr), *a.* [L. *macula*, spot, + *papula*, pimple, + *-ar*[3].] Both macular and papular.

Mad., Madm. Abbreviations of *Madam*.

Madagass (mad-ą-gas'), *n.* 1. Same as *Malagasy*.—2. A light-colored Jamaica negro whose hair is more nearly straight than is usual with the race.

madarin (mad'ą-rin), *n.* Same as ★*mudarin*.

madaroma (mad-ą-rō'mą), *n.* [NL., < Gr. *μαδαροῦν*, make bald, < *μαδαρός*, bald.] Same as *madarosis*.

madarotic (mad-ą-rot'ik), *a.* [*madarosis* (*-rot-*) + *-ic.*] Relating to or marked by madarosis, or a falling of the hair, especially of the eyelashes.

mad-bred (mad'bred), *a.* Bred by madness in the brain; madness-bred. [Rare.]

This fell tempest shall not cease to rage
Until the golden circuit on my head,
Like to the glorious sun's transparent beams,
Do calm the fury of this *mad-bred* flaw.
Shak., 2 Henry VI., iii. 1.

madder[1], *n.*—**Blue field-madder.** Same as *field-madder*: now adventive in Ontario and Massachusetts, also in Bermuda.—**Purple madder.** (*a*) See *madder lakes*. (*b*) Same as ★*purple-black*.—**Wild madder.** (*c*) The dyer's-cleavers, *Galium tinctorium*.

madder-bleach (mad'ėr-blēch), *n.* Originally, a very thorough bleaching process to which cotton cloth was subjected before it was printed with madder: now used in many cotton-bleacheries to designate the most thorough form of cotton-bleaching.

In calico-printing with alizarine colors, or in fact with any colors where a particularly clear and white ground is desired the *madder-bleach* is used.
L. A. Olney, Textile Chem. and Dyeing, II. 48.

maddish (mad'ish), *a.* [*mad*[1] + *-ish.*] 1. Like a madman; characteristic of a madman.—2. Somewhat mad; rather mad.

Mad-dog weed. See ★*weed*[1].

madega (ma-dā'gą), *n.* [Abyssinian.] A measure of capacity in Abyssinia, equal to 3.466 bushels. *C. H. Haswell*, Mech. and Engin. Pocket-book, p. 48.

madeleine (mäd-lān'), *n.* [F. *madeleine*, from *Madeleine*, a feminine name. See *maudlin.*] A small iced and decorated cake, usually made with a layer of jelly or jam.

mademoiselle, *n.* 4. A French governess: used as '*Fräulein*' is used for a German governess.

madescent (ma-des'ent), *a.* [L. *madescens* (*-ent-*), ppr. of *madescere*, become moist, < *madere*, be moist.] Slightly moist.

Madhuca (mad-hō'ką), *n.* [NL. (Gmelin, 1791), < Skt. *madhūka*, a bee, also the name of a tree, *Bassia latifolia* or *Madhuca Indica*, the mahwa-tree.] A genus of dicotyledonous trees belonging to the family *Sapotaceæ*. About 30 species are known, natives of the East Indies. (See *Bassia*.) Several species are valuable for the oil yielded by the seeds, and for their fleshy flowers, which are largely used as food in central India and yield a coarse spirit by distillation. The mahwa-tree, *Madhuca Indica*, is cultivated throughout India for these purposes. *M. butyracea*, the Indian butter-tree, yields a solid white oil known as *fulwa-butter*. *M. longifolia* of southern India is the principal source of illupi-oil. The bark, leaves, and oil of these trees are used in rheumatic and cutaneous diseases, and the timber is hard and durable. See *illupi*.

madnep, *n.* (*b*) *Heracleum lanatum*, the cow-parsnip or masterwort.

madness, *n.*—**Greenland dog-madness.** Same as ★*piblockto*.

mado (mā'dō), *n.* [Prob. aboriginal Australian.] A fish, *Therapon cuvieri*, of the family *Hæmulidæ*, found in Australian waters.

madonnina (ma-do-nē'nä), *n.* [It., < *madonna*, madonna.] A silver coin of Genoa, with a device of the immaculate conception on the reverse, worth 1*s.* 6½*d.*; the double lira.

madras, *n.* 2. A thin cotton cloth, generally corded or figured, used for shirts, etc.

Madreporic gland, in echinoderms. Same as ★*axial organ*.

madreporidan (mad-rē-por'i-dan), *a.* Resembling or characteristic of the *Madreporidæ*.

madreporigenous (mad″rē-pō-rij'e-nus), *a.* [*madrepore* + *-gen* + *-ous.*] Producing madrepore coral: as, *madreporigenous* polyps.

madriale (mä-drē-ä'le), *n.* [It.: see *madrigal.*] In *music*: (*a*) A madrigal. (*b*) An intermezzo: so called because madrigals were once much used as intermezzi in the opera.

madrina (mä-drē'nä), *n.* [Sp., lit. 'godmother'; also sponsor, protectress, < *madre*, < L. *mater*, mother.] In South America, the leading animal of a mule-train, usually distinguished by some head-ornament, chiefly by a bell dangling from the neck. In Spain the term is also used to designate the rope or leather band by which two mules are tied together; and for a wooden support in the shape of a pillar or column.

madroño, *n.* The name was originally applied to the strawberry-tree, *Arbutus Unedo*, which is so called in Spain. It was transferred to its congener, *A. Menziesii*, of the American Pacific Coast. It is now also applied to *A. Xalapensis* and *A. Arizonica*, of the southwestern United States and northern Mexico.

madupite (ma-dū'pīt), *n.* [*Madùpa*, an Indian name for *Sweetwater*, a county in Wyoming, + *-ite*[2].] In *petrog.*, an aphanitic volcanic rock composed of diopside and phlogopite, with leucite in subordinate amount, also a little glass base. *Cross*, 1897.

Madurese (mad'ū-rēs or -rēz), *a.* and *n.* **I.** *a.* Of or pertaining to Madura, an island in the Malayan archipelago, east of Java.

II. *n. sing.* and *pl.* A native or the natives of the island of Madura.

madwoman's-milk (mad'wùm-anz-milk′), *n.* The sun-spurge, *Euphorbia Helioscopia*.

Ma. E. An abbreviation of *Master of Engineering*.

mæandrinoid (mē-an'dri-noid), *a.* Resembling the *Mæandrinidæ*, a family of corals.

mæandroid (mē-an'droid), *a.* [Gr. *μαίανδρος*, a meander, + *εἶδος*, form.] Having the form of a meander, as a brain-coral.

Aporose, mainly colonial corals, massive, branching, or *mæandroid*. *Encyc. Brit.*, XXV. 462.

maestrale (mä-es-trä'le), *a.* [It., < *maestro*, master.] See *stretto*.

Maestrichtian (mäs-trich'ti-an), *n.* [*Maestricht* + *-ian.*] In *geol.*, the designation of a

substage of the Cretaceous in Belgium and northern France: equivalent to *Maestricht beds* (which see, under *bed*[1]).

maffia (mä′fi-ä or mä-fē′ä), *n.* [Also *mafia* (N. E. D., Internat. Encyc.); = F. *maffia* (Larousse), < It. *maffia* (marked *máffia*, Edgren), a Sicilian word of obscure origin not in the local glossaries and only lately inserted in Italian dictionaries.] 1. In Sicily, (*a*) a general sentiment of hostility to legal restraint or punishment, or to the invoking of the law for any purpose; also, (*b*) the collective number of those who sympathize with this hostility and often express it by criminal acts.—2. A supposed wide-spread secret society of Sicilians, or other Italians, leagued in opposition to the laws or for purposes of revenge by assassination. [This is the sense reflected in the American newspapers since 1888.]

Here and there it [the insurrection in Sicily] was based upon a bastard Socialism, in other places it was made a means of municipal party warfare under the guidance of the local *maffia*. *Encyc. Brit.*, XXIX. 649.

The *Maffia* is not, as is generally believed, one vast society of criminals, but is rather a sentiment akin to arrogance which imposes a special line of conduct upon persons affected by it. In substance the maffioso considers it dishonourable to have recourse to lawful authority to obtain redress for a wrong or a crime committed against him. *G. Mosca*, in Encyc. Brit., XXXII. 618.

maffick (maf′ik), *v. i.* [A back-formation from *mafficking*, taken as a verbal noun.] To give way to a frenzy of enthusiasm; celebrate a victory with a delirious uproar. [Slang, Eng.]

The word had its origin in the scenes witnessed in London on May 18, 1900, the night after the raising of the siege of Mafeking was announced. . . . And because the celebration was so utterly unprecedented, because such scenes had been supposed to be impossible in London, or anywhere else where English is spoken, there was no word to describe it. Afterward, therefore, when the London mob has shown a disposition to celebrate in a similar manner, a brand-new word has been employed to describe these manifestations of enthusiasm — the word '*maffick*.' *N. Y. Times*, July 6, 1902.

maffick (maf′ik), *n.* [*maffick*, *v.*] A particular act of mafficking. See ★*maffick*, *v.* [Slang, Eng.]

The Peace '*maffick*' has not yet been completely worked off. *Westminster Gazette*, June 4, 1902, p. 7. *N. E. D.*

mafficker (maf′i-kėr), *n.* One who 'mafficks,' or celebrates a joyful event with frenzied enthusiasm. [Slang, Eng.]

mafficking (maf′i-king), *n.* [From the name of *Mafeking*, a town in South Africa which became famous in the Boer war (1899–1900). Held by British troops under Colonel (later Major-General) R. S. S. Baden-Powell, it underwent a severe siege by the Boers. It was finally relieved on May 18, 1900. The announcement of the relief of Mafeking produced an extraordinary outburst of popular enthusiasm in London on the night of May 18. The name was humorously treated as a verbal noun in *-ing*, and the verb *maffick* was thus evolved.] A frenzied celebration of a victory, when the people of a city go wild with joy. See ★*maffick*, *v.* [Slang, Eng.]

Probably in years to come the perfervid ebullitions which were described as "*Mafficking*" will be looked upon as beyond the bounds of physiological limits. *Lancet*, June 6, 1903, p. 1574.

mafficky (maf′i-ki), *a.* [*maffick* + *-y*[1].] Inclined to be uproariously enthusiastic; frenzied with joy: as, a *mafficky* crowd. *N. Y. Times*, July 6, 1902. [Slang, Eng.]

maffioso (mä-fi-ō′sō), *n.*; pl. *maffiosi* (-sē). [It., < *maffia*.] One who sympathizes with the maffia; a member of the maffia.

mafoo (mä-fō′), *n.* [Chin. *ma fu*, a groom, servitors in general: *ma*, horse, + *fu*, a man (servant).] A groom; by extension, a coachman. [Anglo-Chinese.] *N. and Q.*, 10th ser., III. 305.

mag. An abbreviation of *magnetism*.

magaline (mag′a-lin), *n.* [*mag(netic)* + *-a-* + *line*[2].] A practical unit of magnetic flux density equal to 1,000,000 gausses or lines per unit of cross-section.

magastromancy † (mā-gas′trō-man-si), *n.* [Gr. *μάγος*, magus, + *ἀστρον*, star, + *μαντεία*, divination.] Magical astronomy.

If there were any congruity or consistency betwixt prophecy and *magastromancy*.
Rev. J. Gaule, The Magastromancer. *N. E. D.*

magautrap (mag′â-trap), *n.* [*mag(azine)* + *au(to-)* + *trap*[1].] A machine for throwing clay pigeons used in trap-shooting. It contains a magazine from which the pigeons are discharged automatically.

During the day others shot at targets from the *magautrap*. *Forest and Stream*, Feb. 21, 1903, p. 159.

magazine, *n.*—**Expense magazine**, a magazine for keeping small quantities of ammunition for immediate use, as distinguished from a storage magazine.—**Magazine flood-pipe.** See ★*flood-pipe*.

magazine-cock (mag-a-zēn′kok), *n.* A cock or valve in an ammunition-room which, when opened, permits sea-water to flow from the magazine flood-pipe into the room and to flood the ammunition in case of fire on board the vessel.

magazine-dress (mag-a-zēn′dres), *n.* A special woolen outside dress with slippers worn by men who handle powder in a magazine.

magazine-fuse (mag-a-zēn′fūz), *n.* A device for protecting electric circuits from excessive currents, in which, when the fuse is melted, it is replaced automatically by another.

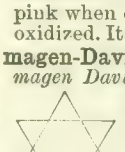
magazine-passage (mag-a-zēn′pas″āj), *n.* On shipboard, an alleyway in the magazine; a small passageway cut off from the magazine proper but communicating with it by small doors.

magazine-pistol (mag-a-zēn′pis″tol), *n.* A repeating pistol; a pistol which has a magazine containing a number of cartridges which are fed automatically into the chamber so that all of them may be fired in rapid succession.

Magdalenian (mag-da-lē′ni-an), *a.* and *n.* [See *magdalen*.] **I.** *a.* In *geol.*, noting one of the divisions of the postglacial series in France, based upon the character and workmanship of the human relics they contain. The name is derived from the caves of La Madeleine in Périgord, where well-finished flints are found associated with carved bone and ivory. It is equivalent to the ★*Glyptic period*.

II. *n.* The paleolithic epoch described above.

Magellania (maj-e-lā′ni-ä), *n.* [NL., < *Magellan* (in allusion to the Straits of Magellan?).] A genus of brachiopods having a long and deeply reflected loop. It appeared in Jurassic time, and still exists in southern seas.



Magellanian (maj- or mag-e-lā′ni-an), *a.* Same as ★*Magellanic*, 2.—**Magellanian series.** See ★*series*.

Magellanic, *a.* 2. Pertaining to the region in the vicinity of the Straits of Magellan.—**Magellanic jacket**, a sailor's watch-coat, with a hood. *N. E. D.*

Magelona (maj-ē-lō′nä), *n.* [NL.] The typical and sole genus of the family *Magelonidæ*. *M. papillicornis*, of which the blood is madder-pink in color, is found between tide-marks along the coast of the United States. *F. Müller*, 1858.

Magelonidæ (maj-ē-lon′i-dē), *n. pl.* [NL., < *Magelona* + *-idæ*.] A family of marine, sand-inhabiting polychætous worms, having the body divisible into two regions by differences in the setæ, the prostomium large and flat, two long peristomial cirri, and a large eversible buccal region. The blood is madder-pink when oxygenated, but colorless when deoxidized. It contains the single genus *Magelona*.

magen-David (mä′gän-dä′vēd), *n.* [Heb. *magen David*, shield of David.] A cabalistic emblem consisting of two intertwined triangles, forming a six-pointed star. This emblem has been adopted by modern Jews, although it is of non-Jewish origin. The supposed miracle-working cabalists inscribe it upon parchment along with certain formulæ and use it as a protecting amulet. The Zionists have placed the *magen-David* on their flag. See *Zionist* ★*flag*.

Magen-David.

Magenta bronze. See *tungsten* ★*bronze*.—**New magenta**, a basic coal-tar color of the triphenyl-methane type. It dyes tannin-mordanted cotton a red which is brighter and bluer than magenta.

maggiolata (mäj-ō-lä′tä), *n.* [It., < *Maggio*, < L. *Maius*, May.] An Italian May-day song.

maggot, *n.*—**Beet leaf-maggot**, the larva of an anthomyiid fly, *Pegomya vicina*, which mines the leaves of the sugar-beet and other closely allied plants. See ★*Pegomya*, with cut.—**Cabbage-root maggot.** Same as *cabbage-maggot*.—**Corn-stalk maggot.** See ★*corn*[1].—**Processional maggots.** See *snakeworm*.—**Red maggot**, the larva of the wheat-midge. See *wheat-midge*, 1.

Magian. **I.** *a.* 2. [*l. c.*] Magic. [Rare.]

Will he touch me with his searing hand, . . .
Or tear me piecemeal with a bony saw,
And keep me as a chosen food to draw
His *magian* fish through hated fire and flame?
Keats, Endymion, iii.

II. *n.* 2. [*l. c.*] A wizard.

Magic parallelepiped, photograph. See ★*parallelepiped*, ★*photograph*.—**Magic square** (*general* and *ordinary*). See ★*square*[1].

magicalize (maj′i-kal-īz), *v. t.*; pret. and pp. *magicalized*, ppr. *magicalizing*. [*magical* + *-ize*.] To invest with a magical charm. [Rare.]

The landscape, up to this point so Greek in its clear beauty, is suddenly *magicalized* by the romance touch. *M. Arnold*, Celtic Lit., p. 122.

magiric (ma-jī′rik), *a.* [Gr. *μαγειρικός*, < *μάγειρος*, a cook, also a butcher, earlier (by etym.) a baker, lit. 'kneader,' < *μάσσειν*, knead: see *mass*[2], n.] Of or pertaining to cookery. *Soyer. N. E. D.*

magirist (ma-jī′rist), *n.* [*magir-ic* + *-ist*.] An expert in magirology.

magirology (ma-jī-rol′ō-ji), *n.* [Gr. *μάγειρος*, a cook, + *-λογια*, < *λέγειν*, speak.] The art of cookery. [Rare.]

magistrate, *n.*—**Glasgow magistrate**, a red herring.

magistratial (maj-is-trā′shial), *a.* [Irreg. < *magistrate* + *-ial*.] Same as *magisterial*. [Rare.]

Then nodding with a *magistratial* air,
To farther anecdote he call'd the fair.
Wolcot, Bozzy and Piozzi, ii.

magna cum laude (mag′nä kum lâ′dē). [L.] With great praise: a phrase used in conferring a degree which has been taken with high honors.

magnalium (mag-nā′li-um), *n.* [NL., < L. *magnus*, great.] An alloy of aluminium and magnesium combined in varying proportions. Magnalium containing 25–30 per cent. of magnesium is not affected by air or water and gives good castings; with 7½–10 per cent. of manganese, it takes on a good polish and is suitable for bells. The alloy also possesses great ductility and its melting-point lies between 600° and 700° C.

Magner's hitch. Same as *Magnus hitch* (which see, under *hitch*).

Magnesia bleach-liquor. Same as ★*magnesium hypochlorite*.—**Magnesia nigra**, an early name for pyrolusite or black oxid of manganese, for a long time looked upon as an inferior kind of magnetite or lodestone, incapable of attracting iron.—**Magnesia soap.** See ★*soap*.—**Magnesia usta**, an old pharmaceutical name for magnesium oxid produced by heating magnesium carbonate or magnesia alba. More commonly called *calcined magnesia*.—**Sorel's magnesia cement.** See ★*cement*.—**Milk of magnesia.** See ★*milk*.

Magnesic oxychlorid. Same as ★*magnesium oxychlorid*.

magnesiferous (mag-nē-sif′e-rus), *a.* [*magnesium* + L. *ferre*, bear, + *-ous*.] Containing magnesium as a constituent: as, a *magnesiferous* limestone.

Magnesite bricks. See ★*brick*[2].

magnesium, *n.*—**Deville and Caron's magnesium process.**—See ★*process*.—**Gratzel's electrolytic magnesium process**, a process which consists in electrolyzing a bath of carnallite for about thirty-six hours, a current of moderately high tension being employed. The reduced magnesium separates in globules which are collected and, on being remelted, yield a chemically pure metal.—**Magnesium fluting.** See ★*fluting*.—**Magnesium hypochlorite**, a substance used to some extent in bleaching, made by decomposing a solution of ordinary bleaching-powder with magnesium sulphate. Also called *magnesia bleach-liquor*.—**Magnesium manganite**, a compound obtained, instead of calcium manganite, in Waldon's modified process for recovering manganese in the manufacture of bleaching-powder. This process, though possessing certain advantages, has not come into general use.—**Magnesium nitride**, a yellow powder produced by heating metallic magnesium in nitrogen gas. It reacts energetically with water, forming magnesium hydroxid and ammonia. Its production furnishes the means of separating nitrogen from argon and the other inert gases of the atmosphere, and its action upon water, or that of the analogous but cheaper nitride of calcium, may become industrially important as a means of making ammonia from atmospheric nitrogen.—**Magnesium oxychlorid.** This substance, or the hydroxychlorid, is the essential material of Sorel's cement, used in building and in the manufacture of artificial stone. Also called *magnesic oxychlorid*.—**Magnesium peroxid**, a substance, MgO_2, produced by the interaction of sodium dioxid and magnesium sulphate. It is valuable in the modern use of hydroxyl in bleaching, having the advantage over the original sodium dioxid of not leaving a residue of corrosive character injurious to the fabric to be bleached. Also known as *magnesium dioxid*.—**Magnesium pyrophosphate**, the salt which is left on heating to redness ammoniomagnesium orthophosphate. It is the form in which phosphoric acid is most commonly determined in analysis.

magnet, *n.*—**Club-foot magnet**, a horseshoe magnet only one leg of which has a magnetizing coil.—**Lifting magnet**, an electromagnet used instead of hooks, chains, or clamps in lifting iron or steel sheets, bars, billets, rails, or structural shapes in a crane or derrick. It is made in many forms adapted to the shapes of the metal to be raised. The magnet, whatever its form, is suspended from the hoisting wire rope or chains of a traveling crane or the boom of a derrick, and is supplied with current through wires. The man who operates the crane controls the current by a small switch. When the magnet touches the metal to be lifted and the current is turned on, the magnet holds the metal until the current is cut off.—**Molecular magnets**, molecules of a substance, such as iron, each of which, according to Ewing's theory of magnetism, has a north and south pole.

The phenomenon of magnetism consists of these *molec-*

ular magnets being placed with their poles pointing in the same direction.

W. Watson, Text-book of Physics, p. 729.

Normal magnet, a magnet the dimensions of which are such as to give the greatest attractive force at the ends possible with a given weight of iron.—**Vibration-magnet**, a suspended magnet from the rate of vibration of which the relative intensity of the field in which it swings is determined, or from the vibration of which one of the elements for the computation of the absolute horizontal intensity of the earth's magnetic field is derived.

magnetarium (mag-ne-tā'ri-um), *n.*; pl. *magnetaria* (-ä). [NL.] An instrument devised by H. Wild (1890) for illustrating some of the phenomena of terrestrial magnetism. It consisted of a globe surrounded with a coil of wire and an outer concentric globe representing the earth's surface.

Magnetic alloy, an alloy which may be produced from non-magnetic metals by melting together copper, manganese, and aluminium in the proportion of about 60, 27, and 13 per cent., in the order named.—**Magnetic chuck, clutch, conductivity.** See ★*chuck*[4], etc.—**Magnetic concentration**, the process of separating the magnetic from the non-magnetic particles of an ore by the action of a magnetic field.—**Magnetic concentrator**, a machine for concentrating magnetic minerals which occur with non-magnetic material. By the use of powerful magnetic fields this method of separation has lately been applied to feebly magnetic minerals.—**Magnetic creeping**, the phenomenon of gradual increase in the magnetization of a specimen of iron when subjected to a sudden magnetizing force.—**Magnetic curves.** (*b*) Lines of force, or lines of flow, or stream-lines, supposed to emanate from the polar regions of the sun and communicate energy to the earth from the sun by the motion of the ether. The coronal streamers that are seen during solar eclipses have the curvature of stream-lines and are therefore assumed by some to be true magnetic curves in a coronal field of force.—**Magnetic detector.** See ★*detector*.—**Magnetic explorer**, a device for exploring the magnetic field. It consists of a spiral of bismuth the resistance of which varies with the strength of the field, or sometimes of a small, flat coil of wire of known dimensions in circuit with a ballistic galvanometer.—**Magnetic fatigue.** See ★*fatigue*.—**Magnetic flux.** See ★*magnetism*, 1.—**Magnetic fringe**, that portion of the magnetic field of a generator, motor, or electromagnet which extends into the air-space outside of the edges or horns of the pole-pieces of the machine.—**Magnetic hammer, hysteresis, latitude, loop**, etc. See ★*hammer*[1], etc.—**Magnetic permeance.** See ★*magnetism*, 1.—**Magnetic permeation, perturbation, phantom, polarization, pole, pressure, pulley, reactance.** See ★*permeation*, etc.—**Magnetic reluctivity.** See ★*magnetism*, 1.—**Magnetic resistivity, resonance, retardation, saturation**, etc. See ★*resistivity*, etc.—**Magnetic separator.** (*b*) Same as ★*magnetic concentrator*.—**Magnetic shield, shoal shunt**, etc. See ★*shield*, etc.—**Open magnetic circuit.** See ★*circuit*.—**Solar magnetic period.** See ★*period*.—**Unit of magnetic flux.** See ★*unit*.—**Unit magnetic reluctance.** See ★*reluctance*.

magnetiferous (mag-ne-tif'ē-rus), *a.* [L. *magnes* (*magnet-*), magnet, + *ferre*, bear, + *-ous*.] Having magnetic properties.

magnetification (mag-net″i-fi-kā'shọn), *n.* The production of magnetic flux; magnetization.

magnetify (mag-net'i-fī), *v. t.*; pret. and pp. *magnetified*, ppr. *magnetifying*. [*magnet*.] To render magnetic; magnetize. [Rare.]

magnetism, *n.* **1.** As in the electric circuit so in the magnetic circuit there exists a quantity component, the magnetic current, or *magnetic flux*, measured in lines of magnetic force, and a pressure component, the *magnetomotive force*, measured in absolute units, or frequently in ampere-turns. The ratio of magnetomotive force divided by magnetic flux is called the *magnetic resistance* or *reluctance*, and its reciprocal is called the *permeance*. *Magnetizing force* is the magnetomotive force per unit length of magnetic circuit; *magnetic induction* is the magnetic flux per unit section; *reluctivity* is the reluctance, and *permeability* the permeance per unit volume. To produce a magnetic circuit energy is required, which is partly or completely returned when the magnetic circuit is destroyed. No energy is required to maintain the magnetic circuit. Magnetic materials—that is, materials of high permeability, as iron, nickel, and cobalt—remain permanently magnetized after withdrawing the exciting magnetomotive force. The remaining permanent magnetism is called the *remanent magnetism*, the permanent magnetomotive force the *coercive force*. The coercive force, therefore, equals the magnetomotive force which has to be applied in the opposite direction to destroy the remanent magnetism. (See *magnetic* ★*hysteresis*.) The magnetic permeability, or conductivity for magnetism, is practically the same for all substances, with very few exceptions (the so-called *magnetic substances*), in which it is from hundreds to thousands of times greater. The magnetic substances are iron, cobalt, nickel, magnetite, liquid oxygen, and certain alloys of unmagnetic metals, as copper manganese and aluminium. All the other substances differ from one another in permeability only by a fraction of 1 per cent., and are called *paramagnetic* or *diamagnetic*, according as they are of higher or lower permeability than air.

magnetization, *n.*—**Longitudinal magnetization**, magnetization of a bar or ring such that lines of flux are parallel to the axis of the magnetized body.—**Magnetization by separate touch**, a method of magnetizing a bar of iron or steel in which two magnets are used. They are placed with opposite poles together at the center of the bar to be magnetized, and are simultaneously drawn apart along the bar.

magnetize, *v. t.*—**Unit of magnetizing force.** See ★*unit*.

magnetizer, *n.* **3.** Specifically, one who assumes to cure disease by means of so-called magnetic passes, magnetized water, etc. *Lancet*, June 16, 1900, p. 1761.

magneto, *n.* **2.** Specifically, the electric generator used as the source of the current in internal-combustion motors (the engines of motor-cars in particular) to cause the spark which ignites the combustible mixture. The magneto, which is in effect a dynamo, is driven from the motor-shaft and supplies current through a small storage battery for use in starting or before the magneto armature reaches speed. The magneto is not liable to stoppage of its current, nor to change of voltage, and the renewal of the battery-cell is eliminated. See ★*ignition*, 5, and *internal-combustion* ★*motor*.

magneto-acoustic (mag″ne-tō-ạ-kös'tik), *a.* Of or pertaining to magnetic and also to acoustic properties of a substance: as, the *magneto-acoustic* quality of a telephone diaphragm. *Elect. World and Engin.*, Aug. 29, 1903, p. 340.

magneto-alternater (mag″ne-tō-al'tėr-nā-tėr), *n.* An alternating current, generator, or motor with permanent field-magnets.

Magneto-cathode rays. See ★*ray*[1].

magnetocrystallic (mag″ne-tō-kris-tal'ik), *a.* Same as *magne-crystallic*.

magneto-drop (mag'ne-tō-drop″), *n.* An annunciator or drop-signal operated by an electromagnet. *Elect. World and Engin.*, Dec. 12, 1903, p. 967.

magnetofriction (mag″ne-tō-frik'shọn), *n.* A phenomenon observed when an electric discharge is acted upon by a powerful magnetic field.

He [H. Pellat] describes how the positive column is squeezed together into a thin pencil and calls this phenomenon *magneto-friction*.

Sci. Amer. Sup., June 20, 1903, p. 22969.

magnetographic (mag″ne-tō-graf'ik), *a.* [L. *magnes* (*magnet-*), magnet, + γράφειν, write, + *-ic*.] Of or pertaining to the graphical recording of fluctuations in the intensity of terrestrial magnetism.

magneto-inductive (mag″ne-tō-in-duk'tiv), *a.* Of or pertaining to magnetic induction.—**Magneto-inductive capacity**, magnetic induction per unit of magnetizing force; permeability.

magnetometer, *n.*—**Differential magnetometer**, an instrument for testing the permeability of iron by means of a balanced, divided magnetic circuit: analogous in principle to the Wheatstone bridge.—**Vibration magnetometer**, a magnetometer of which the time of vibration is lengthened by attaching a plumb-bob to the magnet.

magnetometrically (mag″ne-tō-met'ri-kạl-i), *adv.* By a magnetometric method or process.

magnetomotive, *a.*—**Unit of magnetomotive force.** See ★*unit*.

magneto-motor (mag'ne-tō-mō″tọr), *n.* An electric motor the field of which is furnished by permanent magnets.

magneto-optical (mag″ne-tō-op'ti-kạl), *a.* Of or pertaining to the influence of the magnetic field upon optical phenomena or to optical phenomena dependent upon magnetic action; specifically, pertaining to the power of the magnetic field to cause rotation of the plane of polarization of light; magneto-optic.

magneto-phonograph (mag″ne-tō-fō'nọ-grạf), *n.* In *elect.*, a phonograph which records speech magnetically. It consists of a very small magnet attached to a diaphragm and acting on a moving steel tape or wire which is magnetized in waves by the vibrations of the magnet when some one speaks against the diaphragm. In repeating, the magnetized steel tape, moving in front of the magnet, sets the magnet, and thereby the diaphragm, in vibration and reproduces the sound. *Trans. Amer. Inst. Elect. Engin.*, 1901, p. 47.

magneto-regulator (mag″ne-tō-reg'ū-lā-tọr), *n.* An electric potential regulator, consisting of two stationary coils at right angles, a primary and a secondary, and an iron core which is moved to change the path of the magnetic flux and thereby varies the secondary voltage or potential.

magnetostatic (mag″ne-tō-stat'ik), *a.* Of or pertaining to a magnetic field whose lines are stationary.

magnetostatics (mag″ne-tō-stat'iks), *n.* That part of the science of magnetism which deals with stationary magnetic fields.

magneto-striction (mag″ne-tō-strik'shọn), *n.* Change of length or mechanical deformation of a body produced by the action of a magnetic field. *Physical Rev.*, March, 1902, p. 158.

magneto-stricture (mag″ne-tō-strik'tụr), *n.* Same as ★*magneto-striction*.

magneto-therapy (mag″ne-tō-ther'ạ-pi), *n.* The use of magnetism in the treatment of disease.

magnetropism (mag-net'rō-pizm), *n.* [Short for **magnetotropism*, < μάγνης, magnet, + τρόπος, a turning, + *-ism*.] An alleged change of direction of growth of organisms under the action of a magnet.

magnet-wire (mag'net-wīr), *n.* Wire of the sort commonly used in winding electromagnets and similar apparatus; copper wire with a thin insulating layer of cotton or silk.

magnicaudate (mag-ni-kâ'dāt), *a.* [L. *magnus*, great, + E. *caudate*.] Having a large tail.

magnification, *n.* **4.** In the theory of optical images, the ratio f/x or x′/f′, where f is the focal length of the object-space of the optical system and x the distance of the object from the principal focal plane of that space, or where f′ and x′ are the corresponding quantities in the image-space.—**5.** In *math.*, in conformal representation, the modulus of the derivative $\frac{dw}{dz} = \text{limit}\frac{\Delta w}{\Delta z}$.—**Normal magnification**, the magnification obtained from a lens-system when the exit-pupil equals the pupil of the eye.

magnificative (mag-nif'i-kā-tiv), *a.* and *n.* [*magnificate* + *-ive*.] **I.** *a.* Serving to magnify.

II. *n.* In *gram.*, an augmentative, a word expressive of increased or large size: opposed to *diminutive*. *Whitney*, Life and Growth of Lang., xi. 214.

magnipotence (mag-nip'ọ-tens), *n.* [*magnipoten(t)* + *-ce*.] The possession of great power. [Rare.]

Jehovah's mild *magnipotence*
Smiles to behold His children play
In their own free and childish way.

Coventry Patmore, in Macmillan's Mag., Dec., 1861, 114.

magnipotent (mag-nip'ọ-tent), *a.* [NL. **magnipotens* (*-ent-*), < *magnus*, great, + *potens*, powerful. See *potent*.] Having great strength and power.

Satan, as he is a spirit, is *magnipotent*, but he never was omnipotent; and therefore there may be, and are, abundance of fine things which such People expect of him. *Defoe*, System of Magick, iii.

magnitude, *n.*—**Algebraic magnitude**, a magnitude considered as negative or positive. This character is usually indicated by a qualitative use of the algebraic signs + and —.—**Intensive magnitude**, a magnitude which evinces degrees of 'more' and 'less,' but which is not a measurable magnitude or quantity. Thus, sensations are intensive magnitudes, since they are directly given as 'louder,' 'weaker,' 'brighter,' 'fainter,' 'colder,' etc.; but they are not quantities, since a 'loud' sensation is not the sum of so-and-so many 'weak' sensations, and the difference between a 'loud' and a 'weak' sensation cannot itself be represented as a sensation-magnitude made up of so-and-so many sensation-units.—**Median magnitude**, in *biol.*, one above which and below which equal numbers of the variates occur.—**Star magnitude.** On the absolute scale (see *magnitude*, 5), Aldebaran is taken as the standard first-magnitude star and the scale is carried downward for the fainter stars. The equation which connects the magnitudes of two stars with their relative brightness is $\log \frac{b_m}{b_n} = \frac{4}{10}(n-m)$, in which m is the magnitude of the brighter star, and n that of the fainter one, while b_m and b_n are their respective brightnesses. In applying the scale to objects brighter than Aldebaran fractional and negative numbers must be used. Thus the magnitude of Vega is 0.3; that of Arcturus is + 0.0; of Canopus —1.0; of Sirius, —1.4; of Venus, when brightest, about —4.0. That of the sun would be about —26. The earlier observers, Herschel, Struve, and Argelander, used scales of their own, differing widely for the telescopic stars. The absolute scale most nearly agrees with Argelander's, the standard first magnitude having been selected to secure such accordance as far as possible.

magnitudinous (mag-ni-tū'di-nus), *a.* [L. *magnitudo* (*-din-*), greatness, + *-ous*.] Having the quality of greatness in size, amount, importance, etc. [Rare.]

magnium (mag'ni-um), *n.* [NL. (Davy, 1808). < *magn(esia)* + *-ium*.] A former name of the element magnesium.

magnochromite (mag-nọ-krō'mīt), *n.* [*magn(esium)* + *chromite*.] A variety of chromite in which magnesium replaces a considerable part of the ferrous iron. The mineral from Grochau, Silesia, to which the name was first applied (1868), yielded 14 per cent. of magnesia. Mitchellite, from Webster, North Carolina, is essentially the same mineral. It gave 17.3 per cent. of magnesia.

magnofranklinite (mag-nọ-frangk'lin-īt), *n.* [*magn(etic)* + *franklinite*.] A variety of franklinite from Franklin Furnace, New Jersey, stated to be highly magnetic and to contain but little zinc.

Magnolia metal. See ★*metal*.

magnolin (mag′nō-lin), *n.* [*magnolia* + *-in*².] An aromatic bitter principle contained in the bark and leaves of various species of magnolia.

magnolite (mag′nō-līt), *n.* [*Magnolia* + *-ite*².] A mercury tellurate (perhaps Hg_2TeO_4) occurring in tufts of silky white crystals: found in the Magnolia district, Colorado.

magootee (ma-gö′tē), *n.* [E. Ind.] A flute-like musical instrument used by East Indian snake-charmers. In the reed a mirror is set, to which, while the instrument is being played, the snake's eyes are attracted with a hypnotizing effect.

magophony (mā-gof′ō-ni), *n.* [Gr. *μαγοφόνια*, ⟨ *μάγος*, magus, + *φόνος*, slaughter.] The massacre of the magi, an event in Persian history. *N. E. D.*

magpie, *n.* **6.** A breed of small domesticated pigeons having the head, the under side of the body, and the long flight-feathers white, and the rest of the plumage clear black, red, yellow, or blue: the line between the two colors should be sharply defined. The name is derived from the suggestion of a magpie found in the black-and-white variety.—**7.** A black-and-white costume for women in which the contrasts are very marked, the masses of color being large.

magpied (mag′pīd), *p. a.* [*magpie* + *-ed*².] Compare *pied.*] Variegated with black and white like a magpie: said of a black-and-white costume for women, at one time fashionable.

magpie-goose (mag′pī-gös), *n.* A black-and-white goose, *Anseranas melanoleucus*, found in Australia.

magpie-lark (mag′pī-lärk″), *n.* The pied grallina, *Grallina picata.*

M. Agr. Same as ★*Agr. M.*

magra (mä′grą), *n.* [Aboriginal Australian.] A sort of sling or support by means of which the native Australian women carry their children on their backs.

magrepha (mä-grā′fä), *n.* [Heb.] A musical instrument mentioned in the Talmud as used in the temple at Jerusalem in the first century A.D.: usually supposed to be a rude organ. Its sound is said to have been excessively loud.

Magyarism (ma′dyar-izm), *n.* The political principles, sentiments, or aims of the Magyars; adherence to those principles or aims.

Magyarization (ma″dyar-i-zā′shon), *n.* The act of Magyarizing, or the state of being Magyarized.

Magyarize (ma′dyar-īz), *v. t.*; pret. and pp. *Magyarized*, ppr. *Magyarizing.* To render Magyar in character, language, or sentiment.

mahajun (mą-hä′jun), *n.* [Hindi *mahājan*, a great person.] A banker or merchant; a moneylender; a usurer. *Yule and Burnell*, Hobson-Jobson.

mahakavya (mą-hä-käv′yą), *n.* [Skt. *mahākāvya*, a great poem, ⟨ *mahā*, great, + *kāvya*, poem.] In *Skt. lit.*, a great or classical poem (a term specifically applied to six particular poems.)

The artificial rules of prosody and poetics, according to which a poem, a *mahākāvya*, ought, according to the later writers on the Ars poetica, to be composed.
Encyc. Brit., XXVI. 432.

mahal (mą-häl′), *n.* [Also *muhal*, *mahl*; ⟨ Hind. *mahall*, ⟨ Ar. *mahall*, ⟨ *halla*, lodge.] **1.** Private apartments.—**2.** A palace; a summer house.—**3.** A territorial division; also, a division of land for farming and hunting purposes.

[Anglo-Indian in all uses.]

mahala (ma-hä′lą), *n.* [Also *mahaly*, *mohale*: said to be a corruption of Sp. *mujeres*, women, adopted by California Indians: also taken as from Yokuts *muk'ela*, in the same meaning.] **1.** An Indian woman; a squaw. [Pacific coast of the U. S.]—**2.** A female salmon.

mahala-mats (ma-hä′lą-matz), *n.* A prostrate shrub, *Ceanothus prostratus*, which forms carpets in the Sierra and northern Coast Range of California, especially under yellow pine. In spring it is covered with delicate clusters of blue flowers, and in late summer bears scarlet fruit among a rich green foliage. Also called *squaw's-carpet.*

mahamari (mä-hä-mä′rē), *n.* [Also *mahamuree*; ⟨ Hindi (?) *mahāmāri*, Hind. *mahāmār*, pestilence, ⟨ *mahā*, great, + *mār*, beating, striking, in comp., killing, destroying.] The East Indian name for the plague, or a disease resembling it, which occurs on the southern slopes of the Himalayas.

The native form of plague, known as *mahamari*, is confined to the southern slopes of the Himalaya.
Encyc. Brit., XXXI. 786.

mahant (mä-hunt′), *n.* [Hindi.] A religious superior. *N. E. D.*

Maharanee (mä-hä-rä′nē), *n.* [Hind. *mahārānī*, ⟨ *mahā*, great, + *rānī*, queen.] The wife of a maharaja.

"Room for the *Maharanee* av Gokral-Seetarum." . . . She is a very estimable old queen of the Central Indian States, and they say she is fat.
R. Kipling, Incarnation of Krishna Mulvaney.

maharif (mä-hä-rēf′), *n.* One of the large horse-antelopes of Central Africa, *Hippotragus bakeri*, a relative of the sable antelope, and, like that species, having long, decurved horns. It is pale liver-color, with a dark stripe over the shoulders.

mahatma (mą-hat′mä), *n.* [Skt. *mahātmā*, nom. sing. of *mahātman*, great-souled, of great intellect, very wise; as a noun, great spirit, universal soul; ⟨ *mahā*, great, + *ātman*, soul, spirit.] An alleged adept in Brahmanism: a name applied by modern European and American theosophists to certain imaginary persons who have acquired, by ascetic or 'astral' means, preternatural powers, and are asserted to exist in or near India. The term so used is modern and is due to European manipulation. No beings so named and endowed have any ancient recognition in Indian literature.

maha-white (mä-hä-hwīt′), *n.* In New Zealand, a name for one of the mullets, *Agonostomus forsteri.*

mahayana (mä-hä-yä′nä), *n.* [Skt., 'the great vehicle,' ⟨ *mahā*, great, + *yāna*, vehicle, road, way, course.] A later form of Buddhism, originated by Nagarguna.

The *Mahâyâna* or modern form of Buddhism in India.
Encyc. Brit., XXVI. 432.

Mahdiship (mä′dē-ship), *n.* The dignity or office of a Mahdi.

Mahdist, *n.* **II.** *a.* Of or pertaining to the Mahdists.

As to the remainder of the region in question, the *Mahdist* troubles account sufficiently for the absence of white men during the recent years.
Geog. Jour. (R. G. S.), XVIII. 47.

mahoe, *n.*—**Wild mahoe,** *Malvaviscus arboreus*, which, besides being an ornamental greenhouse plant, yields a coarse bast-fiber applied to various uses in South America. See ★*Malvaviscus.*

mahogany, *n.* **5.** An old British collectors' name for a European and Asiatic noctuid moth, *Amphipyra tetra.*—**False mahogany,** the red bay or isabella-wood, *Persea Borbonia.* Also called *Florida mahogany.*—**Irish mahogany,** the European alder, *Alnus glutinosa.*—**Philippine mahogany,** a name sometimes given to the wood of *Pterocarpus Indicus* and *P. echinatus.* Called in the Philippine Islands *narra* and *asana.* See ★*asana.*—**Valley mahogany,** *Cercocarpus parvifolius*, which grows in valleys and on mountain slopes, and is also called *mountain mahogany.*

maholi (mä-hō′li), *n.* [African.] A species of galago, *Galago maholi*, found in central Africa. See cut under *Galago*, 1.

Mahoning sandstone. See ★*sandstone.*

mahow (mą-hou′), *n.* [S. African.] An intoxicating drink made from fermented mealie meal. [South Africa.]

Excess mealie meal (this was burnt and drunk as a black liquor termed 'native coffee'), fermented makes a drink called '*mahow*' (intoxicating).
Lancet, June 18, 1904, p. 1717.

mahzor (mach′zōr), *n.*; pl. *mahzorim* (-zō-rēm). [Heb., ⟨ *hazar*, return.] **1.** A cycle; a solar cycle of 28 years or a lunar cycle of 19 years.—**2.** A Jewish festival prayer-book. Each of the five principal festivals has a special liturgy.

mai (mä′ē), *n.* [Maori.] In New Zealand, a tree, the same as *matai.*

maia-moth (mā′yą-môth), *n.* An American saturniid moth, *Hemileuca maia*, in color black

Maia-moth (*Hemileuca maia*).

with white markings. Its larvæ feed on oak-leaves.

maid (mād), *v. i.* [*maid*, *n.*] To do the work of a maid: usually referring to a lady's-maid. *N. E. D.*

maiden. **I.** *n.* **7.** A frame on which clothes are dried. [Prov. Eng.].—**8.** *pl.* See ★*mingles.*

II. *a.*—**Maiden number.** See ★*number.*

maiden-cane (mā′dn-kān), *n.* See ★*cane*¹.

maidenism (mā′dn-izm), *n.* [*maiden* + *-ism.*] The manner or bearing of a maiden; a maidenish peculiarity or idea. [Rare.]

When he confessed these *maidenisms*, I despaired of his suiting the pleasant, prancing, pop-gun situation of butler at Prior's Lea, and was the less concerned to find him in treaty for another place.
Anna Seward, Letters, III. 38.

maiden's-blush, *n.* **3.** In Australia, either of two timber-trees, *Echinocarpus australis* of the linden family, and *Euroschinus falcatus* of the cashew family, the wood of which has a delicate rosy color when freshly cut.—**4.** In Tasmania, *Convolvulus erubescens*, a species of morning-glory.

maiden's-tears (mā′dnz-tērz), *n.* The bladder-campion, *Silene vulgaris.*

maidism (mā′i-dizm), *n.* Same as ★*maïdismus.*

maidismus (mā-i-dis′mus), *n.* [NL., ⟨ *maid-*, false stem of *maïs*, maize, + *-ismus*, E. *-ism.*] Same as *pellagra*, a disease produced by eating damaged Indian corn. *Vaughan and Novy*, Cellular Toxins, p. 223.

maid's-hair (mādz′hār), *n.* The yellow bedstraw, *Galium verum*; also the common bedstraw or goose-grass, *G. Aparine.*

mail¹, *n.* **9.** The breast feathers of a hawk when full grown. *E. B. Mitchell*, Art and Practice of Hawking, p. 9.

mail², *n.*—**Open mail,** in the *postal service*, mail forwarded to any country for redistribution in that country or distribution onward to still other countries or places of final destination.

mail-boat (māl′bōt), *n.* A steamboat or steamship which carries the mail on lakes, rivers, or the sea. Also *mail-steamer.*

mail-chute (māl′shōt), *n.* A vertical mailing-tube, having a glass front, erected in a hotel or office-building, and passing through all or several floors; a chute for letters. At each floor is a letter-drop, and on the first floor a collecting-box. The box and chute are nearly air-tight and the inclosed air acts as an air-cushion to check the fall of the letters.

maile (mä′ē-lā), *n.* [Hawaiian, etc., *maile*, *ma-i-le* = Maori *maire.*] A name widely used throughout the islands of the Pacific Ocean for plants having myrtle-like leaves, and especially applied in certain groups to *Gynopogon*, a genus of plants belonging to the *Apocynaceæ*, which have the agreeable fragrance of coumarin. The glossy branches of the Hawaiian maile, *Gynopogon olivæformis*, are in great favor with the natives for making garlands and for decorating their houses and lanais on festive occasions; and the lau-maile of Samoa, *G. bracteolosus*, is used by the natives for wreaths and garlands, but is not so highly esteemed by them as the more fragrant moso'oi blossoms. For other kinds of maile, see ★*maire*².

mailer¹, *n.* **2.** A boat or steamer which carries mail; a mail-boat. [Colloq.]

mailer² (mā′lėr), *n.* [*mail*³ + *-er*².] **1.** One who pays rent.—**2.** A squatter on waste ground (with the consent of the owner) who holds himself ready to be hired by the day. [Scotch, in both uses.]

mail-flag (māl′flag), *n.* A distinguishing pennant carried by vessels having the mail in transportation. The United States mail-flag is a swallow-tail pennant with a red field, a blue border, and a spread-eagle in the upper corner.

mailing-tube (mā′ling-tūb), *n.* A pasteboard tube, used as a cover for maps, engravings, photographs, and the like when sent in the mails.

mail-order (māl′ôr″dėr), *n.* In *com.* and *manuf.*, an order for goods, received by mail.—**Mail-order house,** a business house which conducts a retail business by receiving orders and cash by mail and distributing the goods through the mails. In England, called a *postal-trade house.*

mail-room (māl′röm), *n.* A room which is used in receiving and distributing mail-matter.

mail-steamer (māl′stē″mėr), *n.* A steamship that carries the mails.

maimakterion (mī-mak-tē′ri-on), *n.* [Gr. *Μαιμακτηριών*, so called from the festival, held in this month, of *Ζεὺς Μαιμάκτης*, Zeus 'the boisterous' or 'stormy,' ⟨ *μαιμάσσειν*, *μαιμάειν*, be eager, rage.] The fifth Attic month, containing the end of November and the beginning of December.

maimer (mām′ėr), *n.* One who maims or mutilates.

main[1], *n.*—**Forcing-main** or **force-main,** a main-pipe through which water or other fluid material is forced, by pumping, to a reservoir, tank, or system of pipes for distribution or supply: used in distinction from a *main supply-pipe*, which derives its motive pressure from gravity due to an elevated source of supply of the water or other fluid material transmitted.

main[2], *a.*—**Main clue-garnets,** the tackles which haul up the clues of the mainsail or course, and which on all sails above the courses are called *clue-lines.*—**Main clue-lines,** the purchases which haul up the clues of the main-topsail, topgallantsail, and royal.

main-backstays (mān′bak″stāz), *n. pl.* The backstays of the maintopmast and maintopgallantmast; also, the backstays of the main-royal-pole.

main-breadth (mān′bredth), *n.* The broadest part of a ship at any given timber or frame. Compare *bearing*, 10.

main-buntlines (mān′bunt″linz), *n. pl.* The buntlines belonging to the square sails on the mainmast.

main-center (mān′sen″tėr), *n.* 1. A shaft or axle on which a walking-beam rocks in a beam-engine.—2. The center of the heaviest revolving part, as the shaft on which the levers vibrate in side-lever engines.

main-chains (mān′chānz), *n. pl.* The locality where are situated the iron links on plates for securing the shrouds of the mainmast. See *chain*, 7.

main-chuck (mān′chuk), *n.* A lathe-chuck which carries other chucks or clamps for grasping the work to be turned.

main-crosstrees (mān′krôs″trēz), *n. pl.* The crosstrees on the mainmast, situated at the meeting of the head of the topmast and foot of the topgallantmast on square-rigged vessels, and at the meeting of the head of the lower mast and foot of the topmast on fore-and-aft rigged vessels.

main-en-griffe (mañ-oṅ-grēf′), *n.* [F.] Same as *claw-hand.*

main-gaff (mān′gaf), *n.* The spar to which the head of the fore-and-aft mainsail is bent.

main-keel (mān′kēl), *n.* In *wood ship-building*, a name used to distinguish the keel proper from the false keel. See cut under *keel*[1], 2.

mainland, *n.* 2. The principal island of a group: as, the *mainland* of Orkney.

mainmast, *n.* 2. *pl.* The lower topmast and topgallantmasts of the mast next abaft the foremast.

mainmort† (mān′môrt), *n.* [F. *mainmorte*, 'dead-hand': see *dead-hand* and *mortmain.*] 1. Same as *mortmain.*—2. In *Fr. feudal law*, a right which the lord had (on the death of the chief of a family which is mainmortable) of taking the best movable in the house. *Chambers.*

mainmortable (mān-môr′ta-bl), *a.* and *n.* [F. *mainmortable*, < *mainmorte*. See ★*mainmort.*] I. *a.* Not having the right of alienating one's possessions in the event of dying childless, as serfs under the old feudal law of France; also, not subject to this right, as the possessions themselves.

II. *n.* A serf who, under the feudal law in France, did not have the right of alienating his possessions in the event of a childless death.

main-piece (mān′pēs), *n. Naut.*, the timber of which the rudder-head is composed; the principal part of a timber; the main section of a timber.

main-rope (mān′rōp), *n.* In *mining*, in the tail-rope system of haulage, the rope which draws out the loaded cars. See *tail-rope system*, under *tail-rope.*

mainsail, *n.* 2. *pl.* The square sails on the mainmast: they are the course, or mainsail proper, the lower and upper topsails, the topgallantsail and royal, and also a skysail if the ship is lofty. Men-of-war usually carry single topsails instead of a divided sail.—**Mainsail haul!** an order to swing the main-yards so that the sails on the main may be filled on the new tack.

main-sheet, *n.* 2. *pl.* Collectively, all the sheets of the square sails on the mainmast, but especially the sheets which belong to the main course.—3. In Jamaica, weak rum and water. [Slang.]

> We . . . have seen an old man invited to have a drink of "*main-sheet*" (Jamaican for a cool and seductive mixture of rum and water).
>
> *Blackwood's Mag.*, June, 1890, p. 784.

To haul aft the main-sheet. See ★*aft*[1].

main-shrouds (mān′shroudz), *n. pl.* The shrouds on the main lower mast.

mainstay, *n.* 3. *pl.* All the stays which give support to the main lower mast, maintopmast, and maintopgallantmast.

Maintenance of way. See ★*way*[1].

maintop-bowline (mān′tọ-bō″lin), *n. Naut.*, something very long: as, his yarn was as long as the *maintop-bowline.* [Sailors' slang.]

maintopgallant (mān′top″gal-ant), *n.* The name given to the rigging, yard, and sail belonging to the maintopgallant-mast.—**Maintopsail haul!** the order to swing the after-yards when tacking. This order is given in distinction from *mainsail haul*, which is the order proper when the mainsail is not clued up before tacking.

main-yard, *n.* 2. *pl.* All the yards which belong to the mainmast, namely, the lower, lower topsail, upper topsail, topgallant, royal, and skysail yards.

main-yardman (mān′yärd-man), *n.* A sailor whose station is on the main-yard for the purposes of loosing, furling, and reefing the mainsail, or for sending the main-yard on deck.

Maioli (mī-ō′lē), *a.* The name of an Italian bookbinder (Thomas Maioli) of the first half of the eighteenth century: used as descriptive of his style, or of a style resembling his.

> The principal features of a *Maioli* design, I claim, are a perfect curve in scrollwork where it is used, a framework of flowing curved lines more than of figures of geometrical shape, ornaments of Moresque character, mostly in outline, sometimes azured, and an enrichment of part of the field with a studding of gold dots.
>
> *W. Matthews*, Modern Bookbinding, p. 71.

maiotic, *a.* See ★*miotic.* *Nature*, Nov. 29, 1906, p. 98.

maipuri (mī-pö′ri), *n.* [S. Amer.] An Indian name, used to some extent as a common name, for the South American tapir, *Tapirus terrestris.*

maire[2] (mä′i-rā), *n.* [Maori *maire* = Hawaiian, etc., *maile*, a widely spread name for plants with myrtle-like leaves.] 1. *Eugenia Maire*, a small New Zealand tree of the myrtle family, with white bark and four-angled branches, oblong-lanceolate, acuminate leaves, and white flowers having a tuft of many stamens. The fruit is a red berry crowned by the thickened rim of the calyx. It is distinguished from the other maires of New Zealand as *maire-Tawhiki*, or 'myrtle of the god Tawhiki' (the Tafa'i of Samoan myths and Kahai of the ancient Hawaiians).—2. *Mida salicifolia*, a small New Zealand tree of the sandalwood family, having variable, myrtle-like or willow-like leaves and short axillary cymes of small green flowers.—3. One of several species of *Olea* indigenous to New Zealand: (*a*) The black maire, *O. Cunninghamii*, a lofty tree with white limbs, long coriaceous leaves, racemes of unisexual flowers, and fruit in the form of a drupe containing a bony nut. The wood is dense, hard, and durable. (*b*) The white maire, *O. lanceolata*, a smaller and less robust tree, yielding the New Zealand boxwood (which see, under ★*boxwood*). (*c*) The narrow-leaved maire, *O. montana*, a large bushy tree with leathery linear leaves and racemes of minute flowers. (*d*) The broad-leaved maire, *O. apetala*, which yields the ironwood of Norfolk Island.—4. In Tahiti, *Gynopogon stellatus*, a plant with ternate, myrtle-like leaves. Compare ★*maile.*

mairie (mā-rē′), *n.* [F., < *maire*, mayor.] In France, the public building which serves as the office, and usually as the residence, of the mayor of a town, or, in Paris, of one of the great divisions of a city.

mairogallol (mā-rọ-gal′ol), *n.* A colorless compound, $C_{18}H_7O_{10}Cl_{11}$, which is formed by the action of chlorin on pyrogallol. It crystallizes in lustrous prisms, and melts at about 190° C.

maise[2] (māz), *n.* The mayweed, *Anthemis Cotula.*

maisin (mā′zin), *n.* [NL. *maïs*, maize, + *-in*[2].] A colorless pulverulent proteid, $C_{184}H_{300}O_{51}.N_{46}S$, found in the seeds of maize, which contain from 4 to 4½ per cent. of it.

maisonette (mā-zọ-net′), *n.* [F., dim. of *maison*, house.] A small house. [Rare.]

> The Charlevilles have exchanged their *maisonette* in Berkeley Square for Queensberry House, Piccadilly, and, with their usual kindness, have invited us to two dinners and one rout whilst we remain.
>
> *Lady Morgan*, Autobiography, p. 38.

maiz, *n.* A simplified (and former) spelling of *maize.*

maize, *n.* 1. Indian corn presents numerous varieties, which fall under 6 types, all referable to *Zea Mays.* According to E. L. Sturtevant, who based his classification on the character of the kernel (endosperm), these types (agricultural species) are as follows: (1) *Pop-corn*, distinguished by the small size of the kernel and by its property of popping with heat. See *pop-corn.* The kernel, split transversely, exhibits the chit (embryo) surrounded by corneous matter, glossy in appearance, sometimes having a thin line of starchy matter between. (2) *Flint corn*, which has larger kernels incapable of popping with heat; the chit is surrounded by starchy matter, and this by a corneous envelop; the kernels are in from 8 to 16 rows in different varieties, but usually in 8. (3) *Dent corn*, which has kernels with a transverse furrow at the top, the section showing corneous matter at the sides and starchy matter between, reaching from the chit to the summit; the kernels are usually in from 16 to 20 rows. (4) *Soft corn*, in which the grain is wholly starchy (amylaceous). (5) *Sweet corn*, which has kernels with a translucent appearance, usually corneous throughout, the starch being more or less reduced to sugar, the grains generally with a wrinkled surface, usually in 12 rows. (6) *Starchy sweet corn*, in which the lower half of the kernel is starchy, the upper half corneous and translucent. (7) *Pod-corn*, in which each kernel is inclosed in a separate husk, the whole ear being also in a husk. Each of these groups except the last two, admits, according to Sturtevant, of subdivision into three, according as the kernel is broader than deep, as broad as deep, or much deeper than broad. Pop-corn is divided into three subgroups: *golden pop-corn*, marked by the small size of the ear and kernel, and by its extreme earliness: regarded by some as a form of pearl pop-corn; *pearl pop-corn*, in which the kernels are densely aggregated and have a nacre-like color; and *rice pop-corn*, which has pointed kernels, and a tendency to yield cone-formed ears with the kernels imbricate rather than side by side. The pop-corn stalk usually grows from 5 to 7 feet high, and tends to bear many ears. Flint corn usually grows from 5 to 8 feet high, and inclines to bear two ears to the stalk. Though less prolific than dent corn, its varieties are planted in the more northerly regions on account of their shorter season, prevailing over New England, New York, and Canada. Dent corn ordinarily attains a height of from 8 to 12 feet, and bears but one ear to the stalk. Its varieties alone are planted in the corn-belt of the United States (see below). Soft corn was liked by the aborigines on account of its being more easily crushed, but it has no modern commercial standing. The best quality of sweet corn is produced in the more northerly regions, where it is grown chiefly for use as a fresh vegetable and for canning. Soft sweet corn consists, as far as is known, of a few Mexican varieties. Pod-corn is grown, under various names, merely as a curiosity. It is thought to approach nearest to the primitive form from which all these types have sprung. No wild species of maize is at present clearly known. Corn was grown by the American aborigines from Maine to Chile and Argentina, whence its cultivation has spread over the warmer parts of the globe. The world's product from 1902 to 1906 inclusive averaged 3,340,000,000 bushels, of which North America, chiefly the United States, yielded 2,680,000,000. Almost three fifths of the crop of the United States is produced (1907) by the seven States (named in the order of quantity) of Illinois, Iowa, Missouri, Nebraska, Kansas, Indiana, and Ohio, these being known as the *corn*, or *maize, surplus States* and forming the *corn-belt.* Among other important corn-producing States, are Texas and Oklahoma.—**Millo maize,** one of the non-saccharine sorghums, related to Kafir-corn, cultivated for forage in warmer parts of the United States.

maize-meal (māz′mēl), *n.* Same as *Indian meal* (which see, under *meal*[1]).

maizenic (mā-zē′nik), *a.* Pertaining to or derived from maize.—**Maizenic acid,** an organic acid contained in the styles and stigmas of *Zea Mays.*

maize-thorn (māz′thôrn), *n.* Same as *mouse-thorn.*

maja (mä′hä), *a.* [Sp., fem. of ★*majo.*] Noting a Spanish woman of the lower classes who dresses gaily and is a belle in her circle. See ★*majo.*

> Now bring me, dear Dolores, my basquiña,
> My richest *maja* dress.
>
> *Longfellow*, Span. Student, ii. 1.

majagua (mä-hä′gwä), *n.* [West Indian Sp., from a native name.] 1. A malvaceous tree, *Pariti tiliaceum*, native in Porto Rico, Cuba, Mexico, Central America, and South America, and widely distributed throughout the warm regions of the world. Its strong, flexible bast-fiber was in use by the natives of America before the advent of Europeans. In Porto Rico, nearly all the ropes in use are made from this fiber. Called also *emajagua.* See ★*balibago*, ★*fau*, 2.

2. A collective name used in Spanish-speaking countries for the bast-fibers of a number of malvaceous and similar plants. See *mahoe.*

majo (mä′hō), *a.* [Sp., gay, fine.] Noting a Spaniard of the lower classes, who is a gaily dressed dandy. The feminine is *maja.*

> Here, too [in the Vivarrambla], were the *Majos* and *Majas*, the rural beaux and belles, with fine forms, flashing eyes, and gay Andalusian costumes.
>
> *Irving*, Alhambra, p. 155.

majolist (ma-jol′ist), *n.* [*majol(ica)* + *-ist.*] A maker of majolica; a potter who makes pottery in the style of the old Italian majolica. Also *maiolist.*

major, *a.* 6. In *pros.*, noting the longer of two types of verse which bear a common name.—**Major arc,** the arc on the same side of its chord as the center of the circle.—**Major circle,** a great circle.

majordomo, *n.* 2. See ★*water-master.*

major-generalcy (mā″jor-jen′e-ral-si), *n.* Same as *major-generalship.*

Majorism (mā′jor-izm), *n.* The doctrines of Georg Major. See *Majoristic.*

majorize (mā′jor-īz), *v. i.*; pret. and pp. *majorized*, ppr. *majorizing.* [*major* + *-ize.*] 1. To come of age.—2. In *Rugby foot-ball*, to convert a try into a goal, that is, to increase the points from three to five. *N. E. D.*

mak (mäk), *a.* [D., tame, domesticated.] In South African Dutch, tame: applied especially to Kafirs who have come under European influences.

makaisa (mä-kī′sä), *n.* [Tagalog *makaisa.*] In the Philippine Islands, *Croton Tiglium*, a shrub or small tree bearing poisonous fruit which is used by the natives for stupefying fish and crabs and for killing dogs. It is very acrid and is used medicinally as a counter-irritant, the seeds being made into a paste or plaster and applied externally to the body; taken internally, it acts as a drastic purgative. The natives sometimes administer the fourth part of a seed, but its action is so violent that the remedy is considered dangerous. This plant is also called *tuba*, or *tuba makaisa*, and by the Bisayans *makasla.* See *Croton*, 1 (with cut).

makara (mä′ka-rä), *n.* [Skt. *mákara.*] In *Hindu myth.* and *art*, a fantastic marine monster figured with the body and tail of a fish and the forelegs, neck, and head of an antelope, an alligator, or a shark: used as a symbolic or ornamental figure, and as the zodiacal sign Capricorn.

makasla (mä-käs′lä), *n.* [Bisayan *makasla.*] See ★*makaisa.*

make[1], *v.* **I.** *trans.* 24. To reach; catch (a train, etc.): as, we *made* Paris in three hours. [Colloq.]

He . . . jumped on board the steam-boat . . . "Just *made* it," he said: "and that's what I like to do."
Howells, Silas Lapham, vi.

To make a balk. See ★*balk*[1].—**To make a berth** (*naut.*), to reach an anchorage; obtain dockage.—**To make an anchorage** (*naut.*), to come to anchor; find an anchorage berth.—**To make a pair of spectacles,** in *cricket.* See ★*spectacle.*—**To make colors** (*naut.*), to display the ensign on board of naval vessels, yachts, etc.: a ceremony which takes place at 8 A.M.—**To make it so** (*naut.*), an order, given by the captain, which means that authority is given to strike the ship's bell eight strokes as the official announcement of meridian, or 12 o'clock by the sun.—**To make the course good** (*naut.*), to allow the vessel's head alternately to incline as much on one side of the given course as on the other, so that the mean of the two will give the course that it is desired to steer. This is done on sailing vessels when, owing to a heavy sea or other cause, the ship's head cannot be kept steady, but yaws away from the proper course.

II. *intrans.*—**To make clear** (*naut.*), to pass without touching; avoid.—**To make off.** (*b*) *Naut.*, to chop whale blubber into pieces.

make[1], *n.* 7. In *bridge*, the declaration.

In considering a heart *make*, the dealer should be influenced by the general strength of his hand and by the number of honours he holds in the trump suit.
J. B. Elwell, Bridge, p. 13.

8. In *mining*, a system of metal-bearing veins which are not stratified; a network of veins. [Australia.]

make-and-break (māk′and-brāk′), *n.* A device for alternately closing and opening an electric circuit; an interrupter.

make-key (māk′kē), *n.* In *physiol.* and *exper. psychol.*, an electric key the action of which closes an electrical circuit.

It [the Scripture-Dessoir reaction key] may also be used, though less accurately, as a *make key.*
E. B. Titchener, Exper. Psychol., II. i. 165.

maker, *n.* 4. In *bridge*, the declaring hand.

When the *maker* is on your right, you have the advantage that your trumps are over his.
J. B. Elwell, Bridge, p. 24.

5. In *shoemaking*, the laster (a man or boy) who places the closed uppers of a boot (in handsewn work) over the last and attaches the bottom material. *Webb*, Industrial Democracy, I. 418.

make-record (māk′rek″ord), *n.* In *physiol.* and *exper. psychol.*, a record (chronoscopic or chronographic) obtained by the use of a make-key.

The lost time of the *make-records* may be reduced to a minimum by adjustment of the lower sliding block.
E. B. Titchener, Exper. Psychol., II. i. 165.

makeshiftiness (māk′shif-ti-ness), *n.* The character of being makeshifty. *Ruskin*, Præterita, ii. 267.

makeshifty (māk′shif-ti), *a.* [*makeshift* + *-y*[3].] Of the nature of a makeshift; characterized by the use of makeshifts. [Rare.]

make-spark (māk′spärk), *n.* A spark produced in the air-gap of the secondary circuit of an induction-coil or transformer when the primary circuit is made or closed.

makhna, makna, *n.* Same as ★*muckna.*

making-up (mā′king-up′), *n.* 1. The act or process of compensating.—2. In *printing*, the process of arranging composed type in columns and pages.

Notes are a hindrance in composition and *making-up* . . . The composition and *making-up* of this matter must have been an affliction to be avoided.
De Vinne, Practice of Typography, p. 171.

Making-up piece, a smooth convex plate fastened to the comb-cylinder of a Heilmann cotton-combing machine, between the needle and the fluted segments, to allow time for the auxiliary parts to act.

makita (mä-kē′tä), *n.* [Fijian.] In *bot.*, see ★*ais.*

mako (mä′kō), *n.* [Maori.] The tiger-shark (which see). The teeth of the mako are used for ornaments by the Maoris. *E. E. Morris*, Austral English.

Mal. An abbreviation (*a*) of *Malachi*, a book of the Old Testament; (*b*) of *Malayan.*

mal, *n.*—**Mal de caderas** [Sp. 'disease of the hips'], a chronic (at present, incurable) infectious (but not contagious) disease of horses in South America, caused by the presence of flagellate protozoa of the species *Trypanosoma equinum.* The parasites live in the blood plasma and are supposed to be transmitted by flies.—**Mal de los pintos.** Same as *pinta.*—**Mal de mer.** Same as *seasickness.*—**Petit mal,** a mild epileptic attack, not marked by strong convulsions or complete unconsciousness. Compare *grand mal.*

mala[2] (mā′lä), *n.* [L. *mala*, jaw, cheek: see *malar.*] A sclerite in the mouth-parts of certain *Myriapoda*, the third joint of the mandible, supporting the sclerites which homologize with the galea and lacinia of an insect's maxilla.

Malabar almond. Same as *country almond* (which see, under *almond*).

malabathrum (mal-a-bath′rum), *n.* [L. *malabathrum, malobathrum,* < Gr. *μαλάβαθρον, μαλόβαθρον,* < Skt. *tamālapattra,* 'leaf of the tamāla tree,' < *tamāla*, Hindi *tamal*, name of several trees, + *pattra*, leaf.] 1. The dried, aromatic leaves of several Indian species of *Cinnamomum*, especially *C. iners* and *C. nitidum*, formerly used in medicine. Also called *Indian* or *Malabar leaves.* (See *Malabar leaves*, under *leaf.*)—2. An ointment or perfume prepared from the malabathrum leaf.

malac. An abbreviation of *malacology.*

Malacanthidæ (mal-a-kan′thi-dē), *n. pl.* [NL., < *Malacanthus* + *-idæ.*] A family of trachinoid fishes of the temperate and tropical seas, including about six genera, the greater number of species being American.

Malacanthus (mal-a-kan′thus), *n.* [NL., < *μαλ(ακός)*, soft, + *ἄκανθα*, thorn.] A genus of fishes found in West Indian waters.

Malaceæ (mā-lā′sē-ē), *n. pl.* [NL. (Small, 1903), < *Malus* + *-aceæ.*] A family of dicotyledonous choripetalous trees and shrubs of the order *Rosales*, the apple family, typified by the genus *Malus:* usually included in the family *Rosaceæ*, as the tribe or subfamily *Pomeæ* (which see).

Malache (mal′a-kē), *n.* [NL. (B. Vogel, 1772), < Gr. *μαλάχη*, the common mallow: see *mallow.*] A genus of dicotyledonous plants of the family *Malvaceæ.* See *Pavonia.*

malachite-green, *n.* 3. One of the modern artificial dyes, a salt of tetramethyl-paradiamido-triphenylcarbinol: used in dying silk, wool, and cotton. Also called *benzaldehyde green, solid green*, and *Victoria green.*—**Malachite-green G.** Same as *ethyl green* (which see, under *green*[1]).

malacia, *n.* 2. A longing for some special article of food; specifically, a depraved appetite. *Syd. Soc. Lex.*

Malacocephalus (mal″a-kō-sef′a-lus), *n.* [NL., < Gr. *μαλακός*, soft, + *κεφαλή*, head.] A genus of deep-sea fishes of the family *Macruridæ.*

Malacocottus (mal″a-kō-kot′us), *n.* [NL., < Gr. *μαλακός*, soft, + NL. *Cottus.*] A genus of cottoid fishes found in the North Pacific.

Malacocotylea (mal″a-kō-kot-i-lē′ä), *n. pl.* [NL., < Gr. *μαλακός*, soft, + *κοτύλη*, cup, socket.] An order of endoparasitic *Trematoda* equivalent to *Digenea.* Also *Malacotylea.*

malacocotylean (mal″a-kō-kot-i-lē′an), *a.* and *n.* **I.** *a.* Having the characteristics of the *Malacocotylea.*

II. *n.* One of the *Malacocotylea.*

Malacoctenus (mal-a-kok′te-nus), *n.* [NL., < Gr. *μαλακός*, soft, + *κτείς* (*κτεν-*), comb.] A genus of blennioid fishes found on both coasts of tropical America.

malacoderm, *n.* **II.** *a.* Malacodermatous.

malacodermous (mal″a-kō-dėr′mus), *a.* Same as *malacodermatous.*

malacologic (mal″a-kō-loj′ik), *a.* [*malacolog(y)* + *-ic.*] Same as *malacological.*

malacophilous (mal-a-kof′i-lus), *a.* [Gr. *μαλακός*, soft (see *mollusk*), + *φιλεῖν*, love, + *-ous.*] In *bot.*, adapted to cross-fertilization by mollusks: applied to plants or their flowers.

malacophonous (mal-a-kof′ō-nus), *a.* [Gr. *μαλακόφωνος*, < *μαλακός*, soft, + *φωνή*, voice.] Soft-voiced; having a gentle voice.

malacopod (mal′a-kō-pod), *n.* A member of the *Malacopoda.*

malacostome (mal′a-kō-stōm), *n.* [Gr. *μαλακός*, soft (*μαλάκια*, mollusks), + *στόμα*, mouth.] The mouth of a mollusk.

malacotomist (mal-a-kot′ō-mist), *n.* [*malacotom-y* + *-ist.*] One who is versed in malacotomy; a student of the anatomy of mollusks.

Malacotylea (mal-a-cot-i-lē′ä), *n. pl.* Same as ★*Malacocotylea.*

malacozoölogy (mal″a-kō-zō-ol′ō-ji), *n.* [Gr. *μαλακός*, soft (*μαλάκια*, mollusks), + E. *zoölogy.*] The zoölogy of mollusks; malacology.

malactic (ma-lak′tik), *a.* and *n.* [Gr. *μαλακτικός*, < *μαλάσσειν*, make soft.] **I.** *a.* Making soft; emollient.

II. *n.* An emollient medicine.

maladif (mä-lä-def′), *a.* [F., < *malade*, sick: see *malady.*] Sickly; delicate.

He [Hans Makart], . . . standing in the corner, silent, inanimate, save for his gleaming black eyes and his smoking cigarette—a fragile, *maladif* little figure, with a disproportionately impressive head.
M. G. van Rensselaer, in Portfolio, 1886, p. 51.

maladminister (mal-ad-min′is-tėr), *v. t.* [*mal-* + *administer.*] To administer in a faulty, inefficient way, particularly public affairs.

The people, themselves, in all countries, might confide in it [the true Scheme of Human Economy], to vindicate their respective interests, by its moderate representations, when necessary to their several sovereigns, or otherwise, as those interests might be *maladministered.*
G. Edwards, Practical Plan, iii.

maladministrator (mal-ad-min′is-trā-tor), *n.* One who maladministers affairs, especially public affairs.

malafu (mal′a-fö), *n.* Same as *toddy*, 1.

Malaga pottery. See ★*pottery.*

Malagasy, *n.* 2. The language of Madagascar.

malakin (mal′a-kin), *n.* [Gr. *μαλακός*, soft, + *-in*[2].] The trade-name of salicyl-paraphenetidine, $C_2H_5{}^4OC_6H_4{}^1N{:}{}^2CHC_6H_4{}^1OH$, prepared by the action of paraphenetidine on salicylic aldehyde. It crystallizes in silky, lustrous needles and is used in medicine as an antipyretic and antirheumatic.

malakon, *n.* See *malacon.*

malamethane (mal-a-meth′ān), *n.* [*mal-ic* + *methane.*] A colorless compound, $NH_2COCH(OH)CH_2COOC_2H_5$, formed by the action of dry ammonia on diethyl malate. Also called *ethyl malamate.*

malamic (mal-am′ik), *a.* [*malam(ide)* + *-ic.*] Noting an acid, a colorless compound, $NH_2COCH(OH)CH_2COOH$, prepared from diazosuccinic ester. It crystallizes in short, thick prisms and melts at 146° C.

malamide (mal-am′id), *n.* [*mal(ic)* + *amide.*] A colorless compound, $H_2NCOCH(OH)CH_2CONH_2$, prepared by the action of ammonia on ethyl malate. It crystallizes in rectangular prisms.

mala-mujer (mä″lä-mö-her′), *n.* [Sp. *mala*, bad, + *mujer*, woman.] A name applied in Mexico to several pernicious plants, some of which are armed with prickles. Among them are *Solanum rostratum*, called *sand-bur* in the southwestern United States; *Cnidoscolus urens* (*Jatropha urens* of Linnæus), which is armed with stinging hairs; and *Rhus Toxicodendron*, the poison-oak, also called *guao* and *tetlatia.* See ★*guao* and ★*tetlatia.*

malamute (mal′a-mūt), *n.* [Name of an Alaskan Indian tribe.] A local name for the Eskimo dog, apparently used in Alaska.

Few pure *malamutes* (native dogs descended from the Siberian wolf) are now employed in the mail service. Their legs are too short, their feet sink too readily through the snow.
Lida Rose McCabe, in St. Nicholas, March, 1908, p. 387.

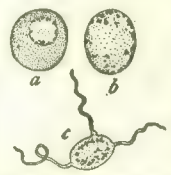
malapaho (mä-lä-pä′hō), *n.* [Philippine Sp., said to be Tagalog.] In the Philippine Islands, a name of several forest trees, especially of *Sindora Wallichii* and *Dipterocarpus vernicifluus.* The latter yields a valuable oleoresin. Also called *panao.*

malappropriate (mal-ą-prō′pri-āt), *a.* [*mal-* + *appropriate*, *a.*] Inappropriate.

malappropriation (mal-ą-prō-pri-ā′shọn), *n.* [*mal-* + *appropriation.*] Misappropriation.

malapropian (mal-ą-prop′i-ąn), *a.* [*malaprop* + *-ian.*] Of the nature of or addicted to malapropism.

malapropism (mal-ap-rọ-pō′izm), *n.* [*malapropo(s)* + *-ism.*] Same as *malapropism.*



Bipartite Malar Bone.

malar, *a.*—**Malar division,** in *craniom.*, the condition, of the malar bone, of being divided by a suture into two bones; a bipartite malar.

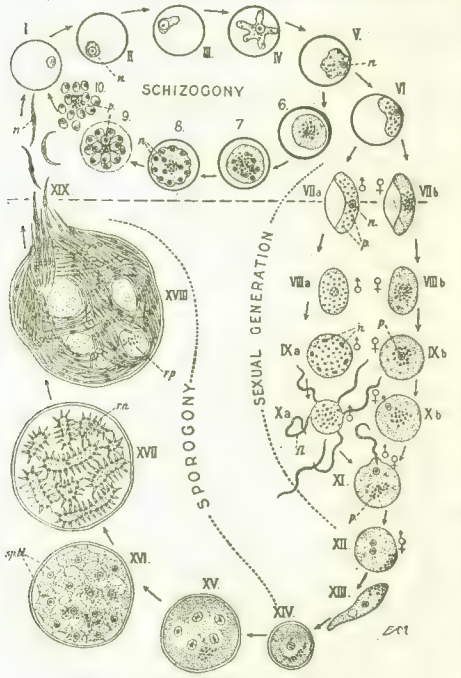
malare (mā-lā′rē), *n.* [NL. (sc. *os*), the malar bone. See *malar.*] In *craniom.*, the most prominent point of the tuberositas malaris. *Von Török.*

malaria, *n.* Numerous investigations made in recent years have established the fact that malaria is a disease resulting from the presence within the red blood-corpuscles of a protozoan parasite, the *Hæmamœba malariæ*, or *Plasmodium malariæ*. The parasite has two cycles of existence, one in the human body, the other in the body of a mosquito of the genus ★*Anopheles* (which see, with cut). In the blood, reproduction of the parasite occurs only by fission or segmentation; but in the stomach-wall of the mosquito, which it reaches in the blood sucked by this insect from the skin of the sick, sexual reproduction occurs, the parasite giving birth to a large number of exceedingly minute forms, called sporozoids. These make their way through the tissues of the mosquito to its salivary glands, whence they are injected into the blood of the human subject whom this infected mosquito stings. On reaching maturity in the blood, the protozoan invades the red blood-corpuscles, and so completes the two cycles of its existence. The malarial paroxysm of chill, fever, and sweating occurs at the time of invasion of the blood-cells by a new brood of the parasites, either those resulting from segmentation of the protozoan within the human blood-vessels or those reproduced sexually in the body of the mosquito and thence injected into man. There are three varieties of the *Hæmamœba* which are concerned in the production of the three varieties of malaria, *tertian, quartan,* and *estivo-autumnal* or *pernicious.* Symptomatically, there are four forms of malaria: the *intermittent,* in which the interval between the paroxysms is fever-free; the *remittent,* in which the fever is continuous, but is marked by exacerbations with intercurrent chill and sweating; the *pernicious* or *congestive* form, in which the blood-poisoning is profound; and the *chronic* form, constituting what is called the *malarial cachexia.* See ★*Laverania.*—**Hybrid malaria,** malaria modified by association with some other disease.

Hæmamœba malariæ (*Plasmodium quartanæ*), the Parasite of Quartan Fever.

a, a developing form within the red blood-corpuscle; *b*, a full-grown body, the substance of the red corpuscle having disappeared; *c*, flagellate body.

(From Johns Hopkins Hospital Reports—Thayer and Hewetson.)



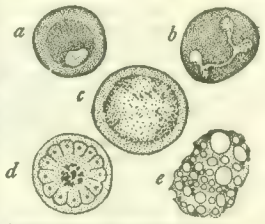


Diagram of the Complete Life-cycle of the Parasite of Pernicious Malaria, *Hæmamœba* (*Plasmodium*) *malignum* or *Laverania malariæ.*

The stages shown above the dotted line are those found in human blood; below the dotted line are seen the phases through which the parasite passes in the intermediate host, the mosquito. I–V and 6–10 show the schizogony; VI–XII, the sexual generation, which at VII splits into two lines, male (*a*) and female (*b*), to be united again by conjugation (XI and XII); XIII, the motile zygote; XIV–XIX, sporogony. I–III, young amœbulæ in blood-corpuscles, the last two showing the ring-form (which is, however, not quite correctly drawn). IV, older, actively amœboid trophozoite. V, still older, less amœboid trophozoite. 6, mature schizont. 7, schizont with nucleus dividing up. 8, young rosette stage. 9, fully formed rosette stage, merozoites round a central residual mass of protoplasm containing the pigment, and blood-corpuscle beginning to break down. 10, merozoites free in the blood by breaking down of the corpuscle. VI, young, indifferent gametocyte. VIIa, male crescent. VIIb, female crescent. VIIIa and VIIIb, the gametocytes becoming oval. IXa and IXb, spherical gametocytes; in the male (IXa) the nucleus has divided up. Xa and Xb, formation of gametes; in the male (Xa) the so-called flagella or male gametes (*f*) are thrown out—one of them is seen detached; in the female (Xb) a portion of the nucleus has been thrown out. XI, a male gamete penetrating a female gamete at a cone of reception formed near the nucleus. XII, zygote with two pronuclei in proximity. XIII, zygote in the motile stage (vermicule or oökinete). XIV, encysted zygote (oöcyst). XV, commencing multiplication of the nuclei in the oöcyst. XVI, oöcyst with numerous sporoblasts. XVII, commencing formation of sporozoites; the nucleus of each sporoblast has divided to form numerous nuclei, each of which is growing out in a little tongue of protoplasm to become a sporozoite, but a few nuclei remain behind as residual nuclei. XVIII, full-grown oöcyst crammed with ripe sporozoites; on one side the cyst has burst and the sporozoites are escaping. XIX, free sporozoites, showing their changes of form. *n*, nucleus of the parasite; *p*, melanin pigment; *fl*, flagella; *sp.bl*, sporoblasts; *r.n.*, residual nuclei; *r. p*, residual protoplasm. (Chiefly after Neveu-Lemaire, from whom the plan and arrangement of the different stages are borrowed, with slight modifications; details of the figures are founded on the figures of Grassi, Schaudinn (Leuckart's "Zoologische Wandtafeln"), Ross, and others.)

(From Lankester's "Zoology.")

Hæmamœba (*Plasmodium*) *tertianæ*, the Parasite of Tertian Fever.

a, a young form within a red blood-corpuscle; *b*, a developing pigmented form within the corpuscle; *c*, a full-grown body; *d*, a segmenting body; *e*, a degenerating form undergoing vacuolization.

(From Johns Hopkins Hospital Reports—Thayer and Hewetson.)

malarial, *a.*—**Malarial cachexia.** See ★*cachexia.*—**Malarial crescent.** Same as ★*crescent,* 4 (*e*).—**Malarial fever of cattle.** Same as *Texas fever.*

II. *n.* One who suffers from or is subject to malaria.

malariated (mā-lā′ri-ā-ted), *a.* [*malaria* + *-ate*[2] + *-ed*[2].] Infected with malaria.

malarigenous (mal-ą-rij′e-nus), *a.* [*malaria* + L. *-genus*, -producing.] Producing malaria; malarious. [Rare.]

malarin (mal′ą-rin), *n.* [*malar(ia)* + *-in*[2].] The trade-name of acetophenone-paraphenetidine citrate, $(C_2H_5OC_6H_4N:C(CH_3)C_6H_5)_3C_6H_8O_7$. It is prepared by the action of acetophenone on paraphenetidine, forms a crystalline powder, and is used in medicine as a febrifuge. Also called *acetophenone-phenetidide.*

malarioid (mą-lā′ri-oid), *a.* [*malari(a)* + *-oid.*] Like or resembling malaria. *Syd. Soc. Lex.*

malariologist (mą-lā-ri-ol′ọ-jist), *n.* Same as *malarialist.*

malarrangement (mal-ą-rānj′mẹnt), *n.* [*mal-* + *arrangement.*] Bad, defective arrangement.

malashaganay (mä-lä-shä′ga-ni), *n.* [*Amer. Ind.*] Same as *fresh-water drum,* which see, under *drum*[1], 11 (*b*).

Malaspina glacier. See ★*glacier.*

malaxation, *n.* 2. In *entom.*, with certain solitary wasps, the act of kneading or bruising with their jaws insects already stung, in order more thoroughly to paralyze them before storing them away in their burrows as food for their future young.

Malay cat. See ★*cat*[1].

Malayic (mą-lā′ik), *a.* [*Malay* + *-ic.*] Same as *Malay.*

Malayo-African (mą-lā″ō-af′ri-kạn), *a.* Malayan and African; connected with Malaysia and Africa. *Keane,* Ethnology, p. 331.

Malayo-Chinese (mą-lā″ō-chī-nēs′), *a.* Malayan and Chinese; connected with Malaysia and China. *Keane,* Ethnology, p. 333.

Malayo-European (mą-lā′ō-ū-rọ-pē′ąn), *a.* Connected with Malaysia and Europe. *Keane,* Ethnology, p. 333.

Malayoid (mą-lā′oid), *a.* [*Malay* + *-oid.*] Similar to the Malays.

Malayo-Indonesian (mą-lā″ō-in-dọ-nē′si-ąn), *a.* Connected with Malaysia and Indonesia. *Keane,* Ethnology, p. 333.

Malayo-Malagasy (mą-lā″ō-mal-ą-gas′i), *a.* Malayan and Malagasy; connected with Malaysia and Madagascar. *Keane,* Ethnology, p. 285.

Malayo-Papuan (mą-lā″ọ̄-pap′ū-ąn), *a.* and *n.* **I.** *a.* Common or relating to both Malays and Papuans.

II. *n.* One of mixed Malay and Papuan blood.

malchite (mal′kīt), *n.* [*Malchen,* Mount Melibocus, Hesse, Germany, + *-ite*[2].] In *petrog.*, a fine-grained to aphanitic, porphyritic, igneous rock, composed of labradorite and hornblende, with a subordinate amount of quartz. *Osann,* 1892.

malconduct (mal-kon′dukt), *n.* [*mal-* + *conduct.*] Wrong, faulty, or improper conduct; especially, maladministration of public affairs: as, *malconduct* in office.

malcontentism (mal-kọn-tent′izm), *n.* [*malcontent* + *-ism.*] The condition or state of being malcontent or dissatisfied.

maldigestion (mal-di-jes′tyọn), *n.* [*mal-* + *digestion.*] Imperfect digestion.

mal-di-gomma (mal-dē-gom′ą), *n.* [It.: *mal,* disease; *di,* of; *gomma,* gum, also the name of a disease.] Same as ★*foot-rot,* 2.

malduck (mal′duk), *n.* The fulmar petrel, *Fulmarus glacialis.* Also *malmarsh.*

male[1], *n.* 3. A 'male' precious stone. In the middle ages and until quite recent times, all the darker gems, such as sapphire, ruby, and topaz, were known as 'male' gems; the lighter blue, lighter red, or lighter yellow were called 'female' gems.—**Dwarf male.** (*b*) The minute, parasitic male which is attached to the body of the ordinary hermaphrodite individual in certain cirripeds. It is supposed to secure the cross-fertilization of the hermaphrodite. See *complemental,* 2.

Malebolgian (mal-ē-bol′ji-ąn), *a.* [*Malebolg(e),* < It. *male,* fem. pl. of *malo,* evil, + *bolge,* pl. of *bolgia,* budget, + *-ian.*] Pertaining to or resembling Malebolge, the eighth circle in Dante's description of Hell.

Malebolgic (mal-ē-bol′jik), *a.* Same as ★*Malebolgian.*

malediction, *n.* 2. In *anc. eccles. law,* a curse annexed to the donation of lands to churches or religious institutions against those who should violate their rights. *Cowell.*

maleducation (mal″ed-ū-kā′shọn), *n.* [*mal-* + *education.*] Faulty, imperfect education. *Emerson.*

malefactory (mal-ē-fak′tọ-ri), *a.* [NL. **malefactorius,* < *malefactor.*] Ill-doing; criminal. [Rare.]

One of the boasts of Riversley was that while the rest of the world ate and drank poison, the Grange lived on its own solid substance, defying *malefactory* Radical tricksters.

G. Meredith, Adventures of Harry Richmond, xlix.

male-fern, *n.* 2. The dried rhizome of *Dryopteris Filix-mas* of Schott, or of *Dryopteris marginalis* of Gray, used as an anthelmintic. The chaff, together with the dead portions of the rhizome and stipes, should be removed, and only such portions used as have retained their internal green color.—**Oleoresin of male-fern.** See ★*oleoresin.*

maleness (māl′nes), *n.* The character of being male. [Rare.]

The discovery of these morphological facts does not in the least shift the old-time attribute of *maleness* as applied to the stamen or of femaleness as applied to the pistil. *L. H. Bailey,* in Science, June 5, 1896, p. 826.

mal-entendu (mäl′oṅ-toṅ-dü′), *a.* and *n.* [F. *mal,* ill, + *entendu,* understood.] **I.** *a.* Wrongly understood; mistaken.

II. *n.* A misunderstanding.

Maletra burner. See ★*burner.*

malfeasant (mal-fē′zant), *a.* and *n.* [F. *malfaisant,* < *mal,* ill, + *faisant,* ppr. of *faire,* do. Compare *damage feasant.*] **I.** *a.* Doing ill; guilty of misconduct in office.

II. *n.* An ill-doer; a malefactor.

malgovernment (mal-guv′ėrn-mẹnt), *n.* [*mal-* + *government.*] Bad government; misgovernment.

malgrace (mal-grās′), *n.* [OF. *male grace,* 'bad grace.' See *mal-* and *grace.*] 1†. Ill grace; ill favor; disfavor.—2. Something of ill grace or ill favor; something unbecoming.

May these not see in us some *malgrace* which it needs the gentleness of Christ to get over and forget, some savagery of which we are not aware, some gaucherie that repels though it cannot estrange them?

Geo. MacDonald, Weighed and Wanting, iv.

malice, *n.* 5. The common dwarf mallow, *Malva rotundifolia.*—**Particular malice,** actual malevolence; positive ill-will: it is directed toward a definite person or persons and is distinguished from *legal malice,* that is, the doing of a wrongful act without spite; and from Blackstone's *universal malice,* which is intentional but not definite.

malignite (ma-lig′nīt), *n.* [*Maligne* river, Canada, + *-ite*[2].] In *petrog.*, a name given by Lawson (1896) to phaneric igneous rocks composed of orthoclase with ægirite-augite, biotite, sodic amphibole, nephelite, melanite, sphene, and apatite. Some varieties of malignite are rich in melanite, others in nephelite.

malik (mä′lik), *n.* [Ar.] The head man of a village in parts of India and central Asia.

About this time a letter arrived from the Prince Sultán Dániyál, reporting that (*Malik*) Ambar had collected his troops in Bidar. *Elliot*, Hist. Ind., VI. 104.

mali-mali (mä′li-mä′li), *n.* A form of chronic chorea or tic prevalent in the Philippine Islands.

malipes (mal′i-pēz), *n.* Singular of *malipedes*.

malism (mā′lizm), *n.* [L. *malus*, bad, + *-ism*.] The doctrine that the world is evil, or that, on the whole, evil prevails over good: a less extreme doctrine than pessimism.

Malism, to me a convenient expression, is acknowledged on all hands. *H. Goodwin*, Science and Faith, p. 243. *N. E. D.*

malist (mā′list), *n.* [L. *malus*, bad, + *-ist*.] One who believes that the world is bad, but not the worst possible.

Bad as things are, he does not believe that the world is getting worse and worse . . . he is a '*malist*.' *Cheyne*, Job & Solomon, p. 202. *N. E. D.*

malistic (ma-lis′tik), *a.* [*malist* + *-ic*.] Pertaining to or of the nature of malism.

malitza (mä-lit′sä), *n.* [Samoyed ?] A kind of fur coat or tunic reaching to the knees, and open only at the neck and hem, worn by the Samoyeds. It is made with the hair inside, and with mitts attached to the sleeves. See extract under ★*louphu*.

malkuth (mal-köth′), *n.* [Heb. kingdom, < *malak*, to rule, < *melek*, king.] The tenth Sephira, forming the Adam Kadmon. See ★*Sephiroth* and ★*Adam Kadmon*.

mallagong (mal′a-gong), *n.* [Australian.] A native name for the Australian duck-mole or platypus, *Ornithorhynchus paradoxus*: used to some extent locally as a common name. Also, in books, *mallangong* and *mullagong*.

Malleable castings. See ★*casting*.

malleableize (mal′ē-a-bl-īz), *v. t.*; pret. and pp. *malleableized*, ppr. *malleableizing*. [*malleable* + *-ize*.] To make malleable, as iron or other metals. [Rare.]

malleal (mal′ē-al), *a.* and *n.* [*malleus* + *-al*[1].]
I. *a.* Of or relating to the malleus.
II. *n.* Same as *interoperculum*. *Starks*, Synonymy of the Fish Skeleton, p. 515.

malleate (mal′ē āt), *a.* [*malleus* + *-ate*[1].] In rotifers, having the mallei stout, the manubria and uncī being of equal length: as, the *malleate* type of trophi.

malleatory (mal′ē-ā-tō-ri), *a.* [NL. **malleatorius*, < L. *malleator*, a hammerer, < *malleare*, *v.*, hammer: see *malleate*.] Of or pertaining to a hammerer or hammering.—**Malleatory spasm** or **chorea.** Same as *malleation*, 3.

mallee[2] (mal′ē), *n.* Same as *molly*[3].

mallee-scrubber (mal′ē-skrub″ėr), *n.* In Australia, a name given to cattle that run wild in the mallee-scrub, or thickets of dwarf eucalyptus, *Eucalyptus dumosa* and *E. oleosa*. The brush-turkey, *Leipoa*, is similarly known as the *mallee-bird*.

mallein (mal′ē-in), *n.* [L. *malle(us)*, glanders, + *-in*.] A sterilized filtered extract of glycerin-bouillon cultures of the bacillus of glanders, containing substances from the bodies of the bacilli and their soluble products which have not been destroyed by heat.

malleh-bug (mal′e-bug), *n.* Same as *mianabug* (which see).

mallemak, *n.* See *mallemuck*.

mallemot (mä-le-mōt′), *n.* [Cape D. *mallemót*, < *mal*, foolish, + *mot*, moth.] A name given in South Africa to a poisonous wasp.

malleotomy (mal-ē-ot′ō-mi), *n.* [*malleus* + Gr. *-τομα*, < *ταμεῖν*, cut.] **1.** An operation for separating the malleoli by division of the ligament which holds them in apposition.—**2.** An operation of division of the malleus in the middle ear in cases of ankylosis of the ossicles.

mallochorion (mal-ō-kō′ri-ọn), *n.* [NL., < Gr. *μαλλός*, a lock of wool, + *χόριον*, membrane. See *chorion*.] In *embryol.*, the presumably primitive form of the mammalian chorion, characterized by a uniform covering of villi.

malloplacenta (mal″ō-plā-sen′tä), *n.* [NL., < Gr. *μαλλός*, a lock of wool, + NL. *placenta*.] In *embryol.*, a non-deciduate placenta corresponding to the mallochorion, that is, having uniformly distributed villi. Such a placenta occurs in many ungulates and in cetaceans.

mallotoxin (mal-ō-tok′sin), *n.* [Gr. *μαλλός*, lock of wool, + E. *toxin*.] Same as ★*rottlerin*.

mallow, *n.*—**Bristly-fruited mallow,** *Modiola Caroliniana*, a low plant of the mallow family with pedately cleft leaves, red flowers, and hispid-aristate carpels, found from Virginia to Florida and Texas, and also in Central and South America.—**European mallow,** *Malva Alcea* of Europe, cultivated in, and escaped from, gardens in some parts of the United States. Also called *vervain-mallow*.—**Globe mallow.** The name is applied especially to the species *Sphæralcea acerifolia*, the maple-leaved globe mallow, and *S. cuspidata*, the sharp-fruited globe mallow, of western North America.—**High mallow.** See *high-mallow*.—**Low mallow,** the dwarf mallow, *Malva rotundifolia*.—**Running mallow.** Same as *dwarf mallow*: so called from its procumbent, spreading habit.—**Swamp-mallow,** the swamp rose-mallow, *Hibiscus Moscheutos*.—**Virginia** or **Virginian mallow,** *Sida hermaphrodita*. See *Sida*, 1.—**Water-mallow,** the swamp rose-mallow.—**White mallow,** the marsh-mallow, *Althæa officinalis*.

malm, *v. t.* **2.** To mix (clay and chalk) for making bricks.

malma (mal′mä), *n.* [Kamchatkan.] Same as *Dolly Varden trout* (which see, under *trout*[1]).

malo (mä′lō), *n.* [Fijian and Hawaiian, the paper-mulberry, a malo or girdle made from it, Maori *maro*, a girdle.] **1.** In the Fiji Islands, Hawaii, and other parts of Polynesia, the paper-mulberry, *Papyrius papyrifera*.—**2.** A cloth or girdle made from the fiber of the paper-mulberry. See *Broussonetia*, ★*kapa*, *tapa*, ★*aute*, and ★*wauke*.

malobago (mä-lō-bä′gō), *n.* [Bicol *malubago*.] Same as ★*balibago*.

malobservance (mal-ọb-zėr′vans), *n.* [*mal-* + *observance*.] Wrong observance: as, *malobservance* of the Sabbath.

malobservation (mal″ob-zėr-vā′shọn), *n.* [*mal-* + *observation*.] Incorrect observation; the act of seeing or observing wrongly.

Further experiment [in "crystal-gazing"] may reveal some normal explanation, while scepticism (which seldom takes the trouble to examine the alleged facts with any care) can always repose on a theory of *malobservation* and imposture. *Encyc. Brit.*, XXXII. 53.

malofrontal (mā-lō-fron′tal), *a.* [L. *mala*, jaw, + *frons* (*front-*), forehead, + *-al*[1].] In *craniom.*, pertaining to both the malar and the frontal bone.

malonic (ma-lon′ik), *a.* [*mal(ic)* + *-on* + *-ic*.] Noting an acid, a colorless compound, $CH_2(COOH)_2$, found in the sugar-beet and prepared by the hydrolysis of cyanacetic acid; propanediacid. It crystallizes in triclinic plates and melts and decomposes into carbon dioxid and acetic acid at 132° C. Malonic esters and their sodium derivatives are extensively used for organic syntheses.

malorganization (mal-ôr″gan-i-zā′shọn), *n.* [*mal-* + *organization*.] Imperfect or wrong organization.

malorganized (mal-ôr′gan-īzd), *a.* [*mal-* + *organized*.] Imperfectly or wrongly organized.

Malo-Russian, *n.* **II.** *a.* Pertaining or relating to the Little-Russians.

malpais (mäl-pä-ēs′), *n.* [Sp., 'bad land': see *mal-*, *pais*, *peasant*.] The ragged surface of a lava-flow. [Southwestern U. S.]

In the old times, up to the present generation, in their trading visits to the Pimas the Hopi took the trail through Chaves Pass, an available one for them to cross the rugged *malpais* of the Mogollones. *J. W. Fewkes*, in Smithsonian Rep., 1896, p. 520.

malposed (mal-pōzd′), *a.* [*mal-* + *pose*[2] + *-ed*[2].] Badly placed; wrongly placed.

Malposed teeth are not only unsightly but prone to disease. *Encyc. Brit.*, XXVII. 417.

malpraxis (mal-prak′sis), *n.* [*mal-* + *praxis*.] Malpractice.

malt[1], *n.*—**Pale malt,** in *brewing*, malt which has been dried in a kiln, but at a comparatively low temperature, so that it has less color than yellow or amber malt.—**Slack malt,** malt which, after having been dried, has absorbed moisture from the atmosphere. It produces inferior beer, and requires to be redried before use.

Malta gray. Same as *methylene* ★*gray*.

maltan (mâl′tan), *n.* [*malt*[1] + *-an*.] The term used in organic chemistry to designate an atomic complex which is supposed to be present in the starch molecule and which gives rise to maltose and its derivatives when the starch is hydrolyzed.

maltase (mâl′tās), *n.* [*malt*[1] + *-ase*.] A ferment which causes the cleavage of maltose into two molecules of dextrose. Maltase, like lipase, has been shown to be capable of reversible action in concentrated solutions. It occurs widely distributed in both the animal and the vegetable world.

maltate (mâl′tāt), *n.* [*malt*[1] + *-ate*[1].] A compound of malt with another substance.

Maltee (mâl′tē), *a.* Same as *Maltese* (cat). *Dialect Notes*, III. iii, 193. [Colloq.]

Maltese cross. (*b*) A plant, *Lychnis Chalcedonica*. Also called *cross-of-Jerusalem*.—**Maltese lace.** See ★*lace*.

maltesite (mâl-tēs′īt), *n.* [*Maltese* (see def.) + *-ite*[2].] A variety of chiastolite or macle (andalusite) which is found in the crystalline schists of eastern Finland. It occurs in large nodules that exhibit a Maltese cross of the pure mineral separated by areas of impure material. See cut under *chiastolite*.

malt-grist (mâlt′grist), *n.* See the extract.

When wanted the malt is again scoured, and is ground or rather crushed in specially-constructed malt mills, which press the grains so that the hulls remain intact while the interior starch body is finely powdered. It is now termed "*malt-grist*," and it is stored in grist hoppers, where it is kept in readiness for the mash-tub underneath. *Sci. Amer.*, June 18, 1904, p. 480.

maltha, *n.* **2.** Haeckel's term for the gelatinous ground-substance or mesoglœa and contained cells of various kinds, which forms the skeletogenous layer in sponges.

malthacite (mal′thą-sīt), *n.* [Gr. *μαλθακός*, soft (a variant of *μαλακός*, soft), + *-ite*[2].] A white or yellowish clay which occurs in scales, also massive. It is related to fullers' earth.

malthite (mal′thīt), *n.* [*maltha* + *-ite*[2].] A general term sometimes used to embrace the viscous bitumens of varying consistency, namely, maltha, mineral tar, brea, and chapapote.

Malthusianize (mal-thū′si-an-īz), *v. i.*; pret. and pp. *Malthusianized*, ppr. *Malthusianizing*. [*Malthusian* + *-ize*.] To become a supporter of the doctrines of Malthus. [Rare.]

malt-jelly (mâlt′jel″i), *n.* The trade-name of an extract of malt to which isinglass, gelatin, or agar-agar has been added at a boiling temperature and the liquid gelatinized by cooling.

malto-. A combining form used in organic chemistry to designate a relation to maltose.

maltodextrine (mâl-tō-deks′trin), *n.* A variety of dextrine or starch-gum, produced, in 'mashing' brewers' malt, as an intermediate product between starch and fermentable glucose. Its claim to be considered a distinct substance is not clearly established.

maltol (mâl′tol), *n.* [*malt*[1] + *-ol*.] A colorless compound, $CH\langle \begin{matrix} C(OH):CH \\ O \\ CH:C(OH) \end{matrix} \rangle CH$ (?), formed during the roasting of malt. It crystallizes in long needles and gives a violet color with ferric chlorid.

maltometer (mâl-tom′e-ter), *n.* [*malt*[1] + Gr. *μέτρον*, measure.] A hydrometer with a special scale, used to determine the strength of brewers' wort or extract of malt.

maltonic (mâl-ton′ik), *a.* [*malt*[1] + *-on* + *-ic*.] Pertaining ultimately to malt.—**Maltonic acid.** Same as ★*gluconic acid*.

maltosazone (mâl-tōs-az′ōn), *n.* [*maltose* + *azone*.] A crystalline compound, $C_{12}H_{24}O_9(N.NH_2)_2$, prepared by the action of maltose on hydrazine acetate. The name is also used, less correctly, for *phenyl maltosazone*.

maltoside (mâl′tō-sid), *n.* [*maltose* + *-ide*[1].] In *organic chem.*, the name of a class of compounds which are both intramolecular anhydrids and ethers. They are formed from alcohols and maltose by the action of hydrochloric acid, closely resemble the corresponding glucosides from glucose, and are hydrolyzed by certain enzyms.

malt-screen, *n.*—**Waterfall malt-screen,** a sieve or screen placed in a sloping position and having several strips of wood crossing it horizontally, by passing over which malt is cleansed from dust, rootlets, and plumules, preparatory to its use by the brewer.

maltzyme (mâlt′zim), *n.* [*malt*[1] + Gr. *ζύμη*, ferment.] A specially prepared form of diastase or malt extract.

malu (mä′lö), *n.* [*Melanesian*.] The initiation ceremonies of the Melanesians performed at the time of puberty of boys.

malum, *n.* **2.** In *pathol.*, a disease.—**Malum coxæ,** hip-disease.—**Malum perforans,** perforating ulcer of the foot.—**Malum senile.** (*a*) Arteriosclerosis. (*b*) Inflammation of the sclera in the aged. (*c*) A chronic destructive disease of one of the larger joints, usually the hip, which occurs in advanced life.

malunion (mal-ū′nyọn), *n.* [*mal-* + *union*.] Union of the fragments of bone in a faulty position after a fracture.

Malvaviscus (mal-va-vis′kus), *n.* [NL. (Adanson, 1763, adopted from Dillenius, 1732), < L. *Malva*, mallow, + *viscum*, bird-lime, in allusion to the mucilaginous or fleshy fruit.] A genus of plants of the family *Malvaceæ*. They are shrubs closely allied to *Abutilon*, from which they differ in having a 10- to 12-bracted involucre. There are from twenty to thirty species, native to warm parts of America. *M. arboreus*, known to gardeners as *Achania Malvaviscus*, is a window-garden or greenhouse plant, with alternate

shallowly 3-lobed leaves and scarlet flowers which remain nearly or quite closed and bear a projecting column of stamens.

Malvern quartzite. See ★*quartzite.*

malwa (mäl′wä), *n.* An intoxicating liquor made from ripe bananas and fermented millet. [Africa.]

mam. An abbreviation of *mammalogy.*

mamaki (mä-mä′kē), *n.* [Hawaiian.] **1.** A name in Hawaii of a shrub of the nettle family, *Pipturus albidus,* found on all the islands of the group, and one of the two principal plants from which kapa is prepared.—**2.** The kapa or cloth made from this plant.

mamaloi (mä-mä-lō′i), *n.* [Also *maman-loi;* < *mama,* mother, + Bantu *loi,* sorcerer.] The priestess in voodoo ceremonies. [Haiti.]

Mamamouchi (mä-mä-mö-shē′), *n.* [F., a factitious word.] A pompous title, from that supposed to have been conferred by the Sultan on M. Jourdain in Molière's play, 'Le Bourgeois Gentilhomme'; hence, one who takes such a title; an ostentatious, self-important, and ridiculous pretender.

mamane (mä-mä′nā), *n.* [Native name.] A leguminous tree, *Sophora chrysophylla,* growing at great elevations in the Hawaiian Islands, which has pinnate leaves, racemes of pale-yellow flowers, and fruit in the form of a four-winged pod deeply constricted between the seeds. The wood is hard and durable, and is suitable for posts in building. It was used by the ancient Hawaiians for making their *oo,* or digging implements, and the *holua,* or sleds, in which they coasted down the mountain sides.

mamanite (mä′ma-nīt), *n.* [*Maman* (see def.) + *-ite*2.] A mineral closely related to polyhalite in aspect and characters, but stated to differ in the proportion of the bases. It occurs with carnallite at the salt-mine of Maman in Persia.

mamelonated (mam′e-lon-ā-ted), *a.* [*mamelon.*] Having rounded, nipple-shaped elevations on the surface.

Mameluke bit, a heavy iron bit used by the Brazilian mamelucos.—**Mameluke point,** the double-edged cutting-point of the Mameluke saber.—**Mameluke sleeve,** a fashion of sleeve worn by women in Paris under the First Empire. *N. E. D.*

mamillariform (mam-i-lā′ri-fôrm), *a.* Same as *mammilliform.*

mamma2, *n.*—**Supernumerary mammæ,** breasts in excess of the normal number. They may be situated near the natural ones, or may be found in the axilla, groin, or abdominal wall. Also called *accessory mammæ.*

mammæform, *a.* An erroneous form for *mammiform.*

mammalgia (ma-mal′ji-ą), *n.* [L. *mamma,* breast, + Gr. ἄλγος, pain.] Neuralgic pain in the breast.

mammality (ma-mal′i-ti), *n.* The state or condition of being a mammal. *J. Fiske.*

Mammary arteries, three main trunks which supply the breast, the *internal* arising from the subclavian artery, and the *superior* and *inferior external* derived from the axillary artery.

mamma-shrimp (mam′ä-shrimp), *n.* A West Indian crab, probably of the family *Homolidæ.*

mammato-cumulus, *n.* 2. Same as *mammiform cloud* (which see, under ★*cloud*1).

mammilla, *n.*—**Spinning mammilla,** one of the mammilliform spinnerets of a spider.

mammillaplasty (ma-mil′ą-plas-ti), *n.* [L. *mammilla,* nipple, + Gr. πλαστός, < πλάσσειν, form.] A surgical operation for restoring a defective nipple or raising a depressed one.

mammoid (mam′oid), *a.* [*mamm*(*a*)2 + *-oid.*] Pertaining to or resembling a mamma in character or shape: as, the *mammoid* process of the temporal bone of man. [Rare.]

mammoniacal (mam-ō-nī′ą-kąl), *a.* Same as ★*mammonic.*

mammonic (ma-mon′ik), *a.* [*Mammon* + *-ic.*] Related to or influenced by Mammon or worldliness. [Rare.]

mammonitish (mam′on-ī-tish), *a.* Resembling Mammon; worldly; avaricious. *N. E. D.*

mammular (mam′ū-lär), *a.* [*mammula* + *-ar*3.] Having or consisting of mammulæ.

mammulose (mam′ū-lōs), *a.* [*mammula* + *-ose.*] Same as ★*mammular.*

mammy, *n.* **3.** Same as *stone-lugger,* 2.

mamo (mä′mō), *n.* [Hawaiian.] **1.** The sickle-billed sunbird, *Drepanis pacifica,* one of the honey-suckers of Hawaii: exterminated for the sake of its yellow feathers, which were used in making feather cloaks worn by the chiefs. It was black with golden-yellow rump and lower back. See cut under *Drepanis.*—**2.** A cloak made wholly or partly from the feathers of this bird.

mamsell, mamselle (mam-zel′), *n.* [F. *mamselle, mamzelle,* short for *mademoiselle.*] Mademoiselle. [Colloq.]

Put on Miss Maria's bonnet this instant, *Mamsell.* . . . I shall take care, *Mamsell,* that you return to Switzerland to-morrow. *Thackeray,* Fitz-Boodle Papers, Pref., p. 170.

man1, *n.* **14.** In Cumberland, Westmoreland, and Lonsdale, a cairn or pile of stones marking a summit or prominent point of a mountain. Compare *Low Man, High Man,* as local names for particular cairns, also applied to portions of the mountains themselves. *N. E. D.*—**Blue-sky man.** See ★*sky*1.—**Corner man.** (*a*) One of the two end-men of a company of negro minstrels. (*b*) A loafer who hangs about street-corners. [Eng. in both uses.] (*c*) In building a camp or barn of logs, one who notches the logs so that they will fit closely and make a square corner. (*d*) One who makes a corner in stocks or commodities.—**Second man.** (*b*) In *domestic service,* a butler's first assistant, to whom, among other duties, the care of the silver is intrusted.—**The man in the street,** the ordinary man; one who takes the commonplace view of things; the type of commonplaceness.

The man in the street, finding no worth in himself which corresponds to the force which built a tower or sculptured a marble god, feels poor when he looks on these. *Emerson,* Self-Reliance, Essays, 1st ser., p. 62.

A Greenwich nautical almanac he has, and so being sure of the information when he wants it, *the man in the street* does not know a star in the sky.

Emerson, Self-Reliance, Essays, 1st ser., p. 83.

Third man, in *cricket.* (*a*) A fielder who stands beyond point, but farther from the wicket, and more behind it. (*b*) His position in the field.—**Ward man,** a police officer detailed as a detective in the service of his captain. The office was abolished in New York in 1894. [U. S.]—**White man.** (*a*) A man of the Caucasian race. (*b*) An honest, upright man. [Slang, U. S.]

man2 (mân), *n.* [Per. *mān,* Hind. *mān,* usually *man,* Skt. *māna,* a measure, a weight, < √*mā,* measure: hence E. *maund.*] A measure of weight in Persia, varying in value, in different localities, from about 6 to about 25 pounds.

Man., Manit. Abbreviations of *Manitoba.*

mana1 (mä′nä), *n.* [Jap. *mana,* the true or real characters, from *ma,* just, true, perfectly, exactly, + *na,* name.] The Chinese characters as used by the Japanese.

Chinese characters have been adopted by only one people with an agglutinative language, the Japanese, who along with these characters (*Mana*) use another method of writing (Kana), which is syllabic.

Deniker, Races of Man, p. 141.

mana2 (mä′nä), *n.* [Maori and Tahitian *mana,* authority, influence; Samoan and Hawaiian *mana,* supernatural power, etc.: a word common to many Polynesian and Melanesian languages.] **1.** Power in general; authority; influence. [New Zealand.]—**2.** Magical or supernatural power.

A degraded and conventionalised representation of a bird, probably of the sacred bird of the West Pacific, the frigate bird, which possesses *mana* (spiritual or magical power) in an eminent degree.

Nature, May 14, 1903, p. 36.

manaca, or **manacaa** (mä′nạ-kä′), *n.* [Tupi.] In Brazil, the name of a shrub belonging to the solanum family, *Brunfelsia Hopeana,* the tough woody root of which is used as a remedy for rheumatism and syphilis. See ★*Brunfelsia.*

manada (mä-nä′dä), *n.* [Sp.] A Spanish term for a herd of cattle or drove of sheep; adopted to some extent in California and southern Texas.

managemental (man-āj-men′tąl), *a.* [*management* + *-al*1.] Relating to management or to the management; of the nature of management. [Rare.]

managerially (man-ā-jē′ri-ąl-i), *adv.* In the manner of a manager; in the capacity of a manager.

manal (mā′nąl), *a.* [L. *man*(*us*), hand, + *-al*1.] Of or pertaining to the manus or hand.—**Manal formula,** in *zoöl.,* a statement of the distance between the distal ends of the second to fifth metacarpals of a bat, measured when the wing is extended as in flight.

mañana (män-yä′nä), *n.* and *adv.* [Sp., the morning, the morrow; < L. *mane,* the morning.] **1.** *n.* To-morrow: used as a synonym of easy-going procrastination.

Six hours [to wait]! What difference did it make? There was a flavor of the *mañana por la mañana* of the Spaniards . . . in the acceptance of the situation that appealed to me.

F. Hopkinson Smith, A Pot of Jam, in At Close Range, [p. 243.

Land of Mañana, the land of To-morrow: applied to any region characterized by the easy-going procrastination of its inhabitants; a land where the Spanish disregard of the value of time prevails.

A lethargic sloth beyond that of sluggish ox or somnolent swine, which was an irritating marvel to the patient padres of the eighteenth century, and is to-day a by-word in the even-tempered *land of Mañana.*

Pop. Sci. Mo., March, 1902, p. 421.

II. *adv.* On the morrow; to-morrow; on any future day; by and by.

"Lazzarillo," despairingly, "order the horses, it is time to go."

"Oh! *mañana,* señora; we go *mañana.*"

"But the luggage?"

"Oh! aie, *mañana,*" murmured Lazzarillo, provokingly, putting off the evil day.

S. J. Cunningham, Through the Byways of Andalusia, v.

mananguete (mä-nän-gā′tā), *n.* [Philippine Sp.] A person who sells tuba, a drink made of palm-sap. [Philippine Is.]

mananosay (man-a-nō′sā), *n.* Same as *manunose.*

manarvel (mą-när′vęl), *v. t.* Same as *manavel.*

Manasquan formation. See ★*formation.*

manazo (mä-nä′zō), *n.* The Japanese name of a small shark, *Mustelus manazo,* of the family *Carchanidæ.*

man-breasted (man′bres″ted), *a.* Presenting a human appearance as far as the breast or upper part of the body is concerned, as the merman.

And in the light the white mermaiden swam,
And strong *man-breasted* things stood from the sea,
And sent a deep sea-voice thro' all the land.

Tennyson, Guinevere, l. 244.

man-broker (man′brō″kėr), *n.* A sailors' boarding-house keeper; a sailors' shipping-agent.

mancala (män′ka-lä), *n.* [Ar. *manqala,* a game played with 72 small shells on a board of 12 holes, lit. 'place of transferring or moving' (compare the meaning of *draughts,* lit. 'moves'), < *ma-,* a prefix forming nouns of place and time, + *naqala,* transfer, remove.] A game played on a board containing two or more rows of cup-shaped holes in which pebbles are placed and transferred from hole to hole according to certain rules. The game has been carried by the Arabs over the greater part of Africa and eastward to the Malay Archipelago. It is known locally as *naranj* (Maldive Islands); *chonka* (Ceylon); *chongkak* (Malay Peninsula); *poo* (Liberia); *chuncajon* (Philippine Islands); *gabatta* (Abyssinia); *abangah* (Niam Niam); *wave* (West Indies); *chuba* (as published and played in the United States).

Mancalias (man-kā′li-as), *n.* [NL., irreg. < L. *mancus,* defective, + *-alias,* "a quasi-diminutive termination to correspond with *Ceratias.*"] A genus of fishes of the family *Ceratiidæ,* inhabiting the open seas, usually at considerable depths.

Manchester cotton. See *Kendal* ★*cotton.*

Manchesterism (man′ches-tėr-izm), *n.* The economic philosophy and policy of so-called *Manchester school;* especially, the principles of free trade and *laissez faire. Kidd,* Western Civilization, p. 23.

Manchurian subregion. See ★*subregion.*

mancinism (man′si-nizm), *n.* [It. *mancinismo,* < *mancino,* left-handed, < *manco,* left-handed, maimed, defective, < L. *mancus,* defective.] Left-handedness or left-sidedness.

It seems that sufficient care has not yet been taken to determine what constitutes left-handedness. The relative strength of the two hands is not enough to decide this, for *mancinism,* or left-sidedness, is a matter of relative skill as well as of relative strength.

H. H. Ellis, The Criminal, p. 110.

mancipant (man′si-pant), *n.* [L. *mancipans* (*-ant-*), < *mancipare,* deliver. See *mancipate* and *mancipation.*] One who disposes of property by mancipation; a mancipator.

mancipatio (man-si-pā′shi-ō), *n.* [L.] Same as *mancipation,* 1.

mancipative (man′si-pā-tiv), *a.* [*mancipate* + *-ive.*] In *Rom. law,* having the character of mancipation (which see); mancipatory.

A *mancipative* will was executed by the same process.

Poste, Gaius, II. § 103.

mancipator (man′si-pā-tor), *n.* [L. *mancipator,* < *mancipare,* deliver. See *mancipate* and *mancipation.*] In *Rom. law,* one who disposed of property by mancipation; a mancipant.

Mancipation . . . is an imaginary sale which is only within the competence of Roman citizens, and consists in the following process: in the presence of not fewer than five witnesses, citizens of Rome above the age of puberty, and another person of the same condition, who holds a bronze balance in his hands and is called the balance holder, the alience holding a bronze ingot in his hand, pronounces the following words: This man I claim as belonging to me by right quiritary and be he purchased to me by this ingot and this scale of bronze. He then strikes the scale with the ingot, which he delivers to the *mancipator* as by way of purchase money.

Poste, Gaius, I. § 119.

mancipee (man-si-pē′), *n.* [Irreg. *mancip*(*ate*)

+ *-ee*[1].] The purchaser of property by mancipation, or the executor of a mancipatory will.

mancipium (man-sip'i-um), *n.* [L. See *mancipate.*] In *Rom. law*, the power over a freeman acquired by mancipation, that is, exercise of the paternal power to sell a son. The son then came into a condition similar to that of a slave, but to the purchaser alone. The transaction could be only among Roman citizens.

Bondage was an institute of the Civil law, slavery of the law of nations. [The custom did not exist in Justinian's time.] *Poste*, Gaius, pp. 30, 85.

Mandaic (man-dā'ik), *a.* Same as *Mandæan.*

mandant, *n.* **II.** *a*†. Commanding; ordering: chiefly in the phrase *member mandant*, the brain, as the controller of the body.

mandarah (man'da-rä), *n.* [Ar. *mandarah*, place of seeing, < *nadara*, see.] In some Oriental countries, a reception-room.

mandarin, *n.* **6.** Same as *mandarin orange* (which see, under *orange*[1]).

mandarinize (man'da-rin-īz), *v. t.*; pret. and pp. *mandarinized*, ppr. *mandarinizing.* [*mandarin* + *-ize.*] To raise to the position of mandarin; make a mandarin of. [Rare.]

mandarinship (man'da-rin-ship), *n.* [*mandarin* + *-ship.*] The office, authority, or rank of mandarin.

mandate (man'dāt), *v. t.*; pret. and pp. *mandated*, ppr. *mandating.* [L. *mandare*, pp. *mandatus*, commit, enjoin, command. See *mandate, n.*] 1†. To command.—**2.** To commit (a sermon, speech, etc.) to memory by repeating (it) aloud to one's self before delivery. [Scotch.]

My father . . . flung away his life without stint every Sabbath-day, his sermons being laboriously prepared, loudly *mandated*, and at great expense of body and mind, and then delivered with the utmost vehemence and rapidity.

J. Brown, Letter to J. Cairns, 1860, in Horæ Subsecivæ, [p. 97.

mandatee (man-dā-tē'), *n.* One to whom a mandate is given; a mandatary.

mandation (man-dā'shon), *n.* [*mandate, v.*, + *-ion.*] The act of committing (a sermon, or speech, etc.) to memory. See ★*mandate*, 2.

mandative (man'dā-tiv), *a.* [ML. *mandativus*, < L. *mandare*, command.] **1.** Relating to or of the nature of command.—**2.** In *gram.*, noting the imperative use of the future.

mandelic (man-del'ik), *a.* [G. *mandel*, almond, + *-ic.*] Noting an acid, a colorless compound, $C_6H_5CH(OH)COOH$, prepared by the hydrolysis of bitter-almond oil or by the action of hydrochloric acid on a mixture of benzaldehyde and hydrocyanic acid. It forms large rhombic crystals, melts at 118° C., and may be resolved into its optical isomers. Also called *phenylglycolic acid* or *paramandelic acid.*

mandible[1], *n.* (*e*) In polyzoans, an operculum.

mandibled (man'di-bld), *a.* Provided with a mandible or operculum, as the avicularia of certain *Polyzoa.*

An acute *mandibled* avicularium.
Annals and Mag. Nat. Hist., June, 1903, p. 591.

mandibula (man-dib'ū-lä), *n.* In *ichthyol.*, same as *dentary.*

Mandibular condyle, fenestra, fontanelle, foot, goniometer, index. See ★*condyle*, etc.

mandibularis (man-dib-ū-lā'ris), *n.* [NL. See *mandibular.*] The masseter muscle.

mandilion[2] (man-dil'yon), *n.* [NGr. *μανδήλιον*, *μανδύλιον*, a handkerchief, *τὸ ἅγιον μανδήλιον*, 'the sacred handkerchief' of the legend; orig. identical with *mandilion*[1], a garment.] A handkerchief on which, according to an ecclesiastical legend, a portrait of Jesus was painted, and which was sent by him to Abgarus, prince of Edessa. In the earliest version of the legend, that of Eusebius, the portrait is not mentioned. Three churches claim to possess the original relic, the Sainte-Chapelle at Paris, the church of San Silvestro in Capite in Rome, whence the relic was transferred to the Vatican in 1870, and the church of S. Bartolommeo in Genoa. The mandilion is not to be confused with the sudarium of St. Veronica.

man-door (man'dōr), *n.* In *mining*, a small trap-door on a traveling road.

mandragorine (man-drag'ō-rin), *n.* [*mandragora* + *-ine*[2].] A hydroscopic resinous alkaloid, $C_{17}H_{23}NO_3$, contained in the root of *Mandragora autumnalis* and *M. vernalis.* It melts at 77–79° C., and its salts are mydriatics.

mandragorite (man-drag'ō-rīt), *n.* [*mandragora* + *-ite*[2].] One who consumes mandragora as a narcotic. [Rare.]

mandrake, *n.*—**Wild mandrake.** (*a*) See *wild*[1]. (*b*) The enchanter's nightshade, *Circæa Lutetiana.*

mandram (man'dram), *n.* [West Indian.] A mixture, used in the West Indies as an appetizer, consisting of sliced cucumbers, chopped shallots, lime-juice, wine, and peppers. Also *mandrang.*

mandrel-press (man'drel-pres), *n.* A hand-press used to push a mandrel into a metal object for the purpose of holding it in a lathe or other machine-tool: also used to push the mandrel out again when the work is done. It is usually made as an attachment to a lathe and is sometimes a separate machine. Also called an *arbor-press.*

mandriarch (man'dri-ärk), *n.* [LGr. *μανδριάρχης*, < Gr. *μάνδρα*, monastery.] The founder or head of a monastic order. *N. E. D.* [Rare.]

mandrin (man'drin), *n.* [F. *mandrin*, a mandrel, former, strike, etc.: see *mandrel.*] A stiff wire used to give shape and rigidity to a soft catheter during its introduction.

mandruka (man-drö'kä), *n.* A trade-name of a kind of honeycomb-sponge of fine quality.

Honeycomb sponges are various in quality, these being known as *Mandruka*, and found in deep water, are perfect forms, and have a close fiber and no horny fibers protruding from the surface, and are characteristic for their small root. *Sci. Amer. Sup.*, Feb. 14, 1903, p. 22670.

manflight (man'flīt), *n.* The flight of a human being through the air by means of a flying- or a gliding-machine. *Aeronautic Annual*, 1895, p. 145.

manga, *n.* **2.** A cone-shaped bag for the filtration of amalgam. *Phillips and Bauerman*, Elem. of Metallurgy, p. 746.

mangan (mang'gan), *n.* [Gr. *μάγγανον*, a machine, war-engine: see *mangonel.*] Same as *mangonel.*

mangan-, mangano-. A prefix used with mineral names to indicate the presence of manganese: as, *manganapatite*, *manganosiderite*, etc.

manganandalusite (mang"gan-an-da-lū'sīt), *n.* A variety of andalusite of a grass-green color, which contains considerable manganese: found in muscovite-quartzite at Vestanå, Sweden.

manganberzeliite (mang"gan-bėr-zē'li-īt), *n.* A variety of berzeliite from Långban, Sweden, peculiar in containing both manganese and sodium.

manganblende (mang'gan-blend), *n.* Same as *alabandine.*

manganbrucite (mang-gan-brö'sīt), *n.* A massive variety of brucite which contains considerable manganese: found at Jakobsberg, Sweden.

Manganese bronze. (*b*) Same as *manganese brown.* See *brown.*—**Manganese dioxid,** the common black oxid of manganese, found in nature as the mineral pyrolusite: valuable in the manufacture of glass, steel, bleaching-powder, and in other industries. Its composition is represented by the formula MnO_2.—**Manganese peroxid,** manganese dioxid, MnO_2, also known as black oxid of manganese. As found in nature it constitutes the mineral pyrolusite. See *manganese.*—**Manganese silicate,** a compound which occurs in nature in several minerals (as rhodonite, tephroite, and bementite) and as a constituent of many more complex silicates.—**Red manganese.** (*b*) Rhodonite.

manganesious (mang-ga-nē'shius), *a.* [*manganese* + *-i-ous.*] Same as *manganous.*

manganic[2] (mang-gan'ik), *a.* [Gr. *μαγγανικός* (used in reference to charms), adj., < *μάγγανον*, a machine: see ★*mangan.*] Relating to the form of civilization in which machinery is used: opposed to ★*naturistic*, 2.

Professor Rouleau, of Berlin, divides culture into phases which he calls '*manganic*' and 'naturistic'; the former term applies to the use of machinery and the domestication of nature's forces, the latter to that condition of culture in which the hand was aided by the simplest appliances. *Pop. Sci. Mo.*, Feb., 1902, p. 338.

manganin (mang'ga-nin), *n.* [*mangan(ese)* + *-in*[2].] An alloy of 84 per cent. copper, 12 per cent. nickel, and 4 per cent. manganese, used, generally in the form of wire, to make electrical resistance-coils, since its resistance varies little with changes of temperature.

manganite, *n.* **2.** A substance which may be viewed as a compound of manganese dioxid with the monoxid of a more basic or electropositive metal.—**Calcium manganites,** compounds which represent the product of the union of lime and manganese dioxid in different proportions. They constitute the 'Weldon mud' obtained in the process, patented by W. Weldon, for recovering manganese in available form from the still liquor of the manufacture of chlorid of lime.

manganitic (man-ga-nit'ik), *a.* Pertaining to or containing manganite.

manganocolumbite (mang"ga-nō-kō-lum'bīt), *n.* Same as *mangancolumbite.*

manganosphærite (mang"ga-nō-sfē'rīt), *n.* An iron-manganese carbonate occurring in globular aggregations: found at the Louise Mine near Horhausen, Germany.

Manganous acid, a hypothetical acid, H_2MnO_3, corresponding to the manganites. It is not known as an actually obtainable substance.—**Manganous oxid,** manganese monoxid or protoxid, MnO.

manganpectolite (mang-gan-pek'tō-līt), *n.* A variety of pectolite containing several per cent. of manganese protoxid: found at Magnet Cove, Arkansas.

mange[2], *n.*—**Texas mange.** Same as *winter itch.*

mangel, *n.* An abbreviation of *mangel-wurzel.*

mangle[2], *n.* **2.** See *plate-straightening* ★*rolls.*

mangle-padded (mang'gl-pad"ed), *a.* In *calico-printing*, noting cloth which has been saturated, or padded, with a mordant or color in a mangle.

man-god (man'god), *n.* A deity regarded as being in form or origin or in other respects a man.

The old tradition of the fish-headed *man-god* Oannes, who taught men to read and to write, and to sow, and to reap, and to build. *Nature*, Feb. 11, 1904, p. 338.

mango-fish, *n.* **2.** *Polynemus paradoxus*, a fish found in the East Indies.

mango-fool (mang'gō-föl), *n.* Mangos beaten to a pulp and mixed with cream or milk. *N. E. D.*

mangostin (mang'gō-stin), *n.* [*mangost(een)* + *-in*[2].] A tasteless golden-colored compound, $C_{20}H_{22}O_5$, contained in the husk of the fruit of *Garcinia mangostana* from India. It crystallizes in thin plates melting at 190° C.

mangrove, *n.*—**Black mangrove.** Same as ★*courida.*—**Button mangrove,** *Conocarpus erecta:* same as *buttonwood*, 1.—**Five-petaled mangrove,** *Ceriops Candolleana*, a tree which yields a medicinal bark. See *Tengah* ★*bark.*—**Four-petaled mangrove,** *Rhizophora mucronata* and *R. Mangle.* See *Rhizophora* and *mangrove*, 1.—**Mangrove grouper.** See ★*grouper.*—**Many-petaled mangrove,** *Bruguiera gymnorhiza.*—**Milky mangrove.** Same as ★*blinding-tree.*—**Native mangrove,** in Tasmania, a variety of *Acacia longifolia*, abundant on the sea-coast and an excellent tree for binding coast sands.—**Red-flowered mangrove,** *Lumnitzera littorea.*—**Red mangrove.** (*b*) In Australia: (1) *Bruguiera Rheedii*, a small tree which yields a good tan-bark and a hard, durable, yellowish-brown wood; (2) *Heritiera littoralis*, a tree of the family *Sterculiaceæ.* See *Heritiera* and *sundari.*—**River-mangrove,** *Ægiceras majus*, a small tree of the family *Myrsinaceæ*, which grows on swampy shores from India and Ceylon to China, the Philippine Islands, and northern Australia. It forms impenetrable thickets like the common mangrove.

mangrove-fly (mang'grōv-flī), *n.* A West African fly of the genus *Glossina*, a tsetse-fly.

The genus Tabanidæ, to which "hippo" and "*mangrove*" *flies* belong, has a wide distribution, which extends all over the country and along the Nile, and in no way agrees with that of sleeping sickness. The bite of these flies is, however, severe, and they may be regarded as possible carriers of disease.

Jour. Trop. Med., Nov. 2, 1903, p. 343.

mangrove-minnow (mang'grōv-min"ō), *n.* See ★*minnow.*

Manhattanese (man-hat-an-ēs'), *a.* and *n.* [*Manhattan* + *-ese.*] **I.** *a.* Of or pertaining to the island of Manhattan (New York) or to its inhabitants.

Unlike most "stellar vehicles," however, "Her Own Way" is very far from being a one-part piece. It brings together a number of highly piquant *Manhattanese* types of to-day, sketched with captivating drollery.

The Forum, Jan.–March, 1904, p. 410.

II. *n.* **1.** One who lives upon the island of Manhattan.—**2.** The characteristic phraseology of a New-Yorker.

manhole (man'hōl), *v. i.*; pret. and pp. *manholed*, ppr. *manholing.* To enter or use a manhole, as for the purpose of examining or repairing machinery. [Nonce-word.]

"Mister McAndrews, dont you think steam spoils romance at sea?"
Damned ijjit! I'd been doon that morn to see what ailed the throws,
Manholin', on my back—the cranks three inches from my nose. *R. Kipling*, McAndrew's Hymn, l. 147.

manhole-plate (man'hōl-plāt), *n.* The cover of a manhole.

manhole-ring (man'hōl-ring), *n.* A ring, usually of steel or wrought-iron, riveted to a boiler-shell around a manhole to strengthen and stiffen the shell at that point and form a flat surface for the joint with the lid.

mania, *n.*—**Alcoholic mania,** delirium tremens.—**Mania mitis,** delirium.—**Reasoning mania,** paranœa.

manic (mā'nik), *a.* [Gr. *μανικός*, mad, insane, < *μανία*, madness: see *mania.*] Relating to or affected with mania. *Buck*, Med. Handbook, V. 120.

Manicaria (man-i-kā′ri-ạ), *n.* [NL. (Gaertner, 1791), < L. *manicæ*, sleeve, glove, gauntlet; from the appearance of the spathes.] A genus of palms. It contains but one species, *M. saccifera*, the bussu of the Brazilian natives, which is found from the Amazon region to Central America. See *bussu-palm*.

manic-depressive (mā″nik-dē-pres′iv), *a.* Both manic and melancholic: noting a form of insanity in which mania and melancholia alternate. *Baldwin*, Dict. of Philos. and Psychol., II. 393.

manicurist (man′i-kūr-ist), *n.* [*manicure* + *-ist.*] One who practises manicure; a manicure.

The surgeons, though they had ceased to rank with *manicurists* and barbers, were often little better than bone-setters. *Nature*, July 26, 1900, p. 294.

manifest, *n.*—**Master's manifest** (*naut.*), the document, signed by the master and submitted to the customs authorities, showing to what port the cargo is destined, and giving an itemized account of it, and the names of the shippers and consignees.

manifestational (man″i-fes-tā′shọn-ạl), *a.* Of, pertaining to, or of the nature of manifestation.

manifold[1], *n.* 5. In *math.*, given a general conception capable of various determinations or determination-modes, the totality of the determinable particulars is a *manifold*, of which each is an element. The manifold is continuous or discrete, according as the passage from one determination to another is continuous or discrete.

Now since every point of the colour *manifold* is completely determined by three magnitudes which are given in fact and cannot be arbitrarily chosen, it is plain that measurement by superposition—involving, as it does, motion, and therefore change in these determining magnitudes—is totally out of the question.
B. A. W. Russell, Foundations of Geom., p. 67.

6. Same as ★*manifold-valve*.—**Algebraic manifold**, one whose elements combine by an addition which is associative and commutative.—**Infinite manifold**, one that is equivalent to a part of itself.—**Numerable manifold**, a manifold between which and the whole or a part of the scale of natural numbers a one-to-one correspondence can be established.—**Ordered manifold**, a manifold arranged in order by a definite criterion.—**Progressive manifold**, an ordered manifold in which (1) there is one element anterior to all the rest; and (2) every element x is followed by a definite next element x', so that $x < x'$ and no element falls within the interval (x, x').—**Self-constituted manifold**, a manifold wherein only the properties which the elements represent are used to define the relations between elements. The manifold of integral numbers is self-constituted, since all relations of such numbers can be defined in terms of them.—**Uniform manifold**, one in which each element bears the same relation as any other element to the manifold considered as a whole. The perimeter of a circle, the points being elements, forms a uniform manifold, but not the surface of a circle.

manifold[2] (man′i-fōld), *n.* [Also *mannifold, manifolds; many* + *fold*[1], *n.*] The third stomach of a ruminant; the manyplies; the intestines generally. [Eng. dial.]

manifolder (man′i-fōl-dėr), *n.* Any contrivance, such as a manifold-writer, for making a number of facsimile copies of a document, a sketch, or the like, at one time; also, the person who uses such a contrivance for this purpose.

manifold-valve (man′i-fōld-valv″), *n.* A number of valves combined in one valve-body or -chamber. Each valve has a separate opening below it to which a pipe can be connected, but the chamber above the valves is common to all. Usually called *manifold*.

manigraphy (ma-nig′ra-fi), *n.* [Gr. *μανία*, madness, + *-γραφία*, < *γράφειν*, write.] The description of the various forms of insanity.

man-in-the-ground (man′in-thē-ground″), *n.* Same as *wild* ★*gourd* (*b*).

maniple, *n.* 5. In the middle ages, a garment worn under the armor.

manism (mā′nizm), *n.* [L. *man(es)* (see *manes*, 1) + *-ism.*] The worship of the manes or shades of the dead. *G. S. Hall*, Adolescence, II. 179.

Manisuris (man-i-sö′ris), *n.* [NL. (Linnæus, 1771), < Gr. *μανός*, loose, scanty, + *οὐρά*, tail. The allusion is to the character of the inflorescence.] A genus of grasses. See *Rottbœllia*.

Manitoban (man-i-tō′bạn), *a.* and *n.* **I.** *a.* Of or pertaining to Manitoba.

II. *n.* An inhabitant of Manitoba.

manitoism, manitouism (man′i-tō-izm, -tō-izm), *n.* Same as ★*demonism*, 2.

manitology (man-i-tol′ọ-ji), *n.* [*manit(o)* + *-ology.*] The study of manitos.

We should do great injustice to the Indian character, not to mention by far the most prominent of their beliefs, so far as they govern his daily practices. We allude to the doctrine of Manitoes, or what may be denominated *Manitology*. *Schoolcraft*, Ind. Tribes of U. S., I. 36.

manjairah (man-jī′rạ), *n.* [Syrian.] A Syrian direct flute with six holes.

Manjairah.

manjak (man′jak), *n.* [West Indian.] A variety of bitumen found in Uvalde county, Texas, and in Barbados. *Smithsonian Rep.*, 1889, p. 445.

manjee (man′jē), *n.* [Also *manjie, mangee, maungee*; < Hind. *mānjhī*, Beng. *mājī, māghi*, lit. 'one who stands in the middle,' < Skt. *madhya*, middle. See *mid*[1].] The master, or steersman, of a boat or any native river-craft; also a title borne by the head men among the Paharis or Hill-people of Rajmahal. *Yule and Burnell*, Hobson-Jobson.

The principal Gaut *mangies* of Calcutta have entered into engagements at the Police Office to supply all persons that apply there with boats.
India Gazette, Feb. 17, 1781.

manjua (män-hö′ä), *n.* [Cuban, of native origin.] Same as *striped* ★*anchovy*.

manjuari (män-hö-ä-rē′), *n.* [Cuban, of native origin.] Same as *alligator-gar* (which see, under *gar*[1]).

mankalah, *n.* See ★*mancala*.

manlid (man′lid), *n.* The cover of a manhole of a steam-boiler. [British.]

manlihood (man′li-hụd), *n.* Manliness. *N. E. D.* [Rare.]

Mannaheim (män′ạ-hīm), *n.* [Icel. **Manna heim*, 'home of men,' *Mannheimar*, pl. 'homes of men.'] In *Norse myth.*, the earth.

manna-insect (man′ạ-in″sekt), *n.* A scale-insect, *Gossyparia mannifera* (formerly known as *Coccus manniparus*), which lives on the tamarisk and has been fancied to have produced the manna of the children of Israel.

mannan (man′ạn), *n.* [*manna* + *-an.*] A colorless compound, or mixture of compounds, found in the seeds of certain leguminous and other plants and in the tubers of several orchids. It constitutes a reserve food of the plant, and is readily converted into mannose by the action of soluble ferments.

mannane (man′ān), *n.* [*manna* + *-ane.*] Same as ★*mannan*.

manna-oak (man′ạ-ōk), *n.* See ★*oak*.

manneotetrose (man″ē-ọ̄-tet′rōs), *n.* [*manna* + Gr. *τέτρα-*, four, + *-ose.*] A sugar, $C_{24}H_{42}O_{21}$, obtained from manna. It forms small monoclinic crystals. Also called *stachyose*.

mannequin (mȧn-kaṅ′), *n.* [F., = E. *manikin.*] In a dressmaking establishment, a young woman employed to put on gowns, etc., when shown to customers, or to wear them for exhibition in public places.

manneristic (man-ėr-is′tik), *a.* [*mannerist* + *-ic.*] Marked by mannerism; characterized by mannerisms.

mannersome (man′ėr-sum), *a.* Mannerly. [Eng. dial.]

mannid (man′id), *n.* [Also *mannide*; *manna* + *-id*[1].] One of a class of organic substances which occur widely distributed in the vegetable world and on decomposition yield mannite, $C_6H_{14}O_6$.

mannie (man′i), *n.* [Dimin. of *man.*] A little man; a boy. [Scotch.]

"Well, *mannie*," he added, "it's nane of my affairs; but ye seem a decent-spoken lad."
R. L. Stevenson, Kidnapped, ii.

mannitan (man′i-tạn), *n.* [*mannite* + *-an.*] The name of two compounds, $C_6H_{12}O_5$. They are formed by prolonged boiling of mannite with concentrated hydrochloric acid, and are distinguished as *amorphous* and *crystalline*. The former is semisolid and feebly dextrorotatory; the latter forms monoclinic tables and is strongly levorotatory.

mannitic, *a.* 2. Pertaining to mannitic acid or manna.—**Mannitic acid**, a strongly acid syrupy compound, $C_6H_{12}O_7$, prepared by the oxidation of mannite. It reduces silver and copper salts in alkaline solution when warmed.

mannitine (man′i-tin), *n.* [*mannite* + *-ine*[2].] A colorless liquid, $C_6H_8N_2$, prepared by the distillation of a mixture of mannite and ammonium chlorid. It boils at 170° C.

mannoheptite (man-ọ̄-hep′tīt), *n.* [*manna* + Gr. *ἑπτά*, seven, + *-ite*[2].] Same as ★*perseite*.

mannoheptose (man-ọ̄-hep′tōs), *n.* [*manna* + Gr. *ἑπτά*, seven, + *-ose.*] The name of three stereomeric compounds. The i-derivative is a colorless syrup, $C_7H_{14}O_7$, prepared from the corresponding mannoheptonic anhydrid. It is not fermentable with beer-yeast.

mannonic (ma-non′ik), *a.* [*manna* + *-one* + *-ic.*] Noting an acid, a hypothetical compound, $C_6H_{12}O_7$, known only in the form of its anhydrid and salts. Three stereomeric substances with this name are known. The d-derivative, which is the most important, is prepared by the oxidation of mannose.

mannononose (man-ọ̄-non′ōs), *n.* [*manna* + *-one* + *-ose.*] A colorless dextrorotatory carbohydrate, $C_9H_{18}O_9$, prepared by the reduction of mannonic anhydrid. It forms small crystals melting at about 130° C.

manno-octose (man-ọ̄-ok′tōs), *n.* [*manna* + Gr. *ὀκτω*, eight, + *-ose.*] A colorless syrupy carbohydrate, $C_8H_{16}O_8$, prepared by the reduction of manno-octoic anhydrid.

mannose (man′ōs), *n.* [*manna* + *-ose.*] The name of three stereomeric compounds, $C_6H_{12}O_6$. The dextro-derivative is found in groundnuts and is prepared by the oxidation of mannite.

mano (mä′nō), *n.* [Sp., lit. 'the hand,' < L. *manus*, the hand.] A cylindrical stone, slightly tapering to each end, used for grinding grain or cocoa. See also ★*metate*.

The grinding-stone concordantly changes from a simple roller or crusher to a *mano* (or muller), and finally to a pestle, at first broad and short, but afterwards long and slender. *Smithsonian Rep.*, 1899, p. 37.

manoao (mä-nō-ä′ō), *n.* [Maori.] A small tree of the yew family, *Dacrydium Colensoi*, yielding a hard, close-grained yellowish-brown wood. Called also *New Zealand yellow pine* and *tarwood*.

manœuver, *n.*—**Gridiron manœuver** (*naval*), a British tactical manœuver of a fleet in double column, in which the ships in each column turn inward simultaneously and pass through the intervals between the ships of the other column, then again turn simultaneously, thus forming double column in the inverse order.

manograph (man′ọ̄-gràf), *n.* [Gr. *μανός*, rare, thin (see *manometer*), + *γράφειν*, write.] A device in which a beam of light, moving over a ground-glass screen, shows the pressure in the cylinder at any point of the stroke for a given engine: used on high-speed engines, as of motor-cars, which are too small for ordinary indicators.

Manometabola (man″ọ̄-me-tab′ọ̄-lạ), *n. pl.* [NL., < Gr. *μανός*, thin, + *μεταβολή*, change.] In *entom.*, a division of Packard's *Heterometabola* including those insects which undergo a slight or gradual metamorphosis but which are active in all stages. It includes the *Orthoptera, Dermaptera, Platyptera, Thysanoptera*, and *Hemiptera* (the *Coccidæ* excepted).

manometer, *n.* 2. In *physiol.*, an instrument used for determining blood-pressure.

Hürthle's differential *manometer* has proved to be an instrument of great value and precision. A double-bored tube cannula is introduced so that one tube reaches the right auricle and the other the right ventricle. In observations on the left side of the heart, one tube is placed in the left ventricle and the other in the aorta, and each of these tubes is brought in connexion with a tambour.
Encyc. Brit., XXXI. 733.

Regnault manometer, a form of manometer in which any desired adjustment of the mercury is effected by means of a three-way cock.

Manometric unit. See ★*unit*.

manorrin (ma-nor′in), *n.* [Ojibway name.] The wild rice, *Zizania aquatica*.

manostat (man′ọ̄-stat), *n.* [Gr. *μανός*, rare, thin, + *στατός*, verbal adj. of *ἱστάναι*, stand. See *static*.] A device for keeping constant the pressure of the gas in some apparatus; a pressure regulator. *Jour. Phys. Chem.*, Feb., 1907, p. 107.

manque (mañk), *n.* [F., a lack.] In *roulette*, one of the numbers from 1 to 18.

If he places his money on *Manque*, he is considered to wager that the ball will fall into one of the numbers from 1 to 18 inclusive. *Amer. Hoyle* p. 376.

manquea (män-kā′ä), *n.* [Sp., < *manquear*, pretend to be maimed.] An infectious disease

of young cattle existing enzoötically throughout tropical and subtropical South America. It is characterized by the formation of abscesses of the size of a walnut or a hen's egg upon the legs. The cause is a minute oval bacterium which closely resembles the bacillus of fowl-cholera.

To Mr. O. Voges, of Buenos Ayres, is due the credit of having discovered the smallest bacillus which has yet been identified. It is much smaller than the influenza bacillus, and is only just discernible when magnified about 1500 times. These very minute rods were obtained from abscesses which cattle suffer from in South America, producing a disease known as *manquea* amongst other names. It is usually found in quite young cattle, and is easily recognisable by the characteristic lameness of one leg which it produces.

Nature, March 13, 1902, p. 445.

manqueta (män-kā′tä), *n.* [Also *maquata;* W. African.] The native name for a fossil gum-resin found in Angola. It resembles copal gum.

Man-rope stanchion. See ★*stanchion*.

M. A. N. S. An abbreviation of *Member of the Academy of Natural Sciences*.

mansard, mansarde (man-särd′), *n.* [F.: see *Mansard roof*.] In French, a mansard roof; a dormer-window; hence, a chamber lighted by such a window; a chamber in the roof: in English used in all these senses. See *Mansard roof*, under *roof*[1].

man's-motherwort (manz′mu͟ᴛʜ″ėr-wėrt), *n.* The castor-oil bean, *Ricinus communis*.

mant (mant), *v. i.* and *t.* [Origin obscure.] To stammer. [Scotch.]

manta, *n.* 5. A wrap of black cloth, cashmere, or silk extensively worn by women on the west coast of South America, especially in the forenoons and to church and funerals. It is worn less now than formerly, when it was in general use on the streets.

Mantchu, *n.* and *a.* See *Manchu*[1].

mantel, *n.* 4. In *geom.*, lateral surface: as, the *mantel* of a frustum.—**Mantel figures,** statuettes or figurines for the decoration of mantels or small apartments; commonplace and commercial sculpture.

manteltree, *n.* 2. Same as *mantelpiece*. *N. E. D.*

mantic, *a.*—**Mantic bees,** bees supposed to have prophetic power. Bees played an important part in Greek mythology and in the oracles.

In the Homeric Hymn to Hermes we get a seeming personification of *mantic bees* in the neighborhood of Delphi. *A. B. Cook*, in Jour. Hellenic Studies, XV. 7.

II. *n.* Divination; an object used in divination.

In these eight lectures are discussed, first, the methods of religious psychology and various views concerning the essence of religion, its development and diverse forms, subjective faith and the specific utterances of faith, offerings, vows, castigations, sacramental acts and objects, *mantics*, revelations, prayer, symbols and symbolic acts, religious art, presentations in words, doctrine, dogma and free knowledge, religious ethics and religious communities.

Amer. Jour. Relig. Psychol. and Education, May, 1904, [p. 107.

manticoceran (man-ti-kos′ė-ran), *a.* Relating or belonging to the genus *Manticoceras*.

Manticoceras (man-ti-kos′ė-ras), *n.* [NL., < Gr. *μαντικός*, prophetic, + *κέρας*, horn.] A genus of nautiloid cephalopods or goniatites with broad lateral sutural saddles which cover the principal part of the lateral surface of the whorl: characteristic of the lower Upper Devonian (zone of *Manticoceras intumescens*) and equivalent to *Gephyroceras*.

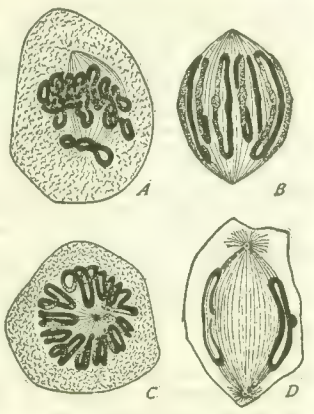
mantid (man′tid), *n.* and *a.* **I.** *n.* A member of the family *Mantidæ*.

II. *a.* Having the characters of or belonging to the orthopterous family *Mantidæ*.

mantispid (man-tis′pid), *n.* and *a.* **I.** *n.* A member of the family *Mantispidæ*.

II. *a.* Having the characters of, or belonging to, the neuropterous family *Mantispidæ*.

mantle, *n.* 2. (*d*) (3) Also, the plumage of the back and upper parts of the closed wings, which, as in gulls and terns, is often quite distinct in color from the rest of the plumage and suggests a mantle.



Great Black-backed Gull. *Mantle* intense slate-color nearly black, with a purplish reflection.

Coues, Key to North Amer. Birds, p. 743.

Incandescent mantle, a mantle consisting of refractory earths possessing high radiating power, rendered luminous by heating to incandescence in the flame of a Bunsen burner, as in the Welsbach light. As now made, these mantles consist of more than 99 per cent. of thorium oxid mixed with less than 1 per cent. of cerium oxid; without this admixture they would give but little light.

mantle-cavity (man′tl-kav″i-ti), *n.* In a bivalve, the whole space included between the pallial lobes, containing the gills, visceral mass, and foot.

mantle-fibers (man′tl-fī″bėrz), *n. pl.* In *cytol.*, a bundle of delicate achromatic fibers which connect the chromosomes during the anaphase stages of karyokinetic cell-division. See *interzonal* ★*fibers*.

Mantle-fibers.

Heterotypical Mitosis in Spermatocytes of the Salamander. (Flemming.)

A, prophase: chromosomes in the form of scattered rings, each of which represents two daughter-chromosomes joined end to end. *B*, the rings, ranged about the equator of the spindle and dividing; the swellings indicate the ends of the chromosomes. *C*, the same, viewed from the spindle-pole. *D*, diagram (Hermann) showing the central spindle, asters, and centrosomes, and the contractile mantle-fibers attached to the rings (one of the latter dividing).

(From Wilson's "The Cell.")

mantle-fusion (man′-tl-fū″zhon), *n.* In bivalves, union of the edges of the mantle-lobes. As the result of such fusions the anal and branchial siphons and the opening for the protrusion of the foot are formed.

mantle-line (man′tl-līn), *n.* Same as *pallial line*.

mantle-lobe (man′tl-lōb), *n.* In brachiopods, either the dorsal or the ventral reduplication of the body-wall, closely applied to the internal surface of the corresponding valve and containing a prolongation of the cœloma. *Parker and Haswell*, Textbook of Zool., I. 333.

mantle-rock (man′tl-rok), *n.* Residual deposits, consisting of the insoluble portions of rocks which have been exposed to the atmospheric agencies. The layer covers the more solid and unaltered rock like a mantle. Compare *laterite*, ★*regolith*, ★*saprolite*.

It is not to be inferred, however, that any part of the *mantle rock* (soil and subsoil) now remaining in this area is necessarily millions of years old. It is possible that all products of decay in the distant past have been carried away by erosion, and that all which now remain are the product of decay within relatively recent times.

R. D. Salisbury, in Geol. Surv. of New Jersey, 1897, p. 7.

manual. **I.** *a.*—**Manual stop.** See ★*stop*[1].—**Manual training-school,** a school where the pupils are taught various crafts by actual practice; also, a class or school in which the manual methods of instruction are taught.

II. *n.*—**Manual of arms.** See ★*arm*[2].

manualist, *n.* 2. One who teaches the deaf and dumb by means of the manual alphabet or method.

manubalist (man′ū-ba-list), *n.* [F. *manubaliste*, < ML. **manubalista*, < L. *manus*, hand, + *ballista*, *balista*. See *ballista*.] In medieval armor, a hand-weapon by which projectiles were thrown. The term includes the arbalist.

manuf. An abbreviation (*a*) of *manufacture;* (*b*) of *manufacturer;* (*c*) of *manufacturing;* (*d*) of *manufactory*.

manuka (mä-nö′kä or män′ö-kä), *n.* [Maori.] Either *Leptospermum scoparium*, a low shrub, called *white* or *scrub manuka*, or *L. ericoides*, a tree, called *red manuka*. The wood of the latter is very hard and durable and is a favorite with the natives for making spears, paddles, fishing-rods, etc. The leaves of *L. scoparium* are sometimes used as a substitute for tea, whence it is called *tea-tree*.

manul[2] (mä′nȯl), *n.* [Origin obscure.] In the pearl-fisheries of Ceylon, a pearl-oyster bank which consists of soft or loose sand, as distinguished from a *paar*, which consists of rock or hard bottom. See ★*paar*.

manumitter (man-ū-mit′ėr), *n.* One who manumits or frees; an emancipator.

The Church was the great *manumitter* and improver of the condition of the serf in the middle ages; and in the present age religious feeling has been at the bottom of the great movement against slavery.

J. B. Mozley, Eight Lectures on Miracles, vii.

manure, *n.* The advent of commercial fertilizers has made it necessary to distinguish *farm* or *natural manures* and *artificial manures*. Recent usage tends to restrict the term *manure* to the former. In scientific agriculture, only those applications are properly manures which directly supply plant-food, and those which serve mainly to improve the soil physically (as gypsum, lime, marl) are distinguished as *soil amendments* or *improvers*. This distinction affects also, to some extent, the term *fertilizer*. See *artificial* ★*manure*.—**Artificial manure,** manure provided by manufacture (as superphosphates), or by mining (as kainite), or at least requiring transportation from points where found (as guano). Chemical fertilizers are here included and materials of organic origin, such as ground bone, tankage, etc. In America these are usually termed *commercial fertilizers*, soil amendments being often included.—**Barn-yard manure.** See *farm-yard* ★*manure*.—**Chemical manure,** an inorganic fertilizer which consists of one or more chemical compounds (muriate of potash, nitrate of soda, etc.) containing a manurial ingredient.—**Cold manure,** an animal manure which ferments slowly, as that of cattle and hogs.—**Complete, normal,** or **general manure,** a fertilizer which supplies all the elements of plant-food in which soils are liable to be deficient, namely, nitrogen, phosphorus, and potassium. See ★*manurial ingredient*.—**Farm-yard, barn-yard,** or **stable manure,** the solid and liquid excrements of stock kept in and about stables, more often mixed with litter. This is a complete manure, but the ingredients are not in due proportion. The urine is more valuable than the solids.—**Fresh manure.** Same as *green* ★*manure* (*b*).—**Green manure.** (*a*) Any fresh vegetable substance, as weeds, prunings, seaweed, etc., used as a fertilizer; in recent use, chiefly, a standing crop plowed under for fertilizing. See *green* ★*manuring*. (*b*) Unfermented dung. Also called *fresh* or *long manure*.—**Liquid manure.** See *manure*.—**Long manure,** barn-yard manure which contains unrotted litter; hence, fresh manure.—**Short manure,** well-rotted barn-yard manure.—**Stable manure.** See *farm-yard* ★*manure*.

manure-fly (mą-nūr′flī), *n.* See ★*mushroom-gnat*.

manure-sick (mą-nūr′sik), *a.* In such a state as to receive no benefit from manuring: said of land. Apparent cases of this kind are probably due to the lack of some essential ingredient in the application. *Storer*, Agriculture, p. 47.

Manurial ingredient, constituent, or **element,** one of the substances required in a complete manure.

manuring (mą-nūr′ing), *n.* [Verbal n. of *manure, v. t.*] The addition of any substance to the soil to increase its fertility; fertilizing.—**Green manuring,** the plowing under of a green crop, usually one sown for the purpose, to serve as a manure. Legumes (clover, cow-pea, etc.) are chiefly used, owing particularly to their nitrogen-gathering capacity; but buckwheat, rye, etc., are useful on poor soils. It is often better to harvest the legume, the root growth still enriching the soil; but this is not usually called green manure. See *ameliorating*, *renovating*, and *nitrogen-fixing* ★*crop*.

Manus cava, a deformity of the hand marked by a deep hollow of the palm.—**Manus valga,** a form of club-hand in which the hand is deflected to the ulnar side.—**Manus vara,** a form of club-hand in which the hand is deflected to the radial side.

manutype (man′ū-tīp), *n.* [L. *manus*, hand, + Gr. *τύπος*, type.] Printed matter made with letters separately impressed or formed by hand.

manutype (man′ū-tīp), *v. t.*; pret. and pp. *manutyped*, ppr. *manutyping*. To make by hand from types, or with pen or pencil, isolated letters in imitation of print: erroneously applied to type-writing.

manward (man′wärd), *adv.* and *a.* Toward man; with regard to man.

The correlative change in the conception of His *manward* activities and relations.

A. M. Fairbairn, Philos. Chris. Relig., p. 543.

man-wise (man′wīz), *adv.* and *a.* Pertaining to or in the manner of any relation of individual to individual, rather than of group to group. *E. A. Ross*, Social Control, p. 29.

Manx penny. See ★*penny*.

many-minded (men′i-min″ded), *a.* Having many successive states of mind in regard to some matter, but unable to come to a decision about them; lacking in decision; vacillating.

manywhere (men′i-hwār), *adv.* [Also formerly *maniquare*, *many wheres;* < *many* + *where*.] In many places. [Rare.]

This kind of Prayer . . . was *many wheres* received.

Jewell, Repl. Harding, p. 433. *N. E. D.*

Smoothed and polished rocks occur also "*manywhere*," if I may coin the word, in our northern districts, where the rocks are hard enough to receive and retain their characteristic marks.

Sir J. Lubbock, Scenery of England, p. 52.

manzai (män-zī′), *n. pl.* [Jap.] Strolling ballet-singers and -dancers who go about at the beginning of the new year. *Hepburn*, Jap.-Eng. Dict.

manzana (män-thä′nä), *n.* [Sp., a block of houses, a square measure.] 1. A group of houses surrounded on every side by streets; a square or block.—2. A unit, equivalent to about $1\frac{5}{8}$ acres, employed in Central America for measuring land.

manzanillo (man-zą-nil′ō; Sp. pron. män-thä-nēl′yō), *n.* [Sp. See *manchineel*.] The common manchineel, *Hippomane Mancinella*. *C. Lumholtz*, Unknown Mexico, II. 64.

maomao (mä-ō-mä′ō), *n.* The Maori name of a New Zealand sea-fish, *Neptotichthys violaceus*, one of the *Stromateidæ*. *E. E. Morris*, Austral English.

maon, *n.* See *mahone*.

Maori. **I.** *n.*—**Pakeha Maori** ('foreign Maori'), a

white man who lives among the Maoris and has adopted their customs.—**White Maori,** a local name for calcium tungstate or scheelite. [New Zealand.]

II. *a.*—**Maori chief.** See ★*chief*.—**Maori hen,** the weka rail, or wood-hen, a large New Zealand land-rail of the genus *Ocydromus*.

Maorian (mä-ō′ri-an, or mou′ri-an), *a.* Same as *Maori*.—**Maorian subregion.** See ★*subregion*.

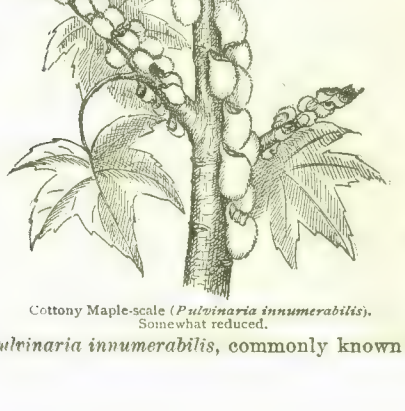
Maorilander (mä′ō-ri-lan″dėr, or mou′ri-lan″dėr), *n.* [*Maoriland* (New Zealand) + *-er*[2].] A native or an inhabitant of New Zealand.

map[1], *n.*—**Cultural map.** See ★*cultural*.—**T-O map,** a map issued by the topographical office of the ordnance survey of England: a purely topographical map, containing nothing relating to land divisions. *Geog. Jour.* (R. G. S.), XV. 379.

mapau (mä′pou), *n.* [Maori.] Any one of several New Zealand trees resembling one another in foliage, especially *Myrsine Urvillei*. The name, with a descriptive adjective prefixed, is usually applied by the settlers to other trees, and is frequently corrupted into *maple*.—**Black mapau,** the tawhiri, *Pittosporum tenuifolium*: so named from the color of the bark.—**Red mapau,** the settlers' name for the mapau of the natives, *Myrsine Urvillei*, on account of the dark-red wood.—**White mapau.** (*a*) *Carpodetus serratus*, an ornamental shrub or small tree of the saxifrage family, with mottled green leaves and large panicles of white flowers. (*b*) The tarata, *Pittosporum eugenioides*. See ★*tarata*.

maple[1], *n.* **3.** In New Zealand, a common settlers' corruption of ★*mapau*.—**4.** In Australia, *Chariessa Moorei*, the scrub silky oak (which see, under ★*oak*).—**Black maple.** (*a*) Same as *black sugar-maple*. (*b*) The sugar-maple.—**California maple,** the broad-leaved maple.—**Creek maple,** the silver maple, *Acer saccharinum*.—**Cut-leaved maple.** (*a*) Any horticultural form of the silver maple, or other species of maple with dissected leaves. (*b*) The box-elder, *Acer Negundo*.—**Drummond's maple,** *Acer Drummondii*, of the coast region from New Jersey to Texas: by some regarded as a subspecies of *A. rubrum*.—**European maple** or **field-maple,** the common European maple, *Acer campestre*.—**Ground maple,** *Heucheravillosa*, an herb of the eastern United States which has hairy stems and leaves shaped like those of the maple. Also called *American sanicle*.—**Guelder-rose maple,** the maple-leaved arrow-wood, *Viburnum acerifolium*.—**Hard maple.** (*b*) The black sugar-maple.—**Low maple,** the mountain-maple.—**Maple-leaf-cutter.** See ★*leaf-cutter*.—**Moose-maple,** the mountain-maple.—**Northern maple,** the dwarf maple.—**Oregon maple,** the broad-leaved maple.—**Red River maple.** (*a*) The silver maple. (*b*) The box-elder.—**River-maple,** the silver maple.—**Rocky Mountain maple,** the dwarf maple.—**Shoe-peg maple,** the red maple: so called from the use of its wood for shoe-pegs.—**Sugar-maple.** (*b*) A local name in some places for the box-elder.—**Swamp-maple.** (*b*) The silver maple. (*c*) The mountain-maple.—**Vine-maple.** (*b*) The Canada moonseed, *Menispermum Canadense*.—**Water-maple.** (*a*) See *water-maple*. (*b*) The silver maple. (*c*) The mountain-maple.—**White maple.** (*a*) See *white*[1]. (*b*) The red maple: so called from its white wood. Compare *shoe-peg* ★*maple*.

maple-aphis (mā′pl-ā″fis), *n.* One of several species of plant-lice, as *Pemphigus acerifolii*, which infest the leaves of the maple.



maple-ash (mā′pl-ash), *n.* The ash-leafed maple, *Acer Negundo*.

maple-blight, *n.* See ★*blight*.

maple-borer, *n.* Besides the species mentioned are the following: (*a*) A cerambycid beetle, *Glycobius speciosus*. (*b*) Any one of several horntail borers of the family *Uroceridæ*, as *Xiphydria albicornis* and *Oryssus sayi*. (*c*) The larva of a buprestid beetle, *Dicerca divaricata*. (*d*) Any one of several scolytid beetles, as *Xyloterus politus* and *Corthylus punctatissimus*. (*e*) A calandrid beetle, *Stenoscelis brevis*. (*f*) A ptinid beetle, *Xestobium affine*. (*g*) The larva of the leopard-moth, *Zeuzera pyrina*.—**Beautiful maple-borer,** an American cerambycid beetle, *Plagionotus speciosus*, black in color and banded with yellow. Its larvæ bore in the trunk of the sugar-maple.

maple-louse (mā′pl-lous), *n.* A plant-louse that infests the maple.—**Woolly maple-louse,** an American aphidid, *Pemphigus acerifolii*, occurring abundantly on the leaves of the maple and secreting an abundance of white wool-like wax.

maple-scale (mā′pl-skāl), *n.* **1.** The species,

Cottony Maple-scale (*Pulvinaria innumerabilis*). Somewhat reduced.

Pulvinaria innumerabilis, commonly known as the *cottony maple-scale*.—**2.** *Aspidiotus tenebricosus*, a destructive diaspine coccid.

maple-worm (mā′pl-wėrm), *n.* Any one of several lepidopterous larvæ which defoliate maple-trees.—**Green-striped maple-worm,** the larva of an American ceratocampid moth, *Anisota rubicunda*, occurring abundantly in the northern Mississippi valley and the eastern United States, where it feeds on the leaves of species of maple. See *Anisota*, with cut.

mapo (mä′pō), *n.* [Cuban Sp.] Same as *sleeper*[1], 8 (*c*).

mappy (map′i), *a.* [*map*[1] + *-y*[3].] Having the appearance of a map; in *pathol.*, noting the condition called *geographical tongue*.

maquahuitl (mä-kwä-hwē′tl), *n.* [Nahuatl *maitl*, hand, + *quauitl*, stick, tree.] A sword-like weapon of wood the edges of which are set with sharp flakes of obsidian.

maquata, *n.* [W. African.] Same as ★*manqueta*.

maquette (mä-ket′), *n.* [F., < It. *macchietta*, dim. of *macchia*, a spot, < L. *macula*, a spot: see *macula*.] The first sketch, in wax or clay, from which a work in sculpture is elaborated. Wax maquettes are often employed by painters in arranging compositions.

M. J. B. E. Detaille has, after a long delay, executed four *maquettes*, each comprehending three large panels. *Athenæum*, Jan. 24, 1903, p. 122.

maqui[2] (mä′kwē), *n.* [It. dial.] A tract of land on the shores of the Mediterranean, especially in Corsica, characterized by a siliceous soil and occupied by a sclerophyllous vegetation more luxuriant and taller than that of the garrigues, but mainly bush, with a few trees, in France chiefly *Pinus Pinaster* and *Quercus Suber*. See ★*garrigue*.

Only in the Mediterranean countries, in the so-called *Maquis*, do we find anything similar.
Bot. Gazette, XXVII. 14.

The macchie or *maquis* of Algeria in no way differs from that of Corsica, Sardinia, and other places; it consists of lentisk, arbutus, myrtle, cistus, tree-heath, and other Mediterranean shrubs. *Smithsonian Rep.*, 1890, p. 260.

Mar. An abbreviation (*a*) of *March*; (*b*) [*l. c.* or *cap.*] of *maritime*.

M. Ar. An abbreviation of *Master of Architecture*.

Mara[2] (mär′ä), *n.* [Skt. *māra*, death, plague, god of love, tempter, as adj. killing, cf. *mara*, death, < √ *mṛ*, die. See *mortal*.] In *Hind. myth.*, the tempter; the spirit of evil.

marabotin (mä-rä-bō-tēn′), *n.* [Sp., related to *morabitino*. See *maravedi*.] **1.** A coin struck by the Almoravides and Almohades in the eleventh and twelfth centuries.—**2.** A name given to the Arabic derham, or dinar, which circulated in the south of France as late as the eleventh and twelfth centuries.

marabunta (mar-a-bun′tä), *n.* [Negro-Eng. (in Dutch Guiana) *marabonsoe;* also cited as Pg., *marabonda*, a social wasp; prob. a native W. Ind. or Guiana name.] In British Guiana and the West Indies, a common name for various species of bees and wasps.

maracock† (mar′a-kok), *n.* [Also *maricock, amaracoc, maracot*, etc.; Algonkin.] The fruit of certain American passion-flowers, especially of the 'may-pop,' *Passiflora incarnata*, native of Virginia, and the granadilla, *P. quadrangularis*, of Brazil and the West Indies; also the plant itself. *N. E. D.*

maral (mä-räl′), *n.* [Pers. *marāl*.] The red deer of Persia and the Caucasus, *Cervus maral*.

marami (ma-rä′mi), *n.* [Aboriginal Australian.] A crawfish-like crustacean of the genus *Astacopsis*, found in Australia.

marantic (ma-ran′tik), *a.* [Gr. μαραντικός, wasting, withering, < μαραίνειν, waste, wither.] Wasting: same as *marasmic*.

marare (mä-rä′rā), *n.* [Maori.] A labroid fish, *Coridodax pullus*, of New Zealand.

marasmolite (ma-raz′mō-līt), *n.* [Gr. μαρασμός, decay, + λίθος, stone.] A partially decomposed sphalerite containing free sulphur.

Marasmus infantilis or **lactantium,** the wasting of young infants without evident cause: often due to insufficient nourishment.

marathon (mar′a-thon), *n.* A long-distance foot-race (usually of 24.85 miles or 40 km.). The name was suggested by the feat of the Greek messenger who in 490 B. C. carried the news of victory from Marathon to Athens.

marattiaceous (ma-rat-i-ā′shius), *a.* Belonging to or having the characters of the *Marattiaceæ*, a family of ferns.

marble, *n.*—**Bird's-eye marble,** a name for an ornamental stone, consisting of the fossil coral *Acervularia davidsoni*, which in Iowa is carved into small objects.

Sections of the coralline cells suggest eyes.—**Calico marble,** a trade-name for the mottled Triassic marble quarried near the Potomac at the Point of Rocks, Maryland: used in the Capitol at Washington.—**Egyptian marble,** a black marble veined with yellow.—**Florentine marble.** Same as ★*landscape-marble*.—**Mandelato marble,** a light-red marble with white spots.—**Melbury marble,** a name for septaria of the Melbury district, in west Dorset, England.—**Mozambique marbles,** a trade-name for a variety of crude india-rubber in small balls, black or brown on the outside, lighter in color within, the product of several speices of *Landolphia* from Mozambique.—**Palombino marble,** a compact, fine-grained white marble found in ancient monuments.—**Peacock marble,** a green marble.—**Stalagmite marble.** Same as *onyx marble*.

marble-band (mär′bl-band), *n.* Mussel-band limestone.

marbled, *a.* **3.** Having the lean and fat properly blended: applied by butchers to meat.

Hereford meat, in the technique of the trade, is always 'beautifully *marbled*,' or, in other words, its lean and its fat are very evenly blended.
Rep. Kan. State Board Agr., 1901–02, p. 248.

Marbled luster. See ★*luster*[2].—**Marbled white.** Same as ★*half-mourner*.

marble-fish (mär′bl-fish), *n.* In Geelong, a name of the tupong. *E. E. Morris*, Austral English.

marble-flower (mär′bl-flou″ėr), *n.* The poppy, *Papaver somniferum*.

marble-gall (mär′bl-gâl), *n.* A gall made by *Cynips Kollari*.

marbleization (mär″bl-i-zā′shon), *n.* [*marbleize* + *-ation*.] The state of being marbled or marked by veins and cloudings. Also called *marmoration*.

A secondary œdema, . . . accompanied with a more or less distinct *marbleization* of the superficial veins.
Buck, Med. Handbook, I. 463.

marble-paper (mär′bl-pā″pėr), *n.* Paper printed in colors and designs imitating marble.

Marble-rag (mär′bl-rag″), *n.* In *Eng. geol.*, a division of the Upper Purbeckian or Portland Oölites, lying at the summit of the Jurassic series and consisting of limestone with fresh-water fossils (*Unio*) overlain by clays and shales.

marble-seal (mär′bl-sēl), *n.* The seal *Phoca fetida*.

marble-veal (mär′bl-vēl), *n.* Potted veal interspersed with lumps of tongue, having a mottled surface when cut. *N. E. D.*

marblewood, *n.* **2.** In Australia, the whitish, mottled heart-wood of the Queensland olive, *Olea paniculata*. It is hard, tough, close-grained, and durable, and when newly cut has a rose-like fragrance.

Marc brandy-oil. Same as *fusel-oil*.

marcal (mär′kal), *n.* [Also *mercal, merkal*, < Tamil *marakkāl*.] A measure of capacity used in the Madras Presidency, equal, at Madras, to 2.70 gallons.

Marcan (mär′kan), *a.* [L. *Marc(us)*, Mark, + *-an*.] Of or pertaining to St. Mark or to the Gospel attributed to him.

The *Marcan* tradition.
H. B. Swete, in Exposition, June, 1903, 415.

marcella (mär-chel′lä), *n.* [It.] The Venetian silver lira: so called on the accession of Nicolo Marcello (1473).

marcello (mär-chel′lō), *n.* [It.] A silver coin of Francesco III., Gonzaga, Duke of Mantua (1540–50).

Marcellus shale. See ★*shale*[2].

marcescence (mär-ses′ens), *n.* The character or state of being marcescent.

marcgraviaceous (märk-grā-vi-ā′shius), *a.* Belonging to the plant family *Marcgraviaceæ*.

march[1], *n.*—**Approver in the marches,** in *Eng. criminal law*, an approver who had a license to sell and purchase beasts in the marches. See *march*[1].—**March place,** in *mining*, the room or drift next the march or property line. [Scotch.]—**March stones,** in *mining*, stones set at intervals on the surface to indicate the line of march; boundary stones. [Scotch.]

march[2], *v. i.*—**Time and marching,** in *topog.*, the name applied to a method of determining linear distances by observing the time required by a person marching or walking at a regular rate of speed over the distance to be measured.

The position of intermediate points other than points of triangulation has been fixed by "*time and marching*" observations. *Geog. Jour.* (R. G. S.), XV. 620.

march[2], *n.*—**Route march,** a march of troops in which the first consideration is the health and comfort of the soldiers. It is the ordinary march of an army when distant from the enemy.

march[4]† (märch), *n.* The celery plant, *Apium graveolens*, and parsley, *Petroselinum Petroselinum*. Also *merch*.

March. An abbreviation of *Marchioness*.

M. Arch. An abbreviation of *Master of Architecture.*

Marchand's adrenals. See ★*adrenal.*

marchantiaceous (mär-kan-ti-ā′shius), *a.* Belonging or related to the family of liverworts, *Marchantiaceæ.*

Marchantiales (mär-kan-ti-ā′lēz), *n. pl.* [NL. (Engler, 1892), ‹ *Marchantia* + *-ales.*] An order of cryptogamic plants of the class *Hepaticæ,* characterized by athalloid, dorsiventral proembryonal generation, the antheridia and archegonia borne in groups on the surface of the thallus or on stalked receptacles, the sporogonia consisting of a spherical capsule with or without a short stalk. It embraces the two families *Marchantiaceæ* and *Ricciaceæ* (which see), and is coördinate with the *Jungermanniales* and *Anthocerotales,* the three orders constituting the class *Hepaticæ,* or liverworts. See ★*Jungermanniales* and ★*Anthocerotales.*

marchasite, marchesite, *n.* Same as *marcasite.*

marchesa (mär-kā′zä), *n.*; pl. *marchese* (-zā). [It.] An Italian marchioness; a lady having the rank of marchioness.

marchese (mär-kā′ze), *n.*; pl. *marchesi* (mär-kā′zē). [It.] An Italian nobleman ranking between a duke and a count; a marquis.

March-fly (märch′flī), *n.* Any member of the dipterous family *Bibionidæ.*

Marchi's tract. See ★*tract*[1].

marcia (mär′chē-ä), *n.* [It., a march. See *march*[2], *n.*] In *music,* same as *march*[2], 5: as, *tempo di marcia,* in march rhythm and time; *marcia funebre,* a funeral march, etc.

marciale (mär-chē-ä′le), *a.* [It., ‹ *marcia,* a march.] In *music,* like a march in rhythm and style.

Marcite (mär′sīt), *n.* [L. *Marcus,* Gr. Μάρκος, + *-ite*[2].] Same as *Marcosian.*

marco (mär′kō), *n.* [Sp. See *mark*[2].] A Spanish and Spanish-American unit of weight for gold and silver, equal to half a libra.

marconi (mär-kō′ni), *v. i.* or *t.* To telegraph by the Marconi wireless system.

marconigram (mär-kō′ni-gram), *n.* [*Marconi* (see def.) + Gr. *γράμμα,* anything written.] A message by wireless telegraph sent by the Marconi system.

The British battleship Revenge . . . received a number of private *Marconigrams.*
Ithaca Jour., March 18, 1902, quoted in Dialect Notes, [II. vi.

marconigraph (mär-kō′ni-gràf), *n.* [*Marconi* + Gr. *γράφειν,* write.] The wireless telegraph of Marconi.

A school for *Marconigraph* operators.
Daily Chron., March 21, 1903. *N. E. D.*

marconigraph (mär-kō′ni-gràf), *v.* [*marconigraph, n.*] **I.** *intrans.* To send messages by means of Marconi's system of wireless telegraphy.

II. *trans.* To transmit by wireless telegraphy.

marconigraphy (mär-kō′ni-gràf-i), *n.* [*marconigraph* + *-y.*] The system of wireless telegraphy developed by Marconi.

The history of the series of inventions and discoveries which have culminated in Transatlantic *Marconigraphy.* *Nature,* April 23, 1903, p. 583.

marconism (mär-kō′nizm), *n.* [*Marcon(i)* + *-ism.*] The art of wireless telegraphy according to the Marconi system. *N. E. D.*

marconist (mär-kō′nist), *a.* and *n.* **I.** *a.* Of or pertaining to the Marconi system of wireless telegraphy. *Encyc. Dict.*

II. *n.* A telegraphic operator who uses the Marconi system of wireless telegraphy. *Encyc. Dict.*

marcuccio (mär-kō′chē-ō), *n.* [It., aug. of *marco:* see *mark*[2].] A Venetian copper coin struck under the Doge Bertuccio Valieri (1656–58).

marcylite (mär′si-līt), *n.* [For R. B. *Marcy* (1812–87).] A name given by C. U. Shepard to an impure copper ore of uncertain character, probably in part an impure atacamite, in part a decomposed chalcopyrite containing oxid of copper and water: from a locality in Arkansas.

mardling (märd′ling), *n.* Duckweed; especially, the lesser duckweed, *Lemna minor.*

mare[1], *n.*—**Flying mare,** a trick in wrestling, consisting in seizing the opponent's wrist, turning it back, and working the arm palm down over the shoulder, thus using the arm for a lever, throwing him over the shoulder.

mare[4] (mā′rē), *n.*; pl. *maria* (-ri-ä). [L., a sea: see *mere*[1] and *marine.*] A sea; specifically, in *astron.,* a name for certain dark regions on the surface of the moon which were supposed by Galileo and other early observers to be seas or oceans, and are now regarded as plains; also a name for certain dark regions on the planet Mars.

The craters are so different in size from those of the earth, many being over a hundred miles in diameter, and so numerous, overlapping and irregularly distributed that the causes leading to their formation must be very different from those of volcanoes upon the earth, and for these forms Shaler proposes the name of vulcanoids. The *maria,* or great plains, evidently belong to a category distinct from the vulcanoids, being characterized by their larger size, smoother and darker floors.
Amer. Jour. Sci., Oct. 1904, p. 314.

Mare liberum [L.], a free sea; an open sea: distinguished from *mare clausum* (which see).

maregram, maregraph. See ★*marigram, marigraph.*

maremma (mä-rem′ä), *n.*; pl. *maremme* (-ā). [It.] A marshy and unhealthy region lying along the sea-shore.

mareograph (mā′rē-ō-gràf), *n.* Same as *marigraph.*

mareometer (mā-rē-om′e-tėr), *n.* Same as *marigraph.*

mare-ridden (mār′rid‴n), *p. a.* Nightmare-ridden; witch-ridden.

Between his neck and his collar was a large live shore-crab, holding on tight with both hands.
"Gentles! good Christians! Save me! I am *mare-rode!*"
Kingsley, Westward Ho! ii.

mare's-tail, *n.* **1.** (*c*) The horseweed, *Leptilon Canadense.* (*d*) The heath-aster, *Aster ericoides.*

marg. An abbreviation (*a*) of *margin;* (*b*) of *marginal.*

margarimeter (mär-gą-rim′e-tėr), *n.* [Irreg. ‹ *margari(n)* + Gr. *μέτρον,* measure.] An apparatus for determining, by observation of the density at 100° C., the proportion of oleomargarin in adulterated butter.

margarodid (mär-gą-rod′id), *a.* and *n.* Having the characters of or belonging to the lepidopterous family *Margarodidæ;* a member of the *Margarodidæ.*

margarous (mär′gą-rus), *a.* [*margar(ic)* + *-ous.*] Noting an acid, a substance resembling margaric acid, now known to be a mixture.

Margate chalk. See ★*chalk.*

Margelidæ (mär-jel′i-dē), *n. pl.* [NL., ‹ *Margelis* (*-lid-*) + *-idæ.*] A family of *Anthomedusæ,* having 4 or more simple or branched tentacles, with 4 or 8 separate manubrial gonads. The simple unbranched tentacles may be uniformly distributed or grouped in 4 or 8 sets. It contains several genera, among which are *Margelis, Lizzia, Cytæis, Limnorea,* and *Hippocrene.*

Margelis (mär-jē′lis), *n.* [NL., ‹ Gr. *μαργηλίς,* a pearl.] The typical genus of the family *Margelidæ. Steenstrup,* 1849.

margin, *n.*—**Anal margin.** See ★*anal.*—**Margin of cultivation.** See ★*cultivation.*—**Margin of power,** surplus of power; a margin over and above that required under normal conditions.—**Margin of safety.** Same as ★*factor of safety.*

marginal, *a.*—**Marginal anchor,** in some *Lucernaridæ,* as *Haliolystes,* a peculiar form of marginal body.—**Marginal contrast, eye.** See ★*contrast,* ★*eye*[1].—**Marginal funnel,** in medusoids, one of the conical prominences on the subumbral surface above the velum, having an excretory pore at the apex.—**Marginal moraine, plate, tubercle.** See ★*moraine,* etc.—**Marginal utility.** See ★*utility.*

II. *n.* **1.** One of the bones which form the border of the carapace in turtles, except in the *Trionychoidea,* in which they are lacking: same as *marginal* ★*plate.* See cut under *carapace,* 1.—**2.** In the ammonoid cephalopods, or ammonites, one of the small inflections which sometimes develop on the sides of the antisiphonal lobe of the sutures.—**3.** In *conch.,* one of the outermost teeth on the radula of gastropods; one of the uncini.—**4.** In asteroid echinoderms, one of the series of thick plates round the margin of the arms and disk.

marginal-pygal (mär‴ji-nąl-pī′gąl), *a.* Noting the posterior median bony plate in the carapace of a turtle.

margination (mär-ji-nā′shọn), *n.* The act of marginating or the condition of having a margin; a marginated appearance.

No statement in a properly-edited historical source ought to appear without its being at once obvious, either from the nature of the print or from distinctly-marked *margination.* *Archæol. Inst. Jour.,* LV. 128.

marginoplasty (mar′jin-ō-plas‴ti), *n.* [L. *margo* (*margin-*), edge, margin, + Gr. *πλαστός,* formed, + *-y*[3].] A surgical operation for restoring an edge or border, as of the lip or eyelid.

margin-plate (mär′jin-plāt), *n.* In *iron shipbuilding,* a longitudinal plate which limits the double bottom at the turn of the bilge. The lower edge is connected to the outside plating by an angle-bar, and the upper edge is flanged over horizontally, and the inner-bottom plating riveted to it. See cuts at *double* ★*bottom* and ★*bracket*[1], 9 (*b*).—**Margin-plate bracket,** the triangular plate fitted on the margin-plate to give a connection for the foot of the frame angle-bar above the inner bottom.

margin-stop (mär′jin-stop), *n.* In a typewriter, an adjustable stop-motion which controls the traverse of the carriage in one or both directions. It consists of a stop supported by a graduated margin-stop bar and fitted with a locking device to hold it in any desired position. It is so named because, through the limiting of the traverse of the carriage and the leaving of a portion of the paper held by the carriage outside the feeding distance of the carriage, that part or edge is left blank and forms the margin of the printed sheet.

marg. trans. An abbreviation of *marginal translation.*

marguerite, *n.* **3.** In decorative design, a small flat rosette which resembles the common daisy.

The daisies or *marguerites* of the outer border had central bosses consisting of convex disks of rock crystal, set probably on a blue paste background.
A. J. Evans, in Annual of Brit. School at Athens, [VII. 78.

marguerite-fly (mär′ge-rēt-flī‴), *n.* A phytomyzid fly, *Phytomyza chrysanthemi,* the larva of which mines the leaves of composite plants in greenhouses.

maria, *n. pl.* See ★*mare*[4].

mariamolle (mä-rē-ä-mol′e), *n.* [Prop. as in Sp., *maria mole, Maria mole: Maria,* Mary; *molle, mole,* ‹ L. *mollis,* soft.] A pomacentroid fish, *Eupomacentrus fuscus,* found about coral reefs from the West Indies to Brazil.

marian[4] (mä-rē-än′), *n.* [W. Ind. Sp., given as "a negro word meaning tough and lean."] *Holocentrus marinus,* a chætodontoid fish found in the West Indies.

Mariana (mā-ri-ā′nä), *n.* [NL. (Hill, 1762), from *Carduus Marianus,* the Linnæan name of the milk-thistle, or Virgin Mary's thistle.] A genus of dicotyledonous plants of the family *Asteraceæ.* See *Silybum.*

Marianist (mā′ri-ąn-ist), *n.* [*Marian*[2] + *-ist.*] A member of a now extinct religious association of knights, founded in the thirteenth century at Bologna to succor and protect the unfortunates who suffered from the strife between the Guelfs and Ghibellines.

maricao (mä-rē-kä′ō), *n.* [Porto Rican.] The surette, *Byrsonima spicata.* Also called *doncella.* See *surette.*

maricultural (mā-ri-kul′tụr-ąl), *a.* Of or relating to mariculture.

Such maps would be purely agricultural and *maricultural,* dependant upon the harvests of the land and sea.
Science, Oct. 9, 1903, p. 461.

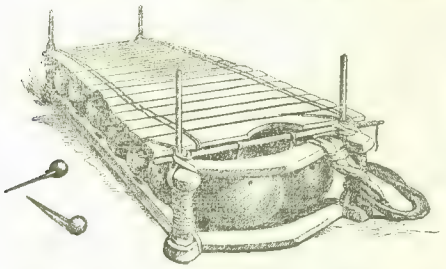
mariculture (mā′ri-kul-tụr), *n.* [L. *mare,* sea, + *cultura,* culture.] The development of the resources of the sea, especially with respect to food-fish: coined in distinction from *agriculture.*

Marienglas (mä-rē′en-gläs), *n.* [G., 'Mary's glass.'] A German name applied to plates of selenite (gypsum) and also to muscovite. Sometimes called *Frauenеis* ('[Our] Lady's ice').

Marie's disease. See ★*disease.*

marigot (mar′i-got), *n.* [F.] A branch or side channel in a river. [West Africa.]

Passing up a *marigot* or branch channel, worn down by porters' feet to a deep wet ditch, we soon reached the half-way place, a second sandy oasis, the site of the village of Zumgboji. *R. F. Burton,* Mission to Gelele, I. 35.



marigram (mar′i-gram), *n.* [Also *maregram, mareogram;* ‹ L. *mare,* sea, + Gr. *γράμμα,* a writing, *γραμμή,* a line.] The line traced by the marigraph as a record of fluctuations of sea-level.

mariguana (mä-rē-gwä′nä), *n.* Same as ★*marihuana.*

marihuana (mä-rē-hwä′nä), *n.* [Mex.] In Mexico, any one of several plants having narcotic properties; in many localities, *Cannabis Indica,* and in the state of Sonora, *Nicotiana glauca.*

marimba (ma-rim′bä), *n.* [Also *merimba;* W. African: Kimbundu (Angola) *marimba.*] **1.** An African musical instrument formed of a number of strips of wood of various sizes

yielding different notes when struck by a hammer. The sound is often reinforced by resonators formed from calabashes placed underneath.

Marimba.

Instruments of the bar type are found frequently in our orchestras and bands under various names, as xylophone; they are familiar in children's toys and are widely distributed in savage and half-civilized lands under the names of *marimba*, balafong, harmonicon, etc.
Smithsonian Rep. (Nat. Mus.), 1900, p. 436.

2. In the Kongo region and Angola, a name of a musical instrument with iron keys; the sansa.

marimonda (mar-i-mon′dä), *n.* [Amer. Sp.] A name applied to various spider-monkeys, particularly to the white-bellied species, *Ateles beelzebuth*.

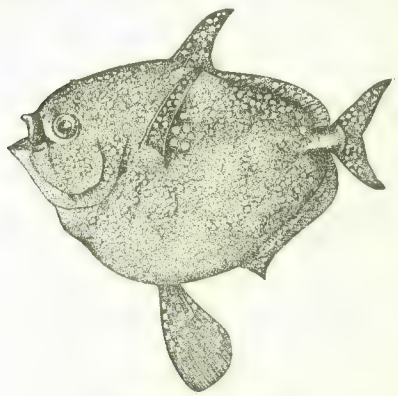
marina (mä-rē′nä), *n.* [It., fem. of *marino*. See *marine*.] An esplanade or promenade by the sea. *N. E. D.*

marine. I. *a.*—**Marine band, blue, chorology.** See ★*band*³, etc.—**Marine interest.** Same as *maritime interest*.—**Marine laboratory, metal, salt.** See ★*laboratory*, etc.

II. *n.*—**Dead marine.** Same as *marine*, 5.—**Mercantile marine,** the merchant service; the vessels, officers, and crews belonging to the merchant-marine.—**Merchant marine.** Same as *mercantile* ★*marine*.

mariner, *n.* 2. A Tasmanian name for the bronze-colored shell of any one of several species of the marine gastropod *Elenchus*, especially *E. bellulus*. Also called *warrener*, and *pearly necklace shell*. *E. E. Morris.*

marinist² (ma-rē′nist), *n.* [*marin*(*e*) + *-ist*.] One who attributes various changes on the earth's surface, such as the formation of terraces, planes, etc., to marine action: opposed to ★*subaërialist*.



Mariolatrous (mā-ri-ol′a-trus), *a.* Characterized by Mariolatry; of the nature of Mariolatry.

Mariology (mā-ri-ol′ō-ji), *n.* [*Mary* + *-ology*.] The doctrines and opinions of the various Christian sects with regard to the Virgin Mary.

Mariology is exhaustively treated in the four hundred and fifty pages which are here devoted to it. The work is divided into three parts.
Dublin Rev., Jan., 1903, p. 211.

Mariotte's spot. Same as *blind spot*.

mariposa (mar-i-pō′sä), *n.* [Sp.] 1. A butterfly.—2. A beautiful fish, *Lampris luna*, of large size, found in the open Atlantic and Pacific.—3. The mariposa-lily.

Mariposa (*Lampris luna*).
(From Jordan's "Guide to the Study of Fishes.")

mariposite (mar-i-pō′sīt), *n.* [*Mariposa* + *-ite*².] A micaceous mineral, varying from soft green to white, observed with pyrite in the gold ore of the Mariposa region, California.

marisca (ma-ris′kä), *n.* [NL., < L. *marisca*, a fig, pl. *mariscæ*, piles.] One of the excrescences in hemorrhoids.

mariscal (ma-ris′kal), *a.* [*marisca* + *-al*¹.] Hemorrhoidal.

Maritime cause, in *law*, an action arising from the commercial relation of persons on navigable waters.—**Maritime exchange,** a meeting-place for ship-brokers and others interested in ships and shipping, where business of a marine nature is transacted.—**Maritime jurisdiction,** the jurisdiction of courts of admiralty.—**Maritime loan.** See ★*loan*¹.—**Maritime service,** in *law*, a service rendered upon public navigable waters and having relation to commerce or navigation.

mariupolite (mar″i-ö-pō′līt), *n.* [*Mariupol*, on the Sea of Azov, Russia, + *-ite*².] In *petrog.*, a nephelite-syenite composed of albite, ægirite, and nephelite, with a small amount of lepidomelane and zircon. It is free from potash feldspar. *Morozewicz.*

marivaudage (mar″i-vō-däzh′), *n.* [*Marivaux*, a French writer of the 18th century.] In *lit.*, a style resembling that of Marivaux, whose writings were a mixture of subtle metaphysics and bizarre trivialities, with over-refined sentiments which were mingled with the most ordinary colloquialisms: the word has come to note an affected attempt at refinement.

Characteristic of *sensibilité* in sense and of *marivaudage* in manner. *Saintsbury.*

mark¹, *n.* 17. In *ordnance* (followed by a Roman numeral), an expression used to distinguish different designs of the same size and type of gun or mount: as, 6-inch B. L. R., *mark* II (a 6-inch caliber breech-loading rifle-gun of a design indicated as marked two).—**Black mark, china mark.** See ★*black*, ★*china*¹.—**By the mark** (*naut.*), the cry of the leadsman when he obtains soundings of 2, 3, 5, 7, 10, 13, 15, 17, or 20 fathoms. On the hand lead-line there are 9 marks and 11 deeps, the latter being the unmarked fathoms of the line, namely, the 1, 4, 6, 8, 9, 11, 12, 14, 16, 18, and 19.—**Easy mark,** one who from his simplicity of character or unsuspecting nature is easily imposed upon. [Slang, U. S.]—**Good mark.** (*a*) A mark placed in a school- or class-register against the name of a pupil for being 'good' in behavior or diligent in study. (*b*) In Australia, a person, conspicuous in the community for his integrity and high business standing, who would rather allow himself to be imposed upon than seem to impose upon another; an 'easy mark' for the unscrupulous. [Slang.]—**Lead-line mark** (*naut.*), one of the nine markings on the hand lead-line, or one of the knots on the deep-sea lead-line, which is continued from 20 to 100 fathoms.—**Marks and deeps** (*naut.*), the fathoms of the lead-line from 1 to 20; the 9 marks and 11 deeps of the hand lead-line. See *lead-line*, 1.—**Port-wine mark.** Same as *capillary* ★ *nævus*.—**Sharp-up mark.** Same as ★*square-mark*.

mark², *n.* 5. [Finnish *markka*.] A current silver coin of Finland, equal to 100 pennia (see ★*penni*), and equivalent to $19\frac{30}{100}$ cents.—6. A silver coin of Schleswig-Holstein, equal to 16 skillings, and equivalent to 24 cents.

mark⁵, *n.* Same as *marc*².

markasol (mär′ka-sol), *n.* [Trade-name.] Bismuth borophenate, an antiseptic powder used in surgery for dusting purposes.

mark-buoy (märk′boi), *n.* In submarine-cable work, a buoy anchored to mark any desired position or point.

mark-caller (märk′kâl″ėr), *n.* In sorting logs, one who stands at the lower end of the sorting-jack and calls the different marks so that the logs may be guided into the proper channels or pockets.

marker, *n.* 1. (*c*) In *archery*, a person stationed near the target, especially in clout-shooting, to signal to the archers the result of each shot.

2. (*b*) Specifically, a counter (an oblong piece of bone) used in faro. One marker is placed on a player's bet, and another on a card so far removed from it that he cannot take in both bets by any of the usual ways of placing bets on the lay-out. From the fact that the marker is not a chip, and has no value except to point out the superior value elsewhere, arose the colloquial expression: "he is not a *marker* to so-and-so."

7. At *poker*, any object placed upon the table to show that a player who has no chips is still in the pool: sometimes used in table-stakes to indicate that the player is supposed to have as much money in front of him as any other person at the table.—8. In *railroading*, a flag, lamp, or other signal placed upon an engine or train, or upon an electric car, to indicate its character, destination, etc. The green flag at the end of a train is a marker, as is also a red tail-light, or an extra light upon a locomotive.—**Deprez marker** or **signal,** a delicate form of electromagnetic time-marker, capable of recording five-hundredths of a second.—**Magnetic marker,** in *physiol.* and *exper. psychol.*, a time-marker consisting essentially of a writing-lever actuated by an electromagnet which is in circuit with an electric fork. The Deprez and Pfeil time-markers are typical magnetic markers. *Scripture*, Exper. Phonet., p. 91.—**Pfeil's marker,** in *physiol.* and *exper. psychol.*, an electromagnetic time-marker used in connection with an electric fork to trace a time-line upon the smoked surface of a kymograph drum. See *Deprez* ★*marker*. *Scripture*, Exper. Phonet., p. 91.

market, *n.* 7. On the *stock-exchange*, one of the classes into which the business of the exchange is divided; a group of jobbers engaged in a particular kind of business. [Eng.]

Every great *market* is organized with a view not merely to the purchase and sale of a commodity at once, or "on the spot," but also with a view to the future requirements of buyers and sellers. *Encyc. Brit.*, XXX. 540.

market-boat (mär′ket-bōt), *n.* A dinghy or other small boat used by the stewards to bring off marketing for the various messes.

market-gardening (mär′ket-gär″dn-ing), *n.* The occupation of raising vegetables for sale, particularly when conducted on such a scale as to constitute a business; truck-gardening.

market-scales (mär′ket-skālz), *n.* A counter-scale adapted to the weighing of meat and fish.

market-wire (mär′ket-wīr), *n.* Soft steel and brass wire in small sizes, suitable for the retail hardware trade.

markhor, *n.* Four subspecies are recognized, the extremes being represented by the Astor and the Suliman markhor. In the first, named from the village of Astor in northwestern Kashmir, the horns are long, massive, and form an open spiral. In the Suliman variety, found in the Suliman range, the horns are comparatively short and straight, with the keel running around them like the thread of a screw.

Markhor (*Capra falconeri*).
Head of Astor Markhor.
Horns of Suliman Markhor (larger scale).

marking, *n.*—**Lapham** or **Laphamite markings,** a peculiar form of the Widmanstättian figures, first observed by I. A. Lapham in the meteoric iron of Trenton, Wisconsin, and called Lapham or Laphamite markings by J. Lawrence Smith. In this form of the figures there are broad bands of kamacite inclosing areas of plessite.

marking-bowl (mär′king-bōl), *n.* A roller provided with coloring-matter for marking off warps into lengths or sections for the loom.

marking-cross (mär′king-krôs), *n.* A cross placed upon church vestments or furniture to mark them as exclusively devoted to sacred uses. Altar-cloths and corporals usually have five, in reference to the wounds of Christ.

marking-disk (mär′king-disk), *n.* In a Morse ink-writer (a machine for taking telegraph messages), the rotating disk which carries the letters and signs and marks the signals.

marking-hammer (mär′king-ham″ėr), *n.* A hammer bearing a raised device used to stamp logs, to indicate ownership. Also called *marking-iron*.

marking-hatchet (mär′king-hach″et), *n.* A hatchet for marking trees. A raised die is cut on the head for stamping the face of the blaze.

marking-iron, *n.* 2. Same as ★*marking-hammer*.

marking-plate (mär′king-plāt), *n.* A three-cornered metal plate with a small spike, used to mark an angle of a tennis-court.

marking-plow, *n.* 2. An ice-plow fitted with a guide, used to mark ice for cutting.

marking-tape (mär′king-tāp), *n.* In *tennis*, a tape used to outline and mark the various divisions of a tennis-court.

markland (märk′land), *n.* [*mark*² + *land*¹.] A division of land, originally of the annual value of a mark. *N. E. D.*

marksman, *n.* 1. (*b*) A soldier who makes 60 per cent. at target practice at ranges up to 600 yards.

mark-weed (märk′wēd), *n.* The poison-ivy, *Rhus radicans*.

marl¹, *n.*—**Chloritic marl.** See ★*chloritic*.—**Etruria marl,** a subdivision of the Carboniferous system in

England. It is regarded by British geologists as a part of the Upper series of the coal-measures, attains a thickness of 1,100 feet, is underlain by the Blackband group and overlain by the Newcastle-under-Lyme group. Its bottom and top are characterized by *Spirorbis* beds.—**Gainfahren marl,** a phase of the Miocene series of Austria. It is considered by Austrian geologists as a part of the second substage of the Mediterranean or marine stage and is characterized by an abundance of lamellibranchs and gastropods.—**Gargas marl,** a subdivision of the Cretaceous system in Vaucluse, France. It is the lowest member of the Aptian or upper division of the Lower Cretaceous. It is also well developed in northwestern Germany.—**Grinzing marl,** a phase of the Miocene Tertiary in Austria. It is considered by Austrian geologists to be a part of the second substage of the Mediterranean or marine stage.—**Salt marl,** the lowest division of the Cambrian rocks in the Salt Range of India. It is 1,500 feet thick and without fossils.—**Swamp marl,** beds of freshwater shells found beneath swamps and left by the *Mollusca* which inhabited the lake or pond which has given rise to the swamp. They are sought as a source of lime in making hydraulic cement.

Marlburian (märl-bu′ri-an), *n.* [Erroneously < *Marlborough.*] A graduate of Marlborough College.

I will read you the last letter received from a nephew of mine, aged twenty-one, a *Marlburian,* who . . . is settled on a Texan ranche.
T. Hughes, Rugby, Tennessee, III. iii.

marmairolite (mär-mī′rō-līt), *n.* [Gr. *μαρμαίρειν,* glisten, + *-lite.*] A mineral from Sweden, occurring in fine crystalline needles of a pale yellow color: probably a variety of the amphibole called *richterite.*

marmarize (mär′ma-rīz), *v. t.*; pret. and pp. *marmarized,* ppr. *marmarizing.* [Gr. *μάρμαρος,* marble, + *-ize.* See *marmarosis.*] To convert (limestone) into marble by metamorphism; subject to marmarosis.

On the east side of the great intrusive mass of Fair Head the chalk is likewise *marmarised.* Another smaller . . . illustration of the same change occurs at Camps Quarry near Edinburgh.
Geikie, Text-book of Geol., p. 603.

marmelos (mär′mē-los), *n.* [NL., < Pg. *marmelo,* quince.] The Bengal quince, *Ægle marmelos.*

marmit (mär′ mit), *n.* [F. *marmite,* pot or kettle.] A pot fitted with a hook by which it may be hung; a kettle; a soup-kettle.

marmite (mär-mēt′), *n.* [F.] A pot; a kettle; specifically, an earthenware pot in which soup is made and served.—**La petite marmite,** a soup made of strong stock and vegetables.

marmoration, *n.* 3. Same as ★*marmorization.*

marmorization (mär″mō-ri-zā′shon), *n.* [*marmorize* + *-ation.*] In *geol.*, the process of recrystallization during metamorphism, whereby sedimentary limestones become marble.

Marmorization of the limestone is abundant in the region and by no means confined to the contact belt, but, as Mr. King observes, spreads out over large areas in the limestone beds that have no definite relation to any known outcrop of eruptive rock.
Amer. Jour. Sci., Aug., 1903, p. 144.

marmorize (mär′mō-rīz), *v. t.*; pret. and pp. *marmorized,* ppr. *marmorizing.* [L. *marmor,* marble, + *-ize.* Compare ★*marmarize.*] To change from a sedimentary limestone to crystalline marble, more especially under the influence of an intrusive dike or other mass of eruptive rock. *Geikie,* Text-book of Geol., p. 772.

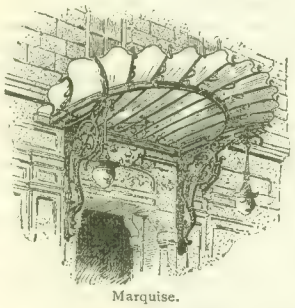
marmorosis (mär-mō-rō′sis), *n.* [L. *marmor,* marble + *-osis.*] Same as *marmarosis.*

maro (mä′rō), *n.* Same as ★*malo.*

maroon[1]. **I.** *a.*—**Maroon formation.** See ★*formation.*

II. *n.*—**Acid maroon.** See ★*acid-maroon.*—**Alizarin maroon,** a mordant dyestuff derived from anthracene. It is a mixture of α- and β-amidoalizarin and amidopurpurin. With a chromium mordant it produces a maroon color. It is not as fast as alizarin red.—**Maroon S,** an impure acid-magenta.

maror (mä-rōr′), *n.*; pl. *merorim* (me-rō′rim). [Heb. *marōr,* < *marar,* bitter.] A bitter herb, eaten at the seder meal on the first two evenings of Passover.



marouflage (mä-rö-fläzh′), *n.* [F., < *maroufler,* back (a painting) with a back lining glued on, < *maroufle,* a tenacious paste.] The process or the act of applying a mural painting to a wall by coating the back of the canvas with a strongly adhesive paste and applying it. This device allows mural paintings to be in oil colors, and also allows the work to be done at a distance from the building for which it is intended.

Marq. An abbreviation of *Marquis.*

Marquette (mär-ket′), *n.* In *geol.*, that section of the Huronian system which is found in the Marquette iron range in the northern peninsula of Michigan and west of the city of Marquette. It consists of metamorphosed sedimentary rocks, and of eruptives of several kinds, and is separated by an unconformity into three well-marked divisions, a lower, a middle, and an upper. *Geikie,* Text-book of Geol., p. 628.

Marquettian (mär-ket′i-an), *a.* In *geol.*, noting a group of rocks carrying the Marquette iron ores: a name given by Alexander Winchell. The group is placed by him below the true Huronian. See ★*Marquette.*

marquise, *n.* 3. In *gem-cutting,* an ellipsoidal double-pointed form of cut which has been used extensively for diamonds and the more brilliant stones, although many of the common stones, such as amethysts, etc., are now cut in this way. Also called *navette.* —4. A light shelter over an entrance doorway: usually carried on brackets or cantalivers, more rarely on slender posts. The roofing itself is often of glass.—5. Same as *marquee.*—**Marquise ring,** a finger-ring in which is set a cluster of gems having the form of a pointed oval.

Marquise.

marral, *n.* See ★*murral.*

marram-grass (mar′am-gras), *n.* Same as *marram.*

marriage, *n.*—**Class-marriage.** See ★*class-marriage.*—**Common-law marriage,** a marriage not solemnized by any form or ceremony, but created by an actual and consummated agreement between the parties. It may be evidenced by their conduct and reputation. Such a marriage is valid in the United States, except in those states where statutes have abolished it. See *marriage,* 2.—**Detinue of goods in frank marriage.** See ★*detinue.*—**Marriage officer,** a diplomatic or consular agent, or other duly authorized person, before whom marriage between British subjects in a foreign land may be solemnized and be valid.

Under it [the Foreign Marriage Act, 1892] a marriage between British subjects on land is as valid as a marriage duly solemnized in England, . . . if celebrated in accordance with the local law or in the presence of a "*marriage officer.*" *Encyc. Brit.,* XXX. 548.

Restraint of marriage, a legal term used with reference to conditions attached to bequests, gifts, etc., in which the beneficiary, in order to obtain the bequest or gift, is limited in the free choice of marriage. Conditions in restraint of marriage are, if general, usually void.—**Royal marriage,** in such games as penuchle and bezique, the king and queen of the trump suit.

marriageability (mar″āj-a-bil′i-ti), *n.* The state of being marriageable, or the degree to which a person may be considered marriageable.

marriage-flight (mar′āj-flīt), *n.* Same as *nuptial* ★*flight.*

marrite (mär′it), *n.* [For Dr. John Edward *Marr,* of Cambridge, England.] A lead-gray to steel-gray mineral which occurs very sparingly in highly modified monoclinic crystals in the dolomite of the Binnenthal in Switzerland: the chemical composition has not been determined.

marron[1], *n.*—**Marrons glacés,** French or Italian chestnuts boiled in a syrup of sugar and water and flavored with vanilla and a few drops of lemon-juice. They are softened and sweetened all through, not having a glaze of sugar like glacé oranges, etc.

marrow[1], *n.*—**Oblongate marrow,** the medulla oblongata.

marrubiin (ma-rō′bi-in), *n.* [*Marrubi-um* + *-in*[2].] A neutral compound contained in *Marrubium vulgare.* It crystallizes in large plates or needles melting at 106° C.

marry[1], *v. i.*—**To marry over the broomstick.** See ★*broomstick.*

Mars, *n.* 2. The question of the planet's climate hinges upon its temperature. It is undeniable that the white caps which alternately form and disappear about its poles behave with respect to the planet's seasons exactly as snow caps would. This strongly suggests conditions of temperature resembling our own, and a corresponding climate. On the other hand, the rarity of the planet's atmosphere, the infrequency of clouds, its smallness, and its distance from the sun (reducing its supply of solar heat to less than half of ours) seem to require a temperature far below the melting-point of ice, and suggest that the white caps may be due to the precipitation of some substance with a much lower freezing-point than water. The question can hardly be settled until our heat-measuring instruments become sensitive enough to determine the planet's temperature by direct observation.—**Canals of Mars.** See ★*canal*[1].

Marseilles pottery. See ★*pottery.*

marsh, *n.* 2. In Australia, a drained meadow. See the extract.

A '*marsh*' here is what would in England be called a meadow, with this difference, that in our *marshes,* until partially drained, a growth of tea-trees (Leptospermum) and rushes in some measure encumbers them; but, after a short time, these die off, and are trampled down, and a thick sward of verdant grass covers the whole extent.
Mrs. Meredith, My Home in Tasmania, I. 163, quoted in [E. E. Morris, Austral English.

marshallik (mär′sha-lik), *n.* [Yiddish.] A professional merrymaker. Also *marshalok.* See ★*badhan.*

marsh-bass (märsh′ bas), *n.* The large-mouthed black-bass, *Micropterus salmoides.*

marsh-berry (märsh′ber″i), *n.* The Old World cranberry, *Oxycoccus Oxycoccus.* Also *bogberry, fenberry,* and *marshwort.*

marsh-clover (märsh′klō″vėr), *n.* The bog-bean, *Menyanthes trifoliata.*

marsh-cow (märsh′kou), *n.* A name given by Rütimeyer to a race of cattle of small size the remains of which were found in Swiss lake-villages. *Lyell,* Antiq. of Man, p. 24.

marsh-crocodile (märsh′krok″ō-dil), *n.* A common species of southern Asia, *Crocodilus palustris,* somewhat smaller and less dangerous than the muggar, or salt-water crocodile, *C. porosus.*

marsh-deer (märsh′dēr), *n.* The larger South American deer, *Cervus* or *Odocoileus palustris.*

marsh-fleawort (märsh′flē″wėrt), *n.* A swamp or marsh plant, *Senecio palustris,* found in high northern latitudes in North America, Greenland, Europe, and Asia, extending southward in the western hemisphere to Iowa and Wisconsin. It has spatulate, entire, radical leaves, those of the stem being few and toothed. The heads are numerous, mostly in a terminal corymb, the rays pale yellow but showy.

Marsh-fleawort (*Senecio palustris*). *a*, lower part of stem with leaves; *b*, upper part of stem with flowers; *c*, floret. (From Britton and Brown's "Illustrated Flora of the Northern States and Canada.")

marshite (märsh′it), *n.* [Named after C. W. *Marsh.*] Cuprous iodide (Cu_2I_2) occurring in oil-brown tetrahedral crystals at the Broken Hill mines, New South Wales.

marshman (märsh′man), *n.*; pl. *marshmen* (-men). A person living in the marshes: used in Yorkshire to designate a particular group of people.

Apparently the bird was well known to the Yorkshire "carr-men" and "*marsh-men*" half a century ago, but no examples are known to science save the type and the one procured by Mr. Coburn. *Nature,* Jan. 15, 1903, p. 252.

marsh-orchis (märsh′ôr″kis), *n.* See ★*orchis*[2].

Marsh's arsenic apparatus, test. See ★*apparatus,* ★*test*[1].

marsh-treader (märsh′tred″ėr), *n.* Any bug of the heteropterous family *Hydrometridæ* or *Limnobatidæ. L. O. Howard,* Insect Book, p. 282.

marsileaceous (mär-sil-ē-ā′shius), *a.* Belonging to the *Marsileaceæ,* a family of cryptogamic plants.

marsipobranchian (mär″si-pō-brang′ki-an), *n.* A member of the order *Marsipobranchii,* a group of vertebrates containing the lampreys and hagfishes.

Marsupial plate. See ★*plate.*

Marsupialida (mär-sū-pi-al′i-dä), *n. pl.* The *Cubomedusæ.*

marsupialization (mär-sū″pi-al-i-zā′shon), *n.* [*marsupial* + *-ize* + *-ation.*] The formation of a pouch in a membrane, such as the peritoneum.

marsupialize (mär-sū′pi-al-īz), *v. t.*; pret. and pp. *marsupialized,* ppr. *marsupializing.* [*marsupial* + *-ize.*] To render marsupial in character; provide with a pouch.

marsupite (mär-sū′pīt), *n.* [NL. *Marsupites.*] A member of the genus *Marsupites.*

Marsupites (mär-sū-pī′tēz), *n.* [Gr. *μάρσιπος,* a pouch, + *-ιτης,* E. *-ite*[2].] The only genus of the family *Marsupitidæ,* including flexible crinoids of free-swimming habit having no column and few and large calyx plates. It occurs in the Upper Cretaceous of Europe.

mart[5] (märt), *n.* [See *marten*[1].] The marten. [Eng. dial.]

martaban (mär′ta-ban), *n.* [Ar. *martabāni.*] Old celadon porcelain, popularly supposed to have been made at Martaban in Pegu. Some-

times called *green porcelain*. Large jars of this kind are mentioned by Ibn Batuta, the Algerian traveler, in the fourteenth century.

The Arabs and Persians call this peculiar porcelain *martabani*, and value it very highly from its fancied property of detecting poisoned food by changing color.
S. W. Bushell, Oriental Ceram. Art, p. 148.

martelé (mär-te-lā′), *a.* [F., pp. of *marteler*, hammer, strike: see *martel*, *v.*] 1. Hammered; produced by hammering: applied to metal work.—2. In *music*, same as *martellato*.

martensite (mär′ten-sīt), *n.* [From a personal name.] A very hard carbide of iron, approximately of the composition $Fe_{24}C$, formed in the recalescence of steel at 850° C. in cooling from a temperature of 1,000° C. or over. It remains unchanged if the metal is then suddenly cooled, as by plunging it into cold water, but on slow cooling is decomposed into iron and the carbide Fe_3C. On the other hand, it appears that this latter compound, known as *cementite*, may split into martensite and carbon in the form of graphite.

martensitic (mär-ten-sit′ik), *a.* [*martensite* + *-ic*.] Pertaining to, or characterized by martensite: designating the state of steel when its iron and carbon are combined to form martensite.

Martha Washington china. See ★*china*[1].

Martian, *a.* II. *n.* An (imaginary or possible) inhabitant of Mars.

These exemplary *Martians* wear no clothes but the exquisite fur with which nature has endowed them, and which constitutes a part of their immense beauty.
Du Maurier, The Martian, viii.

martin[3] (mär′tin), *n.* A shortened form of *freemartin*.

Purebred steer, spayed or *martin* heifer, two years old and under three.
Rep. Kan. State Board Agr., 1901–02, p. 211.

martingale, *n.* 4. In *fencing*, a bit of twine, fastened to the hilt of a foil, which is caught round one finger of the sword hand to prevent the foil from falling to the ground in case of disarmament.—**Standing martingale**, a long martingale connected to the girth and collar of a harness, with branched ends which are attached to the rings of the bridle-bit.

martinoe (mär′ti-nō), *n.* [Probably a corruption of *Martynia*.] The unicorn-plant, *Martynia Louisiana*.

Martin's albumin negative process. See ★*process*.

martiology (mär-ti-ol′ō-ji), *n.* [L. *Mars* (*Mart-*), Mars, + Gr. *-λογία*, < *λέγειν*, speak.] The study of the planet Mars: same as *areography*, which is the accepted term. [Rare.]
L. F. Ward, Pure Sociol., p. 69.

martyrium (mär-tir′i-um), *n.*; pl. *martyria* (-ä). [LGr. *μαρτύριον*, a martyr's shrine, < *μάρτυρ*, martyr: see *martyr*.] A place in which the relics of martyrs are preserved, usually a crypt or underground chapel like the famous one of the church of Saint-Denis, France, which still retains much of the original Roman construction.

martyrolatry (mär-tē-rol′a-tri), *n.* [*martyr* + *-olatry*. See *idolatry*.] Worship of the Christian martyrs.

The Christianity which he despised—the only Christianity which he knew—was mainly associated with a superstitious *martyrolatry* and a grovelling relic-worship. The Galileans, he said, "abandon the worship of the gods to worship the mouldering remains of the dead."
Farrar, Lives of the Fathers, I. 702.

marum, *n.* 2. Same as *herb mastic* (which see, under *herb*).

marut (mä-rut′), *n.* [Skt. *marút*, wind, wind-god.] In *Hindu myth.*, a wind-god; a storm-god.

Marxian (märk′si-an), *a.* Pertaining to the socialistic or the historical views formulated by Karl Marx. *Kidd*, Western Civilization.

Marxist (märks′ist), *n.* A socialist of the school which accepts the views of Karl Marx, or a historian or sociologist who accepts Marx's economic interpretation of history. *Kidd*, Western Civilization.

marzacotto (märt-sä-kot′ō), *n.* [It. *marzacotto*, formerly a sort of ointment, also a potters' tool (Florio, 1598).] In *ceram.*, a thin coating of transparent glaze, made of oxid of lead, potash, and sand: used by Italian potters on their painted stanniferous enamel to increase the brilliancy of the colors. See ★*coperta*.

mas. An abbreviation of *masculine*.

M. A. S. An abbreviation of *Master of Applied Science*.

masamacush (mas′a-ma-kush″), *n.* [Prob. North Amer. Indian.] A common name of the Great Lake trout, *Cristivomer namaycush*, found in the Great Lakes, and widely distributed over northern North America.

masar, *n.* See ★*mazar*.

masarid (mas′a-rid), *n.* and *a.* I. *n.* A member of the hymenopterous family *Masaridæ*.

II. *a.* Having the characters of or belonging to the family *Masaridæ*.

mascagnite (mas-kän′yīt), *n.* [*Mascagni* + *-ite*[2].] Same as *mascagnin*.

mascaret (mȧs-kä-rā′), *n.* [F. *mascaret*, < Gascon *mascaret*, of unknown origin.] A tidal bore.

The tide begins to make itself felt at Poses, 11 miles above Elbeuf, and between Caudebec and Villequier the *mascaret*, or bore, has its greatest development.
Encyc. Brit., XXXII. 508.

Maschil (mäs-kēl′), *n.* [Heb.] An epithet prefixed to thirteen psalms (32, 42, 44, 45, 52–55, 74, 78, 88, 89, and 142). It probably means 'a contemplative composition,' but the true significance is not certainly known.

mascot, *n.* II. *a.* Of the nature of a mascot; having luck-bringing qualities; lucky: as, *mascot* snakes; a *mascot* dog or goat.

mascularity (mas-kū-lar′i-ti), *n.* [L. *mascul*(*us*), male, + *-ar* + *-ity*.] Masculinity.

To some the unmentionables might savor of *mascularity*.
Kane, Grinnell Exp., xlvi. 425. *N. E. D.*

mash[1], *n.*—**Sour mash**, mash in which fermentation is begun by having put back into it some of a mash in which fermentation has already been going on.—**Sweet mash**, in *brewing*, mash in which fermentation has been started with yeast.—**Thick-mash process**, a method of preparing wort in brewing, chiefly employed in Bavaria, other parts of Germany, and Bohemia. It involves the removal of portions of the malt from the mash-tub to be boiled and returned to the mash-tub, so that much of the diastase is rendered inactive, while the starch of the boiled portion is brought to the condition of starch-paste and thus is more readily acted on, the production of glucose is regulated, and the amount of malt-extract in the wort is increased.—**Thin-mash process**, the method of preparing wort in brewing most common in France and England. It involves simple infusion of malt with water at 60° to 70° C., with continuous stirring in a mash-tub with a false bottom, the clear infusion being drawn off after a time from beneath this, and more water at the same temperature as before run on upon the malt for a second mashing. None of the malt is heated to the boiling-point of water.

mashed (masht), *p. a.* In *geol.*, noting rocks which are dynamically crushed and granulated.

Also, northwest of Cranberry the gangue minerals and even magnetite are developed in the mass of the red granite along more or less *mashed* zones.
Contrib. to Econ. Geol., U. S. Geol. Surv., 1902, p. 245.

mashie, *n.* Same as ★*mashy*[2].

mashing, *n.* 4. In *geol.*, the granulation of a rock in dynamic metamorphism. *Van Hise*, in U. S. Geol. Surv., Monographs, XLVII. 762.

mashrebeeyah, meshrebeeyah (mash-, mesh-re-bē′yä), *n.* [Ar. *mashrabiya*.] A window with openwork of light wooden bars, leaving free access to the air, and used as a place where a porous water-bottle may be put for cooling: usually, in Cairo and other Levantine cities, a projecting bay-window or oriole window, fitted on three sides with such openwork.

mashy[2], **mashie** (mash′i), *n.* In *golf*, a club with an iron head and a more or less lofted face.

Mashy-niblick.

mashy-niblick (mash′i-nib″lik), *n.* A golf-club with a small, deep iron head, lofted: used for approaching and playing out of hazards and bad lies.

mask[3], *n.* 9. In *zoöl.*: (*c*) The skin of the forehead and upper part of the face of any quadruped, taken off at about the level of the eyes.—10. In *base-ball*, a protection for the face worn by the catcher. See ★*cage*, 8.—**Brewer's mask**, an apparatus used to facilitate inhalation of ethyl chlorid in the induction of surgical anæsthesia.—**Uterine mask**, chloasma occurring during pregnancy, or in certain cases of disease of the womb.

maskalonge, *n.*—**Chautauqua maskalonge**, a great pike or maskalonge, *Esox ohiensis*, found in Chautauqua Lake and in the Ohio Basin.

masked, *p. a.* 5. In *pathol.*, same as ★*larval*, 2.

masking, *n.* 2. In *photog.*, a device adopted in printing from an imperfect negative, consisting in pasting tissue-paper on the reverse side of the negative over the portions of the picture which print too deeply. *Woodbury*, Encyc. Dict. of Photog., p. 276.

masochism (maz′ō-kizm), *n.* [From Leopold von Sacher-*Masoch*, an Austrian novelist, who described the perversion.] A form of sexual perversion in which the victim craves, and takes pleasure in, physical abuse from one of the other sex: the opposite of *sadism*.

masochistic (maz-ō-kis′tik), *a.* Characterized by or of the nature of masochism. *G. S. Hall*, Adolescence, II. 127.

mason-ant (mā′sn-ant), *n.* Any ant which makes habitations of mud, such as *Lasius brunneus* or *Formica fusca* of Europe. *Kirby and Spence*, Entomology, p. 271.

Masonic china. See ★*china*[1].

masonry, *n.*—**Dry masonry**, work done without the use of mortar of any kind, especially where the stones are closely fitted and leave only fine joints between them.—**Polygonal masonry**, masonry which shows on the face of a wall many-sided blocks, the face being smooth, but the joints at irregular angles with each other. Thus five-sided and six-sided stones, and even more complicated pieces, are set in a wall by patient fitting of one to another, while very small splinters are used to make the surface more uniform.—**Trapezoidal masonry**, masonry in which the faces of the outer stones are four-sided but not rectangular. They may even have the top and bottom beds horizontal and parallel.

masonwork (mā′sn-wėrk), *n.* Masonry. [Colloq.]

masopin (mas′ō-pin), *n.* A colorless compound, $C_{22}H_{36}O$, contained in the resin from a Mexican tree. It crystallizes in needles melting at 155° C. Also called *masopin resin*.

masrite (mas′rīt), *n.* [See ★*masrium*.] A fibrous alum from Egypt, supposed to contain a new element called *masrium*.

masrium (mas′ri-um), *n.* [NL., < Ar. *Masr*, Egypt, + *-ium*.] The name given to a supposed new chemical element of the same family with barium, strontium, and calcium, occurring as sulphate in the mineral masrite from Egypt. There has been no confirmation of its existence. The place to which the approximate atomic weight reported would assign it in the periodic classification of the elements seems to belong to the more recently discovered radium.

mass[1], *n.*—**Nuptial mass**, a mass celebrated at a church wedding, with special prayers and blessings for the couple married.

mass[2], *n.* 8. In *phar.*, a preparation of thick, pasty consistency with which is incorporated some active medicinal substance: the mass is made up into pills of definite size and weight for administration.—9. In the *fine arts*, any large and simple expanse of form, light, shade, or color, in which the details of a composition arrange themselves.—**Achromatic mass.** See ★*achromatic*.—**Active mass.** (*a*) In *phys. chem.*, the amount of the active substance contained in the unit volume; the concentration of the active substance, or the number of gram-molecules (or gram-equivalents) contained in one cubic centimeter or one liter, as the case may be. (*b*) In *electrochem.*, the concentration of that fraction of the electrolyte which, at the given dilution, is dissociated into ions, and is therefore capable of carrying the electric current.—**Apparent mass**, the mass of a moving particle due to its electrostatic charge and to its velocity. It differs from the ordinary mass dealt with in mechanics, which is independent of the velocity.—**Electromagnetic mass**, mass due to the electric charge of a moving particle.

The *electromagnetic mass* is a vector quantity of the nature of a tensor, with the same kind of symmetry as an ellipsoid of rotation. *Science Abstracts*, VI., Sec. A, 238.

Gravitational mass, mass in the sense in which the term is used in ordinary mechanics: so called to distinguish it from the electromagnetic mass of a moving electron or charged particle.—**In mass** (*milit.*), in compact formation, as a close column.—**Lateral masses of the sacrum.** See ★*sacrum*.—**Law of conservation of mass.** See ★*conservation*.—**Law of mass action.** See ★*action*.—**Linear mass of points**, a mass not discrete: a term used by Hankel.—**Longitudinal mass**, in the dynamics of an electrically charged particle, mass which opposes acceleration in the line of motion.—**Mass resistivity.** See ★*resistivity*.—**Tigroid masses.** Same as *Nissl* ★*bodies*.—**Transverse mass**, in the dynamics of an electrically charged particle, mass which affects acceleration perpendicular to the line of motion.—**Vallet's mass**, a mixture of ferrous carbonate with sugar and honey brought by evaporation of water to a thick, pasty condition, used in medicine in the form of Vallet's pills. The sugar protects the iron from the action of the air tending to form ferric oxid or hydroxid.

Mass. An abbreviation of *Massachusetts*.

massa[2] (mas′ä), *n.* A copper coin of Ceylon.

massage[2], *n.*—**Douche massage**, massage combined with the application of a douche to the same part.—**Vibratory massage**, rapid and light percussion of a part, for therapeutic purposes, made by means of a special instrument.

Massaria (ma-sā′ri-ä), *n.* [NL. (De Notaris, 1844), named for Giuseppe Filippo *Massara* (1792–1839), an Italian botanist.] A genus of pyrenomycetous fungi having the perithecia separate and imbedded in the host. The spores are large, several-septate, brown, and usually surrounded by a conspicuous hyaline envelop. Many species have been described. They occur on dead trunks and branches. *M. inquinans* is a common species in Europe and America, found on the maple and other trees.

Massariaceæ (ma-sā-ri-ā′sē-ē), *n. pl.* [NL., < *Massaria* + *-aceæ*.] A family of pyrenomycetous fungi named from the genus *Massaria* and having the same general characters.

massecuite (más-kwēt′), *n.* [F., 'baked mass.'] In the manufacture of sugar and in sugar-refining, the semi-fluid mixture of separating sugar crystals and residual syrup, produced by completed evaporation, from which, after cooling, the syrup is to be removed by drainage or by the use of the centrifugal machine.

masser[3] (mas′èr), *n.* [F. *masser*.] A masseur. [Great Britain.]

A single *masser* should have strength enough to do the work without too obvious exhaustion, which gives the patient an unpleasant impression.
Encyc. Brit., XXX. 573.

masseur, *n.* 2. An instrument designed for mechanical massage of the tissues.

massing[1] (más′ing), *n.* [*mass*[1], *v.*] The act denoted by the verb *mass*[1].

massing[2] (más′ing), *n.* [*mass*[2], *v.*] The act denoted by the verb *mass*[2].

massing[3] (mas′ing), *n.* Same as *massage*. [Rare.]

Without going so far as to make *massing* a closed profession, it is obviously desirable to have some guarantee of competency. *Encyc. Brit.*, XXX. 573.

massive, *a.* 6. In *zoöl.*: (*b*) Noting a compact sponge of any kind which grows more or less equally in all directions: contrasted with *incrusting, dendritic, flabellate,* etc.—7. In *pathol.*, extensive; involving a large mass of tissue.

II. *n.* Same as *massif*.

Mount Cochrane, . . . which rises 12,140 feet above sea-level. This powerful *massive* competes with Mounts San Valentin and San Clemente as to which is the highest of Patagonia. *Geog. Jour.* (R. G. S.), XVI. 206.

massive-solid (más′iv-sol′id), *a.* Having the quality of being both solid and homogeneous.

Judging from the heated conditions of the material extruded during a *massive-solid* eruption at the time it rises into the air, and reasoning also from the known variations in the physical and mineralogical features of the igneous rocks which depend on the conditions under which they solidify, we should expect the lavas extruded in a *massive-solid* condition to present at least three leading physical characteristics.
Amer. Jour. Sci., April, 1904, p. 263.

massless (más′les), *a.* [*mass*[2] + *-less*.] In *physics*, devoid of mass.

masson (mȧ-soṅ′), *n.* A silver coin of Lorraine in the eighteenth century. It was struck under Leopold I. (1690–1729), and was named from Masson, the director of the mint.

Masson's disk. See ★*disk*.

massotherapeutics (mas″ō-ther-ą-pū′tiks), *n.* [*mass(age)* + *therapeutics*.] Treatment of disease by means of massage. Also *massotherapy*.

massoy (mas′oi), *n.* [Also *massaj, massoi, mussoi;* Malay *masui*.] The bark of an East Indian tree, *Cinnamomum Kiamis*. *N. E. D.*

mast[1], *n.*—**Bonaventure mast** (*naut.*), the after-mast of a four-masted vessel of the Elizabethan period, which corresponded to the jigger-mast of to-day.—**Fore-trysail mast.** Same as ★*fore-spencer mast*.—**Lower-mast,** the first mast above the deck; the mast that steps in the keelson and passes through the deck.—**Mast-and-guy system,** a method of providing longitudinal strength in wooden river-steamers having shallow hulls. Strong keelsons in the bottom support a series of vertical poles or masts on each side of the vessel, which are tied and braced together with iron rods or chains, thus forming a structure analogous to a bridge-girder.—**Mast-yard plates,** the iron plates of which the yards of some vessels are constructed.

mastaba (mas′tą-bą), *n.* [Ar. *mastaba* or *mastaba*, a stone or mud bench.] The earliest form of Egyptian tomb, a building oblong or square in plan and having sloping sides and a flat roof. It covers the sepulchral pit.

mastaxed (mas′takst), *p. a.* Possessing a mastax, or chitinous gizzard, as rotifers.

He also describes a new *mastaxed* male.
Nature, Feb. 5, 1903, p. 327.

mast-cell (mȧst′sel), *n.* A name given to certain large wandering cells of the leucocyte type, found in the blood and connective tissues under normal but more especially under pathological conditions, such as those of leucemia, chronic inflammation, etc. See cut under ★*lymphocyte*. *Buck*, Med. Handbook, I. 75.

mast-cloth (mȧst′klôth), *n.* The middle breadth of canvas in a square sail, which receives the chafing of the mast; also, a covering of canvas sometimes laced on the after-mast of a steamship, so as to receive the soot and smoke from the stack when at sea.

master[1]. **I.** *n.*, 9. (*e*) In medieval musical gilds, especially those of the mastersingers, one who had attained the highest rank of proficiency.—**Master of misrule** (*naut.*), the title given by his messmates to the elected master of ceremonies during the recreation-hour obtained from the captain for the purpose of indulging in all kinds of pranks and absurdities. It was a well-known custom on old-time vessels to grant this privilege to the crew as a mark of appreciation for some good work done by them.—**Master of the Crown Office.** See ★*crown*.—**Small master,** a painter of small easel-pictures.

The great majority of pieces due to the brush of this most exquisite of all '*small masters*' [Watteau] were no doubt engraved.
Claude Phillips, in Burlington Mag., V. 235.

II. *a.*—**Master card.** See ★*card*[1].—**Master controller.** See ★*controller*.—**Master record.** See ★*record*.

master-general (más′tėr-jen″ę-ral), *n.* An officer of the British Army from 1483 to the Crimean war, who was charged with the supply and transportation of the army and in the early days controlled the artillery and engineers. Also called *master-general of ordnance*.

master-keyed (más′tėr-kēd), *a.* Fitted to a master-key.

A series of locks is said to be "*master-keyed*" when so constructed that each lock can be operated by its own key, which fits it but no other lock in the series, and also by another key which will operate every lock in the series, this latter being designated as a "master-key" or "pass-key."
H. R. Towne, Locks and Builders' Hardware, p. 121.

master-mechanic (más″tėr-mę-kan′ik), *n.* A chief mechanic; one who has charge of the machinery, etc., of shops.

master-song (más′tėr-sông), *n.* The art in general, or some accredited composition, of the mastersingers or meistersänger. See *mastersinger*.

master-strap (más′tėr-strap), *n.* A heavy steel strap used in wood-bending machines to insure smooth bending of the wood.

master-tap (más′tėr-tap), *n.* A tap used to cut a die for any screw, but not used in cutting threads in the nuts, a larger tap being used for that purpose to afford a slight clearance.

Masthead compass. See ★*compass*.

mast-hinge (mȧst′hinj), *n.* *Naut.*, a kind of socket for quickly stepping and unstepping the mast of a small sail-boat.

mast-hole (mȧst′hōl), *n.* In *ship-building*, the hole through the partners of a deck to receive the mast. See *partner*, 3.

mastic, *n.*—**Oil of mastic.** See ★*oil*.

masticator, *n.* (*d*) An attachment to a feed-cutter. It crushes, shreds, and mixes hay, corn, or other material cut in the feed-cutter, and is designed to render the feed more digestible and palatable.

mastigobranch (mas′ti-gō-brangk), *n.* Same as ★*mastigobranchia*. *Annals and Mag. Nat. Hist.*, Nov., 1903, p. 536.

mastigobranchia (mas″ti-gō-brang′ki-ą), *n.*; pl. *mastigobranchiæ* (-ē). [NL., < Gr. *μάστιξ* (*μαστιγ-*), whip, + *βράγχια*, gills.] A bush-like or plumose epipodial appendage of the throacic limbs of decapod crustaceans, serving to clean the gills.

First maxillipeds with a 2-lobed *mastigobranchia*. . . . The *mastigobranchiæ* are extremely rudimentary, consisting of a minute tubercle with a mere trace of a plume.
Trans. Linnean Soc. London, Zool., Feb., 1903, p. 440.

mastigobranchial (mas″ti-gō-brang′ki-ąl), *a.* [*mastigobranchia* + *-al*[1].] Pertaining to or characteristic of a mastigobranchia.

First maxillæ 2-branched; second pair 3-branched, with wide *mastigobranchial* plate.
Trans. Linnean Soc. London, Zool., Feb., 1903, p. 440.

mastigophoran (mas-ti-gof′ō-ran), *a.* and *n.* **I.** *a.* Relating or pertaining to the *Mastigophora*.

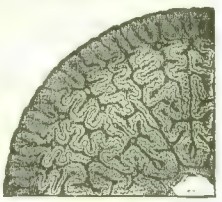
II. *n.* Any one of the *Mastigophora*.

Mastigopus (mas-tig′ō-pus), *n.* [NL., < Gr. *μάστιξ* (*μαστιγ-*), a whip, + *πούς*, foot.] The final stage in the development from the larval to the adult condition of certain decapod crustaceans, as the *Sergestidæ*. The external changes involved consist largely in modifications of the appendages of the antennary and mouth parts and of the ambulatory limbs. *Proc. Zool. Soc. London*, 1896, p. 944.

mastigosis (mas-ti-gō′sis), *n.* [Gr. *μαστίγωσις*, < *μαστιγοῦν*, whip, flog, < *μάστιξ*, a whip, a scourge.] Whipping; flagellation.

mastigospore (mas′ti-gō-spōr), *n.* [Gr. *μάστιξ* (*μαστιγ-*), a whip, + *σπορά*, seed.] In *phytogeog.*, a plant which distributes itself by means of ciliate or flagellate propagative cells, as in *Protococcus*, etc., or by plant-bodies similarly motile, as in *Bacteriaceæ* and *Volvocaceæ*. *F. E. Clements*.

masting (mȧst′ing), *n.* On a sailing-vessel, the arrangement of the masts and their supports.



This method of procedure has long been followed in the Royal Navy, where the data as to *masting*, etc., obtained and tabulated long ago for the now obsolete classes of sailing ships, have furnished rules for practice up to the present time, and have made serious accidents, such as dismasting, almost unknown.
White, Manual of Naval Arch., p. 343.

mastodonic (mas-tō-don′ik), *a.* [*mastodon* + *-ic*. The regular type is *mastodontic*.] Relating to or having the characters of a mastodon; mastodontic; gigantic. *Kane*, Grinnell Exp., xxxi. 269. *N. E. D.*

mastodonsaurian (mas″tō-don-sâ′ri-an), *a.* and *n.* **I.** *a.* Pertaining to, resembling, or having the characters of *Mastodonsaurus*.

II. *n.* A member of the labyrinthodont genus *Mastodonsaurus*.

Mastodonsaurus (mas″tō-don-sâ′rus), *n.* [NL., < Gr. *μαστός*, teat, + *ὀδούς* (*ὀδοντ-*), tooth, + *σαῦρος*, lizard.] A genus of very large labyrinthodont amphibia having a skull one and one quarter meters in length, the outer surface of which is highly sculptured, the premaxillæ pierced for the passage of two tusks of the lower jaw, and the teeth of very complicated structure. The body skeleton is known only in part. It occurs in the Triassic of Europe and India.

Section of a tooth of a *Mastodonsaurus*.

mastoid. **I.** *a.*—**Mastoid antrum,** the mastoid cells taken collectively.—**Mastoid disease.** Same as *mastoiditis*.—**Mastoid empyemia.** See ★*empyemia*.—**Mastoid sinus.** See ★*sinus*.

II. *n.* 3. Same as *pterotic*. *Starks*, Synonymy of the Fish Skeleton, p. 510.

mastoidale (mas″toi-dā′lē), *n.* [NL., neut. of **mastoidalis*, < *mastoides*, mastoid.] In *craniom.*, the lowest point of the mastoid process. *Von Török*.

mastoidectomy (mas-toi-dek′tō-mi), *n.* [NL. *mastoides*, mastoid, + Gr. *ἐκτομή*, excision.] A surgical operation for the excavation of the mastoid process. *Lancet*, April 4, 1903, p. 957.

mastoideum, *n.* 2. Same as *opisthotic*. *Starks*, Synonymy of the Fish Skeleton, p. 511.

mastoiditis, *n.*—**Sclerosing mastoiditis,** chronic mastoiditis in which the walls of the cells become thickened, almost or quite obliterating the latter.

mastoidotomy (mas-toi-dot′ō-mi), *n.* [NL. *mastoides*, mastoid, + Gr. *τομή*, a cutting.] A surgical operation for opening into the mastoid cells in cases of mastoiditis, in order to provide for drainage and free exit of the pus.

mastomenia (mas-tō-mē′ni-ą), *n.* [NL., < *μαστός*, breast, + *μῆνες*, menses.] A form of vicarious menstruation in which there is bleeding from the breasts.

mastoncus (mas-tong′kus), *n.*; pl. *mastonci* (-ton′sī). [Gr. *μαστός*, breast, + *ὄγκος*, mass.] A mammary tumor.

mastopexy (mas′tō-pek-si), *n.* [Gr. *μαστός*, breast, + *πῆξις*, fastening.] A surgical operation for raising and supporting pendulous breasts.

mastorrhagia (mas-tō-rā′ji-ą), *n.* [NL., < Gr. *μαστός*, breast, + *-ραγια*, < *ῥηγνῦναι*, break.] Hemorrhage from the breast.

mast-partners (mȧst′pärt″nėrz), *n. pl.* Same as *partners*. See *partner*, 3.

mast-plate (mȧst′plāt), *n.* In *iron ship-building*, one of the plates of which an iron mast is constructed.

mastrous, *a.* 2. Great; remarkable. Also used adverbially: as, a *mastrous* large school. [Prov. Eng.]

M. Ast. S. An abbreviation of *Member of the Astronomical Society*.

mast-step (mȧst′step), *n.* In *ship-building*, a support above the keel or on a deck on which the heel of the mast rests and by which it is prevented from moving sideways. In racing-yachts, the step is built up into a structure of cross girders to distribute the load over a large area of the lightly constructed bottom.

mast-tackle (mȧst′tak″l), *n.* A purchase for hoisting or lowering a mast; a purchase secured to the masthead for the purpose of handling heavy weights.

masut (mä-söt′), *n.* [Said to be Russian; cf. Russ. *maslo*, oil, butter.] The Russian name for crude petroleum from the Caucasus, which has lost the more volatile hydrocarbons by exposure to the air. The name is also applied, but less properly, to the residue from the distillation of such petroleum after all illuminating oil has been driven off. This residue is properly called ★*astatki* (which see).

mat[1], *n.* **9.** In *phytogeog.*, a mat-like aggregation of tufts from basal branches. Compare ★*mat-plant*. *Pound and Clements.*—**Abdominal mat.** See ★*abdominal*.—**Chafing-mat** (*naut.*), a mat-like binding wound around a hawser or rope, or laid under the end of a plank or spar, to prevent chafing or wear.—**Chinese mat,** a particular style of package in which the poorest grades of cassia-bark are marketed. It consists of two small rolls sewn into a mat; in the center are heavy foreign materials, outside of that cinnamon-chips of very inferior quality, and on the extreme outside neatly arranged quills of fair size and quality.—**Cork-mat** (*naut.*), a bag filled with granulated cork, used to prevent chafing; a cork fender.—**Dock-mat,** a rope fender used in a dock to protect the side of a vessel.

Matabele (mä-tä-bā′le), *n.* [From a tribe name.] A name given in South Africa to a large predatory true ant which is said to capture white ants and keep them as slaves in its own colonies.

matador, *n.* **4.** In *skat*, every trump in unbroken sequence with the highest trump, if in the same player's hand or on the same side as the highest trump. See ★*skat*[2].

Matagne schists. See ★*schist*.

matalan (mä′tä-län), *n.* [E. Ind.] A small Hindu flute used with bayadere dances.

matama (mä-tä′mä), *n.* [East African.] A native name for a kind of millet, *Sorghum vulgare*, much cultivated by the natives of Africa. Also called *Kafir-corn* and *durra*.

The native food resources are *matama*, maize, manioc, and in some parts bananas. *Nature*, May 7, 1903, p. 15.

matanza (mä-tän′thä), *n.* [Sp., < *matar*, kill.] **1.** The act of butchering or slaughtering.—**2.** The place where cattle are slaughtered.

Matawan formation. See ★*formation*.

match[1], *n.*—**Three-ball match.** See ★*ball*[1].

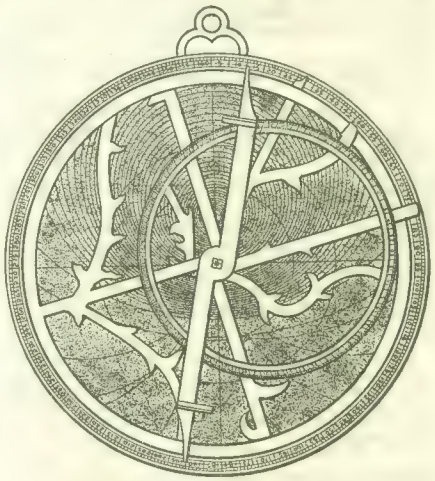
match[1], *v. t.* **5.** In *building*, to bring to a uniform width or thickness by any process, either by sorting and arranging the material or by cutting down some pieces to correspond with others: thus, planks are said to be of *matched* width.—**6.** In *logging*. See ★*mate*[1], *v. t.*, 3.

match[2], *n.*—**Parlor-match,** the trade-name for a friction-match made without sulphur, or with so little that the disagreeable suffocating smell from its combustion is practically avoided.—**Settlers' matches,** the long pendulous strips of bark which hang from eucalypts and other trees during decortication, and which, when thoroughly dry, are used for torches and kindling. [Australia.]

Match-makers' disease. See ★*disease*.

match-play (mach′plā), *n.* [*match*[1], *n.*, + *play*[1], *n.*] In *golf*, play in which the score is reckoned by counting the holes lost or won on either side.

mate[1], *n.* **6.** In *geom.*, the element that is paired with a given element in a correlation.—**Chief mate** (*naut.*), the deck-officer next below the master in rank; the one upon whom the command of the vessel would fall in the event of the death or disability of the captain.—**Extra second mate.** Same as *navigating* ★*mate*.—**Junior mate** (*naut.*), any of the mates lower in rank than the chief mate.—**Machinist's mate,** a chief petty officer of a man-of-war, who stands watch in the engine- and fire-rooms when the vessel is under way.—**Mate of the deck** (*naut.*), the officer of the watch.—**Mate of the hold** (*naut.*), the officer who has charge of, and is responsible for, the condition of the hold.—**Mate of the hull** (*naut.*), an old-fashioned rating for the officer specially assigned to the work on the hull, spars, and the standing and running rigging in the fitting out or repairing of a vessel. This officer was generally the chief mate, although a junior mate was sometimes selected.—**Mate of the watch** (*naut.*), the officer in charge of the deck; the mate on watch who has charge of the ship.—**Navigating mate** (*naut.*), the mate assigned to duty in the chart-room. On some steamships a navigating mate called an *extra second mate* is carried, whose specific duty it is to look after the navigation of the ship as an aid to the captain. This officer stands no regular bridge watch, but is supposed to be on the alert day and night to ascertain the ship's place in latitude and longitude, to lay out the ship's course, and to determine the deviation of the compass by azimuths of the sun, moon, and stars.—**Senior mate** (*naut.*), the chief mate.



mate[1], *v. t.* **3.** In *logging*, to place together in a raft (logs of similar size); match.

mate[3], *n.*—**Forced mate,** in *chess*, a mate at a certain stage of the game, which cannot be avoided even by the best possible rejoinders.

mate[4], *n.* **2.** Same as ★*congonha*.

mateceric (mä-te-ser′ik), *a.* [*mate*[4] + L. *cera*, wax, + *-ic*.] Noting an acid, a colorless compound, obtained from the wax of *yerba-maté*.

mater[2], *n.* **3.** The large metallic disk which forms the foundation of an astrolabe, and carries at its circumference the graduation upon which the indications of the alidade or index are read. *Sci. Amer.*, Aug. 12, 1905, p. 120.

Astrolabe of Regiomontanus, showing the Mater.

Material point, placenta. See ★*point*[1], ★*placenta*.

materialism, *n.*—**Psychophysical materialism,** the doctrine that the problem of psychology is to determine the dependence of immediate experience upon the body. *W. Wundt* (trans.), Outlines of Psychol., p. 17.

material-man (mā-tē′ri-al-man), *n.* One who keeps for sale the materials used in some trade, especially those used by builders.

materteral (mā-tėr′tę-ral), *a.* [L. *matertera*, maternal aunt.] Characteristic of a maternal aunt. *W. Taylor*, Monthly Rev., CII. 447. *N. E. D.*

matezite (mat′ę̄-zīt), *n.* **1.** A carbohydrate which occurs in crude india-rubber from Madagascar. It is the mono-methyl ether of optically inactive inosite.—**2.** Same as ★*pinite*.

matezo-dambose (mat′ę̄-zō-dam′bōs), *n.* A name given to d-inosite obtained by treating pinite (matezite) with hydriodic acid.

mat-grass, *n.* **3.** In Australia, *Manisuris compressa*, a grass with creeping or ascending flattened stems, esteemed for pasturage and said to keep green the whole year in dry climates.—**4.** Same as *tussock-grass*, 2. *Hannan*, Textile Fibres of Commerce, p. 139.

math. An abbreviation (*c*) of *mathematician*.

Mathematical induction. (*b*) See ★*induction*.

mathematicophysical (math-ę̄-mat′i-kō-fiz′i-kal), *a.* Of or pertaining to mathematical physics; noting the study of physics by mathematical methods.

mathematics, *n.*—**Mixed mathematics,** mathematics into which the consideration of the properties of matter enters.—**Pure mathematics,** mathematics apart from its applications. Compare *applied mathematics*.—**Qualitative mathematics,** mathematics rigorously kept free from every quantitative idea, being neither positively nor negatively quantitative: for instance, pure projective geometry as founded and expounded by von Staudt (1847).

mathetic (ma-thet′ik), *a.* [Gr. *μαθητικός*, relating to learning. See *mathesis*.] Of or pertaining to mathesis or learning. *Bentham*.

Matico camphor. See ★*camphor*.

matildite (ma-til′dīt), *n.* [*Matilda* (see def.) + *-ite*[2].] A sulphobismutite of silver ($AgBiS_2$), occurring in gray prismatic crystals, also massive: from the Matilda mine, near Morococha, Peru. Also found in Colorado.

mâtin[2] (mä-taṅ′), *n.* [F.] A French breed of large dogs, somewhat resembling the great Dane, but rough-coated; also used to some extent for sheep-dogs. Also *mâtin-dog*.

mâtin-dog, *n.* See ★*mâtin*[2].

mating, *n.*—**Apolegamic mating,** preferential mating; conscious and intentional sexual selection.—**Assortative mating, assortive mating, homogamous mating,** the pairing or mating of animals, or of human beings, with some common distinctive characteristic, considered apart from the question whether the mating is due to conscious selection of or preference for this characteristic or is unintentional or unconscious; sexual selection in its widest sense.

We could hardly want stronger evidence of the existence of *assortative mating* in man, i.e. of the actuality of sexual selection. *Biometrika*, Nov., 1903, p. 373.

Autogamic mating, the pairing or mating of like with like.

Pearson adds, "Variations do not occur accidentally, or in isolated instances; *autogamic* and assortive mating are realities." *T. H. Morgan*, Evol. and Adapt., p. 269.

Endogamic mating or **breeding,** mating or breeding within the limits of the tribe or family.—**Heterogamous mating,** the pairing or mating or marriage of unlike individuals, as contrasted with *homogamous* ★*mating*.—**Homogamous mating.** Same as *assortative* ★*mating*.—**Pangamic mating,** marriage or mating or pairing at random within the limits of the race, without conscious or unconscious preference or selection.—**Preferential mating,** marriage or pairing or mating with one individual of the opposite sex rather than another, as the result of preference or selection; sexual selection as commonly understood.—**Selective mating,** homogamous or assortative mating with or without conscious preference.

matipo (mä′tē-pō), *n.* [Maori.] A name for several of the New Zealand trees also called *mapau*, particularly for those better known as *tarata* and *tawhiri*. See ★*mapau*, ★*tarata*, and ★*tawhiri*.

matka (mat′kä), *n.* [Russ. *matka*, mother, dim. of *matĭ*, mother.] A Russian name of the mother fur-seal, used on the Pribilof Islands.

matlow (mat′lō), *n.* A corruption of French *matelot*, sailor.

They get into her an' bale out another young Christmas-treeful of small reckonin's—brass mostly. Simultaneous it hits the Pusser that 'e 'd better serve out mess pork for the poor *matlow*.

R. Kipling, Traffics and Discoveries, p. 54.

mato (mä′tō), *n.* [Porto Rican.] **1.** A hard, round seed of any one of several leguminous plants, used by children for playing marbles; especially, a seed of *Guilandina Crista*, *G. major*, *Ormosia monosperma*, or *Stizolobium urens*, or one of the plants itself. They are usually distinguished from each other, as *mato azul*, *mato amarillo*, etc.—**2.** A game of marbles played with these seeds.

Matonia (ma-tō′ni-ä), *n.* [NL. (Robert Brown, 1830), named for Dr. *Maton*, a London physician.] A small genus of peculiar Malaysian ferns, the only living representatives of the family *Matoniaceæ*. The best-known species, *M. pectinata*, which occurs also as a fossil, has rigid fan-shaped fronds, from 1 to 2 feet wide and palmately divided, the divisions pectinately pinnatifid, and the sori, which are borne singly at the confluence of several veinlets toward the base of the segment, large, globose, with a peltate stipitate superior indusium inclosing six sessile radial sporangia which are laterally connate. A second, rare species, *M. sarmentosa*, is of very different habit but of like fructification.

Matoniaceæ (ma-tō-ni-ā′sē-ē), *n. pl.* [NL., < *Matonia* + *-aceæ*.] One of the eight families of ferns comprising the *Eufilicineæ*, or homosporous leptosporangiate *Filicales*, and typified by the genus *Matonia*. There are, besides, some half-dozen genera of fossil plants placed in this family. See ★*Matonia*.

mat-plant (mat′plant), *n.* A plant of a prostrate radiating habit.

The *mat-plant*, such as a purslane or carpet-weed, adapted to life on a flat plane.

C. MacMillan, Minnesota Plant Life, ii.

matranee (ma-trä′nē), *n.* [Also *metrahnee*; Hind. *mehtarānē*, fem. of *mehtar*, a sweeper, or scavenger.] A female sweeper or scavenger.

matrical (mat′ri-kal), *a.* [L. *matrix* (*matric-*) + *-al*[1].] In *histol.*, of or pertaining to a matrix, like the matrix of a tissue such as cartilage.

The nutrition of the cartilage is probably effected by impenetration of fluids along the fine bundles of fibers, which in this way come to stand out clearly amid the *matrical* substance.

Jour. Roy. Micros. Soc., April, 1903, p. 163.

matrimony, *n.* **4.** It is played with a lay-out on which bets are placed, the players winning the counters in each division according to the combinations held. These are: *matrimony*, any king and queen; *intrigue*, any queen and jack; *confederacy*, any king and jack; a *pair*, any two cards of the same denomination, and *best*, the ace of diamonds. Two cards are given to each player.

matrine (mā′trin), *n.* A crystalline dextrorotatory alkaloid, $C_{15}H_{24}ON_2$, contained in the roots of *Sophora angustifolia*. It melts at 80° C.

matriotism (mā′tri-ọt-izm), *n.* [L. *mater*.

mother: on the analogy of *patriotism*.] Loyalty to one's mother country. [Rare.]

I am delighted with your *matriotism*. "Rome, Venice, Cambridge!" I take it for an ascending scale, Rome being the first step and Cambridge the glowing apex.
Lowell, Letters, I. 270.

matrix, *n.*—**Rank of a matrix.** See ★*rank*[2].

matrix-bar (mā′triks-bär), *n.* A combination of matrices, usually 12 in number, on one plate or bar of metal, as arranged for type-making on the monoline machine.

matrix-gem (mā′triks-jem), *n.* An opal, turquoise, ruby, or other gem intimately mixed with the matrix material and cut with it.

mat-rush (mat′rush), *n.* The great bulrush, *Scirpus lacustris*.

matsa (mä′tsä), *n.*; pl. *matsoth* (mät-sōt′). [Also *mazza*, pl. *mazzoth*; Heb. √*matsats*, suck, taste.] Unleavened bread. See *Passover*.

matted[2] (mat′ed), *p. a.* Dull; lusterless; covered with a mat glaze: as, *matted* steel; *matted* glass; *matted* pottery.

matter, *n.*—**Bredichin's matter,** matter of which comets' tails are formed, according to the hypothesis of Bredichin.

He [Bredichin] has found that it is merely necessary to postulate three kinds of matter, issuing from the nucleus with three initial velocities, and subject to repulsion from the sun with three sets of forces of repulsion—i.e., as compared with ordinary gravitative attraction for the whole of the phenomena of all sorts of comets to be very completely accounted for. . . . With the comparatively slow separation of the atoms of *Bredichin's matter* from the nucleus, each one describing its own hyperbola convex to the sun, the tail at any moment represents the then position of any number of atoms which left the nucleus for some distance back.
Nature, Sept. 10, 1903, p. 450.

Fourth state of matter, a term proposed by Crookes for the condition in which gases exist when the pressure is so low that the particles have a mean free path greater than the dimensions of the containing vessel. A gas under such pressures is also called a *hypergas* or *radiant matter*. See *radiant matter*.—**Gray matter** or **substance.** See ★*gray*.—**Law of conservation of matter.** See ★*conservation*.—**Matter in pais,** in *law*, in the country; not in court.

Matteuccia (ma-tū′chiă), *n.* [NL. (Todaro, 1866), named in honor of Carlo *Matteucci*, an Italian physicist and statesman.] A small genus of dimorphous polypodiaceous ferns, having the fronds borne in a close, upright crown from an ascending rhizome. In the single American species, the ostrich-fern, *M. Struthiopteris* (*Onoclea Struthiopteris*, *Struthiopteris Germanica*), which occurs also in Europe, the bright-green sterile fronds are broadly lanceolate and bipinnatifid, from 3 to 6 feet nigh, with the lower pinnæ reduced in size. The sterile fronds, which appear late in the season, are much smaller and usually devoid of leafy tissue, with the crowded sori wholly concealed beneath the strongly revolute margins of the contracted, bead-like pinnate divisions. There is, besides, an Asiatic species, in most respects similar.

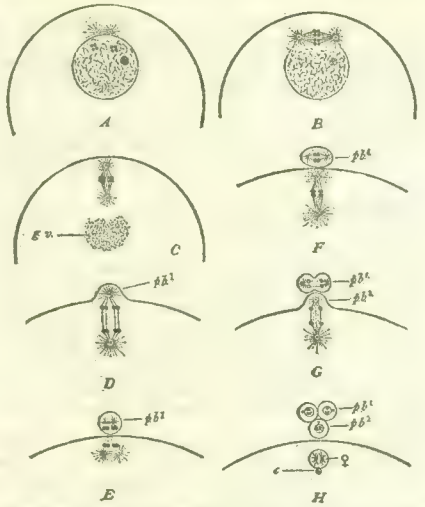
Matthean (ma-thē′an), *a.* [L. *Matthæ(us)* + *-an*.] Of or pertaining to St. Matthew or to the Gospel attributed to him.

matting[2], *n.* **3.** In stained glass, color laid on to deaden a surface or to render glass less transparent.

mattoid (mat′oid), *n.* [It. *mattoide*, madman, < *matto*, < ML. *mattus*, stupid, dull, + *-oide*, E. *-oid*.] One who exhibits symptoms of mental degeneration but is not positively insane; a semi-insane person; a crank: a term used by Lombroso to designate a semi-insane person whose ideas and aims (often of a literary or artistic character), while they may simulate those of talent and even of genius, are marked by radical absurdities which the patient is unable, through mental weakness, to perceive.

mattowacca (ma-tō-wak′ä), *n.* [Appar. an Amerindian name.] Same as *gizzard-shad*.

mattras, *n.* Same as *matrass*.



Mattress blanket. See ★*blanket*.

mattress-wire (mat′res-wīr), *n.* Fine steel wire used for making wire mattresses.

matura (mā-tū′rä), *n.* Same as *imago*. [Rare.]

Exception is taken to the use of the words "imago" and "imagine," introduced by Linnæus, as representing the final stage of insect metamorphosis, and "*matura*" (maturo = to ripen) is suggested and employed as a substitute, conforming conveniently with the accepted terms for the earlier stages—larva and pupa.
Nature, March 30, 1905, p. 521.

maturation, *n.* **3.** In *cytol.* and *embryol.*, the final stage in the development of the germ-cells (ovum and spermatozoön). This stage is characterized by certain changes in the chromosomes, especially a reduction in their number to one half of that of the chromosomes in the somatic or body cells. *Parker and Haswell*, Zoology, I. 18.

Diagrams showing the essential facts in the maturation of the egg. The somatic number of chromosomes is supposed to be four. *A*, initial phase, two tetrads have been formed in the germinal vesicle; *B*, the two tetrads have been drawn up about the spindle to form the equatorial plate of the first polar mitotic figure; *C*, the mitotic figure has rotated into position, leaving the remains of the germinal vesicle at *g.v.*; *D*, formation of the first polar body, each tetrad divides into two dyads; *E*, first polar body formed, two dyads in it and in the egg; *F*, preparation for the second division; *G*, second polar body forming and the first dividing, each dyad divides into two single chromosomes; *H*, final result, three polar bodies and the egg-nucleus, ♀, each containing two single chromosomes (half the somatic number); *c*, the egg-centrosome which now degenerates and is lost. (From Wilson's "The Cell.")

mature, *a.* **5.** In *phys. geog.* and *geol.*, noting the stage of maximum development; specifically, noting a stage in the cycle of erosion when the fullest development of variety in forms and of activity in processes is attained.

The usual outlines of a *mature* lake-shore in consequence of wave-action. *Geog. Jour.* (R. G. S.), XVI. 447.

Mature river, topography. See ★*river*[2], ★*topography*.

maturer (mā-tūr′ėr), *n.* One who, or that which, matures; whatever serves to ripen or bring to maturity; something added, as to ale, to ripen or mature it: as "sorrow is a great *maturer* of judgment," *Addison*.

maturescence (mat-ū-res′ens), *n.* [See *maturescent*.] The process of becoming mature; maturation.

maturity, *n.* **4.** In *phys. geog.*, that stage in the geographical cycle or cycle of erosion when the fullest development of variety in forms and of activity in processes is attained. It lies between the uncarved forms of youth and the worn-down forms of old age.

Matuta (mā-tū′tä), *n.* [NL., < L. *Matuta*, a surname of Ino, a sea-deity.] The typical genus of the family *Matutidæ*. It is noted for its powers of swimming and burrowing. *Fabricius*, 1798.

Matutidæ (mā-tū′ti-dē), *n. pl.* [NL., < *Matuta* + *-idæ*.] A family of oxystomatous brachyurous crustaceans, having much the same characters as the *Calappidæ* except that the third maxillipeds have the three terminal joints concealed beneath the triangular acute fourth joint. It includes the genera *Matuta* and *Hepatus*.

matutinary (mā-tū′ti-nā-ri), *a.* [L. *matutin(us)* + *-ary*. See *matutinal*.] Same as *matutinal*. [Rare.]

We were aroused at four o'clock this morning; had some eggs and coffee, and were ready to start between five and six; being thus *matutinary*, in order to get to Terni in time to see the falls.
Hawthorne, Fr. and Ital. Note-books, I. 239.

maty[3] (mā′ti), *n.*; pl. *maties* (-tiz). [Dim. of *mate*[1].] **1.** A mate; a companion.—**2.** A dockyard carpenter, shipwright, or artificer. [Eng.]

mau (mou), *n.* A tsetse-fly.

maud[2] (mâd), *n.* [Origin obscure.] A salmon-net stretched around four stakes in the form of a square.

maudlinize (mâd′lin-īz), *v. t.*; pret. and pp. *maudlinized*, ppr. *maudlinizing*. To make maudlin-drunk. [Rare.]

Mi. Pledge her, good brother.
Gab. I do—
Mi. I hope 't will *maudlenize* him.
R. Brome, Covent-Garden Weeded, iv. 1.

Maugrabee (mâ′gra-bee), *n.* Same as *Mograbin*.

Maugrabin, *n.* Same as *Mograbin*.

maul[1], *n.* Specifically—**2.** In *well-boring*, a heavy block of wood used like the ram of a pile-driver to drive pipe into the ground for water or preliminary to boring in the rock below.—**Double-headed maul,** a large iron hammer the two ends of which are equal in size, both of them steel-faced, and which is used for driving bolts.—**Single-headed maul,** a large iron hammer having a flat head, steel-faced at one end and with a point at the other.

maul[5] (mâl), *n.* Same as *mold*[2], *n.* [Prov.]—**Black mauls,** fungous disease of willows, in Ireland, attributed to a pyrenomycetous fungus, *Physalospora gregaria*.

maulavi, *n.* Same as ★*maulvi*.

maulvi (moul′vi), *n.* [Also *moulvi*, *maulavi*, *molavee*, etc. Hind. *maulavī*, *maulvī*, in popular speech *mulvī*, also *maulī*, *maulbī*, < Ar. *maulawī* (*maulavī*, *maulvī*): see *molla*.] In Hindu Mohammedan use, a judge; a doctor (of the law): a common title of learned men, professors of the law and literature.

maungee, *n.* See ★*manjee*.

mauve, *n.*—**Acid mauve.** See ★*acid-mauve*.

maux (mâks), *n.* [See *mawk*[2].] A slattern; a woman of low character; a prostitute. [Obs. or dial.]

mauzeliite (mou-zā′li-īt), *n.* [Named after R. *Mauzelius*, a Swedish chemist, who analyzed it.] A titano-antimonate of lead and calcium occurring in dark-brown octahedrons at Jakobsberg, Sweden.

mavourneen (ma-vör′nēn), *n.* [Ir. *mo*, my; *mūirnīn*, darling, dim. *muirn*, joy, affection.] My darling; darling: an Irish term of endearment.

Kathleen *mavourneen!* the grey dawn is breaking.
Annie Barry Crawford.

maw-bound, *a.* **II.** *n.* Same as ★*grain-sick*.

Mawworm[2] (mâ′wėrm), *n.* A man who resembles Mawworm, a character in Bickerstaffe's play "The Hypocrite," 1769; a hypocritical pretender to sanctity. *N. E. D.*

A man naturally likes to look forward to having the best. He would be the very *Mawworm* of bachelors who pretended not to expect it.
George Eliot, Middlemarch, I. ii.

Mawwormish (mâ′wėrm-ish), *a.* Characteristic of Mawworm. See *Mawworm*[2].

He [Luther] was no sour Sabbatarian, no *mawwormish* mar-joy. He had music in his soul.
Karl Blind, in Gentleman's Mag., CCLV. 488.

max[2] (mäks), *n.* [A native name in Yucatan.] A Central American curculionid beetle whose larva burrows into the sisal plant in Yucatan.

Next to fire, a large, long-nosed black beetle is the greatest enemy of the cultivated sisal. It is known to the natives as the "*max*."
Sci. Amer. Sup., May 9, 1903, p. 22869.

maxillary. I. *a.*—**Maxillary index.** See ★*index*.—**Maxillary neuralgia.** Same as *facial* ★*neuralgia*.

II. *n.* **2.** The posterior of the two bones which border the upper jaw in osseous fishes. It usually bears teeth in the soft-rayed fishes, but in the spiny-rayed fishes the teeth are confined to the premaxillary.—**Supplemental maxillary,** an auxiliary bone found on the upper or posterior edge of the maxillary of some species of fishes.

maxillitis (mak-si-lī′tis), *n.* [NL., < *maxilla* + *-itis*.] Inflammation of the maxilla or jaw.

maxillolabial (mak-sil-ō-lā′bi-al), *a.* [L. *maxilla*, jaw, + *labium*, lip, + *-al*[1].] Pertaining to both the maxilla and the labium. *Buck*, Med. Handbook, I. 435.

Maximianist (mak-sim′i-an-ist), *n.* [*Maximianus* + *-ist*.] An adherent of one of the extreme sects of the Donatist heresy in the fourth century: so called from its leader Maximianus, bishop of Carthage.

Maximilianea (mak-si-mil-i-ā′nē-ä), *n.* [NL. (Martius, 1819), named in honor of *Maximilian* I. (1756–1825), King of Bavaria, who supported Martius in his earlier botanical exploration of Brazil.] A genus of plants of the family *Cochlospermaceæ*. They are trees or shrubs, with palmately lobed leaves preceded by the conspicuous yellow flowers, which are borne in small racemes or panicles. There are about 13 species, widely distributed in the tropics, but confined to arid habitats. *M. Gossypium*, of India, is a small tree which produces kuteera gum, a substitute for gum tragacanth. In *M. nilotica*, an African species, the permanent stem from which the flower and leaf shoots spring is almost subterranean. The thickened underground portion of the West African *M. tinctoria* produces a yellow dye. See *Cochlospermum*.

maximite (mak′sim-īt), *n.* [Named from its inventor, Hudson *Maxim*.] An explosive, invented by Hudson Maxim, consisting largely of picric acid: used as a bursting-charge for large projectiles.

Maximite, the new high explosive which has been adopted by the United States Government as a bursting

charge for shell, is one of the most powerful high explosive compounds known to science, being about fifty per cent. more powerful than pure nitro-glycerine. Among commercial high explosives, it is equalled only in shattering force by nitro-gelatine and pure picric acid. . . . The experiments at Sandy Hook which finally resulted in the adoption of *Maximite* were very thorough and exhaustive.

H. Maxim, in Jour. Mil. Serv. Institution U. S., Nov., 1901, pp. 347, 348.

maximum, *a.*—**Maximum stress.** See ★*stress*[1].—**Principle of maximum work.** See ★*work*.

maxtle (mäsh′tle), *n.* [Mex. Sp., < Nahuatl (of Mexico) *maxtlatl*.] The popular name in Mexico, New Mexico, and Central America for the breech-clout.

maxwell (maks′wel), *n.* [Named for J. Clerk *Maxwell*, an eminent mathematician and physicist.] The c. g. s. unit of magnetic flux; the flux which, acting upon a unit magnet-pole, will repel it with a force of one dyne; the flux per square centimeter of cross-section in a field of unit flux density.

mayacaceous (mā-ya-kā′shius), *a.* Belonging to the plant family *Mayacaceæ*.

Mayad clover. See *Trifolium*.

Mayall's albumin negative process. See ★*process*.

Mayan (mī′an or mä′yan), *a.* and *n.* [*Maya* + *-an*.] **I.** *a.* Of or pertaining to the Mayas.

II. *n.* A linguistic family of North America including numerous languages spoken in southern Mexico and Central America.

maycock[2] (mā′kok), *n.* [Also *macock;* formerly also *macokos;* from one or more Indian forms corresponding to Virginian (Powhatan?) *mahawk*, gourd, Delaware (Lenâpé) *machgachk*, pumpkin.] A species of squash or pumpkin. *Jour. Amer. Folk-lore*, Oct.–Dec., 1902, p. 247. [Now local in Virginia.]

May-dewing (mā′dū″ing), *n.* The custom of washing the face in dew on May-day, or on the first Sunday in May, to secure lasting beauty of complexion. The custom still exists in some places in England. See *May-dew*, *n.*

The quaint old custom of *May-dewing*, or washing the face in dew, on the first Sunday in May . . . was observed yesterday by a large number of Blackburn girls and women. *Standard* (London), May 8, 1905.

Mayepea (mā-ep′ē-ạ), *n.* [NL. (Aublet, 1775), prob. from a native Guiana name of the type species, *Mayepea Guianensis*.] A genus of dicotyledonous trees or shrubs belonging to the family *Oleaceæ*. See *Linociera*.

Mayfield (mā′fēld), *n.* Same as *placitum*.

The frequent popular assemblies, whereof under the names of the Mallum, the Placitum, the *Mayfield*, we hear so much under Clovis and Charles were now never summoned. *J. Bryce*, Holy Roman Empire, p. 126.

May-gowan (mā′gou″an), *n.* The common daisy. Also *ewe-gowan*.

May-haw, *n.* This species has the largest flowers and the largest and best-flavored fruit of the genus. In southwestern Louisiana the fruit is largely gathered for the market, being utilized for jellies, etc. Also called *summer haw*.

May Hill sandstone. See ★*sandstone*.

mayoral[2] (mä-yō-räl′), *n.* [Sp., < *mayor*, greater. See *major*.] A head shepherd; an overseer; a leader of a pack-train.

Our mules toiled along slowly and painfully, urged by the incessant cries of the *mayoral*, or conductor, and his mozo. As the *mayoral's* whip could only reach the second span, the business of the latter was to jump down every ten minutes, run ahead and belabor the flanks of the foremost mules, uttering at the same time a series of sharp howls, which seemed to strike the poor beasts with quite as much severity as his whip.

B. Taylor, Lands of the Saracens, p. 406.

Here our conversation was cut short by the *Mayoral* of the diligence, who came to tell us that the mules were waiting; and before many hours had elapsed, we were scrambling through the square of the ancient city of Burgos. *Longfellow*, Outre-Mer, p. 173.

mayorazgo (mä-yō-räth′gō), *n.* [Sp., < *mayor*, < L. *major*, elder. See *major*.] In *Sp. law*, same as *majorat*, 1.

maysin (mā′zin), *n.* [NL. *mays*, *maïs*, maize, + *-in*[2].] See ★*maisin*.

may-star (mā′stär), *n.* Same as *star-flower* (*a*).

Maytenus (mā′te-nus), *n.* [NL. (Molina, 1782), from *mayten*, the Chilean name of *Maytenus Boaria*.] A genus of plants of the family *Celastraceæ*. They are upright trees or shrubs with alternate evergreen leaves and small white, yellow, or reddish flowers, either single in the axils of the leaves or in axillary, often clustered, cymes. There are about 70 species, natives of tropical and subtropical America. One, *M. phyllanthoides*, grows wild as far north as southern Florida. *M. Boaria*, a Chilean species, is planted as an ornamental tree in California as far north as San Francisco. It has pendulous branches, small ovate-lanceolate, glandular-serrate, thin leaves, and inconspicuous flowers followed by fruit with scarlet arils.

May-term (mā′tėrm), *n.* The Easter-term at the University of Cambridge, England. [Eng. colloq.]

May-week (mā′wēk), *n.* The week of the May races at Cambridge, England. *N. E. D.*

May-wine (mā′wīn), *n.* Same as *May-drink*.

may-wings (mā′wingz), *n.* Same as ★*gay-wings*.

mazagran (mä-zä-grän′), *n.* [*Mazagran*, a village of Algeria.] Black coffee sweetened and served with cracked ice in a long, slender glass.

mazamorra (mä-thä-mor′ä), *n.* [Sp. *mazamorra*.] **1.** In Spanish use, breadcrumbs used in a soup or mush.—**2.** In Peru, a dish consisting of a sweet mush made of various fruits; also, a kind of custard.—**3.** In Bolivia, a mud-flow or mud-slide. Such slides occur frequently in the gorges around La Paz, the capital of Bolivia, during the rainy season, and are very dangerous for inexperienced travelers. The mud, however, soon hardens and forms a deep and sterile crust. Portions of the once fertile gorge of the La Paz river have been completely ruined by mud-flows which, in places, attained a thickness of ten to twenty feet.

mazar (mä-zär′), *n.* [Also *masar*, < Ar. *mazār*, a shrine visited by pilgrims, < *zār*, he visited, *ziyārah*, a visit.] A tomb of a saint regarded as a shrine. Also *masar*.

Mazeutoxeron (maz-ū-tok′sẹ-ron), *n.* [NL. (Labillardière, 1798).] A genus of plants of the family *Rutaceæ*. They are shrubs or small trees, usually clothed with stellate hairs, and have ovate or lanceolate opposite entire leaves, and rather large pendent white, green, yellow, or red flowers, with the four petals connate at the base or nearly to the apex into a bell-shaped or tubular corolla, and 8 usually exserted stamens. There are 6 or more species, natives of Australia. *M. speciosum* (*Correa speciosa* of Aiton), the native fuchsia of Australia, and other species are sometimes cultivated in greenhouses.

mazic (mā′zik), *a.* [Gr. *μᾶζα*, a cake (representing NL. *placenta* in its L. sense, a cake), + *-ic*.] Of or pertaining to the placenta; placental.

mazolysis (mạ-zol′i-sis), *n.* [NL., < Gr. *μᾶζα*, a cake (representing NL. *placenta*), + *λύσις*, a loosening.] Separation of the placenta.

mazopathia (maz-ọ-path′i-ạ), *n.* [NL., < Gr. *μᾶζα*, a cake (representing NL. *placenta*), + *πάθος*, disease.] Any placental disease.

mazuca (ma-zö′kạ), *n.* [Also *masooka;* appar. an aboriginal name.] A sciænoid fish, *Leiostomus xanthurus*, found on the Atlantic and Gulf coasts of the United States.

mazun (mä-tsön′), *n.* See the extract.

Lastly, mention should be made of the "*mazun*" of the Armenians from the milk of the bison or goat, but is also prepared from the milk of cows, and possesses a pleasant acid taste similar to that of kefir. It serves as acidifying material in the case of churning wherewith the butter assumes a pleasant aroma. Moreover, it serves as a beverage, and also for the production of various milk foods. The preparation is carried on in a way similar to that of kefir and koumiss, the lactic acid and alcohol fermentation probably takes place here also in a symbiotic manner. *Sci. Amer. Sup.*, Jan. 25, 1908, p. 63.

M. B. An abbreviation (*a*) of the Latin *Medicinæ Baccalaureus*, Bachelor of Medicine; (*b*) of the Latin *Musicæ Baccalaureus*, Bachelor of Music; (*c*) of "mark of the beast," in allusion to the popular belief that the garment described below smacked of popery.—**M. B. waistcoat**, a kind of waistcoat with no opening in front, worn by Anglican clergymen (originally, about 1840, only by adherents of the Tractarian party, but afterwards by many belonging to other schools). *N. E. D.*

mbalolo (mbä′lō-lō), *n.* The native name in Samoa and Fiji for the palolo worm, *Palolo viridis*. An indication of the relative abundance of these worms is the fact that October is called *mbalolo lailai* (little), and November, *mbalolo levu* (large).

mbco. A contraction of *marks banco*.

M. B. F. & H. An abbreviation of the Latin *Magna Britannia, Francia et Hibernia*, Great Britain, France and Ireland.

mbira (mbē′rä), *n.* [S. African.] A South African musical instrument allied to the zanze.

M. B. Sc. An abbreviation of *Master of Business Science*.

M. C. An abbreviation (*b*) of the Latin *Magister Chirurgiæ*, Master of Surgery; (*c*) of *Master of Ceremonies*.

M/c. An abbreviation of *metallic currency*.

McBurney's point. See ★*appendicitis*.

McCay's circles. See ★*circle*.

M. C. E. An abbreviation of *Master of Civil Engineering*.

Mch. A contraction of *March*.

M. C. L. An abbreviation of *Master of Civil Law*.

M. C. P. An abbreviation of *Member of the College of Preceptors*.

M. C. S. An abbreviation of *Madras Civil Service*.

M. D. An abbreviation (*c*) of *Middle Dutch;* (*d*) [*l. c.*] of *months* (*after*) *date*.

Md. A contraction of *Maryland*.

m/d. An abbreviation of *month's date*.

M. D. E. An abbreviation of *Master of Domestic Economy*.

Mdlle. A contraction of the French *Mademoiselle*, Miss.

Mdm. A contraction of *Madam*.

M. D. S. An abbreviation of *Master of Dental Surgery*.

M. D. V. Same as ★*V. D. M.*

mdse. A contraction of *merchandise*.

M. E. An abbreviation (*d*) of *Master of Engineering;* (*e*) of *Mechanical Engineer;* (*f*) of *Military Engineer;* (*g*) of *Most Excellent*.

Me. A contraction of *Maine*.

meadow, *n.*—**Mountain meadow**, an open grassy valley-floor or basin among mountains.

The *mountain meadows* and deer parks, which constitute a feature of considerable importance because of their area in the mountain regions of both the eastern and the western portions of the United States.

Yearbook of U. S. Dept. Agr., 1900, p. 585.

meadow-bell (med′ō-bel), *n.* The harebell.

meadow-grass, *n.*—**Alkali meadow-grass.** See ★*alkali-grass*, 2.—**Pungent meadow-grass.** Same as ★*stink-grass*.

meadow-lily (med′ō-lil″i), *n.* Same as *Canada* ★*lily*.

meadow-parsnip, *n.*—**Golden meadow-parsnip**, *Zizia aurea*, an umbelliferous plant which closely resembles the meadow-parsnip and has bright yellow flowers: found throughout North America east of the Great Plains.

meadow-shoe (med′ō-shö), *n.* A flat iron disk or sole designed to be attached to a horseshoe to prevent the horse from sinking in soft or wet ground.

meadow-wink (med′ō-wingk), *n.* A name sometimes given to the bobolink.

meakin (mē′kin), *n.* The spiked water-milfoil, *Myriophyllum spicatum*, found throughout most of the northern hemisphere.

meaking (mē′king), *n.* *Naut.*, the act of running old oakum out of the deck or bottom seams of a vessel, preparatory to recalking.

meal[1], *n.*—**Germ-oil meal**, a trade-name of the ground cake left after expressing oil from the germs of the kernels of maize or Indian corn. It is used as food for cattle.—**Whole meal**, meal or flour from which the bran has not been removed by bolting.

meal-hour (mēl′our), *n.* The hour or time at which a meal is or should be served; specifically (*naut.*), the interval during which the meal-pennant is displayed. The term has no reference to length of time.

mealiness, *n.* **3.** In *photog.*, a defect in silver-printing, in which the surface of the print presents a peculiar mottled appearance, due generally to a too weak sensitizing-bath. *Woodbury*, Encyc. Dict. of Photog., p. 277.

mealing (mē′ling), *a.* Pertaining to the reduction of some substance, as a cereal, to meal by grinding.

A very interesting *mealing* outfit was encountered on the hillside above the dwelling and near the margin of the mine. *Rep. U. S. Nat. Mus.*, 1900, p. 169.

mealing-plate (mē′ling-plāt), *n.* A plate having teeth for grinding materials, such as acorns, to meal.

Plates 10 and 11 serve to illustrate two of the first steps in the acorn industry, the carrying and hulling of the acorns, and the use of the *mealing plate* in grinding.

Rep. U. S. Nat. Mus., 1900, p. 172.

mealing-trough (mē′ling-trôf), *n.* A trough or box of wood or stones about 2 feet wide, 8 inches high, and several feet long, separated by partitions into several compartments (usually three), each of which contains a metate or slab for grinding corn: used by the Indians of the Southwest and Mexico.

meal-moth, *n.*—**Indian meal-moth.** See ★*moth*.

meal-tree (mēl′trē), *n.* The wayfaring-tree, *Viburnum Lantana*.

meal-worm, *n.* **2.** In *angling*, a worm bred in meal or flour, used for bait in fishing.

The *meal-worm*, which is perhaps the least troublesome, breeds amongst the refuse sweepings of flour mills.

H. Cholmondeley-Pennell, Mod. Pract. Angler, p. 229.

mealy, *a.* **6.** Starchy; farinaceous. See ★*starchy*[2], 2.

mealy-back (mē′li-bak), *n.* A local name for a grasshopper. [Australia.]

mealy-wing (mē′li-wing), *n.* Any member of the homopterous family *Aleurodidæ;* a white fly.

mean[3]. **I.** *a.*—**Mean longitude.** (*b*) The middle longitude; the point half-way between two longitudes; the meridian equidistant between two other meridians.—**Mean point,** of a polygon or polyhedron, the mass-center of a system of equal particles situated at the vertexes or summits.—**Mean sphere, spheroid.** See ★*sphere,* ★*spheroid.*

II. *n.* **10.** The abscissa of the center of gravity of the variates or of the frequency polygon. It is found by the formula $M=\frac{\Sigma(V.f)}{n}$

where V is the magnitude of any class, *f* its frequency, and *n* the number of variates. —**Mean of the altitudes,** in *nav.,* the average obtained in a series of altitudes by dividing the aggregate of the degrees, minutes, and seconds of an arc by the figure which represents the number of altitudes taken.—**Mean of the latitudes,** in *nav.,* the middle latitude (which see, under *latitude*).—**Mean of the tides,** the average high- or low-water mark.—**Weighted mean,** the mean value of a series of observations, obtained by assigning to each its proper weight or importance, instead of assuming all to be of equal significance in the computation of the result.

meander, *n.* **4.** In *phys. geog.,* a self-developed river-curve suitable to the volume of the stream.

The terms "*meander*" and "shut in," and the like, have a definite enough geomorphological meaning, as appears clearly from Mr. Marbut's use of them, but we cannot help feeling that they sound crude and angular, more conformable in style to the German language than to our own. *Geog. Jour.* (R. G. S.), IX. 666.

meandriform (mē-an′dri-fôrm), *a.* Meandrine: labyrinthine.

meandriniform, *a.* Same as *mæandriniform.*

meanness, *n.* **4.** A mean, vindictive spirit. [Dialectal, southern U. S.]

He say he gwine lef he mark on you, marster, and Marse Bruce, an' on dat ole man . . . and de young lady over dyah. . . . Dat man 's got *meanness* in him!
Thomas Nelson Page, On Newfound River, xvi.

meas. An abbreviation of *measure.*

measles, *n.* **5.** In *photog.,* a defect in silver-printing consisting in semi-opaque blotches caused by imperfect fixation by the insoluble silver hyposulphite visible when the prints are held to the light. In time these spots become yellow.—**Bastard measles,** rubella.—**Black measles,** a malignant form of measles formerly of not infrequent occurrence, perhaps the result of the method of treatment adopted. *Syd. Soc. Lex.*—**Confluent measles.** (*a*) A form of measles in which the eruption is so thick that the separate lesions coalesce. (*b*) Same as *scarlet fever.*—**Hemorrhagic measles.** Same as *black measles.*—**Pork measles,** an infection of pork with the bladder-worm stage (*Cysticercus cellulosæ*) of *Tænia solium,* the 'armed' tapeworm of man. See also ★*cysticercosis.*—**Spanish measles.** Same as *anthracnose.*

measure, *n.* **12** (*c*) Specifically, in *organ-building,* the proportion of the diameter of flue-pipes, or of a stop of such pipes, to their length: as, a diapason pipe is made on a wider or larger *measure* than a gamba pipe. —**Double measure,** in *carp.,* molded or having moldings on both sides: said of a door, a casement-window, a screen of joiner's work, and the like. [Eng.]—**Measure-and-a-half,** having moldings and sunken panels on one side: said of a door. Compare *single* ★*measure* and *double* ★*measure.* [Eng.]—**Measure of a dihedral,** the angle of two perpendiculars to the edge of a dihedral, one in each face.—**Measure of an arc,** the sect connected with an arc such that if the arc is cut into two arcs, this sect is the sum of their sects and is not less than the chord of the arc nor, if the arc is minor, greater than the sum of the sects on the tangents from the extremities of the arc to their intersection.—**Measure of an area,** the sum of the measures of the areas of all the triangles into which an area is cut in any given partition, the measure of the area of a triangle being half the product of a base and its corresponding altitude.—**Measure of length,** in terms of a given unit, the number specifying how often the unit is contained in the length.—**Measure of time,** in *astrol.,* the method of ascertaining the periods of events by converting the arc of direction into time. See *equation of arcs of* ★*direction.*—**Measure of volume,** the sum of the measures of volume of all the tetrahedra in any given partition, the measure of the volume of a tetrahedron being one third the product of the area of a face and its correspouding altitude.—**Paris measure,** the system of measures employed in France previous to the adoption of the metric system. The term is applied most frequently to measures of length, such as the Paris foot (pied), Paris inch (pouce), and Paris line (ligne).—**Riemann's measure of curvature.** When the infinite number of two-dimensional ordinary measures of curvature at a point are constant and equal to all the measures of curvature at any other point, there exists what Riemann calls a manifold of constant curvature.—**Single measure,** having no moldings or relief, as a panel framed on either side: said of a door. Compare *double* ★*measure* and ★*measure-and-a-half.* [Eng.]—**Surveyors' measure,** the system of denominate multiple units for linear measurements in land-surveying, in which the primary unit is the surveyors' chain of 4 rods or 66 feet, divided into 100 smaller units called 'links.' See *chain,* 3.

measure-bar (mezh′ūr-bär), *n.* In *musical notation,* same as *bar*[1], 11: used only when it is necessary to distinguish an ordinary bar from a ★*line-bar* (which see).

measure-sign (mezh′ūr-sīn), *n.* In *musical notation,* same as *rhythmical signature* (which see, under *rhythmical*).

measuring-day (mezh′ūr-ing-dā), *n.* In *mining,* the day when the mine foreman or other official measures the work done by the contract miners. [Scotch.]

measuring-motion (mezh′ūr-ing-mō″shọn), *n.* A mechanism for measuring the size or amount of the product of a machine: as, for example, the size of a full lap on a ribbon lap-machine, in cotton-manufacturing. *Thornley,* Cotton Combing Machines, p. 17.

measuring-roller (mezh′ūr-ing-rō″lėr), *n.* A roller, or small beam, as part of the warp-delivering mechanism of a loom for measuring the amount of yarn woven. *T. W. Fox,* Mechanism of Weaving, p. 443.

measuring-spout (mezh′ūr-ing-spout), *n.* In a boiler-room where the coal is stored in overhead bunkers, a chute for delivering the coal to the floor in front of the fire-doors of a battery of boilers. It consists of a sheet-metal chute which has gates above and below, and is controlled by a locking-rod so that the upper gate cannot be opened to admit the coal to the chute until the lower gate is closed. When the chute is full and the supply is cut off, the chute contains a fixed weight of coal. When the coal is discharged below, a counting device registers the weight delivered. The spout swings about a fixed center to distribute the coal to two or more boilers.

measuring-weir (mezh′ūr-ing-wēr), *n.* A low, small, submerged dam, or obstruction of wood, metal, or masonry which affords a method of measuring water, particularly that used in irrigation and in water-power.

measuring-wheel, *n.* **2.** Same as ★*curvometer. Geog. Jour.* (R. G. S.), XVIII. 442.

measuring-worm, *n.*—**Pine measuring-worm.** See *pine* ★*span-worm.*

meat[1], *n.* **8.** *pl.* The trade-name for cotton-seed from which the remains of fiber ('lint') and husk ('hulls') have been removed and which is ready for crushing.

meat-crusher (mēt′krush″ėr), *n.* A small machine having two corrugated rollers between which steaks are passed to make them tender.

meat-flour (mēt′flour), *n.* Meat dried at a low temperature and ground to a powder. *Syd. Soc. Lex.*

meat-fruit (mēt′frōt), *n.* The fruit of *Artocarpus incisa. Syd. Soc. Lex.*

meat-man (mēt′man), *n.* A butcher; a man who sells meat. *Dialect Notes,* III. iii. 194. [U. S.]

meatoscope (mē-ā′tō-skōp), *n.* [L. *meatus,* meatus, + Gr. *σκοπεῖν,* view.] A form of speculum employed in examining the anterior extremity of the urethra.

meatoscopy (mē-ā-tos′kō-pi), *n.* [*meatoscope* + *-y*[3].] The inspection, especially by instrumental means, of any meatus, such as the anterior extremity of the urethra or the vesical orifices of the ureters.

meatotome (mē-ā′tō-tōm), *n.* [NL. *meatus,* meatus, + Gr. *-τομος,* ‹ *ταμεῖν,* cut.] A knife employed in the operation for enlargement of a meatus.

meatotomy (mē-ā-tot′ọ̄-mi), *n.* [*meatotome* + *-y*[3].] Division of the rim of a meatus, usually of the urethra, in order to enlarge it.

meat-rocker (mēt′rok″ėr), *n.* A meat-mincing knife which has a curved blade and a handle at each end: used with a rocking motion.

M. E. C. An abbreviation of *Member of Executive Council.*

mecenic (mē-sen′ik), *a.* [*mec*(*onic*) + *-ene* + *-ic.*] Noting an acid, a colorless compound, $HOC_5HO(COOH)_2$, prepared from meconic acid. It crystallizes in prisms and melts at 146° C.

mechanic, *n.* **5.** A professional card-shuffler usually employed to deal faro in brace games. [Slang.]

mechanical. I. *a.*—**Mechanical advantage,** the ratio of the force applied (to any mechanism) to the force exerted by means of the mechanism; or as frequently stated, the ratio of "*power*" to "*resistance.*"—**Mechanical arithmetic, effect, equivalent of light, momentum, sense.** See ★*arithmetic,* etc.

II. *n.* **2.** *pl.* The trade-name for common articles, such as overshoes, of vulcanized india-rubber, made by molding, and often of old reworked material.

mechanical-esthetic (mē-kan″i-kạl-es-thet′-ik), *a.* In *psychol.,* noting T. Lipps's theory of the geometrical-optical illusions. See *law of mechanical-esthetic* ★*unity.*—**Mechanical-esthetic theory.** See ★*theory.*

mechanicalism (mē-kan′i-kạl-izm), *n.* [*mechanical* + *-ism.*] The character of being mechanical; mechanical action or procedure; specifically, in *philos.,* the mechanical interpretation of the universe.

Yet, admitting what that patient *mechanicalism* may have done for modern civilization, one must not . . . under-estimate the force of personality.
Athenæum, May 6, 1905, p. 558.

mechanicophysical (mē kan″i-kō-fiz′i-kal), *a.* Pertaining to, or dependent on, both mechanics and physics.—**Mechanicophysical theory of evolution.** See ★*evolution.*

mechanicotherapeutics (mē-kan″i-kō-ther-a-pū′tiks), *n.* The treatment of disease by mechanical means, such as gymnastics, massage, vibration, etc.

mechanicotherapy (mē-kan″i-kō-ther′a-pi), *n.* Same as ★*mechanicotherapeutics.*

mechanics, *n.*—**Abstract mechanics.** Same as *rational* ★*mechanics.*—**Animal mechanics,** the science of mechanics as applied to the human body or to the body of any animal.—**Applied mechanics,** the statical and dynamical investigation of machines and engineering construction.—**Celestial mechanics,** that portion of astronomy which deals with the motions of the heavenly bodies.—**Developmental mechanics.** See ★*developmental.*—**Non-Euclidean mechanics,** rational mechanics in which the geometry interwoven is non-Euclidean.—**Pure mechanics.** Same as *rational* ★*mechanics.*—**Rational mechanics.** (*a*) See *rational.* (*b*) The science which explains natural phenomena by depicting them with mathematical precision as dependent solely upon relations of motion.—**Social mechanics,** that part of sociology which treats of social forces and their operation in so far as they act mechanically and according to the laws of motion. *L. F. Ward,* Dynamic Sociol., 603.—**Statistical mechanics,** that portion of mechanics which deals with a great number of systems of the same nature differing in configuration and velocities, not merely infinitesimally, but also in such a way as to embrace every conceivable combination of configuration and velocities.

The laws of *statistical mechanics* apply to conservative systems of any number of degrees of freedom, and are exact. *J. W. Gibbs,* Statistical Mech., Pref., p. viii.

Technical mechanics, the mechanics of construction and manufacture.—**Theoretical mechanics.** Same as *rational* ★*mechanics.*

mechanotherapy (mek″a-nō-ther′a-pi), *n.* [Gr. *μηχανή,* a machine, + *θεραπεία,* healing.] Cure by mechanical means; mechanicotherapeutics.

mechloic (mē-klō′ik), *a.* [*me*(*conin*) + *chlo*(*rin*) + *-ic.*] Noting an acid, a colorless compound, said to be formed by the action of chlorin on meconin. It crystallizes in quadratic prisms and melts at 150° C. It does not contain chlorin.

mecistocephali (mē-sis-tō-sef′a-lī), *n. pl.* In *anthrop.,* persons having a cephalic index less than 71. *Huxley,* Scientific Memoirs, III. 215.

mecistocephalic (mē-sis″tō-se-fal′ik), *a.* Same as ★*mecistocephalous. Jour. Anthrop. Inst.,* 1872, p. 314.

mecistocephalous (mē-sis-tō-sef′a-lus), *a.* [Gr. *μήκιστος,* longest, tallest, greatest, + *κεφαλή,* head, + *-ous.*] In *anthrop.,* having a cephalic index less than 71.

mecistocephaly (mē-sis-tō-sef′a-li), *n.* [See ★*mecistocephalous.*] The character of being mecistocephalous.

While A is the widest, B is the narrowest normal skull I have met with, its index being only 629. It is, therefore, an extremely marked example of *mecistocephaly.*
Huxley, Scientific Memoirs, III. 218.

meck (mek), *n.* [D. *mik,* a forked stick.] A notched piece of wood in a whale-boat, upon which to rest the harpoons.

Meckelectomy (mek-e-lek′tō-mi), *n.* [*Meckel*('*s ganglion*) + Gr. *ἐκτομή,* excision.] Excision of Meckel's ganglion.

Meckelian bar. Same as *Meckelian rod.* See *rod*[1].

Meckel's diverticulum. See ★*diverticulum.*

Mecklenburgian epoch. See ★*epoch.*

mecocephalic (mē″kō-se-fal′ik), *a.* [Gr. *μῆκος,* length, + *κεφαλή,* head, + *-ic.*] Same as *dolichocephalic. Huxley.*

mecodont (mē′kọ̄-dont), *a.* Pertaining to or having the characters of the *Mecodonta.*

Mecodonta (mē-kọ̄-don′tä), *n. pl.* [NL., ‹ Gr. *μῆκος,* length, + *ὀδούς,* tooth.] A division of the *Salamandridæ,* having the palatal teeth situated on the inner sides of the palatal processes, forming two parallel rows diverging behind.

meconial (mē-kō′ni-al), *a.* [L. *meconi*(*um*) + *-al*[1].] Of or pertaining to meconium, in any sense.

meconinic (mek-ọ̄-nin′ik), *a.* [*meconin* + *-ic.*] Pertaining to meconinic acid or meconin. —**Meconinic acid,** a hypothetical compound, $C_{10}H_{12}O_5$, known only in the form of its salts and of its anhydrid meconin.

meconism (mek′ō-nizm), *n.* [Gr. *μήκων*, poppy, + *-ism.*] Chronic opium poisoning in those addicted to the use of that drug.

meconoisin (mē-kō-noi′sin), *n.* A neutral principle, $C_8H_{10}O_2$, contained in opium.

mecopter (mē-kop′tėr), *n.* A member of the order *Mecoptera;* a scorpion-fly.

med. An abbreviation (*c*) of *medieval;* (*d*) of *medicinal.*

M. E. D. An abbreviation of *Master of Elementary Didactics.*

medaddy-bush (mē-dad′i-bůsh), *n.* The American fly-honeysuckle, *Lonicera ciliata.*

medal, *n.* 2. A small metal badge, usually with a ribbon attached, presented for distinguished service.

He [Lord Roberts] was created K. C. B., G. C. B., and a baronet, received the *medal* with four clasps, and the bronze star, and was given the command of the Madras army. *Encyc. Brit.*, XXXII. 264.

medalary, medallary (med′ạl-ā-ri), *n.* [*medal* + *-ary*[1].] A collection of medals. [Rare.]

These gentlemen [Visconde de Castilhos and Councillor A. J Viale] kindly showed me the *medallary* struck for the tercentenary festival. The collection is remarkable only for portraying as many men as there are medals. *R. F. Burton*, in Athenæum, Jan. 28, 1882, p. 125.

medalize, medallize (med′al-īz), *v. t.*; pret. and pp. *medalized*, ppr. *medalizing.* [*medal*, *n.*, + *-ize.*] To portray on a medal.

Not less remarkable for their technical merit are two medals in which Mr. Legros has transformed two of his models into "personages" of the fifteenth or sixteenth century. . . . Mr. Legros has also *medallised* Mr. Constantine Ionides. *Mag. of Art*, V. xvii.

medallionist (mē-dal′yon-ist), *n.* A worker of medallions. *N. E. D.*

medal-play (med′al-plā), *n.* In *golf*, play in which the score is reckoned by counting the total number of strokes taken to complete the round.

medano (mā′dä-nō), *n.* [Sp. *médano, mégano*, a heap of sand, = Pg. *medão*, a heap (*de areia*, of sand), < Sp. Pg. *meda* = OF. *moie* = It. *meta*, Lombard *meda*, a heap, < L. *meta*, a conic post, goal-post, also a conic hill, etc.] A crescentic sand-dune; a barchan.

The dunes called barchanes usually have their greatest extension in a longitudinal direction. This form occurs in the Sahara, in Central Asia, in Peru (where they are called *medanos*), and probably in other localities also. *Geog. Jour.* (R. G. S.), IX. 290.

Med. Dir. An abbreviation of *Medical Director.*

medesimo tempo (mạ-dā′si-mō tem′pō). Same as ★*istesso.*

medial, *n.* 2. In *entom.*, same as *median vein* (*b*) (which see, under *median*[1]).—3. In *geom.*, same as ★*median*[1], 1.

medialization (mē″di-ạl-i-zā′shọn), *n.* [*medialize* + *-ation.*] The making of a consonant medial (sonant).

A similar *medialization* is found with ch, s, which in Abenaki are often heard after vowels as j and z respectively. . . . The tendency to *medialization* in ancient times, however, must have been very slight, if it existed at all. *Amer. Anthropologist*, Jan.–March, 1902, p. 24.

medialize (mē′di-ạ-līz), *v. t.*; pret. and pp. *medialized*, ppr. *medializing.* [*medial* + *-ize.*] To render medial.

It is quite possible that the earlier Abenakis may have only partially *medialized* their consonants after vowels. *Amer. Anthropologist*, Jan.–March, 1902, p. 25.

median[1], *a.* 2. Noting the middle number of a series; having as many before as behind (or above as below) a certain number: distinguished from *average:* as, the *median* age of the population was found to be 21 (that is, there were as many persons above 21 as below it), while the *average* age was found to be 25.—**Median line.** (*d*) A straight through a vertex of a triangle and the mid-point of the opposite side.—**Median magnitude.** See ★*magnitude.*—**Median point.** (*a*) In *geom.*, the cointersection point of a triangle's medians; its centroid. (*b*) Such a point on the *x*-axis of the frequency polygon that the ordinate from it bisects the polygon of rectangles or the continuous curve.—**Median section.** Same as *golden section* (which see, under *golden*).

II. *n.* 1. In *geom.*: (*a*) A sect whose endpoints are the bisection-points of opposite sides of a quadrilateral. (*b*) A sect from a vertex of a triangle to the bisection-point of the opposite side.—2. The measure or observation which has as many of the separate measures or observations above as below it.

This principle may be applied to other kinds of means besides the arithmetic, in particular the *median* (that point which has as many of the given observations above as below it). . . . If the observations do not obey the normal law—especially if the extremities are abnormally divergent—the precision of the *median* may be greater than that of the arithmetic mean. *Encyc. Brit.*, XXVIII. 287.

3. In *entom.*, the median vein of an insect's wing.

mediaometer (mē″di-ạ-om′e-tėr), *n.* [L. *media*, pl. of *medium*, + Gr. *μέτρον*, measure.] An instrument for measuring the amount of refractive errors of the various media of the eye.

mediastinal, *a.* **II.** *n.* In *entom.*, the submarginal vein of the wing of a cockroach. *Amer. Jour. Sci.*, Aug., 1904, p. 118.

mediastino-pericarditis (mē″di-as-tī″nọ-per″i-kär-dī′tis), *n.* [NL.] Inflammation of the pericardium and of the adjacent mediastinal structures.

Mediastino-pericarditis seemed not to be so rare as had been supposed. Since attention had been directed to it four cases had been discovered by the physicians of the Heidelberg medical clinic; three of them were operated on successfully and one died from influenza. *Lancet*, July 18, 1903, p. 188.

mediastinotomy (mē″di-as-ti-not′ọ-mi), *n.* [NL. *mediastinum* + Gr. *-τομια*, < *ταμεῖν*, cut.] Incision into the cavity of the mediastinum. *Therapeutic Gazette*, Jan., 1903, p. 59.

Mediastinum cerebelli. Same as *falx cerebelli.*—**Mediastinum cerebri.** Same as *falx cerebri.*

medic[3], *n.*—**Toothed medic,** *Medicago denticulata.* See ★*bur-clover.*

Medical botany. See ★*botany.*—**Medical corps,** the surgeon officers of the navy, consisting of a surgeon-general, medical directors, medical inspectors, surgeons, passed assistant surgeons, and assistant surgeons.

medicamentary (med″i-ka-men′tā-ri), *a.* [*medicament* + *-ary*[1].] Medicamental; medicinal.

medicamentation (med″i-ka-men-tā′shọn), *n.* [*medicament* + *-ation.*] Same as *medication.*

medication, *n.*—**Cataphoretic medication.** See ★*cataphoretic.*—**Epidermic medication.** See *epidermic method*, under *epidermic.*

medicator (med′i-kā-tọr), *n.* [*medicate* + *-or*[1].] 1. One who medicates; one who prescribes or prepares medicines.

The art of a *medicator* of poisons. *Scott*, Demonol., I. 67. *N. E. D.*

2. An instrument for carrying remedies into a cavity of the body, as the larynx; an applicator.

medicatory (med′i-kā-tō-ri), *a.* [*medicat*(*e*) + *-ory.*] Medicative; medicinal.

medicin, *n.* and *v. t.* A simplified spelling of *medicine.*

medicine, *n.*—**Bureau of Medicine and Surgery.** See ★*bureau.*—**Compound medicines,** remedies which contain a mixture of several drugs.—**Preventive medicine,** that branch of medical science which has to do with the prevention of disease by means of personal and public hygiene.—**Psychological medicine** medical science in its relation to mental diseases.—**Rational medicine,** the practice of the healing art based upon actual knowledge, and reasoning from the known to the unknown: opposed to *empiricism.*—**Statical medicine,** the treatment of disease governed by observation of the varying relations of ingestion, excretion, and body weight.—**Suggestive medicine,** the treatment of disease by means of (hypnotic) suggestion.

medicine-ball (med′i-sin-bâl), *n.* A large ball, of considerable weight, used in exercising. It is thrown from one player to another.

medicine-bowl (med′i-sin-bōl), *n.* A bowl which contains sacrifices or sacred objects, used in the religious ceremonials of the North American Indians. *Amer. Anthropologist*, 1901, p. 215.

medicine-lodge (med′i-sin-loj), *n.* A lodge used for the performance of religious ceremonials among North American Indians. *Giddings*, Inductive Sociol., p. 207.

medicine-spoon (med′i-sin-spön), *n.* A spoon, usually of porcelain, the bowl of which is partially decked over but which has an aperture at the tip through which a fluid may be poured, without spilling, into the mouth.

medicine-tree (med′i-sin-trē″), *n.* Same as ★*horseradish-tree*, 2.

medicisterna (mē″di-sis-tėr′nä), *n.* [NL., < L. *medius*, middle, + *cisterna*, cistern.] The arachnoid canal (which see, under *canal*[1]).

medico, *n.* 2. A name, among Spanish-speaking people of America, for *Teuthis cæruleus* and other species of the same genus, fishes found in warm seas and called *surgeon-* and *doctor-fish*, in English. *Jordan and Evermann*, Amer. Food and Game Fishes, p. 486.

medicomechanical (med″i-kō-mē-kan′i-kạl), *a.* Of or pertaining to mechanicotherapy. *Buck*, Med. Handbook, I. 1.

medicommissure (mē-di-kom′i-sūr), *n.* [L. *medi*(*us*) + E. *commissure.*] The middle or soft commissure of the brain. *Wilder* and *Gage.*

medicophysical (med″i-kō-fiz′i-kạl), *a.* Both medical and physical; relating both to the state of health or disease of the body and its parts and to the physical condition; specifically, noting the examination required of recruits in the army and navy, engineers, applicants for life-insurance, etc. *Buck*, Med. Handbook, VI. 180.

medicopsychological (med″i-kō-sī″kō-loj′i-kạl), *a.* Of or pertaining to medicopsychology. *Nature*, July 6, 1905, p. 227.

medicopsychology (med″i-kō-sī-kol′ọ-ji), *n.* The science of the mind in relation to the science of medicine; the medical or pathological study of mental conditions.

medicotopographical (med″i-kō-top-ō-graf′i-kạl), *a.* Of or pertaining to topography in its relation to disease or health; noting the medical study of the relation of the topography of a locality to health.

A *medicotopographical* and general account of Marwar, Sirohi, Jaisalmir. *Geog. Jour.* (R. G. S.), XV. 192.

medicozoölogical (med″i-kō-zō-ọ-loj′i-kạl), *a.* Of or pertaining to the science of zoölogy in its relation to the study of medicine; noting the study of zoölogy in its bearing upon the study of diseases in man. *Science*, Jan. 30, 1903, p. 198.

medidural (mē-di-dū′ral), *a.* [*medi*(*an*) + *dural.*] Relating to the central part of the dura mater.

medifrontal (mē-di-fron′tal), *a.* Same as ★*mediofrontal.* *Amer. Anthropologist*, Oct.–Dec., 1903, p. 631.

medilateral (mē-di-lat′ẹ-ral), *a.* [L. *medius*, middle, + *latus* (*later-*), side, + *-al*[1].] On or near the middle of the side; half-way between back and belly. *Trans. Linnean Soc. London*, Zool., Feb., 1903, p. 409.

medio (mā′di-ō), *n.* [Sp. *medio*, middle, < L. *medius*, middle.] A silver coin of Mexico and the Spanish American states, equal to one half a real.

medio-anterior (mē″di-ō-an-tē′ri-ọr), *a.* In or toward the anterior and median region of the animal body. Same as ★*anteromedial.* *Trans. Amer. Micros. Soc.*, Nov., 1903, p. 140.

mediocarpal (mē″di-ō-kär′pal), *a.* [L. *medius*, middle, + NL. *carpus* + *-al*[1].] Situated in the middle of the carpus or wrist: as, the *mediocarpal* articulation.

mediocenter (mē″di-ō-sen′tėr), *n.* [L. *medius*, middle, + *centrum*, center.] The center of the nine-point circle.

mediocircle (mē″di-ō-sėr′kl), *n.* [L. *medius*, middle, + *circulus*, circle.] The circle determined by the mid-points of the sides of a triangle.

mediocolic (mē″di-ō-kol′ik), *a.* [L. *medius*, middle, + NL. *colon* + *-ic.*] Relating to the middle portion of the colon.

mediofrontal (mē″di-ō-fron′tal), *a.* [L. *medius*, middle, + *frons* (*front-*), front, + *-al*[1].] Situated in the middle line of the frontal region.

mediolingual (mē″di-ō-ling′gwạl), *a.* [L. *medius*, middle, + *lingua*, tongue, + *-al*[1].] Relating to the median portion of the tongue. *Scripture*, Exper. Phonetics, p. 395.

medio-occipital (mē″di-ō-ok-sip′i-tal), *a.* [L. *medius*, middle, + *occiput* (*occipit-*) + *-al*[1].] Situated in the middle line of the occipital region.

mediopalatal (mē″di-ō-pal′ā-tal), *a.* [L. *medius*, middle, + *palatum*, palate, + *-al*[1].] 1. Relating to the central portion of the palate. *Scripture*, Exper. Phonetics, p. 297.—2. Same as ★*mesuranic.* *Turner.*

mediopontine (mē″di-ō-pon′tin), *a.* [L. *medius*, middle, + *pons* (*pont-*) (see def.) + *-ine*[1].] Situated in the middle portion of the pons Varolii.

medioposterior (mē″di-ō-pos-tē′ri-ọr), *a.* [L. *medius*, middle, + *posterior*, hinder.] In or toward the posterior and median region of the animal body. Same as ★*posteromedian.* *Trans. Amer. Micros. Soc.*, Nov., 1903, p. 141.

medioprepalatal (mē″di-ō-prē-pal′ā-tal), *a.* [L. *medius*, middle, + *præ*, before, + *palatum*, palate, + *-al*[1].] Relating to the center of the anterior portion of the palate. *Scripture*, Exper. Phonetics, p. 436.

medioseptum (mē″di-ō-sep′tum), *n.*; pl. *mediosepta* (-tä). In *ornith.*, a vertical division between the two narial chambers.

Adventitious ossicles occurring in the soft membranous *medio-septa* of these vertebrates. *Proc. Zool. Soc. London*, 1891, p. 124.

mediostapedial (mē″di-ō-stā-pē′di-al), *n.* The median portion of the columella in birds and reptiles. In birds, its inner end is fused with the stapedial plate that fits into the fenestra ovalis. *W. K. Parker.*

Medism (mē′dizm), *n.* [Gr. Μηδισμός, < Μηδίζειν, Medize.] **1.** In *Gr. hist.*, the favoring of the principles or the furtherance of the interests of the Medes or Persians; in a rhetorical use, an unpatriotic sympathy with or tolerance of any foreigners.

An analogy may be found in the *medism* of the Delphic oracle, which yet, by a species of national self-deception, did not forfeit its claim to Hellenic respect, in spite of its failure in the hour of trial.

W. T. Woodhouse, in Jour. Hellenic Studies, XVIII. 46.

2. A Median or Persian idiom.

medisylvian (mē-di-sil′vi-an), *a.* [L. *medius*, middle, + *Sylvius* (see def.) + *-an.*] Relating to or situated in the middle portion of the fissure of Sylvius. *Amer. Anthropologist*, Oct.–Dec., 1903, p. 621.

Medit. An abbreviation of *Mediterranean.*

meditemporal (mē-di-tem′pō-ral), *a.* [L. *medius*, middle, + *tempus* (*tempor-*), temple, + *-al*[1].] Relating to or situated in the middle portion of the temporal lobe of the brain. *Amer. Anthropologist*, Oct.–Dec., 1903, p. 627.

mediterranean, *a.* **3.** [*cap.*] (*b*) Same as ★*Iberian*[1], 3.—**Mediterranean class,** a group of domesticated fowls which comprises breeds derived from southern Europe, including the Andalusian, Leghorn, Minorca, and Spanish breeds.—**Mediterranean passports, stage.** See ★*passport*, ★*stage.*—**Mediterranean province.** See ★*province.*

medithoracic (mē″di-thō-ras′ik), *a.* Same as *mesothoracic.*

medithorax (mē-di-thō′raks), *n.* [L. *medius*, middle, + NL. *thorax.*] Same as *mesothorax.*

medium, *n.*—**Löffler's medium,** a nutritive medium which is extensively used in the cultivation of the diphtheria organism. It is composed of three parts of calves' or lambs' blood-serum, with one part of ordinary bouillon, made from veal, plus one per cent. of glucose, the whole being solidified and sterilized.—**Passive medium,** a liquid or solution in which living cells or tissues, taken from the body, can be examined without undergoing any, or but very little, change in their microscopic structure: opposed to *active medium.*

mediumization (mē″di-um-i-zā′shon), *n.* The process of mediumizing or transforming into a spiritualistic medium.

Till we can do this, we must feel the effects of the acidity, as I may call it, which characterizes the crude and unsettled spiritual existence reached by our present system of *mediumization.*

W. D. Howells, Undiscovered Country, ii.

mediumize (mē′di-um-īz), *v. t.*; pret. and pp. *mediumized*, ppr. *mediumizing.* [*medium* + *-ize.*] To make a spiritualistic medium of; render a medium. [Rare.] *N. E. D.*

Medize (mē′dīz), *v. i.*; pret. and pp. *Medized*, ppr. *Medizing.* [Gr. *μηδίζειν*, < Μῆδοι, the Medes.] In *Gr. hist.*, to be unduly partial to the Medes or Persians or to imitate them; be unpatriotically or disloyally subservient to the Persians.

The leading men of Thebes . . . decidedly *medised* or espoused the Persian interest.

Grote, Greece, II. xi. v. 101. *N. E. D.*

medlar, *n.*—**Rock-medlar.** Same as *Savoy medlar.* See ★*Amelanchier.*—**Savoy medlar.** See *Savoy medlar.*

Medo-Persian (mē″dō-pėr′shan), *a.* and *n.* **I.** *a.* Pertaining to or including both Medes and Persians.

II. *n.* One of the Medo-Persian people or nation.

medow, *n.* A simplified spelling of *meadow.*

medulla, *n.* **1.** (*g*) The semi-fluid endosarc of a protozoön.

The protoplasm is differentiated into a firmer superficial layer, the cortex, . . . and a semi-fluid central mass, the *medulla*, . . . and is covered superficially by a thin cuticle. *Parker and Haswell*, Zoology, p. 45.

Medulla dorsalis, the spinal cord.

Medullary canal. Same as *medullary cavity* (*b*).—**Medullary fold, narcosis, nucleus, sheath.** See ★*fold*[1], etc.—**Medullary streak.** Same as *medullary furrow.*

medullate (med′u-lāt), *v. i.*; pret. and pp. *medullated*, ppr. *medullating.* To produce the white substance of Schwann around the axis-cylinder of a nerve-fiber; form a medullated nerve.

The tract which ascends from the internal geniculate body *medullates* separately from the other intracerebral systems.

Philos. Trans. Roy. Soc. (London), 1898, ser. B, p. 2.

medullation (med-u-lā′shon), *n.* [*medulla* + *-ation.*] The formation or acquisition of a medulla or marrow or pith. *Buck*, Med. Handbook, II. 319.

medullic (mē-dul′ik), *a.* [L. *medulla*, marrow, + *-ic.*] Noting an acid, a colorless compound, $C_{20}H_{41}COOH$, found, in combination with glycerol, in beef-suet and beef-marrow.

medullization (med″u-li-zā′shon), *n.* [L. *medulla*, marrow, + *-ize* + *-ation.*] Inflammatory softening of the substance of bone.

medullo-encephalic (med″u-lō-en″se-fal′ik), *a.* Same as *cerebrospinal.*

medusid (mē-dū′sid), *n.* A jelly-fish of the family *Medusidæ.*

medusome (mē-dū′sōm), *n.* [*Medusa* + *-ome.*] In siphonophores, a modified medusoid person.

Free-swimming colonies of modified medusoid persons (*medusomes*).

J. A. Thomson, Outlines of Zoology, p. 143. *N. E. D.*

meet[1], *v. t.*—**To meet her** (*naut.*), to put the rudder so as to check the swing of the vessel's head.

meet[1], *n.* **3.** In *geom.*: (*a*) The straight line common to two planes. (*b*) A point which is on each of two straights: also called their *cross.*

meeting, *n.* **5.** *pl.* In *mining*, the point in a mine-shaft where the ascending and descending cages meet. When the coal was raised in creels or corves the shaft was bulged at the meetings. *Barrowman*, Glossary.

mefitic, mefitis. Amended spellings of *mephitic, mephitis.*

megabar (meg′a-bär), *n.* [Gr. *μέγα*, great, + *βάρ*(*ος*), weight.] A proposed unit of atmospheric pressure; a gaseous pressure such that the force on each centimeter of surface is one megadyne. The megabar is equivalent to the pressure exerted by 75.015 centimeters of mercury. It is 10^6 c. g. s. units of pressure.

megabarie (meg-a-bä-rē′), *n.* [Also *megabary, megabarye*; F. *megabarie*, < *megabar* + *-ie*[3], *-y*[3].] A unit of atmospheric pressure recommended by the International Physical Congress in Paris (1900). Same as ★*megabar.*

The *megabary*, equal to 10^6 C.G.S. units, may, for practical purposes, be considered equal to the pressure of a column of mercury 75 cm. high at 0°. C. under normal conditions of gravity. *Science*, Jan. 18, 1901, p. 101.

megabary (meg′a-bär-i), *n.* Same as ★*megabarie.*

megacaryocyte (meg-a-kar′i-ō-sīt), *n.* [Gr. *μέγα*, great, large, + *κάρυον*, nut, nucleus, + *κύτος*, a hollow (a cell).] A large cell with lobulated nucleus found in the spleen of the human embryo and of young animals.

megacephaly (meg-a-sef′a-li), *n.* [*megacephalous.*] The condition of being megacephalous, either normally or pathologically.

megacerotine (meg-a-ser′ō-tin), *n.* [*Megaceros* (*-cerot-*) + *-ine*[1].] Relating to or having the characters of *Megaceros* or *Cervus giganteus*, the extinct Irish deer.

megachilous (meg-a-kī′lus), *a.* [Gr. *μέγας*, great, + *χείλος*, lip.] **1.** In *entom.*, having a large lip.—**2.** Of or pertaining to the genus *Megachile.*

megaclon (meg′a-klon), *n.* [Gr. *μέγας*, large, + *κλών*, twig (see ★*clon*).] In the nomenclature of the sponge-spicules, a large-sized rhabdoclon. See ★*rhabdoclon.*

megacoulomb (meg″a-kö-lom′), *n.* [*mega-* + *coulomb.*] A practical unit of electric charge or quantity equal to a million coulombs.

megacranous (meg-a-krā′nus), *a.* [Gr. *μέγας*, great, + *κρανίον*, cranium, + *-ous.*] In *craniom.*, having a skull of large volume—2,120–2,270 cubic centimeters in males and 1,850–1,950 cubic centimeters in females.

megadont, *a.* **2.** In *craniom.*, having a dental index of more than 44.

megadynamics (meg″a-dī-nam′iks), *n.* [Gr. *μέγας*, great, + E. *dynamics.*] In *geol.*, the dynamics of the earth, viewed in their large relations, as connected with great upheavals or subsidences of the crust.

Without the postulate of pervasive rigidity, conditioned by modifications due to molecular change, and to local solution-fusion, I am unable to find agencies competent to satisfy the demands of the *megadynamics* of the earth.

T. C. Chamberlin, in Econ. Geol., Oct.–Nov., p. 721.

megafrustule (meg-a-frus′tūl), *n.* [Gr. *μέγας*, great, + E. *frustule.*] In *biol.*, a frustule of large size.

megagamete (meg-a-gam′ēt), *n.* [Gr. *μέγας*, great, + E. *gamete.*] A large gamete or germ-cell, as distinguished from a microgamete; a macrogamete. The ovum is a megagamete, the spermatozoön a microgamete; the two unite to form a zygote.

It is obvious that the *megagamete* corresponds with the ovum of the higher animals, the microgamete with the sperm, and the zygote with the oosperm or impregnated egg. *Parker and Haswell*, Zoology, I. 72.

megagnathous (me-gag′nā-thus), *a.* [Gr. *μέγας*, great, + *γνάθος*, jaw.] In *anthrop.*, having large jaws.

Megaladapidæ (meg″a-la-dap′i-dē), *n. pl.* [*Megaladapis*, the type genus, + *-idæ.*] A family of lemurs which contains extinct species of comparatively great size: based on bones from Pleistocene and cave deposits of Madagascar. *Megaladapis insignis* was as large as a donkey, and is surmised by A. S. Woodward to have been aquatic in its habits. *Forsyth Major*, 1893.

megalencephalic (meg-a-len-se-fal′ik), *a.* [Gr. *μέγας* (*μεγαλ-*), great, + E. *encephalic.*] Characterized by hypertrophy of the encephalon.

megalo-. [Gr. *μεγαλο-*, combining form of *μέγας*, great: see *meg-, mega-.*] A prefix, meaning 'great' or 'large'; specifically, in *phys.*, a prefix sometimes used in place of the shorter forms *meg-* and *mega-* to denote that a unit is multiplied by one million.

megaloblast (meg′a-lō-blast), *n.* [Gr. *μέγας* (*μεγαλ-*), great, + *βλαστός*, germ.] A large nucleate cell found in the bone-marrow in the embryo: also a megalocyte, or large red blood-corpuscle occurring in certain forms of anemia in extra-uterine life. *R. C. Cabot*, Clinical Exam. of the Blood, p. 89.

megaloblastic (meg″a-lō-blas′tik), *a.* [*megaloblast* + *-ic.*] Of or pertaining to megaloblasts; of the nature of a megaloblast.

The presence of the nucleated erythrocytes of the *megaloblastic* type was evidence of a severe, though not necessarily fatal, anæmia.

Med. Record, Jan. 31, 1903, p. 196.

megalocardia (meg″a-lō-kär′di-a), *n.* [NL., < Gr. *μέγας* (*μεγαλ-*), great, large, + *καρδία*, heart.] The condition of having an abnormally large heart.

megalocephalia (meg″a-lō-se-fā′li-a), *n.* Same as ★*macrocephalia.*

megalocephalic (meg″a-lō-se-fal′ik), *a.* [Gr. *μεγαλοκέφαλος*, < *μέγας* (*μεγαλ-*), great, large, + *κεφαλή*, head, + *-ic.*] Same as *megacephalic.*

megalocephaly (meg″a-lō-sef′a-li), *n.* [*megalocephal*(*ic*) + *-y*[3].] Same as ★*macrocephaly.*

megalochirous (meg″a-lō-kī′rus), *a.* [Gr. *μέγας* (*μεγαλ-*), great, + *χείρ*, hand.] Characterized by large hands or prehensile organs.

megaloconidium (meg″a-lō-kō-nid′i-um), *n.*; pl. *megaloconidia* (-ä). [NL., < Gr. *μέγας* (*μεγαλ-*), great, large, + NL. *conidium.*] Same as *macroconidium.*

megalocornea (meg″a-lō-kôr′nē-ä), *n.* [NL., < Gr. *μέγας* (*μεγαλ-*), great, large, + NL. *cornea.*] Abnormally large size of the cornea.

Megalocottus (meg″a-lō-kot′us), *n.* [NL., < Gr. *μέγας* (*μεγαλ-*), great, large, + NL. *Cottus.*] A genus of cottoid fishes found in the North Pacific.

megalocytosis (meg″a-lō-sī-tō′sis), *n.* [*megalocyte* + *-osis.*] The production or formation of megalocytes, or very large red blood-corpuscles.

megalodactylia (meg″a-lō-dak-til′i-ä), *n.* [NL., < Gr. *μέγας* (*μεγαλ-*), great, large, + *δάκτυλος*, finger.] Same as ★*macrodactylia.*

megalodactylism (meg″a-lō-dak′ti-lizm), *n.* [Gr. *μέγας* (*μεγαλ-*), great, large, + *δάκτυλος*, finger, + *-ism.*] Same as ★*macrodactylism.*

Megalodon (meg′a-lō-don), *n.* [NL., < Gr. *μέγας* (*μεγαλ-*), great, large, + *ὀδούς* (*ὀδοντ-*), tooth.] An extinct genus of *Pelecypoda* typifying the family *Megalodontidæ.* It is characterized by ponderous heart-shaped shells with amphidetic area, opisthodetic ligament, and large and heavy cardinal teeth. The earliest species are Devonian, but the shells are most abundant in the Triassic rocks. Properly *Megalodus.*

Megalodon (*Eumegalodon*) *cucullatus*, Goldf. Devonian; Paffrath, near Cologne. One half natural size. (From Zittel's "Palæontology.")

megalodont (meg′a-lō-dont), *a.* [Gr. *μεγαλόδους* (*-ὀδοντ-*), < *μέγας* (*μεγαλ-*), great, large, + *ὀδούς* (*ὀδοντ-*), tooth.] Having large teeth; megadont.

megalodontous (meg″a-lō-don′tus), *a.* [Gr. *μέγας* (*μεγαλ-*), great, + *ὀδούς* (*ὀδοντ-*), tooth.] Characterized by large teeth.

megalogastria (meg″a-lō-gas′tri-ä), *n.* [NL., < Gr. *μέγας* (*μεγαλ-*), great, large, + *γαστήρ*, stomach.] The condition in which the stomach is abnormally large.

megaloglossia (meg″a-lō-glos′i-ä), *n.* [Gr. *μέγας* (*μεγαλ-*), great, large, + *γλῶσσα*, tongue.] Same as *macroglossia.*

megalomaniac (meg″a-lō-mā′ni-ak), *a.* and *n.*

[*megalomania* + *-ac.*] **I.** *a.* Pertaining to or characterized by megalomania.

But in that courteous, cultured throng I doubt whether one-fifth felt sympathy with the *megalomaniac* ideals paraded before their eyes. *Nation*, May 11, 1899.

II. *n.* One who suffers from megalomania.

megalomaniacal (meg″a-lō-mā-nī′a-kal), *a.* Relating to or suffering from megalomania. *G. S. Hall*, Adolescence, II. 536.

megalomartyr (meg″a-lō-mär′tėr), *n.* [Gr. *μέγας* (*μεγαλ-*), great, + *μάρτυρ*, witness.] A great or eminent martyr.

Among those holy martyrs whom the Greeks honour with the title of *Megalomartyrs* (i.e. = Great Martyrs) as St. George, St. Pantaleon, &c. four are distinguished by them above the rest as principal patrons.
Butler, Lives of the Primitive Fathers, II. 93.

It was the Chief of the "*Megalomartyrs*," or Dii Selecti, who had convoked this crowd of christian people.
Is. Taylor, Anc. Chr., II. 186.

Megalonychidæ (me-gal-ō-nik′i-dē), *n. pl.* [NL., < *Megalonyx* (*-onych-*) + *-idæ.*] The great ground-sloths of the genus *Megalonyx* considered as sufficiently distinct from those represented by *Megatherium* to warrant their separation as a distinct family. *Zittel*, 1892.

megalopa, *n.* 2. Same as ★*megalopa stage.* —**Megalopa stage**, in the development of crabs, an advanced larval stage in which the animal has large eyes, an extended abdomen, and well-developed pleopods.

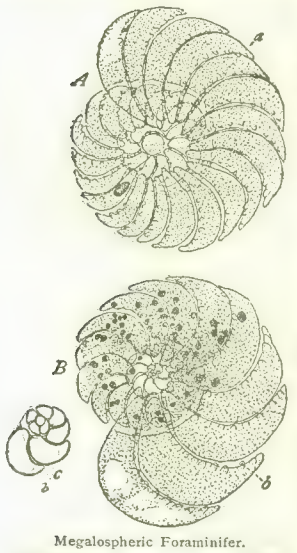
It is therefore interesting to find that in the zoea and through the larval and post-larval (*megalopa*) *stages*, the shore-crab possesses a primary and a secondary chromatophore system of a very clearly defined character.
Philos. Trans. Roy. Soc. (London), 1902, ser. B, p. 318.

megalophonic (meg″a-lō-fon′ik), *a.* Same as *megalophonous.*

megalophthalmus (meg″a-lof-thal′mus), *n.* [NL., < Gr. *μεγαλόφθαλμος*, large-eyed, < *μέγας* (*μεγαλ-*), great, large, + *ὀφθαλμός*, eye.] A condition in which the eyes are of abnormally great size. *Buck*, Med. Handbook, II. 9.

megalopia (meg-a-lō′pi-ä), *n.* [NL., < Gr. *μέγας* (*μεγαλ-*), great, large, + *ὤψ* (*ὠπ-*), eye.] Same as *megalopsia.*

megalopod (meg′a-lō-pod), *a.* and *n.* [Gr. *μέγας* (*μεγαλ-*), great, large, + *πούς* (*ποδ-*), foot.] Having large feet; megalopodous; macropod.



megalopodous (meg-a-lop′ō-dus), *a.* [Gr. *μέγας* (*μεγαλ-*), great, + *πούς* (*ποδ-*), foot.] Characterized by large feet.

megalopore (meg′a-lō-pōr), *n* [Gr. *μέγας* (*μεγαλ-*), great, large, + *πόρος*, pore.] A large pit or pore in the shell of a chitinoid mollusk, containing a sense-organ: opposed to ★*micropore.*

megaloscope (meg′a-lō-skōp), *n.* [Gr. *μέγας* (*μεγαλ-*), great, large, + *σκοπεῖν*, view.] A form of endoscope in which the part brought into view is magnified.

megalosphere (meg′a-lō-sfēr), *n.* [Gr. *μέγας* (*μεγαλ-*), great, large, + E. *sphere.*] The large original or central chamber of a megalospheric foraminifer. Compare ★*microsphere.* *Nature*, April 6, 1905, p. 550.

megalospheric (meg″a-lō-sfer′ik), *a.* [*megalosphere*(*e*) + *-ic.*] Having a single large nucleus and a large central chamber, as certain foraminifers in which the species consists of two kinds of individuals. Compare ★*microspheric.* *Knowledge and Sci. News*, March, 1904, p. 48.

Megalospheric Foraminifer.

Polystomella crispa. *A*, the megalospheric, *B*, the microspheric forms, decalcified. *a*, communication between the chambers; *b*, retral processes; *c*, the central chambers of the microspheric forms more highly magnified. The canal system is omitted in these figures for the sake of clearness. (From Lankester's "Zoology.")

megamaxwell (meg-a-maks′-wel), *n.* A unit of magnetic flux equal to 1,000,000 maxwells.

megamere (meg′a-mēr), *n.* [Gr. *μέγας*, great, large, + *μέρος*, part.] One of the large blastomeres of the segmenting ovum in certain animals, as opposed to the micromeres. See *macromere.*

megameter (meg′a-mē-tėr), *n.* [*mega-* + *meter.*] A unit of length equal to one million meters.

megamho (meg′a-mō), *n.* [*mega-* + *mho.*] A practical unit of electric conductance equal to 1,000,000 mhos or 1×10^{-3} c. g. s. units.

megamil (meg′a-mil), *n.* [*mega-* + *mil.*] A proposed practical unit of length, equal to one million mils or one thousand inches. [Rare.]

megampere (meg-am-pār′), *n.* [*mega-* + *ampere.*] A practical unit of electric current equal to a million amperes.

meganephric (meg-a-nef′rik), *a.* [Gr. *μέγας*, large, + *νεφρός*, kidney, + *-ic.*] Characterized by the possession of large nephridia: as, a *meganephric* worm.—**Meganephric nephridia.** See ★*nephridium.*

meganucleus (meg-a-nū′klē-us), *n.*; pl. *meganuclei* (-ī). [NL., < Gr. *μέγας*, great, + E. *nucleus.*] Same as *macronucleus.*

megaphone, *n.* 2. A large speaking-trumpet of a conical form.

megaphonic (meg-a-fon′ik), *a.* [*megaphon*(*e*) + *-ic.*] Of or pertaining to a megaphone; of the nature of a megaphone; transmitted by means of a megaphone: as, a *megaphonic* message.

Several individuals can be examined at once by duplicating the ear tubes or by substituting a *megaphonic* horn for the tubes. *Science*, June 24, 1904, p. 960.

megaphotographic (meg″a-fō-tō-graf′ik), *a.* Pertaining to or produced by megaphotography.

megaphotography (meg″a-fō-tog′ra-fi), *n.* [Gr. *μέγας*, great, + E. *photography.*] The photography of the heavenly bodies and of celestial phenomena. *Nature*, May 24, 1900, p. 79.

megaphyllous (meg-a-fil′us), *a.* [Gr. *μέγας*, large, + *φύλλον*, leaf, + *-ous.*] In *bot.*, large-leaved.

It is natural to look to the pteridophytes for guidance as to the origin of foliar development in the sporophyte, for they are the most primitive plants with leafy sporophytes. They may be disposed according to the prevalent size of their leaves in a series, leading from microphyllous to *megaphyllous* types. *Science*, Oct. 21, 1904, p. 529.

megaprosopous (meg-a-pro-sō′pus), *a.* [Gr. *μέγας*, great, large, + *πρόσωπον*, face, + *-ous.*] In *craniom.*, said of a skull having a large face, the volume of which is 720–780 cubic centimeters in males and 580–625 cubic centimeters in females.

megapul (meg′a-pul), *n.* [*mega-* + *pul.*] In *physics*, a proposed unit of measurement of the time-integral of forces; one million dynes acting for one second.

megarrhine, megarhine (meg′a-rīn), *a.* [Gr. *μέγας*, great, + *ῥίς* (*ῥιν-*), nose.] Characterized by a large nose, as *Rhinoceros megarhinus*, an extinct species of rhinoceros.

megascleric (meg-a-sklē′rik), *a.* [*megasclere* + *-ic.*] Pertaining to or characteristic of a megasclere.

megascleron (meg-a-sklē′ron), *n.*; pl. *megasclera* (-rä). [NL.] In sponge-spicules, a megasclere.

megasclerum (meg-a-sklē′rum), *n.*; pl. *megasclera* (-rä). [NL.] Same as *megasclere.*

megasphere (meg′a-sfēr), *n.* [Gr. *μέγας*, great, large, + *σφαῖρα*, sphere.] The large primordial chamber in the shells of some *Foraminifera:* contrasted with ★*microsphere.* See ★*megalosphere.*

megasporophyl, megasporophyll (meg-a-spō′rō-fil), *n.* [Gr. *μέγας*, great, large, + *σπορά*, seed (spore), + *φύλλον*, leaf.] 1. In the *Spermatophyta*, a carpel.—2. In the *Pteridophyta*, a sporophyl which bears megaspores (macrospores).

megastome (meg′a-stōm), *n.* [Gr. *μέγας*, great, large, + *στόμα*, mouth.] A univalve shell having a large aperture or mouth.

megatherial (meg-a-thē′ri-al), *a.* [NL. *megatherium* + *-al*[1].] Pertaining to or resembling the megatherium; huge; unwieldy.

Beautiful problems of the past of our island and the evolution of life were defaced by the disorderly offspring of a quite *megatherial* wit—if one may coin such an antithesis to "etherial." *Nature*, July 26, 1894, p. 301.

megathermic (meg-a-thėr′mik), *a.* [*megatherm* + *-ic.*] Having the character of a megatherm; composed of or characterized by megatherms.

Yet in these latter extensions [Southern Florida and Southern Brazil] the *megathermic* flora is already perceptibly impoverished.
A. F. W. Schimper (trans.), Plant Geog., p. 226.

megatorque (meg′a-tôrk), *n.* [*mega-* + *torque.*] A proposed practical unit for the measurement of the moments of forces; one million torques or one million times the moment of a dyne acting with a lever-arm of one centimeter.

megatypy (meg′a-tī-pi), *n.* [*megatyp*(*e*) + *-y*[3].] In *photog.*, the process of making megatypes or enlargements.

megawatt (meg′a-wot), *n.* [*mega-* + *watt.*] A unit of power or activity equal to 1,000,000 watts.

megazoöid (meg-a-zō′oid), *n.* [Gr. *μέγας*, great, large, + E. *zoöid.*] A large zoöid, or animal, as opposed to a small individual, or microzoöid, of the same species. Such mega- and microzoöids occur, for example, in the bell-animalcule, *Vorticella.* In this animal the microzoöids are formed as free-swimming buds by the large, pedunculate, and sessile megazoöids.

Colony of Megazoöids.
a, nutritive zoöid; *b*, reproductive zoöid; *c*, axial fiber. (From Parker's "Biology," after Saville Kent.)
(From Lankester's "Zoology.")

megillah (me-gil′ä), *n.*; pl. *megilloth* (-ōt). [Heb., < *gālāl*, roll.] One of five books in the Old Testament (namely, Canticles, Ruth, Lamentations, Ecclesiastes, and Esther) which are recited in the synagogue in the following order: Canticles on Passover, Ruth on the feast of Weeks, Ecclesiastes on the feast of Tabernacles, and Esther on Purim; Lamentations is given on the fast of the ninth of Ab. They derive their name from the fact that they are written on parchment rolls or scrolls.

megilloth, *n.* Plural of ★*megillah.*

megistocephalous (me-gis-tō-sef′a-lus), *a.* [Gr. *μέγιστος*, superl. of *μέγας*, great, large, + *κεφαλή*, head.] Having a very large head.

megohmmeter (me-gōm′e-tėr), *n.* An instrument similar in type to an ohmmeter but suitable for the measurement of very high electric resistances.

megosmatic (meg-os-mat′ik), *a.* [Gr. *μέγας*, great, + E. *osmatic.*] Same as ★*macrosmatic.*

megoxycyte (me-gok′si-sīt), *n.* [Gr. *μέγας*, great, + *ὀξίς*, sharp, + *κύτος*, hollow (cell).] A coarsely granular oxyphil or eosinophil blood-corpuscle, or leucocyte. *Durham*, 1897.

mehari (mā-hä′rē), *n.* One of a race of swift Arabian camels taking name from Mehara, a region in Arabia where it is raised, and of great value in campaigning and in exploring expeditions.

His little troop was mounted on *meharis*, used by the Touaregs—rapid camels, which are to the ordinary camels of the caravan what race-horses are to cart horses. Thanks to the mobility of his caravan, M. Foureau could perform long raids without being attacked by the Touaregs.
Nat. Geog. Mag., Feb., 1905, p. 77.

meharist (mā-hä′rist), *n.* [F. *mehariste*, < *mehari* + *-ist.*] A trooper mounted on a mehari.

A new and decisive operation was undertaken. At the commencement of February, 1904, Major Laperrine, quitting In-Sala at the head of a troop of "*meharistes*" and taking his route south, succeeded in traversing the Sahara and meeting a second troop of "*meharistes*" which had set out from Timbuctoo.
Nat. Geog. Mag., Feb., 1905, p. 79.

mehmandar (mā′man-där), *n.* [Pers.] In Persia and India, an official appointed to act as courier to a traveler of distinction. *N. E. D.*

mehtar (mā′tär), *n.* [Also *mater;* < Hind. *mehtar*, a sweeper (ironically a 'prince'), < Pers. *mihtar*, a great personage, a prince.] A sweeper; a scavenger.

Among the more minute of his elaborate recommendations is one that in campaigns in warm countries where dust storms and flies are always prevalent a "*mehtar*" establishment from India should be attached to each unit with the duty to cover up the excreta immediately after the latrine has been used. *Lancet*, Aug. 29, 1903, p. 627.

Meibomia (mī-bō′mi-ä), *n.* [NL. (proposed by Heister, established by Adanson in 1763),

named after B. *Meibom* (1678–1740), a German botanist.] A genus of dicotyledonous plants of the family *Fabaceæ*. See *Desmodium*.

Meibomian cyst. Same as *chalazion*.

meiler (mē′lėr), *n.* [G. *meiler*, MHG. *mīler*; origin obscure. The corresponding Bohem. *milèr*, Pol. *millerz*, are from the G.] A pile of wood to be burned into charcoal, irrespective of the shape; also, specifically, a rectangular pile about 25–30 feet in length, 8 feet wide, and sloping from a height of 2 feet at one end to 7 or 8 feet at the other, this upward slope tending to develop a draft in the direction of the length of the pile and so to secure uniform progress in the burning. *Groves and Thorp*, Chem. Technol., I. 105.

meiobar (mī′ō-bär), *n.* [Gr. *μείων*, less, + *βάρος*, weight.] An area of low barometric pressure on the daily weather-map: a term introduced by Prestel in 1870.

meiotic, *a.* See ★*miotic*. *Nature*, Sept. 26, 1907, p. 556.

Meissner's bodies. Same as *Meissner's corpuscles*.

Meister (mīs′tėr), *n.* [G.] Master.

Mejidieh, *n.* Same as *Medjidie*.

Mekong yellow. See ★*yellow G* and *R*.

M. E. L. An abbreviation of *Master* (or *Mistress*) *of English Literature*.

Melæna neonatorum, hemorrhage from the stomach or bowels in the new-born infant, denoted by the passage of altered blood in the stools.—**Melæna spuria,** simulation of melæna neonatorum, in which the blood comes from a fissured nipple of the nurse, not originally from the intestinal tract of the child.

melænic (me-lē′nik), *a.* [*melæna* + *-ic*.] Relating to or marked by melæna.

melalgia (mel-al′ji-ä), *n.* [NL., < Gr. *μέλος*, limb, + *ἄλγος*, pain.] Neuralgic pain in one or more of the limbs.

melam (mel′am), *n.* [Gr. *μέλι*, honey, + E. *am*(*monia*).] A colorless granular, pulverulent, indifferent compound, $C_6H_9N_{11}$, formed by the rapid heating of ammonium thiocyanate at 300° C.

melamdim, *n.* Plural of ★*melammad*.

melamine (mel′am-in), *n.* [*melam* + *-ine*².]

A colorless compound, $H_2NC{<}^{N:C(NH_2)}_{N.C(NH_2)}{>}N$, formed, together with melam, by heating ammonium cyanate. It crystallizes in monoclinic prisms. Also called *cyanuramide*, *triguanide*, and *triurethriamidin*.

melammad (me-lam′ad), *n.*; pl. *melamdim* (-dēm). [Heb. (Yiddish *m'lamed*), < *lamad*, learn, teach.] A teacher in a rabbinical school: especially, the teacher of a *heder*, or elementary Jewish school.

Melampsora (mel-amp-sō′rä), *n.* [NL. (Castagne, 1843), < Gr. *μέλας* (*μελαν-*), black, + *ψώρα*, scab, scale.] A genus of uredineous fungi having 4 spore forms (spermagonia, æcidia, uredo- and teleutospores), all produced on the same host. The æcidia are without peridia and paraphyses, and the teleutospores form a dark crust on the surface of the host. The species are numerous and common, causing rusts of various plants. *M. farinosa* is usually abundant on the leaves of various willows.

Melampsoraceæ (mel″amp-sō-rā′sē-ē), *n. pl.* [NL., < *Melampsora* + *-aceæ*.] A family of uredineous fungi named from the genus *Melampsora*. The teleutospores are sessile and usually form flattened masses in the tissue of the host.

melancholia, *n.*—**Involution melancholia,** melancholia occurring in advanced life, during the period of senile involution. *Jour. Philos. Psychol. and Sci. Methods*, Dec. 5, 1907, p. 698.—**Melancholia attonita,** a form of melancholia in which the sufferer shows absolute indifference to all his surroundings.

melanconiaceæ (mel-an-kō-ni-ā′sē-ē), *n. pl.* [NL., < *Melanconium* + *-aceæ*.] A family of *Fungi Imperfecti* named from the genus *Melanconium*. Also written *Melanconieæ*.

melanconiaceous (mel-an-kō-ni-ā′shius), *a.* Pertaining to or belonging to the fungous family *Melanconiaceæ*.

Melanconiales (mel-an-kō-ni-ā′lēz), *n. pl.* [NL., < *Melanconium* + *-ales*.] An order of *Fungi Imperfecti* containing the single family *Melanconiaceæ*. The spores are usually borne in superficial cavities without the formation of a special wall or pycnidium. See ★*Glœosporium* and *Melanconium*.

Melanconidaceæ (mel-an-kō-ni-dā′sē-ē), *n. pl.* [NL., < *Melanconis* (*Melanconid-*) + *-aceæ*.] A family of pyrenomycetous fungi named from the genus *Melanconis* and containing 9 genera.

Melanconis (mel′an-kō-nis), *n.* [NL. (Tulasne, 1863), referring to the black spores, < Gr. *μέλας* (*μελαν-*), black, + *κόνις* (*κονιδ-*), dust.] A genus of pyrenomycetous fungi, type of the family *Melanconidaceæ*. It has the perithecia arranged in a valsoid stroma and producing elongate necks which break through the surface of the bark. The spores are ellipsoid or elongate and uniseptate. *M. modonia* is a common species occurring on dead branches of chestnut.

melanephidrosis (mel-a-nef-i-drō′sis), *n.* [Gr. *μέλας* (*μελαν-*), black, + NL. *ephidrosis*.] A form of sweating-sickness marked by dark perspiration.

mélangeur (me-loṅ-zhėr′), *n.* [F. **mélangeur*, m., *mélangeuse*, f., < *mélanger*, mix, < *mélange*, a mixture.] In *candy-making*, a mill for grinding and mixing cocoa. One type consists of a granite roller (sometimes two) traveling in a pan or metal bed. In another the bed revolves, and the rollers, held in one position, revolve by friction with the bed. It is used in mixing cocoa and sugar in making chocolate.

melanian² (me-lā′ni-an), *a.* [F. *mélanien*, < Gr. *μέλας* (*μελαν-*), black.] In *anthropol.*, used as the equivalent of ★*Negrito* and also of *Negroid*. *Owen*.

melanidrosis (mel″an-i-drō′sis), *n.* [NL., < Gr. *μέλας* (*μελαν-*), black, + *ἱδρ*(*ώς*), sweat, + *-osis*.] The sweating of a dark-colored fluid.

melanize (mel′a-nīz), *v. t.*; pret. and pp. *melanized*, ppr. *melanizing*. [Gr. *μέλας* (*μελαν-*), black, + *-ize*.] To render melanistic; produce melanism in.

melano (mel′a-nō), *n.* [Gr. *μέλας* (*μελαν-*), black.] An abnormally black or melanistic animal; a black animal that would normally be colored.

The small specimen is a *melano*, but shows indications of the normal spotted condition.

Annals and Mag. Nat. Hist., 1902, p. 59.

melanocancroid (mel″a-nō-kang′kroid), *n.* [Gr. *μέλας* (*μελαν-*), black, + E. *cancroid*.] An epithelial tumor containing much pigment matter.

melanocerite (mel″a-nō-sē′rīt), *n.* [Gr. *μέλας* (*μελαν-*), black, + E. *cer*(*ium*) + *-ite*².] A fluosilicate of the cerium and yttrium metals, calcium, and other elements. It occurs in brown to black rhombohedral crystals, and is found sparingly in southern Norway.

melanochalcite (mel″a-nō-kal′sīt), *n.* [Gr. *μέλας* (*μελαν-*), black, + *χαλκός*, copper, + *-ite*.] A pitch-black massive mineral substance forming a thin zone about a kernel of cuprite in nodules the exterior zones of which are made up of malachite and chrysocolla. In composition it is a silicocarbonate of copper with copper hydroxid. It is found near Bisbee, Arizona.

melanochlorous (mel″a-nō-klō′rus), *a.* [Gr. *μέλας* (*μελαν-*), black, + *χλωρός*, yellow.] Variegated with black and yellow. *Mayne*.

melanochroid (mel″a-nō-krō′id), *a.* [*melanochro*(*ic*) + *-id*².] Same as *melanochroic*. *Keane*, Ethnology, p. 167.

melanocratic (mel″a-nō-krat′ik), *a.* [Gr. *μέλας* (*μελαν-*), black, + *κρατεῖν*, rule, + *-ic*.] In *petrog.*, noting igneous rocks characterized by a preponderance of dark-colored minerals, or rather of minerals, chiefly ferromagnesian, that are normally dark-colored: contrasted with ★*leucocratic* rocks. *Brögger*, 1896.

melanocyte (mel′a-nō-sīt), *n.* [Gr. *μέλας* (*μελαν-*), black, + *κύτος*, a hollow (a cell).] In *pathol.*, a lymphocyte, or wandering amœboid cell, containing dark pigment-granules.

melanoderma (mel″a-nō-dėr′mä), *n.* [Gr. *μέλας* (*μελαν-*), black, + *δέρμα*, skin.] Dark discoloration of the skin; melasma.

melanodermic (mel″a-nō-dėr′mik), *a.* [*melanoderm*(*a*) + *-ic*.] Having a dark-colored skin. *Buck*, Med. Handbook, I. 110.

melanogallic (mel″a-nō-gal′ik), *a.* [Gr. *μέλας* (*μελαν-*), black, + E. *gallic*².] Noting an acid, an amorphous, odorless, tasteless compound, $C_6H_4O_2$, formed by heating gallic or tannic acid. Also called *gallhuminic acid* and *metagallic acid*.

melanogen (me-lan′ō-jen), *n.* [Gr. *μέλας* (*μελαν-*), black, + *-gen*, -producing.] The colorless mother substance, or chromogen, of urinary melanin.

Melanogrammus (mel″a-nō-gram′us), *n.* [NL., < Gr. *μέλας* (*μελαν-*), black, + *γραμμή*, line.] A genus of gadoid fishes, known as haddock, found on both coasts of the North Atlantic.

melanoid, *a.* **II.** *n.* A pigment resembling or belonging to the melanins.

melanoidin (mel-a-noi′din), *n.* [*melanoid* + *-in*².] A melanin derived from the albumins: a term introduced by Schmiedeberg.

Melano-Papuan (mel″a-nō-pap′ū-an), *a.* Connected with the black races and the Papuan race (which is itself one of the black races of Melanesia). *Keane*, Ethnology, p. 288.

melanophore (mel′a-nō-fōr), *n.* [Gr. *μέλας* (*μελαν-*), black, + *-φορος*, bearing, < *φέρειν*, bear.] 1. A large cell which contains dark pigment-granules. Typical examples occur in the common fence-lizard, *Anolis*, which turns from green to brown. *Nature*, Jan. 28, 1904, p. 304.—2. The dark-brown chromatophore of the algæ.

melanophyl, melanophyll (mel′a-nō-fil), *n.* [Gr. *μέλας* (*μελαν-*), black, + *φύλλον*, leaf.] The yellow-brown coloring-matter of the diatoms, composed of diatomin and chlorophyl, and supposed to be similar to the phæophyl of the brown algæ.

melanoplakia (mel″a-nō-plā′ki-ä), *n.* [NL., < Gr. *μέλας* (*μελαν-*), black, + *πλάξ* (*πλακ-*), a flat thing.] The formation of dark patches on the tongue.

melanose² (mel′a-nōs), *a.* [*melanosis*.] Characteristic of or affected with melanosis.

melanosed (mel′a-nōst), *p. a.* Affected with melanosis.

melanostibian (mel″a-nō-stib′i-an), *n.* [Gr. *μέλας* (*μελαν-*), black, + NL. *stibi*(*um*) + *-an*.] An antimonate of iron and manganese occurring in black foliated masses: found in Sweden.

Melanostigma (mel″a-nō-stig′mä), *n.* [NL., < Gr. *μέλας* (*μελαν-*), black, + *στίγμα*, point.]

Melanostigma pammelas.
(From Bulletin 47, U. S. Nat. Museum.)

A genus of fishes, belonging to the family *Zoarcidæ*, found in the deep sea off both coasts of North America.

melanotrichous (mel-a-not′ri-kus), *a.* [Gr. *μελανόθριξ* (*τριχ-*,) black-haired, < Gr. *μέλας* (*μελαν-*), black, + *θριξ* (*τριχ-*), hair.] Having black hair; black-haired.

melanotype, *n.* 2. A glass negative mounted on black and used as a positive.—3. A black print.

Melanthiaceæ (me-lan-thi-ā′sē-ē), *n. pl.* [NL. (Lindley, 1830), earlier *Melanthaceæ* (Robert Brown, 1810), < *Melanthium* + *-aceæ*.] A family of monocotyledonous plants of the order *Liliales*, the bunch-flower family, typified by the genus *Melanthium* (which see). It is included by many authors in the *Liliaceæ*, but is distinguished from it mainly by the septicidal capsule and the absence of bulbs. The family includes the hellebore, the bellwort, the bog-asphodel, and the blazing-star or devil's-bit.

melanthiaceous (me-lan-thi-ā′shius), *a.* Belonging to the plant family *Melanthiaceæ*.

melanthin (mel′an-thin), *n.* [Gr. *μέλας* (*μελαν-*), black, + *ἄνθος*, flower, + *-in*².] A glucoside, $C_{20}H_{33}O_7$(?), contained in the seeds of *Nigella sativa*.

melanure (mel′a-nūr), *n.* [NL. *melanura* (see def.), < Gr. *μελάνουρος*, black-tailed, < *μέλας* (*μελαν-*), black, + *οὐρά*, tail.] A sparoid fish, *Oblada melanura*, found in the Mediterranean.

melanurenic (mel″a-nū-ren′ik), *a.* [*melanur*(*ic*) + *-en-* + *-ic*.] Noting an acid, the same as ★*ammelide*.

melanuresis (mel″a-nū-rē′sis), *n.* [NL., < Gr. *μέλας* (*μελαν-*), black, + *οὔρησις*, urination.] The passage of dark-colored urine, usually containing melanin.

melaphyre, *n.* It is proposed, in the field classification accompanying the quantitative system of classification of igneous rocks (see ★*rock*¹), to restore the term *melaphyre* to its early significance and apply it to all dark-colored porphyries, of any composition.

Melasma gravidarum, discoloration of the skin occurring in pregnant women.—**Melasma universale,** a discoloration of almost the entire surface of the body, occurring in the aged.

Melasmia (me-las′mi-ä), *n.* [NL. (Léveillé, 1846), < Gr. *μέλασμα*, a black spot, black color.] A genus of *Fungi Imperfecti*, of the family *Leptostromataceæ*, having dimidiate pycnidia in a black scutellate stroma. The species are mostly stages in the development of *Rhytisma*.

M. acerina is the pycnidial condition of *Rhytisma acerinum*. See ★*Rhytisma*.

melassic, *a.* 2. Noting an acid, a colorless compound, $C_6H_6O_3$ (?), formed by the action of alkali on glucose.

melassigenic (me-las-i-jen'ik), *a.* [*melasses* (F. *mélasse*), molasses, + *-genic*.] Producing molasses, or tending to increase the proportion of molasses to crystallized sugar obtained in sugar-making. A large amount of mineral salts in beet-juice or cane-juice and the '*inversion*' of much of the sucrose present are melassigenic in effect.

Melbourn rock. See ★*rock*[1].

Melbury marble. See ★*marble*.

Melchizedekian (mel-kiz-ē-dek'i-an), *n.* [LL. ★*Melchisedecianus*, MGr. Μελχισεδεκιανοί, < Μελχισεδέκ, Melchizedek.] One of a sect which was founded about 210 A.D. as a branch of the Theodotians. The sect affirmed that Melchizedek was not a man, but a divine power, without father or mother, the true priest, who was intercessor not only for men but for angels and thus superior to Christ.

Melchizedekite (mel-kiz'ē-dek-īt), *n.* [MGr. Μελχισεδεκῖται, pl.] Same as ★*Melchizedekian*.

meld (meld), *v. t.* [G. *melden*, mention, announce.] In *penuchle*, to announce (any counting combination in the hand), such as sequence in trumps, 150; in card-games in general, to declare.

When a player *melds* any combination, he must lay down the cards of which his meld consists face upwards on the table beside him; he can make use of any of these exposed cards to play to a trick, but the remainder (if any) must remain exposed until the talon is exhausted.

Amer. Hoyle, p. 204.

meld (meld), *n.* [*meld*, *v.*] In *penuchle*, the announcement of any counting combination in the hand: as, a *meld* of 60 queens; in card-games in general, a declaration. *Amer. Hoyle*, p. 202.

Meldola's blue. Same as *new blue*.

mêlée, *n.* 2. That part of the game of halma in which the pieces of the two players occupy the same part of the board.

melem (mel'em), *n.* [*mel*(*am*) + *-em* (a mere substitution).] A white amorphous compound, $C_6H_6N_{10}$(?), left undissolved when melam is digested with potassium hydroxid.

melene (mel'ēn), *n.* [Gr. *μέλι*, honey, + *-ene*.] A colorless, crystalline, olefinic hydrocarbon, $C_{30}H_{60}$, prepared by the distillation of beeswax. It melts at 62° C.

meletin (mel'ē-tin), *n.* [*mel*(*in*) + *-et* + *-in*[2].] A decomposition-product of melin, probably identical with quercitin.

melezibiose (mel-ē-zib'i-ōs), *n.* [*melezi*(*tose*) + *biose*.] A disallowed form for ★*melezitose*.

melezitose (mē-lez'i-tōs), *n.* [F. *mélézitose*; cf. ★*melizitose*.] A colorless dextrorotatory carbohydrate, $C_{18}H_{32}O_{16}+2H_2O$, obtained in southern France from the sweet exudation of the young twigs and needles of the larch, *Abies Larix*, and from *Alhagi Camelorum* from Asia. It forms small, lustrous, hard, monoclinic crystals, and melts at 140° C. In France it is sometimes used in place of sugar. In India it is employed as an aperient. Also called *melezitriose*.

melezitriose (mel-ē-zit'ri-ōs), *n.* Same as ★*melezitose*.

Melian (mē'li-an), *a.* Of or pertaining to the Island of Melos (one of the Cyclades) or to its productions.

Of the last kind is the most of the Rhodian ware, and that which lay thickly just below the surface at Phylakopi, and is not of *Melian* manufacture.

Encyc. Brit., XXXI. 57.

melianthaceous (mel″i-an-thā'shius), *a.* Belonging to the plant family *Melianthaceæ*.

melibiase (me-lib'i-ās), *n.* [Gr. *μέλι*, honey, + *biase* (?).] Same as ★*raffinase*.

melibiose (me-lib'i-ōs), *n.* [Gr. *μέλι*, honey, + E. *biose*.] A colorless pulverulent dextrorotatory carbohydrate, $C_{12}H_{22}O_{11}$, prepared by the action of dilute acids on melitriose (raffinose).

melic[2] (mel'ik), *n.* [L. *melic*(*a*).] A plant of the genus *Melica*.

melicera (mel-i-sē'rä), *n.* [NL., < Gr. *μέλι*, honey, + *κηρός*, wax.] Same as *meliceris*; also, same as *porrigo*, and *favus*, 2.

meliceria (mel-i-sē'ri-ä), *n.* Same as ★*melicera*.

meliceroma (mē-lis-ē-rō'mä), *n.*; pl. *meliceromata* (-ma-tä). [NL., as *melicer*(*is*) + *-oma*.] Same as *meliceris*.

Melicerta (mel-i-sèr'tä), *n.* [NL., < L. *Melicerta*, Gr. Μελικέρτης, name of a sea-god.] The typical genus of the family *Melicertidæ*. *Schrank*, 1803.

Melicertidæ (mel-i-sèr'ti-dē), *n. pl.* [*Melicerta* + *-idæ*.] A family of social rotifers, of the order *Rhizota*, having a corona without setigerous lobes, the mouth lateral, the velum in the form of a continuous marginal band bent upon itself at the dorsal surface in such a manner as to encircle the corona twice, and the trophi malleoramate. It includes the genera *Melicerta*, *Lacinularia*, *Megalotrocha*, *Trochosphæra*, *Conochilus*, *Limnias*, *Cephalosiphon*, and *Œcistes*.

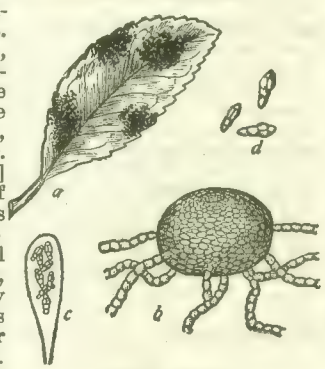
melicha, *n.* See ★*meliha*.

melichroous (me-lik'rō-us), *a.* [Gr. *μελίχροος*, honey-colored, < *μέλι*, honey, + *χροά*, color.] Having the color of honey.

Melichthys (me-lik'this), *n.* [Gr. *μέλ*(*ας*), black, + *ἰχθύς*, a fish.] A genus of balistoid fishes found in tropical seas.

meliha, melicha (mel'i-ċhä), *n.* [Heb., < *mālaḥ*, *v.*, salt, *melaḥ*, *n.*, salt.] The Jewish process of salting meat in preparing it for kosher food. See ★*kashern*.

melilite-basalt (mel'i-līt-ba-sâlt″), *n.* See ★*basalt*.



melilot, *n.*—**Blue melilot**, the Swiss melilot or old sow, *Trigonella cærulea*. It is a native of southeastern Europe and has blue flowers collected into heads.

melilotic (mel-i-lot'ik), *a.* [*Melilotus* + *-ic*.] Noting an acid, a colorless compound, $HO.C_6H_4CH_2CH_2\overset{2}{C}OOH$, found in yellow melilot, *Melilotus officinalis*, and prepared by the reduction of coumarin. It forms long trimetric crystals and melts at 83° C. Also called *orthohydroxycoumaric acid*.

melinite[2] (mel'i-nīt), *n.* [Gr. *μήλινος*, of the apple or quince, of a quince color (< *μῆλον*, apple, quince), + *-ite*[2].] A yellow clay-like mineral obtained from Amberg, Bavaria.

melinum (mel'i-num), *n.* [NL., < Gr. *μήλινος*, of quince color. See ★*melinite*[2].] In *chem.*, an early name for the metal cadmium.

Meliola (mel-i-ō'lä), *n.* [NL. (Fries, 1825), in allusion to the shape of the perithecia, dim. < Gr. *μῆλον*, apple.] A genus of ascomycetous fungi of somewhat doubtful relationship, placed by some authors in the order *Perisporiales*. The mycelium forms a sooty layer on the surface of the leaves. The perithecia are black and without a regular opening. About 130 species have been described, and they occur chiefly in the warmer regions of the earth. *M. Penzigi* causes the sooty mold of citrous fruits.

Meliola Penzigi.

a, leaf showing the fungus; *b*, perithecium with portions of the mycelium, magnified; *c*, ascus containing spores; *d*, three ascospores, highly magnified. (From Saccardo's "Fungi Italici.")

meliorative (mē'lyo-rā-tiv), *a.* Tending or serving to make better; that tends toward betterment.

Here would come the so-called *meliorative* and pejorative developments in word-meaning, whereby, e.g., steward, "the sty-ward," becomes the title of a great officer of the realm and the name of a line of kings; or, on the other side, sou (Lat. solidus) passes from the name of a gold coin to that of one of proverbially insignificant value. *Encyc. Brit.*, XXXI. 673.

melis (mel'is), *n.* [G., < Gr. *μέλι*, honey.] A kind of lump-sugar made in Germany by warming up the 'massecuite' from the vacuum-pan until most of the small crystals which have begun to form are redissolved, filling into molds and allowing the whole to solidify.

melissic (mē-lis'ik), *a.* [Gr. *μέλισσα*, honey, + *-ic*.] Of or pertaining to honey.—**Melissic acid**, a colorless compound, $C_{29}H_{59}COOH$, prepared by heating melissyl alcohol with calcium and potassium hydroxids at 220° C. It crystallizes in silky, lustrous plates and melts at 90° C. It is the highest known member of the series of normal aliphatic acids.

Melissyl alcohol, a substance found in beeswax.

melissylene (mē-lis'i-lēn), *n.* [Gr. *μέλισσα*, honey, + *-yl* + *-ene*.] Same as ★*melene*.

melitagra (mel-i-tag'ri-ä), *n.* [NL., < Gr. *μέλι*, (*μελιτ-*), honey, + *ἄγρα*, a catching.] Same as *impetigo*.—**Melitagra florescens**, eczema of the face, with yellow, honeycomb-like crusts. *Dunglison*.

melitagria (mel-i-tag'ri-ä), *n.* Same as ★*melitagra*.

melitagrous (mel-i-tāg'rus), *a.* [*melitagra* + *-ous*.] Pertaining to, of the nature of, or suffering from, melitagra or impetigo.

melitis (mē-lī'tis), *n.* [NL., < Gr. *μῆλον*, cheek, + *-itis*.] Inflammation of the cheek.

Melitodes (mel-i-tō'dēz), *n.* [NL., < Gr. *μελιτώδης*, like honey, < *μέλι*(*τ-*), honey, + *εἶδος*, form.] The typical genus of the family *Melitodidæ*. *Verrill*, 1864.

Melitodidæ (mel-i-tō'di-dē), *n. pl.* [NL., < *Melitodes* + *-idæ*.] A family of gorgonacean *Alcyonaria*, having the axis jointed and consisting of alternate portions of calcareous and soft horny substance, and without an epithelial layer around the central rod. It contains several genera, among them being *Melitodes*, *Mopsella*, *Clathraria*, and *Parisis*.

melitriose (me-lit'ri-ōs), *n.* Same as *melitose*, or ★*raffinose*.

melizitase (mel-i-zī'tās), *n.* [*melizit*(*ose*) + *-ase*.] A ferment which causes the inversion of melizitose (a higher polysaccharide).

melizitose (mel-i-zī'tōs), *n.* [Varied from *melezitose*. Cf. *melitose*.] A carbohydrate, of the composition $C_{18}H_{32}O_{16}$, found in various kinds of manna.

mellaginous (me-laj'i-nus), *a.* [NL. *mellago* (*mellagin-*), a substance like honey, + *-ous*.] Of the nature of or resembling honey.

Melletes (me-lē'tēz), *n.* [NL., < Gr. *μελλητής*, loiterer. The fish remains in shallow pools as the tide recedes.] A genus of cottoid fishes known from Alaska.

melligenous (me-lij'e-nus), *a.* [L. *mel* (*mell-*), honey, + *-γενης*, -producing.] Honey-producing; that yields honey. [Rare.]

mellogen (mel'ō-jen), *n.* [L. *mel* (*mell-*), honey, + *-gen*, -producing.] A black, brittle, amorphous compound, $C_{11}H_2O_4.1\frac{1}{2}H_2O$, prepared by the electrolysis of acidified water with gas-carbon electrodes. It does not melt.

Mellone hydrid. Same as ★*cyamellone*.

mellonide (mel'ō-nid), *n.* [*mellone* + *-ide*[1].] The general name, in organic chemistry, of salts of mellone.

mellophanic (mel-ō-fan'ik), *a.* [L. *mel* (*mell-*), honey, + Gr. *-φανης*, < *φαίνεσθαι*, appear.] Noting an acid, a colorless compound, $C_6H_2(\overset{1,2,3,5}{COOH})_4$, prepared by the oxidation of the corresponding tetramethyl-benzene. It forms small, ill-defined crystals and melts at 238° C. Also 1, 2, 3, 5-*benzene-tetra-carboxylic acid*.

melodial (me-lō'di-al), *a.* [*melody* + *-al*[1].] Pertaining to melody; melodic.

melodramatize (mel-ō-dram'a-tīz), *v. t.*; pret. and pp. *melodramatized*, ppr. *melodramatizing*. [*melodrama* (*t-*) + *-ize*.] To make a melodrama of; render melodramatic.

melody, *n.*—**Melody curve**, in *phonetics*, a curve or graphic tracing which represents the melodic course (changes of tonal pitch) of a spoken word or sentence. *Scripture*, Exper. Phonetics, p. 479.

melody-organ (mel'ō-di-ôr″gan), *n.* An organ so constructed that the highest tone of chords can be made louder or more emphatic than the other tones.

melody-string (mel'ō-di-string″), *n.* Same as *chanterelle*, 1.

Melogramma (mel-ō-gram'ä), *n.* [NL. (Fries, 1849), < Gr. *μέλας*, black, + *γράμμα*, anything written.] A genus of pyrenomycetous fungi of the family *Melogrammataceæ*. It has the perithecia more or less buried in a black somewhat cushion-shaped or elevated stroma. The spores are elongate, brown, and several-septate. *M. vagans* is a common species on dead branches of *Carpinus* in Europe and America.

Melogrammataceæ (mel″ō-gram-a-tā'sē-ē), *n. pl.* [NL., < *Melogramma* (*Melogrammat-*) + *-aceæ*.] A family of pyrenomycetous fungi named from the genus *Melogramma* and containing 8 genera.

melolonthin (mel-ō-lon'thin), *n.* [*Melolonth*(*a*) + *-in*[2].] A colorless compound, $C_5H_{12}O_3N_2S$, contained in the cockchafer, *Melolontha vulgaris*. It crystallizes in silky, lustrous plates, and decomposes without melting.

melon[1], *n.*—**Bacteriosis of the melon.** See ★*bacteriosis*.—**Indian melon**, the barrel-cactus, *Echinocactus*. *Jour. Amer. Folk-lore*, April–June, 1902, p. 109. [Colorado.]—**Melon vine-borer.** Same as *squash* ★*vine-borer*.

melon-beetle (mel′o̤n-bē″tl), *n.* Any one of several beetles infesting melon plants, notably the chrysomelids *Diabrotica vittata, D. duodecimpunctata*, and, in the western United States, *D. trivittata*. See ★*cucumber-beetle*.

meloncus (mē-long′kus), *n.*; pl. *meloncī* (-lon′-sī). [Gr. *μῆλον*, cheek, + *ὄγκος*, a mass.] Tumor of the cheek.

melon-fly (mel′o̤n-flī), *n.* A trypetid fly, *Dacus cucurbitæ*, whose larvæ bore into melons, cucumbers, and other cucurbitaceous fruit in Hawaii.

melon-fruit (mel′o̤n-frōt), *n.* The papaw. *Bartlett.*

melongena (mel-on-jē′nä), *n.* [Also *melinzane, melangeno*; < It. *melanzana*.] The egg-plant, *Solanum Melongena*.

melon-hood (mel′o̤n-hu̇d), *n.* A kind of fungus, *Hygrophorus pratensis*. *N. E. D.*

melonist (mel′o̤n-ist), *n.* [*melon*[1] + *-ist*.] One who cultivates melons. *N. E. D.*

melonite (mel′ō-nīt), *n.* [Named from the *Melonese* mine, in Calaveras county, California.] A nickel telluride (perhaps Ni_2Te_3), which occurs in reddish-white granular forms with metallic luster: found in California and also in Colorado.

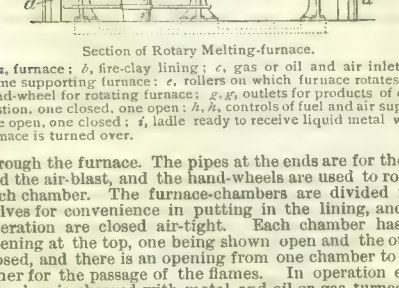
melon-louse (mel′o̤n-lous), *n.* An American plant-louse, *Aphis gossypii*, which damages the leaves and young shoots of melons, as well as of cotton, orange, and many other trees and plants. See cut under ★*cotton-aphis*.

melon-moth (mel′o̤n-môth), *n.* The adult of the melon-caterpillar (which see).

melonry (mel′o̤n-ri), *n.* [*melon*[1] + *-ry*.] A place where melons are grown.

melon-ware (mel′o̤n-wār), *n.* Pottery made in the form and coloring of a small melon. Melon-ware was made extensively in the eighteenth century by Whieldon, Wedgwood, and other English potters.

melon-wood (mel′o̤n-wu̇d), *n.* A yellow Mexican wood resembling sandalwood, used for furniture. *Treas. Bot.*



melophare (mel′ō-fār), *n.* [Gr. *μέλος*, song, + *φάρος*, lighthouse.] A lantern fitted with oiled paper on which music is written, so that it can be read at night, as in serenading.

melo-tragedy (mel-ō-traj′e-di), *n.* [Gr. *μέλο(ς)*, song, + E. *tragedy*.] A musical or operatic tragedy.

> He [Alfiere] composed a sort of drama, altogether new, which he called a *melo-tragedy*. His object here was to unite the music . . . with the grandeur and pathos of tragedy. *J. Hobhouse*, Hist. Illustr. Ch. Har., p. 402.

melotype (mel′ō-tīp), *n.* [Appar. irreg. < Gr. *μέλας*, black, + *τύπος*, type. The name would allude confusedly to the dark room that is not required.] **1.** In *photog.*, a photographic process which permits development at any time and does not require a dark room.—**2.** A picture made by this process.

melting-furnace, *n.* **2.** A gas-furnace used to melt gold, silver, copper, nickel, or other hard metals placed within it in a crucible. For melting lead, type-metal, and other soft metals an iron pot is used instead of a crucible.—**Rotary melting-furnace,** an oil- or gas-furnace having two cylindrical steel chambers lined with fire-clay and placed end to end on rollers for convenience in rotating one or the other, independently, in charging and pouring out the melted metal. The cut shows a lengthwise section

Section of Rotary Melting-furnace.

a, furnace; *b*, fire-clay lining; *c*, gas or oil and air inlet; *d*, frame supporting furnace; *e*, rollers on which furnace rotates; *f*, hand-wheel for rotating furnace; *g, g*, outlets for products of combustion, one closed, one open; *h, h*, controls of fuel and air supply, one open, one closed; *i*, ladle ready to receive liquid metal when furnace is turned over.

through the furnace. The pipes at the ends are for the oil and the air-blast, and the hand-wheels are used to rotate each chamber. The furnace-chambers are divided into halves for convenience in putting in the lining, and in operation are closed air-tight. Each chamber has an opening at the top, one being shown open and the other closed, and there is an opening from one chamber to the other for the passage of the flames. In operation each chamber is charged with metal, and oil or gas turned on at one end. The flame of the burning gas melts the metal in the first chamber, and the waste heat passes through to the second chamber, heating the metal in part and escaping at the top. The illustration shows two chambers at this point of the operation. The gas is then turned off, the cover of the first chamber is removed, and the chamber is turned over until the liquid metal pours out into the ladle on the floor. The chamber is turned back and recharged, the top being left open. The top of the second chamber is then closed and the gas is turned on at that end, when the whole process is reversed and, by thus alternating the two chambers, the work of the furnace becomes practically continuous.

melting-hole (mel′ting-hōl), *n.* A furnace for melting steel in the crucible process. *Phillips and Bauerman*, Elements of Metallurgy, p. 348.

mem (mām), *n.* [Heb. *mēm* (*mäyim*, waters), Samaritan *mēm*, Syr. Ar. *mīm*, etc.; in Gr. *μῶ*, later *μῦ*. See *M*.] The thirteenth letter (מ) in the Hebrew alphabet, corresponding to the English *m*. Its numerical value is XL.

mem. An abbreviation (*b*) [*cap.*] of *member*; (*c*) of the Latin *memento*, remember; (*d*) of *memoir*.

member, *n.* **4.** (*f*) In the classification of the sedimentary rocks adopted by the United States Geological Survey, one of the component elements of a formation.

5. In *Eng. law*, a place where a custom-house has been kept of old time, with officers or deputies in attendance. Such localities were lawful places of exportation or importation. *Bouvier*, Law Dict.

memberment (mem′bėr-ment), *n.* [*member* + *-ment*.] The manner of arrangement of parts in a complex body. *Buck*, Med. Handbook, VII. 313.

membrana (mem-brā′nä), *n.*; pl. *membranæ* (-nē). [L.] Same as *membrane*.—**Membrana flaccida,** the tympanic membrane where it passes over the notch of Rivini.—**Membrana granulosa,** a layer of yellow granules lining the Graafian follicle.—**Membrana propria,** one of various membranes which cover or line organs or cavities, such as the pia mater, the membrane covering the cartilage of the Eustachian tube, a fibrous addition to the periosteum of the sternum, etc.—**Membrana putaminis,** the membrane lining the inner surface of the shell of a bird's egg.—**Membrana reticulata,** a finely reticulate membrane which covers the organ of Corti in the ear.—**Membrana serosa.** (*a*) Same as *serous membrane*. (*b*) Same as *false amnion*.—**Membrana tympani.** Same as *tympanic membrane* (which see, under *membrane*).

membranate (mem′brā-nāt), *a.* [NL. *membranatus*, < *membrana*. See *membrane*.] Having a membrane or membranes; covered with membranes. *Robson*, Brit. Flora, iii. 7.

membranated (mem′brā-nā-ted), *a.* Same as ★*membranate*.

membrane, *n.*—**Acherson's membrane,** a sheath of casein which incloses the milk-globules, preventing their coalescence.—**Alar membrane.** See ★*alar*.—**Basilar membrane of the eye.** See ★*basilar*.—**Bowman's membrane.** Same as *Bowman's* ★*layer*.—**Cargile membrane,** a thin animal membrane, such as gold-beaters' skin, employed to prevent adhesions of opposed raw surfaces after an operation. *Med. Record*, March 7, 1903, p. 387.—**Dermal membrane,** in sponges, the outer porous skin.—**Descemet's membrane.** Same as *membrane of Demours*.—**Drum membrane.** Same as *tympanic membrane*.—**Huxley's membrane** or **layer,** a portion of the inner root-sheath of the mammalian hair which consists of polygonal cells with clearly defined nuclei.—**Membrane of Duddell.** Same as *membrane of Demours*.—**Osborne membrane,** in lepidopterous larvæ, the stretched part of the membrane around the rectum and in the anal legs. It is shed with the last larval skin in the transformation to pupa. Also called *retaining membrane*.—**Peripodal membrane,** in *entom.*, that portion of the hypodermis of holometabolic insects which lines the peripodal cavity.—**Peritoneal membrane,** in tracheate arthropods, the epithelial layer of the tracheæ. Also called *ectotrachea*.—**Peritrophic membrane,** a chitinous tube within the alimentary canal of many insects which eat solid indigestible food: probably a secretion of the chylific stomach.—**Reissner's membrane.** See *membrane of Reissner*.—**Retaining membrane.** Same as *Osborne* ★*membrane*.—**Reticulate membrane,** the net-like membrane covering the organ of Corti in the ear.—**Shrapnell's membrane.** Same as ★*membrana flaccida*.—**Tympaniform membrane,** the membrana tympaniformis, which takes part in the formation of the syrinx in birds and is stretched between the lower bronchial half-rings. It is described as *membrana interna* and *membrana externa*, according to its position on the internal or external side of the bronchus.—**Virginal membrane.** Same as *hymen*[2].—**Vitreous membrane.** Same as *membrane of Bruch*.

membrane-pipe (mem′brān-pīp), *n.* In *phonet.*, a pipe with membranous reeds; a tube across the end of which membranes are stretched: used to illustrate the action of the vocal cords.

> *Membrane pipes* . . . form convenient instruments for illustrating the effect of tension on the pitch of the membrane, but are decidedly liable to mislead in implying that the vocal bands vibrate like membranes and that the tension is obtained wholly by bringing the points of support further apart. *Scripture*, Exper. Phonetics, p. 257.

membranin (mem′brā-nin), *n.* [*membrane* + *-in*[2].] A hyalogen (possibly a glucoalbumin) found in Descemet's membrane and the capsule of the crystalline lens.

Membranipora (mem-brā-nip′ō-rä), *n.* [NL., < L. *membrana*, membrane, + Gr. *πόρος*, pore.] The typical genus of the family *Membraniporidæ*. *Blainville*.

Membraniporidæ (mem″brā-ni-pō′ri-dē), *n. pl.* [*Membranipor(a)* + *-idæ*.] A family of chilostomatous ectoproctous polyzoans, having the zoarium calcareous or membranocalcareous, the zoœcia forming an irregular continuous expansion, or in linear series with raised margins, and more or less membranous in front. It contains the genera *Membranipora, Electra, Biflustra, Amphiblestrum, Megapora*, and *Foveolaria*.

membranoid (mem′brā-noid), *a.* [*membran(e)* + *-oid*.] Resembling a membrane; membraniform.

membrette (mem-bret′), *n.* [F., < *membre*, member.] An alette; also, less accurately, any small shallow pilaster.

Memorandum clause. See ★*clause*.

memory, *n.*—**Affective memory.** See ★*affective*.—**Associative memory,** in *physiol.*, that capacity of the organism in virtue of which a given stimulus produces not only the effects to which it is adequate, but also the effects of other stimuli which formerly affected the organism coincidentally with the given stimulus: sometimes regarded as a criterion of the existence of mind in the organism stimulated.—**Emotional memory,** affective memory.—**Functional memory,** in *psychol.*, a memory connected always with the exercise of some bodily function and not meditated by free ideas. See the extract.

> The second category contains those animals possessing primitive instincts . . . and *functional memory*, i. e., memory connected always with some bodily function. The animal perceives, in the external world, the conditions of satisfying the primary instincts; but this consciousness is strictly connected with the return of functional need, and leaves no independent image in the nervous organism. *Amer. Jour. Psychol.*, XII. 264.

Intellectual memory, in *psychol.*, memory of sensations and of their derivatives: opposed to ★*affective memory*. *T. Ribot* (trans.), Psychol. of Emotions, p. 163.—**Kinesthetic memory,** in *psychol.*: (*a*) Memory of bodily movement. Such memory may be mediated by images of sight, hearing, etc., or by kinesthetic images. *Baldwin*, Dict. of Philos. and Psychol., I. 599. (*b*) Memory as mediated by kinesthetic images in the narrower sense.—**Mediate memory.** Same as *mediate* ★*association*. *W. Wundt* (trans.), Outlines of Psychol., p. 243.—**Memory apparatus,** in *psychol.*, an apparatus for the study of memory and association which consists, in principle, of a screen with a window, behind which pass at regular intervals series of words, pictures, nonsense-syllables, etc.—**Memory-consciousness,** in *psychol.*, mind as it is when we are remembering something; the disposition or arrangement of mind during an act or process of recall. *E. B. Titchener*, Exper. Psychol., I. i. 1.—**Motor memory,** in *psychol.*, memory by means or in terms of motor or kinesthetic images. *Amer. Jour. Psychol.*, XI. 7.—**Muscular memory.** Same as *motor* ★*memory*. *F. Galton*, Human Faculty, p. 106.—**Pitch memory,** in *psychol.*, memory of tonal pitch; specifically, the ability accurately to recall the pitch of a tone or clang, or the key of a melody. *Amer. Jour. Psychol.*, XII. 409.

memory-cell (mem′ō-ri-sel), *n.* A special cortical cell supposed to be the seat of the memory-image of a sensation: opposed to *sensory cell*.

> We assume, therefore, that the sensation of the rose is produced in certain ganglion-cells, and that these numerous sensory cells transmit their excitation further to one other ganglion-cell, a *memory-cell*. *T. Ziehen* (trans.), Introd. to Physiol. Psychol., p. 156.

memory-idea (mem′ō-ri-ī-dē″ä), *n.* In *psychol.*, a reproduced idea; an idea of a remembered object or event.

> *Memory-ideas* are aroused by sense-perceptions, and again interrupted by new impressions. *W. Wundt* (trans.), Human and Animal Psychol., p. 282.

memory-image (mem′ō-ri-im″āj), *n.* In *psychol.*, the reproduction in kind of a sensation or sense-perception; the sensation or sense-perception as it is pictured in memory.

> *Memory-images*, it is true, cannot be directly aroused through external sense impressions, but follow them after a longer or shorter interval. *W. Wundt* (trans.), Outlines of Psychol., p. 22.

Memphite, *n.* **2.** The language now spoken in the neighborhood of ancient Memphis, and forming one of the main divisions of Coptic; also, formerly, the adjacent Coptic dialect now called *Bohairic*.

Memphitic empire, the ancient empire or earliest period of Egyptian history, from the first to the tenth dynasties inclusive: characterized, especially in the fourth and fifth dynasties, by the realism and dignity of its sculpture and the importance of its monuments, such as the Great Sphinx and the great pyramids of Gizeh.

menachite (men′a-kīt), *n.* [*Menachan*, prop. *Menaccan*, a locality in Cornwall, + *-ite*[2].] An imperfectly examined ingredient in black magnetic sand, later identified by Klaproth with the metal titanium which he discovered.

menagerist (me-naj′ę-rist), *n.* One who forms, owns, or exhibits a menagerie, or collection of wild animals.

Menandrian (me-nan′dri-an), *n.* A member of one of the most ancient branches of the Gnostics, so called from the leader, Menander, thought to have been a disciple of Simon Magus. He asserted that he was the Messiah, offering salvation through baptism in his name, and promising immortality to his followers.

mend, *v. t.*—**To mend the furl.** Same as *to mend* ★*sail.*

mendee (men′dē), n. [Also *mindy, mendy;* Hind. *mendhi.*] The plant *Lawsonia alba,* a variety of henna. It affords the henna dye extensively used in Mohammedan countries for dyeing the hands and the hair. *Yule and Burnell.*

Mendelian (men-dē′li-an), *a.* [*Mendel* (see def.) + *-ian.*] Of or pertaining to Gregor Johann Mendel (1822–84), an Austrian naturalist and ecclesiastic, or to the theoretical interpretations of his experiments in heredity or of others of like character: as, the *Mendelian* law of heredity. See *ancestral* ★*inheritance.*

With the discovery of the *Mendelian* principle the problem of evolution passes into a new phase.
Bateson and Saunders, Rep. Evol. Com. Roy. Soc., 1902, [L. 125.

Mendelian hybrid. See ★*hybrid.*

Mendelianism (men-dē′li-an-izm), *n.* Same as ★*Mendelism.*

The " purity of the germ " idea applies quite as well to the law of ancestral inheritance as to *Mendelianism* and is in harmony with it. *Science,* Feb. 5, 1904, p. 214.

Mendelism (men′del-izm), *n.* [*Mendel* + *-ism.*] The theory of hybridity and heredity proposed by Gregor Johann Mendel (1822–84) and revived in later years by De Vries, Bateson, and others. See *ancestral* ★*inheritance.*

The breeder wants to preserve the desirable characters or traits and eliminate the undesirable ones, but under the strict interpretation of *Mendelism* this is difficult.
Science, March 20, 1903, p. 451.

Mendelize (men′del-īz), *v. i.*; pret. and pp. *Mendelized,* ppr. *Mendelizing.* To conform to Mendel's law of ancestral inheritance. See *ancestral* ★*inheritance.*

We do not know what plants will *Mendelize* until we try. *L. H. Bailey,* Plant Breeding, p. 171.

Mendelssohnian (men-del-sō′ni-an), *a.* In *music,* pertaining to or in the style of the German composer Felix Mendelssohn-Bartholdy (1809–47).

mendole (mañ-dōl′), *n.* [F. *mendole,* It. *mendole.*] A small Mediterranean fish, *Smaris gagarella,* or some similar species: formerly called *cackerel.*

meneclinoid (men-e-klin′oid), *n.* [Gr. *μήνη,* the moon, + *κλίνειν,* bend, + *-oid.*] In *math.,* a catenary.

Menelaion (men-e-lā′yon), *n.* [Gr. *Μενελάϊον, Μενελάειον,* < *Μενέλαος,* Menelaus.] A temenos or shrine in honor of Menelaus, the Homeric hero. The Menelaion at Sparta was excavated in 1889–90.

menelcosis (men-el-kō′sis), *n.* [NL., < Gr. *μῆνες,* menses, + *ἕλκωσις,* ulceration.] Bleeding from an ulcer as a form of vicarious menstruation.

Menevian (me-nē′vi-an), *a.* [*Menevia,* the medieval Latin name of St. David's.] Of or pertaining to St. David's, in Wales.—**Menevian group.** See ★*group*[1].

M. Eng. An abbreviation of *Master of Engineering.*

menhidrosis (men-hi-drō′sis), *n.* Same as ★*menidrosis.*

Menidia (mē-nid′i-a), *n.* [NL., < Gr. *μήν,* moon, + dim. *-ιδιον.*] A genus of atherinoid fishes, of numerous species, all American, some of them entering or inhabiting fresh water: known as *silversides.*

menidrosis (men-i-drō′sis), *n.* [NL., < Gr. *μῆνες,* menses, + *ἱδρώς,* sweat.] Sweating of blood as a form of vicarious menstruation.

meningic (mē-nin′jik), *a.* Same as *meningeal.*

meninginа (men-in-jī′nä), *n.* [NL., < Gr. *μῆνιγξ,* membrane, pia mater.] The pia mater and cerebral layer of the arachnoid regarded as one membrane.

meninginitis (mē-nin-ji-nī′tis), *n.* [NL., < *meningina* + *-itis.*] Inflammation of the meningina; leptomeningitis.

meningism (mē-nin′jizm), *n.* [Gr. *μῆνιγξ,* membrane, + *-ism.*] A morbid condition marked by the symptoms of meningitis, but without the actual presence of that disease; pseudomeningitis.

Meningitic streaks. Same as *taches cérébrales,* which see under *tache*[4].

meningitis, *n.*—**Basilar meningitis,** inflammation of the membranes covering the base of the brain: usually of tuberculous origin.—**Cerebral meningitis,** inflammation of the membranes of the brain.—**Cerebrospinal meningitis.** (*a*) See *cerebrospinal* and *meningitis:* also see *epidemic cerebrospinal* ★*meningitis.* (*b*) See ★*forage-poisoning.*—**Epidemic cerebrospinal meningitis.** See *meningitis.* It was first described in 1805, since which time several severe epidemics of the disease have occurred in various parts of the world. The disease is caused by a micro-organism, *Diplococcus intracellularis meningitidis,* or Weichselbaum's diplococcus, present in the cerebrospinal fluid. The death-rate from the disease is high, and even if recovery takes place incurable deafness, blindness, paralysis, or mental feebleness may be left behind. The treatment that has given the best results is by means of hot baths and the administration of large doses of sodium salicylate. Good results have been obtained by the injection of an antitoxic serum. Benefit often follows the withdrawal of a portion of the cerebrospinal fluid through a puncture in the lumbar region of the spine.—**Otitic meningitis,** involvement of the membranes of the brain in an inflammatory process arising in the middle ear.—**Spinal meningitis,** inflammation of the membranes of the spinal cord.

meningocephalitis (mē-ning″gō-sef-a-lī′tis), *n.* [NL., < Gr. *μῆνιγξ,* membrane, + *κεφαλή,* head, + *-itis.*] Inflammation of the cerebral membranes and adjacent portion of the brain.

meningocerebritis (mē-ning″gō-ser-ē-brī′tis), *n.* [NL., < Gr. *μῆνιγξ,* membrane, + L. *cerebrum,* brain, + *-itis.*] Same as ★*meningocephalitis.*

meningococcic (mē-ning″gō-kok′sik), *a.* [NL. *meningococc(us)* + *-ic.*] Pertaining to or derived from meningococci.

In the foregoing table there are given the results of the tests with seven different antigonococcic serums and a *meningococcic* serum in conjunction with the various homologous extracts and two control extracts.
Jour. Med. Research, Dec., 1907, p. 229.

meningococcus, *n.* See ★*diplococcus intracellularis meningitidis* (with cut).

meningo-encephalitis (mē-ning″gō-en-sef-a-lī′tis), *n.* Same as ★*meningocephalitis. Jour. Trop. Med.,* July, 1903, p. 202.

meningo-encephalocele (mē-ning″gō-en-sef′-a-lō-sēl), *n.* [Gr. *μῆνιγξ,* membrane, + *ἐγκέφαλος,* brain, + *κήλη,* tumor.] Hernia of the brain with its membranes.

meningo-encephalomyelitis (mē-ning″gō-en-sef″a-lō-mī-e-lī′tis), *n.* [NL., < Gr. *μῆνιγξ,* membrane, + *ἐγκέφαλος,* brain, + *μυελός,* marrow, + *-itis.*] Inflammation of the brain and spinal cord with their membranes.

meningomalacia (mē-ning″gō-ma-lā′si-ä), *n.* [NL., < Gr. *μῆνιγξ,* membrane, + *μαλακια,* softness.] Softening of any membrane.

meningomyelitis (mē-ning″gō-mī-e-lī′tis), *n.* [NL., < Gr. *μῆνιγξ,* membrane, + *μυελός,* marrow, + *-itis.*] Inflammation of the spinal membranes and more or less of the substance of the spinal cord.

meningomyelocele (mē-ning-gō-mī′e-lō-sēl), *n.* [Gr. *μῆνιγξ,* membrane, + *μυελός,* marrow, + *κήλη,* tumor.] Spina bifida in which the tumor consists of both membranes and nervous substance.

meningorrhagia (mē-ning-gō-rā′ji-ä), *n.* [NL., < Gr. *μῆνιγξ,* membrane, + *-ραγια,* < *ῥηγνύναι,* break.] Hemorrhage from the membranes of the brain or spinal cord.

meningorrhea (mē-ning-gō-rē′ä), *n.* [NL. *meningorrhoea,* < Gr. *μῆνιγξ,* membrane, + *ῥοία,* a flow.] Same as ★*meningorrhagia.*

menischesis (mē-nis′kē-sis), *n.* [NL., < Gr. *μῆνες,* menses, + *σχέσις,* retention.] Failure of menstruation to establish itself at puberty.

Meniscium (mē-nis′i-um), *n.* [NL. (Schreber, 1791), < Gr. *μηνίσκος,* a crescent, alluding to the arcuate connecting veins.] A genus of coarse polypodiaceous ferns resembling various species of *Goniopteris* and *Dryopteris* and having fronds 1–7 feet high, usually once pinnate. The primary pinnate veins of the pinnæ are uniformly connected by opposing veinlets arcuately joined in pairs, each with an excurrent free veinlet, the elliptical or somewhat curved sori being borne at the point of union. The species, about 10 in number, are mostly tropical, one (*M. reticulatum*) occurring in subtropical Florida.

Meniscotheriidæ (mē-nis″kō-thē-rī′i-dē), *n. pl.* [*Meniscotherium,* the type genus, + *-idæ.*] A family of ungulate mammals, belonging to the suborder *Condylarthra,* which comprises species of small size with lophodont molars. All are extinct, and their remains are found in the Lower Eocene. *Cope,* 1882.

meno (mā′nō), *adv.* [It., < L. *minus,* less: see *minus.*] In *music,* less: as, *meno* allegro, less quick; *meno* forte, less loud; *meno* mosso, slower; etc.

Menognatha (mē-nog′na-thä), *n. pl.* [NL., irreg. < Gr. *μένειν,* remain, + *γνάθος,* jaw.] In Brauer's classification of insects, a group of superordinal rank which includes those forms which feed by means of jaws both as young and as adults.

menognathous (mē-nog′na-thus), *a.* Pertaining to, or having the characters of, the *Menognatha.*

Menominee (me-nom′i-nē), *n.* [From a local name, one of many derived from the name of the *Menominee* Indians of the region mentioned.] 1. That section of the Huronian system which constitutes the Menominee iron range along the river of this name and on the border of Michigan and Wisconsin. It consists of metamorphosed sedimentary and eruptive rocks, and is separable into a lower and an upper portion.—2. *Coregonus quadrilateralis,* one of the whitefishes found in the Great Lakes and north to Alaska.

Other important items [of fishes taken from Lake Michigan] were "*Menominee*" worth $14,307, and bluefin worth $12,794, all other products being represented by lower values. *Rep. U. S. Fish Com.,* 1902, p. 597.

menophania (men-ō-fā′ni-ä), *n.* [NL., < Gr. *μῆνες,* menses, + *-φανια,* < *φαίνεσθαι,* appear.] The appearance of menstruation at puberty.

menorah (me-nō′rä), *n.* [Heb. *menōrāh,* < *nūr,* light.] A candlestick: specially applied to the seven-branched candlestick in the synagogue.—**Menorath ha-zahab,** the golden candlestick in the Tabernacle (Ex. xxv. 31).

Menorah.

Menorhyncha (men-ō-ring′kä), *n. pl.* [NL., irreg. < Gr. *μένειν,* remain, + *ῥύγχος,* snout, bill.] In Brauer's classification of insects, a group of superordinal rank which includes those forms which take food by suction both as young and as adults.

menorhynchous (men-ō-ring′kus), *a.* Of or pertaining to the *Menorhyncha.*

menoschesis (mē-nos′kē-sis), *n.* Same as ★*menischesis.*

menosepsis (men-ō-sep′sis), *n.* [NL., < Gr. *μῆνες,* menses, + *σῆψις,* putrefaction.] Decomposition of retained menstrual discharges; also, blood-poisoning resulting therefrom.

menoseptic (men-ō-sep′tik), *a.* Pertaining to or affected with menosepsis.

Menospora (mē-nos′pō-rä), *n.* [NL., < Gr. *μήνη,* moon, + *σπορά,* seed (spore).] The typical genus of the family *Menosporidæ. Léger,* 1892.

Menosporidæ (men-ō-spor′i-dē), *n. pl.* [NL., < *Menospora* + *-idæ.*] A family of gregarines which consists of solitary forms having the epimerite on a long neck and crescent-shaped spores. It contains the genera *Menospora* and *Hoplorhynchus.*

menostasia (men-os-tā′si-ä), *n.* [NL.] Same as *menostasis.*

menostatic (men-os-tat′ik), *a.* [*menostasis.*] Pertaining to or marked by menostasis, or retention of the menses.

mensur. An abbreviation of *mensuration.*

mensuralist (men′sū-ral-ist), *n.* [*mensural* + *-ist.*] A composer of measurable music.

The figures adopted by earlier *mensuralists.*
Woodbridge, Oxf. Hist., I. 132. *N. E. D.*

mental[1], *a.*—**Law of mental growth,** in Wundt's psychology, one of the three laws of mental development, coördinate with the laws of heterogony of ends and of development toward opposites.

The *law of mental growth* is an application, to more comprehensive mental syntheses, of the law of psychical resultants, which declares that every psychical compound shows attributes which, while intelligible from the attributes of its elements, are by no means the mere sum of the attributes of these elements.
W. Wundt (trans.), Outlines of Psychol., p. 369.

Mental physiology, physiological psychology; psychology approached by way of physiology, or developed in connection with physiological facts and laws. W. B.

Carpenter wrote a "Principles of Mental Physiology, with their applications to the training and discipline of the mind, and the study of its morbid conditions," which reached its sixth edition in 1888. The phrase has now fallen into disuse.—**Mental science.** See ★*science*.

mentalism (men'tal-izm), *n.* [*mental*[1] + *-ism*.] 1. Mental activity or process.

Deranged nervous function—a deranged *mentalism*, if I may be permitted to coin such a word—of an epileptic or allied nature.
Maudsley, Mental Dis., vii. 243. *N. E. D.*

2. The metaphysical opinion that matter is a mode of mind or consciousness; the opposite of materialism.

It may be held broadly that 'matter in ultimate analysis is a mode of mind or consciousness,' without raising the question of a conscious self or subject. . . . Such view I think is often called Idealism. I propose to label it '*Mentalism*' in broad antithesis to 'Materialism.' If, again, the Mentalist's ontology expressly excludes the notion of self or subject . . . then perhaps we may designate him as an atomistic *Mentalist*.
Sidgwick, in Mind, Jan., 1900, p. 20. *N. E. D.*

Menthaceæ (men-thā'sē-ē), *n. pl.* [NL. (Ward, 1905), < *Mentha* + *-aceæ*.] A great family of dicotyledonous sympetalous plants of the order *Polemoniales*, the mint family, typified by the genus *Mentha*, the mint genus. It is characterized primarily by a labiate corolla, whence it was called *Labiatæ* by Bernard Jussieu in laying out the garden of the Trianon—a name which has been generally adopted and is still widely used, although not based on that of any genus of the family. See *Labiatæ*.

menthenol (men'thē-nol), *n.* Same as ★*terpineol*.

menthenone (men'the-nōn), *n.* [*Mentha* + *-en* + *-one*.] A colorless ketonic compound, $C_{10}H_{16}O$, contained in peppermint-oil and prepared by the action of dilute hydrochloric acid on nitrosomenthene. It boils at 206.3° C. and has a well-marked odor of peppermint.

menthiodol (men-thī'ō-dol), *n.* [*menth(ol)* + *iodol*.] Iodol containing one per cent. of menthol.

menthophenol (men-thō-fē'nol), *n.* [*menth(ol)* + *phenol*.] An antiseptic and anesthetic fluid made by melting together 3 parts of menthol and 1 part of phenol: generally used very much diluted with water.

menticulture (men'ti-kul-tūr), *n.* [L. *mens* (*ment-*), mind, + *cultura*, culture. See *culture*.] The cultivation or training of the mind.

mento-anterior (men″tō-an-tē'ri-ọr), *a.* [L. *mentum*, chin, + *anterior*, before.] Noting a position of the fetus, during labor, in which its chin points anteriorly in relation to the body of the mother.

mento-iliac (men-tō-il'i-ak), *a.* [L. *mentum*, chin, + E. *iliac*.] Noting a position of the fetus, during labor, in which its chin points to one or the other iliac fossa of the mother.

mentolabial (men-tō-lā'bi-ạl), *a.* [L. *mentum*, chin, + *labium*, lip, + *-al*[1].] Relating to both the chin and the lips.—**Mentolabial furrow**, the hollow just above the chin.

mentoposterior (men″tō-pos-tē'ri-ọr), *a.* [L. *mentum*, chin, + *posterior*, behind.] Noting a position of the fetus, during labor, in which its chin is directed posteriorly in relation to the body of the mother.

menyanthaceous (men″i-an-thā'shius), *a.* Belonging to the plant family *Menyanthaceæ*.

menyanthol (men-i-an'thol), *n.* [*menyanth(in)* + *-ol*.] A colorless volatile oily compound, C_8H_8O, prepared by the hydrolysis of the glucoside menyanthin. It has an odor like that of oil of bitter almonds.

M. E. P. An abbreviation of *mean effective pressure*.

Mephistophelic (mef″is-tō-fel'ik), *a.* Same as *Mephistophelian*.

Mephitic air. See ★*air*[1].

mer. An abbreviation of *meridian*.

meralgia (mē-ral'jiạ), *n.* [NL., < Gr. *μηρός*, the thigh, + *ἄλγος*, pain.] Pain in the thigh.—**Meralgia paræsthetica**, various disagreeable and painful sensations in the skin of the thigh.

Meramec (mer'a-mek), *n.* A name suggested by E. O. Ulrich, from the Meramec river in Missouri, where these strata outcrop, for a group of Lower Carboniferous limestones of the upper Mississippi valley, embracing the St. Louis, Spergen Hill, and Warsaw of earlier writers.

merc. An abbreviation (*a*) of *mercurial*; (*b*) of *mercury*.

mercantil, *a.* A simplified spelling of *mercantile*.

Mercantile agency. See ★*agency*.

mercaptal (mėr-kap'tạl), *n.* [*mercapt(an)* + *al(dehyde)*.] The name of a class of compounds containing the group $\frac{R}{H}>C(SAlk)_2$, where R is any hydrocarbon radical and Alk is an alkyl-group such as methyl or ethyl. The compounds are oils with a highly offensive smell, and are also called *thioacetals*. They are related to mercaptan in the same way that the acetals are to alcohol.

mercapto-. A combining form used in organic chemistry to denote a derivative of a mercaptan, that is, a compound containing the group R S, where R is an alkyl radical such as methyl or ethyl.

mercaptol (mėr-kap'tol), *n.* [*mercapt(an)* + *-ol*.] The name in organic chemistry of a class of compounds containing the group $\frac{R}{R}>C(SAlk)_2$, where R is any hydrocarbon radical and Alk is an alkyl-group such as methyl or ethyl. The compounds are prepared by the action of ketones on mercaptans and are related to the mercaptols in the same way that acetals are to acetoles or as aldehydes are to ketones.

mercapturic (mėr-kap-tū'rik), *a.* [*mercapt(an)* + *-uric*.] Used only in the following phrase.—**Mercapturic acid**, a name (introduced by Baumann) of certain complex substances which appear in the urine of dogs after they are fed with hyalogen substitution-products of benzol, the aromatic radical appearing in combination with a sulphur-group of the nature of cystein.

mercatorial[1] (mėr-kạ-tō'ri-ạl), *a.* [L. *mercatorius*, mercantile.] Mercantile; of or pertaining to merchants or commerce. [Now rare.]

Mercatorial[2] (mėr-kạ-tō'ri-ạl), *a.* [From *Mercator* (Lat. for Gerhard *Kremer*, 1512–1594), a Flemish geographer, and the inventor of a system of map-projection extensively used by navigators.] Of or pertaining to Mercator's projection (which see, under *projection*) or to Mercator's chart (which see, under *chart*).

The *Mercatorial* bearing between two stations is the mean of their reciprocal true bearings.
Encyc. Brit., XXXIII. 99.

Merced series. See ★*series*.

mercenaria (mėr-se-nā'ri-ạ), *n.* The specific name of the quahog, or hard-shell clam, adopted to some extent as a book-name.

mercerization, *n.* The most valuable application of mercerization at the present time is the lustering of cotton yarn, which is accomplished by subjecting the yarn under tension to the action of caustic-soda solution and then thoroughly removing the caustic soda by washing before the tension is relieved. Egyptian or sea-island cotton is best suited for the purpose, and with yarns of these cottons a high silky luster may be obtained. Two-ply yarn is commonly used, and the nature of the twist of the yarn has been found to have more or less influence upon the result.

merch (mėrch), *n.* Same as ★*march*[4].

merchandizable (mėr'chạn-dīz-ạ-bl), *a.* Suited for being classed as merchandise; marketable.

Merchant mill. See ★*mill*[1].

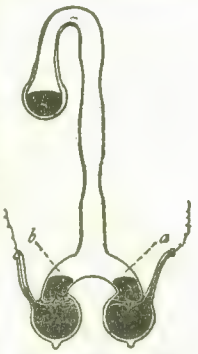
Merchantable volume. See ★*volume*.

merchanteer (mėr-chạn-tēr'), *n.* A merchant vessel: a merchantman. [Rare.]

merchanter† (mėr'chạn-tėr), *n.* A merchantman.

merchet, *n.* Same as *marchet*.

Mercurean, *a.* and *n.* Same as *Mercurian*.



Mercurian, *a.* **II.** *n.* 1. In *astrol.*, one born under the influence of the planet Mercury. *N. E. D.*—2. An (imaginary) inhabitant of the planet Mercury.

Mercuric iodide. See ★*iodide*.—**Mercuric oxid,** red oxid of mercury (HgO), the substance, early known as calx of mercury, from which Priestley, in 1774, first obtained oxygen in separate form.

mercurius (mėr-kū'ri-us), *n.* [ML. See *Mercury*.] The metal mercury.—**Mercurius philosophorum** (Mercury of the philosophers, that is alchemists), a name used in the fourteenth and fifteenth centuries to denote the essence of metallic character, or that which should have the power of imparting metallic character in the highest degree to base metals.

Mercury, *n.*—**Black mercury,** the poison-ivy, *Rhus radicans*.—**Black oxid of mercury,** mercurous oxid, Hg_2O.—**Green iodide of mercury.** See ★*iodide*.—**Inch of mercury.** See ★*inch*[1].—**Maiden's mercury,** the girl's mercury.—**Mercury arc.** See *electric* ★*arc*.—**Mercury-arc rectifier.** Same as *mercury-vapor* ★*rectifier*.—**Mercury lamp,** a lamp the light of which is derived from an electric discharge through mercury vapor

in vacuo. In its original form the mercury lamp was devised by Professor Arons of Berlin (1892). The Arons lamp consists of a vacuum-tube with mercury terminals, of the form shown in Fig. 1. When the tube is carefully pumped out and an arc is established in the vacuum between the terminals *a* and *b*, a strong light of characteristic greenish color is emitted. To establish the arc the lamp is tipped until the mercury flows through the bend of the tube from one leg to the other, thus forming a temporary bridge for the path of the current, which is immediately broken upon restoring the lamp to its vertical position. Much heat is developed by the electric arc in such lamps, particularly at the cathode, the surface of which emits more light than any other portion of the arc, and on this account it is difficult to maintain such lamps in long-continued operation without breaking the glass. To overcome this difficulty, and to render the mercury lamp more suitable for certain spectroscopic work requiring great intensity of light, Lummer modified the form of the tube as shown in Fig. 2 and surrounded the entire tube, with the exception of the flattened ends, *w*, *w'*, which serve as windows, with a metallic case through which a flow of cold water is maintained. Another mercury lamp was devised by Abbe of Jena, for the special purpose of testing lenses, the form being such as to throw the light of the arc vertically upwards. An interesting and useful modification is that of Fabry and Perot, Fig. 3, in which the cathode consists of mercury contained in an inner tube, *c*. The mercury of the anode fills the annular space between this tube and the exterior of the lamp. The Cooper-Hewitt lamp, a form of mercury arc-lamp for commercial lighting, consists essentially of a straight tube of glass about 5 centimeters in diameter and 40 centimeters long. One terminal is formed by mercury contained in the bottom of the tube and the other terminal, in the top of the tube, is of iron. The arc is established by tipping the lamp, until the mercury flows from the bulb in a thin stream the entire length of the tube, and then restoring it to its vertical position. The light, which fills the entire tube, is greenish in color, as in all mercury lamps, but possesses an actinic intensity of great value for photographic purposes. In some commercial mercury lamps an attempt has been made to remedy the lack of red in the light of the mercury arc by placing in the same circuit incandescent lamps with carbon filaments. The light of all mercury arc-lamps differs from that commonly used for purposes of illumination in having a bright-line spectrum, that of mercury vapor. The strongest line in this spectrum is the green line of wave-length 5461, to which the characteristic color of the light is due. The only other visible lines are a yellow pair at 5770–90 and violet lines of wave-lengths 4358 and 4047. (See Fig. 4.) There is also a strong ultra-violet triplet, 3650–55–63, and to this, together with the violet lines, the extraordinary actinic intensity of the mercury lamp is due. The infra-red spectrum of the mercury arc consists of a group of lines lying between 1 μ and 2 μ and another group between 4 μ and 6 μ. The intensity of this region as compared with that of the visible spectrum is, however, much smaller than in the case of the continuous spectra of sources of light usually employed for illumination and the radiant efficiency of the mercury lamp is therefore comparatively high, probably about 20 per cent. By substituting for the glass vacuum-tube a tube of fused quartz, Hereaus has succeeded in producing a mercury lamp capable of sustaining very high temperatures and of furnishing light the intrinsic brightness of which far exceeds that of the other forms. This lamp, on account of the greater transparency for ultra-violet rays of the quartz tube, is especially valuable in certain lines of work in which an intense ultra-violet spectrum is demanded.—**Mercury perchlorid.** Same as *corrosive sublimate*.—**Mercury-vapor rectifier.** See ★*rectifier*.—**Scotch mercury,** the foxglove.—**Siemens mercury unit.** See ★*unit*.

Fig. 1. Arons Lamp.

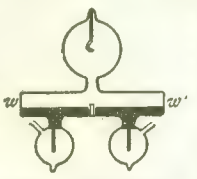


Fig. 2. Lummer Lamp.

Fig. 3. Lamp of Fabry and Perot.

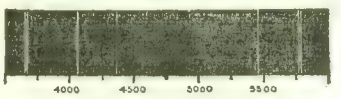

Fig. 4. Spectrum of the Mercury Arc.

mercury-break (mėr'kū-ri-brāk″), *n.* An interrupter for induction-coils, in which mercury is used. See *interrupter* (*a*).

mercury-spark (mėr'kū-ri-spärk″), *n.* See ★*spark*[1].

mercury-switch (mėr'kū-ri-swich″), *n.* See ★*switch*.

mercury-trough (mėr'kū-ri-trôf″), *n.* In *chem.*, a trough (generally of porcelain, cast-iron, or wood) used to hold mercury over which, in glass jars or tubes, gases are collected which, on account of their solubility, can not well be

collected over water: essentially, a pneumatic trough containing mercury instead of water.

mercury-tube (mėr'kū-ri-tūb″), *n.* See ★*tube.*

mercury-valve (mėr'kū-ri-valv″), *n.* A valve in which mercury is used as a seal between the parts.

mercury-weed (mėr'kū-ri-wēd), *n.* The three-seeded mercury, *Acalypha Virginica.*

mercy, *n.* **5.** In *criminal law,* partial remission of a punishment to which a convict is subject, as distinguished from pardon, or total remission.—**To be in mercy,** said of a convict who is liable to punishment at the discretion of the judge.

merdurinous†, *a.* [L. *merda,* dung, + E. *urinous.*] Consisting of both dung and urine. *B. Jonson.*

mere[6] (mēr), *n.* [Gr. *μέρος,* a share, part.] In the reticulum or supporting skeleton of the extinct silicious sponges of the family *Dictyospongidæ,* one of the divisions or meshes produced by the intersection of the primary vertical and horizontal spicular bundles. It is subdivided by the spicules of subordinate rank into lesser areas or quadrangles — dimeres, tetrameres, hexameres.

mere[7] (mer'e), *n.* [Maori.] A Maori war-club; a *casse-tête,* or war-ax, from 12 to 18 inches in length, made of any suitable hard material, as stone, hard wood, or whalebone. Outside of New Zealand the word is only known as the name of a little trinket of greenstone made in imitation of the New Zealand weapon in miniature, mounted in gold or silver, and used as a brooch, locket, ear-ring, or other article of jewelry. *E. E. Morris,* Austral English.

Merevale shales. See ★*shale*[2].

merganser, *n.*—**White merganser,** the smew, *Merganser albellus,* the smallest and whitest of the mergansers. See *smew* (with cut).

mergence (mėr'jens), *n.* The act of merging or sinking into something else, with consequent loss of original identity or form; the state of being merged.

A gradation between a "bird-like canoe-charm," through a "human-headed bird canoe-charm," to a "canoe fetich," the latter having a very prognathous human head. The *mergence* of a frigate-bird's into a human head may be due . . . to one design acting upon the other.
Haddon, Evolution in Art, 266.

merger[2], *n.* **3.** A merging of the interests and control of two or more corporations, engaged in the same line, or in allied lines, of business, into a single corporation which exchanges its stock for that of the merging corporations, which however preserve, nominally at least, their separate identity.

So too, who shall doubt but that the present monopolistic movements, the trusts and the *mergers,* when we shall have learned to guard that which is good and prevent that which is bad, will result in greater benefits to mankind and a higher civilization?
Science, July 31, 1903, p. 129.

meridian. I. *a.*—**Meridian furrow.** See ★*furrow.*—**Meridian zenith distance,** the complement of the meridian altitude, or what that altitude lacks of 90° 00′ 00″.

II. *n.* **6.** In ctenophorans, a costa or *meridional* row of swimming-plates.

It possesses eight *meridians* (costæ) of iridescent paddles in constant vibration, which run from near one pole towards the other. *Encyc. Brit.,* XXVII. 300.

Astronomic meridian, on the celestial sphere, a great circle which passes through the poles of the earth's axis and the zenith of the spectator.—**Brass meridian.** See *meridian of a globe.*—**Celestial meridians,** hour-circles; great circles of the celestial sphere which pass through its poles and correspond exactly to the meridians on the earth.—**Gnomonic meridian,** a meridian in gnomonic projection.—**National meridian,** the meridian which passes through the national observatory of a country; the prime or first meridian of a nation; the zero-point in longitude for that nation, and from which calculations are made.—**Principal meridian.** (*a*) A first or prime meridian. (*b*) The meridian from which the meridians bounding townships are measured.—**Terrestrial meridian,** a geographic meridian.—**Zero meridian,** the meridian from which longitude east or west is reckoned.

The International Congress at Washington in October, 1894, which adopted for the nations represented the uniform *zero-meridian* of Greenwich for maritime purposes.
Science, June 21, 1901, p. 979.

Meridiana (mē-rid-i-ā'nä), *n.* [NL. (Hill, proposed in 1761, established in 1768), < L. *meridianus,* pertaining to midday. See *meridian.* The name alludes to the habitual opening of the flowers at noon.] A genus of dicotyledonous herbs of the family *Asteraceæ.* See *Gazania* and *treasure-flower.*

meridianal (mē-rid'i-a-nal), *a.* [*meridian* + *-al*[1].] Lying in the direction of a meridian; meridional.

The great *meridianal* systems, e. g. the Urals and the Rocky mountains. *Geog. Jour.* (R. G. S.), XV. 540.

meridian-passage (mē-rid'i-an-pas″āj), *n.* The crossing of a heavenly body over the meridian of the observer.

meridional, *a.* **II.** *n.* One who dwells in the south; specifically, an inhabitant of the south of France.

Daudet was able to paint a real sober picture of the *Meridional* in Numa Roumestan.
M. V. Crawford, Stud. For. Lit., p. 50. *N. E. D.*

meriedric (mer-i-ē'drik), *a.* Same as *merihedric.*

merihedral (mer-i-hē'dral), *a.* Same as ★*merihedric.*

merihedric, *a.* **2.** In *group-theory,* designating isomorphism in which two groups are multiply isomorphic.—**3.** In *crystal.,* same as *hemihedral.*

merihedrism (mer-i-hē'drizm), *n.* [*merihedr(ic)* + *-ism.*] Merihedric isomorphism. See ★*merihedric,* 2.

merimba (me-rēm'bä), *n.* See ★*marimba.*

merino, *n.*—**Pure merinos,** in Australia, and especially in New South Wales, the very first families (socially): from the fact that the pure merinos are the most valuable sheep. [Slang.]

The *pure merinos* . . . pride themselves on being of the purest blood in the colony.
P. Cunningham, Two Years in New South Wales, II. 116.

merise† (me-rēs'), *n.* [F.] A kind of small black cherry. *N. E. D.*

merism (mer'izm), *n.* [Gr. *μερισμός,* division into parts, < *μερίζειν,* divide into parts, < *μέρος,* a part.] The repetition of parts in an organism in such a way as to form a regular pattern, as in radial and bilateral symmetry, serial homology, etc. *W. Bateson,* Study of Variation, p. 23.

merismoid (me-ris'moid), *a.* [Gr. *μέρισμα,* a part, + *-oid.*] Characterized by a branched or laciniate cap: said of sporophores.

Merismopedia (mer″is-mō-pē'di-ä), *n.* [NL. (Meyen, 1839), < Gr. *μέρισμα,* a part, + *πεδίον,* a plain (taken in the sense of *ποίς,* foot).] **1.** A genus of unicellular fresh-water blue-green algæ, characterized by spherical cells which divide regularly in two directions, thus having the cells arranged in groups of fours.—**2.** [*l. c.*] In *bacteriol.,* a name applied to cocci arranged in large rectangular plates.

merist (mer'ist), *n.* [Gr. *μεριστής,* < *μερίζειν,* divide.] One who divides. [Rare.]

The administrators of the three great divisions of law are severally Archons, *Merists,* and Dicasts. . . . The *Merists* are properly the Domini, or Lords of houses and nations. *Ruskin,* Munera Pulveris, p. 117, note.

meristic (me-ris'tik), *a.* [Gr. *μεριστικός,* < *μεριστός,* divided, < *μερίζειν,* divide. See ★*merism.*] Pertaining to or exhibiting merism. *W. Bateson,* Study of Variation, p. 22.—**Meristic homology, variation.** See ★*homology,* ★*variation.*

meristically (me-ris'ti-kal-i), *adv.* By means of merism, or in a meristic manner. *W. Bateson,* Study of Variation, p. 26.

merit, *n.*—**Certificate of merit.** See ★*certificate.*—**Order of merit.** See ★*order.*

merle[1], *n.* **2.** A West Indian name for orioles of the genus *Cassicus.*

merluce (mėr'lūs), *n.* [NL. *merlucius, merluccius:* said to be formed (irregularly) from F. *mer,* L. *mare,* sea, + L. *lucius,* pike.] The European hake, *Merlucius merluccius,* belonging to the family *Merluciidæ.*

mero (mā'rō), *n.* [Sp. Pg. *mero.*] The spotted jewfish, *Epinephelus guaza,* found off the coasts of southern Europe and western Africa.

merocarpal (mer-ō-kär'pal), *a.* [*merus* + *carpus* + *-al*[1].] Pertaining to the merus and the carpus, or to the fourth and fifth joints of a malacostracan trunk-leg; as, the *merocarpal* joint. *Proc. Zool. Soc. London,* May–Dec., 1901, II. 555.

merocrystalline (mer-ō-kris'ta-lin), *a.* [Gr. *μέρος,* part, + E. *crystalline.*] In *petrog.,* partly crystalline. *Fletcher,* 1895. Also *semi-crystalline, hypocrystalline, hypohyaline.*

merocyte (mer'ō-sīt), *n.* [Gr. *μέρος,* part, + *κύτος,* a hollow (a cell).] In *embryol.,* one of the nucleate masses of protoplasm lying in the unsegmented yolk of a meroblastic ovum, such as the ovum of sharks, birds, etc.

merognathite (mē-rog'na-thīt), *n.* [Gr. *μέρος,* part, + E. *gnathite.*] In crustaceans, the fourth joint of a gnathite.

merogonic (mer-ō-gon'ik), *a.* [*merogon(y)* + *-ic.*] Of or pertaining to merogony, or the development of fertilized fragments of eggs. *E. B. Wilson,* in *Biol. Bulletin,* April 5, 1903, p. 218.

merogony (me-rog'ō-ni), *n.* [Gr. *μέρος,* part, + *-γονια,* < *-γονος,* -born.] The development, partial or perfect, of an organism from part of an egg or part of an embryo. If the two blastomeres of the two-celled stage of the segmenting egg of a ctenophore are isolated, each forms a half-embryo. In *Amphioxus* each forms a perfect embryo of half the normal size.

merohedric (mer-ō-hē'drik), *a.* Same as *merihedric.*

merology (me-rol'ō-ji), *n.* [Gr. *μέρος,* part, + *-λογια,* < *λέγειν,* speak.] Same as *histology.*

meromorph, *a.* **II.** *n.* A change in one or more of a number of parts in series, such as the change of the appendages of the antennary somite of a crustacean into eyes.

meromorphosis (mer-ō-môr'fō-sis), *n.* [Gr. *μέρος,* part, + *μόρφωσις,* forming.] In *biol.,* the incomplete replacement of a lost part. See ★*holomorphosis.*

meront (mer'ont), *n.* [Gr. *μέρος,* part, + *ὤν* (*οντ-*), being.] In certain sporozoans, as *Thelohania,* a form of trophozoite which multiplies by simple schizogony, a second division sometimes taking place before the first is finished, so that three or four individuals may be connected in a group or chain.

meroplankton (mer-ō-plangk'ton), *n.* [NL., < Gr. *μέρος,* part, + NL. *plankton.*] The organisms, considered collectively, that pass part of their lives in the depths of the ocean and part at or near the surface.

meroplanktonic (mer″ō-plangk-ton'ik), *a.* [Gr. *μέρος,* part, + E. *planktonic.*] Swimming in the ocean at one stage of life and passing the rest of life vagrant or sessile on the sea-bottom, as part of the diatoms and *Oscellaria,* the planktonic fucoids, the metagenetic medusæ, some *Turbellaria* and annelids, the pelagic larvæ of hydroids and corals, and many helminths, echinoderms, *Acalepha,* and gastropods. *Haeckel* (trans.), Planktonic Studies, p. 583.

Thus the *meroplanktonic* stage, which we may assume existed in the ancestors of Fulgur and Sycotypus, was apparently suppressed even in the earliest species of Fulgur, as otherwise the distribution would be more world-wide. *Amer. Nat.,* Aug., 1903, p. 516.

merorachischisis (mer″ō-rā-kis'ki-sis), *n.* [Gr. *μέρος,* part, + *ῥάχις,* spine, + *σχίσις,* cleaving.] Partial fissure of the spinal cord. Also *merorrhachischisis.*

merosthenic (mē-ros-then'ik), *a.* [Gr. *μηρός,* thigh, + *σθένος,* strength, + *-ic.*] Strong in the hinder parts; having the hinder parts more developed and stronger than the fore parts: opposed to *prosthenic.*

merosymmetrical (mer″ō-si-met'ri-kal), *a.* [*merosymmetr(y)* + *-ical.*] In *crystal.,* exhibiting partial symmetry. See ★*symmetry,* 6.

merosymmetry (mer-ō-sim'e-tri), *n.* [Gr. *μέρος,* part, + E. *symmetry.*] In *crystal.,* partial symmetry; a lower grade of symmetry than that exhibited in holosymmetrical forms. See ★*symmetry,* 6.

merotomy (me-rot'ō-mi), *n.* [Gr. *μέρος,* part, + *-τομια,* < *ταμεῖν,* cut.] In *histology,* a dividing into several parts or segments.

The experiments of "*merotomy,*" that is to say of amputation, tried by Waller on nerves, on infusoria by Brandt, etc., teach us the necessity of the presence of the cellular body and the nucleus.
Smithsonian Rep., 1902, p. 404.

merotropy (me-rot'rō-pi), *n.* [Gr. *μέρος,* part, + *-τροπια,* < *τρέπειν,* turn.] A name which has been suggested for a phenomenon, generally termed *desmotropy,* which is exhibited by certain organic chemical compounds. See ★*desmotropy.*

Merozoa (mer-ō-zō'ä), *n. pl.* [NL., < Gr. *μέρος,* part, + *ζῷον,* animal.] A grade of *Cestoidea* in which the adult worm consists of two distinct parts, the head or scolex, and the genital region or body. It contains the *Dibothridiata* and the *Tetrabothridiata,* in which groups are included nearly all cestoid worms: contrasted with *Monozoa.*

merozoite (mer-ō-zō'īt), *n.* [Gr. *μέρος,* part, < *ζῷον,* animal, + *-ite*[2].] In the life-cycle of a sporozoön, one of the cells to which a dividing spore gives rise. They appear as buds radiating from the parent cell and afterward become free.

When fully developed, the spores, or, as they are technically known, the *merozoites,* drop off the parent cell and work their way through the fluids of the digestive tract until they come to the cells lining it, and then, like the

sporozoites, they penetrate the cells, grow at their expense, and again reproduce spores as before.
Pop. Sci. Mo., June, 1901, p. 192.

Mersey jolly-tail. See ★*jollytail*.

Mertensidæ (mėr-ten'si-dē), *n. pl.* [NL., < *Mertensia*, the typical genus, + *-idæ*.] A family of tentaculate ctenophorans which have the body compressed in the stomachal plane, the subtentacular ribs longer than the substomachal, and no wing-like appendages at the sensory pole. It contains the genera *Euchlora* and *Charistephane*.

merulioid (me-rō'li-oid), *a.* [*Merulius* + *-oid*.] Resembling or pertaining to the genus *Merulius*.

Merulius (me-rō'li-us), *n.* [NL. (Haller, 1768), < L. *merula*, a blackbird: see *merle*[1]. The name alludes to the black color of the fungus, especially in its later stages.] A genus of hymenomycetous fungi of the family *Polyporaceæ*. They have a soft, waxy, usually resupinate hymenium, with reticulate or sinuous folds forming shallow pits. *M. lacrymans*, sometimes called the *house-fungus*, is the cause of a destructive dry-rot of coniferous wood. See cut under *dry-rot*.

merycole (mer'i-kōl), *n.* [Irreg. < *merycol(ogy)*, or < *mery(cism)* + *l. colere*, cultivate.] One who practises merycism.

merycology (mer-i-kol'ō-ji), *n.* [*meryc(ism)* + Gr. *-λογια*, < *λέγειν*, speak.] The study of the causes, nature, and treatment of rumination in man.

mesaconic (mes-a-kon'ik), *a.* [Gr. *μέσος*, middle, + E. *aconic*.] Noting an acid, a colorless compound, $HOCO.CCH_3$ / $HCCOOH$, prepared by boiling citraconic acid with dilute nitric acid. It crystallizes in slender needles, melting at 202° C.

Mesadenia (mes-a-dē'ni-ä), *n.* [NL. (Rafinesque, 1832), < Gr. *μέσος*, middle, + *ἀδήν*, gland; in allusion to the central projection of the receptacle.] A genus of plants of the family *Asteraceæ*. They are tall perennial, mostly smooth, often milky-juiced herbs with terminal corymbs of small, few-flowered, inconspicuous heads, the flowers all tubular and perfect. There are about 16 species, natives of North and Central America, of which 11 occur within the United States. They are commonly called *Indian plantain*.

mesa-dwelling (mā'sä-dwel″ing), *n.* A house, usually a communal dwelling, built upon a mesa or limited table-land with steep sides, as in the western part of the United States.

mesaortitis (mes″ā-ôr-tī'tis), *n.* [NL., < Gr. *μέσος*, middle, + *ἀορτή*, aorta, + *-itis*.] Inflammation of the middle coat of the aorta.

mesaræum (mes-a-rē'um), *n.*; pl. *mesaræa* (-ä). [NL., < Gr. *μεσάραιον*, mesentery, < *μέσος*, middle, + *ἀραιά*, belly, flank, fem. of *ἀραιός*, porous.] Same as *mesentery*.

mesaticephalism (mes″a-ti-sef'a-lizm), *n.* The condition of being mesaticephalic.

mesaticephalous (mes″a-ti-sef'a-lus), *a.* Same as *mesaticephalic*.

mesaticephaly (mes″a-ti-sef'a-li), *n.* [*mesaticephal-ic* + *-y*[3].] In *anthrop.*, the condition of being mesaticephalic; mesaticephalism.

We place systematically after the Tibetans and the Indo-Chinese, who are subbrachycephalous, the Chukluks, whose average indication, 79.9, stands at the extreme limit of *mesaticephaly*, and not far from them, the Tungus-Manchu (300,000 individuals), another breaking up of Prichard's "Allophylians," with their clearly mesaticephalous skull, which is at the same time excessively flattened. *Smithsonian Rep.*, 1895, p. 514.

mesaticercic (mes″a-ti-sėr'sik), *a.* [Also *mesatikerkic*; < Gr. *μέσατος*, midmost, + *κερκίς*, radius of the arm.] Having the forearm of average length in proportion to the length of the arm; neither brachycercic nor dolichocercic; having a radiohumeral index between 75 and 80. *Turner*.

mesatikerkic (mes″a-ti-kėr'kik), *a.* See ★*mesaticercic*.

mesatilekanic (mes″a-ti-le-kan'ik), *a.* [Gr. *μέσατος*, midmost, + *λεκάνη*, dish, bowl (pelvis).] Same as ★*mesatipellic*. *Turner*.

mesatipellic (mes″a-ti-pel'ik), *a.* [Gr. *μέσατος*, midmost, + *πέλλα*, dish (pelvis).] In *anthrop.*, said of a male who has an index of the pelvic brim between 90 and 95. Also *mesopellic*. *Jour. Anthrop. Inst.*, 1900, p. 149.

mesatipelvic (mes″a-ti-pel'vik), *a.* [Gr. *μέσατος*, midmost, + L. *pelvis*, bowl (pelvis).] Same as ★*mesatipellic*.

Mesatlantis (mes-at-lan'tis), *n.* [Gr. *μέσος*, middle, + *Ἀτλαντίς*, Atlantic.] The mid-Atlantic or tropical Atlantic sea-region of Sclater, which comprises the Atlantic ocean from a little north of the tropic of Cancer down to about the tropic of Capricorn. *Geog. Jour.* (R. G. S.), X. 219.

mesaxonic (mes-ak-son'ik), *a.* [Gr. *μέσος*, middle, + *ἄξων*, axis, + *-ic*.] Having the third digit of the foot the largest, thus forming the axis of the foot: contrasted with ★*paraxonic*.

They (Perissodactya) are all digitigrade quadrupeds, with the axis of both feet passing through the digit No. III (hence *mesaxonic*).
A. S. Woodward, Outlines of Vertebrate Palæontology, [p. 319.

mescal-buttons (mes-käl' but″nz), *n. pl.* [*mescal* (Nahuatl *mexcalli*) + E. *buttons*.] The dried tops of a succulent, spineless, turnip-shaped cactus growing in the arid regions of Texas and northern Mexico, known botanically as *Lophophora Williamsii*, and called by the natives in various localities *peyote*, *hikuli*, and *wokowi*. The plant scarcely rises above the ground: it has a flat top divided into a number of radiating convex ribs bearing low tubercles, each with an areole in the center which bears a tuft of silky hairs from which the pink flowers appear. The tops of the plants are collected by the Indians and dried, forming button-like masses an inch or more in diameter and about a quarter of an inch thick. These buttons have narcotic properties and in Texas are sometimes called *dry whisky*. They are either chewed dry or are added to tizwin, mescal, or other alcoholic drinks. They produce a delirious exhilaration which enables the Indians to perform certain ceremonial dances for many successive hours without fatigue. The effect seems to resemble that of opium, though in some cases a condition of exaltation is induced resembling that produced by Indian hemp. Several alkaloids have been isolated from the plant, some of which resemble morphine, others strychnine, in their effects upon animals. One of them, called *pellotine*, has been introduced as a hypnotic; another, called *mescaline*, seems to be the cause of the exaltation.

Mescal-button (*Lophophora Williamsii*). One third natural size.

mescaline (mes-kal'in), *n.* [*mescal* + *-ine*[2].] Methyl-3, 4, 5-trimethoxybenzylamine, $(CH_3O)_3C_6H_2.CH_2NHCH_3$, an alkaloid found in mescal-buttons. It crystallizes in needles which melt at 151° C.

mescalism (mes-käl'izm), *n.* [*mescal* + *-ism*.] The habit of using mescal or mescal-buttons. *Amer. Anthropologist*, Oct.–Dec., 1902, p. 789.

mescal-pit (mes-käl'pit), *n.* A pit filled with stones on which mescal roots are roasted.

mescroyance†, *n.* [OF. See *miscreant*.] Unbelief. [Rare.]

There may be any quantity of intermediate mind, in various conditions of bog, . . . but the elements of Croyance and *Mescroyance* are always chemically separable out of the putrescent mess.
Ruskin, Fors Clavigera, lxxii. 383.

mescroyant†, *n.* [OF. See *miscreant*.] An unbeliever.

mesdem (mes-dem'), *n.* [Egyptain ?] A substance used in ancient Egypt as a cosmetic and a medicine. It seems to have been either antimony sulphid or lead sulphid, more probably the latter. *E. von Meyer* (trans.), Hist. Chem., p. 18.

mese[4] (mes'ē), *n.* [Gr. *μέση*, the middle string or note.] In *Gr. music*, the middle or central tone of the system. See cut under *tetrachord*.

mesectoblast (me-sek'tō-blast), *n.* [Gr. *μέσος*, middle, + E. *ectoblast*.] Same as ★*ectomesoblast*.

This mass of *mesectoblast*, with enclosed auditory pit, bears a considerable resemblance to the common anlage of auditory pit and lateral line system referred to above. It subsequently extends into the adjacent gill arches, where its further history was not followed.
Science, April 11, 1902, p. 575.

mesembryo, *n.* 2. The blastula stage of a polyzoan. *Cumings*, 1904.

Mesencephalic flexure, fossa. See ★*flexure*, ★*fossa*[1].

mesencephalospinal (mes-en-sef″a-lō-spī'nal), *a.* Of or pertaining to both the mesencephalon, or mid-brain, and the spinal chord.

mesenchymatal (mes-eng-kī'ma-tal), *a.* Same as *mesenchymal*. *L. O. Howard*, in Science, Dec. 21, 1906, p. 812.

mesenchyme, *n.* 2. In *embryol.*, the whole or a portion of the middle germ-layer, or mesoblast, when this layer is not epithelial, but consists of stellate, loosely interconnected, or even disconnected cells like those seen in primitive forms of connective tissue.

About the proton of the liver and the vascular spaces surrounding it there is considerable *mesenchyme*.
Trans. Amer. Micros. Soc., Nov., 1903, p. 58.

mesenchymic (mes-eng-kim'ik), *a.* Of or pertaining to mesenchyme.

mesenteriform (mez-en-ter'i-fôrm), *a.* Resembling a mesentery.

Deep carmine, *mesenteriform*, consisting of suberect plicately aggregated laminæ; the margin minutely ragged or crispate, and furnished with a few scattered pores of irregular shape. *Dana*, Zooph., p. 708.

mesenteritic (mes″en-te-rit'ik), *a.* [*mesenterite* + *-ic*.] Relating to or affected with mesenteritis.

mesenteroblast (mes-en'te-rō-blast), *n.* [*mesenteron* + Gr. *βλαστός*, germ.] In *embryol.*, the mesenteron; the middle portion of the intestine or alimentary tract, arising from the entoderm, as distinguished from the stomodeal and proctodeal portions of the embryonic gut, which are of ectodermal origin.

mesenteron, *n.* 2. In sea-anemones and similar polyps, the main digestive cavity or stomach; in *Mollusca*, the stomach and intestine. Compare *stomodæum* and *proctodæum*.

mesenterophthisis (mes-en-te-rof'thi-sis), *n.* [NL., < *mesenteron* + Gr. *φθίσις*, consumption.] Tuberculosis of the mesenteric glands.

mesentery, *n.*—**Directive mesenteries**, in the *Hexacoralla*, the mesenteries which correspond to the extremities of the longitudinal mouth. They are distinguished from the other mesenteries of the animal by the fact that the muscular thickenings on the walls of the pairs do not face each other, as they do in all other pairs of the body. —**Edwardsian mesentery**, in anthozoans, one of the eight mesenteries first formed: so called because exhibited typically by the adult stage of *Edwardsia*.—**Uterine mesentery**. Same as *mesometry*.

mesentoderm (mes-en'tō-dėrm), *n.* [Gr. *μέσος*, middle, + E. *entoderm*.] In *embryol.*, a cell-layer or single blastomere not yet differentiated into mesoderm and entoderm proper, but exhibiting peculiarities of both of these germ-layers.

mesentomere (mes-en'tō-mēr), *n.* [*mes(omere)* + *entomere*.] In *embryol.*, a blastomere which has not yet divided into mesomeres and entomeres.

The cleavage of the egg of the nudibranch, Fiona marina, is of the spiral type well known for molluscs. From the *mesentomere* . . . arises the primary mesoblast and also enteroblasts, these latter being concerned in the formation of the intestine.
Amer. Nat., July–Aug., 1904, p. 505.

mesepisternal (mes-ep-i-stėr'nal), *a.* Of or pertaining to the mesepisternum.

mesepithelium (mes-ep-i-thē'li-um), *n.* [Gr. *μέσος*, middle, + NL. *epithelium*.] Same as *mesothelium*.

mesh[1], *n.* 6. One of the subdivisons of a head or ear of wheat; a wheat spikelet.

The spikelets (*meshes*) are two to four grained.
U. S. Dept. Agr., Bur. Plant Industry, 1901, Bulletin 3, [p. 10.

meshorer (me-shō'rėr), *n.* [Heb. *meshōrēr*, < *shīr*, sing.] A singer who assists the cantor or hazzan in the synagogue.

mesh-pin (mesh'pin), *n.* An oval piece of wood over which the mesh of nets is formed, the loops being knotted on its edge.

meshummad (me-shō'mad), *n.* [Heb., < *shamad*, destroy.] Literally, one who is destroyed: a term of disdain and hatred applied to one who abandons Judaism for another faith; a pervert.

mesh-winding (mesh'wīn″ding), *n.* See ★*winding*[1].

mesiad (mes'i-ad or mē'zi-ad), *adv.* [*mesi(al)* + *-ad*[3].] In *zoöl.*, to or toward the middle line or plane of the body.

When the bones of the shoulder-girdle in a grebe are articulated as in life, there is quite an interval between their sternal ends, *mesiad*. *Amer. Nat.*, Jan., 1904, p. 22.

Mesial length. See ★*length*.

mesicerin (mes-i-sē'rin), *n.* [*mesi(tine)* + Gr. *κηρός*, wax, + *-in*[2].] A colorless crystalline compound, $C_6H_3(^{1,3,5}CH_2OH)_3$, prepared by boiling the corresponding bromide with water and lead carbonate. Also called *1′, 3′, 5′-trihydroxymethylbenzene*.

mesidine (mes'i-din), *n.* [*mesi(tine)* + *-id* + *-ine*^{2}.] A colorless liquid, $H_2\overset{2}{N}C_6H_2(\overset{1}{C}H_3)(\overset{3}{C}H_3)(\overset{5}{C}H_3)$, prepared by the reduction of nitromesitylene. It boils at 229–230° C. Also called *amino*-1, 3, 5-*trimethylbenzene*.

mesilla (mā-sēl'yä), *n.* [Sp., dim. of *mesa*: see *mesa*.] A small mesa.

mesiocaudad (mes″i-ō-kâ'dad), *adv.* [*mesi(al)* + *caudad*.] In the median line and toward the tail. *Proc. Zool. Soc. London*, 1899, p. 1024.

Mesirenia (mes-i-rē'ni-ä), *n.* [Gr. *μέσος*, middle, + NL. *Irenia*, the Pacific region.] The mid-Pacific sea-region of Sclater, consisting of that part of the Pacific which lies between the tropics of Cancer and Capricorn.

mesite (mes'īt), *n.* [Gr. *μεσίτης*, being in the middle. See *Mesites*, *mesitine(-spar)*.] An old name for a mixture of methyl acetate and mesityl oxid, prepared by distilling crude wood-alcohol or crude acetic acid from wood with sulphuric acid.

mesitene (mes'i-tēn), *n.* [*mesite* + *-ene*.] Same as ★*mesite*.

mesitine (mes'i-tin), *n.* Same as *mesitine-spar*.

mesitol (mes'i-tol), *n.* [*mesit(ine)* + *-ol*.] A colorless crystalline compound, $H\overset{2}{O}C_6H_2(\overset{1}{C}H_3)(\overset{3}{C}H_3)(\overset{5}{C}H_3)_3$, prepared by the action of nitrous acid on mesidine. It melts at 65–69° C. Also called 1, 3, 5-*trimethylphenol*.

mesitonic (mes-i-ton'ik), *a.* [*mesit(ine)* + *-one* + *-ic*.] Noting an acid, a colorless compound, $(CH_3)_2C(COOH)CH_2COCH_3$, prepared by the action of hydrochloric-acid gas, potassium cyanide, and alcohol on acetone. It crystallizes in small prisms or large plates, melts at 74° C., and boils at 138° C. under 15 millimeters pressure.

Mesityl oxid, a colorless liquid olefinic ketone, $(CH_3)_2C{:}CHCOCH_3$, prepared by the action of hydrochloric-acid gas, sulphuric acid, or zinc chlorid on acetone. It has an odor of peppermint and boils at 129.5–130° C. Also called *isopropylidine-acetone* and *2-methyl-2-pentenone*.

mesitylenic (mes″i-ti-lē'nik), *a.* [*mesitylene* + *-ic*.] Of or pertaining to mesitylene.—**Mesitylenic acid,** a colorless compound, $(\overset{1}{C}H_3)_2\overset{3}{C}_6H_3\overset{5}{C}OOH$, prepared by the action of dilute nitric acid on mesitylene. It forms monoclinic crystals and melts at 166° C. Also called 1, 3-*dimethylbenzoic acid* (5).

mesitylic (mes-i-til'ik), *a.* [*mesityl* + *-ic*.] Noting an acid, a colorless compound, $(CH_3)_2C\langle\begin{matrix}CH_2.C(CH_3)COOH.H_2O\\ CO.NH\end{matrix}$, prepared by the action of hydrochloric-acid gas, potassium cyanide, and alcohol on acetone. It crystallizes in long prismatic needles, melts, when anhydrous, at 174° C., and may be distilled.

meso-. [Gr. *μέσο-ς*, middle.] A combining form used in organic chemistry to indicate optical inactivity through internal compensation. See ★*mesoform*.

mesoappendix (mes″ō-a-pen'diks), *n.* [*mes(entery)* + *appendix*.] The mesentery of the vermiform appendix. *Buck*, Med. Handbook, I. 421.

mesobacteria (mes″ō-bak-tē'ri-ä), *n. pl.* [Gr. *μέσος*, middle, + NL. *bacteria*, pl. of *bacterium*.] Medium-sized rod-shaped bacteria. *Billroth*.

mesobenthic (mes-ō-ben'thik), *a.* [*mesobenthos* + *-ic*.] Of or pertaining to the mesobenthos; living upon or in the bottom between the outer edge of the continental slope and the bottom of the deep ocean. *Encyc. Brit.*, XXXIII. 934.

mesobenthos (mes-ō-ben'thos), *n.* [NL., ⟨ Gr. *μέσος*, middle, + *βένθος*, depth: see ★*benthos*.] The animals and plants which live upon or in the bottom between the outer edge of the continental slope and the bottom of the deep ocean, considered collectively and in contrast with the dwellers in or upon the bottom of the continental slope and those that live upon or in the bottom of the deep ocean. See ★*benthos*, ★*epibenthos*, and ★*hypobenthos*.

The mud-line is the real upper limit of this zone [continental slope]: it typically begins at about 100 fathoms, but may begin at 5 to 20 fathoms in deep sheltered firths, or be pushed down to 300 fathoms where currents are strong. The fauna of this zone may be termed the *mesobenthos*; it is not so abundant, nor so sharply characterized, as the epibenthos and yet is sufficiently distinct to deserve at any rate a provisional name.
Encyc. Brit., XXXIII. 933.

mesoblast, *n.* 2. In *cytol.*, the middle one of three concentric protoplasmic layers supposed to surround the cell-nucleus.

The normal and developed cell has three concentric envelopes which may be called blasts, the whole enclosing a nucleus, so that the structure which we found in the earth as spheres is repeated here as blasts. These are the exoblast, *mesoblast*, and endoblast.
J. W. Powell, Truth and Error, p. 69.

Sporadic mesoblast, mesoblast in the form of disconnected cells or cell-clusters, as distinguished from typical mesoblast in a continuous cell-layer or epithelium. *Philos. Trans. Roy. Soc.* (London), 1894, Ser. B, p. 313.

mesobregmate (mes-ō-breg'māt), *a.* [Gr. *μέσος*, middle, + *βρέγμα*, sinciput.] In *craniom.*, having a moderately rounded vertex. *J. C. Prichard*.

mesobronchium (mes-ō-brong'ki-um), *n.*; pl. *mesobronchia* (-ä). In *ornith.*, a tube or prolongation of the bronchus running backward into one of the abdominal air-sacs.

Mesocambrian (mes-ō-kam'bri-an), *n.* In *geol.*, the middle Cambrian.

Mesocampyli (mes-ō-kam'pi-lī), *n. pl.* [NL., ⟨ Gr. *μέσος*, middle, + *καμπύλος*, curved.] In Hyatt's classification of the cephalopods, a suborder of the *Ammonoidea* of uncertain value, comprising certain Devonian goniatites or forms intermediate in structure between the *Microcampyli* and *Eurycampyli*.

meso-Carboniferous (mes″ō-kär-bo-nif'e-rus), *a.* Middle Carboniferous.

Title: 'The *Meso-Carboniferous* Age of the Union and Riversdale formations in Nova Scotia.'
Science, March 7, 1902, p. 392.

mesocardium (mes-ō-kär'di-um), *n.*; pl. *mesocardia* (-ä). [NL., ⟨ Gr. *μέσος*, middle, + *καρδία*, heart.] In *embryol.*, the membrane which connects the developing heart with the anterior body-wall on the ventral side and with the intestine on the dorsal side.

mesocarpaceous (mes″ō-kär-pā'shius), *a.* Belonging or pertaining to the *Mesocarpaceæ*, a family of algæ.

mesocephal (mes-ō-sef'al), *n.* [Gr. *μέσος*, middle, + *κεφαλή*, head.] In *anthrop.*, a mesocephalic individual. *Deniker*, Races of Man, p. 316.

mesocephali (mes-ō-sef'a-lī), *n. pl.* [NL.] In *anthrop.*, mesocephalic individuals. *Keane*, Ethnology, p. 328.

mesocephalic, *a.* 3. Of or relating to the mesencephalon.

Mesocestoides (mes″ō-ses-toi'dēz), *n.* [NL., ⟨ Gr. *μέσος*, middle, + NL. *Cestoides*.] The typical genus of the family *Mesocestoididæ*. *Vaillant*, 1863.

Mesocestoididæ (mes'ō-ses-toi'di-dē), *n. pl.* [NL., ⟨ *Mesocestoides* + *-idæ*.] A family of tapeworms, of the order *Tetracotylea*, having the head unarmed but provided with four terminal suckers, and the genital pores separate on the ventral surface. It contains the genus *Mesocestoides*, parasitic in the dog and cat, especially in Iceland.

mesochondrium (mes-ō-kon'dri-um), *n.*; pl. *mesochondria* (-ä). [NL., ⟨ Gr. *μέσος*, middle, + *χόνδρος*, cartilage.] The transparent matrix or intercellular substance in which the cellular elements of hyaline cartilage are embedded.

mesochroi (me-sok'rō-ī), *n. pl.* [NL., ⟨ Gr. *μέσος*, middle, + *χρόα*, color.] In *anthrop.*, individuals or races of a medial (namely, a yellow) color. See the extract under ★*leucochroi*.

mesochroic (mes-ō-krō'ik), *a.* [*mesochroi* + *-ic*.] In *anthrop.*, of or pertaining to the mesochroi; having a medial (namely, a yellow) color: contrasted with ★*leucochroic* and *æthochroic*.

mesochrone (mes'ō-krōn), *n.* [Gr. *μέσος*, middle, + *χρόνος*, time.] A mean-time curve. *P. Serret*, 1855.

mesococcus (mes-ō-kok'us), *n.*; pl. *mesococci* (-sī). [NL., also *mesococcos*, ⟨ Gr. *μέσος*, middle, + NL. *coccus*.] A medium-sized coccus: applied to such forms of bacteria. *Billroth*.

mesoconch (mes'ō-kongk), *a.* [Gr. *μέσος*, middle, + *κόγχη*, shell.] Same as ★*mesoconchous*.

mesoconchic (mes-ō-kong'kik), *a.* Same as ★*mesoconchous*.

mesoconchous (mes-ō-kong'kus), *a.* [Gr. *μέσος*, middle, + *κόγχη*, shell, + *-ous*.] In *craniom.*, having an orbital index of middle value, that is, of from 80.1 to 85.0: a term used by German anthropologists.

mesoconchy (mes'ō-kong-ki), *n.* [*mesoconch* + *-y*^{3}.] In *craniom.*, the condition or character of being mesoconchous. *Biometrika*, March–July, 1904, p. 214.

Mesocoracoid arch. See *precoracoid* ★*arch*.

mesocotyl (mes-ō-kot'il), *n.* [Gr. *μέσος*, middle, + E. *cotyl(edon)*.] An intercalary internode developed between the cotyledons in certain plants, which renders them alternate instead of opposite.

A further irregularity in the case of Klugia Zeylanica and some species of Streptocarpus is the displacement of the cotyledons from the opposite to an alternate position; this is attributed to the intercalary development of an internode between the cotyledons, to which the name of *mesocotyl* is given. *Nature*, Sept. 8, 1904, p. 453.

mesocracy (me-sok'ra-si), *n.* [Gr. *μέσος*, middle, + *-κρατια*, rule, ⟨ *κρατεῖν*, be strong, rule.] Government by the middle class. *N. E. D.*

mesocratic (mes-ō-krat'ik), *a.* [Gr. *μέσος*, middle, + *κρατεῖν*, rule. See ★*mesocracy*.] 1. Pertaining to, or characterized by, mesocracy. —2. In *geol.*, having light and dark minerals in about equal amounts: contrasted with ★*leucocratic* and ★*melanocratic*.

The main body of the boss is made up of a coarsely crystalline, *mesocratic*, hornblende gabbro.
Amer. Geol., Sept., 1904, p. 134.

mesocribrum (mes-ō-krib'rum), *n.*; pl. *mesocribra* (-rä). [Gr. *μέσος*, middle, + L. *cribrum*, a sieve.] The median one of three main side sacs arising from the embryonic cribrum.

The mammalian cribrum.—W. Blendinger has investigated this structure in a series of mammals. In origin it consists of lateral, more or less vertical, folds, the cribral sacs. On the embryonic cribrum there arise three main side sacs, pro-, *meso-*, and meta*cribrum*, the entrance to which is perpendicular to the main axis of the nasal canal.
Jour. Roy. Micros. Soc., Feb., 1905, p. 42.

mesocyst (mes'ō-sist), *n.* [Gr. *μέσος*, middle, + *κύστις*, a bag. See *cyst*.] The double layer of peritoneum attaching the gall-bladder to the liver when the former is completely surrounded by serous membrane. *Syd. Soc. Lex.*

Mesoderm band, one of the strands of mesodermal cells which arise from the germinal groove of the embryo of an insect.

mesodesm (mes'ō-desm), *n.* [See *Mesodesma*.] In *bot.*, the layer of undifferentiated parenchyma lying between the several strands of a polystele. *Encyc. Brit.*, XXV. 416.

Mesodesma, *n.* 2. [*l. c.*] A fold of peritoneum which subtends one of the uterine ligaments.

mesodesmic (mes-ō-des'mik), *a.* Of or pertaining to a mesodesm.

mesodiastolic (mes-ō-dī-as-tol'ik), *a.* [Gr. *μέσος*, middle, + E. *diastolic*.] Occurring in the middle of the diastole. *N. E. D.*

Mesodon (mes'ō-don), *n.* [NL., ⟨ Gr. *μέσος*, middle, + *ὀδούς* (*ὀδοντ-*), tooth.] A genus of Jurassic fishes, similar to *Microdon* (which see), but having teeth on the vomero-palatine in five rows and three or four irregular small rows on the splenial.

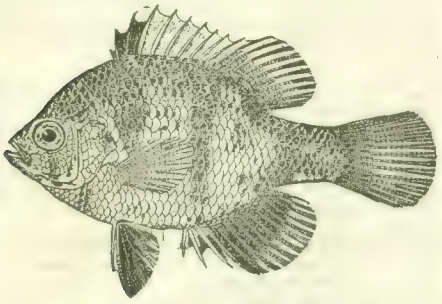
mesodont, *a.* 3. In *craniom.*, having a dental index between 42 and 44.

II. *n.* In *entom.*, one of a group of stag-beetles which have, like the amphiodonts, a mandibular development intermediate between the teleodont and priodont types.

mesodorsal (mes-ō-dôr'sal), *a.* [Gr. *μέσος*, middle, + E. *dorsal*.] Situated in the middle of the dorsal region or back.

meso-epididymis (mes-ō-ep-i-did'i-mis), *n.* [NL., ⟨ Gr. *μέσος*, middle, + NL. *epididymis*.] A double layer of the tunica vaginalis, resembling the mesentery, that unites the epididymis to the scrotum.

mesoform (mes'ō-fôrm), *n.* [Gr. *μέσος*, middle, + E. *form*.] In *organic chem.*, a compound which contains two or more asymmetric (optically active) carbon atoms in the molecule, but which has its optical activity diminished or extinguished because one or more of the carbon atoms has the dextrorotatory and one or more the levorotatory configuration, thus more or less completely neutralizing each other's optical effect. Such compounds are also said to be internally compensated, in contradistinction from the racemic or externally compensated isomers. The two forms are distinguished, in practice, by the fact that the racemic isomer is capable of resolution into two optically active substances, which is not the case with the meso-compound.



mesognathia (mes-og-nath'i-ä), *n.* [NL., ⟨ Gr. *μέσος*, middle, + *γνάθος*, jaw.] In *anthrop.*, the condition of having middle-sized jaws.

mesognathion (mes-og-nath'i-on), *n.*; pl. *mesognathia* (-ä). [Gr. *μέσος*, middle, + *γνάθος*, jaw.] An external premaxillary bone.

mesognathism (me-sog'nā-thizm), *n.* [*mesognath-ic* + *-ism*.] In *anthrop.*, the condition or character of being mesognathous.

mesogonion (mes-ō-gō'ni-on), *n.*; pl. *mesogonia* (-ä). [NL.] See ★*mesogonium*.

Mesogonistius (mes″ō-gō-nis′ti-us), *n.* [Gr. *μέσος*, middle, + *γωνία*, angle, + *ἱστίον*, sail.] A genus of fresh-water sunfishes, of the family *Centrarchidæ*, found in the eastern United States.

Black-banded Sunfish (*Mesogonistius chætodon*). (From Bulletin 47, U. S. Nat. Museum.)

mesogonium (mes-ō-gō′ni-um), *n.*; pl. *mesogonia* (-ä). [NL., < Gr. *μέσος*, middle, + *γόνος*, generation.] In *Trachomedusæ*, one of the thin vertical laminæ of the subumbrella which pass across the bell-cavity from the manubrium to the radial canals, underlying the generative sacs and dividing each into two. Also *mesogonion*.

mesogyrate (mes-ō-jī′rāt), *a.* [Gr. *μέσος*, middle, + L. *gyratus*, pp. of *gyrare*, turn.] Twisted toward the middle, as the beaks of some pelecypod mollusks: contrasted with ★*prosogyrate* and ★*opisthogyrate*.

mesogyrous (mes-ō-jī′rus), *a.* [Gr. *μέσος*, middle, + *γῦρος*, a turn, gyre, + *-ous*.] In *ornith.*, having the second or middle loop of the intestine arranged in the form of a spiral, as in all *Passeres*.

mesohepar (mes-ō-hē′pär), *n.* [Gr. *μέσος*, middle, + NL. *hepar*. See *hepar*.] A fold of peritoneum attached to the free edge of the right lobe of the liver in many animals. *Syd. Soc. Lex.*

mesohypoblast (mes-ō-hī′pō-blȧst), *n.* Gr. *μέσος*, middle, + *ὑπό*, under, + *βλαστός*, germ.] Same as ★*mesentoderm*.

mesohypsicephalic (mes-ō-hip″si-se-fal′ik), *a.* [*meso(cephalic)* + *hypsicephalic*.] In *craniom.*, being both mesocephalic and hypsicephalic. *Man*, 1901, p. 190.

mesolecithal (mes-ō-les′i-thal), *a.* [Gr. *μέσος*, middle, + *λέκιθος*, yolk, + *-al*[1].] In *embryol.*, a term applied to certain eggs, like those of most arthropods, in which the yolk in an early developmental stage lies in the center and is enveloped by a layer of blastodermic cells: same as *centrolecithal* and ★*perilecithal*.

Mesolithic (mes-ō-lith′ik), *a.* [Gr. *μέσος*, middle, + *λίθος*, a stone, + *-ic*.] In *prehistoric archæol.*, relating to the period intermediate between the Paleolithic and Neolithic periods: a term employed in the classification of post-glacial deposits which contain human relics, or of such relics themselves, and referring to the relative character and degree of workmanship displayed therein. Contrasted with *Eolithic*, *Paleolithic*, and *Neolithic*. *Deniker*, Races of Man, p. 308.

mesologic (mes-ō-loj′ik), *a.* Same as *mesological*.

mesomegacranious (mes-ō-meg-ȧ-krā′ni-us), *a.* [Gr. *μέσος*, middle, + *μέγα*, great, + *κρανίον*, skull.] In *craniom.*, having a skull of medium volume, that is, measuring from 1,810 to 1,950 cubic centimeters in males and from 1,610 to 1,730 cubic centimeters in females.

mesomegaprosopous (mes-ō-meg-ȧ-pros′ō-pus), *a.* [Gr. *μέσος*, middle, + *μέγα*, great, + *πρόσωπον*, face.] In *craniom.*, said of a skull which has a face of middle size, the volume of which is from 580 to 640 cubic centimeters in males and from 480 to 530 cubic centimeters in females.

mesomental (mes-ō-men′tal), *a.* [Gr. *μέσος*, middle, + L. *omentum* + *-al*[1].] Relating to the central portion of the omentum.

mesomere (mes′ō-mēr), *n.* [Gr. *μέσος*, middle, + *μέρος*, part.] In *embryol.*: (*a*) In the segmenting egg, a blastomere, or cell which gives rise to the mesoblast. (*b*) In the vertebrate embryo, a mesoblastic somite, or protovertebra.

mesometatarse (mes-ō-met′ȧ-tärs), *n.* Same as ★*mesometatarsus*.

mesometatarsus (mes-ō-met-ȧ-tär′sus), *n.*; pl. *mesometatarsi* (-sī). [Gr. *μέσος*, middle, + NL. *metatarsus*.] The middle metatarsal bone.

mesomula (me-som′ū-lä), *n.*; pl. *mesomulæ* (-lē). [Gr. *μέ(σος)*, middle, + (?) *σῶμα*, body, + dim. *-ula*.] A young embryo which consists of an epithelial mesoderm and entoderm separated by a mass of mesenchyme.

Mesomycetes (mes-ō-mī-sē′tēz), *n. pl.* [NL., < Gr. *μέσος*, intermediate, + NL. *Mycetes*.] A group of fungi including the *Hemiascales* and the *Hemibasidiales*, regarded by some authors as intermediate between the *Phycomycetes* and the higher fungi, *Ascomycetes* and *Basidiomycetes*. *Brefeld*.

mesomycetous (mes″ō-mī-sē′tus), *a.* Of or pertaining to the *Mesomycetes*, a group of fungi.

mesonasal (mes-ō-nā′zal), *a.* [Gr. *μέσος*, middle, + E. *nasal*.] Relating to or situated in the middle of the nose.

Mesonemertini (mes″ō-nē-mėr-tī′nī), *n. pl.* [NL., < Gr. *μέσος*, middle, + NL. *Nemertini*.] A group or order of nemerteans having the lateral nerves in the dermal muscular layer; the body-wall consisting of ectoderm, dermis, an external circular, an internal longitudinal, and usually an intermediate diagonal layer of muscles; the mouth behind the brain; no cæcum; and the proboscis without stylets. It includes the family *Cephalothricidæ*. Compare ★*Protonemertini*, ★*Metanemertini*, and ★*Heteronemertini*.

mesonephridium (mes″ō-ne-frid′i-um), *n.*; pl. *mesonephridia* (-ä). [NL., < Gr. *μέσος*, middle, + NL. *nephridium*.] A nephridium of mesodermal origin.

mesopatagium (mes-ō-pat-ā-jī′um), *n.*; pl. *mesopatagia* (-ä). [Gr. *μέσος*, middle, + NL. *patagium*. See *patagium*.] That part of the wing-membrane of a bat lying between the fifth digit of the hand and a line drawn from the center of the posterior margin to the elbow.

Within the *mesopatagium* the subordinate lines incline either toward the forearm or the manus.
Harrison Allen, Monograph of the Bats of North America, p. 3.

mesopectus (mes-ō-pek′tus), *n.* [Gr. *μέσος*, middle, + L. *pectus*, breast.] Same as *mesosternum*, 2.

mesopellic (mes-ō-pel′ik), *a.* [Gr. *μέσος*, middle, + *πέλλα*, dish (pelvis), + *-ic*.] Same as ★*mesatipellic*. *Brinton*, Races and Peoples, p. 49.

mesophile (mes′ō-fil), *a.* [G. *mesophil* (Warming, 1895), < Gr. *μέσος*, middle, + *φίλος*, loving.] Same as ★*mesophilous*. *C. Mohr*.

mesophilic (mes-ō-fil′ik), *a.* [Gr. *μέσος*, middle, + *φίλος*, loving.] Preferring, or adapted to live under, a condition of medium temperature or moisture; mesophilous: noting especially bacteria which grow best in cultures which are maintained at a medium temperature (15–45° C.). *Buck*, Med. Handbook, I. 686.—**Mesophilic bacteria**. See ★*bacterium*.

mesophilous (me-sof′i-lus), *a.* Mesophilic; in *phytogeog.*, mesophytic.

mesophryon (me-sof′ri-on), *n.* [NL., < Gr. *μεσόφρυον*, < *μέσος*, middle, + *ὀφρύς*, eyebrow.] The region between the eyebrows.

mesophyte (mes′ō-fīt). *n.* [Gr. *μέσος*, middle, + *φυτόν*, plant.] 1. A plant which is adapted to live under conditions of medium moisture and dryness; a plant intermediate between the hydrophytes and the xerophytes.—2. Same as *mesophytum*.

mesophytic (mes-ō-fit′ik), *a.* [*mesophyte* + *-ic*.] Of the nature of or pertaining to mesophytes.

mesoplankton (mes-ō-plangk′ton), *n.* [Gr. *μέσος*, middle, + NL. *plankton*.] The animals that float or swim in the water below the 100-fathom line and above the 500-fathom line, considered collectively and in contrast with the fauna of the deep ocean and the fauna and flora of the surface. See ★*hypoplankton* and ★*epiplankton*.

A. [Arachnactio] albida . . . occurred in over 61 per cent. of epiplankton hauls, never in a *mesoplankton* haul, and may fairly be taken to be a purely epiplankton form.
Proc. Zool. Soc. London, 1903, I. 117.

mesoplanktonic (mes″ō-plangk-ton′ik), *a.* [*mesoplankton* + *-ic*.] Pertaining to or of the nature of mesoplankton. *Nature*, Nov. 5, 1903, p. 23.

mesoplasm (mes′ō-plazm), *n.* [Gr. *μέσος*, middle, + *πλάσμα*, anything formed.] An intermediate layer between the ectoplasm and the endoplasm of some sporozoans. *Cohn*.

mesoplastral, *a.* **II.** *n.* Same as *mesoplastron*.

mesoplax (mes′ō-plaks), *n.* [NL., < Gr. *μέσος*, middle, + *πλάξ*, anything flat.] In the *Pholadidæ*, a family of teleodesmaceous *Pelecypoda*, one of the accessory shelly plates, thus termed when situated above the beaks of the two valves. See also ★*prosoplax*, ★*metaplax*, and ★*hypoplax*.

mesopod (mes′ō-pod), *n.* Same as *mesopodium*.

mesopore (mes′ō-pōr), *n.* [Gr. *μέσος*, middle, + *πόρος*, pore.] In the *Bryozoa*, the angular or irregular cells which occupy interzoœcial spaces in some of the paleozoic genera (*Monticulipora*).

mesopotamic (mes″ō-pō-tam′ik), *a.* [See *Mesopotamian*.] Situated between two rivers: as, a *mesopotamic* region.

mesopsychic (mes-ō-sī′kik), *a.* [Gr. *μέσος*, middle, + *ψυχή*, mind, + *-ic*.] In *psychol.*, belonging to the mid-period of mental development: opposed, on geologic analogy, to ★*paleopsychic* and ★*cenopsychic*. *G. S. Hall*, Adolescence, II. 358.

mesopterygoid, *n.* **2.** In *ichth.*, a bone between the pterygoid and metapterygoid which usually helps to wall in the orbital cavity behind and below. It is not infrequently absent.

mesoptile (mes′op-til), *n.* [Gr. *μέσος*, middle, + *πτίλον*, feather.] A feather of the plumage of nestling birds, intermediate between the down and the mature feather: it bears on its tip the down and is in turn attached at its base to the neossoptile: correlative with ★*teleoptile* and ★*neossoptile*.

This so-called nestling plumage, which is always intermediate in point of time and position between the other two named, may be called the *mesoptile*.
Rep. Fur Seal Investigations, III. 424.

mesoptychial (mes-op-tik′i-ȧl), *a.* [Gr. *μέσος*, middle, + *πτύξ* (*πτυχ-*), fold, + *-ial*.] Relating to the anterior middle part of the chest: as, the *mesoptychial* scales of lizards.

mesorchis (mes-ôr′kis), *n.* [NL.] Same as *mesorchium*.

mesorchium, *n.* **2.** In *ichth.*, the tissue which suspends the genital gland from the dorsal wall of the abdominal cavity in the males.

mesorcinol (mes-ôr′si-nol), *n.* [Gr. *μέσος*, middle, + E. *orcinol* (?).] A colorless compound, $(HO)_2C_6H(^{1,3,5}CH_3)_3$, prepared by the action of nitrous acid on aminomesitol. It sublimes in small lustrous plates, melts at 149–150° C. and boils at 274.5–275.5° C. Also called 1, 3, 5-*trimethylphendiol*.

mesorhinian, *a.* **II.** *n.* In *anthrop.*, a mesorhinian individual or type.

mesorhiny (mes′ō-rin-i), *n.* [*mesorhine* + *-y*[3].] In *anthrop.*, the condition or character of being mesorhine.

mesorostral (mes-ō-ros′tral), *a.* [Gr. *μέσος*, middle, + L. *rostrum*, beak, + *-al*[1].] Pertaining to or situated upon the median line of the beak: specifically, referring to the beak or prolongation of the head of such a cetacean as a dolphin.

mesosalpinx (mes-ō-sal′pingks), *n.* [Gr. *μέσος*, middle, + *σάλπιγξ*, trumpet.] The upper part of the broad ligament between the Fallopian tube and the ovary.

Mesosauri (mes-ō-sâ′rī), *n. pl.* [NL., < Gr. *μέσος*, middle, + *σαῦρος*, lizard.] An order of plesiosaurs established by Boulenger to contain species having vertebræ with a persistent notochord, four sacral vertebræ, and paddles with five fingers of not more than five phalanges each. The type genus, *Mesosaurus*, is from the Trias of South Africa.

mesoscelocele (mes-ō-sel′ō-sēl), *n.* [Gr. *μέσος*, middle, + *σκέλος*, leg, + *κήλη*, tumor.] Perineal hernia.

mesosclerometer (mes″ō-sklē-rom′e-tėr), *n.* [Gr. *μέσος*, middle, + *σκληρός*, hard, + *μέτρον*, measure.] An instrument for testing the hardness of minerals by the rotation of a weighted needle pressed against the surface. See *sclerometer*.

mesoseismal (mes-ō-sīs′mal), *a.* [Gr. *μέσος*, middle, + *σεισμός*, earthquake.] Pertaining to or situated in the center of intensity of an earthquake: as, the *mesoseismal* area.

mesoseme, *a.* **II.** *n.* In *craniom.*, a skull which exhibits mesoseme measurements.

mesosome (mes′ō-sōm), *n.* [*mesosoma.*] 1. In crustaceans, the pereion or thorax. Compare ★*metasome* and *urosome.*—2. Same as *mesosoma.*

mesospore, *n.* 2. A unicellular teleutospore which occurs in certain species of *Puccinia,* as *P. obscura, P. Scirpi,* etc., associated with the ordinary two-celled form.

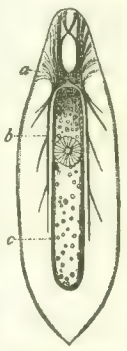
mesostasis (me-sos′tạ-sis), *n.* [Gr. *μέσος,* middle, + *στάσις,* a placing.] 1. In *petrog.,* same as *base*[2], 8.

These rocks [dolerites of the Western Isles of Scotland and of Iceland] . . . are described as possessing "intersertal structure," a structure characterized, according to the definition . . . by the presence of a hypocrystalline interstitial substance (*mesostasis*) wedged in between the feldspars. *Nature,* March 15, 1888, p. 459.

2. In *phytogeog.,* the condition of being mesostatic.

mesostatic (mes-ō-stat′ik), *a.* [Gr. *μέσος,* middle, + *στατικός,* causing to stand.] 1. In *petrog.,* of or pertaining to mesostasis.—2. In *phytogeog.,* having place under essentially uniform conditions of medium moisture: said of a succession of vegetations. *F. E. Clements.*

mesosternite (mes-ō-stėr′nīt), *n.* [Gr. *μέσος,* middle, + E. *sternite.*] Same as *mesosternal sternite.* See *mesosternal.*



mesosthenic (mes-os-then′ik), *a.* [Gr. *μέσος,* middle, + *σθένος,* strength, + *-ic.*] 1. Of ordinary or medium strength.—2. Strong in the median or middle part.

Mesostoma (me-sos′tō-mä), *n.* [NL.] Same as ★*Mesostomum.*

Mesostomatidæ (mes″ō-stō-mat′i-dē), *n. pl.* Same as ★*Mesostomidæ.*

Mesostomidæ (mes-ō-stom′i-dē), *n. pl.* [NL., ⟨ *Mesostomum* + *-idæ.*] A family of freshwater and marine rhabdocœlous turbellarians, having one or two generative openings and a rosette-shaped, ventrally placed pharynx. It includes several genera, among them being *Mesostomum, Castrada,* and *Promesostomum.*

Mesostomum (me-sos′tō-mum), *n.* [NL., ⟨ Gr. *μέσος,* middle, + *στόμα,* mouth.] The typical genus of the family *Mesostomidæ.* Also *Mesostoma. Dugés.*

Alimentary Canal and Nervous System of *Mesostomum ehrenbergii* (after Graff).

a, the two cerebral ganglia with two eye-spots; *b,* two lateral nerve-trunks; *c,* alimentary canal with mouth and pharynx.

mesostyle (mes′ō-stīl), *n.* [Gr. *μέσος,* middle, + *στῦλος,* pillar.] 1. In *bot.,* a style of intermediate length, as in trimorphic plants. Compare ★*metastyle* and ★*parastyle.*—2. In *anat.,* the median one of the three enamel-covered ridges on the outer side of the molar tooth of a horse: correlated with ★*parastyle* and ★*metastyle.*

Microchœrus in all probability comes in the same group, and when more fully known should furnish a closer approximation to the Indrisinæ than Necrolemur, on account of the development of a *mesostyle* in the upper molars. *Amer. Jour. Sci.,* March, 1904, p. 214.

mesosystolic (mes″ō-sis-tol′ik), *a.* [Gr. *μέσος,* middle, + E. *systolic.*] Occurring in the middle of the systole. *N. E. D.*

mesotarsal (mes-ō-tär′sal), *a.* [NL. *mesotars(us)* + *-al*[1].] Relating to the median horizontal line of the tarsus; pertaining to the metatarsus. *Parker and Haswell,* Zoology, II. 366. —**Mesotarsal joint,** a joint or articulation in the median horizontal plane of the tarsus, such as the ankle-joint of birds and reptiles, in which the joint is between the bones of the tarsus and not between the tibia and the tarsus.

mesotartaric (mes″ō-tär-tar′ik), *a.* [Gr. *μέσος,* middle, + E. *tartaric*[1].] Noting an acid, a colorless optically inactive compound, $HOOC\text{-}CH(OH).CH(OH)COOH.H_2O$, prepared by the prolonged boiling of d-tartaric acid with water or hydrochloric acid. It crystallizes in rectangular plates and melts at 140–143° C. The compound can not be resolved into optically active isomers, and its lack of activity is consequently regarded as being intramolecular, the one asymmetric carbon atom exactly neutralizing the other. See ★*mesoform.*

mesotendon (mes-ō-ten′dọn), *n.* [Gr. *μέσος,* middle, + L. *tendo,* tendon.] The synovial fold which connects a tendon and its sheath.

mesotheca (mes-ō-thē′kä), *n.*; pl. *mesothecæ* (-sē). [Gr. *μέσος,* middle, + *θήκη,* case.] The middle one of the three laminæ of the perigonium in *Hydrozoa. N. E. D.*

mesothecium (mes-ō-thē′si-um), *n.*; pl. *mesothecia* (-ä). [Gr. *μέσος,* middle, + NL. *thecium.*] 1. The middle layer of cells in the wall of an anther.—2. The thecium of lichens. *Jackson,* Gloss. Bot. Terms.

mesothermal (mes-ō-thėr′mal), *a.* [Gr. *μέσος,* middle, + *θέρμη,* heat, + *-al*[1].] Relating to or exhibiting a moderate temperature or quantity of heat.

mesothermic (mes-ō-thėr′mik), *a.* [*mesotherm* + *-ic.*] Having the character of a mesotherm; composed of or characterized by mesotherms.

The most important family of the north temperate zone among the Polycarpicae, that of the Ranunculaceæ, is *mesothermic* and microthermic. *A. F. W. Schimper* (trans.), Plant-Geog., p. 236.

mesothet (mes′ō-thet), *n.* [Gr. *μέσος,* middle, + *θετόν* (neuter), placed. See *thesis.*] A middle or intermediate term or thing. See *mesothesis.* [Rare.]

Mackaye sat in his usual place . . . while opposite to him was Farmer Porter. . . . A curious pair of 'poles' the two made; the *mesothet* whereof, by no means a 'punctum indifferens,' but a true connecting spiritual idea, stood on the table—in the whisky bottle. *Kingsley,* Alton Locke, xxi.

mesothetic (mes-ō-thet′ik), *a.* [*mesothesis.*] Of the nature of mesothesis; intermediate; serving to connect extremes or opposites. [Rare.]

An honest development of the true idea of Protestantism, which is paving the way to the *mesothetic* art of the future. *Kingsley,* Yeast, xv. *N. E. D.*

mesothorium (mes-ō-thō′ri-um), *n.* [Gr. *μέσος,* middle, + NL. *thorium.*] A disintegration-product of thorium, intermediate between thorium and radiothorium.

These preparations must contain the intermediate product between thorium and radiothorium. He [Dr. Otto Hahn] therefore reaches the conclusion that it is this intermediate product, for which he suggests the name "*mesothorium,*" and not the radiothorium, which is separated from the thorium in the technical process of preparing pure thorium nitrate. *B. B. Boltwood,* in Amer. Jour. Sci., Aug., 1907, p. 96.

mesotonic (mes-ō-ton′ik), *a.* [Gr. *μέσος,* middle, + E. *tonic.* See *tone*[1].] Of the nature of or characterized by middle or mean tones. See *mean* ★*tone* and *temperament,* 5.

This is known as the System of Mean Tones, or the *Mesotonic* System, as it will be here termed. It was the earliest system of temperament, and is claimed by Zarlino and Salinas. *A. J. Ellis,* in Proc. Roy. Soc. (London), XIII. 408.

mesotriæne (mes-ō-trī′ēn), *n.* [Gr. *μέσος,* middle, + *τρίαινα,* trident.] In the nomenclature of the spicular elements of sponges, a triæne in which the rhabdome is produced, leaving the three cladisks near the middle of the shaft. See *triæne.*

mesotroch (mes′ō-trok), *n.* [Gr. *μέσος,* equal, + *τροχός,* a wheel.] A band of cells bearing cilia and encircling the middle of the body in the larvæ of certain marine worms (annelids). Compare ★*prototroch,* ★*paratroch,* etc.

mesotropic (mes-ō-trop′ik), *a.* [Gr. *μέσος,* middle, + *-τροπος,* ⟨ *τρέπειν,* turn, + *-ic.*] In *phytogeog.,* controlled by conditions changing from wet or dry to medium: said of a succession of vegetations. *F. E. Clements.*

mesotropy (me-sot′rō-pi), *n.* [*mesotrop(ic)* + *-y*[3].] The character or condition of being mesotropic.

mesoturbinal (mes-ō-tėr′bi-nạl), *n.* [Gr. *μέσος,* middle, + E. *turbinal.*] The middle turbinate bone.

meso-uterine (mes-ō-ū′tẹ-rin), *a.* [Gr. *μέσος,* middle, + E. *uterine.*] Pertaining to the middle of the uterus: applied to the fold of peritoneum which supports the uterus.

mesoxalyl (mes-ok′sạ-lil), *n.* [*mesoxal(ic)* + *-yl.*] In *organic chem.,* the bivalent radical –COCO.CO– or its hydrated form $-COC(OH)_2-CO-$. It is the radical of mesoxalic acid.

mesquite, *n.*—**Bristly mesquite,** one of the black gramas, *Bouteloua hirsuta,* ranging from Illinois and Wisconsin to the Rocky Mountains. It is a tufted perennial, from 6 to 16 inches high, named from its hairy spikes. It is valuable chiefly because it will produce feed on very poor soils.—**Curly** or **creeping mesquite,** *Hilaria cenchroides,* a delicate perennial grass with slender, creeping stems and upright shoots a few inches to nearly a foot high. It is one of the most valuable grasses for grazing on the dry plains and mesas in the southwestern United States. It forms a close mat in summer, cures on the roots, and when not rotted by late rains affords excellent pasture in the fall and winter. During severe drought it appears dead, but quickly revives throughout upon the advent of warm rains.—**Early mesquite,** the true buffalo-grass, *Bulbilis dactyloides.*—**Grape-vine mesquite.** Same as *vine-*★*mesquite.*—**Hairy mesquite.** Same as ★*side-oats.*—**Running mesquite.** Same as *curly* ★*mesquite.*—**Seed-mesquite,** *Bouteloua Texana,* a small, densely tufted grass found in Texas, Oklahoma, and Arkansas. It is an important grass in stock-ranges, chiefly along the Rio Grande. Also called *Texas grama.*—**Velvet-mesquite.** Same as *velvet-grass.* See *Holcus.*—**Vine-mesquite,** *Panicum obtusum,* a stoloniferous panic-grass with upright stems 1–2 feet high and runners often 8 or 10 feet long. It ranges from Colorado and Texas into Mexico, being found chiefly on irrigated ground or on damp soil, most often in shade. Its character indicates agricultural value. Sometimes called *grape-vine mesquite* or *grass,* and in New Mexico *wire-grass.*

mess[1], *n.*—**Chief Master-at-arms' mess,** the chief petty officers' mess, presided over by the master-at-arms, the highest chief petty officer of a naval vessel.—**Orderly sergeants' mess,** the marines' mess for the sergeants and other non-commissioned officers of the marine guard. —**Steerage mess,** the midshipmen's mess.—**Ward-room mess,** the commissioned officers' mess: generally for those above the rank of ensign.—**Warrant-officers' mess,** the mess of the boatswain, gunner, carpenter, sailmaker, and warrant machinists.

message-hook (mes′āj-hůk), *n.* A wire hook upon which are filed the sheets of paper on which telegraphic messages have been written.

message-rate (mes′āj-rāt), *n.* A fixed rate of payment per message sent by telephone, as distinguished from a subscription entitling to unlimited service. *N. E. D.*

message-stick (mes′āj-stik), *n.* A stick bearing carved marks, carried by a messenger. The marks serve as reminders and are a device for securing the accurate delivery of the message. Message-sticks are used particularly in Australia.

message-string (mes′āj-string), *n.* A knotted string to which a number of symbolic objects are attached: used to convey messages from one person or tribe to another, and found, for instance, among the Jebu tribe in Africa. See also ★*knot-writing. Ratzel* (trans.), Hist. of Mankind, II. 406.

mess-beef (mes′bēf), *n.* Beef packed in barrels for use on board ship.

mess-boy (mes′boi), *n.* *Naut.,* the one who waits on the officers' table on a merchant steamer.

messel[3] (mes′el), *n.* In *Arabic music,* a method or system of fixing and measuring intervals which involves their description in terms derived by dividing the vibration-number of the lower tone by that of the higher: thus, the *messel* of an octave was 2, of a fifth 1½, etc. It is supposed that the messel theorists, by at least the fourteenth century, had established the modern thirds and sixths as distinguished from those of the Pythagorean system.

messenger, *n.*—**To fleet the messenger.** See ★*fleet*[1].

messenger-rope (mes′en-jėr-rōp), *n.* 1. In power-transmission, a rope-drive for operating a drum or machine.—2. A rope used to support guide-sheaves.

messenger-strand (mes′en-jėr-strand), *n.* A strand in a messenger-wire or a single wire used to support a cable.

messenger-wire (mes′en-jėr-wīr), *n.* A wire or wire rope used to support an aërial cable. The cable is attached to the messenger-wire at frequent intervals by cable-clips.

Messianism (me-sī′an-izm), *n.* [*Messian(ic)* + *-ism.*] Belief in a Messiah.

messieurs. Plural of *monsieur.*

Messinese (mes-i-nēs′), *a.* and *n.* [*Messina,* a city in Italy, + *-ese.*] I. *a.* Of or pertaining to Messina.

II. *n.* An inhabitant of Messina.

Messinian (me-sin′i-an), *a.* and *n.* [*Messina,* a city in Italy, + *-ian.*] I. *a.* Of or pertaining to Messina; in *geol.,* noting a division of the Tertiary in Italy commonly regarded as appertaining to the base of the Pliocene, though by some authors considered as the top of the Miocene. It is constituted of deposits indicating alternations of marine and brackish-water conditions.

II. *n.* 1. An inhabitant of Messina.—2. In *geol.,* the Messinian formation.

messire (me-sēr′), *n.* [F., ⟨ L. *meus senior.* See *monsieur.*] Sir: a French title of honor prefixed originally to the names of persons of high rank, but later used more loosely as a form of address.

mess-kid (mes′kid), *n.* Same as *kid*[3], 1.

mess-man (mes′man), *n.* Same as ★*mess-boy.*

Messrs. An abbreviation of the French *Messieurs.*

mess-whistle (mes′hwis″l), *n.* *Naut.,* the pipe to meals; the winding of the boatswain's call as a summons to meals.

mestiza (mes-tē′zä), *n.* Feminine of *mestizo.*

Mestizo wool. See ★*wool.*

mesto (mās′tō), *a.* [It., < L. *mæstus*, sad, < *mærere*, be sad.] In *music*, sad, gloomy.

mesuranema (mes-ū-ran′ē-mä), *n.* [NL., also *mesouranema*, < Gr. *μέσος*, middle, + *οὐρανός*, heaven.] In *astrol.*, mid-heaven; the tenth house of the heavens, being the maternal house, or house of dignities.

mesuranic (mes-ū-ran′ik), *a.* [Gr. *μέσος*, middle, + *οὐρανός*, palate, + *-ic.*] In *craniom.*, having a palatomaxillary index between 110 and 115. *Turner.*

met. An abbreviation (*a*) of *metaphor, metaphorical, metaphorically;* (*b*) of *metaphysical, metaphysically, metaphysics;* (*c*) of *metropolitan.*

met-. A combining form sometimes used in organic chemistry in place of *meta-.*

meta-. (*d*) In *inorganic chem.*, among the different types of periodic, phosphoric, arsenious, arsenic, boracic, and silicic acids, a prefix used in the name of that which contains the least proportion of hydrogen. (*e*) As a prefix to the names of benzene derivations, it signifies that atoms or radicals substituting two, three, or four of the hydrogen atoms of benzene have the positions (if all six hydrogen atoms of the original benzene be numbered consecutively from 1 to 6) 1 and 3, 1, 2, and 4, or 1, 2, 3, and 5, respectively. This arrangement is spoken of as *asymmetric.* In *geol.*, it is used to denote change, transformation, or metamorphism, but differently in different instances. In one case the rock-name to which it is prefixed accords with the present character of the rock, and the prefix *meta-* indicates that it has been developed by processes of metamorphism: as, *meta-diorite*, a diorite which has resulted from metamorphism, possibly of a gabbro. In another case the rock name describes the rock as it was before metamorphism: as, *meta-diabase*, for an altered diabase.

meta-andesite (met-ạ-an′dē-zīt), *n.* An altered or partly metamorphosed andesite.

Much of the lava contains porphyritic quartz, and in general may be designated metarhyolite, but a large part, being without free quartz and less siliceous, has the appearance of *metaandesite.* A peculiarity of many of these rocks is that they are rich in soda.
Contrib. to Econ. Geol., U. S. Geol. Surv., 1902, p. 124.

meta-arthritic (met″ạ-är-thrit′ik), *a.* [Gr. *μετά*, after, + E. *arthritic.*] Consequent upon arthritis as an effect.

metabasalt (met″ạ-bạ-sâlt′), *n.* An altered or partly metamorphosed basalt. *Amer. Jour. Sci.*, Feb., 1904, p. 145.

metabelian (met-ạ-bē′li-ạn), *a.* [Gr. *μετά*, with, + E. *Abelian*[2].] In *math.*, noting a group whose cogredient group of isomorphisms is Abelian.

metabiosis (met″ạ-bī-ō′sis), *n.* [NL., < Gr. *μετά*, with, + *βίωσις*, a way of life.] The dependence of an organism upon another which furnishes something that is necessary for its existence.

metabiotic (met″ạ-bī-ot′ik), *a.* [*metabiosis* (*-ot-*) + *-ic.*] In *biol.*, dependent upon another for some condition of existence. See ★*metabiosis.*

metabole (me-tab′ō-lē), *n.* [Gr. *μεταβολή*, changing, change, < *μεταβάλλειν*, turn about, change.] Development with metamorphosis, such as characterizes many insects: contrasted with ★*ametabole*, or development without metamorphosis.

metabolin (me-tab′ō-lin), *n.* [*metabol(ic)* + *-in*[2].] Same as *metabolite.*

metabolizable (me-tab′ō-lī-zạ-bl), *a.* [*metabolize* + *-able.*] Capable of metabolic transformation: said of foods received into the animal system. See *metabolism.*

metabolon (me-tab′ō-lon), *n.*; pl. *metabola* (-lạ). [Gr. *μεταβόλον*, neut. of *μεταβόλος*, changeable, < *μεταβάλλειν*, turn about, change.] A temporary and transitional form of matter produced by the disintegration of radioactive substances such as thorium or radium. The metabolon differs from a chemical element in having only a temporary existence.

The various *metabolons* from the radio-elements are distinguished from ordinary matter by their great instability and consequent rapid rate of change.
E. Rutherford, Radio-activity, p. 324.

metacanthid (met-ạ-kan′thid), *n.* and *a.* **I.** *n.* A member of the heteropterous family *Metacanthidæ.*

II. *a.* Having the characters of, or belonging to, the family *Metacanthidæ.*

metacarpal. **I.** *a.*—**Metacarpal ligament, phalanx.** See ★*ligament*, ★*phalanx.*

II. *n.* 2. One of the six primary feathers of a bird's wing which are attached to the metacarpal bones.

metacarpodigital (met-ạ-kär-pō-dij′i-tạl), *n.* One of the primaries of a bird's wing: the term was devised by Wray, who divided the primaries into digitals, those attached directly to the digits, and metacarpals, those joined to the metacarpus.

metacarpophalanx (met-ạ-kär-pō-fā′langks), *n.*; pl. *metacarpophalanges* (-fā-lan′jēz). [NL., < *metacarpus*, 2, + *phalanx.*] A pectoral ray; one of the rays of the pectoral fin in fishes. *Starks*, Synonymy of the Fish Skeleton, p. 523.

metacarpus, *n.* 2. Same as *actinost. Starks*, Synonymy of the Fish Skeleton, p. 523.

metacasein (met-ạ-kā′sē-in), *n.* [*meta-* + *casein.*] A certain phase in the rennin reaction (coagulation of milk), during which the paracasein is precipitated only by higher temperatures.

metacenter, *n.* 2. In *biol.*, an organism or an organ which, while one of the descendants from an archetype, itself becomes a new archetype around which new divergent or apocentric modifications are produced.

With reference to any particular group of forms such a new centre of modification may be termed a *metacentre.*
Encyc. Brit., XXVIII. 343.

Curve of metacenters or **transverse metacenters.** See ★*curves of ship calculations.*

metacentral (met-ạ-sen′trạl), *a.* Same as *metacentric. Trans. Linnean Soc. London*, Zool., Oct., 1901, p. 229.

metacentric, *a.* 2. In *biol.*, pertaining to a new center around which new diverging modifications are produced. *P. C. Mitchell.*—**Metacentric diagram,** in *naval arch.*, a diagram showing the curves of metacenters and of centers of buoyancy in a conventional method. See cut and description under ★*curves of ship calculations.*—**Metacentric height.** See ★*height.*

metacentricity (met″ạ-sen-tris′i-ti), *n.* [*metacentric* + *-ity.*] The property of being metacentric, in either sense of that word.

metacerium (met-ạ-sē′ri-um), *n.* [NL., < Gr. *μετά*, with, + NL. *cerium.*] A supposed new chemical element announced by Brauner as probably present as an oxid mixed with oxid of cerium. No confirmation of its existence has been had.

metacestode (met-ạ-ses′tōd), *n.* [Gr. *μετά*, after, implying change, + E. *cestode.*] A sexless, encysted stage of certain tapeworms, as *Bothriocephalus.* If imperfectly cooked fish infested with the parasite in this stage is eaten by man, the metacestode develops into the mature tapeworm. Also called *pleroces-tode.*

Metacestode of *Bothriocephalus* encysted in the smelt (after Leuckart). (From Lankester's "Zoology.")

metachemic (met-ạ-kem′ik), *a.* [Gr. *μετά*, beyond, + E. *chemic.*] 1. Of or pertaining to metachemistry; metachemical.—2. In *petrog.*, noting changes in the chemical constitution of rocks; metasomatic. *Dana*, 1886.

In none of the specimens studied was there any schistosity, so that the alteration has been *metachemic.*
22d An. Rep. U. S. Geol. Surv., ii. 793.

metachemical (met-ạ-kem′i-kạl), *a.* [Gr. *μετά*, after, + E. *chemical.*] Transcending chemistry; standing beyond the bounds of true chemistry: metachemic.

What Mendeléef denominates the *metachemical* and vague ('verschwommene') theory of electrons.
Science, March 4, 1904, p. 395.

Metachlamydeæ (met″ạ-kla-mid′ē-ē), *n. pl.* [NL. (Engler, 1898), < Gr. *μετά*, after, + *χλαμύς* (*χλαμυδ-*), cloak, envelop, + *-eæ.*] A series of dicotyledonous plants, embracing all those having a double floral envelop (calyx and corolla), with the parts of the inner envelop (corolla) coherent. Although coextensive with the ★*Sympetalæ* (which see), it is not to be confounded with that (which is a division) and is coördinate with the series ★*Archichlamydeæ* (which see). The plants of this series appeared later in the geological history of plants and possess a higher organization than those of the *Archichlamydeæ.*

metachlamydeous (met″ạ-kla-mid′ē-us), *a.* [*Metachlamydeæ* + *-ous.*] Belonging to the plant series *Metachlamydeæ;* having the divisions of the corolla coherent.

metachlorite (met-ạ-klō′rīt), *n.* [*meta-* + *chlorite.*] A dull leek-green chloritic mineral, related to daphnite.

metachromasy (met-ạ-krō′mạ-si), *n.* [Gr. *μετά*, with, after, + *χρῶμα*, color.] An anomalous manner of staining, whereby a single stain will color different tissue elements in different tints or in altogether different colors: a term introduced by Ehrlich. Not all dyes have metachromatic properties. The most notable ones are methyl-violet, thionin, methylene-azure, cresyl violet RR, and toluidin blue.

The cells which contain granules contain also a store of ferment (zymogen), whilst the cells that are destitute of granules exhibit the reaction of mucin (*metachromasy*).
Lancet, July 18, 1903, p. 177.

metachromatic (met″ạ-krō-mat′ik), *a.* [Gr. *μετά*, beyond, + *χρῶμα* (*χρωματ-*), color, + *-ic.*] 1. Pertaining to or characterized by metachromatism or color-change.—2. Pertaining to or exhibiting metachromasy; metachromic.—**Metachromatic bodies,** granules in the interior of certain bacteria which take on a different stain from the rest of the cell; metachromic granules.

metachromatism (met-ạ-krō′mạ-tizm), *n.* [Gr. *μετά*, after, + *χρῶμα(τ-)*, color, + *-ism.*] Change of color; specifically, variation of color due to changes in the temperature of a body; change of color by change of physical conditions, as in the case of a double salt consisting of silver chlorid and mercuric iodide, which changes from yellow to red on being heated and returns to yellow after cooling.

metachromatosis (met-ạ-krō-mạ-tō′sis), *n.* [Gr. *μετά*, after, + *χρῶμα(τ-)*, color, + *-osis.*] An alteration in color.

metachrome (met′ạ-krōm), *n.* [See ★*metachromatic.*] A body or substance that changes color.

metachromic (met-ạ-krō′mik), *a.* [Gr. *μετά*, after, + *χρῶμα*, color, + *-ic.*] 1. Staining in a color different from that of the dye used—for example, red with a blue or violet dye; metachromatic.—2. Differentiated by means of special stains: applied to granules and other contents of the cell.—**Metachromic granules,** in *bacteriol.*, minute bodies within the protoplasm of bacteria which are brought out by special staining methods; metachromatic bodies.

metachromism (met-ạ-krō′mizm), *n.* 1. Same as ★*metachromatism.*—2. Same as ★*metachromasy.*

Metacineta (met″ạ-si-nē′tạ), *n.* [NL., < Gr. *μετά*, after, + *κινητός*, < *κινεῖν*, move.] The typical and only genus of the family *Metacinetidæ. Bütschli*, 1888.

Metacinetidæ (met″ạ-si-net′i-dē), *n. pl.* [*Metacineta* + *-idæ.*] A family of *Suctoria*, consisting of thecate forms having the base of the cup drawn out into a long stalk and the walls perforated for the exit of the tentacles. It contains the single genus *Metacineta.*

metacinnamene (met-ạ-sin′ạ-mēn), *n.* [*meta-* + *cinnamene.*] Same as ★*metastyrolene.*

metacneme (met′ak-nēm), *n.* [Gr. *μετά*, after, + *κνήμη*, tibia.] In anthozoans, one of the later mesenteries which appear after the twelve primary mesenteries. Compare ★*protocneme.*

metacnemic (met-ak-nē′mik), *a.* [*metacneme* + *-ic.*] Resembling, or pertaining to, a metacneme. *Annals and Mag. Nat. Hist.*, May, 1902, p. 397.

metacœle (met′ạ-sēl), *n.* **1.** Same as *metacœlia.*—**2.** The trunk-cavity formed as a pair of entodermal outgrowths in the *Hemichorda.*

And a *metacœle* (trunk cavity), formed as a pair of endodermal outgrowths, which may possibly have been originally archenteric diverticula.
Encyc. Brit., XXIX. 249.

metacœloma (met-ạ-sē-lō′mä), *n.*; pl. *metacœlomata* (-ma-tä). [NL., < Gr. *μετά*, after, + *κοίλωμα*, a hollow.] In *embryol.*, that portion of the true body-cavity, or cœloma, which becomes the pleuroperitoneal cavity of the adult.

metaconal (met-ạ-kō′nạl), *a.* [*metacone* + *-al*[1].] Of or pertaining to the metacone. *Proc. Zool. Soc. London*, 1896, p. 570.

metacone (met′ạ-kōn), *n.* [Gr. *μετά*, after, + *κῶνος*, cone.] The outer, hindmost cusp on the upper molar of such a tooth as that of a horse or horse-like mammal. See cut under ★*tooth*, 1. *Parker and Haswell*, Zoology, II. 529.

metaconid (met-ạ-kon′id), *n.* [*metacone* + *-id.*] The anterior or intermediate cusp on the inner side of a lower molar of a mammal: typically present in the teeth of the extinct *Hyracotherium* and in existing monkeys.

Treating them for the present as subspecies, the animal I should call H. a. leucurus has the tooth small and narrow . . ., low . . ., and simple, the antero-internal cusp not or scarcely divided into its constituent paraconid and *metaconid*, . . . and with but one low cusp on the centre of the talon.
Annals and Mag. Nat. Hist., June, 1904, p. 409.

metaconule (met-a-kon′ūl), *n.* [Gr. *μετά*, with, + E. *conule*.] The posterior smaller or intermediate cusp on the upper molar tooth of a mammal. See cut under ★*tooth*, 1. *Amer. Geol.*, April, 1905, p. 244.

metacopaivic (met-a-kō-pā′vik), *a.* [Gr. *μετά*, with, + E. *copaiva* + *-ic*.] Noting a crystalline acid, $C_{22}H_{34}O_4$, contained in Maracaibo copaiva balsam. It is possibly identical with gurjunic acid.

metacoracoid (met-a-kor′a-koid), *n.* [Gr. *μετά*, with, + E. *coracoid*.] The coracoid proper, as distinguished from the epicoracoid.

Similarly the doubly ossified condition of the coracoid may now be held diagnostic, for it is known that the epicoracoidal element, originally thought to characterize the monotremes alone, is always present, and that reduction to a varying degree characterizes the *metacoracoid*, which retires, as in man, as the so-called coracoid epiphysis. *Smithsonian Rep.*, 1902, p. 588.

metacrasis (met-a-krā′sis), *n.* [Gr. *μετά*, after, + *κρᾶσις*, mingling.] 1. Kinetic metabolism; transmutation of energy. *Jackson*, Gloss. Bot. Terms.—2. In *geol.*, that variety of metamorphism which involves the recrystallization of old materials into new compounds without the necessary addition of new matter: thus, shales may be changed to mica schists. *Geikie*, Text-book of Geol., p. 765.

metacresol-anytol (met-a-krē′sol-an″i-tol), *n.* A 40-per-cent. solution of metacresol in anytol: used in erisypelas.

metacribrum (met-a-krib′rum), *n.* [Gr. *μετά*, with, + L. *cribrum*, a sieve.] The outermost of the three main side sacs arising from the embryonic cribrum. See ★*mesocribrum*. *Jour. Roy. Micros. Soc.*, Feb., 1905, p. 42.

metacrisis (me-tak′ri-sis), *n.* [Gr. *μετά*, after, + *κρίσις*, a separating.] In *petrog.*, a term introduced by Bonney (1886) to signify recombination or a change, such as the conversion of a mud into a mass of quartz with mica and other silicates.

metacrolein (met-a-krō′lē-in), *n.* [*meta-* + *acrolein*.] A colorless crystalline compound, $(C_3H_4O)_3$, prepared by the action of sodium hydroxid on β-chlorpropionic aldehyde. It has a highly offensive odor and melts at 50° C.

metacrystal (met-a-kris′tal), *n.* [Gr. *μετά*, after, + E. *crystal*.] A relatively large crystal, simulating the phenocrysts of eruptive rocks, but formed in both sediments and eruptives during metamorphism. Examples are garnets and staurolite in schists; andalusite in contact-zones; etc. *A. C. Lane*, in Bulletin Geol. Soc. Amer., XIV. 388.

metacyclic, *a.* 2. Solvable by radicals: as, a *metacyclic* equation. See ★*equation*.

metacyesis (met″a-sī-ē′sis), *n.* [Gr. *μετά*, after, + *κύησις*, gestation.] Ectopic gestation in which the embryo, at first in the uterus, is carried to some outside part where it undergoes further development.

metadesmine (met-a-des′min), *n.* [*meta-* + *desmine*.] A more or less completely dehydrated stilbite (desmine).

metadiabase (met-a-dī′a-bās), *n.* [*meta-* + *diabase*.] Same as *epidiorite*.

metadiazin (met″a-dī-az′in), *n.* [*meta-* + *diazin*.] Same as ★*pyrimidine*.

metadiorite (met-a-dī′ō-rīt), *n.* [*meta-* + *diorite*.] In *petrog.*, a phaneric rock, having the composition of diorite, which has been produced by the alteration or metamorphism of another rock, most frequently by the alteration of pyroxene to hornblende. *Dana*.

metadiscoidal (met″a-dis-koi′dal), *a.* [Gr. *μετά*, after, + E. *discoid* + *-al*[1].] In *embryol.*, noting the placenta of certain mammals such as the primates (man and apes), in which the villi are restricted to a disk-shaped chorionic area on the ventral side of the embryo. *Parker and Haswell*, Zoology, II. 562.

meta-element (met′a-el″ē-ment), *n.* [Gr. *μετά*, after, + E. *element*.] In *chem.*, a term suggested by Sir William Crookes for the very similar but in some respects different components into which crude yttrium seems to split up on oft-repeated fractional crystallization of its salts. He connected these supposed analogues of closely related organic radicals with his ideas as to the genesis of the generally recognized elements of chemistry from a single primitive form of matter.

metafysics, *n.* An amended spelling of *metaphysics*.

metagabbro (met-a-gab′rō), *n.* [Gr. *μετά*, after, + E. *gabbro*.] An altered or partly metamorphosed gabbro. *Amer. Jour. Sci.*, Feb., 1904, p. 145.

metagadolinite (met-a-gad′ō-lin-īt), *n.* [Gr. *μετά*, with, + E. *gadolinite*.] An uncertain alteration-product of gadolinite.

metagallic (met-a-gal′ik), *a.* [*meta-* + *gallic*[2].] Same as ★*melanogallic*.

Metagene (met′a-jēn), *a.* and *n.* [Gr. *μετά*, after, + *-γενης*, -producing.] In *geol.*, a term suggested by Heilprin (1887) as an equivalent of *Miocene*.

metageometer (met″a-jē-om′e-tėr), *n.* [*metageometry*, after *geometer*.] One who is skilled in metageometry.

metageometrical (met″a-jē-ō-met′ri-kal), *a.* [*metageometry* + *-ic-al*.] Of or pertaining to metageometry.

metageometrician (met″a-jē-om-e-trish′an), *n.* [*metageometric* + *-ian*.] Same as ★*metageometer*.

Our *metageometricians* tried to derive the basic geometrical principles from pure reason but failed. *Science*, Jan. 16, 1903, p. 106.

metageometry (met″a-gē-om′e-tri), *n.* [Gr. *μετά*, after, + E. *geometry*. Compare *metaphysics*.] A system of geometry which omits or reverses some one or more of the explicit or implicit postulates of ordinary geometry, such as that space has but three dimensions, that all points of space have like neighboring places, that every pair of unbounded straight lines which are in one plane and do not cut one another at a finite distance cut one another at infinity, etc. See ★*non-Euclidean*.

The fifth book of *Metageometry*. . . . M. Barbarin calls fifth book of '*Metageometry*' that which corresponds to the fifth book of the 'Elements of Legendre' or to the eleventh of Euclid. *Science*, Sept. 16, 1904, p. 364.

metaglobulin (met-a-glob′ū-lin), *n.* [*meta-* + *globulin*.] Same as *fibrinogen*.

Metagnatha (me-tag′nā-thā), *n. pl.* [NL., < Gr. *μετά*, after, + *γνάθος*, jaw.] In Brauer's classification of insects, a group of superordinal rank including those forms which take their food by means of jaws when young, but by suction when adult.

metagnathous, *a.* 2. Of or pertaining to the *Metagnatha*.

metagram (met′a-gram), *n.* [Gr. *μετά*, over, + *γράμμα*, a letter.] A word altered by removing some of its letters and substituting others.

metagraph (met′a-gråf), *n.* [Gr. *μετά*, between, + *γράφειν*, write.] In *craniom.*, an instrument used for drawing diagrams of the inner form of the skull.

metagraphic (met-a-graf′ik), *a.* [*metagraph(y)* + *-ic*.] 1. Of the nature of metagraphy; transliterative.—2. Pertaining to, or drawn by means of, the metagraph.

metagrobolism (met-a-grob′ō-lizm), *n.* [*metagrobol(ize)* + *-ism*).] The act of puzzling; mystification. [Humorous.]

By whose [the mendicant friars' and Jacobins'] gyronomomic circumbilivaginations, as by two celivagous filopendulums, all the autonomatic *metagrobolism* of the Romish church, when tottering and emblustricated with the gibble gabble gibberish of this odious error and heresy, is homocentrically poised. *Rabelais* (trans.), iii. 38.

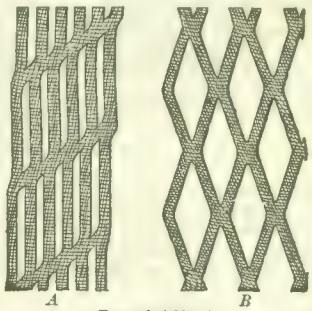
metagrobolize (met-a-grob′ō-līz), *v. t.*; pret. and pp. *metagrobolized*, ppr. *metagrobolizing*. [F. *metagraboulizer* (Rabelais), to puzzle (Cotgrave).] To puzzle; puzzle out. [Humorous.]

Ha, ha, a pair of breeches is not so easily got; I have experience of it myself. Consider, Domine, I have been these eighteen days in *matagrabolising* this brave speech. *Rabelais* (trans.), i. 158.

I find my brains altogether *metagrabolized* and confounded, and my spirits in a most dunsical puzzle. *Rabelais* (trans.), iii. 59.

"You see," quoth Stalky, as they strolled up to prep. with the ignoble herd, "if you get the houses well mixed up an' scufflin', it 's even bettin' that some ass will start a real row. Hullo, Orrin, you look rather *metagrobolized*." *R. Kipling*, Stalky & Co., p. 124.

metakinesis (met″a-ki-nē′sis), *n.* [NL., < Gr. *μετά*, after, + *κίνησις*, motion.] 1. Same as *metaphase*.



Heuser ('84) seems to have been the first to call attention to the double character of the daughter chromosomes in the diaster stage of Tradescantia virginica, but he interpreted the separation of the daughter segments during *metakinesis* of the first mitosis as a transverse division. *Bot. Gazette*, April, 1903, p. 251.

2. Any mental process or manifestation of consciousness. See the extract.

We call manifestations of energy 'kinetic' manifestations, and we use the term 'kinesis' for physical manifestations of this order. Similarly, we may call concomitant manifestations of the mental or conscious order 'metakinetic, and may use the term '*metakinesis*' for all manifestations belonging to this phenomenal order. According to the monistic hypothesis, every mode of kinesis has its concomitant mode of *metakinesis*, and when the kinetic manifestations assume the form of the molecular processes in the human brain, the metakinetic manifestations assume the form of human consciousness. *C. L. Morgan*, Animal Life and Intelligence, p. 467.

metakinetic (met″a-ki-net′ik), *a.* [*metakinesis*.] Of or pertaining to metakinesis, in either sense of that word; specifically, pertaining to mind or consciousness or to a manifestation of mind or consciousness. See ★*metakinesis*, 2. *L. F. Ward*, Pure Sociol., p. 156.

metal, *n.* 11. In *mining:* (*a*) Cast-iron. (*b*) Hard rock; whin or igneous rock. (*c*) *pl.* A general name for coal-bearing strata. *Barrowman*, Glossary.—**Albata metal**, an alloy composed of 40 parts of copper, 32 of zinc, and 8 of nickel.—**Alfenid metal**, an alloy composed of 60 parts of copper, 30 of zinc, and 10 of nickel, with traces of iron. It is a kind of German silver.—**Alger metal**, an alloy composed of 90 parts of tin and 10 of antimony. It is suitable as a protector from corrosion.—**Argusoid metal**, an alloy composed of 55.5 per cent. of copper, 23.2 of zinc, 13.4 of nickel, 3.5 of lead, and 4 of tin, with traces of iron.—**Ashberry metal**, an alloy somewhat resembling Britannia metal (which see, under *metal*). It is composed of 78–82 parts of tin, 14–20 of antimony, 2–3 of copper, 1–2 of zinc, 1–2 of nickel, and 1 part of aluminium. It is harder than Britannia metal and is used chiefly for the manufacturing of forks, spoons, coffee-pots, tea-pots, etc., for which Britannia metal is generally employed.—**Baudoin metal**, an alloy composed of 72 parts of copper, 16.6 of nickel, 1.8 of cobalt, 2.5 of tin, and 7.1 of zinc. About ½ per cent. of aluminium may also be added.—**Bobierre metal**, an alloy of 66 parts of copper and 34 of zinc. It is used for sheathing ships.—**Bourbon metal**, an alloy composed of equal parts of aluminium and tin. It solders readily.—**Coarse metal**, the impure metal obtained in one of the intermediary processes of extraction.—**Colloidal metals**. See ★*colloidal*.—**Delta metal**, an alloy consisting chiefly of brass or bronze with a small proportion of iron, and sometimes containing also manganese or lead. The iron is chemically dissolved in the brass or the bronze, and the alloy is characterized by great strength and toughness, durability, and resistance to corrosion. It is especially valuable for ship-building, massive engineering, sanitary work, etc.—**Direct metal**, molten cast-iron taken directly from the blast-furnace and used in the subsequent metallurgical processes before it has solidified.—**Dull metal**, molten metal which has stood in a ladle until it thickens, or into which pieces of solid metal have been thrown to cool it. Dull metal is preferable for heavy castings because it shrinks less, crystallizes more closely, and is less liable to blow-holes and spongy places than hot metal.—**Expanded metal**, sheet-metal lathing and lattice for use in making screens and lockers and for reinforcing concrete. It is made by cutting in sheet-metal a series of short slits arranged in parallel lines,

Expanded Metal.
A, lathing; B, net.

one line breaking joint with the next, and then pulling the sheet out sidewise until the slits are drawn open and form a diamond-mesh net. It is extensively used in fireproof and steel-concrete construction. See *reinforced* ★*concrete*.—**Fine metal**, the regulus or matte, containing from 60 to 80 per cent. of copper, obtained in the fourth stage of the Welsh method of copper-smelting (which see, under ★*method*). The name serves to distinguish it from the regulus obtained in the second stage of the process, which is known as *coarse metal*. See *white metal*, under *metal*.—**French metal**, metallic antimony of a marketable degree of purity. Also called *star metal*.—**Hercules metal**, a trade-name of an alloy of copper and a little aluminium.—**Karmarsch metal**, an alloy composed of tin, copper, and antimony in varying proportions. It is used as a bearing-metal.—**Magnolia metal**, a trade-name of an anti-friction alloy, used for the bearings of machinery, etc., consisting of about 78 per cent. of lead, 18 of antimony, and 4 of tin.—**Perforated metal**, a trade-name of iron, brass, copper, or other sheet-metal perforated in a perforating-press, with square, round, or oblong holes arranged in various patterns: used for screens, riddles, sieves, lamp-fixtures, and other purposes. Compare *expanded* ★*metal*.—**Platinum metals**, a natural group of elements of metallic character, found associated in the mineral kingdom, and having close relations with one another as to chemical behavior. There are six in all, forming two subgroups of three each, platinum, iridium, and osmium in the one, palladium, rhodium, and ruthenium in the other.—**Rare-earth metals**. See ★*earth*[1].—**Ruoltz metal**, an alloy which contains from 20 to 30 per cent. of silver, 25 to 30 per cent. of nickel, and 35 to 50 per cent. of copper: used for manufacturing jewelry.—**Spence's metal**, a compound obtained by dissolving metallic sulphids (mostly those of iron, lead, and zinc in varying proportions) in melted sulphur. It melts at 160° C., takes perfect impressions, and is at-

tacked by few acids. It is used for soldering gas-pipes, and is especially valuable for making air-tight connections between glass tubes.—**Star metal,** a trade-name of refined metallic antimony showing on the surface the star-like crystalline markings which indicate a near approach to purity.—**White metal.** (*b*) A metallic alloy used for the bearings of machinery, usually consisting of tin and lead hardened by antimony, zinc, or copper, and distinguished by greater fusibility and the absence of yellow color from the bronzes used for the same purpose. (*c*) A metallic alloy used for the production, by casting in iron or brass molds, of cheap ornamental articles to be electroplated, usually consisting of lead and tin hardened by antimony, with occasional addition of other metals.

Metal-ammonia compounds. See ★*ammonia.*

Metal-ammonium compounds. See ★*ammonium.*

metalbumin (met-al-bū′min), *n.* [*meta-* + *albumin.*] Same as ★*pseudomucin* (which see).

metalepsis, *n.* 2. In *chem.*, same as *metalepsy.*

metalik (me-tal′ik), *n.* [Turk.] A Turkish coin worth ten paras or about one cent.

metaline, *n.* 3. A trade-name of a non-rusting antifriction alloy, intended to be used as a lubricant in bearing surfaces. It is inserted as plugs or short pencil-like rods radially in holes in the bearing.

metallaceous (met-ạ-lā′shius), *a.* [*metal* + *-aceous.*] Resembling or analogous in character to the metals.

metalleity (met-ạ-lē′i-ti), *n.* [F. *métalléité,* ⟨ L. *metalleus,* metallic.] The property of being metallic; metallic character. *Coleridge.*

Metallic acid, an acid of which the radical consists of a metal in combination with oxygen, as chromic acid (H_2CrO_4). The term is frequently but incorrectly applied to an acid oxid of a metal or a metallic anhydrid, as chromium trioxid (CrO_3).—**Metallic return.** See ★*return*1.

metallician (met-ạ-lish′ạn), *n.* [*metallic* + *-i-* + *-an.*] A racing book-maker: from the fact that book-makers used metallic books and pencils. *Hotten,* Slang Dict.

metallocyanide (met″ạ-lō-sī′ạ-nīd), *n.* [L. *metallum,* metal, + E. *cyanide.*] Any cyanide of a metal.

metallogenetic (met″ạ-lō-jē-net′ik), *a.* [Gr. *μέταλλον,* metal, + E. *genetic.*] Producing metals.—**Metallogenetic province,** a region of similar or related ore-deposits. *L. de Launay,* Compte rendu, 10th Int. Geol. Congr., 1906, I. 555.

metallogeny (met-ạ-loj′e-ni), *n.* [Gr. *μέταλλον,* metal, *-γενης,* -producing.] That special branch of geology which treats of the genesis of the metalliferous deposits.

On the possible rôle of slipping in *metallogeny.*
Nature, April 13, 1905, p. 576.

metallograph (me-tal′ō-gràf), *n.* [See *metallography.*] A print produced by metallography. See *metallography,* 3.

metallographer (met-ạ-log′ra-fėr), *n.* [*metallograph(y)* + *-er*2.] A metallographist; a metallurgist. *Athenæum,* April 1, 1905, p. 406.

Metallographic province, a mining region in which the ore-deposits possess a general similarity of type. Compare ★*metallogenetic,* which is to be preferred because not already established in a totally different sense. *J. E. Spurr,* in U. S. Geol. Surv., Prof. Paper 42, p. 276.

metallographical (met″ạ-lō-graf′i-kạl), *a.* [*metallograph(y)* + *-ical.*] Relating to or connected with metallography.

metalloptric (met-ạ-lop′trik), *a.* [Gr. *μέταλλον,* taken in sense of L. *metallum,* metal, + Gr. *-οπτρον,* ⟨ *ὀπ-,* see.] Relating to the minute structure of metals and their alloys as studied with the aid of the microscope.

The report takes up the work done by the different departments, these covering heat and mechanics, optical research, electric thermometers, pressure indicators, photometry, saccharimetry, *metalloptric* researches and chemistry. *Elect. Rev.,* Sept. 10, 1904, p. 400.

metalloscope (me-tal′ō-skōp), *n.* [Gr. *μέταλλον,* taken in sense of L. *metallum,* metal, + Gr. *σκοπεῖν,* view.] An instrument for investigating microscopically the structure of metals. The metal under examination is polished and then etched, this process disclosing its crystalline structure. *Science,* Oct. 30, 1903, p. 575.

metallotechny (met′ạ-lō-tek-ni), *n.* [Gr. *μέταλλον,* metal, + *τέχνη,* art.] The art of working in metals. *N. E. D.*

metallurgy, *n.*—**Physical metallurgy,** the study of the physical properties of metals and alloys. This branch of metallurgy is occupying a large share of the attention of scientists at the present time. *Electrochem. and Metal. Industry,* July, 1905, p. 248.

metal-mark (met′al-märk), *n.* Any butterfly of the family *Riodinidæ.*—**Large metal-mark,** an American riodinid butterfly, *Calephelis borealis.*—**Small metal-mark,** an American riodinid butterfly, *Calephelis cænius,* which occurs in the southern United States. Its early stages are unknown.

metalogisis (met-ạ-loj′i-sis), *n.* [Gr. *μετά,* after, + *λογισις,* numeration, calculation.] A changing of numerical status or relations. [Rare.]

At the upper surface the disintegrated rocks form an overplacement of soils which undergo such chemical reaction that the substances of vegetal life are produced. This material, exposed for longer or shorter periods, is transported by streams to lakes or to the sea and sinks to the bottom, where it is recombined into various substances, especially as carbonate of lime, chloride of sodium, other salts, clay, and coal. All of this transmutation is a numerical change in the relation of the atoms to the molecules of the substances developed. Let us call it *metalogisis.*
J. W. Powell, Truth and Error, p. 55.

metaloph (met′ạ-lof), *n.* [Gr. *μετά,* after, + *λόφος,* crest.] A crest, or fold of enamel, developed on the postero-internal angle of such an upper molar as that of a horse. *Amer. Museum Jour. Sup.,* Jan., 1903, Guide Leaflet No. 9, p. 20.

metalorganic (met″al-ôr-gan′ik), *a.* [Prop. *metallorganic,* ⟨ *metal* (L. *metallum*) + *organic.*] Pertaining to a compound consisting of a metal in combination with one or more organic radicals, such as zinc methyl, $Zn(CH_3)_2$, or magnesium ethyl iodide, $MgIC_2H_5$.

metal-spinning (met′al-spin″ing), *n.* In *sheet-metal work,* the forming of brass, copper, and other vessels on a spinning-lathe. A flat disk is placed in the lathe and made to revolve at a high speed in a vertical plane. A suitable tool is then held in the hand, supported on the tool-rest, and pressed against the disk, causing it to bend into the desired form. Vases, bowls, plates, jars, pans, and other vessels are in this way pressed or spun directly from flat disks of sheet-metal. See ★*spinning-lathe.*

metamathematical (met-ạ-math-ē-mat′i-kạl), *a.* [*metamathematic(s)* + *-al*1.] Pertaining to or of the nature of metamathematics.

metamerical (met-ạ-mer′i-kạl), *a.* [*metamere* + *-ical.*] Of or pertaining to metameres, or segments of the body; metameric.

metameride (me-tam′ẹ-rid), *n.* [*metamer* + *-ide.*] Same as *metamer.*

metamorfose, metamorfosis. Simplified spellings of *metamorphose, metamorphosis.*

metamorphic, *a.* 3. Noting races formed by intercrossing of archimorphic races in those parts of the world where distinct archimorphic races come into contact. Examples of metamorphic races are the Malay, Ethiopians, and Hottentots. *G. T. Fritsch.*

metamorphism, *n.*—**Contact metamorphism,** in *petrog.,* the metamorphism developed in rock in the immediate neighborhood of igneous rocks. See *metamorphism.*—**Macrostructural metamorphism,** metamorphism which produces changes of structure sufficiently coarse to be easily discernible with the unassisted eye. *Geikie,* Text-book of Geol. (4th ed.), p. 765.—**Microstructural metamorphism,** changes in the microscopic structure of rocks which may not be visible without magnification. *Geikie,* Text-book of Geol. (4th ed.), p. 765.

metamorphist (met-ạ-môr′fist), *n.* [*metamorph(ism)* + *-ist.*] In *geol.,* an advocate of the theory of metamorphism.

metamorphopsy (met″ạ-môr-fop′si), *n.* Same as *metamorphopsia.*

metamorphosis, *n.* 5. In *music,* either the same as *variation* (see *variation,* 9), or that extension or transformation of a theme or subject which often appears in modern music in the progress or development of an extended movement. From Beethoven onward the recognition of the essentially plastic nature of musical ideas (see *idea,* 9) has steadily advanced and constitutes one of the salient characteristics of recent composition.—**Stadia of metamorphosis,** instars. See ★*instar*2.

metamorphous (met-ạ-môr′fus), *a.* Same as *metamorphic.*

metamorphy, *n.* 2. In *biol.,* the abnormal replacement of a part of the body of an organism by another part, as in a flower in which the pistil is replaced by a leaf-shoot.

Metamynodon (met-ạ-min′ō-don), *n.* [NL., irreg. ⟨ Gr. *μετά,* after, + *ἀμύνειν,* ward off, defend, + *ὀδούς,* tooth.] A genus of aquatic, hornless rhinoceroses occurring in the White River Oligocene deposits of North America. It is characterized by formidable canine tusks, small but prominent eye-sockets, a broad, flat skull, and the presence of four completely functional digits in the manus. The latter character widely separates this animal from the true rhinoceroses.

Metanemertini (met″ạ-nē-mėr-tī′nī), *n. pl.* [NL., ⟨ Gr. *μετά,* after, + NL. *Nemertini.*] A group or order of nemerteans having the brain and lateral nerves lying within the dermal muscles of the body-parenchyma, the body-wall as in the *Mesonemertini,* the mouth in front of the brain, the proboscis usually with stylets, and a cæcum generally present. It includes several families, among which are the *Eunemertidæ, Amphiporidæ, Tetrastemmidæ,* and *Malacobdellidæ.*

metanephric (met-ạ-nef′rik), *a.* [*metanephr(on)* + *-ic.*] Of or pertaining to the *metanephron.*

Another organ which, though not peculiar to the Mammalia, is yet a diagnostic feature of terrestrial vertebrates, is the *metanephric* kidney, and that there is possibly a relationship between terrestrial modes of locomotion and the evolution of this organ I will now endeavor to show. *Proc. Zool. Soc. London,* 1903, I. 338.

Metanephric duct, a duct that in higher vertebrates becomes the ureter. *Parker and Haswell,* Zoology, II. 110.

metanephros (met-ạ-nef′ros), *n.* Same as *metanephron.*

metanepionic (met-ạ-nep-i-on′ik), *a.* [Gr. *μετά,* between, + *νήπιος,* an infant.] In the nomenclature of the stages of growth and decline (auxology), noting a substage of the nepionic condition intermediate between the ananepionic and the paranepionic conditions. See ★*nepionic.*

For about half a volution or less, the shell is smooth, although lines of growth become more pronounced. At more or less regular intervals stronger lines of growth appear (ananepionic). In the later portion of the nepionic stage (*metanepionic*) longitudinal wrinkles or ribs appear which characterize the ambital portion of the whorl, and may be traced upward to the suture between the two whorls. *Amer. Nat.,* Aug., 1903, p. 518.

metantimonate (met-an′ti-mō-nāt), *n.* [*meta-* + *antimonate.*] A salt of antimonic acid, as sodium antimonate, the production of which by precipitation, owing to its slight solubility, is sometimes used as a test for sodium in its compounds.

metantimonic (met-an-ti-mon′ik), *a.* [*meta-* + *antimonic.*] Noting an acid, $HSbO_3$, obtained by heating ortho-antimonic acid to 175° C. The metantimonic acid of Frémy ($H_4Sb_2O_7$) is now called *pyro-antimonic* acid, thus preserving analogy with the different phosphoric acids.

metanucleolus (met″ạ-nū-klē′ō-lus), *n.* [NL.] Same as ★*metanucleus.*

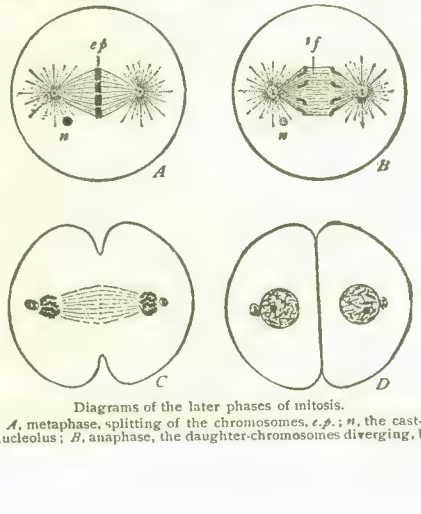
After a time the chromatin emerges and is re-distributed in the nuclear framework, or it postpones its emergence until the formation of the directive spindle where it takes the form of chromosomes. In both cases there is a residue (Häcker's "*metanucleolus*"), which is either a product of metabolism or superfluous chromatin. *Jour. Roy. Micros. Soc.,* April, 1904, p. 187.

metanucleus (met-ạ-nū′klē-us), *n.* [NL., ⟨ Gr. *μετά,* after, + NL. *nucleus.*] The nucleolus of the ovum after its extrusion into the cytoplasm from the nucleus or germinal vesicle. *V. Haecker,* 1892.

meta-organism (met-ạ-ôr′gan-izm), *n.* [Gr. *μετά,* after, + E. *organism.*] See the extract.

That this body of ours . . . is interpenetrated with a '*meta-organism*' of identical shape and structure, and capable sometimes of detaching itself from the solid flesh. *Myers,* Phantasms of Living, II. 278. *N. E. D.*

metapectin (met-ạ-pek′tin), *n.* [*meta-* + *pectin.*] A colorless amorphous-acid compound, $C_{32}H_{48}O_{32}$(?), prepared by boiling parapectin with dilute acid.



metapectus (met-ạ-pek′tus), *n.* [NL., ⟨ Gr. *μετά,* after, + L. *pectus,* breast.] Same as *metasternum,* 2.

Meso- and *Metapectus* with a double row of dark green nodules placed on transverse spots of the same color; metapleura with a row of spines.
Annals and Mag. Nat. Hist., June, 1904, p. 440.

metapeptic (met-ạ-pep′tik), *a.* [*metapepsis.*] Pertaining to, or characterized by, metapepsis.

metaph. Same as ★*met.* (*a*) and (*b*).

metaphase (met′ạ-fāz), *n.* [Gr. *μετά,* after, + *φάσις,* phase.] In *cytol.,* the second or middle

Diagrams of the later phases of mitosis.
A, metaphase, splitting of the chromosomes, *e.p.*; *n,* the cast-off nucleolus; *B,* anaphase, the daughter-chromosomes diverging, be-

tween them the interzonal fibers, *i.f.*, or central spindle; centrosomes already doubled in anticipation of the ensuing division; *C*, late anaphase or telophase, showing division of the cell-body, midbody at the equator of the spindle and beginning reconstruction of the daughter-nuclei; *D*, division completed. (From Wilson's "The Cell.")

stage of karyokinetic cell-division, or mitosis, in which the chromosomes are collected to form the equatorial plate of the spindle and undergo longitudinal fission. Compare ★*anaphase* and ★*telophase*. *Strasburger*, 1884.

metaphasis (me-taf′ā-sis), *n.* [NL.] Same as ★*metaphase*.

metaphenylene (met-a-fē′nil-ēn), *n.* [*meta-* + *phenylene*.] The phenylene radical in which the two valence bonds extend from carbon atoms that are in the meta position. See ★*meta-* (*e*).—**Metaphenylene blue.** See ★*blue*.

metaphonical (met-a-fon′i-kal), *a.* Pertaining to, or of the nature of, metaphony or umlaut.

metaphony (me-taf′ō-ni), *n.* [F. *métaphonie*, < Gr. *μετά*, over, + *φωνή*, sound.] Umlaut. [Rare.]

Since the usual term 'mutation' is altogether vague, designating any kind of vowel-shifting whatever, I have ventured to introduce into the English terminology the word '*metaphony*' for German 'Umlaut,' as al eady in my French edition.

V. Henry, Comp. Grammar of Eng. and German, p. 43.

metaphragmal (met-a-frag′mal), *a.* [*metaphragma* + *-al*[1].] Of or pertaining to the metaphragm or metaphragma.

metaphysicize (met-a-fiz′i-sīz), *v. i.*; pret. and pp. *metaphysicized*, ppr. *metaphysicizing*. [*metaphysic* + *-ize*.] To engage in metaphysical reflection or argument; think metaphysically.

He [Walking Stewart] had also this singularity about him—that he was everlastingly *metaphysicizing* against metaphysics.

De Quincey, Note Book of an English Opium-eater, p. 243.

metaphysiologist (met-a-fiz-i-ol′ō-jist), *n.* [*metaphysiology*(*y*) + *-ist*.] A student of metaphysiology.

Modern metaphysicians and *metaphysiologists* have been staggered by the impropriety of assigning Secretion, Digestion, &c., to the spiritual agent active in Thought and Will.

G. H. Lewes, in Fortnightly Rev., April, 1876, p. 486.

metaphysiology (met-a-fiz-i-ol′ō-ji), *n.* [Gr. *μετά*, after, + E. *physiology*.] A science or theory of life transcending physiology.

There is still the radical separation between the conceptions of Creation and Evolution in the explanation of the Cosmos; and between the conceptions of *metaphysiology*, and physiology in the explanation of Life and Mind.

G. H. Lewes, in Fortnightly Rev., April, 1876, p. 479.

Metaphyta (met-a-fī′tä), *n. pl.* [NL. (Haeckel, 1889), < Gr. *μετά*, beyond, + *φυτόν*, pl. *φυτά*, plant.] A great division of the vegetable kingdom including all multicellular plants, or plants possessing tissues, that is, all except the *Protophyta* (which see). It corresponds in plant life to the *Metazoa* in animal life.

metaphyte (met′a-fīt), *n.* [Gr. *μετά*, after, + *φυτόν*, plant.] In *bot.*, a multicellular plant: corresponding to *metazoön* in zoölogy. See ★*Metaphyta*.

metaphytic (met-a-fit′ik), *a.* [*metaphyt*(*e*) + *-ic*.] Pertaining to metaphytes, or of the nature of a metaphyte.

metaplasm[2], *n.* 2. In *cytol.*, a collective term applied to lifeless or non-living substances or inclusions such as yolk-bodies, starch, pigment, etc., in the cell-protoplasm, as distinguished from the living substances. *Hanstein*, 1868.

These non-living substances altogether belong to the group known as *metaplasm* or paraplasm, in contradistinction to the substance which is the real living element of the cell—the protoplasm.

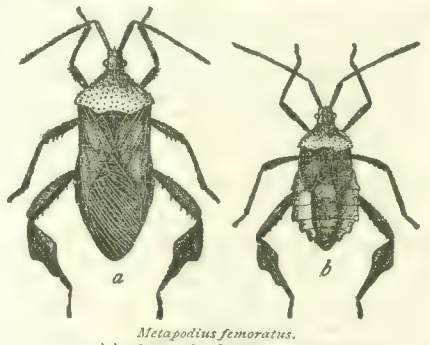
S. Watase, Biol. Lectures, 1893, p. 85.

metaplasmic (met-a-plaz′mik), *a.* [*metaplasm* + *-ic*.] Consisting of, or pertaining to, metaplasm.

After the formation of the daughter nuclei, they again begin to fill with the linin granules or reticulum (the so-called *metaplasmic* substance of Strasburger) until, at the time of maturity, they are so dense as to make any distinction between the granular material and chromatin reticulum very difficult. *Bot. Gazette*, July, 1903, p. 11.

metaplasmosism (met-a-plas′mō-sizm), *n.* [NL., < Gr. *μετά*, after, implying change, + *πλάσμα*, anything formed, + *-os*(*is*) + *-ism*.] A pathological change in a cell or its constituents. *Haeckel*. [Rare.]

metaplax (met′a-plaks), *n.* [NL., < Gr. *μετά*, after, + *πλάξ*, a plate.] In the *Pholadidæ* (a family of teleodesmaceous *Pelecypoda*), one of the accessory shelly plates, thus termed when situated behind the beaks of the two valves. See also ★*prosoplax*, ★*mesoplax*, and ★*hypoplax*.



metaplexus (met-a-plek′sus), *n.* [NL., < Gr. *μετά*, after, + NL. *plexus*.] The choroid plexus in the fourth ventricle of the brain.

metapneumonic (met″a-nū-mon′ik), *a.* [Gr. *μετά*, after, + NL. *pneumonia* + *-ic*.] Following upon pneumonia; occurring as a sequel of pneumonia.

metapod (met′a-pod), *n.* [Also *metapode*; < NL. *metapodium*.] Same as *metapodium*.

metapodion (met-a-pō′di-on), *n.*; pl. *metapodia* (-ä). [NL., < Gr. *μετά*, after, + *πόδιον*, dim. of *ποῦς*, foot.] In hymenopterous insects with a petiolated abdomen, the part of the abdomen situated behind the petiole.

metapodius (met-a-pō′di-us), *n.*; pl. *metapodii* (-ī). [NL., < Gr. *μετά*, after, + *ποῦς* (*ποδ-*), foot.] A large American coreid bug, *Metapodius femoratus*, the thick-thighed metapodius, occurring abundantly in the southern United States. It is both carnivorous and phytophagous, and is an important enemy of the cotton-caterpillar and army-worm.

Metapodius femoratus.
a, adult; *b*, nymph. Enlarged one fourth.

metapole (met′a-pōl), *n.* [Gr. *μετά*, after, + *πόλος*, pole.] If BCX, ACY, and ABZ are triangles constructed externally on the sides of ABC, and BCX′, ACY′, and ABZ′ triangles constructed internally, and all six are similar to Δ T, the straights AX, BY, and CZ cointersect in T_1, prime metapole of ABC and T; the straights AX′, BY′, and CZ′ in T_2, second metapole of ABC and T.

metapolitical (met″a-pō-lit′i-kal), *a.* [*metapolitic*(*s*) + *-al*[1].] Of or pertaining to metapolitics.

The metaphysical, or as I have proposed to call them, *metapolitical* reasonings hitherto discussed, belong to government in the abstract. But there is a second class of reasoners who argue for a change in our government from former usage. *Coleridge*, The Friend, II. iv.

metapolitician (met″a-pol-i-tish′an), *n.* [*metapolitics*.] One who indulges in metapolitics or abstract political theorizing.

The *metapoliticians*, as they have aptly been called, who bewilder themselves with abstractions.

Southey, Ess., I. 390. *N. E. D.*

metaprotaspis (met″a-prō-tas′pis), *n.* [NL., < Gr. *μετά*, after, + NL. *protaspis*.] A subdivision of the protaspis or larval stage in the trilobites intermediate between the anaprotaspis and paraprotaspis conditions. See ★*protaspis*.

metaprotein (met-a-prō′tē-in), *n.* [*meta-* + *protein*.] A protein derivative which results from the action of acids or alkalies upon albumins. The group includes the acid albumins and alkaline albuminates.

metapsychical (met-a-sī′ki-kal), *a.* A term formed on the analogy of *metaphysical* to denote phenomena beyond the range of ordinary consciousness; occult or transcendental: applied to the phenomena of psychical research. *Athenæum*, April 22, 1905.

metapsychology (met-a-sī-kol′ō-ji), *n.* A term formed on the analogy of *metaphysics* to denote philosophical speculation regarding the mind, its origin, functions, etc., which is beyond the reach of verification by mental experience; metempirical psychology.

metapterygoid, *n.* 2. In *ichth.*, the posterior of the three pterygoid elements, the mesopterygoid and the pterygoid being anterior to it. It is articulated behind with the hyomandibular.

metapyric (met-a-pir′ik), *a.* [Gr. *μετά*, after (signifying change), + *πῦρ*, fire, + *-ic*.] In *petrog.*, noting a metamorphosed igneous rock: thus, a *metapyric* gneiss is one derived from a granite. *Gregory*, 1894.

metaquinite (met-a-kwin′īt), *n.* [Gr. *μετά*, after, + E. *quina* + *-ite*[2].] Dihydroxyhexahydrodiphenyl, $C_6H_5C_6H_9(OH)_2$: made by reducing phenyldiketohexamethylene with sodium and alcohol. It melts at 157° C.

metarachidial (met″a-rā-kid′i-al), *a.* [*metarachis* (assumed stem *-rachid-*) + *-ial*.] Of or pertaining to a metarachis: as, the *metarachidial* aspect of a sea-pen.

metarachis (me-tar′a-kis), *n.*; pl. *metaraches* (-kēz). [Gr. *μετά*, after, + *ῥάχις*, spine.] In *Pennatulacea*, that face of the rachis on which the zoöids are borne: opposed to ★*prorachis*.

metargon (met-är′gon), *n.* [Gr. *μετά*, beyond, + E. *argon*.] A supposed element found in atmospheric air: afterward found to be merely carbon monoxid.

metarhyolite (met-a-rī′ō-līt), *n.* [Gr. *μετά*, after, + E. *rhyolite*.] An altered or partly metamorphosed rhyolite.

Much of the lava contains porphyritic quartz, and in general may be designated *metarhyolite*, but a large part, being without free quartz and less siliceous, has the appearance of metaandesite. A peculiarity of many of these rocks is that they are rich in soda.

Contrib. to Econ. Geol., U. S. Geol. Surv., 1902, p. 124.

metaschematism (met-a-skē′ma-tizm), *n.* [NL. *metaschematismus*, < Gr. *μετασχηματισμός*, < *μετασχηματίζειν*, to transform.] A change in the form of a disease, as when hemoptysis follows suppression of the menses. *Syd. Soc. Lex.*

metascolecite (met-a-skol′ē-sīt), *n.* [*meta-* + *scolecite*.] A partly dehydrated scolecite, differing from the original mineral in physical characters.

metaseptum (met-a-sep′tum), *n.*; pl. *metasepta* (-tä). [NL., < Gr. *μετά*, after, + NL. *septum*, partition.] In corals. See the extract.

In recent corals the septa beyond the primary septa—*metasepta*—are found to appear bilaterally, in a dorsoventral sequence, within each of the six primary systems, the adult radial symmetry being secondary. In certain Palæozoic corals the *metasepta* arise in a regular dorsoventral succession within only four of the six primary systems. *Science*, March 6, 1903, p. 388.

metasitism (met′a-sī-tizm), *n.* [Gr. *μετά*, after, implying change, + *σῖτος*, food (*σιτεῖν*, eat), + *-ism*.] 1. Change from the method of nutrition which is characteristic of plants to that which is characteristic of animals. [Rare.]

In the same way we can derive the phycomycetes by *metasitism* from the siphonea, the fungi from the algæ.

Haeckel (trans.), Wonders of Life, p. 616.

2. Cannibalism, especially among protozoans. *Haeckel*.

metasocial (met-a-sō′shal), *a.* [Gr. *μετά*, after, + E. *social*.] Pertaining to the stage of social evolution which begins with the conquest and subjugation of one group or race by another, and continues through fusion or amalgamation. *L. F. Ward*, Pure Sociol., p. 274.

metasomatic, *a.* 3. Relating to the alternations of air and water within the earth, which are suggestive of breathing, and eventually produce important geological changes.

metasomatism, *n.* 2. Chemical change occurring in a body of ore or in a rock-mass at a considerable depth in the earth's crust: distinguished from *weathering*, which occurs at or near the surface.

metasomatist (met-a-sō′ma-tist), *n.* [Gr. *μετά*, over, + *σῶμα* (*σώματ-*), body, + *-ist*.] One who believes in the lithological theory of metasomatosis.

metasomatome (met-a-sō′ma-tōm), *n.* [Gr. *μετά*, after, + *σῶμα*(*τ-*), body, + *-ome*.] One of the constrictions or spaces between successive mesoplastic somites, or protovertebræ, in vertebrate embryos.

metasome, *n.* 2. In some crustaceans, as the amphipods, the first three segments of the pleon or abdomen. Compare ★*mesosome* and *urosome*.

metasperm (met′a-spèrm), *n.* [Gr. *μετά*, over, + *σπέρμα*, seed.] A member of the *Metaspermæ*; an angiosperm.

Metaspermæ (met-a-spèr′mē), *n. pl.* [NL. (Strasburger, 1872), < Gr. *μετά*, after, + *σπέρμα*, seed.] Same as *Angiospermæ* (which see) and ★*Archispermæ*. The term is designed to emphasize the fact that these plants appeared later in the geological series, none being certainly known earlier than the Lower Cretaceous. See ★*Metachlamydeæ*.

metaspermic (met-a-spėr′mik), *a.* [*Metasperm*(*æ*) + *-ic.*] Of, or consisting of, *Metaspermæ.*

metastability (met″a-stā-bil′i-ti), *n.* [*meta-* + *stability.*] The character of being metastable; specifically, in *thermodynam.*, equilibrium of the type, neither strictly stable nor unstable, possessed by a medium under certain conditions such as those which exist in the case of an under-cooled liquid.

metastable (met-a-stā′bl), *a.* [*meta-* + *stable*[2].] 1. In *phys. chem.*, having a stability of such sort that a minute impressed change of conditions may produce a disturbance not proportional to the impressed change. Pure water in a smooth vessel may be cooled a few degrees below the freezing-point without the formation of ice. The water is then in a metastable condition. If a hundredth of a grain of ice at the temperature of the freezing-point be brought in contact with the water, a certain fraction of it becomes ice, while the temperature of the whole rises to the freezing-point; and if ten or a thousand grains of ice be used, the fraction frozen and the final temperature are precisely the same. A somewhat closely analogous condition in mechanics is called an unstable equilibrium; but the word equilibrium, in chemistry, has been applied to the permanence of a given relation between *two* or more substances and cannot consistently be applied to the stability of a single substance.

Among supersaturated solutions there are some which under definite conditions can be kept indefinitely, if germs are excluded, without formation of the solid phase. Such solutions are called *Metastable.*

H. W. Morse and G. W. Pierce, in Proc. Amer. Acad. of [Arts and Sciences, May, 1903.

2. In *thermodynam.*, in a state intermediate between stable equilibrium and unstable equilibrium, but approaching stability as nearly as the conditions will permit.

metastasis, *n.* 4. In *petrog.*, a change within a rock or mineral in the nature of recrystallization or molecular rearrangement, without the addition or subtraction of material: as the crystallization of a limestone, or the devitrification of glass.

metastasize (me-tas′ta-sīz), *v. i.*; pret. and pp. *metastasized*, ppr. *metastasizing.* [*metastasis* + *-ize.*] In *pathol.*, to produce new foci of disease in more or less distant parts by means of metastasis: referring usually to malignant growths.

As might be expected the tendency to *metastasize* is much greater in certain tumors than in others.

Jour. Med. Research, Nov., 1907, p. 187.

metastatic, *a.* 2. Relating to or characteristic of the *Metastatica* or *Holostomatidæ;* involving a change of host but no alternation of generations: as, the *metastatic* mode of development of certain trematodes.

Metastatica (met-a-stat′i-kạ), *n. pl.* The *Holostomatidæ. Leuckart.*

Metastigmata (met-a-stig′ma-tạ), *n. pl.* [NL., < Gr. *μετά*, after, + *στίγμα*, point, mark.] In Canestrini's classification of the *Acarina*, a group corresponding to the superfamily *Ixodoidea*, or ticks.

metastigmate (met-a-stig′māt), *a.* and *n.* I. *a.* Having the characters of or belonging to the *Metastigmata.*

II. *n.* A member of the *Metastigmata.*

metastome (met′a-stōm), *n.* Same as *metastoma.*

metastomial (met-a-stō′mi-al), *a.* [*metastomium* + *-al*[1].] Of or pertaining to the metastomium.

metastomium (met-a-stō′mi-um), *n.* [NL., < Gr. *μετά*, behind, + *στόμα*, mouth.] The region of the body behind the mouth; the metastoma.

metastrophe (me-tas′trō-fē), *n.* [Gr. *μετά*, after, + *στροφή*, a turning.] Change or interchange; specifically, in *crystallog.* See the extract.

A solid figure is symmetrical to an axis when every radius vector moving in a plane perpendicular to the axis and meeting a point of the figure would also meet corresponding points at the same distances from the axis at each revolution through an arc-angle of $\frac{2\pi}{n}$.

The aspect of such a solid figure will not therefore be changed by a revolution of the solid round this axis through the angle $\frac{2\pi}{n}$, and any portion of its surface so revolving will move into a position in which it will be congruent with another portion of the surface entirely corresponding to it.

Def.—Congruence of this kind will be termed *metastrophe*, and such corresponding parts will be said to be metastrophic to each other.

N. Story-Maskelyne, Crystallography, p. 99.

metastrophic (met-a-strof′ik), *a.* [Gr. *μετά*, after, + *στροφή*, a turning, + *-ic.*] Of, characterized by, or of the nature of, metastrophe; interchangeable: said specifically of the faces, edges, and solid angles of a crystal with reference to rotation about an axis of symmetry. See ★*symmetry*, 6.

metastyle (met′a-stīl), *n.* [Gr. *μετά*, after, + E. *style*[2].] 1. In *bot.*, an unusually long style: said chiefly of trimorphic plants. Compare ★*mesostyle* and ★*parastyle.*—2. The posterior enamel-covered ridge on the outer side of such a molar as that of a horse: correlative with ★*parastyle* and ★*mesostyle.*

Rudimentary conules, and para-, meso-, and *metastyles. H. F. Osborn*, in Bulletin Amer. Mus. Nat. Hist., 1902, [p. 210.

metastyrene (met-a-stī′rēn), *n.* Same as ★*metastyrolene.*

metastyrol (met-a-stī′rol), *n.* [*meta-* + *styrol.*] See ★*metastyrolene.*

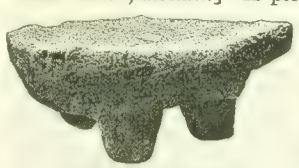
metastyrolene (met-a-stī′rō-lēn), *n.* [*meta-* + *styrolene.*] A transparent, highly refractive, solid polymer of styrolene, $(C_8H_8)_n$, contained in liquid storax and formed spontaneously from styrolene, into which it is retransformed by distillation. Also called *metastyrene*, *metacinnamene*, and, incorrectly, *metastyrol.*

metasyncrisis (met-a-sin′kri-sis), *n.* [Gr. *μετασύγκρισις*, < *μετασυγκρίνειν*, use diaphoretics.] In *med.*, the elimination of morbid matter, particularly through the pores of the skin. *N. E. D.*

metasyphilis (met-a-sif′i-lis), *n.* [*meta-* + *syphilis.*] Hereditary syphilis.

metasyphilitic (met-a-sif-i-lit′ik), *a.* 1. Relating to or of the nature of hereditary syphilis.—2. Occurring as a sequel of syphilis.

metatactic (met-a-tak′tik), *a.* [*metataxis.*] Pertaining to, or of the nature of, metataxis.



Metatarsal artery, phalanx. See ★*artery*, ★*phalanx.*

metatarsale, *n.* 2. *pl.* The bones of the metatarsus considered collectively.

metataxic (met-a-tak′sik), *a.* Same as ★*metatactic.*—**Metataxic change.** See ★*change.*

metataxis (met-a-tak′sis), *n.* [Gr. *μετά*, after (indicating change), + *τάξις*, arrangement.] In *petrog.*, mechanical modification such as transverse cleavage, produced in a rock by metamorphism. *Irving*, 1889.

metate (me-tä′te), *n.* [Mex. Sp. *metate*, < Nahuatl *metatl, metlatl.*] A primitive hand-mill of stone, usually on three, formerly also on four, legs of the same block. In ancient times the Mexican metate was often elaborately carved, whereas the Peruvian batan is a rude slab. The metate is in common use in the North American Southwest.

Metate from Pueblo Viejo. (From 22nd An. Rep. Bureau Amer. Ethnol.)

Thus it is found that the nether millstone, which may be either a ledge or other mass in place of a portable bowlder, is, in the early stage of use, a flat or slightly concave *metate*, which after more extended use becomes a deeply concave *metate*, still later a shallow mortar, and at length a deep mortar which may eventually be worn through, if the original mass is not more than 9 to 15 inches in thickness. *Smithsonian Rep.*, 1899, p. 37.

metathetical, *a.* 2. In *chem.*, involving transposition of constituents between two compounds which interact chemically with each other.

In order that water may act hydrolytically upon barium chloride, for example, with liberation of hydrogen chloride and substitution of oxygen for chlorine, the temperature of the system must approach low redness, while magnesium chloride is attacked at a much lower temperature, and aluminum chloride is extremely sensitive to the *metathetical* action of water.

Amer. Jour. Sci., May, 1904, p. 365.

metatitanic (met″a-tī-tan′ik), *a.* [*meta-* + *titanic.*] Noting an acid, a substance thrown down as a white precipitate on boiling a solution of orthotitanic acid in aqueous hydrochloric acid. Its formula is H_2TiO_3, analogous to that of metasilicic acid.

metatrophia (met-a-trō′fi-ạ), *n.* [NL., < Gr. *μετά*, with, + *ἀτροφία*, atrophy.] The atrophy of malnutrition. Also *metatrophy.*

metatrophic (met-a-trof′ik), *a.* [Gr. *μετά*, after, + *τροφή*, nourishment, + *-ic.*] Dependent upon organic matter, both nitrogenous and carbonaceous: applied to bacteria which are thus dependent for their existence. They are the most numerous and widely distributed of the micro-organisms. See ★*prototrophic* and ★*paratrophic.*

metatropic (met-a-trop′ik), *a.* [*metatrop*(*y*) + *-ic.*] Pertaining to, or characterized by, metatropy.

metatropy (me-tat′rō-pi), *n.* [Gr. *μετά*, after (indicating change), + *τροπή*, a turning.] In *petrog.*, metamorphic processes consisting in physical changes, into which chemical action does not enter or enters only to a slight extent. *Irving*, 1889.

metatungstate (met-a-tung′stāt), *n.* [*meta-* + *tungstate.*] A salt of metatungstic acid. The metatungstates are not precipitated by the addition of an acid unless the solution is boiled for some time, when ordinary tungstic acid is thrown down.

metatungstic (met-a-tung′stik), *a.* [*metatungst*(*ate*) + *-ic.*] Noting a metallic acid, forming small yellow crystals of the composition $H_2W_4O_{13}.7H_2O$, obtained by decomposing barium metatungstate by dilute sulphuric acid. It differs from ordinary or normal tungstic acid in being soluble in water.

metatype (met′a-tīp), *n.* [Gr. *μετά*, after, + *τύπος*, type.] 1. A tabulation of the normal or average individuals of a race, in respect to any characteristic, as a basis for statistical comparison with exceptional or aberrant individuals. See the extract under ★*metatypic.*

It is these *metatypes* that we should compare anatomically with the criminals if we would make comparison between the anatomic characters of the two classes.

Smithsonian Rep., 1890, p. 630.

2. In the nomenclature of types in natural history, a topotype identified by the nomenclator himself.

metatypic (met-a-tip′ik), *a.* [*metatype* + *-ic.*] Pertaining to, or of the nature of, a metatype.

In order to characterize criminals in general, it is necessary to obtain the averages, which can be compared with the averages of other individuals of the same race, the same sex, the same social class, etc. These latter individuals must themselves be the average of their respective race, sex, or class, and their averages thus taken should become the type or standard. Honest or virtuous men (a category not less vague than that of criminals) will then be without doubt the *metatypic.*

Smithsonian Rep., 1890, p. 631.

metavanadate (met-a-van′a-dāt), *n.* [*metavanad*(*ic*) + *-ate*[1].] A salt of metavanadic acid, as sodium metavanadate, $NaVO_3$, and ammonium metavanadate, NH_4VO_3. The latter of these gives a deep-black color with tincture of galls which has been proposed for use as writing-ink; it has also been used in the development of aniline black on cotton cloth.

metavanadic (met″a-vā-nad′ik), *a.* [*meta-* + *vanadic.*] Noting an acid, a substance obtained in brilliant scales of a golden color by prolonged boiling of cupric metavanadate with sulphurous acid. Its formula is HVO_3. It has been used as a golden bronzing-powder.

metavoltaite (met-a-vol′tā-īt), *n.* Same as ★*metavoltine.*

metavoltine (met-a-vol′tin), *n.* [Gr. *μετά*, with, + E. *voltine.*] A hydrous sulphate of potassium, sodium, and ferric iron which occurs in minute yellow hexagonal scales. It is related in composition to voltaite.

metazone (met′a-zōn), *n.* [Gr. *μετά*, behind, + E. *zone.*] The posterior of the three zones into which the pronotum of the *Acridiidæ*, *Locustidæ*, and *Gryllidæ* is divided.

Melanoplus decoratus sp. nov. Related to decorus. Vertex rather strongly protuberant, especially in female. Pronotum with mid-carina strong on *metazone*, weak or indistinct on prozone. *Psyche* (Boston), XI. 12.

Met. E. An abbreviation of *Metallurgical Engineer.*

metel[2] (mē′tel), *n.* [Ar.] 1†. The thorn-apple, *Datura Stramonium.*—2. The specific name given by Linnæus to the hairy thorn-apple, *Datura Metel.*

metembryo, *n.* 2. The gastrula stage of a polyzoan. *Cumings*, 1904.

metempsychosist (me-temp-si-kō′sist), *n.* [*metempsychos*(*is*) + *-ist.*] One who believes in metempsychosis. *N. E. D.*

Metencephalic fossa. See ★*fossa*[1].

metencephalospinal (met-en-sef″a-lō-spī′nal), *a.* In *neurol.*, of or pertaining to both the metencephalon, or cerebellum, and the spinal cord.

metensarcosis (met″en-sär-kō′sis), *n.* [Gr.

μετά, over, + *ἐνσάρκωσις*, < *ἐν*, in, + *σάρξ*, flesh.] The transference of the flesh of one body to another. *N. E. D.* [Rare.]

See especially the conclusion of the 'great scene (iii. 6) [of Congreve's "Mourning Bride"]; and Almeria's offer (iv. 7) to clothe the rotten bones of her (supposedly) dead lover with her own flesh—a species of *metensarcosis* altogether original. The bathos of the concluding lines equals that of the moral of Buckingham's Julius Caesar.
A. W. Ward, A Hist. of English Dramatic Literature, [II. 589, note.

metenteron, *n.* 2. In sea-anemones and polyps, one of the radially arranged cavities given off from the stomach or mesenteron; an intermesenteric chamber.

meteorgraph (mē′tē-or-gråf), *n.* [*meteor* + Gr. *γράφειν*, write.] 1. A device for quickly recording the exact location of the path of a shooting star. Neumayer's arrangement consisted of a plate supported at any angle on the ordinary equatorial mounting of a telescope. The records were made by hand-drawn pencil lines on this plate.—2. A meteorograph.

Meteoric paper. See ★*paper*.

meteorics (mē-tē-or′iks), *n.* The study of the atmosphere; meteorology.

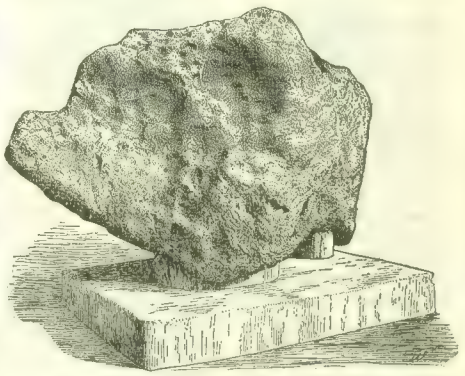
meteorin (mē′tē-ō-rin), *n.* [*meteor* + *-in*2.] A supposed new metal reported by A. T. Abel as separated from the Cranbourne (Australia) meteoric iron. It was later shown by Flight to be identical with Reichenbach's tænite, and was named by him edmondsonite (after George Edmondson, Director of Queenwood College, Hampshire).

meteorist (mē′tē-ō-rist), *n.* [*meteor* + *-ist*.] One who is versed in the study of meteors. *N. E. D.*

meteoristic (mē″tē-ō-ris′tik), *a.* [*meteorism*.] Pertaining to or affected with meteorism.

meteorit (mē′tē-ō-rit), *n.* [G. (?): see *meteorite*.] An alloy of aluminium and phosphorus. It is a chemical mixture and can be melted and cast. It has a comparatively high tensile strength and can be worked like brass. *Sci. Amer. Sup.*, Jan. 24, 1903, p. 22622.

meteorite, *n.* The great interest in meteorites in recent years has led not only to a minuter study of known meteorites, but also to a keener search for new specimens and a closer watch for falls. The result of this activity is shown in the very considerable increase in the number of known meteorites from well-authenticated independent sources. The collections of Vienna and London contain each between 550 and 600 specimens and the Ward-Coonley collection (now in New York) has over 600. Of recent discoveries of meteoric iron, the Willamette specimen, found in Clackamas county, Oregon, in 1902, is remarkable for its great size (being one of the four largest masses known to exist: see below), and also for various structural features. Its dimensions are 10¾ x 7 x 4 feet, and its estimated weight about 15½ tons. The form (see cut) is roughly conical, and the cone-shaped portion, lying beneath when found, was obviously the front side (*brustseite*) in the forward motion of the mass. A remarkable feature of this iron is the large, basin-like cavities on the upper exposed surface, probably the result of terrestrial decomposition during the long period that has elapsed since its fall. Near Cañon Diablo, Arizona, in a very limited area, more than 600 masses of meteoric iron have been found since 1891. They vary from about 1,200 pounds to half an ounce and less in weight and their occurrence is immediately associated with a remarkable crater (¾ of a mile wide, 500 feet deep), which is believed to owe its origin to the impact of the meteoric mass. This iron is noteworthy because it has been shown by various investigators, especially by Moissan of Paris, to contain minute transparent octahedrons of diamond. It has also yielded green hexagonal crystals of carbon silicide (*moissanite*), identical with the artificial compound used in the arts as an abrasive under the name of *carborundum*. The mass of meteoric iron, the 'Ahnighito meteorite,' brought to New York by Lieutenant Peary from Cape York, Greenland, in 1897 (known since 1818), is unquestionably the largest meteorite preserved in any museum and perhaps the largest mass known to exist. It measures 11 x 7½ x 5½ feet and weighs 36½ tons; its form is shown in the cut.



Willamette Meteorite.
Side view showing holes piercing the base.
In the American Museum of Natural History, New York.

A somewhat higher weight (estimated as 46 tons) is given for the iron of Bacubirito, Sinaloa, Mexico (known since 1871), while that of Chupadero, Chihuahua, Mexico (1852), weighs about 16 tons. The meteoric origin of the Ahnighito iron is well established, although the iron of Disko Island and those of some other localities on the west coast of Greenland are certainly terrestrial. The great mass of Santa Catharina, Brazil, remarkable for its high percentage of nickel (34 per cent.), is now generally regarded as terrestrial; this type is called *catarinite* by Meunier. Some doubt also has been cast upon the meteoric origin of the iron from Oktibbeha county, Mississippi, which contains 60 per cent. of nickel (*oktibbehite* type, Meunier). The meteorites which have been seen to fall between 1890 and 1906 number about 30. These include three irons, those of Quesa, Spain (1898), of Bugaldi, New South Wales (1900), and of Ngoureyma, in Northwest Africa (1900); the latter-named mass weighed 37½ kilograms, and its remarkable appearance is shown in the adjoining cut. The minute microscopic and chemical examination of meteoric irons has led to more definite knowledge of the composition of the various iron-nickel alloys, *kamacite*, *tænite*, and *plessite* forming the triad (or trias) of Reichenbach (see *Widmannstättian figures*, under *Widmannstättian*); of these, kamacite contains from 4.8 to 7.4 per cent. of nickel, tænite from 16.7 to 38.1 per cent., and plessite is regarded as a eutectic mixture of the two species. Reichenbach's *lamprite* (*glanzeisen*) has been shown, however, to be not nickel-iron, but in part iron carbide (including *cohenite* (Fe, Ni)$_3$C), and in part *schreibersite*. The *edmondsonite* of Flight (*meteorin* of Abel) is only tænite. The *wickelkamacite* of Brezina (*hülleisen* of Reichenbach) is kamacite, not in regular form as usual, but of irregular outline inclosing accessory constituents, sulphids, graphite, silicates, etc. The iron sulphid of meteoric irons is now conceded to be troilite (FeS), not pyrrhotine (Fe_7S_8). The list of chemical elements identified in meteorites has been increased by the following, several of them detected in traces only and a few perhaps needing confirmation: gold, silver, platinum, iridium, palladium, lead, gallium, selenium; the stone of Saline township, Kansas, contains free phosphorus. The identification of leucite, a mineral of rather rare occurrence in terrestrial igneous rocks, as an essential constituent of the meteoric stone of Schafstädt is an interesting point; it is probably also present in the Pavlovka stone (1882). The classification of meteorites now generally adopted is essentially that of Gustav Rose (Berlin, 1863) as extended and elaborated by later writers, particularly A. Brezina of Vienna. The fundamental division is that between the *meteoric irons*, or *siderites*, consisting essentially of metallic iron (probably in all cases nickel-iron), and the *meteoric stones*, or *aërolites*, in which silicates predominate, the metallic nickel-iron sometimes (though rarely) entirely absent. As a transition-group between the irons and stones belong those meteorites in which the iron forms a continuous, sponge-like mass inclosing silicates (chiefly olivin and bronzite); these are often embraced under the general name of *siderolites*, and sometimes (as below, Brezina) divided into *siderolites* and *lithosiderites*, according as the iron, on a cross-section, appears as separate grains or forms a continuous web. The system of Brezina (catalogue of the Ward-Coonley collection, 1904) recognizes further the following prominent divisions: I. STONES: (*a*) *achondrites*, chondri generally absent, metallic iron absent or only sparingly present; (*b*) *chondrites*, chondri prominent, bronzite, olivin, and iron essential; (*c*) *chondrites*, with enstatite, anorthite, and iron essential; (*d*) *siderolites*, iron inclosing silicates, iron in separate grains in section. II. IRONS: (*e*) *lithosiderites*, iron and silicates, the iron continuous in section; (*f*) *octahedrites*, irons with octahedral structure as shown in Widmannstättian figures; (*g*) *hexahedrites*, irons with cubic structure and cleavage; (*h*) *ataxites*, structure interrupted or indistinct. These divisions are further separated into groups or types briefly characterized as follows: (*a*) ACHONDRITES: (1) *chladnite* (abbreviated Chl), consisting chiefly of bronzite (named, like the mineral chladnite (=enstatite), after the physicist Chladni (1756–1827), who wrote about meteors); (2) *chladnite* with bronzite, black or metallic veined (Chla); (3) *angrite* (A), chiefly augite (named after the meteorite of Angra dos Reys, Brazil; date of fall, 1869); (4) *chassignite* (Cha), chiefly olivin (Chassigny, France, 1815); (5) *bustite* (Bu), bronzite and augite (Busti, India, 1852); (6) *amphoterite* (Am), bronzite and olivin (named by Tschermak); (7) *rodite* (Ro), bronzite and olivin, brecciated or breccia-like (La Roda, Spain, 1871); (8) *eucrite* (Eu), augite with anorthite (named by Rose in 1863; also used for a terrestrial rock: see *eucrite*); (9) *shergottite* (She), augite with maskelynite (Sherghotty, India, 1865); (10) *howardite* (Ho), bronzite, olivin, augite, and anorthite (named by Rose after Edward Howard, who first determined the true nature of meteoric iron: Philos. Trans. Roy. Soc., 1802); (11) *howardite*, brecciated (Hob); (12) *leucituranolite* (L), leucite, anorthite, augite, and glass (named by C. Klein, 1904). (*b*) CHONDRITES: (1) howarditic chondrite (Cho); (2) the same, veined (Choa); (3) chondrite, white and friable (Cw); (4) the same, veined (Cwa); (5) the same, brecciated (Cwb); (6) intermediate chondrite (Ci), firm, with white and gray chondri; (7) the same, veined (Cia); (8) the same, brecciated (Cib); (9) gray chondrite (Cg), firm gray mass with chondri; (10) the same, veined (Cga); (11) the same, brecciated (Cgb); (12) *orvinite* (Co), black, infiltrated mass, discontinuous crust (Orvinio, Italy, 1872); (13) *tadjerite* (Ct), black, semiglassy, without crust (Tadjéra, Africa, 1867); (14) black chondrite (Cs), dark or black mass, chondri of various colors; (15) the same, veined (Csa); (16) *ureilite* (U), black mass, chondritic or granular, iron in veins, etc. (Novo Urei, Russia, 1886); (17) carbonaceous chondrite (K), dull-black friable chondri with free carbon and little or no iron; (18) the same, spherulitic (Kc); (19) the same, spherulitic, veined (Kca); (20) spherulitic chondrite (Cc), mass friable, chondri not breaking with matrix; (21) the same, veined (Cca); (22) the same, brecciated (Ccb); (23) *ornansite* (Cco), friable mass of chondri (Ornans, France, 1868); (24) *ngawite* (Ccn), friable, brecciated mass of chondri (Ngawi, Java, 1883); (25) spherulitic chondrite, crystalline (Cck); (26) the same, veined (Ccka); (27) the same, brecciated (Cckb); (28) crystalline chondrite (Ck); (29) the same, veined (Cka); (30) the same, brecciated (Ckb). (*c*) ENSTATITE-ANORTHITE CHONDRITES: crystalline chondrite (Cck), enstatite, anorthite, and iron with round chondri. (*d*) SIDEROLITES: (1) *mesosiderite* (M), sponge-like mass of iron inclosing crystalline olivin and bronzite (name given by G. Rose, 1862: see *mesosiderite*); (2) *grahamite* (Mg), the same, with also plagioclase (J. Lorimer Graham of New York city); (3) *lodhranite* (Lo), granular crystalline olivin and bronzite in iron (Lodhran, India, 1868). (*e*) LITHOSIDERITES: (1) *siderophyre* (S), bronzite grains with accessory asmanite in iron (named by Tschermak); (2)–(5) groups of *pallasites*, iron inclosing olivin (Pk), (Pr), (Pi), (Pa), differing chiefly in relation to the olivin (named from Pallas iron, Krasnoyarsk, Siberia, 1749). (*f*) OCTAHEDRITES: groups (1)–(3), fine octahedrites (Off), (Ofv), (Of), showing thin lamellæ of varying types, widths 0.3–0.4 millimeters; (4) medium octahedrite (Om), lamellæ 0.5–0.10 millimeters; (5) broad octahedrite (Og), lamellæ 1.5–2.0 millimeters; (6) broadest octahedrite (Ogg); (7)–(11) brecciated octahedrites, fine, medium, etc., different types (Obk), (Obn), (Obz), (Obzg), (Obc); (12) octahedrite, Hammond group (Oh). (*g*) HEXAHEDRITES: (1) normal, not granular (H); (2) granular (Ha); (3) brecciated (Hb). (*h*) ATAXITES: groups (1)–(8) (respectively designated as Dc, Dsh, Db, Dl, Dn, Ds, Dp, and Dm), differing chiefly either in amount of nickel or in structure; the Siratic group (Ds, and named from a place in Senegal) is poor in nickel, but contains rhabdite. Daubrée divided all meteorites into four grand divisions, according to the amount of iron present, namely: *holosiderites*, containing no silicates; *syssiderites*, an iron mass inclosing silicates; *sporadosiderites*, stones with disseminated grains of iron; *asiderites*, stones containing

Bugaldi Meteorite.
One half natural size, showing the drip from the under side, tail end.
In Technological Museum, Sydney, N. S. W.

Ahnighito Meteorite.
(11 feet wide.)
In the American Museum of Natural History, New York.

Ngoureyma Meteorite.
Top and side views, about one seventh natural size.

no metallic iron. He further divided the sporadosiderites into *polysiderites*, iron abundant; *oligosiderites*, iron less abundant; and *cryptosiderites*, iron not visible to the eye. This classification was further developed by Meunier, who distinguished fifty-three groups, named in most cases after some typical meteorite; these begin with the highly nickeliferous irons *oktibbehite* and *catarinite* (see above), also *tazewellite*, *nelsonite*, *braunite*, etc., and end with *orgueillite* and *bokkewellite*.

Meteoritic hypothesis. See ★*hypothesis*.

meteorogram (mē′tē-ō-rō-gram), *n.* [Gr. *μετέωρον*, a meteor, + *γράμμα*, a writing.] The record of atmospheric conditions made by a meteorograph.

Six possible sources of constant error have been recognized as influencing the records. These are (1) instrumental errors, (2) errors in exposure of instruments when comparing with standards, (3) errors in reading from *meteorograms*, etc.

U. S. Monthly Weather Rev., March, 1904, p. 121.

meteorograph, *n.*—**Aërial meteorograph,** a very light form of meteorograph, designed to be raised to a great height by means of kites or a sounding-balloon.

Meteoroidal hypothesis. Same as *meteoritic* ★*hypothesis*. *Amer. Geol.*, July, 1903, p. 14.

meteorol. An abbreviation of *meteorological*.

Meteorological chart. See *weather-map.*—**Meteorological equator, photography.** See ★*equator*, ★*photography*.

meteorology, *n.*—**Cosmical meteorology,** the general relation of the earth's atmosphere to cosmical processes, more especially to the radiation from the sun to the earth, or the radiation of the earth into space.—**Dynamic meteorology,** the study of the forces that produce the motions of the atmosphere; the combined thermodynamics, hydrodynamics, and aërodynamics of the atmosphere; the physics of the atmosphere; theoretical meteorology.—**Planetary meteorology,** the study of the relations between atmospheric phenomena and the motions or positions of the moon and planets. Since no such relations are accepted by the best authorities, this study is also spoken of as a *false* or *pseudo-meteorology*.—**Statical meteorology,** that branch of meteorology which treats of the condition and the phenomena of the atmosphere at any moment, without much regard to the underlying causes; statistical meteorology; climatology.

meteoroscope, *n.* 2. An instrument for observing and registering the apparent path of a meteor.

meter[1], *n.* 4. In *photog.*, an instrument for determining the time of exposure.

Exposure *Meters*. When gelatine dry plates came into general use, and were made of many different degrees of sensitiveness, the want of a guide to the proper exposure for the various makes of plates under different conditions of lighting began to be felt, and several methods were devised for meeting the want. *Encyc. Brit.*, XXXI. 701.

Meter of water, a unit of gaseous pressure; the pressure exerted by a vertical column of water one meter in height. A meter of water exerts a pressure of 1000 kilograms, or a metric ton, on a square meter of surface, hence its numerical convenience as a unit. Also called *meter of water column*.—**Pendulum meter,** an electric meter which has an oscillatory instead of a rotatory motion.—**Power-factor meter,** a recording instrument for indicating the power factor of an alternating-current circuit.—**Quantity meter,** an integrating meter for electric circuits which usually reads or records in ampere-hours or coulombs.

meter-angle (mē′tèr-ang″gl), *n.* In *optics*, the unit of convergence corresponding to one diopter of accommodation.

meter-bridge (mē′tèr-brij), *n.* A slide-wire bridge the calibrated wire of which is one meter long. See ★*slide-wire bridge*.

meter-candle (mē′tèr-kan″dl), *n.* Same as ★*candle-meter*.

meter-gram (mē′tèr-gram), *n.* A practical unit used in describing or specifying the properties of wire or other electrical conductors; a wire one meter long and weighing one gram.

meter-lens (mē′tèr-lenz), *n.* A lens having a focal distance of one meter.

meter-millimeter (mē″tèr-mil′i-mē-tèr), *n.* A practical unit used in describing or specifying the properties, especially the resistance, of wires; a wire one meter long and one millimeter in diameter.

meter-pump (mē′tèr-pump), *n.* A device for obtaining samples of air for analysis. *Buck*, Med. Handbook, II. 567.

metethereal (met-ē-thē′rē-al), *a.* [Gr. *μετά*, after, + E. *ethereal*.] Existing beyond the ether. See the extract. [Rare.]

Metetherial.—That which appears to lie after or beyond the ether; the *metetherial* environment denotes the spiritual or transcendental world in which the soul exists.

F. W. H. Myers, Human Personality, I. Gloss. p. xix. [*N. E. D.*

meth-. A combining form sometimes used in organic chemistry in place of *methyl*.

Meth. An abbreviation of *Methodist*.

methacetin (meth-as′e-tin), *n.* [*meth(yl)* + *acetin*.] A trade-name of para-oxymethylacetanilide, a white crystalline powder, for use as an antipyretic and antiseptic remedy.

methaform (meth′a-fôrm), *n.* Same as ★*chloretone*, or ★*acetone chloroform*.

methanal (meth′a-nal), *n.* [*methane* + *-al*[3].] Same as *formaldehyde*.

Methane type, the constitution of those organic compounds which may be considered as being derived from methane (CH_4), by the replacement of one or more of the hydrogen atoms by radicals or elements.

methanol (meth′a-nol), *n.* [*methane* + *-ol*.] The official, scientific name for methyl alcohol, CH_3OH.

methazonic (meth-a-zon′ik), *a.* [*meth(yl)* + *azone* + *-ic*.] Noting an acid, a colorless, unstable, explosive compound, $CH_2N_2O_3$, prepared by the action of alcohol and sodium hydroxid on nitromethane. It crystallizes in needles and melts at 58–60° C.

methenyl (meth′ē-nil), *n.* [*meth(yl)* + *-ene* + *-yl*.] The trivalent organic radical ⩾CH. Also called *methine*.

methide (meth′id), *n.* [*meth(yl)* + *-ide*[1].] A class-name applied in organic chemistry to compounds of the univalent radical methyl, $-CH_3$. It is chiefly used in the case of metallic derivatives.

methilepsia (meth-i-lep′si-ă), *n.* [NL., ⟨ Gr. *μέθυ*, wine, + *λῆψις*, taking, seizure.] Same as *methomania*.

methionic (meth-i-on′ik), *a.* [*me(thyl)* + *thionic*.] Noting an acid, a colorless crystalline deliquescent, very stable compound, $CH_2(SO_3H)_2$, prepared by the action of fuming sulphuric acid on lactic acid, and formed, in small quantity, by the action of sulphuric acid on ether.

method, *n.*—**Apagogic method,** reductio ad absurdum.—**Apostoli method,** in *med.*, the treatment of fibroid tumors of the uterus by means of electrolysis.—**Argelander's method,** in *astron.*, a method of observing the light-fluctuations of a variable star by visual comparison with neighboring stars of nearly the same brightness.—**Bradley's method,** in *optics*, a method of determining the velocity of light from the aberration of the fixed stars and the velocity of the earth in its orbit, due to the astronomer Bradley (1727). See *velocity of* ★*light*.—**Brandt's method,** in *med.*, the treatment of typhoid and other fevers by means of cool baths.—**Brandt's method,** in *med.*, manual pressure through the abdominal walls upon the Fallopian tubes, designed to force out contained pus or other fluid.—**Bravais's method,** in *meteor.*, a method of determining the true altitude and motion of a cloud. It consists in observing the images of a cloud as seen in one mirror far below the observer and in another mirror near him. The two mirrors may be turned so that the two images perfectly overlap or coincide. The lower mirror may be always horizontal and may be the smooth surface of a lake. The angle between the two mirrors and their distance apart enable the observer to compute the altitude of the cloud.—**Cascade method.** See ★*cascade*[1].—**Collodion sac method.** See ★*collodion*.—**Credé's method,** in *med.*: (*a*) The instillation of a solution of nitrate of silver into the eyes of a new-born child, as a preventive of gonorrheal ophthalmia. (*b*) Compression of the uterus made by the hand of the accoucheur in order to squeeze out the placenta after the birth of the child.—**Deslandre's spectrographic method.** See ★*spectrographic*.—**Double-slit method,** the method of the ★spectroheliograph (which see).—**Dry method.** Same as *dry way* (which see, under *dry*).—**Dumas's method,** in *phys.*, a process for the determination of vapor-densities invented by the chemist Dumas. It consists in heating the liquid to be vaporized in a glass bulb of known volume. When the liquid has entirely disappeared, the neck of the bulb is sealed and the bulb is weighed. From the mass of the vapor, thus determined, and its volume, the vapor-density is computed.—**Error methods,** in *psychophys.*, a name introduced by Wundt in 1883 to include average error and right and wrong cases. See *gradation* ★*methods*.—**Fizeau-Cornu method,** in *optics*, the method employed by Fizeau and subsequently by Cornu for measuring the velocity of light. See *velocity of* ★*light*.—**Flechsig's myelination method.** See ★*myelination*.—**Foucault's method,** in *optics*, the method employed by Foucault for measuring the velocity of light. See *velocity of* ★*light*.—**Frobenius's method,** in *math.*, a method of integrating linear differential equations in series. It has the advantage of exhibiting the connection between the two solutions found by it.—**Galton's method,** in *psychol.*, a name sometimes applied to the questionary method, which, though not invented by Galton, was used by him with conspicuous success in the study of visualization. Tables of questions (questionaries) dealing with some psychological topic are prepared and sent to a large number of persons. The replies are collated with a view to the induction of psychological uniformities, the determination of the range of mental variation, etc.—**Gibbs's vector method.** See ★*vector*.—**Golgi method,** in *histol.*, a method of distinguishing the nerve-cells and their branches by staining them with silver nitrate.

The *Golgi method* of differentiating the nervous elements has so revolutionized our knowledge of the structure of the nervous system that no text-book on that subject ten years old is of any value except as history.

Amer. Inventor, Dec. 15, 1903, p. 298.

Gradation methods, in *psychophys.*, a name introduced by Wundt in 1883 to include minimal changes and mean gradations. *E. B. Titchener*, Exper. Psychol., II. ii. 316.—**Graffin method,** in *photog.*, a process, especially adapted to the photographing of manuscripts, invented by Mgr. Graffin of Paris. See the extract.

The apparatus for the *méthode Graffin* consists essentially of a prism, or mirror, inclined at an angle of 45 degrees, in front of the object glass of the camera, in order

to reverse the image before its passage into the object glass, in such a way that, twice reversed, it is reproduced as a positive on the sensitive paper. The proof will be negative; the black letters of the manuscript or book copied will appear in white against a black or dark background. The order of the letters and their position will be normal, by reason of the double reversal. The plate-holder contains sheets of bromide paper, preferably rapid. One great advantage of the method is that the manuscript or book to be photographed may be placed horizontally on the table or chair, or on the floor. The work is done with rapidity, almost as fast as one can turn the pages. Only one copy can be made by this process, which cannot therefore serve for the production of a large number of copies.

The Nation, March 5, 1908.

Gram's method, in *bacteriol.*, a method of staining based upon the principle that certain bacteria after being stained with aniline dyes retain the color on subsequent treatment with a solution of iodopotassic iodide, while others are decolorized.—**Hampe's method,** in *chem.*, a method for the determination of oxygen which consists in reducing the oxid of finely divided copper (brought to a bright-red heat) in a current of hydrogen, the loss in weight giving a measure of the amount of oxygen.—**Hehner method,** in *chem.*, an analytical process applied to butter, and to other fats and oils, which determines the percentage of insoluble fatty acids which can be obtained from the particular fat.—**Inverse method of fluxions.** See *fluxion*.—**Isthmus method,** a method of testing the magnetic permeability of iron under great magnetizing force, in which the sample, in the form of a short bobbin, is so placed between the poles of an electromagnet as to form part of a closed magnetic circuit.

In applying the *isthmus method* it is desirable to be able to turn the bobbin round suddenly between the magnet poles.

J. A. Ewing, Magnetic Induction in Iron and other [Metals, p. 150.

Keeler's spectrographic method. See ★*spectrographic*.—**Kjeldahl method,** in *chem.*, a method of determining nitrogen in organic compounds, suggested by Kjeldahl. It consists in boiling the substance with concentrated sulphuric acid, with or without the addition of a little copper or potassium sulphate or mercuric oxid: this oxidizes the carbon to carbon dioxid, and the hydrogen to water, and converts the nitrogen into ammonia. The liquid is then made alkaline and the ammonia boiled off. The method is used chiefly for the examination of fertilizers, foodstuffs, etc.—**Laborde's method,** in *med.*, a method of inducing respiration in cases of threatening asphyxiation, as in drowning, by means of rhythmical tractions on the tongue.—**Littrow's method** (*naut.*), a navigation rule, named after its author, by which to determine the ship's longitude from the employment of circummeridian altitudes.—**Measurement methods,** metric methods; psychophysical metric methods; in *psychophys.*, methods for the determination of the stimulus and differential limen, and of subjectively equivalent stimuli and stimulus-differences: typified by the four classical methods of just noticeable differences, mean gradations, average error, and right and wrong cases.—**Method of average error,** one of the four classical methods of psychophysics, in which a variable stimulus is equated for sensation to a constant stimulus and the errors of adjustment are combined to furnish a representative or average error. The method was introduced into psychophysics by Fechner. *E. B. Titchener*, Exper. Psychol., II. i. 70.—**Method of characteristics,** a geometric method at the basis of enumerative geometry, founded by Chasles on his correspondence-principle (1864).—**Method of Clément and Desormes,** in *phys.*, a method for the determination of the ratio of the two specific heats of a gas. The gas, contained in a closed receptacle, is suddenly compressed by means of a piston, and the change of pressure due to this approximately adiabatic change of volume is immediately noted. The pressure is read again after the gas has cooled. This gives the result of an isothermal change of volume. The ratio of these two changes is the ratio of the specific heats.—**Method of complete series,** in *psychophys.*, a mode of the method of just noticeable differences (which see, under ★*difference*) which combines into one the partial series required for the determination of the upper and lower differential limens.—**Method of constant stimuli,** in *psychophys.*, the method of right and wrong cases as employed with a number of stimuli for the determination of the stimulus limen.—**Method of constant stimulus-differences,** in *psychophys.*, the method of right and wrong cases as employed with a number of stimuli, above and below the standard stimulus, for the determination of the differential limen.—**Method of doubled stimuli,** in *psychophys.*, a method, proposed by J. Merkel, the object of which is the determination of a stimulus that is subjectively the double of the given stimulus.—**Method of equal and unequal cases,** in *psychophys.*, a modification of the method of right and wrong cases, proposed in 1888 by J. Merkel.—**Method of equal-appearing intervals, of equal sense-distances, of mean gradations, of supraliminal differences,** in *psychophys.*, a method the object of which is the equation of two supraliminal sense-distances. In the usual form of the method, the two extreme stimuli are given, and the third, intermediate stimulus is varied up and down by small steps until it appears to divide the total sense-distance into halves. Other forms of the method are, however, possible; and the principle may also be employed for the just noticeable differentiation of supraliminal sense-distances.—**Method of equivalents,** in *psychophys.*, a form of the Fechnerian method of average error in which the stimuli or stimulus-differences to be equated are applied to different parts of the sense-organ.—**Method of infinitesimals,** the method of Leibnitz for the calculus.—**Method of just noticeable differences, method of least differences, method of minimal differences.** See ★*difference*.—**Method of limits.** (*b*) In *psychophys.*, a form or mode of the method of just noticeable differences (which see, under ★*difference*), developed by G. E. Mueller. It is characterized by rules of procedure which make its results comparable with the results of the method of constant stimulus-differences (method of right and wrong cases).—**Method of minimal changes,** in *psychophys.*, a form or mode of the method of just noticeable differences (which see, under ★*difference*), developed by Wundt. It

is characterized by the attention paid to the psychological variable errors, especially to expectation and practice. —**Method of multiple reproduction, method of single reproduction,** in *psychophys.*, forms of the Fechnerian method of average error employed in work upon the estimation of time-intervals. In the former, a standard or normal interval is given, and the observer reproduces this interval (say, by tapping on a key) three, five, ten, or so many times, the length of the normal and of the reproduced intervals being graphically recorded; in the latter, the normal interval is bounded by two clicks or strokes, and the observer is required to make a third stroke as soon as a time has elapsed which he judges to be equal to the normal. The length of the two intervals is recorded as before.—**Method of paired comparisons.** See ★*comparison.*—**Method of passage,** in *bacteriol.*, a method of increasing the virulence of pathogenic bacteria by inoculating a number of animals one from the other in a series.—**Method of reactions,** in *metal.*, a method of double decomposition, in which to a molten bath or to a solution of a combination of bases and acids a reagent is added which is itself a salt or compound of base and acid; the acid of the metallic solution goes to the base of the reagent, and the acid of the reagent unites with the bases in the solution. Such double decompositions are usual with the silicates and carbonates in reduction processes.—**Method of reciprocal polars,** in *geom.*, a method of duplicating or dualizing all descriptive and many metric properties of curves and surfaces by consideration of polar reciprocals. It was first systematically employed by Poncelet.—**Method of right and wrong answers,** in *psychophys.*, a simplified form of the method of right and wrong cases, introduced by J. Jastrow and E. Kraepelin, in which the judgment 'doubtful' is forbidden and all judgments have accordingly the form 'greater' or 'less.'—**Method of right and wrong cases,** in *psychophys.*, a method in which a single slight stimulus-difference, or a number of stimulus-differences ranging from small to large above and below the standard stimulus, is presented to the observer, who is required to judge in each case of the relation of the component stimuli (as second stimulus greater, less, much greater, relation doubtful, etc.). From the distribution of the judgments in accordance with the theory of probabilities a differential limen and its measure of precision may be determined. Like the method of constant stimuli (which see, above), the method is available for the determination of a stimulus limen. It is evidently, in a way, the counterpart and supplement of such methods as that of minimal changes. There, stimuli are varied until a required judgment has been passed; here, stimuli are constant and the observer's judgments are variable.—**Method of Roy and Ramsden,** in *phys.*, a method for the measurement of the linear expansion of bars, in which the elongation is observed directly through microscopes focused upon cross-lines ruled upon the specimen. See ★*dilatometer.*—**Method of substitutions,** in *alg.*, a method based upon replacing a quantity by another or by a function of several others. —**Method of two, three, five,** etc., **cases,** in *psychophys.*, Wundt's names for various forms of the method of right and wrong cases. In the first, there are two possibilities of judgment (equal and unequal, or positive and negative); in the second, three (greater, doubtful, less); in the third, five (much greater, greater, etc.).—**Methods of adjustment.** See ★*adjustment.*—**Methods of difference,** in *psychophys.*, a name proposed in 1891 by E. Kraepelin to include right and wrong cases, right and wrong answers, and equal and unequal cases. See ★*methods of limits.*—**Methods of enumeration,** in *psychophys.*, a term introduced by Wundt in 1895 to include the methods of two, three, five, etc., cases, and extended in 1902 to average error: opposed in the first case to *methods of* ★*adjustment*, and in the second to *gradation* ★*methods.*—**Methods of limits,** in *psychophys.*, a name proposed in 1891 by E. Kraepelin to include minimal changes, mean gradations, and average error.—**Mixed method,** the combination upon one printing-plate of the different processes of line-engraving, etching, mezzotint, with rouletting.

> Line-engraving has been killed by etching, mezzotint, and that bastard form of line-engraving known as the "*mixed method*"—a combination of etching, graving, and machine-ruling, such as is seen in Thomas Landseer's "Stag at Bay." *Encyc. Brit.*, XXVIII. 267.

Napier's method (*naut.*), a graphic representation of the deviation. The margin of a compass card is shown as cut out at the N-point and straightened into a vertical line, divided into 32 equal parts which correspond to the 32 points of the compass, and into 360 degrees of its circumference. Also called *Napier's card, compass-error card, curve, diagram,* and *deviation diagram.*—**Newton's method of approximation,** in *alg.*, a method for obtaining the roots of equations.—**O'Dwyer's method,** in *med.*, a method of relieving obstructive dyspnœa by intubation of the larynx.—**Ogata's method,** in *med.* (*a*) A method of resuscitation of an asphyxiated new-born infant by alternately approximating the feet and the head and letting the body fall, holding the infant by the feet only. (*b*) A method of resuscitation, in cases of asphyxia from chloroform or ether, by stroking the lower portion of the chest with the fingers in order to stimulate respiration and the action of the heart.—**Open method,** in *med.*, the treatment of wounds by free exposure to the air, as contrasted with the use of air-tight antiseptic dressings.—**Patch method.** See ★*patch.*—**Point-to-point method,** a method of determining wave-forms of alternating currents, in which each point upon the curve indicating the wave is found separately. Also called *step-by-step method.*

> In other places there is an apparent want of knowledge of recent progress, as, for example, where the oscillograph is spoken of as an instrument of little value, the *point-to-point method* being described as more practical.
> *Nature*, May 14, 1903, p. 31.

Polygonal method, in topographical surveying of an extensive area or territory, the traverse method of determining the relative positions of several points by surveying a series of consecutive lines joining those points: used as an alternative to the method of triangulation, in which the lines surveyed form the sides of contiguous triangles, the lengths of whose sides are determined by trigonometric methods.

On the other side, the *polygonal method* permitted, as has already been stated, the carrying on of the operations of the survey along the route of each expedition.
Geog. Jour. (R. G. S.), XVI. 331.

Questionary method. See *Galton's* ★*method.*—**Reckoning method,** in *psychophys.*, a method of enumeration (Germ. Abzählungsmethode) typified by the method of right and wrong cases. *W. Wundt* (trans.), Outlines of Psychol., p. 257.—**Reserve-seed method.** See ★*seed.* —**Reserve-sprout method.** See ★*sprout.*—**Römer's method,** in *optics*, the method employed by Römer (1675) for computing the velocity of light from observations upon the eclipses of Jupiter's moons, made when the earth and that planet were in conjunction and when they were in opposition. See *velocity of* ★*light.*—**Rousseau's method,** in *photom.*, a graphic method devised by Rousseau for finding the mean spherical intensity of a source of light. See *Rousseau's* ★*figure.*—**Sayre's method,** in *surg.*, the treatment of lateral curvature of the spine, or of Pott's disease, by means of a corset of plaster of Paris applied while the patient is suspended by bands under the arms.—**Scattered-seed method.** See ★*seed.*—**Schleich method,** in *med.*: (*a*) Induction of local anæsthesia by distention of the tissues with a weak cocaine solution subcutaneously injected. (*b*) Induction of general anæsthesia by a mixture of chloroform, ether, and petroleum ether administered by inhalation.—**Schott method,** in *med.*, the treatment of heart-disease by baths in effervescent water and by special exercises.—**Seebeck's and Holmgren's method,** in *exper. psychol.*, a rough method of testing partial color-blindness. Colored cards or worsteds are given to the subject, who is required to sort and match them without naming the colors.—**Serial method,** in *psychophys.*, any method which implies the presentation to the observer of a graded series of stimuli; specifically, in the sphere of sensation, a gradation method; in the sphere of affection, a form of the method of impression. As applied to affective processes, the serial method requires that a series of stimuli be presented to the observer one at a time, and be referred by him to one or other of certain prearranged categories of affective intensity, as very pleasant, moderately pleasant, indifferent, moderately unpleasant, very unpleasant. The results are recorded in graphic form.—**Single-tree method,** that method of conservative lumbering in which reproduction from self-sown seed under the shelter of the old stand is invited by the cutting of single trees. This cutting may be made throughout the forest, as in some wood-lots, or in definite portions of the forest in turn. Also called *selection system, selection method, shelter-wood selection system.* —**Stand method,** that method of conservative lumbering in which reproduction is secured from self-sown seed by means of successive cuttings made throughout the mature stand, thus leading to the production of a new stand approximately even aged. These successive cuttings encourage seed production, create conditions favorable to the growth of seedlings, and gradually remove the remaining trees of the mature stand as the young growth develops. The series of cuttings, which vary in number and duration according to the degree of difficulty with which reproduction is effected, is divided into the following four kinds: (1) *Preparatory cuttings* fit the stand for its reproduction by the removal of dead, dying, or defective trees, and prepare the ground for the germination of seeds. A stand in which one or more preparatory cuttings have been made is in the *preparatory stage.* (2) *Seed cuttings* encourage seed production by the further opening of the stand, and admit light in quantity favorable for the development of young growth. A forest in which one or more seed cuttings have been made is in the *seedling stage.* (3) *Removal cuttings* gradually remove the mature stand which would otherwise retard the development of the young trees. A stand in which one or more removal cuttings have been made is in the *removal stage.* (4) The *final cutting* is the last of the removal cuttings, in which all of the old stand still remaining is cut. Also called *shelter-wood compartment system, method of successive thinnings, compartment system,* and *high forest compartment system.*—**Statistical method.** (*a*) See *statistical method,* under *statistical.* (*b*) In *phys.*, the method of statistical mechanics in which a great number of systems, similar in nature but differing as to configurations and velocities, are simultaneously considered.—**Step-by-step method.** Same as *point-to-point* ★*method.* —**Sturm's method,** in *alg.*, a method for ascertaining how many real roots of an equation lie between any given limits.—**Sylvester's dialytic method,** in *alg.*, a method of elimination. See *dialytic,* 3.—**Sylvester's method,** in *med.*, a method of artificial respiration for the resuscitation of a drowning person. Inspiration is effected by drawing the arms up over the head, the subject lying on the back, and expiration by folding the arms over the chest and producing pressure.—**Tentative method,** specifically, a procedure followed by skilled experts in opening locks of either the tumbler, pin, or combination keyless type, in which advantage is taken of possible lost motion due to poor mechanical construction, to detect, by feeling the yielding of the bolt, the position of pins or tumblers. This element of weakness has been reduced or eliminated in the more modern constructions, such as the so-called "paracentric" or deeply corrugated section of the key-way in flat-key types, and by the timelock combinations.—**Thiersch's method of skin-grafting.** See ★*skin-grafting.*—**Unitary method of chemistry.** See *unitary* ★*theory.*—**Welsh method of copper-smelting,** a process of smelting copper in reverberatory furnaces, employed largely in South Wales. It is conducted in six stages. In the first stage the pyritic ore (the ore usually employed) is roasted in a reverberatory furnace to expel the arsenic and a part of the sulphur, and a large proportion of the sulphid of iron present in the pyrites is changed into oxid of iron, while the copper oxid is converted into sulphid. In the second stage of the process the oxid of iron is removed by melting and by causing it to combine with silica: this part of the process is also carried out in a reverberatory furnace, and a coarse metal is obtained containing about 33 per cent. of copper. In the third stage the granulated coarse metal is calcined again for the purpose of oxidizing more of the sulphid of iron. In the fourth stage the calcined coarse metal is fused together with some slag containing silica and ores containing oxid and carbonate of copper. The fused mass separates by gravity into the matte or regulus, containing

from 60 to 80 per cent. of copper, and a metallic slag consisting chiefly of silicate of iron, but containing also some copper. The regulus, which is called, according to its appearance, either *cake blue metal, cake white metal,* or *pimple metal,* is placed again in the reverberatory furnace. This constitutes the fifth stage of the process, in which the sulphur is partly removed and blister-copper obtained. In the sixth and last stage the metal is refined and toughened by being subjected to oxidizing agencies while molten, during which the arsenic escapes as vapor, while the other metals are converted to oxids.—**Wet method.** Same as *wet way.*—**Will and Varrentrapp's method,** in *chem.*, a process, devised by the two chemists named, for determining quantitatively the nitrogen of organic substances submitted to analysis. It consists essentially in heating, in a tube of hard glass, a weighed portion of the substance mixed with a large excess of soda-lime (a mixture of sodium and calcium hydroxids), thus converting the nitrogen present into ammonia, which is carried as gas into an excess of hydrochloric acid and so fixed as ammonium chlorid. In the ammonium chlorid the ammonia, and from it by calculation the nitrogen, may be determined either by the gravimetric or the volumetric method. This process has for a number of years been in most cases replaced by that of Kjeldahl.—**Zero method.** Same as *null-method* (which see, under *method*).

methodaster (meth′ō-das-tėr), *n.* [Irreg. < *method* + *-aster.* The formation does not express the meaning intended.] One who makes an ignorant use of scientific methods, or magnifies unduly the importance of methods.

> The *methodaster* and macerator blunts the intuitions, the best thing in youth, drags down thoughts that fly and makes them crawl at a slow, senescent pace. More yet, it tends to pedantry that shields ignorance from exposure, teaches the art of seeming wise with empty minds, . . . and whips up a modicum of knowledge to deceptive proportions. *G. S. Hall*, Adolescence, II. 496.

Methodist. I. *n.*—**Calvinistic Methodists,** Methodists who accept the Calvinistic teachings of Whitefield, in the controversy of 1740, as opposed to the Arminian doctrine of John Wesley. They are found chiefly in Wales.

II. *a.*—**Reformed Methodist Church.** See ★*church.*

Methodological parallelism, physiologico-psychological parallelism; a methodological form of the doctrine of psychophysical parallelism. See the quotation.

> From this [psychoneural parallelism] we must distinguish a second sense of parallelism founded on the disparity just mentioned as also pertaining to the psychical and neural correlates. We may call this physiologico-psychological, or, more briefly, *methodological parallelism.* It rejects, as illogical, the attempt to penetrate to psychical facts from the standpoint of physiology. . . . It also forbids the psychologist to piece out his own shortcomings with tags borrowed from the physiologist. The conceptions of the two sciences are to be kept distinct as the facts themselves to which they relate are distinct. . . . This methodological convention, as we may call it, implies a more stringent interpretation of causation than that expounded by J. S. Mill. *Encyc. Brit.*, XXXII. 66.

Methody (meth′ō-di), *n.* Same as *Methodist.* [Vulgar or dial.]

methol (meth′ol), *n.* [*meth(yl)* + *-ol.*] **1.** Same as ★*carbinol,* ★*methanol,* or *methyl alcohol* (which see, under *alcohol*).—**2.** A colorless hydrocarbon, said to be found in crude wood-alcohol. It is probably a mixture.

methonal (meth′ō-nal), *n.* [*meth(yl)* + *-one* + *-al*[3].] A synthetic organic compound, $(CH_3)_2C(SO_2CH_3)_2$, similar in composition and action to sulphonal; dimethylsulphonedimethylmethane. It is hypnotic.

methose (meth′ōs), *n.* [*meth(yl)* + *-ose.*] A colorless, sweet, syrupy carbohydrate, $C_6H_{12}O_6$, prepared by the condensation of formaldehyde under the influence of magnesium hydroxid. It is probably a mixture.

methoxy-group (me - thok′si - grōp), *n.* [*meth(yl)* + *oxy-* + *group*[1].] The monovalent organic radical $-OCH_3$, derived from methyl alcohol.

methoxyl (meth-ok′sil), *n.* Same as ★*methoxy-group.*

Methven screen. See ★*light standard.*

Methyl acetanilide, a coal-tar product with properties similar to acetanilide, sold under the trade-name *exalgin:* principally used as an analgesic.—**Methyl aldehyde.** Same as *formaldehyde.*—**Methyl alkali blue.** See ★*blue.*—**Methyl blue.** See *methyl-blue.*—**Methyl chlorid,** a colorless gas, CH_3Cl, prepared by the action of sodium chlorid and sulphuric acid on methyl alcohol, and formed by treating methane with chlorin. It has an ethereal odor and boils at −23.73° C. It is sometimes used, mixed with ethyl chlorid, to produce anæsthesia. Also called *chlormethane.*—**Methyl eosin, orange.** See ★*eosin,* ★*orange*[1].—**Methyl violet.** See ★*methyl-violet.*

methylate, *v. t.* 2. To substitute in (a compound) the methyl radical $-CH_3$, for an equivalent of some other radical or element. —**Methylated spirit.** Alcohol thus denaturized or rendered unfit for drinking (with the addition of one half of one per cent. of benzene) is by law exempt from the internal revenue tax in the United States, and therefore becomes available for manufacturing uses at much reduced cost. Similar regulations have been adopted in other countries, and other materials than crude wood-spirit have been employed to denaturize the common or ethyl alcohol.

methylate (meth'i-lāt), *n.* [*methyl* + *-ate*[1].] A derivative of methyl alcohol.—**Sodium methylate,** a colorless compound, CH_3ONa, prepared by the action of sodium on methyl alcohol.

methylation (meth-i-lā'shon), *n.* [*methylate* + *-ion.*] The act of methylating. See ★*methylate.*

Methylene acetylenazin. Same as ★*glyoxaline.* —**Methylene benzoate,** a crystalline compound, $(C_6H_5CO_2)_2CH_2$, prepared indirectly from formaldehyde and benzoic acid. It melts at 99° C. and boils at 255° C. —**Methylene blue.** See *methylene-blue.*—**Methylene dibenzamide,** a crystalline compound, $(C_6H_5CONH)_2CH_2$, formed by the action of ammonia on methylene benzoate. It melts at 118° C.—**Methylene gray, green, violet.** See ★*gray,* etc.—**New methylene-blue.** (*a*) A basic coal-tar color of the thiazin type. It dyes tannin-mordanted cotton a fuller and redder blue than methylene-blue. (*b*) A basic color of the oxazin type, distinguished as *new methylene-blue GG.*

methylenitan (meth-il-en'i-tan), *n.* [*methylene* + *-ite*[2] + *-an.*] A yellow syrupy or amorphous carbohydrate, $C_6H_{10}O_5$, prepared by boiling trioxymethylene with lime-water. It is not fermentable and is probably a mixture.

methylglycine (meth-il-glī'sin), *n.* Same as ★*sarcosine.* Also *methylglycosine.*

methylguanidin (meth-il-gwä'ni-din), *n.* A poisonous substance, of the nature of a ptomaïne, which has been found in decomposing cadavers.

methylindol (meth-il-in'dol), *n.* Same as *skatol.*

methylmethane (meth-il-meth'ān), *n.* Same as ★*ethane.*

methylosis (meth-i-lō'sis), *n.* [Gr. *μετά,* after, + *ὕλη,* matter, + *-osis.*] In *geol.,* that variety of metamorphism which involves change of chemical substance. *Geikie,* Text-book of Geol., p. 765.

methylpelletierine (meth″il-pel-e-tēr'in), *n.* A colorless, hygroscopic, dextrorotatory, liquid alkaloid, $C_9H_{17}ON$, contained chiefly in the root of the pomegranate-tree. It boils at 215° C.

methylpentose (meth-il-pen'tōs), *n.* [*methyl* + *pentose.*] A pentose in which one hydrogen atom has been replaced by the methyl-group: used especially of rhamnose or isodulcite.

methylphenacetin (meth″il-fē-nas'e-tin), *n.* [*methyl* + *phenacetin.*] A colorless synthetic compound formed by the action of methyl iodide on phenacetin. It is hypnotic.

methylsalol (meth-il-sal'ol), *n.* [*methyl* + *salol.*] A colorless crystalline synthetic compound, a methyl derivative of salol: used in rheumatism.

methyluramine (meth″il-ūr-am'in), *n.* [*methyl* + *ur(ic)* + *amine.*] A methyl derivative of guanidin, $NH:C(NH_2)(NH.CH_3)$, obtained on oxidation of creatine, to which it is closely related: same as ★*methylguanidin.* It has also been found in putrefying meat.

methylurethane (meth″il-ūr-eth'ān), *n.* [*methyl* + *ur(ic)* + *ethane.*] A crystalline synthetic hypnotic obtained by the action of cyanogen chlorid on methyl alcohol.

methyl-violet, *n.* 2. One of several basic colors of the triphenylmethane group. They consist chiefly of the hydrochlorids of pentamethyl and hexamethyl pararosaniline or their benzyl derivatives.

methyostylic (meth″i-ō-stil'ik), *a.* Relating to, or having that arrangement of the visceral arches termed, methyostyly.

methyostyly (meth-i-os'ti-li), *n.* [Gr. *μετά,* after, + E. *hyo(id)* + Gr. *στῦλος,* pillar, + *-y*[3].] That condition of the visceral arches in which their component parts are more or less shifted from their primitive conditions, and the metapterygoid, symplectic, and adjacent parts assist the hyomandibular in the support of the lower jaw: a condition found in the *Teleostei,* or bony fishes.

Methyostyly, in allusion either to the prominence of the metapterygoid, or to the fact that *methyostyly* represents a morphological advance upon earlier modes.
Biol. Bulletin, June, 1904, p. 59.

methystic[1] (me-this'tik), *a.* [Gr. *μεθυστικός,* intoxicating, < *μεθύειν,* be intoxicated, < *μέθυ,* strong drink: see *mead*[1]. Compare *amethyst.*] That intoxicates; intoxicating.

methystic[2] (me-this'tik), *n.* [NL. *methyst-(icum)* + *-ic.*] Noting an acid, a colorless compound, $CH_2\langle^{O}_{O}\rangle C_6H_3C_4H_4COCH_2COOH$, prepared by the hydrolysis of its methyl ester, methysticin (kawain), derived from kawa-root (*Piper methysticum*). It crystallizes in silky, lustrous, prismatic needles and melts at 180° C.

methysticin (me-this'ti-sin), *n.* [NL. *methysticum*) + *-in*[2].] Same as ★*kawain.*

métier (mā-tyā'), *n.* [F. *métier,* OF. *mestier, mester,* = It. *mestiero,* < L. *ministerium,* attendance, service, office, occupation, work: see *ministry* and *mystery*[2].] Trade; profession; with reference to literature or art, one's particular kind or line of ability.

Messrs. Morris & Co.'s furniture was not of William Morris's own design, flat ornament being essentially his *métier.* *A. Vallance,* William Morris, p. 92.

métissage (mā-tē-säzh'), *n.* [F., < *métis,* of mixed race: see *métis.*] Mixture of races.

métisse (mā-tēs'), *n.* [F., fem. of *métis:* see *métis.*] A woman of mixed blood, particularly of mixed Indian and white descent.

Metius's ratio. See ★*ratio.*

metoche (met'ō-kē), *n.* [Gr. *μετοχή,* a sharing, < *μετέχειν,* share in, take part in, < *μετά,* among, + *ἔχειν,* have.] In *arch.*: (*a*) The arrangement of a dentil-course or of a Doric frieze with its triglyphs and metopes: a term used by Vitruvius (III. 3) [although some authorities make the term *metatome*]. (*b*) The space between two dentils: used by French writers, by a false analogy with *metope.*

metochy (met'ō-ki), *n.* [Gr. *μετοχή,* a sharing.] The relation between ants and those of their guests which are tolerated and not disagreeable to them. *Cambridge Nat. Hist.,* VI. 183.

metodontiasis (met″ō-don-tī'a-sis), *n.* [NL., < Gr. *μετά,* after, + *ὀδούς* (*ὀδοντ-*), tooth, + *-iasis.*] 1. Faulty development of the teeth.—2. The second dentition.

metœstrous (met-es'trus), *a.* Of or pertaining to the metœstrum. See the extract under ★*metœstrum.*

metœstrum (met-es'trum), *n.*; pl. *metœstra* (-trä). [Gr. *μετά,* after, + *οἶστρος,* vehement impulse.] The period of decline which follows the height of the period of sexual desire in female mammals.

Metœstrum, or the Metœstrous Period.—If conception does not take place during œstrus the activity of the generative organs gradually subsides during a definite period, which I have called the *metœstrum;* and this is followed . . . by a long period of rest.
W. Heape, in Quart. Jour. Micros. Sci., Nov., 1900, p. 8.

metol (met'ol), *n.* [*met(hyl)* + *-ol.*] A trade-name of methyl-*p*-amino-*m*-cresol hydrochlorid, $CH_3\overset{4}{N}HC_6H_3O\overset{1}{H}C\overset{3}{H}_3.HCl$. It is used in photography as a developer.

meton. An abbreviation of *metonymy.*

metonym (met'ō-nim), *n.* [Gr. *μετά,* after, + *ὄνυμα,* a name (see *onym*).] A name given to a group (usually a genus) after a different name had been applied to another member (usually a species) of the same group. According to the American code of botanical nomenclature, a metonym is invalid.

A name is rejected when there is an older valid name based on another member of the same group (*metonym*).
Code of Bot. Nomenclature, p. 175.

metopantralgia (met″ō-pan-tral'ji-ä), *n.* [NL., < Gr. *μέτωπον,* forehead, + *ἄντρον,* cave (cavity), + *ἄλγος,* pain.] Pain in the frontal sinuses.

metopantritis (met″ō-pan-trī'tis), *n.* [NL., < Gr. *μέτωπον,* forehead, + *ἄντρον,* cave (cavity), + *-itis.*] Inflammation of the frontal sinuses.

Metopias (me-tō'pi-as), *n.* [NL., < Gr. *μετωπίας,* having a broad forehead, < *μέτωπον,* forehead.] 1. A genus of labyrinthodont *Amphibia* from the Keuper of Würtemberg, attaining large size and having a broadly triangular skull with anterior orbits, weak dentition, and slightly infolded dentin: the pectoral plates are large and the ribs very heavy.—2. A genus of Silurian trilobites.

metopion (me-tō'pi-on), *n.*; pl. *metopia* (-ä). [NL., < Gr. *μετώπιον,* forehead, prop. neut. adj., < *μέτωπον,* the forehead.] In *anthrop.,* the point in which a line connecting the tubera of the frontal bone intersects the median line. *Amer. Anthropologist,* Jan.–March, 1901, p. 35.

metopodynia (met″ō-pō-din'i-ä), *n.* [Gr. *μέτωπον,* forehead, + *ὀδύνη,* pain.] Neuralgic pain in the forehead.

metopomancy (met'ō-pō-man-si), *n.* [Gr. *μέτωπον,* the forehead, brow, front, face, + *μαντεία,* divination.] Divination by means of the characteristics of the face.

metoxenous (mē-tok'se-nus), *a.* [Gr. *μετά,* among, + *ξένος,* a stranger.] Heterœcious.

metranate (met'ra-nāt), *n.* [*metran* + *-ate*[3].] The office or jurisdiction of a metran or head of the Abyssinian church.

The Patriarchate of Alexandria, and *Metranate* of Ethiopia. *J. M. Neale,* Hist. Eastern Church, I. 111. *N. E. D.*

metraneurism (mē-tran'ū-rizm), *n.* [Gr. *μήτρα,* uterus, + *ἀνευρυσμός,* dilation (see *aneurism*).] Same as ★*metrectasia.*

metraterm (mē'tra-tėrm), *n.* [Gr. *μήτρα,* uterus, + L. *term(inus),* end.] In certain trematodes, the short, thick-walled terminal portion of the uterus.

The uterus terminates in a short heavy-walled region devoid of eggs, known as the *metraterm.*
Buck, Med. Handbook, VII. 862.

metratonia (mē-tra-tō'ni-ä), *n.* [NL., < Gr. *μήτρα,* uterus, + *ἀτονία,* atony.] Atony of the uterus.

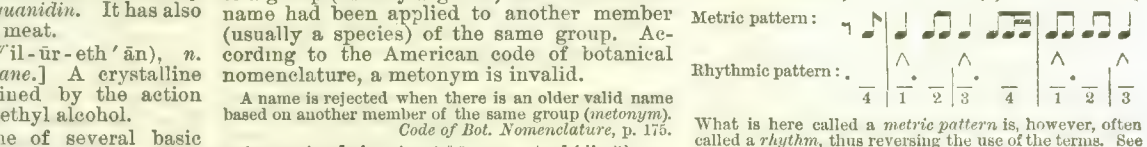
metratrophia (mē-tra-trō'fi-ä), *n.* [Gr. *μήτρα,* uterus, + *ἀτροφία,* atrophy.] Atrophy of the uterus.

metrectasia (mē-trek-tā'si-ä), *n.* [NL., < Gr. *μήτρα,* uterus, + *ἔκτασις,* extension.] Dilatation of the non-pregnant uterus.

metrectomy (mē-trek'tō-mi), *n.* [Gr. *μήτρα,* uterus, + *ἐκτομή,* excision.] Same as *hysterectomy.*

metrelcosis (mē-trel-kō'sis), *n.* [NL., < Gr. *μήτρα,* uterus, + *ἕλκωσις,* ulceration.] Ulceration of the uterus, especially of its neck.

metremphysema (mē″trem-fi-sē'mä), *n.* [NL., < Gr. *μήτρα,* uterus, + *ἐμφύσημα,* inflation.] Same as *physometra.*



metret (met'ret), *n.* [*meter*[3], *metre*[2], the measure of length, + dim. *-et,* used here with a particular implication.] A decimal submultiple of the meter, in the scheme of magnitudes devised about 1860 by G. J. Stoney. See ★*metro* and ★*uno.*

We shall use the syllable **-et** for decimal submultiple. Thus the sixthet will mean the sixth of these -ets, that is, a unit in the sixth place of decimals. In this nomenclature the tenthet of a meter is the same as the tenth-*metret,* i. e., the tenth of the series of *metrets* or decimal submultiples of a meter.
G. J. Stoney, in Smithsonian Rep., 1899, p. 208.

metria (mē'tri-ä), *n.* [NL., < Gr. *μήτρα,* uterus.] Any local inflammatory condition following childbirth.

metric[1], *a.*—**Metric property,** in *geom.,* a property which involves measure or quantity.—**Metric relation,** a relation which involves measure or quantity.

metric[2], *a.*—**Metric** or **metrical pattern,** in *music,* the scheme of long and short tones, resting upon and conformable to the fundamental rhythm, according to which a particular melody or phrase is laid out. For instance, the *metric pattern* of the first line of "The Bluebells of Scotland," as compared with its *rhythmic pattern,* may be expressed thus:

What is here called a *metric pattern* is, however, often called a *rhythm,* thus reversing the use of the terms. See *meter*[2], 2, and *rhythm,* 2.

metric[3], *a.*—**Metric horse-power.** See ★*horse-power.*

metrics[1], *n.*—**Projective metrics,** in *geom.,* the treatment of metric relations as projective relations to the absolute.

metriocephalic (met″ri-ō-se-fal'ik), *a.* [Gr. *μέτριος,* within measure, moderate, + *κεφαλή,* head.] In *craniom.,* having a length-height index between 72 and 77: said of skulls. *Amer. Anthropologist,* 1901, p. 40.

metro (met'rō), *n.* [An arbitrary detached use of *metro-,* combining form of *meter.*] One of a series of decimal submultiples of the meter: as, *metro*-sixteen, the sixteenth of this series of metros. See the extract and ★*uno.*
G. J. Stoney.

A *metro*-ten is the tenth of the *metros* or decimal units of the metre. In other words it is 10^{10} metres.
Rep. Brit. Ass'n Advancement of Sci., 1901, p. 572, note.

metrocace (mē-trok'a-sē), *n.* [Gr. *μήτρα,* uterus, + *κάκη,* bad condition.] Gangrenous inflammation of the uterus.

metrocampsis (mē-trō-kamp'sis), *n.* [Gr. *μήτρα,* uterus, + *κάμψις,* flexion.] Flexion of the uterus.

metrocele (mē'trō-sēl), *n.* [Gr. *μήτρα,* uterus, + *κήλη,* tumor.] Same as *hysterocele.*

metrodynia (mē-trō-din'i-ä), *n.* [NL., < Gr. *μήτρα,* uterus, + *ὀδύνη,* pain.] Uterine colic.

metrol. An abbreviation (*a*) of *metrological;* (*b*) of *metrology.*

metroncus (mē-trong′kus), *n.*; pl. *metronci* (-tron′sī). [NL., < Gr. *μήτρα*, uterus, + *ὄγκος*, mass.] A tumor of the uterus; also, metrophyma.

metroneurosis (mē″trō-nū-rō′sis), *n.* [NL., < Gr. *μήτρα*, uterus, + NL. *neurosis*.] Any neurosis originating from uterine disease or pregnancy.

metronym (mē′trō-nim), *n.* [Gr. *μήτηρ*, mother, + *ὄνομα*, *ὄυνμα*, name. Compare *metronymic*.] A personal name derived from the mother or from the maternal family.

The acceptance of *metronyms* in the genealogies as proofs of female kinship, while patronyms are rejected. *Nature*, May 5, 1904, p. xiii.

metronymic, *a.* 2. In *anthrop.*, relating to that form of society in which the child takes its name from the mother's family, or in which the child is reckoned as a member of the maternal family.

The older [group] may be named *metronymic*. In a *metronymic* group all the relationships are traced through mothers; relationships on the father's side are ignored. *Giddings*, Elem. of Sociol., p. 188.

metronymy (mē-tron′i-mi), *n.* [*metronym* + *-y*³.] The system of tracing name and kinship in the female line.

Metronymy and Patronymy.—It is necessary to distinguish between two different types of ethnical organization, one of which is older than the other. *Giddings*, Elem. of Sociol., p. 187.

metrop. Same as ★*met.* (*c*).

metropathia (mē-trō-path′i-ä), *n.* [NL., < Gr. *μήτρα*, uterus, + *πάθος*, disease.] Uterine disease. Also *metropathy*.

metrophlogosis (mē″trō-flō-gō′sis), *n.* [NL., < Gr. *μήτρα*, uterus, + *φλόγωσις*, inflammation.] Severe inflammation of the uterus.

metrophotographic (met″rō-fō-tō-graf′ik), *a.* Pertaining to or obtained by means of metrophotography.

A most useful variation on ordinary *metrophotographic* observations, for it is obvious that the representation of orographic features as effected by this well known process conveys a far more readable impression to the eye of the nature of the country photographed, the rise and fall of undulations, the gradation of slopes, &c., than any flat photograph can possibly convey. *Nature*, Oct. 8, 1903, p. 546.

metrophotography (met″rō-fō-tog′ra-fi), *n.* [Gr. *μέτρον*, measure, + E. *photography*.] 1. The art of making topographic maps from measurements of stereophotographs of great interobjective distance. *Nature*, Aug. 18, 1904, p. 392.—2. The taking of stereophotographs for use in map-making.

metrophyma (mē-trō-fī′mä), *n.*; pl. *metrophymata* (-ma-tä). [NL., < Gr. *μήτρα*, uterus, + *φῦμα*, a swelling.] Same as ★*metroncus*.

metropolitanship (met-rō-pol′i-tan-ship), *n.* [*metropolitan* + *-ship*.] The office or jurisdiction of a metropolitan.

metropolypus (mē-trō-pol′i-pus), *n.* [NL., < Gr. *μήτρα*, uterus, + *πολύπους*, polypus.] A polypus of the uterus.

metroproptosis (mē″trō-prop-tō′sis), *n.* [NL., < Gr. *μήτρα*, uterus, + *πρόπτωσις*, falling forward, prolapse.] Same as ★*metroptosis*.

metroptosis (mē-trop-tō′sis), *n.* [NL., < Gr. *μήτρα*, uterus, + *πτῶσις*, falling.] Falling of the uterus. Also *metroproptosis*.

metrorrhagic (mē-trō-rā′jik), *a.* [*metrorrhagi*(*a*) + *-ic*.] Pertaining to or suffering from metrorrhagia or uterine hemorrhage.

metrorrhexis (mē-trō-rek′sis), *n.* [NL., < Gr. *μήτρα*, uterus, + *ῥῆξις*, rupture.] Rupture of the uterus during childbirth.

metrosalpingitis (mē-trō-sal-pin-jī′tis), *n.* [NL., < Gr. *μήτρα*, uterus, + NL. *salpingitis*.] Inflammation of the uterus and Fallopian tubes, or of the latter alone.

metrosalpinx (mē-trō-sal′pingks), *n.* [NL., < Gr. *μήτρα*, uterus, + *σάλπιγξ*, trumpet.] Same as *Fallopian tube*.

metroscope² (met′rō-skōp), *n.* [Gr. *μέτρον*, measure, + *σκοπεῖν*, view.] A speed-measuring device or tachometer which indicates both speed and distance traveled.

metrostaxis (mē-trō-stak′sis), *n.* [Gr. *μήτρα*, womb, + *στάξις*, a dropping.] Hemorrhage of the uterus.

metrostenosis (mē″trō-ste-nō′sis), *n.* [NL., < Gr. *μήτρα*, uterus, + *στένωσις*, narrowing.] Abnormal contraction of the cavity of the uterus.

metrosteresis (mē″trō-ste-rē′sis), *n.* [NL., < Gr. *μήτρα*, uterus, + *στέρησις*, deprivation.] 1. Removal of the uterus.—2. Absence of the uterus.

metrostyle (met′rō-stīl), *n.* [Gr. *μέτρον*, a measure, + E. *style*².] A speed-controller used in certain mechanical piano-players. It consists of an index that can be moved to right or left to correspond with a line traced on the revolving music-roll, its movement affecting a lever by which the tempo of the music may be increased or diminished.

metrosynizesis (mē″trō-sin-i-zē′sis), *n.* [NL., < Gr. *μήτρα*, uterus, + *συνίζησις*, collapse, shrinking.] Adhesion of the uterus to neighboring structures, the result of inflammation.

metro-ten (met′rō-ten), *n.* A unit of length equal to 1×10^{10} meters. See ★*metro*.

metrotomy (mē-trot′ō-mi), *n.* [Gr. *μήτρα*, uterus, + *-τομια*, < *ταμεῖν*, cut.] Same as *hysterotomy*.

metuloid (met′ū-loid), *a.* and *n.* [L. *metula*, a small pyramid, an obelisk, + *-oid*.] I. *a.* Resembling a small pyramid or obelisk.

II. *n.* An object that resembles a small pyramid.

Metuloids, modified cystidia, encrusted with lime, which project from the hymenium of Peniophora, giving it a velvety appearance. *Jackson*, Glossary. *N. E. D.*

metzograph (met′zō-graf), *n.* [*Metz*, a surname, + Gr. *γράφειν*, write.] A form of screen, for process-work in photography, in which lines or dots are avoided and an irregularly grained effect is produced by the use of glass with a wavy surface.

meuse, *n.* See *muse*³, *n.*

Mex. An abbreviation (*a*) of *Mexican;* (*b*) of *Mexico*.

mexcal, *n.* Same as *mescal*.

Mexican bead-tree, bean-weevil, boll-weevil, calendar, cherry, chicken-bug. See ★*bead-tree*, ★*bean-weevil*, ★*weevil*, etc.—**Mexican coca.** Same as *Mexican clover*. See *Richardsonia*.—**Mexican coral bean, luster.** See ★*bean*¹, ★*luster*².—**Mexican snapper.** Same as *red snapper*. See *snapper*¹ (*g*) (3).—**Mexican sole, stinkwood, strips.** See ★*sole*², ★*stinkwood*, ★*strip*².—**Mexican walnut.** Same as *rock-walnut* (which see, under *walnut*). See also ★*walnut*.

Mexicana fiber. See ★*fiber*¹.

Mexicanize (mek′si-kan-īz), *v. t.*; pret. and pp. *Mexicanized*, ppr. *Mexicanizing*. [*Mexican* + *-ize*.] To make like the Mexicans; assimilate to the customs and institutions of Mexico.

These Indians, now practically *Mexicanized*. *An. Rep. Bur. Amer. Ethnol.*, 1897-98, p. xvi.

meymacite (mā′ma-sīt), *n.* [*Meymac* (see def.) + *-ite*².] A hydrated tungstic oxid derived from the alteration of scheelite, found at Meymac, Corrèze, France.

mezure, *n.* and *v.* A simplified spelling of *measure*.

mezzano (med-zä′nō), *a.* [It. *mezzano* (pl. *mezzani*), middle, medium, < L. *medianus*, middle: see *median*¹.] Of medium size: applied to a macaroni larger than spaghetti and smaller than the largest macaroni.

The macaroni called "*Mezzani*," which is a name designating size, not quality, is the preferable kind for macaroni dishes made with cheese. *Century Cook Book*, p. 225.

mezzeria (med-ze-rē′ä), *n.* [It., < *mezzo*, middle, half, < L. *medius*, half: see *medium*.] In Italy, a system of halving the produce of the soil between landowner and landholder: same as *metayage*. See the extract.

A system . . . in certain provinces of Italy and France, where it was once almost universal, and is still very common, is called *mezzeria* and métayage or halving. . . . These expressions . . . merely signify that the produce is divisible in certain definite proportions, which must obviously vary . . . and which do in practice vary so much that the landlord's share is sometimes as much as two-thirds, sometimes as little as one-third. *Encyc. Brit.*, I. 415.

mezzograph (mez′ō or med′zō-graf), *n.* [*mezzo*(*tint*) + *-graph*.] A photographic print imitating the effect of a mezzotint. *N. E. D.*

mezzotype (mez′ō- or med′zō-tīp), *n.* [*mezzo*(*tint*) + *type*.] A kind of paper for photographic printing. *N. E. D.*

mf. 2. In *elect.*, an abbreviation of *microfarad*.

mfd. An abbreviation (*a*) of *manufactured;* (*b*) in *electrotechnics*, of *microfarad*.

mfg. An abbreviation of *manufacturing*.

mfr. An abbreviation of *manufacturer*.

mg. An abbreviation of *milligram*.

M. G. An abbreviation (*c*) of Latin *Musicæ Graduatus*, Graduate of Music.

M. G., M. Goth. Abbreviations of *Mœsogothic*.

mgm. An abbreviation of *milligram*.

Mgr. An abbreviation (*b*) [*l. c.*] of *milligram;* (*c*) [*l. c.*] of *manager*.

M. Gr. An abbreviation of *Middle Greek*.

M. H. An abbreviation (*a*) of *Master of Horticulture;* (*b*) of *Most Honorable*.

M. Hon. An abbreviation of *Most Honorable*.

mhor (mōr), *n.* An East Indian name of the great whale-shark, *Rhinodon typicus*.

mhorr (môr), *n.* [Ar.] A West African gazel, named by E. T. Bennett *Gazella mhorr*, having horns annulated with ten or twelve prominent rings. *N. E. D.*

M. H. R. An abbreviation of *Member of the House of Representatives*.

M. H. S. An abbreviation (*a*) of *Massachusetts Historical Society;* (*b*) of *Member of the Historical Society*.

mi. An abbreviation (*a*) of *mile;* (*b*) of *mill* or *mills;* (*c*) of *milliampere*.

miam (mī′am), *n.* Same as ★*mia-mia*.

mia-mia (mī′mī), *n.* [Also *mi-mi*, *my-my*, *miam;* a native name.] A native hut or shelter of the Australian aborigines.

The word is aboriginal, and has been spelt variously. *Mia-mia* is the most approved spelling, *mi-mi* the most approved pronunciation. *E. E. Morris*, Austral English.

miasmatology (mī″az-ma-tol′ō-ji), *n.* Same as *miasmology*.

miasmic (mī-az′mik), *a.* Same as *miasmatic*.

Miauli, essence of. See ★*essence*.

miazin (mī-az′in), *n.* Same as ★*pyrimidine*.

Mic. An abbreviation of *Micah*, a book of the Old Testament.

mica², *n.*—**Water-mica,** a trade-name for clear, colorless muscovite.

The clear kind is known to the trade as "*water mica*," and this, as a rule, contains no iron, but much of the large-sized muscovite is unfortunately colored to some extent, which detracts greatly from its value. *Jour. Franklin Inst.*, Sept., 1905, p. 200.

micacious (mī-kā′shius), *a.* [L. *micare*, shine.] Shining; sparkling; glittering.

There is the Cyclopean stile, of which Johnson is the great example; the sparkling, or *micacious*, possessed by Hazlitt, and much affected in Reviews and Magazines; the oleaginous, in which Mr. Charles Butler bears the palm, or more appropriately the olive branch. *Southey*, Doctor, interchap. xxii.

micacization (mī″ka-sī-zā′shon), *n.* [*micacize* + *-ation*.] In *geol.*, the process of becoming charged with mica during metamorphism. *Geikie*, Text-book of Geol., p. 790.

micacize (mī′ka-sīz), *v. i.*; pret. and pp. *micacized*, ppr. *micacizing*. [Irreg. < *mica*² + *-c-* + *-ize*.] In *geol.*, to become charged with mica, as in the production of mica-schists from shales.

The Liassic shales by degrees become *micacized*. *Geikie*, Text-book of Geol., p. 803.

micanite (mī′ka-nīt), *n.* [*mica*² + *-n-* + *-ite*².] A trade-name of mica in sheets of considerable size made by cementing together a number of small clear pieces split very thin: used as an insulating material for electric circuits. *Elect. Rev.*, Oct. 8, 1904, p. 575.

micarelle (mī′ka-rel), *n.* [*mica*²: from its appearance.] A micaceous mineral which has externally the form of scapolite and results from its alteration. *Chester*.

M. I. C. E. An abbreviation of *Member of the Institute of Civil Engineers*.

Micellian water. See ★*water*.

Mich. An abbreviation (*b*) of *Michigan*.

Michelangelo, bar of. See ★*bar*¹.

michron (mī′kron), *n.* [Gr. *μι*(*κρός*), small (see *micron*), + *χρόνος*, time.] A unit of time proposed by Lord Kelvin; the time corresponding to the period of vibration of an ether-wave whose length in vacuo is one micron.

Mick (mik), *n.* [An abbreviation of *Michael*.] A slang name for an Irishman. See *micky*.

micr-. In *phys.*, etc., a prefix used instead of *micro-* before a second element beginning with a vowel. See *micro-*.

micracoustic (mik-ra-kös′tik), *a.* [*micr*(*o-*) + *acoustic*.] Having the property of rendering faint sounds audible; magnifying weak sounds.

micræsthete, *n.* Same as ★*micresthete*.

micrallantoid (mik-ra-lan′toid), *a.* [*micr*(*o-*) + *allantoid*.] Characterized by a small allantois. *W. Turner*, Anat., II. 869.

Micrampelis (mi-kram′pe-lis), *n.* [NL. (Rafinesque, 1808), < Gr. *μικρός*, little, + *ἀμπελίς*, dim. of *ἄμπελος*, a vine.] A genus of dicotyledonous plants belonging to the family *Cucurbitaceæ*. (See *Echinocystis*.) *Micrampelis Oregona* is the wild gourd of Oregon, and *M. macrocarpa* and *M. fabacea* are the chilicothe and bitter-root of California. See ★*chilicothe*.

micranatomy (mik-ra-nat′ō-mi), *n.* [NL., < Gr. *μικρός*, small, + E. *anatomy*.] Microscopical anatomy.

micrandrous (mik-ran'drus), *a.* [Gr. *μικρός*, small, + *ἀνήρ* (*ἀνδρ-*), male, + *-ous.*] In *bot.*, of or pertaining to the dwarf male plants of the *Œdogoniaceæ*.

Micraster (mik-ras'tėr), *n.* [NL., < Gr. *μικρός*, small, + *ἀστήρ*, star.] A genus of fossil sea-urchins or *Echinoidea* having a heart-shaped tumid test. It is very abundant in the Cretaceous rocks and occurs also in the early Tertiary.

micrencephalic (mik″ren-se-fal'ik), *a.* Same as *micrencephalous*.

micrencephalism (mik-ren-sef'ą-lizm), *n.* [*micrencephal(y)* + *-ism.*] Same as ★*micrencephaly*.

micrencephalus (mik-ren-sef'ą-lus), *n.*; pl. *micrencephali* (-lī). [NL.] 1. A micrencephalous individual.—2. Same as ★*micrencephaly*.

The conditions known as microcephalus and *micrencephalus*. *Buck*, Med. Handbook, I. 140.

micrencephaly (mik-ren-sef'ą-li), *n.* [Gr. *μικρός*, small, + *ἐγκέφαλος*, brain, + *-y*[3].] In *anthrop.*, the condition or character of being micrencephalous, or small-brained.

micrergate (mī-krėr'gāt), *n.* [Gr. *μικρός*, small, + *ἐργάτης*, worker.] A worker ant of smaller stature than the typical worker form of the species. The workers of the first brood of offspring reared by a young ant-queen are normal micrergates. *Wheeler*.

micresthete (mik'res-thēt), *n.* [Gr. *μικρός*, small, + *αἰσθητός*, < *αἰσθάνεσθαι*, perceive.] In chitons, one of the numerous fine branches given off by a megalesthete. Each branch ends in a swelling which occupies a micropore and carries a small chitinous cap.

micrify (mik'ri-fī), *v. t.* [Gr. *μικρός*, small. See *magnify*.] To make small; minify.

This power which he [the poet] exerts . . . to magnify the small, to *micrify* the great.
Emerson, Nature, p. 67. *N. E. D.*

Micristodus (mī-kris'tō-dus), *n.* [NL., < Gr. *μικρός*, small, + *ἱστός*, an upright projection, + *ὀδούς*, tooth.] A genus of very large sharks of the family *Rhinodontidæ*, found in the Gulf of California.

micristological (mik″ris-tō-loj'i-kal), *a.* Relating or pertaining to micristology.

micro-aërophile (mī-krō-ā'ę-rō-fīl), *a.* and *n.* [Gr. *μικρός*, small, + E. *aërophile.*] **I.** *a.* Same as ★*micro-aërophilous*.

II. *n.* A micro-aërophilous organism.

micro-aërophilic (mī″krō-ā-ę-rō-fil'ik), *a.* Same as ★*micro-aërophilous*.

Clostridium Pasteurianum, which Winogradsky found to possess nitrogen-assimilating properties, is an anaerobe, but it also grows in symbiosis with aerobic forms; it is, therefore, *microaerophilic*. *Science*, March 6, 1903, p. 371.

micro-aërophilous (mī″krō-ā-ę-rof'i-lus), *a.* [*micro-aërophile* + *-ous.*] Requiring but little free oxygen: a term used to designate bacteria and other organisms. See *anaërobic*.

micro-ampere (mī″krō-am-pār'), *n.* A unit employed in the measurement of very small electric currents; one millionth of an ampere or 1×10^{-7} c. g. s. units of current.

micro-analysis (mī″krō-ą-nal'i-sis), *n.* Analysis by means of the microscope.

micro-anemometry (mī″krō-an-e-mom'e-tri), *n.* [Gr. *μικρός*, small, + E. *anemometry.*] The determination of wind-velocity on a very small scale, specifically by Barus's filar micrometer.

microbacillar (mī-krō-bas'i-lär), *a.* [Gr. *μικρός*, small, + E. *bacillus* + *-ar*[3].] Same as *bacterial*. *Buck*, Med. Handbook, VII. 88.

microbacillary (mī-krō-bas'i-lą-ri), *a.* Same as *bacterial*.

microbalance (mī'krō-bal-ąns), *n.* [Gr. *μικρός*, small, + E. *balance.*] A delicate balance for weighing 1 milligram or less. It consists of a capillary glass tube 30 centimeters long and 0.5 millimeter thick, bent at a right angle so as to make one part a pointer 9 centimeters long. The tube is attached, by waterglass, to a quartz fiber 5 centimeters long and fastened to a pronged support. The instrument is thus built on the principle of the torsion balance. A hooked platinum wire melted into the end of the glass beam carries a platinum basket of 20 milligrams weight which holds the objects to be weighed. The deflection of the pointer is read from a scale, and platinum-wire riders serve as weights. The mechanism was devised by Nernst.

microbarograph (mī-krō-bar'ō-gràf), *n.* [*micro-* + *barograph.*] A barograph designed to record minute and rapid variations in the pressure of the atmosphere. *Nature*, Aug. 18, 1904, p. 368.

microbicidal (mī-krō-bi-sī'dal), *a.* [*microbicide* + *-al*[1].] Destructive to microbes.

microbioscope (mī-krō-bī'ō-skōp), *n.* [Gr. *μικρός*, small, + E. *bioscope.*] An apparatus for showing or recording the movements of micro-organisms. *Nature*, Nov. 5, 1903, p. 18.

Microbiotheriidæ (mī″krō-bī-ō-thē-rī'i-dē), *n. pl.* [*Microbiotherium*, the type genus, + *-idæ.*] A family of small marsupial mammals, containing extinct species from the Miocene of Patagonia. *Ameghino*, 1887.

microbism (mī'krō-bizm), *n.* A condition due to the presence of microbes.

The various explanations of "return" cases were considered, including, besides the ordinary ones of failure of disinfection or a true "return" of infection, the possibility of a relapse of the original disease, of latent *microbism*, or of missed cases. *Lancet*, June 18, 1904, p. 1724.

microblast (mī'krō-blàst), *n.* [Gr. *μικρός*, small, + *βλαστός*, germ.] An unusually small nucleated red blood-corpuscle. See cut under ★*blood*, 1.

microbrachia (mī-krō-brā'ki-ą), *n.* [NL., < Gr. *μικρός*, small, + *βραχίων* (L. *brachium*), arm.] A condition in which the arms are abnormally small.

microbrachius (mī-krō-brā'ki-us), *n.*; pl. *microbrachii* (-ī). [NL.] One who has abnormally small, but not deformed, arms.

microbranchiate (mī-krō-brang'ki-āt), *a.* [Gr. *μικρός*, small, + *βράγχιον*, gill, + *-ate*[1].] Relating or pertaining to the small gill. Contrasted with ★*macrobranchiate*.

In the body of the animal [Nautilus] two metameres are recognized—the *microbranchiate* segment, containing the smaller gill, the outer osphradium, pericardial gland, kidney, and kidney opening, with the genuerative opening on the right side and the opening of the pear-shaped body on the left; and the macrobranchiate segment, containing the greater gill and the inner osphradium, pericardial gland, kidney, and renal opening.
Annals and Mag. Nat. Hist., Jan., 1903, p. 135.

microcalory (mī-krō-kal'ō-ri), *n.* [Gr. *μικρός*, small, + E. *calory.*] One thousandth of a small calory.

microcaltrop (mī-krō-kal'trop), *n.* [Gr. *μικρός*, small, + E. *caltrop.*] Same as *microcaltrops*.

Microcampyli (mī-krō-kam'pi-lī), *n. pl.* [NL., < Gr. *μικρός*, small, + *καμπύλος*, curved.] In Hyatt's classification of the cephalopods, a suborder of the *Ammonoidea*. It is the primitive suborder of forms which possess a ventral siphuncle and are characterized by undivided ventral lobes and very slightly developed saddles.

microcanonical (mī″krō-ka-non'i-kal), *a.* [Gr. *μικρός*, small, + E. *canonical.*] In *statistical mech.*, of or pertaining to a distribution in phase such that all the systems of an ensemble have the same energy. *J. W. Gibbs*, Statistical Mech., p. 114.—**Microcanonical distribution, ensemble.** See ★*distribution*, ★*ensemble*.

microcanonically (mī″krō-ka-non'i-kal-i), *adv.* In a microcanonical manner.

microcardia (mī-krō-kär'di-ą), *n.* [NL., < Gr. *μικρός*, small, + *καρδία*, heart.] A condition in which the heart is abnormally small.

microcardius (mī-krō-kär'di-us), *n.*; pl. *microcardii* (-ī). [NL.] A monster having a very small and imperfect heart.

microcarpous (mī-krō-kär'pus), *a.* [Gr. *μικρός*, small, + *καρπός*, fruit.] In *bot.*: (*a*) Having small fruit. (*b*) Of mosses, having small urns.

microcentrosome (mī-krō-sen'trō-sōm), *n.* [Gr. *μικρός*, small, + *κέντρον*, center, + *σῶμα*, body.] In *cytol.*, the central granule of the astrosphere in the dividing-cell; the centriole of Boveri. *Ziegler*, 1898.

microcentrum (mī-krō-sen'trum), *n.*; pl. *microcentra* (-trą). [NL., < Gr. *μικρός*, small, + *κέντρον*, center.] In *cytol.*, the centrosome or cluster of centrosomes united by a primary centrodesmus in the astral system of certain cells. *Heidenhain*, 1894.

microcephal (mī-krō-sef'al), *n.* [*microcephal(ous).*] A microcephalous individual. *Jour. Amer. Folk-lore*, April–June, 1902, p. 121.

microceratous (mī-krō-ser'ą-tus), *a.* [Gr. *μικρός*, small, + *κέρας* (*κερατ-*), horn, + *-ous.*] In *entom.*, having small antennæ.

Microchæta, *n.* 2. [*l. c.*; pl. *microchætæ* (-tē).] One of certain small bristles which occur on the body of a dipterous insect and are used in classification. See ★*chætotaxy*.

The supra-alars are unusual; the cephalic one is small, often so small as to be little or not at all distinguishable from the *microchaetae*.
Kansas Univ. Quarterly, July, 1900, p. 224.

microchemic (mī-krō-kem'ik), *a.* Same as *microchemical*.

microchiria (mī-krō-kī'ri-ą), *n.* [NL., < Gr. *μικρός*, small, + *χείρ*, hand.] A condition in which the hands are abnormally small. Also *microcheiria*.

Microchœridæ (mī-krō-kē'ri-dē), *n. pl.* [*Microchœrus*, the type genus (Gr. *μικρός*, small, + *χοῖρος*, hog), + *-idæ.*] A family of small lemur-like animals, comprising extinct species of small size whose remains occur in Eocene strata. *Lydekker*, 1887.

microclase (mī'krō-klās), *n.* [Gr. *μικρός*, small, + *κλάσις*, fracture.] A name given by Wiik to the feldspar usually called *anorthoclase*.

microcnemia (mī-krok-nē'mi-ą), *n.* [Gr. *μικρός*, small, + *κνήμη*, tibia.] The condition of having the leg short below the knee. See ★*brachycnemic*.

microcnemic (mī-krok-nē'mik), *a.* Same as ★*brachycnemic*.

micrococcal (mī-krō-kok'al), *a.* [*micrococc(us)* + *-al*[1].] Pertaining to, or of the nature of, a micrococcus.

Micrococcus lanceolatus. See ★*diplococcus pneumoniæ* (with cut).—**Micrococcus melitensis**, the pathogenic micro-organism of Malta fever.—**Micrococcus neoformans**, an alleged pathogenic micro-organism of cancer: its existence is doubtful.

Microcodon (mī-krō-kō'don), *n.* [Gr. *μικρός*, small, + *κώδων*, bell.] The typical genus of the family *Microcodonidæ*. *Ehrenberg*, 1830.

Microcodonidæ (mī″krō-kō-don'i-dē), *n. pl.* [NL., < *Microcodon* + *-idæ.*] A family of illoricate rotifers, of the order *Ploima*, containing the genera *Microcodon* and *Microcodides*.

Microcotyle (mī-krō-kot'i-lē), *n.* [NL. (Van Beneden and Hesse, 1863), < Gr. *μικρός*, small, + *κοτύλη*, a cup, socket.] The typical genus of the family *Microcotylidæ*.

Microcotylidæ (mī″krō-kō-til'i-dē), *n. pl.* [NL., < *Microcotyle* + *-idæ.*] A family of trematodes, of the order *Heterocotylea*, having two buccal and many small posterior suckers, borne on a variously shaped marginal cotylophore. It contains the genera *Microcotyle*, *Gastrocotyle*, and *Axine*.

microcranous (mī-krō-krā'nus), *a.* [Gr. *μικρός*, small, + *κρανίον*, cranium.] In *craniom.*, having a skull of small volume, from 1,540 to 1,630 cubic centimeters in males, and from 1,420 to 1,500 cubic centimeters in females.

microcryptocrystalline (mī″krō-krip-tō-kris'ta-lin), *a.* [Gr. *μικρός*, small, + E. *cryptocrystalline.*] In *petrog.*, microscopically cryptocrystalline, that is, composed of crystals so minute that their form cannot be seen with a microscope, their presence being recognized by the phenomenon of aggregate polarization.

The closest approach to typical andesitic microstructure occurs in the dike cutting shales in the ridge south of Winter Creek. . . . The transition from a groundmass of brown *microcryptocrystalline* matrix with distinct lath-shaped feldspar microlites and magnetite grains to one that is gray in thin section with larger feldspar laths and a slightly micropoikilitic structure can be observed in one rock section. *U. S. Geol. Surv.*, Monographs, XXXII. 64.

microcrystal (mī-krō-kris'tal), *n.* [*micro-* + *crystal.*] A microscopic crystal.

microcrystallography (mī-krō-kris-ta-log'ra-fi), *n.* [*micro-* + *crystallography.*] Microscopic crystallography.

microcytase (mī-krō-sī'tās), *n.* [Gr. *μικρός*, small, + E. *cytase.*] A cytase (complement) in the sense of Metchnikoff, derived from the polymorphonuclear leucocytes.

microdactylism (mī-krō-dak'ti-lizm), *n.* [Gr. *μικρός*, small, + *δάκτυλος*, finger or toe, + *-ism.*] A condition in which the fingers and toes are abnormally short. *Buck*, Med. Handbook, IV. 498.

microdactyly (mī-krō-dak'ti-li), *n.* Same as ★*microdactylism*.

microdentous (mī-krō-den'tus), *a.* [Gr. *μικρός*, small, + L. *dens* (*dent-*), tooth, + *-ous.*] Having abnormally small teeth.

Microdesmus (mī-krō-des'mus), *n.* [NL., < Gr. *μικρός*, small, + *δεσμός*, band.] A genus of small fishes of the family *Cerdalidæ*, found off the Pacific coast of tropical America.

microdiactine (mī″krō-dī-ak'tin), *n.* [Gr. *μικρός*, small, + *δι-*, twice, + *ἀκτίς* (*ἀκτιν-*), ray.] A small diactine sponge-spicule.

microdiæne (mī-krō-dī'ēn), *n.* [Gr. *μικρός*, small, + *δι-*, two-, + *-aiva* as in *τρίαινα*, trident.] In the nomenclature of the sponge-spicules, a triod of minute size having two arms of like curvature.

microdichotriæne (mī-krō-dī-kō-trī′ēn), *n.* [Gr. *μικρός*, small, + *δίχα*, in two, + *τρίαινα*, trident.] A small or reduced dichotriæne.

Spicules calthrops-like microtriænes and spined microxeas; *microdichotriænes* absent.
Proc. Zool. Soc. London, 1902, II. 218.

Microdiscus (mī-krō-dis′kus), *n.* [Gr. *μικρός*, small, + *δίσκος*, disk.] A primitive Cambrian genus of trilobites of the family *Agnostidæ*, with slightly segmented cephalon and pygidium. See *Agnostus*.

microdont, *a.* 2. In *craniom.*, having a dental index less than 42.

microdontic (mī-krō-don′tik), *a.* [*microdont* + *-ic.*] Same as ★*microdont*, 2.

microdontism (mī-krō-don′tizm), *n.* [*microdont* + *-ism.*] The character or state of being microdont; microdontism.

microdontous (mī-krō-don′tus), *a.* [*microdont* + *-ous.*] Same as *microdont*.

microdyne (mī′krō-dīn), *n.* [Gr. *μικρός*, small (see *micron*), + E. *dyne.*] A unit of force equal to one millionth of a dyne.

micro-ergate (mī-krō-ėr′gāt), *n.* See ★*microergate*.

microfauna (mī-krō-fâ′nä), *n.*; pl. *microfaunæ* (-nē). [NL., < Gr. *μικρός*, small, + L. *fauna.*] A fauna in which all the animals are of minute or diminutive size; a congeries of microscopic animals, or sometimes a depauperated fauna. *Geog. Jour.* (R. G. S.), X. 323.

microflora (mī-krō-flō′rä), *n.*; pl. *microfloræ* (-rē). [Gr. *μικρός*, small, + L. *flora.* See *flora.*] A flora in which all the plants are of minute size; a congeries of microscopic plants: opposed to ★*macroflora*. *Smithsonian Rep.*, 1904, p. 351.

microform (mī′krō-fôrm), *n.* [Gr. *μικρός*, small, + E. *form.*] A microscopic organism, or one that is too small to be studied without a microscope.

microfungus (mī-krō-fung′gus), *n.*; pl. *microfungi* (-fun′jī). [NL., < Gr. *μικρός*, small, + L. *fungus*, fungus.] A minute fungus which must be magnified in order that its gross morphology may be discerned: distinguished from mushrooms and other large forms.

microgamete (mī-krō-gam′ēt), *n.* [Gr. *μικρός*, small, + E. *gamete.*] 1. The smaller of the two conjugating cells or gametes of a colonial rhizopod. See ★*macrogamete*.—2. A male germ-cell; a spermatozoön. *Encyc. Brit.*, XXXII. 209.

Coccidium differs further from Monocystis in that the conjugating gametes are sexually differentiated, the small, active one, or *microgamete*, functions as the male cell, and the larger quiescent one, or macrogamete, as the female or egg cell, while in the gregarine, on the other hand, the conjugating gametes are of equal size.
Pop. Sci. Mo., June, 1901, p. 192.

microgametocyte (mī″krō-gam′e-tō-sīt), *n.* [Gr. *μικρός*, small, + E. *gametocyte.*] In sporozoans, the mother-cell of a microgamete or male element: contrasted with ★*macrogametocyte*.

Another interpretation would regard this as the male element (mother-*microgametocyte*), in which the falciform bodies represent the *microgametocytes* and from the latter the microgametes may arise somewhat as described by Siedlecki for Adelea ovata, i. e. after the *microgametocyte* has reached the macrogamete.
Jour. Exper. Med., March 17, 1902, p. 310.

microgametophyte (mī-krō-gam′e-tō-fīt), *n.* [Gr. *μικρός*, small, + E. *gametophyte.*] A male gametophyte when the sexes are dicœciously separated.

microgametophytic (mī″krō-gam-e-tō-fit′ik), *a.* [Gr. *μικρός*, small, + E. *gametophyt(e)* + *-ic.*] Of the nature of or relating to a microgametophyte.

The question here arises if we are to regard the rich prothallial endowment of the Podocarpineæ as the retention of a feature possessed by the ancestral Coniferales or as a recent cenogenetic adaptation, which has arisen at a later stage of evolution. This question can only be answered by a consideration of the *microgametophytic* conditions found in the Gymnosperms in general, particularly the more ancient of those still living.
Amer. Nat., June, 1907, p. 361.

microgauss (mī′krō-gous), *n.* In *elect.*, one millionth part of a gauss or of a c. g. s. unit: a practical unit of magnetic induction.

microgilbert (mī-krō-gil′bėrt), *n.* In *elect.*, one millionth part of a gilbert or of a c. g. s. unit: a practical unit of magnetomotive force.

micrognathia (mī-krog-nā′thi-ä), *n.* [NL., < Gr. *μικρός*, small, + *γνάθος*, jaw.] In *anthrop.*, the condition of having small jaws.

micrognathic (mī-krog-nath′ik), *a.* Same as ★*micrognathous*.

micrognathism (mī-krog′na-thizm), *n.* Same as ★*micrognathia*.

micrognathous (mī-krog′na-thus), *a.* [Gr. *μικρός*, small, + *γνάθος*, jaw, + *-ous.*] In *anthrop.*, having small jaws.

Microgobius (mī-krō-gō′bi-us), *n.* [NL., < Gr. *μικρός*, small, + NL. *Gobius.*] A genus of gobioid fishes found on the Atlantic coast of the United States.

microgram, *n.* 2. A photograph or a drawing of a microscopic object.

microgranitoid (mī-krō-gran′i-toid), *a.* [*microgranit(e)* + *-oid.*] Resembling microgranite.

micrograph, *n.* 2. An instrument for photographing microscopic objects.—3. Same as ★*microgram*, 2.

The authors [of "Alloys of Copper and Cuprous Oxide"] studied by metallographical methods the various alloys of copper and cuprous oxide and show that area measurements of enlarged *micrographs* of pure coppers containing less oxygen than the eutectic give good valuations of the oxygen contained.
Elect. World and Engin., March 12, 1904, p. 532.

micrographical (mī-krō-graf′i-kal), *a.* Same as *micrographic*.

micrography, *n.* 2. The art or process of photographing or depicting microscopic objects; photomicrography.

microgyne (mī′krō-jīn), *n.* [Gr. *μικρός*, small, + *γυνή*, a female.] A female or queen ant of smaller stature than the typical female form of the species. *Wasmann.*

microgyria (mī-krō-jir′i-ä), *n.* [NL., < Gr. *μικρός*, small, + *γῦρος*, a turning (see *gyrus*).] A condition in which the cerebral convolutions are abnormally small. *Jour. Med. Research*, March, 1907, p. 104.

microhemozoite, microhæmozoite (mī-krō-hem-ō-zō′īt), *n.* [Gr. *μικρός*, small, + *αἷμα*, blood, + *ζῷον*, animal, + *-ite*2.] The smaller form of schizont in the development of the hemogregarine *Drepanidium serpentium*. Compare ★*macrohemozoite*. *Lutz.*

microhenry (mī-krō-hen′ri), *n.*; pl. *microhenries* (-riz). [Gr. *μικρός*, small, + E. *henry.*] In *elect.*, one millionth part of a henry or one thousand c. g. s. units: a practical unit of inductance.

microhistological (mī″krō-his-tō-loj′i-kal), *a.* [*microhistolog(y)* + *-ic.*] Of or pertaining to microhistology.

microhistology (mī″krō-his-tol′ō-ji), *n.* [Gr. *μικρός*, small, + E. *histology.*] Microscopic histology; micristology.

microjoule (mī′krō-joul), *n.* [Gr. *μικρός*, small, + E. *joule.*] A practical unit of work equal to ten ergs.

microkinetic (mī″krō-ki-net′ik), *a.* [Gr. *μικρός*, small, + E. *kinetic.*] Pertaining to or consisting of minute, continued, and rapid motions or movements, such as those of tremor, titillation, formication, etc. [Rare.]

The aimless and archaic movements of infancy . . . in the form of isolated automatic tweaks or twinges, and perhaps even the still more *microkinetic* gleanings of fibrillary formications, are . . . by slow processes of combined analysis and synthesis . . . made over into habits and conduct that fit the world of present environment.
G. S. Hall, Adolescence, I. 163.

microlecithal (mī-krō-les′i-thal), *a.* [Gr. *μικρός*, small, + *λέκιθος*, yolk of an egg, + *-al*1.] In *embryol.*, having very little food-yolk: applied to certain ova, such as those of sponges, marine worms, echinoderms, etc.: opposed to ★*macrolecithal* or ★*bradylecithal*.

microlepidotous (mī″krō-lep-i-dō′tus), *a.* [Gr. *μικρός*, small, + *λεπιδωτός*, scaled.] Having minute scales.

Microlepidotus (mī″krō-lep-i-dō′tus), *n.* [NL., < Gr. *μικρός*, small, + *λεπιδωτός*, scaled, < *λεπίς* (*λεπιδ-*), scale.] A genus of fishes of the family *Hæmulidæ*, found in the Gulf of California.

Microlestes (mī-krō-les′tēz), *n.* [NL., < Gr. *μικρός*, small, + *λῃστής*, robber.] A genus of small marsupial mammals from the Triassic rocks of England and Germany.

microline (mī′krō-līn), *n.* [*micro-* + *line*2, *n.*] A proposed unit of measurement of microscopic objects. See the extract.

The size of microscopic objects could . . . be recorded simply, by saying they were one, two, three, or more *Microlines* in diameter.
Rep. Brit. Ass'n Advancement of Sci., 1857, p. 115.

micrologic (mī-krō-loj′ik), *a.* [*micrology(y)* + *-ic.*] 1. Marked by minute investigation; micrological.—2. Of or pertaining to micrology; microscopical.

microlophic (mī-krō-lof′ik), *a.* [Gr. *μικρός*, small, + *λόφος*, crest, + *-ic.*] In *craniom.*, having a low incisor crest in the anterior nasal aperture and an indistinct alveolar line. *Harrison Allen*, Jour. Acad. Nat. Sci., Phila., N. S., X. 419.

microm (mī′krom), *n.* [An alteration of *micron.*] Same as *micron*: proposed as a substitute for *micron* by Lord Kelvin, to avoid confusion with the unit of time, the *michron*, also suggested by him.

micromagnetometer (mī-krō-mag-ne-tom′e-tėr), *n.* [Gr. *μικρός*, small, + E. *magnetometer.*] An instrument devised by Pender and Cremieu for the determination of very weak magnetic fields. It consists essentially of a horizontal bar carrying a vertical bar-magnet at one end and suspended by a torsion-fiber. A field of 0.00001 c. g. s. unit gives a large deflection. *Elect. World and Engin.*, April 18, 1903, p. 666.

micromania (mī-krō-mā′ni-ä), *n.* [Gr. *μικρός*, small, + *μανία*, madness.] 1. A delusion that objects, especially the parts of one's own body, are growing smaller.—2. An insane self-depreciation.

micromaniac (mī-krō-mā′ni-ak), *a.* and *n.* [*micromani(a)* + *-ac.*] I. *a.* Pertaining to or suffering from micromania.

II. *n.* 1. One who is afflicted with micromania.—2. One who has a mania for littleness, weakness, or inefficiency. [Rare.]

Alas, the Unity of Italy is undermined by the *micromaniacs* who aim at shutting Italy in her shell, at isolating her from the great nations, forbidding her to share the active initiatives on whose development her glorious destinies depend.
Crispi (trans.), in The Nation, May 11, 1899, p. 350.

micromanometer (mī″krō-mā-nom′e-tėr), *n.* [Gr. *μικρός*, small, + E. *manometer.*] A very small, delicate manometer for measuring minute differences of pressure.

micromazia (mī-krō-mā′zi-ä), *n.* [NL., < Gr. *μικρός*, small, + *μαζός*, breast.] A condition in which the breasts are abnormally small.

micromelia (mī-krō-mē′li-ä), *n.* [NL., < Gr. *μικρός*, small, + *μέλος*, limb.] A condition in which the limbs are abnormally small.

micromelic (mī-krō-mel′ik), *a.* [*micromel(ia)* + *-ic.*] Relating to or characterized by micromelia; having small extremities; dwarfish.

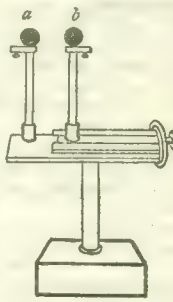
micromembrane (mī-krō-mem′brān), *n.* [Gr. *μικρός*, small, + E. *membrane.*] A very thin layer of finely porous material, such as is used in experiments on osmose.

micromere, *n.* 2. One of the small blastomeres, or cells, which result from the early cleavage of the egg: opposed to ★*macromere* or ★*megamere*.

The eggs undergo a total, but unequal segmentation, with small cells (*micromeres*) at one pole, and larger, yolk-laden cells (macromeres) at the other.
J. S. Kingsley, Vertebrate Zool., p. 222.

micromerism (mī-krom′e-rizm), *n.* [*micromere* + *-ism.*] A collective term for the theories that assume that living protoplasm is made up of a great number of excessively minute units, or biomolecules, each endowed with the peculiar properties of living substance, namely, assimilation, growth, and reproduction.

These [speculative] theories have been ably brought together and discussed by Delage, who has included them all under the term "*micromerism*," since they agree in the assumption that the living substance contains, or consists of, a vast number of excessively minute particles—*i. e.*, aggregates or combinations of molecules, which give to the protoplasm its specific properties and tendencies ("idioplasm" of Nägeli). *Encyc. Brit.*, XXXII. 41.



micromerozoite (mī″krō-mer-ō-zō′īt), *n.* [Gr. *μικρός*, small, + *μέρος*, part, + *ζῷον*, animal, + *-ite*2.] In sporozoans, a microsporozoite: contrasted with ★*macromerozoite*.

micromesentery (mī-krō-mez′en-ter-i), *n.* [Gr. *μικρός*, small, + E. *mesentery.*] In some anthozoans, a small, incomplete mesentery devoid of gonads and filaments. Compare ★*macromesentery*.

micrometallurgy (mī-krō-met′al-ėr-ji), *n.* [Gr. *μικρός*, small, + E. *metallurgy.*] The study of metals, particularly as to structure and crystalline form, under the microscope.

micrometer, *n.*—**Dioptric micrometer**, a form of double-image micrometer having the divided lens in the eye-tube.—**Electric micrometer**, a micrometer for the precise measurement of lengths, in which contacts are indicated electrically, thus permitting an accuracy of determination to within less than one micron.—**Micrometer caliper**. See ★*caliper*.—**Micrometer eyepiece**. See *ocular* ★*micrometer*.—**Ocular micrometer**, an eyepiece

micrometer which consists usually of a cross-hair or set of cross-hairs mounted upon a slide in the eyepiece of a microscope or other optical instrument, and moved through the field by means of a micrometer-screw.—**Repsold's transiting** or **registering micrometer**, a micrometer fitted to a transit-instrument and so arranged that with it the observer can follow a star with the wire, keeping it continually bisected. The passage of the wire across certain definite points of the field is automatically registered on the chronograph by electricity, and the resulting observation is nearly, if not quite, free from personal equation.—**Ring-micrometer**, an opaque, accurately circular ring, supported by arms, or by being cemented upon a glass plate, in the focal plane of the object-glass of a telescope. It is used to determine the difference of declination and right-ascension between two or more bodies by observations of their transits across the ring. It has the advantage of simplicity and does not require an equatorial mounting, but it is less accurate than the filar micrometer.—**Spark-micrometer**, an instrument devised by Riess for the determination of large differences of electrical potential by means of the length of the spark in air between adjustable knobs of metal. The spark passes between the balls *a* and *b*, the distance between which is varied by means of the micrometer-screw *m*.—**Square-bar micrometer**, an instrument similar to the ring-micrometer, except that the ring is replaced by a square composed of four parallel-sided strips, crossing at right angles and so placed that one of its diagonals is exactly east and west, thus requiring an equatorial mounting of the telescope. It has an advantage over the ring-micrometer in the easier reduction of observations and in the accuracy of results.

Spark-micrometer.

micrometer-cock (mī-krom′e-tėr-kok), *n.* A valve capable of delicate adjustment by means of a micrometer-screw.

micro-microfarad (mī″krō-mī-krō-far′ad), *n.* In *elect.*, a practical unit for the measurement of very small capacities; one millionth of a microfarad, or 1×10^{-21} of a c. g. s. unit of the electromagnetic system.

micromil (mī′krō-mil), *n.* [Gr. *μικρός*, small, + E. *mil*(*lion*).] A unit of length equal to one millionth of a mil; 1×10^{-9} inches, or about 2.540×10^{-8} millimeters.

micromorph (mī′krō-môrf), *n.* [Gr. *μικρός*, small, + *μορφή*, form.] A specimen of a size smaller than the normal.

Micromorphs . . . occur . . . in many parts of the Inferior Oolite.
Hudleston, Gasterop. (Palæont. Soc.), p. 112.

micromotoscope (mī-krō-mō′tō-skōp), *n.* [Gr. *μικρός*, small, + E. *motoscope*.] In *photog.*, an instrument for photographing microscopic organisms in motion.

micromyelia (mī″krō-mī-ē′li-ą), *n.* [NL., < Gr. *μικρός*, small, + *μυελός*, marrow.] A condition presented by a small or imperfectly developed spinal cord.

microne (mī′krōn), *n.* Same as *micron*.

micronephric (mī-krō-nef′rik), *a.* [Gr. *μικρός*, small, + *νεφρός*, kidney, + *-ic*.] Pertaining to or characteristic of a micronephridium: as, the *micronephric* type of nephridia in annelids. Compare ★*meganephric*.

micronephridium (mī″krō-nef-rid′i-um), *n.*; pl. *micronephridia* (-ą). [NL., < Gr. *μικρός*, small, + NL. *nephridium*.] A diplonephridium. Compare ★*mesonephridium*.

micronuclear (mī-krō-nū′klē-ąr), *a.* [*micronucleus*.] Pertaining to, or of the nature of, a micronucleus.

micro-organismal (mī″krō-ôr-gą-niz′mąl), *a.* [*micro-organism* + *-al*[1].] Of or pertaining to micro-organisms, such as bacteria and *Protozoa*.

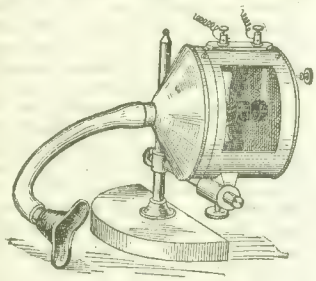
The *microorganismal* differences between fresh and stale sewage are also dwelt upon.
Science, June 26, 1903, p. 1006.

Microperca (mī-krō-pėr′ką), *n.* [NL., < Gr. *μικρός*, small, + *πέρκη*, perch.] A genus of percoid fishes confined to the fresh waters of the eastern United States.

microperthite (mī-krō-pėr′thīt), *n.* [Gr. *μικρός*, small, + E. *perthite*.] A perthite in which the interlaminated structure of the orthoclase (or microcline) and albite is only distinctly discernible by aid of the microscope in a thin section. See ★*cryptoperthite*.

micropetalous (mī-krō-pet′ą-lus), *a.* [Gr. *μικρός*, small, + *πέταλος*, a petal.] Having minute petals.

microphag (mī′krō-fag), *n.* Same as ★*microphage*.



microphage (mī′krō-fāj), *n.* [Gr. *μικρός*, small, + *-φαγος*, < *φαγεῖν*, eat.] A small phagocyte, or wandering leucocyte, which engulfs or devours other cells, bacteria, etc.: opposed to ★*macrophage*.

Metchnikoff has attempted to show that the chief function of the polynuclears or "*microphages*" is to take up bacteria and inert particles, whilst for animal cells they show negative chemiotaxis, remaining inactive; the macrophages doing all the work of phagocytosis when foreign animal cells or fragments of cells are introduced into the peritoneal cavity.
Jour. Med. Research, July, 1906, p. 9.

microphagocyte (mī-krō-fag′ō-sīt), *n.* [Gr. *μικρός*, small, + E. *phagocyte*.] Same as ★*microphage*.

microphitic (mī-krō-fit′ik), *a.* [Gr. *μικρός*, small, + E. *ophite* + *-ic*.] In *petrog.*, microscopically ophitic; noting a texture of igneous rocks, which have crystals of lime-soda feldspar inclosed in crystals of augite, as some diabases (ophites) or basalts.

microphone, *n.*—**Pencil-microphone**, a microphone the contacts of which are formed between rods or pencils of carbon.—**Rousselot microphone**, in *exper. psychol.* and *phonetics*, a microphone, devised by the Abbé Rousselot, which consists essentially of a metallic mouthpiece connected by rubber tubing to a cylindrical metallic box in which three carbon tips are suspended. The adjustment is effected by means of a screw set in the opposite end of the box. The screw is connected with a metallic spring to which one of the carbon tips is attached, and thus regulates the distance between the tips. The wires by which the carbon tips are included in an electric circuit enter through the top of the box.

Rousselot Microphone.

microphonic, *a.* 2. Of an intensity so small as to be audible only by the aid of the microphone.

At a time when Vesuvius became active, Rocca di Papa was agitated by microseisms, and the shocks were found to be accompanied by the very same *microphonic* noises as before. *G. H. Darwin*, The Tides, p. 117.

microphonograph (mī-krō-fō′nō-grāf), *n.* [Gr. *μικρός*, small, + E. *phonograph*.] 1. A phonograph to the membrane of which a microphone is attached, thus intensifying the sounds.—2. See ★*telegraphone*.

The telephonograph, or, as it is sometimes called, the "telegraphone," the "*microphonograph*."
W. J. Hammer, in Smithsonian Rep., 1901, p. 307.

microphony, *n.* 2. In *physics*, the art of enhancing or magnifying the intensity of sound; the use of the microphone.

microphotogram (mī-krō-fō′tō-gram), *n.* Same as *microphotograph*.

microphotographic (mī-krō-fō-tō-graf′ik), *a.* [*microphotograph*(*y*) + *-ic*.] Pertaining to, or of the nature of, microphotography.

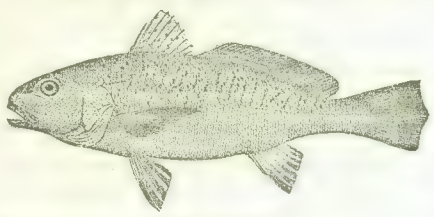
microphthalmous (mī-krof-thal′mus), *a.* Same as *microphthalmic*.

microphysical (mī-krō-fiz′i-kąl), *a.* [Gr. *μικρός*, small, + E. *physical*.] Of or pertaining to the physics of the ultimate particles of matter: opposed to ★*macrophysical*.

microphysics (mī-krō-fiz′iks), *n.* [Gr. *μικρός*, small, + E. *physics*.] The physics of minute masses or of the ultimate particles and structure of matter: opposed to ★*macrophysics*, which deals with bodies taken as a whole.

micropia (mī-krō′pi-ą), *n.* [NL., < Gr. *μικρός*, small, + *ὤψ* (*ὠπ-*), eye.] Defect of vision in which objects appear of smaller size than they really are.

microplankton (mī-krō-plangk′ton), *n.* [Gr. *μικρός*, small, + NL. *plankton*.] The microscopic animals and plants that float or swim in the water.



The *microplankton* of the Sicilian coast has not been included. *Jour. Roy. Micros. Soc.*, Oct., 1903, p. 638.

microplasia (mī-krō-plā′si-ą), *n.* [NL., < Gr. *μικρός*, small, + *πλάσις*, formation.] A condition in which the size normal to the species is not attained; dwarfism.

micropodal (mī-krop′ō-dąl), *a.* [Gr. *μικρός*, small, + *ποῦς* (*ποδ-*), foot, + *-al*[1]: see *Micropoda*.] Having small—especially abnormally small—feet; micropodous.

micropodous (mī-krop′ō-dus), *a.* [Gr. *μικρός*, small, + *ποῦς* (*ποδ-*), foot, + *-ous*.] Having small—especially abnormally small—feet; micropodal.

Micropogon (mī-krop′ō-gon), *n.* [NL., < Gr. *μικρός*, small, + *πώγων*, beard.] A genus of sciænoid fishes found in the warmer parts of the Atlantic and Pacific in America.

Micropogon undulatus.
(From Bulletin 47, U. S. Nat. Museum.)

micropoikilitic (mī-krō-poi-ki-lit′ik), *a.* [Gr. *μικρός*, small, + E. *poikilitic*.] In *petrog.*, microscopically poikilitic; noting a texture in igneous rocks produced by the presence in one crystal of many small crystals of other minerals variously oriented.

The microstructure of the groundmass is "*micropoikilitic*," with more minute feldspars maintaining a fluidal arrangement. *U. S. Geol. Surv.*, Monographs, XXXII. 63.

micropolariscope (mī″krō-pō-lar′i-skōp), *n.* [Gr. *μικρός*, small, + E. *polariscope*.] A microscope with a polarizing attachment. The polarizer is placed beneath the stage and the analyzer above the objective or at the eyepiece. It is used in the examination of crystals, tissues, and other objects.

Micropora (mī-krop′ō-rą), *n.* [NL., < Gr. *μικρός*, small, + *πόρος*, pore.] The typical genus of the family *Microporidæ*. *Gray*, 1848.

micropore (mī′krō-pōr), *n.* [Gr. *μικρός*, small, + *πόρος*, pore.] A small pit or pore in the shell of a chitinoid mollusk containing a microscopic sense-organ: opposed to ★*megalopore*.

Microporidæ (mī-krō-por′i-dē), *n. pl.* [NL., < *Micropora* + *-idæ*.] A family of chilostomatous polyzoans, of the order *Gymnolæmata*, having zoœcia in which the front wall is wholly calcareous and the margins elevated. It includes the genera *Micropora*, *Setosella*, *Caleschara*, *Steganoporella*, and *Vincularia*.

microprojection (mī″krō-prō-jek′shon), *n.* [Gr. *μικρός*, small, + E. *projection*.] In *physics*, the art of projecting upon a screen greatly enlarged images of minute objects by means of a lantern with a microscopic attachment. *Jour. Roy. Micros. Soc.*, Oct., 1904, p. 582.

microprosopous (mī″krō-pro-sō′pus), *a.* [Gr. *μικρός*, small, + *πρόσωπον*, face, + *-ous*.] In *craniom.*, said of a skull which has a small face, with a volume of from 470 to 510 cubic centimeters in males, and from 405 to 435 cubic centimeters in females.

microprosopus, *n.* 2. In the Cabala, the 'lesser face'; a cabalistic name which includes all the Sephiroth below Kether (crown) and denotes the workings of the Adam Kadmon in the universe: opposed to *macroprosopon*, the name applied to the Kether Sephira.

micropterism (mī-krop′te-rizm), *n.* [*micropter*(*ous*) + *-ism*.] The character of being micropterous or short-winged or short-finned; specifically, the condition of having the wings reduced in size or vestigial, as in certain dimorphic bugs (*Hemiptera*) and in some insular insects and birds.

micropterygid (mī-krop-ter′i-jid), *n.* and *a.* **I.** *n.* A member of the lepidopterous family *Micropterygidæ*.

II. *a.* Having the characters of, or belonging to, the family *Micropterygidæ*.

Micropterygidæ (mī-krop-te-rij′i-dē), *n. pl.* [NL., < *Micropteryx* (*-pteryg-*) + *-idæ*.] A notable family of lepidopterous insects, forming, with the family *Hepialidæ*, Comstock's suborder *Jugatæ*. They are very small moths which resemble the tineids in appearance and habits. Their larvæ are usually leaf-miners. See ★*Jugatæ*.

Micropteryx (mī-krop′te-riks), *n.* [NL. (Huebner, 1816, as *Micropterix*; Zeller, 1839, as *Micropteryx*), < Gr. *μικρός*, small, + *πτέρυξ* (*πτερυγ-*), wing.] The type genus of the lepidopterous family *Micropterygidæ*. The species are small, possess no mandibles, have a short tongue, moderate labial palpi, and posterior tibiæ thinly hairy above. The genus has few species and is confined to southern and central Europe.

Micropus, *n.* 4. [*l. c.*] A person with abnormally small, but not necessarily deformed, legs.

micropyle, *n.* 2. In *zoöl.*: (*c*) In certain sporozoans, a minute opening in the oöcyst through which the microgamete enters to fertilize the macrogamete.

microrefractometer (mī-krō-rē-frak-tom′e-tėr), *n.* [*micro-* + *refractometer.*] A refractometer specially constructed for the detection of differences in the minute structure of blood corpuscles. *N. E. D.*

microrheometer (mī″krō-rē-om′e-tėr), *n.* [Gr. *μικρός*, small, + E. *rheometer.*] A galvanometer for small currents.

micros. An abbreviation (*a*) of *microscopic, microscopical*; (*b*) of *microscopy.*

Microsauri (mī-krō-sâ′rī), *n. pl.* [NL.] Same as *Microsauria.*

microscelic (mī-krō-sel′ik), *a.* [Gr. *μικρός*, small, + *σκέλος*, leg.] Having short legs.

What is more, in a race like the French, there are two distinct types, each having the same measurement, but the one class is long-legged (macroscelic, in the term of the anthropologists), the other short-legged (*microscelic*). *Smithsonian Rep.*, 1904, p. 528.

microsclerometer (mī″krō-sklē-rom′e-tėr), *n.* [Gr. *μικρός*, small, + *σκληρός*, hard, + *μέτρον*, measure.] An instrument for measuring the hardness of minerals; a delicate form of sclerometer. *U. S. Geol. Surv.*, 1897–98, p. 511.

microscleron (mī-krō-sklē′ron), *n.*; pl. *microsclera* (-rą̈). [NL.] A microsclere.

microscope, *n.*—**Metallographical microscope**, a form of microscope for the investigation of metals and alloys. Light admitted above the objective from the side is reflected down through the objective, which acts as a condenser, to the object which is viewed under this illumination.—**Projection microscope**, a form of magic lantern adapted to the projection of enlarged images of minute objects. The projecting lenses of the lantern are replaced by high-power microscope lenses.—**Reading microscope**, a vernier- or scale-reading microscope: used on instruments of precision.

microscope (mī′krō-skōp), *v. t.*; pret. and pp. *microscoped*, ppr. *microscoping.* To enlarge with or as with a microscope; examine very minutely as with a microscope: as, to *microscope* one's faults.

microscopize (mī-kros′kō-pīz), *v. i.*; pret. and pp. *microscopized*, ppr. *microscopizing.* To use the microscope; work with a microscope.

I may read, draw, or *microscopize* at pleasure, and as to books, I have a carte blanche from the Captain to take as many as I please. *Huxley*, in Life and Let., II. 29.

microsecond (mī-krō-sek′und), *n.* [Gr. *μικρός*, small, + E. *second.*] One millionth of a second: a unit employed in the measurement of exceedingly small intervals of time.

microseismology (mī″krō-sīs-mol′ō-ji), *n.* [*microseism* + *-ology.*] The scientific study of microseisms or small earth-tremors.

microseismometer (mī″krō-sīs-mom′e-tėr), *n.* [Gr. *μικρός*, small, + E. *seismometer.*] An apparatus for detecting slight earth-tremors, and showing their direction, intensity, and duration.

microsiphuncle (mī-krō-sī′fung-kl), *n.* [*micro-* + *siphuncle.*] Same as *microsiphonula.*

microslide (mī′krō-slīd), *n.* A glass slide upon which an object for observation under a microscope is mounted.

microsmatic (mī-kros-mat′ik), *a.* [Gr. *μικρός*, small, + *ὀσμή*, smell, + *-atic.*] Having the organs of smell small or feebly developed: opposed to ★*megosmatic* and ★*macrosmatic.* *Proc. Zool. Soc. London*, 1894, p. 9.

microsmatism (mī-kros′ma-tizm), *n.* [Gr. *μικρός*, small, + *ὀσμή*, smell, + *-t-* + *-ism.*] The fact or condition of having the organs of smell small or feebly developed: contrasted with ★*macrosmatism.*

microsomatia (mī″krō-sō-mā′shią̈), *n.* [NL., < Gr. *μικρός*, small, + *σῶμα*(*τ-*), body.] Same as *microsomia.*

microsomatous (mī-krō-sō′ma-tus), *a.* [Gr. *μικρός*, small, + *σῶμα* (*σωματ-*), body.] Having a small body; being of minute size.

microsome, *n.* 2. One of the minute granules found in the protoplasm of animal and plant cells and by some biologists regarded as the ultimate units of living matter. The microsomes of the nucleus are known as karyomicrosomes, those of the cytoplasm of the cell as cytomicrosomes. See cut under ★*aster*[1], 7.

Microspathodon (mī-krō-spath′ō-don), *n.* [NL., < Gr. *μικρός*, small, + *σπάθη*, sheath, + *ὀδούς* (*ὀδοντ-*), tooth.] A genus of fishes of the family *Pomacentridæ*, found about rocky islands of the American tropics.

microspectral (mī-krō-spek′tral), *a.* [Gr. *μικρός*, small, + NL. *spectrum* + *-al*[1].] Of or pertaining to the spectra of objects in the field of the microscope, or to microspectroscopy. *Science Abstracts*, VI. Sec. A, p. 110.

microspectroscopic (mī-krō-spek-trō-skop′ik), *a.* [*microspectroscop*(*e*) + *-ic.*] Pertaining to, or observed by means of, the microspectroscope.

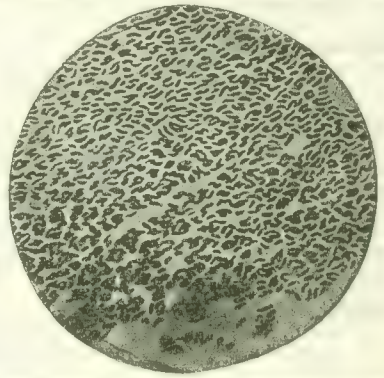
microspectroscopy (mī″krō-spek-tros′kō-pi), *n.* [*microspectroscope* + *-y*[3].] The scientific use of the microspectroscope.

microspermous (mī-krō-spėr′mus), *a.* [See *Microspermæ.*] Having minute seeds; pertaining to or characteristic of the *Microspermæ.*

microsphere (mī′krō-sfēr), *n.* [Gr. *μικρός*, small, + *σφαῖρα*, sphere.] 1. A microscopic spherical organism: applied by Cohn to the micrococci found in vaccine lymph and in small-pox pustules. *N. E. D.*—2. In the calcareous *Foraminifera*, the small primordial chamber of the test: an index of the dimorphism expressed by these bodies, as with like exteriors some have a microsphere and others a large primordial chamber or megasphere.—3. In *cytol.*, the central portion of the astrosphere in the dividing cell. The center of the microsphere is occupied by the centrosome. *Kostanecki and Siedlecki*, 1896.

microspheric (mī-krō-sfer′ik), *a.* [Gr. *μικρός*, small, + *σφαῖρα*, sphere.] Pertaining to or of the nature of a microsphere, in any sense; specifically, having a small central chamber and a large number of small nuclei: as, a *microspheric* individual in some dimorphic foraminifers. Compare ★*megalospheric.*

microspherulitic (mī-krō-sfer-ō-lit′ik), *a.* [*micro-* + *spherulitic.*] In *geol.*, minutely spherulitic in structure.



microsphyxia (mī-krō-sfik′si-ą̈), *n.* [NL., < Gr. *μικρός*, small, + *σφύξις*, pulsation.] A state in which the pulse is very small.

microspined (mī′krō-spīnd), *a.* [Gr. *μικρός*, small, + E. *spined.*] Covered with or bearing minute spines or spinules.

Microspira (mī-krō-spī′rą̈), *n.* [NL. (Schröter, 1886), < Gr. *μικρός* + *σπεῖρα*, spire.] A genus of bacteria, with cells mostly comma-shaped or short spiral, sometimes united in chains, and usually provided with a single polar flagellum, rarely 2 or 3. *M. comma*, the comma bacillus of Koch, is the most important pathogenic species, being generally accepted as the specific cause of Asiatic cholera. *M. Metschnikovi* is associated with fowl-cholera. Other species occur in seawater, sewers, and rivers.

Koch's Comma Bacillus (*Microspira comma*). Highly magnified. (After Lehmann-Neumann.) (From Fischer's "Vorlesungen über Bakterien.")

Asiatic Cholera Bacillus (*Microspira comma*). Magnified 1,000 times.
(From Buck's "Reference Handbook of the Medical Sciences.")

microsplenic (mī-krō-splen′ik), *a.* [*micro-* + *splenic.*] In *pathol.*, not accompanied by enlargement of the spleen. *N. E. D.*

microsporange (mī-krō-spō′ranj), *n.* Same as *microsporangium.*

Microsporidia (mī″krō-spō-rid′i-ą̈), *n. pl.* [NL., < Gr. *μικρός*, small, + *σπόρος*, seed, + dim. *-ιδιον.*] Same as ★*Cryptocystes.* *Nature*, Aug. 27, 1903, p. 408.

microsporozoite (mī″krō-spō-rō-zō′īt), *n.* [Gr. *μικρός*, small, + E. *sporozoite.*] In sporozoans, a small endogenous sporozoite; a micromerozoite. Compare ★*macrosporozoite.*

In 1894, the present writer discovered that in this schizogonic phase (then considered as a separate specific form) there existed cysts with macrosporozoites and others with *microsporozoites*, and he (like Schuberg) propounded the theory of a sexual dimorphism and of a fertilization. *Encyc. Brit.*, XXXII. 815.

microstat (mī′krō-stat), *n.* [Gr. *μικρός*, small, + *στατός*, < *ἱστασθαι*, stand.] The stage and finder of a microscope.

Microstomatidæ (mī″krō-stō-mat′i-dē), *n. pl.* [NL.] Same as *Microstomidæ.*

microstomatous (mī-krō-stom′a-tus), *a.* [Gr. *μικρός*, small, + *στόμα*(*τ-*), mouth, + *-ous.*] Having a small mouth or aperture, as a univalve shell.

microstomia (mī-krō-stō′mi-ą̈), *n.* [NL., < Gr. *μικρός*, small, + *στόμα*, mouth.] Unusually small size of the mouth.

Microstomus (mī-kros′tō-mus), *n.* [NL., < Gr. *μικρός*, small, + *στόμα*, mouth.] A genus of flounders found in rather deep water in the northern seas.

microstrongyle (mī-krō-stron′jil), *n.* [Gr. *μικρός*, small, + *στρογγύλος*, round (see *strongyle*).] In sponge-spicules, a small or reduced strongyle.

The *microstrongyles*, which are 18 x 2 μ in size, are occasionally centrotylote. *Proc. Zool. Soc. London*, 1900, p. 131.

microstrongylon (mī-krō-stron′ji-lon), *n.*; pl. *microstrongyla* (-lą̈). [NL.] A microstrongyle.

microstructural (mī-krō-struk′tū-ral), *a.* [*microstructure* + *-al*[1].] Of minute or microscopical structure; of or pertaining to microstructure.

microstructure, *n.* Applied especially to metals and alloys, the study of the microstructure of which is now a very important department of engineering.

A brief statement of the effect on the *microstructure* of nickel steels of tempering, annealing, working, chilling, etc. The tempering and working produce very similar results. *Jour. Phys. Chem.*, April, 1904, p. 305.

microstyle (mī′krō-stīl), *n.* [NL., < Gr. *μικρός*, small, + *στῦλος*, pillar.] A minute monaxial sponge-spicule with sharp ends.

microtechnic (mī-krō-tek′nik), *n.* [Gr. *μικρός*, small, + E. *technic.*] The handling or construction of the microscope and its accessories; the manipulation of minute objects, as in microscopy.

microtetrod (mī-krō-tet′rod), *n.* [Gr. *μικρός*, small, + *τετρα-*, four, + *ὁδός*, way.] A small tetraxial sponge-spicule.

microthermic (mī-krō-thėr′mik), *a.* [*microtherm* + *-ic.*] Having the character of a microtherm; composed of or characterized by microtherms.

Microthoracidæ (mī-krō-thō-ras′i-dē), *n. pl.* [NL., < *Microthorax* (*-thorac-*) + *-idæ.*] A family of holotrichous ciliate infusorians, consisting of small asymmetrical forms, with the mouth in the hinder part of the body, the cilia scattered and sometimes limited to the oral region, and sometimes one or two undulating membranes. It contains several genera, among them being *Microthorax*, *Cinetochilum*, and *Ancistrum.*

microthorax (mī-krō-thō′raks), *n.* [Gr. *μικρός*, small, + *θώραξ*, thorax.] 1. In *entom.*, a fourth thoracic segment anterior to the prothorax, in the *Dermaptera.*—2. [NL.] [*cap.*] The typical genus of the family *Microthoracidæ.* *Engelmann*, 1862.

Microthyriaceæ (mī-krō-thir-i-ā′sē-ē), *n. pl.* [NL., < *Microthyrium* + *-aceæ.*] A family of ascomycetous fungi of the order *Perisporiales*, named from the genus *Microthyrium.* It contains 21 genera, most of which are tropical or subtropical.

Microthyrium (mī-krō-thir′i-um), *n.* [NL. (Desmazières, 1840), < Gr. *μικρός*, small, + *θύριον*, door.] A genus of ascomycetous fungi having membranous perithecia, with a shield-like covering on the surface of the host. The spores are elongate, 2-celled, and hyaline. The species are mostly tropical. *M. microscopicum* occurs on leaves of various trees and shrubs in Europe and America.

microtia (mī-krō′ti-ą̈), *n.* [NL., < Gr. *μικρός*, small, + *οὖς* (*ὠτ-*), ear.] The condition of having abnormally small ears.

Microtinæ (mī-krō-tī′nē), *n. pl.* [NL., < *Microtus* + *-inæ.*] A subfamily of mouse-like rodents, containing a large number of species and forming one of the most important divisions

of the *Muridæ*. By the law of priority this name replaces the familiar *Arvicolinæ*.

microtine[1] (mī′krō-tin), *n.* [G. *mikrotin*, < Gr. *μικρότης*, littleness, + *-in*[2].] A name sometimes given to the glassy forms of the plagioclase feldspars occurring as minute phenocrysts in igneous rocks.

microtine[2] (mi-krō′tin), *a.* [*Microtus* + *-ine*[1].] Resembling, or having the characters of, the small rodents of the genus *Microtus*. *Smithsonian Rep.*, 1900, p. 86.

microtome (mī′krō-tōm), *v. t.*; pret. and pp. *microtomed*, ppr. *microtoming*. [*microtome*, *n.*] To cut (a tissue or organ) into thin sections with the aid of a microtome.

The following nerves of muscles were *microtomed* for detection of some fibres.
Philos. Trans. Roy. Soc. (London), ser. B, 1898, p. 95.

microtriæne (mī-krō-trī′ēn), *n.* [Gr. *μικρός*, small, + *τρίαινα*, trident.] In sponge-spicules, a small or reduced triæne.

microtriod (mī-krō-trī′od), *n.* [Gr. *μικρός*, small, + *τρι-*, three, + *ὁδός*, way.] In the nomenclature of the sponge-spicules, a triod of minute size.

Microtus (mi-krō′tus), *n.* [NL., < Gr. *μικρός*, small, + *οὖς* (*ὠτ-*), ear.] The typical genus of the subfamily *Microtinæ*, containing those species of small rodents long placed in the genus *Arvicola*. There are over 20 synonyms for this genus. See *Arvicola*. *Schrank*, 1798.

microtylostyle (mī-krō-tī′lō-stīl), *n.* [Gr. *μικρός*, small, + *τύλος*, knot, knob, + *στῦλος*, pillar.] A minute monaxial sponge-spicule with one knobbed end.

microtylote (mī-krō-tī′lōt), *n.* [Gr. *μικρός*, small, + E. *tylote*.] A small tylote. *Sollas*, in Encyc. Brit., XXII. 417.

microtypal (mī′krō-tī-pal), *a.* [*microtype* + *-al*[1].] Pertaining to or characteristic of a microtype: as, the *microtypal* arrangement of mesenteries in the *Zoanthidæ*.

microtype (mī′krō-tīp), *n.* [Gr. *μικρός*, small, + *τύπος*, type.] The normal arrangement of mesenteries in certain *Zoanthidea*, each couple comprising a macromesentery and a micromesentery. Compare ★*macrotype*. *Annals and Mag. Nat. Hist.*, May, 1902, p. 393.

microwatt (mī′krō-wot), *n.* [Gr. *μικρός*, small, + E. *watt*.] A unit of power or activity equal to ten ergs per second; a millionth of a watt.

microxea (mī-krok-sē′ä), *n.*; pl. *microxeæ* (-ē). [NL., < Gr. *μικρός*, small, + *ὀξεία*, fem. of *ὀξύς*, sharp.] In sponge-spicules, a small or reduced oxea. *Proc. Zool. Soc. London*, 1902, II. 218.

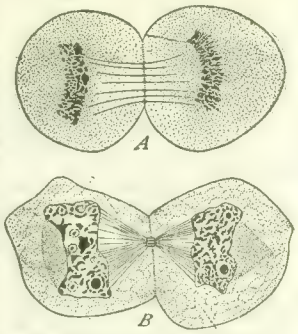
microxycyte (mī-krok′si-sīt), *n.* [Gr. *μικρός*, small, + *ὀξύς*, sharp, + *κύτος*, hollow (cell).] A finely granular oxyphil or eosinophil blood-corpuscle, or leucocyte. *Durham*, 1897.

microzoögonidium (mī-krō-zō″ō-gō-nid′i-um), *n.*; pl. *microzoögonidia* (-ä). [*micro-* + *zoögonidium*.] A minute zoögonidium.

microzoöscopic (mī″krō-zō-ō-skop′ik), *a.* [Gr. *μικρός*, small, + *ζῷον*, animal, + *σκοπεῖν*, view, + *-ic*.] Of or pertaining to the seeing of microscopic organisms; characterized by the seeing of tiny animals.

In a recent study of the dreams of hysterics and epileptics De Santis found that those of the former were most frequently of pain, next of fear, and were less often erotic. Dreams of large animals predominate, while in alcoholism those of tiny animals or *microzoöscopic* dreams were most frequent. *G. S. Hall*, Adolescence, I. 276.

microzyma (mī-krō-zī′mä), *n.*; pl. *microzymæ* (-mē). [NL., < Gr. *μικρός*, small, + *ζύμη*, ferment.] One of the very minute bodies which, according to some biologists, represent the ultimate elements of living substance, or protoplasm, like the pangens, plasomes, gemmules, etc.



Micruræ (mī-krō′rē), *n. pl.* [NL., < Gr. *μικρός*, small, + *οὐρά*, tail.] A group of *Nemertini*, forming a subdivision of the family *Lineidæ*, characterized by a small filamentous tail. It contains the genera *Micrura*, *Cerebratulus*, and *Langia*. See ★*Amicruræ*.

Mida[2] (mī′dä), *n.* [NL. (Cunningham, 1838), stated to be from a native New Zealand name.] A genus of dicotyledonous trees or shrubs belonging to the family *Santalaceæ*. See *Fusanus*.

midas-fly (mī′das-flī), *n.* Any dipterous insect of the family *Mididæ* or *Midasidæ* or *Midaidæ*, as it is variously spelled. *Comstock*, Manual of Insects, p. 461.

midaxillary (mid-ak′si-lā-ri), *a.* Situated in the center of the axilla. *Buck*, Med. Handbook, I. 452.

midbody, *n.* 2. The cell-plate; a structure almost invariably found in plant- and often in animal-cells, as a series of deeply staining thickenings or granules in the equatorial plane of the achromatic spindle toward the end of mitotic cell-division.

Midbody in embryonic cells of *Limax*. (Hoffmann.)
A, earlier stage, showing thickenings along the line of cleavage; *B*, later stage, showing spindle-plate and cytoplasmic plate. (From Wilson's "The Cell.")

mid-digital (mid-dij′i-tal), *n.* One of the two primaries attached to the first phalanx of the second digit of a bird's wing. *Parker and Haswell*, Text-book of Zool., II. 356.

middle, *n.*—**Middle of the road**, an epithet applied, especially in the presidential campaign of 1896, to those members of the Populist party who urged the nomination of a Populist by their party convention and opposed the acceptance of the nominee of the Democratic party: said to be derived from the habit, in some parts of the Southwest, of keeping in the middle of the road, the better to protect one's self from enemies lying in ambush. [U. S. political slang.]—**Persian middle**, in the Arab-Persian musical theory of the early Middle Ages, a central tone in the system of tones which served as a point of reference in the calculation of intervals: the ★*mese* of Greek musical theory.—**To break out middles**, to open lengthwise with a double mold-board or a scooter-plow the middle of an existing cotton bed. Also *to burst* or *burst out middles*. Compare ★*middle-buster*. [Southern U. S.]

middle-body (mid′l-bod″i), *n.* In *naval arch.*, the part of a ship's form in the middle of the length where the cross-sections are all of nearly the same size and shape. The *parallel middle-body* is that part in which they are of exactly the same dimensions.

middle-breaker (mid′l-brā″kėr), *n.* A double mold-board plow, used to break out the middle of a cotton bed and for similar purposes. It is steadied by a land-bar bisecting the angle made by the two mold-boards. [U. S.]

middle-buster (mid′l-bus″tėr), *n.* A middle-breaker. Sometimes corrected to *middle-burster*. [Colloquial, Southern U. S.]

Or by means of a *middle "buster,"* which is a double mold-board plow.
T. F. Hunt, Forage and Fiber Crops in America, p. 352.

middle-piece (mid′l-pēs), *n.* A differentiated region of the spermatozoön between its 'head,' or nucleus, and 'tail,' or flagellum.

Human spermatozoa.
The two at the left after Retzius (81); the one at the extreme left is seen in profile; the other in surface view; the one at the right is drawn as described by Jensen. *a*, head; *b*, terminal nodule; *c*, middle-piece; *d*, tail; *e*, end-piece of Retzius. (From Huber's trans. of Böhm-Davidoff's "Histology.")

It is clear, however, that the term *middle-piece* has been applied to structures of quite different morphological nature, which agree only in lying behind the nucleus. Thus in the salamander the inner centrosome gives rise to the main body of the *middle-piece;* in the rat or in man it gives rise only to the small disc-shaped body lying in the "neck" in front of the so-called *middle-piece;* while in Helix or the elasmobranch it is transformed into a long filament traversing a cytoplasmic "*middle-piece*" which forms a considerable part of the flagellum. The term *middle-piece* has thus become highly ambiguous and should only be employed, if at all, as a convenient descriptive term which has no definite morphological meaning.
E. B. Wilson, The Cell (ed. 1900), [pp. 170, 171.

Middlesex shale. See ★*shale*[2].

middleshot (mid′l-shot), *a.* In *hydraul.*, receiving water at its circumference about opposite the center or middle: said of a water-wheel with a horizontal axis, in which the relation of the diameter of the wheel to the available head makes the type intermediate between the breast-wheel and the under-shot.

middletonite (mid′l-ton-īt), *n.* [*Middleton* collieries, near Leeds, + *-ite*[2].] A hydrocarbon occurring in minute rounded pea-like masses of a yellowish-brown color between layers of coal at the Middleton collieries, near Leeds, England.

middle-watcher (mid′l-woch″ėr), *n.* The lunch served to the officer of the deck during the mid-watch. This is customary in the navy and on board passenger-steamships. [Slang.]

middling, *n.* 5. *pl.* The finest kind of wheat bran.

The bran known as "*middlings*" is usually considered the best to use, because it is finer and contains more flour than the coarse grades.
Flemming, Practical Tanning, p. 9.

mid-door (mid′dōr), *n.* In *mining*, the middle one of three landing-places in a shaft. Also called *mid-working*. [Scotch.]

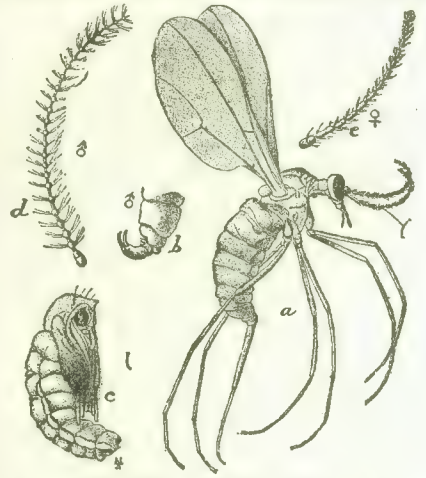
mide (mē′dā), *n.* [Ojibwa *midewin*.] A religious society of the Ojibwa Indians, consisting of a number of persons initiated by supernatural powers. The members are grouped in classes and a record of the initiations of each member is kept by him on birch-bark charts. The traditions of the mide tell of the initiation of the society by the creator or transformer. The ceremonies are performed in a rectangular open lodge. The members of the mide order are believed to possess supernatural powers and to be able to cure disease.

Among the Indians of North America there are also special healers (medicine-men) who are held in great esteem, and who sometimes form a corporation (*Mide*), into which admission can only be gained after a professional examination in the "doctors' cabin."
Deniker, Races of Man, p. 227.

midewiwin (mē-dā′wi-win), *n.* [Ojibwa.] A religious society of the Ojibwa Indians, the members of which are imagined to have the power to converse with spirits and, after death, to reach the land of the spirits. See ★*mide*.

midfacial (mid-fā′shal), *a.* Situated in the middle of the face.

midfilial (mid-fil′yal), *a.* [*mid* + *filial*.] Of or pertaining to a statistical offspring of composite sex which is the statistical mean of the sons and the transmuted daughters.



The proportion between the *Mid-Filial* and the Mid-Parental deviation is constant, whatever the Mid-Parental stature may be.
Francis Galton, Natural Inheritance, p. 97.

Midford sands. See ★*sand*[1].

midfrontal (mid-fron′tal), *a.* Situated in the center of the forehead.

mid-galley (mid′gal″i), *n.* The middle of a vessel; the galley or caboose, situated amidships below decks (midway between the upper deck and the hold) in old-time vessels.

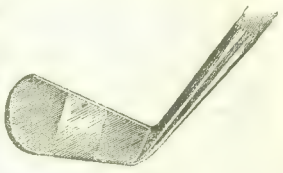
midge, *n.*—**Gray midge**, a kind of artificial fly.—**Net-veined midge.** See ★*Blepharoceridæ*.—**Net-winged midge.** Same as *net-veined* ★*midge*.—**Pear-midge**, a cecidomyiid fly, *Contarinia pyrivora*, indigenous to Europe,

Pear-midge (*Contarinia pyrivora*).
a, female fly; *b*, genitalia ♂; *c*, pupa; *d*, antenna ♂; *e*, antenna ♀. All greatly enlarged. (Riley, U. S. D. A.).

and accidentally introduced into the United States. Its larvæ injure young pear fruit.—**Solitary midge**, *Orphnephila testacea*, a minute dipterous insect: so called by Comstock because it is the only American representative of its family, the *Orphnephilidæ*.—**Violet-midge**, a cecidomyiid fly, *Contarinia violicola*, whose larvæ fold the leaves of the violet, bringing the upper surfaces of the leaves together so as to form a kind of gall. Also called *violet gall-fly*.—**Winter midge**, a trypetid fly, *Trichocera hiemalis*, occasionally found flying in winter and occurring as far north as Greenland.

mid-gear (mid′gēr), *n.* That position of a Stephenson link where both the eccentrics have the same effect on the valve, that is, where

the link-block is at the middle of the link; that position of the valve-gear of an engine in which the engine will run neither forward nor backward.



mid-grandparent (mid-grand′pär-ent), *n.* An ideal person of composite sex who is the algebraical sum of the grandfathers and grandmothers.

mid-heaven, *n.* 3. In *astrol.*, the degree culminating on the cusp of the tenth house.

midinette (mē-dē-net′), *n.* [F., < *midi*, noon.] One of the class of working-girls seen coming out at noon (the lunch-hour) from the business establishments of Paris.

mid-intestine (mid-in-tes′tin), *n.* In *entom.*, the portion of the digestive track of an insect between the proventriculus and the ileum.

mid-iron (mid′ī″ėrn), *n.* A golf-club with an iron head, in form between that of a cleik and that of a mashy: used for approaching.

Mid-iron.

mid-kidney (mid-kid′ni), *n.* The Wolffian body; the mesonephros. *Parker and Haswell*, Text-book of Zoology, II. 110.

midnightly (mid′nīt-li), *a.* and *adv.* **I.** *a.* Occurring at midnight or every midnight.

II. *adv.* At midnight; every midnight. *N. E. D.*

mid-orbital (mid-ôr′bi-tal), *a.* Of or relating to the center of the orbit of the eye; relating to the center of the superior boundary of the eye.

From the *mid-orbital* region onward it [the frontal] becomes band-shaped, ultimately being produced into an outwardly directed and blunt angle underlying the nasal.
Proc. Zool. Soc. London, 1903, I. 270.

mid-parental (mid-pā-ren′tal), *a.* [*mid*[1] + *parental.*] Of or pertaining to statistical mid-parentage.

This value of two thirds will therefore be accepted as the amount of Regression, on the average of many cases, from the *Mid-Parental* to the Mid-Filial stature, whatever the *Mid-Parental* stature may be.
Francis Galton, Natural Inheritance, p. 98.

mid-periphery (mid-pe-rif′e-ri), *n.* In *physiol.* and *psychol. optics*, the middle zone of the retina, colors falling upon which are all seen either as blue or as yellow. *Baldwin*, Dict. Philos. and Psychol., II. 791.

mid-product (mid′prod″ukt), *n.* A substance formed in the course of chemical decomposition which stands between the original material and the end-products. Also *intermediary product.*

midriatic, *a.* and *n.* Same as *mydriatic.*

Midship beam, the breadth of a vessel amidships; the horizontal timber at the broadest part of a ship.

midshipman, *n.* 2. In 1902, Congress abolished the title of naval cadet in the United States navy and restored the title of midshipman. These officers are not commissioned officers, but receive appointments on probation, on the nomination of the President of the United States, of senators, or of congressmen, and the passage of an entrance examination to the Naval Academy. The course of instruction at the Naval Academy lasts four years and is followed by two years at sea, after which midshipmen are promoted to ensigns or second lieutenants of marines upon passing a final examination.—**Midshipman apprentice,** a cadet on board certain merchant and revenue-service vessels; a title given to a midshipman of the East India service who was serving his first year, after which time he became a full midshipman, and after two years as such became eligible for promotion to the office of fourth mate.

midship-section (mid′ship-sek″shon), *n.* In *naval arch.*, the line formed by the intersection of a transverse vertical plane at the middle of the length of a vessel with the surface of the hull; also, a plan of this transverse section on which is delineated the arrangement of the structural parts of the vessel, and on which are marked in great detail the sizes or scantlings of all the structural parts.

mid-shore (mid′shōr), *n.* That strip of a shore which lies between ordinary high-tide mark and the dunes; the middle beach. *A. F. W. Schimper* (trans.), Plant-Geog., p. 180.

mid-spoon (mid′spön), *n.* A wooden golf club, with a lofted face, of which the capacity in distance is between that of a long and that of a short spoon.

mid-stroke (mid′strōk), *n.* In steam-engines, the middle point or position in the stroke or travel of a piston or valve.

mid-tarsal (mid-tär′sal), *a.* Relating to the central portion of the tarsus.

If they act alone they either turn the foot inwards (tibialis posticus), or turn it outwards (peronei), and thus invert or evert the foot at the *mid-tarsal* articulation.
Lancet, July 4, 1903, p. 56.

mid-ventral (mid-ven′tral), *a.* Situated in the middle of the ventral surface.

The median vein lies along the *mid-ventral* line of the swollen abdomen, scarcely noticeable posteriorly, but increasing anteriorly as it picks up several lateral branches.
Amer. Nat., Feb. 1904, p. 123.

mid-ventricle (mid-ven′tri-kl), *n.* The cavity of the midbrain, or mesencephalon, in the embryonic vertebrate. Its medioventral portion becomes the iter, or aqueduct of Sylvius, while its dorsolateral portions become the optic ventricles, or optocœles, of a more advanced stage of development.

midwall (mid′wâl), *a.* and *n.* [*mid*[1] + *wall*[1].] **I.** *a.* In *arch.*, placed in the middle of a wall.—**Midwall shaft,** a shaft or baluster placed in the middle of the thickness of the wall, in an early type of English belfry-windows. *N. E. D.*

II. *n.* In *mining*, a close wooden partition dividing a shaft.

midway, *n.* 3. A middle way or path: also attributively: as, 'the *Midway* Plaisance,' a part of the exhibition park at the World's Fair in Chicago (1893), projecting from the park at a point midway between the north and south sides.

Considerable areas were devoted to "side-shows," and the *midway* Plaisaunce, as it was termed, resembled a gigantic fair.
Encyc. Brit., XXVIII. 351.

Hence—4. A place for booths and side-shows at a fair.

midweek (mid′wēk), *n.* and *a.* **I.** *n.* The middle of the week.

II. *a.* Set for or occurring in the middle of the week: as, the *midweek* sailings; a *midweek* holiday.

mid-working (mid′wėr″king), *n.* See ★*mid-door.*

midyear (mid′yēr), *n.* and *a.* **I.** *n.* The middle of the year: as, rents due at the *midyear.*

II. *a.* Set for or occurring in the middle of the year.

To teachers the series of meetings is a series of *mid-year* institutes. *Yearbook U. S. Dept. Agr.*, 1901, p. 154.

midzu-ame (mēd′zö-ä′mā), *n.* [Jap. *midzu-ame*, < *midz* (*mi-dz*), water, + *ame*, a kind of jelly made from flour.] A syrup made in Japan by the addition of water to ame. See ★*ame.*

M. I. E. E. An abbreviation of *Member of the Institute of Electrical Engineers.*

miemite (mē′e-mīt), *n.* [*Miemo* (see def.) + *-ite*[2].] A variety of the mineral dolomite, of pale asparagus-green color, from Miemo in Tuscany.

Miersiidæ (mēr′si-i-dæ), *n. pl.* [NL., < *Miersia*, a genus, + *-idæ.*] See ★*Acanthephyridæ.*

miersite (mī′ėr-zīt), *n.* [Named from Prof. H. A. *Miers* of Oxford, England.] Silver iodide (AgI) which occurs in yellow tetrahedral crystals at the Broken Hill mines, New South Wales.

miesite (mē′sīt), *n.* [*Mies* (see def.) + *-ite*[2].] A brown variety of pyromorphite containing a small amount of calcium: from Mies, Bohemia.

mièvrerie (myev-re-rē′), *n.* [F., < *mièvre*, arch, roguish (of children). Childish piquancy or prettiness.

The ivory Madonnas of the late thirteenth and early fourteenth centuries gradually lose their austere dignity, relax into elegance and *mièvrerie.*
R. E. Fry, in Burlington Mag., V. 280.

mignonette, *n.*—**Mignonette-vine.** (*b*) See ★*Boussingaultia.*

mignonette-disease (min-yo-net′di-zēz″), *n.* See ★*leaf-blight of mignonette.*

migraine, *n.*—**Ophthalmic migraine,** severe paroxysmal headache due to eye-strain.

migrainine, *n.* See ★*migranine.*

migrainoid (mi-grā′noid), *a.* Resembling migraine. *Buck*, Med. Handbook, VI. 243.

migranine (mi-grā′nin), *n.* A mixture of 90 parts of antipyrin, 9 parts of caffein, and 6 parts of citric acid: said to be specific in migraine.

migration, *n.* 5. In *phytogeog.*, the movement of plants from one area into another. According to F. E. Clements this is properly a narrower term than *invasion.* See ★*invasion*, 4.—**Arctic migration,** a supposed migration of animals from the arctic region into Europe.

One of the most important problems, as far as the origin of the European fauna is concerned, is the question whence came the animals which Doctor Scharff has termed the *"Arctic migration."* He, with many others, contends that until toward the end of the glacial period there existed a continuous land connection between America and Europe, far north between Greenland, Spitzbergen, and Scandinavia, the latter being again connected by a land bridge with Scotland across the North Sea, and England with France. Across this continuous land bridge these animals are supposed by him to have wandered into central Europe.
Smithsonian Rep., 1902, p. 255.

Law of migration, segregation or isolation in space brought about by migration, considered as an explanation of the origin of species. *Eimer* (trans.), Organic Evolution, p. 7.—**Ontogenetic migration,** the successive changes of locality that take place in the normal life-history of many fishes before they reach their adult stage. *Nat. Science*, June, 1897, p. 390. [Rare.]

migrational (mī-grā′shon-al), *a.* [*migration* + *-al*[1].] Pertaining to or characterized by migration.

In the case of freely moving animals, the psychological guidance is an essential factor in the success of the individual; while in the case of plants and low types of animal life, the suitable situation is reached by a wide distribution of a vast number of seeds, spores, or germs, and the same situation is maintained by a loss of *migrational* power as soon as the germs begin to develop.
J. T. Gulick, in Linnean Soc. Jour. Zool., XX. 223.

migrative (mī′grā-tiv), *a.* Migratory.

The Blackcap is a *migrative* species, visiting us early in the spring, and retiring in September.
Montagu, Ornithological Dict. (ed. 1831), p. 42.

migratorial (mī-grā-tō′ri-al), *a.* Same as *migratory.*

mihanere (mē-ha-nā′re), *n.* [A Maori pronunciation of the E. *missionary.*] A convert to Christianity. [New Zealand.]

mijakite, *n.* Same as ★*miyakite.*

mika (mē′kä), *n.* [Aboriginal Australian.] An operation, practised by the natives of Australia, consisting in a partial opening of the lower side of the urethra of the male, resulting in an artificial hypospadia.

Mikado yellow. See ★*yellow.*

mikadoate (mi-kä′dō-āt) *n.* The office of mikado. *N. E. D.*

mikrom, *n.* See ★*microm.*

mikron, *n.* See *micron.*

mikveh (mik′ve), *n.* [Also *mikvah:* Heb. *miqweh*, *miqwah*, a bath, lit. 'a gathering,' especially of water (Gen. i. 10.).] Among orthodox Jews, a bath for the purpose of ritual purification.

mil[1] (mil), *n.* [L. *mille*, a thousand.] A unit of length used in measuring the diameter of wires, equal to 0.001 of an inch.—**Circular mil,** a unit of area used in measuring the areas of cross-sections of wires, equal to 0.7854 of a square mil.

mil[2] (mil), *n.* [L. *mille*, thousand.] A copper coin of Hongkong, the thousandth part of a dollar, corresponding to a Chinese 'cash.'

mil, *n.* and *v.* A simplified spelling of mill.

miladi (mi-lā′di), *n.* A French or Italian form of the English *my lady:* applied on the continent of Europe to titled Englishwomen. Also spelled *milady.*

Telescopes were being used, and loud statements made that the boat held somebody who had been drowned. One said it was the milord who had gone out in a sailing boat; another maintained that the prostrate figure he discerned was *miladi;* a Frenchman who had no glass would rather say that it was milord who had probably taken his wife out to drown her.
George Eliot, Daniel Deronda, lv.

milady, *n.* Same as ★*miladi.*

milammeter (mi-lam′e-tėr), *n.* See ★*milliammeter.*

milampere (mil-am-pār′), *n.* Same as *milliampere.*

milcher (mil′chėr), *n.* An animal that gives milk; a milch animal, as a cow or a goat. More commonly *milker.*

mildew, *n.*—**Beech-seedling mildew,** a fungus, *Phytophthora omnivora*, which attacks the seedlings of beech and other trees.—**Corn-mildew.** See ★*corn-mildew.*—**Cucumber-mildew.** (*a*) A disease of cucumbers, usually confined to greenhouses, due to *Erysiphe Cichoraceaarum.* (*b*) A disease of cucumbers, melons, pumpkins, and similar plants, caused by *Plasmopara Cubensis.*—**Downy mildew.** See *grape-mildew* and ★*Plasmopara.*—**European surface-mildew,** a disease of various plants due to the fungus *Oïdium Tuckeri.* See *mildew*, 1, and *grape-mildew.*—**Filbert-mildew.** See ★*filbert-mildew.*—**Frosty mildew,** a fungous disease of the peach caused by *Cercosporella persica.*—**Peach-mildew,** a disease of peaches which produces white powdery patches upon the fruit: due to the fungus *Podosphæra Oxyacanthæ.* Compare *cherry-blight.*—**Rose-mildew,** a fungous disease of the rose, due to either *Peronospora sparsa* or *Sphærotheca pannosa.*—**Strawberry-mildew,** a fungous disease which attacks the leaves of strawberries: due to *Sphærotheca Castagnei.*

mile, *n.*—**International geographical mile,** one fifteenth of a degree of the earth's equator, equal to about 4.61 statute miles of 5,280 feet.—**Passenger-mile.** See ★*passenger-mile.*—**Ton-mile.** See ★*ton-mile.*

mile-hunter (mīl′hun″tėr), *n.* A bicycler or automobilist who is eager to increase the distance he has traveled or can travel. [Slang.]

milen (mī′len), *n.* [Origin obscure.] In *glass-manuf.*, the scar left by the pontil, as on the bottom of a blown-glass bottle. Sometimes called *punt*.

miler (mī′lėr), *n.* In *track-athletics*, one who runs the mile distance. Similarly, *half-miler*, *quarter-miler*, and *two-miler*. [Colloq.]

mil-foot (mil′fůt), *n.* A wire one mil (or one thousandth of an inch) in diameter and one foot in length: a practical unit used in describing or specifying the properties of wire or other electric conductors.

milhenry (mil-hen′ri), *n.* See ★*millihenry*.

miliaceous (mil-i-ā′shius), *a.* [L. *milia* + *-aceous*. See *milia* and *Milium*.] Of the nature of, or characteristic of, millet or millet-seed.

miliaria, *n.* 1. (*b*) An eruption of minute vesicles due to obstruction of the sweat-glands. Also called *prickly heat*.

miliary, *a.* **II.** *n.* In the *Echinoidea*, one of the very small tubercles on the surface of the test which serve as bases for the lesser spines.

milieu (mē-yė′), *n.* [F., < *mi* (< L. *medius*), middle, + *lieu* (< L. *locus*), place.] The middle place or point; the mean; a point equally removed from extremes; also, surrounding conditions; social environment.

militaristic (mil″i-tā-ris′tik), *a.* [*militarist* + *-ic*.] Of or pertaining to militarists or militarism; military.

A political organization and a moral tendency that are common to all nascent civilization of the *militaristic* order. *Athenæum*, July 15, 1905, p. 73.

militarize (mil′i-tā-rīz), *v. t.*; pret. and pp. *militarized*, ppr. *militarizing*. 1. To render military in character, feeling, bearing, or conduct.

He was brought up in Germany, becoming more and more *militarised*. *Spectator*, Sept. 1, 1900, p. 266.

2. To place under military control; subject to military methods: as, to *militarize* the government.

Military top. See ★*top*¹.

militia, *n.*—**Naval militia,** State forces in the United States which form a part of, and are on a footing with, the national guard. The general duties of the former are similar to those of the latter, but in addition they are supposed to exercise a special supervision along the water-front, both on shore and afloat, and in time of war to be eligible for absorption into the regular naval forces of the country.

milk, *n.* 5. An emulsion; any liquid which holds small particles of solid matter in suspension. *Phillips and Bauerman*, Elements of Metallurgy, p. 385.—**Bitter milk,** milk which has been made bitter by the growth of bacteria, especially of *Bacillus Weigmanni*.—**Fortified milk,** milk rendered more nutritious by the addition of the white of egg or cream.—**Laboratory milk,** milk in which the essential components, namely, fat, albumins, and lactose, have been added according to a special formula.—**Medicated milk,** milk containing medicinal substances first given to the mother that they might be excreted in the milk, and so exert a therapeutic action on the child.—**Milk of magnesia,** a milk-white aqueous liquid holding magnesium hydrate in permanent suspension: it is antacid.—**Modified milk,** cows' milk the composition of which has been altered by the addition of water, salts, sugar, etc., in fixed proportions, so as to adapt it to the needs of the infant at different ages. Also called *rectified milk*.—**Separated milk,** milk from which the cream has been removed by means of a separator. See ★*centrifugal method* and ★*separator*, 2 (*e*).—**Slimy milk,** milk which has become slimy by the growth of bacteria (*Bacterium subviscosum*).—**Soapy milk,** fermented milk which appears to be frothy and has a soap-like taste.—**Sour milk,** milk containing lactic acid which is produced by the growth of certain bacteria, especially *Bacterium acidi-lactici*, and related forms.—**Starch milk,** water which contains in suspension enough starch granules to give it the appearance of milk.—**Vegetable milk.** See the extract.

In a recent number of a Japanese journal a Mr. T. Kalajama described a process for the manufacture of a *vegetable milk*, the properties of which would render it highly suitable for use in tropical countries. The preparation is obtained from a well-known member of the leguminous family of plants (namely, the Soja bean), which is a very popular article of food among the Chinese. The beans are first of all softened by soaking, and are then pressed and boiled in water. The resultant liquid is exactly similar to cows' milk in appearance, but it is entirely different in its composition. This Soja bean-milk contains 92.5 per cent water, 3.02 per cent proteine, 2.13 per cent fat, 0.03 per cent fiber, 1.88 per cent non-nitrogenous substances, and 0.41 per cent ash.
Sci. Amer., Nov. 2, 1907, p. 306.

Witches' milk, a whitish fluid sometimes present in the breasts of new-born infants.

milk, *v. t.*—**To milk the street,** in stock-exchange business, to make a profit out of the smaller traders in stocks (known as 'the street') by first manipulating the market in such a way as to give promise of a rise in prices, thus inducing the smaller traders to purchase the particular stock affected, and after supporting it for a time, depressing the price suddenly before the smaller traders have had time to cover.

milk-brother (milk′bru͟ᴛʜ″ėr), *n.* A foster-brother.

milk-bush (milk′bůsh), *n.* 1. Same as *milk-hedge*.—2. A shrub of the genus *Wrightia*, a native of India.—3. A shrub, *Wrightia saligna*, a native of Queensland. *E. E. Morris*, Austral English.—4. See the extract.

The common *milkbush* of the karroo and karroid regions of the interior [South Africa], viz. Euphorbia mauritanica. *Nature*, Jan. 17, 1907, p. 288.

milk-cell (milk′sel), *n.* The cell in which the milky juice or latex of plants is contained. *N. E. D.*

milk-escutcheon (milk′es-kuch″ọn), *n.* Same as *escutcheon*, 2 (*c*).

milk-fish, *n.* 2. An Australian holothurian which emits a whitish, viscid fluid from its skin. Also known as *tit-fish*. *E. E. Morris*, Austral English.

milk-flour (milk′flour), *n.* Skimmed milk transformed by an exsiccator into a highly soluble powder which, when dissolved at a temperature of 60–70° C. above zero in a proper quantity of water, gives a solution with the same taste, smell, and other qualities as common milk. The flour, or powder, can be easily transported, and can be kept a long time without being spoiled. *Sci. Amer. Sup.*, April 18, 1903, p. 22827.

milk-fungus (milk′fung″gus), *n.* Any fungus of the genus *Lactarius*.

milk-gowan (milk′gou″an), *n.* The dandelion.

milk-grass (milk′gràs), *n.* The corn-salad, *Valerianella olitoria*.

milking, *n.* 4. In *card-playing*, same as ★*fuzzing*.

milk-ipecac (milk′ip″ē-kak), *n.* See ★*ipecac*.

milk-knot (milk′not), *n.* A condition in which there are small nodular swellings in the secreting breast, occurring especially where an effort has been made to suppress the secretion; also, one of the nodular swellings.

milk-nucleon (milk′nū″klē-on), *n.* A substance of the character of Siegfried's phosphocarnic acid, occurring in milk.

milk-plant (milk′plant), *n.* Same as *milk-pea*. See *Galactia*, 2.

milk-powder (milk′pou″dėr), *n.* A powder prepared from desiccated milk. *Evening Post*, Feb. 10, 1906.

milkpox (milk′poks), *n.* A disease, believed to be a modified form of smallpox, prevalent among the Kafirs in South Africa. Also called *amaas*.

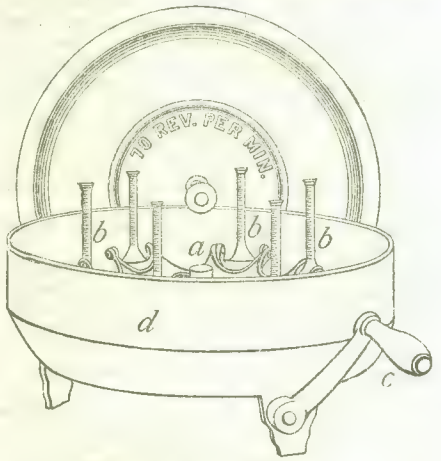
milk-premolar (milk′prē-mō″lăr), *n.* Same as *milk-molar*.

In this communication the author [Oldfield Thomas] suggested the use of the term "*milk-premolars*," in lieu of milk-molars. *Proc. Zool. Soc. London*, 1899, p. 924.

milk-purslane (milk′pėrs″lān), *n.* See *purslane*.

milk-ranch (milk′ranch), *n.* A large dairy-farm. [Slang, western U. S.]

milk-route (milk′röt), *n.* The district or the round of customers served by a milkman or his employees, or the business built up by him in this round or route: as, to buy or to establish a *milk-route*.



milk-scales (milk′skālz), *n. pl.* A spring-balance for weighing cans of milk. One form employs a case for a card ruled in vertical lines, one of the spaces between the lines being assigned to each cow of a herd. The index travels over the whole front of the case and carries a series of knobs which when pressed record the weights on the card. The card is placed in the case, the milk from a particular cow is weighed, then the attendant presses the button on the index and records the weight in the space assigned to the cow that gave the milk. When all the milk is weighed the card shows the actual and comparative weight of milk for each cow in the herd.

milk-separator (milk′sep″a-rā-tọr), *n.* See ★*separator*, 2 (*e*).

milk-shield (milk′shēld), *n.* Same as *escutcheon*, 2 (*c*).

milk-spot (milk′spot), *n.* In *pathol.*: (*a*) A whitish spot sometimes found on serous membranes, especially on the layer of pericardium attached to the heart. They are occasionally found post mortem in the aged. *Lancet*, April 18, 1903, p. 1075. (*b*) A white mucous patch in secondary syphilis. (*c*) A kind of toothrash. *Syd. Soc. Lex.*

milk-tester, *n.* 2. A machine used to ascertain the percentage of fat in a sample of milk. The sample is placed in a standard glass vial which has a long, slender neck graduated on the outside. The vial is then placed in a centrifugal machine and the fat is driven out of the milk, its position in relation to the graduated scale indicating the percentage of it in the milk. Several vials may be tested at once.—**Babcock's centrifugal** or **milk-tester,** an apparatus for determining the percentage of butter-fat in milk, used extensively in creameries. The test is made by adding acid to a weighed quantity of milk and separating the watery portion from the liquid fat by centrifugal force. The percentage of fat is shown by the thickness of the layer of liquid fat as measured in divisions of the graduated neck of the test-bottle.

Babcock Centrifugal or Milk-tester.

a, centrifugal table; *b*, glass jar for milk, cream rising in graduated neck; *c*, handle to operate machine; *d*, casing.

milk-thrombus (milk′throm″bus), *n.*; pl. *milk-thrombi* (-bī). A nodular swelling in the breast arising from obstruction of the flow of milk in the ducts.

milk-train (milk′trān), *n.* In *railroading*, a train which carries milk, and is wholly or in part composed of milk-cars.

Milk-tree wax. See ★*wax*².

milk-vetch, *n.* 2. A plant of any one of the three genera *Phaca*, *Orophaca*, and *Homalobus*, closely related to *Astragalus* and formerly included in that genus.

milkweed, *n.* 3. (*c*) The tall blue lettuce, *Lactuca spicata*.—**Running milkweed,** the hairy angle-pod, *Vincetoxicum hirsutum*, of the eastern United States.—**Wandering milkweed,** the spreading dogbane, *Apocynum androsæmifolium*.

milkweed-beetle (milk′wēd-bē″tl), *n.* A beetle that infests the milkweed.—**Red milkweed-beetle,** any beetle of the lamiid genus *Tetraopes*. They are bright red, usually spotted with black.

milkweed-butterfly (milk′wēd-but″ėr-fli), *n.* 1. See *archippus*.—2. Same as *monarch* ★*butterfly*.

mill[1], *n.* 12. In *leather-manuf.*, an arrangement consisting of one or two large stone rollers which revolve vertically in a pit. *C. T. Davis*, Manuf. of Leather, p. 377.—13. The raised or ridged edge or flange made in milling, stamping, rolling, or pressing anything, as a coin or a screw.—**Bogardus mill,** a machine for grinding materials between two horizontal revolving plates, the upper of which is eccentric to the lower.—**Chaser mill.** Same as *edge-runner mill* (which see, under *mill*[1]).—**Cheese-curd mill,** in *dairying*, a small crushing-mill for breaking and grinding cheese-curd; a curd-breaker or -crusher.—**Dry mill,** any machine in which the abradant or cleaning material is dry. It is sometimes steam-heated to keep the abradant hot and to drive off moisture.—**Exhaust mill.** See ★*tumbling-mill*.—**Gastric mill.** See ★*gastric*.—**Glacial mill.** See ★*glacial*.—**Hungarian mill,** a rotating mill for removing small particles of gold from quartz by mixing with mercury; one of the many forms of pan-amalgamators: so called because used in Hungary.—**Huntington mill,** in *mining*, a crushing-machine in the form of a heavy cast-iron pan containing several rollers on vertical shafts hung like pendulums from a revolving frame, and crushing the ore by centrifugal force as they roll on the inside of the rim.—**Lauth's mill,** a three-high rolling-mill in which the middle roll has a diameter only about one half of that of the top and bottom rolls. The middle roll runs loose, being driven by the friction of the piece going through.—**Merchant mill.** (*a*) A rolling-mill for rolling merchant bars, billets, angles, channels, beams, etc. (*b*) The entire plant for producing merchant bars and shapes, including the buildings, boilers, engines, mills, and accessories.—**Pharyngeal mill,** in rotifers. Same as *mastax*, 1.—**Ramsbottom's mill,** a rolling-mill in which the rolls are driven, without the intervention of a fly-wheel, by a pair of direct-acting horizontal engines, which are reversed after each pass of the bloom or ingot, so that the rolling is performed alternately in opposite directions.—**Wagner's mill,** a rolling-mill consisting of two horizontal rolls mounted in the usual way, and a pair of vertical rolls working in bearings. The distance between the vertical rolls can be regulated at will, so that bars and flats of various sizes can be produced with the same rolls. It is a kind of universal mill.—**Wet mill,** a mill in which moist or wet abradants can be used.

mill[1], *v. t.* **12.** In *sugar-manuf.*, to pass (sugar-cane) through a cane-mill. See *sugar-mill.*

Milla[1] (mil′ä), *n.* [NL. (Cavanilles, 1793), named in honor of J. *Milla*, a Spanish court gardener of Madrid.] A genus of plants of the family *Liliaceæ*, closely allied to *Hookera* and *Triteleia:* distinguished by the salver-shaped perianth with 3-nerved, nearly separate segments, 6 nearly sessile stamens, and waxy-white, star-like flowers borne (from 1 to 5) on a slender scape. *M. biflora*, the only species, a native of New Mexico, Arizona, and Mexico, is a choice garden plant. It may be planted in the border in spring and the bulbs removed in autumn, or used as a pot-plant under glass.

milla[2] (mēl′yä), *n.* [Sp.: see *mile.*] In Spain, a mile, especially a nautical mile or knot; the mile of some Spanish-American countries (as the Argentine Republic, Nicaragua, Salvador, and Venezuela), equivalent to 1.15 statute miles.

millage (mil′āj), *n.* Rate (as of taxation) reckoned in mills per dollar.

mill-beetle (mil′bē″tl), *n.* The cockroach.

mill-brow (mil′brou), *n.* Same as ★*mill-run.*

mill-bush (mil′bůsh), *n.* The iron lining or bushing placed in the eye of a millstone, where the shaft or arbor comes.

mill-dog (mil′dog), *n.* A dog or clamp used to secure a log in a saw-mill.

mill-dressed (mil′drest), *p. a.* Cut or planed in a mill or by mechanical power: said of stones, marble, etc., but more especially of boards, planks, clapboards, and the like, used for house-building. Also *mill-planed.*

mille (mil), *n.* In certain card games, a counter representing ten 'fishes' or points. *N. E. D.*

milled, *p. a.* **5.** Worked in a mill or by machinery: said especially of boards and planks which are cut and then planed by the power-mill.

millefleurs (mēl-flêr′), *n.* [F. *eau de mille-fleurs*, lit. water of a thousand flowers.] Perfume made from several kinds of flowers.

> It was a sad day for you, when you appeared in your neat pulpit with your fragrant pocket-handkerchief (and your sermon likewise all *millefleurs*), in a trim, prim, freshly mangled surplice, which you thought became you. *Thackeray*, Newcomes, v.

millefoliate (mil-e-fō′li-āt), *a.* [L. *mille*, thousand, + *foli(um)*, leaf, + *-ate*[1].] Having leaves that are very much incised, so as to resemble many smaller leaves. *Syd. Soc. Lex.*

Millegrana (mil-ē-grā′nä), *n.* [NL. (Adanson, 1763), a name applied to the plant by some of the early botanists, in allusion to the many capsules and seeds produced by it: < L. *mille*, a thousand, + *granum*, a seed.] A genus of dicotyledonous plants of the family *Linaceæ.* See *Radiola.*

millenary, *n.* **4.** A thousandth anniversary; a celebration of an event that had happened one thousand years before.

millenniad (mi-len′i-ad), *n.* [L. *millenni(um)* + *-ad*[1].] A period of a thousand years; a very long period of years.

millennian (mi-len′i-an), *a.* and *n.* [*millennium* + *-an.*] **I.** *a.* Same as *millennial.*

II. *n.* A millennialist.

millenniary (mi-len′i-ā-ri), *a.* Same as *millennial.*

milleograph (mil′ē-ō-gràf), *n.* [Also *milliograph;* irreg. < L. *mille*, thousand, + Gr. *γράφειν*, write.] A modification of Edison's mimeograph used in printing numbers of any special form up to 500. It utilizes a wax stencil-paper, the pressure of a stencil-point, or a type-writer stroke, and an inked pad below the paper when printing directly. The writing may be transferred to a lithographic stone and more copies printed.

milleporous (mil′e-pō-rus), *a.* [See *millepore.*] Having the characters of the millepores; having numerous pores.

miller, *n.* **7.** A cicada. [Australia.]—**To drown the miller** (*naut.*), to put a generous quantity of water into the grog to make it go around.

Millerian (mi-lē′ri-an), *a.* Relating or pertaining to the English mineralogist W. H. Miller (1801–80), and specifically noting the system of crystallographic notation introduced by him.—**Millerian axes,** the three equal, obliquely inclined axes to which, following Miller, the forms of rhombohedral crystals are sometimes referred. See ★*system.*—**Millerian indices.** See *index,* 8.—**Millerian notation** or **symbols.** See ★*symbol*[1].

millet[1], *n.*—**Ankee-millet.** Same as ★*ankee.*—**Arabian millet.** (*b*) Same as *Johnson* ★*grass.*—**Arizona millet,** *Chætochloa macrostachya*, a native American grass, closely related to the foxtail-millets and making a good hay. It is common in central Texas and ranges to Mexico and South America.—**Australian millet.** Same as *Johnson* ★*grass.*—**Barn-yard millet,** any of the cultivated forms of *Echinochloa Crus-galli*, the barn-yard grass. The best are of an upright habit with a close head, the Japanese barn-yard millet, recently introduced into the United States, being one of the most promising. (Compare ★*ankee.*) The name has been extended to the Shama millet, or jungle-rice, and the Sanwa millet, species of the same genus. See *jungle-*★*rice* and *Sanwa* ★*millet.*—**Broom-corn millet, brown millet,** the true millet, *Panicum miliaceum.*—**Cat-tail millet.** (*b*) Same as *foxtail-*★*millet.*—**Chaparral-millet,** *Panicum Reverchoni*, an excellent pasture-grass of the highlands of central Texas.—**Common millet,** a slender form of foxtail-millet with narrow, nodding heads, affording the best hay. See *foxtail-*★*millet.*—**Ditch-millet.** Same as *millet coda* or *khoda* (which see, under *millet*[1]). This is cultivated in northern India as a rainy-season crop on poor soil, the grain supplying food chiefly to the poorer classes. A variety is called *hureek* (which see).—**False millet.** Same as *Polish* ★*millet.*—**Foxtail-millet,** any of the varieties of *Chætochloa Italica*, as distinguished from *true* or *broom-corn millet*, the name referring to the cylindrical brushy heads. According to Hackel, the probable original of this cultural species is the common green foxtail. Millets of this class have long been grown as cereals as well as for forage in the Old World, but in America they are sown only for forage. Four standard varieties are known in the United States, namely, *common millet, German millet, golden wonder millet,* and *Hungarian millet.*—**German millet,** a robust broad-leaved form of foxtail-millet, yielding an abundant coarse forage but not bearing drought.—**Giant millet,** a very robust foxtail-grass, *Chætochloa magna*, found in water or wet ground on the Atlantic coast from Delaware to Texas, also in the West Indies and in Central America. It promises to be serviceable in reclaiming swampy lands along the coast.—**Golden millet.** Same as *German* ★*millet.*—**Golden wonder millet,** a stout and tall variety of foxtail-millet with a large head, yielding more seed than others: as forage it is coarse.—**Hog-millet.** Same as *broom-corn* ★*millet.*—**Horse-millet.** Same as *pearl millet* (which see, under *millet*[1]).—**Hungarian millet,** a foxtail-millet resembling the common millet in size, marked by the prominent brown or purple beards of the heads: it is next to common millet in quality of hay. Known as *Chætochloa Italica Germanica.*—**Indian millet.** (*b*) In the United States, one of the various mountain-rices, *Eriocoma cuspidata.* It is a valued bunch-grass of the Western arid country, thriving in soil too dry and sandy for most other grasses. *Oryzopsis micrantha*, of the Dakotas and Montana, has been called *small Indian millet.*—**Japanese barn-yard millet.** See *barn-yard* ★*millet.*—**Japanese panicle millet.** Same as *broom-corn* ★*millet.*—**Morocco millet.** Same as *Johnson* ★*grass.*—**Polish millet,** the common crab-grass, *Syntherisma sanguinalis.* In Bohemia (presumably also in Poland) this grass is grown as a cereal, the seeds being used for a mush or porridge.—**Ragi millet,** *Eleusine coracana.* See *Eleusine* and *raggee.*—**Russian millet.** Same as *broom-corn* ★*millet.*—**Sanwa millet,** *Echinochloa Crus-galli frumentacea*, a very quick growing millet, in India yielding forage and a cheap food. It has been introduced experimentally into the United States. See *barn-yard* ★*millet.*—**Shama millet.** Same as *jungle-*★*rice.*—**Swamp-millet,** *Isachne globosa*, a slender creeping grass with upright stems and open panicles of very small spikelets, native in southern Asia and in Australia. It grows on the banks of rivers and in swamps, and is well adapted by its running rootstocks to fixing soils exposed to washing; it is also said to be liked by cattle.—**Texas millet,** *Panicum Texanum*, a leafy branching annual grass of much merit as a hay-grass, native and abundant near the Colorado River of Texas. Also called *Colorado grass, Austin grass, concho-grass* (which see), and *bottom-* or *river-grass.*—**Water-millet,** a stout and tall semi-aquatic grass, *Zizaniopsis miliacea*, of the southern United States, allied to the wild rice, *Zizania.* It grows from extensively creeping rootstocks, and inhabits both fresh- and salt-water marshes.—**Wild millet.** (*a*) The millet-grass, *Milium effusum* (see *Milium,* 1). (*b*) The green foxtail, *Chætochloa viridis.* (*c*) Same as *Indian* ★*millet* (*b*).

millet[2] (mil′et), *n.* [Turk. *millet* (< Ar. *millah*), people, community, sect, creed.] A people; a nation.

> All Moslems, to whatever race they may belong, are included in the *millet*, or nation, of Islam. The Rûm, or Roman (*i.e.*, Greek) *millet* comprises all those who acknowledge the authority of the Œcumenical Patriarch. *Encyc. Brit.*, XXX. 395.

millet-grass, *n.*—**Many-flowered millet-grass,** a European mountain-rice, *Oryzopsis miliacea*, not highly esteemed at home, but proving to be of value on granitic soils in California.

millet-rice (mil′et-rīs), *n.* Same as *jungle-*★*rice.*

mill-fever (mil′fē″vėr), *n.* A form of low fever prevalent among the young hands in linen-mills. *N. E. D.*

mill-gearing (mil′gēr″ing), *n.* Gears; belts, pulleys, and other forms of transmission machinery.

mill-headed (mil′hed″ed), *a.* Having a milled head.

mill-hole (mil′hōl), *n.* An auxiliary shaft connecting a stope or other excavation with the level below.

mill-house (mil′hous), *n.* A mill; a building for milling or grinding.

milliad (mil′i-ad), *n.* [L. *mille*, thousand. See *myriad.*] A millennium; a period of a thousand years.

milliammeter (mil-i-am′e-tėr), *n.* [L. *mille*, a thousand, + E. *ammeter.*] In *elect.*, an instrument for the measurement of small electric currents, in which the scale is graduated to read in thousandths of an ampere. Also *milammeter.*

milliamperage (mil″i-am-pār′āj), *n.* [L. *mille*, a thousand, + E. *amperage.*] In *elect.*, current strength expressed in milliamperes, or thousandths of an ampere.

milliamperemeter (mil″i-am-pār′mē-tėr), *n.* Same as ★*milliammeter.*

millicalory (mil′i-kal″ō-ri), *n.* [L. *mille*, a thousand, + E. *calory.*] The calory; a gram-calory.

millicoulomb (mil′i-kö-lom″), *n.* [L. *mille*, a thousand, + E. *coulomb.*] A thousandth of a coulomb, or 1×10^{-4} c. g. s. units: a practical unit of electrical quantity or charge.

millième (mēl-yām′), *n.* [F., < L. *millesimus*, thousandth.] A current subsidiary coin of Egypt and the Soudan, equal to one tenth of a piaster.

> The subsidiary coinage consists of pieces of 20, 10, 5, 2, and 1 piastres in silver; 5, 2, and 1 *milliemes* in nickel; and ½ and ¼ *millieme* in bronze. *Encyc. Brit.*, XXVII. 700.

milligauss (mil′i-gous), *n.* [L. *mille*, a thousand, + E. *gauss.*] In *elect.*, a practical unit of magnetic induction equal to a thousandth of one gauss or of one c. g. s. electromagnetic unit.

milligilbert (mil′i-gil-bėrt), *n.* [L. *mille*, a thousand, + E. *gilbert.*] In *elect.*, a practical unit of magnetomotive force equal to one thousandth of a gilbert or of one c. g. s. unit.

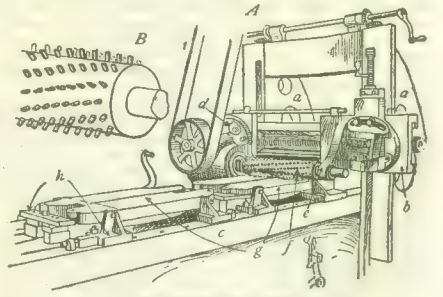
milligrade (mil′i-grād), *a.* [L. *mille*, a thousand, + *gradus*, step. See *centigrade.*] Divided into a thousand degrees: as, a *milligrade* scale. *Bentham.*

millihenry (mil′i-hen-ri), *n.*; pl. *millihenries* (-riz). [L. *mille*, a thousand, + E. *henry.*] In *elect.*, a practical unit of inductance equal to one thousandth of a henry. Also *milhenry.*

millim (mil′im), *n.* [*millim(eter).*] A millimeter; the third metret or decimal submultiple of a meter in the scheme of magnitudes devised (about 1860) by G. J. Stoney, F. R. S. The decim or decimeter is the first metret, the centim the second. See ★*metro* and ★*metret.*

> The third subsection w, from *millims* (millimeters) down to tenths of a micron, covers the entire range of the microscope. *Smithsonian Rep.*, 1899, p. 213.

millimeter, *n.*—**Circular millimeter.** See ★*cross-section units.*



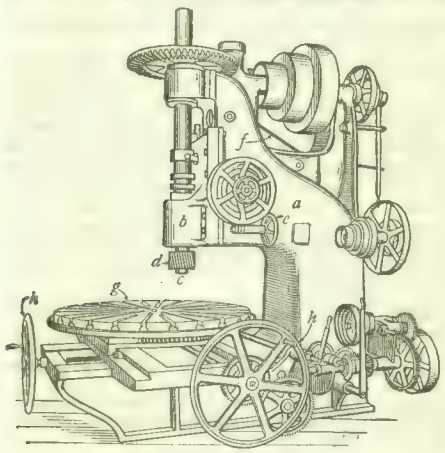
millimicrohm (mil′i-mik-rōm), *n.* [L. *mille*, a thousand, + E. *microhm.*] A c. g. s. unit of resistance: 1×10^{-9} ohms. *H. DuBois*, The Magnetic Circuit, p. 306.

millimicron (mil′i-mī-kron), *n.* [L. *mille*, a thousand, + *μικρός*, small (see *micron*).] A unit of length ($\mu\mu$) equal to 10 Ångström units, .001 micron, or .000001 millimeter: used in spectroscopy for stating wave-lengths of light. It is equal to and sometimes called a micromillimeter. *C. Hering*, Conversion Tables, p. 31.

millimol (mil′i-mol), *n.* [L. *mille*, a thousand, + E. *mol(ecule).*] In *phys. chem.*, the one thousandth part of a gram-molecule, an amount of any element or compound whose weight in milligrams is numerically equal to the molecular weight of the substance. *C. Hering*, Conversion Tables, p. 60.

Milling blue, green, orange, red, scarlet, yellow. See ★*blue,* etc.—**Process milling,** milling of wheat to make flour by one of the processes invented for that purpose.

milling-attachment (mil′ing-a-tach″ment), *n.* A milling-machine combined with other machine-tools, such as a boring-machine, a drilling-machine, or a planer. The most simple of these



Planer Milling-attachment.

A, planer; *B*, milling-cutter with inserted teeth; *a*, housing of planer; *b*, cross-rail; *c*, traveling-bed; *d*, milling-attachment bolted to tool-saddle of cross-rail; *e*, out-board support for spindle of milling-attachment; *f*, milling-cutter; *g*, work (slabs) in vises secured to traveling-table of planer; *h*, vises; *i*, temporary belt delivering power to milling-attachment.

attachments is a bracket-table fixed to the side of a lathe and next to the live-head. The lathe-spindle, extending over the work on the table, becomes the horizontal spindle of the milling-machine to which any horizontal type of cutter can be fixed. Combined boring-, drilling-, and milling-machines are of many forms, and among them are included many of the largest and most powerful machines used in modern machine-shops.—**Planer milling-attachment,** a small milling-machine attached directly to the planer-rail in place of the usual cutting-tool. The spindle may be horizontal or vertical, and within certain limits any form of cutter may be employed. The traveling-bed of the planer is used as the feed-table, and as it has a very long traverse several pieces of work may be placed upon it in a line to pass in turn under the cutter, with great economy of time and labor. Thin or long and narrow pieces of work can also be clamped together side by side and, with suitable cutters, all may be milled at the same time. These milling-attachments may also be in pairs on the same planer and cut two sides of the work at the same time. See cut.

milling-cutter, *n.* 2. A cutting-tool adapted for use in a milling-machine. Milling-cutters are made in a great variety of forms and are used for many purposes. Many are in the form of cylinders, with the cutting edges placed in straight or spiral lines along the sides of the cylinder or radially at the end, when they are called *end-mills.* Others are disks, with the blades on the edge and sides of the edge, or, as in circular saws, with the blades on the edge only, as in the screw-slotting cutter. Others, called *face-cutters,* have the blades placed radially at the end of the shank.

milling-machine, *n.* 1. This name, originally given to a simple form of metal-finishing machine, is now

Large Vertical Milling-machine.

a, frame supporting spindle; *b*, vertical sliding support for spindle; *c*, spindle; *d*, milling-cutter; *e*, control of sliding support to adjust cutter to work; *f*, cable to counterweight for sliding support, counterweight inside the frame; *g*, table for work with rotary, cross, and longitudinal feed having hand or power control; *h*, *h*, control of feed.

applied to a large and important class of tools ranging in size from a small bench-machine to large and powerful machines employed upon the massive pieces of metal used in constructing motors and machinery. Milling-machines having two spindles are called *duplex millers.* Single-spindle machines may also employ several cutters and are then *gang* or *multiple millers.* Special forms of milling-machines are also made which employ the general form of the lathe and the planer. The milling-machine has largely occupied the field of the planer, shaper, and slotting-machine, and has made it possible to finish or machine metal forms hitherto not attainable at all or only by means of slower and more expensive tools. It has thus greatly modified all machine-shop practice and made it possible to finish the many novel and complicated forms now demanded in the metal industries. See *profiling-machine.*—**Boring-, drilling-, and milling-machine.** See ★*boring-machine.*—**Plain milling-machine,** a milling-machine consisting of a standard which supports a horizontal or vertical spindle (operated by suitable belting or gearing) to which some form of revolving cutter, called a *milling-cutter,* may be attached. Beneath the spindle is a feed-table to which the piece of metal to be milled or machined is fixed. The action of the machine is a combination of the revolution of the cutter and the movement of the feed-table which pushes the work against it. The serrations or teeth of the cutter chip or cut off minute shavings of metal as the work passes under it. Since the cutters have a great variety of forms the machine is adapted to a wide range of work. Such machines are divided into two classes, those having horizontal and those having vertical spindles. See ★*milling-cutter.*—**Universal milling-machine,** a milling-machine fitted with longitudinal, cross, and revolving feeds, in which boring, drilling, gear-cutting, milling, etc., can be done by rotating cutters or mills.

milling-saw (mil'ing-sâ), *n.* A milling-cutter resembling a large circular saw used in cutting hot or cold metals. Hot iron is cut at a high and cold iron at a low speed.

milliograph (mil'i-ō-grȧf), *n.* Same as ★*milleograph.*

millionairedom (mil-yon-ãr'dum), *n.* Millionaires collectively; the state of being a millionaire; millionairism.

millionairism (mil-yon-ãr'izm), *n.* The state of being a millionaire.

Your millionaire, for example,—and *millionairism* is getting so common as to be almost vulgar,—your millionaire never tires of telling you how he worked the multiplication table until cents became dimes.
E. Eggleston, Faith Doctor, v.

millionary, *a.* 2. Possessing millions (of dollars, or pounds, etc.).

All this to feed the avidity of a few *millionary* merchants. *Jefferson,* Writings, IV. 284. *N. E. D.*

He had a dread that these *millionary* people, with wasteful private cars, might take undue interest in his companion. *R. Kipling,* Captains Courageous, ix.

millisavart (mil'i-sa-värt″), *n.* [L. *mille,* a thousand, + E. *savart.*] In *acoustics,* an interval pitch equal to one thousandth of a savart.

In acoustics it is common to measure large intervals of pitch in octaves and smaller ones in "commas." M. A. Guillemin proposes to adopt instead of these units the savart and the *millisavart.* By the savart is meant an interval of ten to one, which equals three octaves plus a major third. The *millisavart,* which is the thousandth part of the savart, represents the interval between two French standard diapasons giving one beat per second.
Nature, Aug. 21, 1902, p. 398.

millivoltmeter (mil'i-vōlt-mē″tėr), *n.* [L. *mille,* a thousand, + E. *voltmeter.*] In *elect.,* a direct-reading instrument for the measurement of small differences of potential, in which the scale is graduated to read in thousandths of a volt.

milliweber (mil'i-vā″bėr), *n.* [L. *mille,* thousand, + *weber.* See *weber.*] The thousandth part of a weber.

mill-lands (mil'landz), *n. pl.* Certain lands which by legal custom appertained to a corn-mill, especially in Scotland. *N. E. D.*

mill-leat (mil'lēt), *n.* An artificial channel for the conveyance of water to a mill. *N. E. D.*

millocracy (mi-lok'ra-si), *n.* [See *millocrat.*] Mill-owners as a ruling or dominant class.

In hydra-wrestle, giant '*Millocracy*' so-called, a real giant, though as yet a blind one and but half-awake, wrestles and wrings in choking nightmare.
Carlyle, Past and Present, III. 1.

mill-pick, *n.* 2. Same as *pickax.*

mill-pile (mil'pīl), *n.* A number of puddling-bars charged together into a reheating- or balling-furnace. They are heated to a welding temperature and then passed through the rolls, by which they are welded together and a new bar is formed from the pile.

mill-planed (mil'plānd), *a.* Planed, as a board or plank, in a power-mill. A mill-planed board is not considered as finished for any purpose requiring smoothness, but should be worked over by hand.

mill-power (mil'pou″ėr), *n.* A unit of water-power the value of which varies in different localities. For example, at Holyoke, Massachusetts, it is equivalent to 38 cubic feet of water per second discharging under a head of 20 feet; at Minneapolis, Minnesota, it is equivalent to 30 cubic feet of water per second discharging under a head of 22 feet. *Trans. Amer. Soc. Mech. Engin.,* XXIV. 983.

mill-run (mil'run), *n.* 1. The work of an amalgamating-mill between two clean-ups.—2. A test of a given quantity of ore by actual treatment in a mill.

mill-saw (mil'sâ), *n.* A straight saw placed in a gate or frame which is given a reciprocating motion; one of the saws in a gang-saw. See cut under *saw*[1], 1.

mill-staff (mil'stȧf), *n.* A staff used to test the flatness of the face of a millstone.

millstone-hoist (mil'stōn-hoist), *n.* A hoisting-screw or -jack for lifting and handling millstones.

mill-table (mil'tā″bl), *n.* Same as ★*roller-table.*

mill-worked (mil'wėrkt), *p. a.* Same as ★*mill-dressed.*

milo (mē'lō), *n.* [Hawaiian and Samoan *milo* = Tahitian, Mangarevan, etc., *miro,* name of several trees.] In Polynesia, *Thespesia populnea,* a widely spread tropical tree belonging to the mallow family, with broadly ovate, entire, pointed leaves, and showy yellow hollyhock-like flowers which change to a purplish-pink color on withering. The heart-wood, which is hard, smooth-grained, and durable, is used by the Hawaiians for making bowls, or 'calabashes,' for holding poi. The Samoans use it in boat-building. Also called *Polynesian rosewood.* See *Thespesia* (with cut) and ★*banalo.*

milpa (mil'pȧ), *n.* [Mex. Sp., < Nahuatl *milpan,* in the country; *milli,* a cultivated field.] 1. Among the ancient Aztecs, a garden-bed assigned out of the communal land to a particular family. *Ratzel* (trans.), Hist. of Mankind, II. 131.—2. A cultivated field, especially a field of maize. [Mexico.]

Miltonism (mil'ton-izm), *n.* A peculiarity of Milton's style or an imitation of it.

Cowper's blank verse detains you every step with some heavy *Miltonism;* Chapman gallops off with you his own free pace. *Lamb,* Letters, CXIX. 238.

Miltonist (mil'ton-ist), *n.* A supporter of John Milton, especially of his views on divorce.

A party, distinguished by the name of *Miltonists,* attested the power of his pen, and gave consequence to his pleading for divorce. *Symmons,* Life of Milton, p. 250.

Miltonize (mil'ton-īz), *v. t.* and *i.*; pret. and pp. *Miltonized,* ppr. *Miltonizing.* [*Milton* + *-ize.*] To render Miltonic in character or style; to imitate Milton's style.

Mr. Johnstone has conscientiously gone to Milton for his model, and *Miltonises* as best he may. The metre is a faint Miltonic echo. *The Academy,* April 4, 1903, p. 336.

miltos (mil'tos), *n.* [Gr. *μίλτος,* red lead, minium.] Minium, a red earth found in the Cyclades, from which the ancients made the red paint so common in their decorations.

milt-pain (milt'pān), *n.* A disease of swine.

milt-sickness (milt'sik″nes), *n.* A disease of the spleen in cattle.

mimaluse (mim'a-lös), *a.* and *n.* [Chinook jargon, also *mimaloose, memaloose,* dead, to die (*mimaluse illahee,* a cemetery, a sepulcher); < Chinook *imemalus,* a dead person.] **I.** *a.* Dead. [Columbia River, Washington, and British Columbia.]

II. *n.* A dead body.

M. I. M. E. An abbreviation (*a*) of *Member of the Institute of Mechanical Engineers;* (*b*) of *Member of the Institute of Mining Engineers.*

M. I. Mech. E. An abbreviation of *Member of the Institute of Mechanical Engineers.*

mimeograph (mim'ē-ō-grȧf), *v. t.* To multiply (copies of a writing or document) by means of a mimeograph; manifold by the use of a mimeograph.

mimesid (mī-mes'id), *n.* and *a.* **I.** *n.* A member of the hymenopterous family *Mimesidæ.*

II. *a.* Having the characters of, or belonging to, the family *Mimesidæ.*

mimesis, *n.* 3. The occurrence of symptoms, without organic basis or in the course of some disease, which simulate those of another disease.

Mimetic resemblance. See ★*resemblance.*

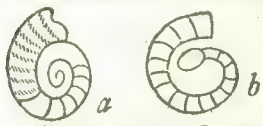
mi-mi (mī'mī), *n.* Same as ★*mia-mia.* [Australia.]

mimiambi (mim-ī-am'bī), *n. pl.* [L., < Gr. *μιμίαμβοι,* pl., < *μῖμος,* mime, + *ἰαμβος,* iambus. See *iambic.*] Mimes composed in iambic verse: as, the *mimiambi* of Herondas.

mimiambic (mim-ī-am'bik), *a.* [*mimiambi.*] Pertaining to or having the characteristics of mimiambi; being a writer of mimiambi: as, a *mimiambic* poet.

mimicry, *n.*—**Aggressive mimicry,** the resemblance of certain predaceous and parasitic insects to the insects on which they prey. Examples are abundant in the tropics, where certain spiders mimic the ants on which they prey. *Volucella* and *Psithyrus* mimic the bees on which their larvæ feed.—**Batesian mimicry.** See ★*Batesian.*—**Müllerian mimicry,** synaposematic resemblance. See ★*resemblance.*

miminy-piminy (mim″i-ni-pim'i-ni), *a.* and *n.* [Arbitrary and imitative.] Absurdly precise, delicate, or over-refined; finicking; niminy-piminy; also, something that exhibits these traits.



She went and dropped her curtsey at the parlour door, and in a *miminy piminy* voice said she was come to make her submission, and would he forgive her, and give her another trial? *C. Reade,* Hard Cash, xxx.

It is a tortuous, tottering, wriggling, fidgetty translation of every thing from the vulgar tongue, into all the tantalizing, teasing, tripping, lisping *mimminee-pimminee* of the highest brilliancy and fashion of poetical diction.
Hazlitt English Poets, viii.

mimoceracone (mim-ō-ser'a-kōn), *n.* [*Mimoceras,* a genus of cephalopods, + Gr. *κῶνος,* a cone.] A cone or shell like that of the cephalopod genus *Mimoceras,* that is, loosely coiled in a spiral and straight for a short distance at the initial end: an elementary expression in the development of genera of the *Ammonoidea.*

mimoceran (mī-mos'e-ran), *a.* [*Mimoceras* + *-an.*] Pertaining to or having the characters of the genus *Mimoceras.*

Mimoceras (mī-mos′e-ras), *n.* [NL., < Gr. *μῖμος*, imitator, + *κέρας*, horn.] A genus of ammonoid cephalopods regarded as of extremely primitive character. Its shell is coiled in a spiral and the initial whorl is free from the next. It is of Lower Devonian age.

Mimoceras compressus, Beyr. sp. Lower Devonian; Wissenbach, Nassau.
a, natural cast; *b*, nepionic individual enlarged.
(From Zittel's "Palæontology.")

mimography (mī-mog′ra-fi), *n.* [Gr. *μῖμος*, a mimic, + *-γραφία*, < *γράφειν*, write.] **1.** The art of writing gesture-language by means of conventional pictorial symbols: designed for recording the gestures used by the deaf and dumb, or of primitive tribes that use gesture-language.—**2.** Writing which consists of symbols that represent gesture-language.

mimophyre (mim′ō-fīr), *n.* [Gr. *μῖμος*, a mimic, + E. (*por*)*phyr*(*y*).] In *petrog.*, a name suggested by Brongniart (1813) for porphyritic volcanic tuffs, and for porphyritic metamorphic rocks which resemble porphyries or porphyroids.

Mimosa, *n.* **3.** [*l. c.*] Same as *thiazol* ★*yellow*.

mimosaceous (mī-mō-sā′shius), *a.* Belonging to the plant family *Mimosaceæ*; resembling or having the characters of the mimosa.

Mimosella (mī-mō-sel′ä), *n.* [NL., < *Mimosa* + dim. *-ella*.] The typical genus of the family *Mimosellidæ*. *Hincks*, 1851.

Mimosellidæ (mī-mō-sel′i-dē), *n. pl.* [NL., < *Mimosella* + *-idæ*.] A family of ctenostomatous gymnolæmatous polyzoans, having the movable deciduous zoœcia contracted below, with an aperture on the ventral side. It contains the single genus *Mimosella*.

mimosis (mī-mō′sis), *n.* [NL., < *μῖμος*, a mimic, + *-osis*.] Same as *mimesis*.

mimotannic (mī-mō-tan′ik), *a.* [*mimo*(*sa*) + *tannic*.] Pertaining to the tannin derived from the mimosa.—**Mimotannic acid**, a variety of tannic acid found in mimosa, acacia, and similar species of plants.

mimsey (mim′zi), *a.* [*mim*, *a.* Cf. *flimsy*.] Prim; prudish; contemptible. *Eng. Dial. Dict.*

mimsy (mim′zi), *a.* [A nonsense-formation, < *mi*(*serable*) + (*fli*)*msy*.] Miserable and flimsy: a ★blend-word, or ★brunch-word (which see). *Lewis Carroll*, Through the Looking-glass, p. 128.

Min. An abbreviation of *minister*.

Mina[3] (mī′nä), *n.* [NL. (Cervantes, 1824), named in honor of Francisco Javier *Mina* (1789–1817), a Spanish soldier, killed in Mexico.] A genus of plants of the family *Convolvulaceæ*, closely related to *Ipomœa* and *Quamoclit*. *Mina lobata* of the gardens, a native of Mexico, is a twining herb with cordate 3-lobed leaves and small flowers in scorpioid clusters, the bag-shaped corolla of which is a rich crimson when it first opens, but changes to yellow.

minacciando (mi-nät-chē-än′dō), *a.* [It., ppr. of *minacciare*, menace: see *menace*, *v.*] In *music*, threatening: noting passages to be so rendered. Also *minaccioso*.

minaccioso (mi-nät-chē-ō′sō), *a.* [It., < *minaccio*, a menace: see *menace*, *n.*] In *music*, same as ★*minacciando*.

minage (mē-näzh′), *n.* [F. and OF. *minage*, < *mine*, a measure of grain, < L. *hemina*, < Gr. *ἡμίνα*, a Sicilian measure.] In French use, formerly: (*a*) The measurement of grain by the 'mine' (a measure somewhat less than two bushels). (*b*) The selling of grain by the 'mine.' (*c*) A tax exacted from the tenant by his lord upon the amount of grain produced. (*d*) A tribute paid upon grain. *Kidd*, Social Evolution, p. 222, note.

minah (mī′nä), *n.* [E. Ind.] In the peninsula of India, a stambha, especially one built of masonry. Compare *lat*[6].

minargent, *n.* **2.** A trade-name of several alloys intended for ornamental use. One of them consists of copper alloyed with nickel, aluminium, and tungsten.

minchiate (min-ki-ä′tā), *n.* [It., pl.] A card-game chiefly played in Tuscany, a modification of tarot; also, as plural (the original use), the cards used in the game. *N. E. D.*

mind[1], *n.*—**Social mind**, the concurrent feeling, agreeing thought, and concerted volition of two or more individual minds. *Giddings*, Prin. of Sociol., p. 132.

mind-blindness (mīnd′blīnd″nes), *n.* Inability to recognize the visual impressions of external objects conveyed to the brain by functionally sound organs of vision.

mind-curist (mīnd′kūr″ist), *n.* One who believes in mind-cure; one who holds the doctrine that mental influence is the only or the chief cure for bodily ills.

A clear and adequate reason may be given to explain why that psycho-physiological transformation and the advent of Faith should be conditioned, or at least greatly facilitated, by self-surrender understood in the sense of a relaxation of the deeper, the unconscious, will—that kind of giving up, of relaxation, which the *Mind-Curist*, the Christian Scientist and the Hypnotizer, wisely attempt to bring about in their subjects by way of preparation.
Amer. Jour. Relig. Psychol. and Education, May, 1904, [p. 80.

mind-deafness (mīnd′def″nes), *n.* Same as *mental* ★*deafness*.

mindlessness (mīnd′les-nes), *n.* The condition of being devoid of mind or intelligence; absence of mind.

God created the world. The question between faith and science even now is not whether the universe was created by Mind. If it requires Mind to construe the universe, could *mindlessness* have constructed it?
W. Alexander, Primary Convictions, v. 12.

mine[2], *n.* **1.** Specifically, in *Scotch mining*: (*a*) The underground works of a colliery or metalliferous working. (*b*) A drift or roadway from the surface, either level or on the slope of the seam. (*c*) A mine passage in rock: usually qualified, as stone-*mine*, cross-cut *mine*, etc.—**Back-set mine.** See ★*back-mine*.—**Buoyant mine.** See *submarine* ★*mine*.—**Contact mine.** See *submarine* ★*mine*.—**Dormant mine.** See *submarine* ★*mine*.—**Electro-contact mine.** See *submarine* ★*mine*.—**Floating mine**, an explosive mine that floats on or near the surface of the water.—**Observation mine.** See *submarine* ★*mine*.—**Small mine**, the dust and small fragments of iron ore left from calcining iron ore in Staffordshire, England. See *mine*[2], 6.—**Submarine mine**, in naval warfare, a large charge of explosive in a water-tight casing placed under water at such a depth that, by its explosion, it may sink or seriously damage a vessel passing in its vicinity. Such mines are of two principal classes: *contact mines*, designed to explode by contact with the vessel; and *observation mines*, designed to explode, at the will of an operator on shore, by the closing of an electric circuit connected to the mine when he observes an enemy's vessel passing over it. An *electro-contact mine* is controlled by an electric circuit by which its condition can be tested and by which it can be made temporarily inoperative for the passage of friendly vessels. Mines are also distinguished as *ground-mines*, which rest on the bottom; and *buoyant mines*, which are anchored to the bottom but remain suspended in the water below its surface by their buoyancy. *Dormant mines* are contact mines which are ordinarily held down to the bottom, but which can be released at the will of an operator on shore, and then become buoyant mines. Submarine mines are arranged systematically in groups in harbors and channels, and such a group is called a *mine-field*.—**Submerged mine.** Same as *contact mine* (which see, under ★*mine*[2]).

mine-car (mīn′kär), *n.* A small car used in mines for bringing ore or coal to the surface.

mine-dust (mīn′dust), *n.* Screenings of calcined ironstone. [Scotch.]

mine-field (mīn′fēld), *n.* A body of navigable water in which submarine mines are anchored for the purpose of preventing an enemy's ships from entering a channel, harbor, or roadstead; also, the group of mines itself. The mines may be so arranged that they can be exploded from a station on shore or may be contact mines which explode on being struck by a vessel. The mines are charged with guncotton or some other very powerful explosive. See *submarine* ★*mine*.

mine-master (mīn′mȧs″tėr), *n.* **1.** One who is charged with the laying of military mines.—**2.** The superintendent of a mine.

mine-pig (mīn′pig), *n.* Pig-iron made from mine or ore, as distinguished from cinder-pig. *N. E. D.*

miner, *n.* **1.** The term is sometimes limited to one who mines for minerals other than coal, a coal-miner being called a *collier* in Great Britain.—**Miners' anemia.** See ★*anemia*[1].—**Miners' asthma, lung, phthisis.** Same as *anthracosis*.—**Miners' disease.** Same as ★*ancylostomiasis*.—**Miners' elbow, horn.** See ★*elbow*, ★*horn*.—**Miners' nystagmus.** See *nystagmus*.—**Miners' right.** See ★*right*.—**Miners' worm.** See ★*worm*.—**Miners' worm disease.** See ★*ancylostomiasis*.

mineral. **I.** *n.* **3.** In *mining*, ore.—**Bathgate mineral.** Same as *Boghead coal*.—**Contact mineral**, a mineral characteristically developed along the contact of an igneous intrusion and its walls, such as vesuvianite and garnet in limestones, andalusite in slates.—**Critical mineral**, in *petrog.*, in the quantitative classification of igneous rocks, an abnormative mineral present in a rock in notable amount, that is, in sufficient amount to render the mode of the rock ★abnormative (which see).—**Green mineral**, malachite.—**Orange mineral**, an oxid of lead, of a bright orange color, which has the chemical formula Pb_3O_4. It has the same chemical composition as red lead, but is finer in texture and more brilliant in color. It is made by oxidizing white lead in a reverberatory furnace, while red lead is made by oxidizing metallic lead in a similar way.

II. *a.*—**Mineral jelly**, a hydrocarbon obtained in the distillation of crude petroleum.

The *mineral jelly* is a hydrocarbon having the formula $C_{16}H_{24}$, and is obtained by the fractional distillation of crude petroleum oil at a temperature of over 200° C.
Encyc. Brit., XXXII. 23.

mineralize, *v. t.* **2.** To impregnate with mineral substances, as metallic salts: thus, the water of a particular spring may be spoken of as more or less strongly *mineralized*.—**3.** In *mining*, to introduce, in solution or otherwise, a new mineral or ore into (surroundings where it did not previously exist, as, for example, into a fissure or into shattered or porous rock). The rock is then said to be *mineralized*.

On the other hand, it is certainly most remarkable that so little auriferous quartz has been found; at the time of my visit hundreds of quartz claims had been staked, but very few had been shown to contain any gold whatever; neither do the quartz boulders of the White Channel appear to be auriferous, or even *mineralized*.
Pop. Sci. Mo., July, 1902, p. 235.

Mineralizing agent, in *petrog.*, a volatile substance, such as water vapor, chlorin, fluorin, or boric acid, which, while not actually entering into the composition of a given mineral, facilitates its crystallization. It is believed by some petrographers, especially the French, that mineralizing agents are necessary to the crystallization of the highly silicious rocks, such as granite. The exact rôle played by the substances in question is not as yet understood.

mineralizer, *n.* **2.** In *petrog.*, a dissolved gas in an igneous magma which promotes crystallization, or leads to the production of particular minerals which contain the elements of the gas, such as boron, chlorin, fluorin, hydrogen. Compare ★*crystallizer*, 2.

mine-run (mīn′run), *n.* The entire unscreened output of a coal-mine.

minervite (mi-nėr′vīt), *n.* [*Minerve* (see def.) + *-ite*[2].] A hydrous aluminium phosphate which occurs in soft plastic masses in the Grotte de Minerve, valley of the Aude, France.

mine-tin (mīn′tin), *n.* Tin ore or tinstone extracted directly from the solid rock: opposed to *stream-tin*, which is obtained by washing the gravel and sand of the beds of streams.

mingles (ming′glz), *n. pl.* In *mining*, iron frames or standards carrying the pillow-blocks of pit-head pulleys. Also *maidens*. *Barrow-man*. [Scotch.]

mingo[1] (ming′gō), *n.* [Origin obscure.] A name of various fishes of the family *Monacanthidæ*.—**Long mingo**, a common name of *Alutera punctata*, a fish of the family *Monacanthidæ*, known from the West Indies to Brazil.

mingo[2] (ming′gō), *n.* [A variant of *mungo*[1].] A kind of shoddy with short fibers. *Encyc. Brit.*, I. 176.

Ming porcelain. See ★*porcelain*[1].

minha (min′hä, min′ċhä), *n.* [Heb., a present, an offering.] The second of the three daily services in the Jewish liturgy; the afternoon prayer.

minhag (min′bäg), *n.*; pl. *minhagim* (min-hä′gēm). [Heb., < *nahag*, drive, go along the road, behave.] Conduct; usage; custom: applied to religious practices and customs which, though not based upon scriptural injunctions, have come to be considered binding.

miniaceous (min-i-ā′shius), *a.* [L. *miniaceus*, cinnabar-red. See *minium* and *miniate*.] Vermilion in color; miniate. *Dana*, Zoöph., p. 643.

miniator (min′i-ā-tor), *n.* [*miniate*, *v. t.*] One who miniates or paints with vermilion, as a manuscript; an illuminator; a miniaturist.

minification (min-i-fi-kā′shon), *n.* [*minify* (*-fic-*) + *-ation*.] The act or result of minifying; reduction in size: opposed to *magnification*.

In the instrument upon the table the eye-piece has a magnifying power of 10—that is to say, a magnifying power which exactly balances the ten-fold *minification* before spoken of.
Jour. Roy. Micros. Soc., June, 1904, p. 281.

minimal, *a.* **2.** Relating to the minimus or fifth digit of the hind foot.

The membrane attached to the ankle . . . is disposed to cross it by an oblique, raised fold and be secured to the *minimal*, *i. e.* little toe side.
H. Allen, Bats of North America, p. 2.

Minimal basis, in Kronecker's method of treating the theory of functions, a basis from which all possible factors have been removed so as to reduce it to its lowest possible order.—**Minimal surface.** See *surface*.

minimetric (min-i-met′rik), *a.* [*mini*(*m*) + Gr. *μέτρον*, measure, + *-ic*.] In *analyt. chem.*, relating to, or obtained by means of, the measurement of minims, as by counting the number of drops required to complete a reaction.

On the estimation of carbon monoxide and carbonic acid in vitiated air, by M. Ferdinand Jean. An application of the *minimetric* method to the examination of air, requiring no skilled manipulation in its use.
Nature, Nov. 13, 1902, p. 47.

minimifidian (min″i-mi-fid′i-an), *a.* and *n.* [L. *minimus*, least, + *fides*, faith.] Exhibit-

ing or requiring the smallest degree of faith: one who has the least faith. [Rare.]

And as we agree in the opinion that the *Minimi-fidian* party err grievously in the latter point, so I must concede to you, that too many Pædo-baptists (assertors of Infant Baptism) have erred, though less grossly in the former. *Coleridge*, Aids to Reflection, p. 284.

minimism (min'i-mizm), *n.* [L. *minim(us)*, least, + *-ism.*] In *theol.*, the disposition to minimize the implications of an accepted dogma; the minimizing view of what is involved in a dogma, especially that of papal infallibility. *N. E. D.*

The doctrine of *Minimism*, adopted by Newman from Bishop Fessler . . . gives liberty to the theologian to examine whether the Papal decree on any given point is or is not infallible.
William Palmer, Narr. Events, Suppl., iv. 278. *N. E. D.*

mining-case (mī'ning-kās), *n.* A frame in a gallery or shaft, made with four planks.

mining-engine (mī'ning-en″jin), *n.* 1. A man-engine.—2. Any engine used about a mine, as a hoisting-engine or mine-locomotive.

mining-locomotive (mī'ning-lō-kō̤″-mō″tiv), *n.* A small locomotive, built very low, usually operated by compressed air or electricity, and used for hauling cars in underground passages and mines.

mining-machine (mī'ning-ma-shēn″), *n.* A channeler; a machine for cutting coal.

mining-piece (mī'ning-pēs″), *n.* A coin struck from gold, silver, or copper ore worked in France, Germany, Russia, and Sweden. *W. C. Hazlitt.*

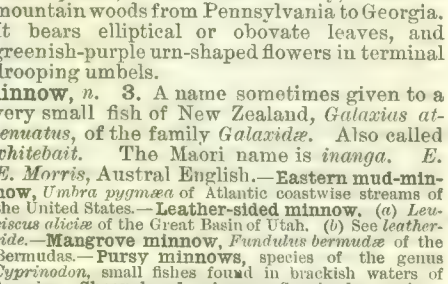
mining-pump (mī'ning-pump), *n.* A pump adapted for taking water from deep mines.

Minion chapel. See ★*chapel.*

ministrer (min'is-trėr), *n.* One who ministers or serves. *N. E. D.*

minjak, *n.* See ★*minyak.*

mink-frog (mingk'frog), *n.* A small spotted frog, *Rana septentrionalis*, of eastern North America: so called from its peculiar odor.



minkle (ming'kl), *n.* [An arbitrary modification of *minnow.*] A minnow. [Rare.]

The hum-bird shook his sun-touched wings around,
The bluefinch caroll'd in the still retreat;
The antic squirrel capered on the ground
Where lichens made a carpet for his feet:
Through the transparent waves, the ruddy *minkle*
Shot up in glimmering sparks his red fin's tiny twinkle.
J. R. Drake, Bronx, st. 4.

Minn. An abbreviation of *Minnesota.*

minnie-bush (min'i-bŭsh), *n.* A shrub, *Menziesia pilosa*, of the heath family, found in mountain woods from Pennsylvania to Georgia. It bears elliptical or obovate leaves, and greenish-purple urn-shaped flowers in terminal drooping umbels.

minnow, *n.* 3. A name sometimes given to a very small fish of New Zealand, *Galaxias attenuatus*, of the family *Galaxidæ*. Also called *whitebait.* The Maori name is *inanga.* *E. E. Morris*, Austral English.—**Eastern mud-minnow,** *Umbra pygmæa* of Atlantic coastwise streams of the United States.—**Leather-sided minnow.** (*a*) *Leuciscus aliciæ* of the Great Basin of Utah. (*b*) See *leather-side.*—**Mangrove minnow,** *Fundulus bermudæ* of the Bermudas.—**Pursy minnows,** species of the genus *Cyprinodon*, small fishes found in brackish waters of America.—**Sheepshead minnow,** *Cyprinodon variegatus*, a pœcilioid fish found in brackish water from Cape Cod to the Rio Grande.—**Silver-sided minnow,** *Leuciscus hydrophlox*, a cyprinoid fish found in the Salt Lake basin.—**Spot-tailed minnow,** the spawn-eater, *Notropis hudsonius.*—**Star-headed minnow,** *Fundulus nottii*, a pœcilioid fish inhabiting swamps and streams in Florida and the neighboring States.

Sheepshead Minnow (*Cyprinodon variegatus*).
(From Bulletin 47, U. S. Nat. Museum.)

Minoan (mī-nō'an), *a.* [Gr. Μινῷος, of Minos (< Μίνως, Minos), + *-an.*] Of or pertaining to Minos, the traditional monarch and lawgiver of Crete, and especially to the palace of Minos, a prehistoric edifice on the site of ancient Cnosus, in Crete, the excavation of which was begun by Arthur J. Evans in 1900.

Dr. Arthur Evans, F.R.S., explained his preliminary scheme for the classification and approximate chronology of the periods of *Minoan* culture in Crete, from the close of the Neolithic to the early Iron age. To the period as a whole it is proposed definitely to attach the name *Minoan*, as indicating the probable duration of successive dynasties of priest-kings, the tradition of which has taken abiding form in the name of Minos. It is proposed to divide this *Minoan* era into three main periods, early, middle, and late, each with a first, second, and third subperiod.
Nature, Oct. 6, 1904, p. 563.

Minoan period, that period of Cretan history and culture which extended from the close of the Neolithic to the early iron age, or from about 3500 B.C. to 1100 B.C. *A. J. Evans*, in Man, Nov., 1904, p. 172.—**Minoan pottery.** See ★*pottery.*

minor. I. *a.*—**Minor arc,** the arc on the opposite side of its chord from the center of the circle.

II. *n.*—**Complementary minor.** Same as *complementary determinant* (which see, under *determinant*).

minorat (mi-nō̤-rä'), *n.* [F., < NL. *minoratus*, < L. *minor*, younger.] The custom that prevailed in some European countries, and still survives in some parts of Germany and Austria, by which the youngest rather than the eldest possible heir had the succession. Compare *majorat.* Similar to *borough-English* (which see).

Minorca (mi-nôr'kạ), *n.* [From the island of *Minorca.*] A breed of domesticated fowls of the Mediterranean class, somewhat similar to the Leghorns, but longer-bodied and heavier. They are good table fowls, lay the year around, and are non-sitters.

Minorcan (mi-nôr'kạn), *a.* and *n.* I. *a.* Of or pertaining to Minorca, one of the Balearic islands.

II. *n.* An inhabitant of the island of Minorca.

Min. Plen. An abbreviation of *Minister Plenipotentiary.*

Min. Res. An abbreviation of *Minister Resident.*

M. Inst. C. E. An abbreviation of *Member of the Institute of Civil Engineers.*

minster-house (min'stėr-hous), *n.* The official residence of the canons of a cathedral. *Stand. Dict.*

M. Inst. M. E. An abbreviation (*a*) of *Member of the Institute of Mechanical Engineers;* (*b*) of *Member of the Institute of Mining Engineers.*

mint[1], *n.*—**Keeper of the exchange and mint.** Same as *master of the mint* (which see, under *mint*[1]).

mint[2], *n.*—**Apple mint.** See *apple-mint.*—**Balm-mint.** (*a*) See *balm*, 7. (*b*) The crisped or curled mint, *Mentha crispa.*—**Brandy-mint,** peppermint.—**Brown mint,** spearmint.—**Cross-mint,** the crisped or curled mint.—**Field-mint.** (*a*) The corn-mint. (*b*) The cat-mint or catnip, *Nepeta Cataria.*—**Fish-mint.** (*a*) The water-mint, *Mentha aquatica.* (*b*) The horsemint, *M. longifolia.* (*c*) The bergamot-mint, *M. citrata.*—**Lamb-mint.** (*a*) Peppermint. (*b*) Spearmint.—**Mountain mint.** (*a*) See *mountain-mint.* (*b*) The Oswego tea, *Monarda didyma.* (*c*) The wood-calamint, *Clinopodium Calamintha.*—**Round-leaved mint.** Same as *round-leaved horsemint.*—**Woolly mint,** *Mentha alopecuroides*, a white-woolly, leafy-stemmed perennial of the Old World, naturalized in the United States.

mintage, *n.* 4. A coin bearing the initial of a particular mint: thus the San Francisco mint is represented by a small S on the reverse.

minting-mill (min'ting-mil), *n.* A press suitable for coining: used in mints to make coins from bullion bars or blanks.

minuscular (mi-nus'kū-lăr), *a.* Pertaining to, or of the nature of, a minuscule; written in minuscules.

Alpha . . . Sometimes the two letters, of which the ω is almost always of that uncial form which resembles the *minuscular*, are hung by chains from the arms of the cross. *Schaff-Herzog*, Relig. Encyc. I.

minute[2], *n.* 2. (*b*) In *geom.*: (2) The sixtieth part of a degree of a perigon.—**Centesimal minute.** See *centesimal division*, under *centesimal.*—**Decimal minute.** See ★*decimal.*—**Horse-power minute,** one sixtieth of a horse-power hour.—**Metric horse-power minute,** one metric horse-power exerted for one minute; one sixtieth of a metric horse-power hour.—**Minute of the equator,** the sixtieth part of a degree of longitude measured on the parallel of the equator; the maximum value of a minute of longitude.—**Sidereal minute.** See *sidereal* ★*second.*

Minyadidæ (min-i-ad'i-dē), *n. pl.* [NL., < *Minyas* (*-ad-*) + *-idæ.*] A family of actinarian zoantharians which have the pedal disk transformed into an apparatus for floating. It includes the genera *Minyas*, *Dactylominyas*, *Acerominyas*, and *Phyllominyas.*

minyak (min'yäk), *n.* [Also (in G. or D. spelling) *minjak;* < Malay *minyak*, Dyak *minyak*, oil, balsam, resin.] Oil, fat, or resin: a Malayan word used in several phrase-names in different dialects, as *minyak lagam*, a balsam or oleoresin obtained from an unknown tree in Sumatra, and resembling gurjun balsam in character; *minyak-tengkawang*, a solid vegetable fat (also known as *Borneo tallow*) obtained from the fruit of various species of *Hopea* in Borneo and Sumatra, and used in soap- and candle-making.

minyan (mēn'yan), *n.*; pl. *minyanim* (mēn-yä'-nēm). [Heb., < *manah*, count, reckon.] In Jewish use, count; number; specifically, the number of ten males above thirteen years of age required for public worship and other religious practices in the synagogue.

Minyas (min'i-as), *n.* [NL., < Gr. Μινύας, a race of nobles at Orchomenos.] The typical genus of the family *Minyadidæ.* *Cuvier.*

Minytrema (mī-nit'rė-mä), *n.* [NL., < Gr. μινύς, small, + τρῆμα, hole.] A genus of suckers found from the Great Lake region to North Carolina and west to Texas.

Mioclænidæ (mī-ō̤-klē'ni-dē), *n. pl.* [NL.] A family of small ungulate mammals, of the suborder *Condylarthra*, containing a few species from the Lower Eocene of New Mexico. *Osborn and Earle*, 1895.

miogyrous (mī-ō̤-jī'rus), *a.* [Gr. μείων, less, + γῦρος. See *gyre.*] In *bot.*, rolled inward a little. *Jackson*, Gloss.

Miolithic (mī-ō̤-lith'ik), *a.* [Gr. μείων, lesser, + λίθος, stone, + *-ic.*] Relating or pertaining to the period intermediate between the Paleolithic and the Neolithic.

Miona bug. See ★*bug*[2].

miophone (mī'ō̤-fōn), *n.* [Gr. μείων, less, + φωνή, sound.] A microphonic instrument for the medical testing of the muscles. *Houston*, Elect. Dict., p. 426.

Miopliocene (mī-ō̤-plī'ō̤-sēn), *n.* [Gr. μείων, lesser, + E. *pliocene.*] In *geol.*, a term at one time applied to the Bolderian and Anversian divisions of the Tertiary system in Belgium, the fauna of which was supposed to indicate a mingling of Miocene and Pliocene forms.

miosis, *n.* (*c*) In *cytol.*, the reduction-process in organisms, including mitapsis (or synapsis) and the subsequent heterotypic and homotypic divisions. This process results in reducing to one half the number of chromosomes in the nuclei. *Farmer* and *Moore.* Improperly spelled *maiosis.* (*d*) Used by error or substitution for *myosis.*

miotherm (mī'ō̤-thėrm), *n.* [Gr. μείων, less, + θέρμη, heat.] A plant which inhabits cool temperate regions.

miotic (mī-ot'ik), *a.* [*miosis* (*miot-*) + *-ic.*] Noting or characterizing the stage in the life-history of an organism at which miosis or reduction occurs. *Farmer* and *Moore.*

miquelet (mik'ė-let), *n.* [F. *miquelet*, < Sp. *miquelete*, < *Miquelot*, a bandit chief.] In *Spanish hist.*: (*a*) A member of a body of Catalonian banditti who infested the Pyrenees in the 17th century. (*b*) A Spanish guerrilla soldier in the Peninsular War; also one of a corps of irregulars employed by Napoleon in 1808 against the Spaniards. (*c*) In modern Spain, the designation of the soldiers of certain local regiments of infantry, chiefly employed on escort duties. *N. E. D.*

Black Camisard and White Camisard, militiaman and *Miquelet* and dragoon, Protestant prophet and Catholic cadet of the White Cross, they had all been sabring and shooting.
R. L. Stevenson, Travels with a Donkey in the Cevennes, [p. 235.

mirabelle (mir-ạ-bel'), *n.* [F.] A plum, the fruit of *Prunus armenoides.* The Corsican mirabelle is the fruit of *Physalis alkekengi.* *Syd. Soc. Lex.*

Miracidium. Highly magnified.

miracidium (mī-ra-sid'i-um), *n.*; pl. *miracidia* (-ä). [NL., < Gr. μειρακίδιον, a little boy, dim. of μειράκιον, a boy (μεῖραξ, a girl).] The free-swimming larva of the liver-fluke. The body is ciliated and the larva swims about seeking for a definite mollusk, its future host, into which it bores its way by means of the snout, which, in certain species, is armed with a stylet.

The embryo . . ., which is designated a *miracidium*, is somewhat elongated in form, with a conical tip, and sometimes also a sharp boring spine at the anterior end.
Buck, Med. Handbook, VII. 863.

Miraculous berry. See ★*berry*[1].

miramolin (mi-ram'ō̤-lin), *n.* [Sp. *miramamolín*, a corruption of Ar. *amīru'l mūminīn*, 'Commander of the Faithful.'] The Emperor of Morocco. [Obsolete or archaic.]

Surely that grape-juice, bubbling at the stalk,
Is some gray scorching Saracenic wine
The Kaiser quaffs with the *Miramoline.*
Browning, Sordello, iii. 212.

mire-blob (mīr′blob), *n.* The marsh-marigold, *Caltha palustris*. Also *May-blob, horse-blob, water-blob*.

miric (mir′ik), *a.* [*m(agnesium)* + *ir(on)* + *-ic.*] In *petrog.*, in the quantitative classification of igneous rocks (see ★*rock*[1]), a term indicating that a rock magma is characterized by the presence of magnesia and ferrous oxid.

mirid (mir′id), *n.* and *a.* **I.** *n.* A member of the heteropterous family *Miridæ*.

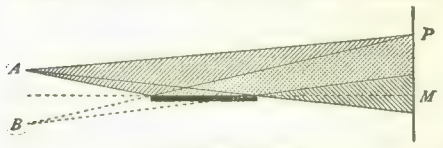
II. *a.* Having the characters of or belonging to the family *Miridæ*.

miriki (mē-rē-kē′), *n.* [Tupi *mirikí, murikí.*] A woolly monkey, *Eriodes arachnoides*, of eastern Brazil, having the thumb absent or imperfectly developed.

mirlic (mėr′lik), *a.* [*m(agnesia)*, + *ir(on)* + *l(ime)* + *-ic.*] In *petrog.*, in the quantitative classification of igneous rocks (see ★*rock*[1]), a term indicating that a rock magma is characterized by the presence of magnesia, ferrous oxid, and lime.

mirliton (mėr-lē-toṅ′), *n.* [F.; origin obscure.] 1. A kind of toy flute. See *kazoo*.—2. The chayote, *Chayota edulis*. [Louisiana.]

mirnyong (mėrn′yong), *n.* [Also *mirrnyong;* aboriginal Australian.] A shell-mound or shell-heap of the natives of Australia and Tasmania. *E. E. Morris*, Austral English.



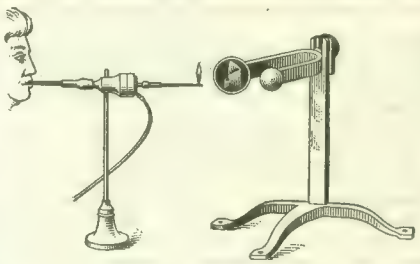
Australia: numerous *mirrnyongs* (ash-heaps, shell-mounds, &c.) mainly confined to the eastern and southern regions. *Keane*, Ethnology, p. 94.

miro[2] (mē′rō), *n.* [Maori *miro.*] A bird of the genus *Miro*, two or three species of which are found on Chatham Island and in New Zealand, where they are called *robins*. Also called *miro-miro*.

mirobia (mē-rō′bi-ą), *n.* The local name in the harbor of Valetta, Malta, for an oscillation with a period of 20 minutes and an amplitude of 14 meters: probably a tidal seiche controlled by the average depth of the Mediterranean Sea off the harbor.

mirograph (mir′ō-graf), *n.* [Irreg. < L. *mirari*, admire, + Gr. *γράφειν*, write.] In *photog.*, a form of cinematograph in which the intermittent movement of the film is effected by means of a disk provided with an eccentric flange which engages a notch in the film. Rotation of the disk is secured by a crank and gearing.

mirror, *n.*—**Achromatic mirror stereoscope.** See ★*stereoscope*.—**Dentists' mirror,** a small looking-glass with a long handle for insertion into a patient's mouth in the examination of the teeth.—**Fresnel's mirrors,** mirrors for the production of interference of light by reflection. The usual arrangement consists of two plane mirrors, set at an angle with each other slightly less than 180°, which reflect overlapping beams of light to a screen with such difference of path as to give interference fringes. Three mirrors, known as *Fresnel's three mirrors*, are also used.—**Laryngeal mirror,** in *phonetics*, a small circular mirror set upon a light wooden handle, used for observation of the larynx during action of the vocal cords.—**Lloyd's single mirror,** a mirror of polished metal, or of black glass, for displaying interference bands by the mutual action of direct and reflected light. The light is



Lloyd's Single Mirror.
A, direct light; *B*, reflected light; *M*, plane of mirror; *P*, interference band.
(From Preston's "Theory of Light.")

reflected at a nearly grazing incidence. *T. Preston*, Theory of Light, p. 122.—**Mercury mirror.** (*a*) A level surface of mercury: used as a mirror in astronomical observations. (*b*) A glass backed with an amalgam of tin or silver.—**Revolving mirror,** a device extensively used in the study of periodic phenomena of high frequency, such as the oscillations of an electric spark, the fluctuations in brightness of an alternating-current arc, or the changes of pressure at the node of a set of standing sound-waves. It consists of a plane mirror or symmetrically arranged set of such mirrors capable of revolving about a central axis parallel to the faces of the mirrors. The method depends upon persistence of vision.—**Rüdorff mirrors,** two small mirrors placed on either side of the screen in the sight-box of a photometer, at an angle to each other of 120–140°, and presenting the two sides of the screen simultaneously to the eye. Erroneously attributed to Rüdorff.

mirror-barometer (mir″ėr-bą-rom′e-tėr), *n.* A mercurial barometer with a small mirror which is moved by the mercury and indicates the height of the column by reflected light.

mirror-box (mir′ėr-boks), *n.* A device used in testing many grass seeds, consisting of a box open on one side and fitted with an adjustable mirror which throws the light upward through a pane of glass upon which the seeds are placed. This makes it possible to discern the presence or absence of seeds within the glumes.

mirror-fork (mir′ėr-fôrk), *n.* A tuning-fork having a small mirror attached to one or both of the tines, used for the observation or projection of Lissajous's curves, for the observation of the flame of a manometric capsule, etc. *Scripture*, Exper. Phonetics, p. 270.

Mirror-fork and manometric flame.

mirror-glass (mir′ėr-glàs), *n.* Glass suitable for mirrors. See ★*mirror-plate*.

mirrorize (mir′ėr-īz), *v. t.*; pret. and pp. *mirrorized*, ppr. *mirrorizing*. To reflect in, or as in, a mirror. [Rare.]

mirror-knob (mir′ėr-nob), *n.* A head or disk of glass, metal, or pottery attached to a long screw or spike, formerly inserted into a wall to form a rest for a mirror or picture-frame. The metal knobs were frequently embellished with painted or enameled medallions, while those of glass were usually pressed into decorative patterns.

mirror-photography (mir′ėr-fō-tog″rą-fi), *n.* Same as ★*multiphotography*.

mirror-plate (mir′ėr-plāt″), *n.* Plate-glass of fine quality suitable for mirrors.

mirror-pseudoscope (mir′ėr-sü″dō-skōp), *n.* In *exper. psychol.*, an instrument in which the pseudoscopic effect is produced, not by prisms or lenses, but by an arrangement of plane mirrors. *E. B. Titchener*, Exper. Psychol., I. ii. 296.

mirror-scale (mir′ėr-skāl), *n.* A scale etched in millimeters on the surface of a strip of glass about 5 millimeters in thickness, which is then silvered on the second surface: used in reading barometers, manometers, etc. See *Jolly's* ★*balance*. *M. W. Travers*, Exper. Study of Gases, p. 56.

mirror-speech (mir′ėr-spēch), *n.* Pronunciation of words as if the syllables or letters were reversed: as '*lamina*' or '*malian*' for '*animal.*'

mirror-thermometer (mir′ėr-thėr-mom″e-tėr), *n.* A thermometer constructed on the same principle as the ★*mirror-barometer* (which see).

mirror-velvet (mir′ėr-vel″vet), *n.* A soft, pliable velvet with the pile pressed down, giving the surface a high gloss.

mirror-writing (mir′ėr-rī″ting), *n.* Same as *mirror-script*.

mirthsome (mėrth′sum), *a.* Mirthful; joyous.

Mis. An abbreviation of *Missouri*.

misandry (mis′an-dri), *n.* Man-hatred; a bad opinion of man, as being unfair or oppressive toward women.

misanthropia (mis-ąn-thrō′pi-ą), *n.* Same as *misanthropy*.

misarchism (mis′är-kizm), *n.* [Gr. *μισεῖν*, hate, + *ἀρχή*, rule, + *-ism.*] Hatred of or opposition to government in any form; the doctrine that government as such is evil or an evil.

misarchist (mis′är-kist), *n.* [*misarch(ism)* + *-ist.*] One who regards government as inherently evil, or at best a necessary evil, yet without going to the extreme position of the anarchist.

These *misarchists* see the beneficent influence of natural law in the industrial world interfered with by what seems to them an extraneous power.
L. F. Ward, Outlines of Sociol., p. 228.

misbecum, *v. t.* An amended spelling of *misbecome*.

misc. An abbreviation (*a*) of *miscellaneous;* (*b*) of *miscellany*.

miscegenate (mis′ē-je-nāt), *v. i.*; pret. and pp. *miscegenated*, ppr. *miscegenating*. [*miscegenation.*] To enter into sexual relations with an individual of another race, especially of a race of another color (black or white).

miscegenate (mis′ē-je-nāt), *n.* A person begotten by miscegenation.

miscegenationist (mis″ē-je-nā′shọn-ist), *n.* One who favors miscegenation, particularly the union of whites and blacks.

miscegenator (mis′ē-je-nā-tọr), *n.* One who miscegenates or unites sexually with an individual of another race.

miscegenesis (mis-ē-jen′e-sis), *n.* [L. *miscere*, mix, + *genesis*. See *genesis*.] Same as *miscegenation*.

miscegenetic (mis″ē-jē-net′ik), *a.* [*miscegenesis.*] Pertaining to, or of the nature of, miscegenesis or miscegenation; produced by miscegenation.

mischarge, *n.* 2. A mixture of gas and air in an internal-combustion engine, introduced into the cylinder, but not ignited. The charge may fail of ignition either as the result of a governing action, because the speed is too high, or because the mixture was not of the normal proportion of fuel and air. Such mischarges often ignite after leaving the cylinder either in exhaust-passages or -pipes, or beyond.

The devices for changing the motor speed by varying the charge or by *mischarge*, work well above the minimum speed at which the motor will run, say about 200 revolutions per minute. *Hiscox*, Horseless Vehicles, p. 24.

mischief, *n.*—**Painted mischief,** the devil's picture-books; playing-cards. *Farmer*.

There are plenty of ways of gambling . . . without recourse to the '*painted mischief.*'
Daily News (London), March 18, 1879. *N. E. D.*

misconjunction (mis-kọn-jungk′shọn), *n.* [*mis-*[1] + *conjunction.*] A false or erroneous conjunction.

There is no *misconjunction* so absurd as that of safety and wrong, because it is a moral *misconjunction*, showing our mortal state itself to be out of joint, even down to its lowest foundations.
Bushnell, Moral Uses of Dark Things, p. 128.

misconvey (mis-kọn-vā′), *v. t.* [*mis-*[1] + *convey.*] To convey a meaning other than that intended: used reflexively.

I hope he has *misconveyed* himself to H. E. Manning, for Manning identifies him in some very painful points with the Rationalism of Germany.
E. S. Purcell, Life Card. Manning, I. xiii.

miscook (mis-kůk′), *v. t.* [*mis-*[1] + *cook.*] To cook badly; spoil in cooking; also, figuratively, to mismanage. *N. E. D.* [Chiefly Scotch.]

miscorrection (mis-kọ-rek′shọn), *n.* [*mis-*[1] + *correction.*] A false or erroneous correction.

miscreate (mis-krē-āt′), *v. t.*; pret. and pp. *miscreated*, ppr. *miscreating*. [*mis-*[1] + *create.*] To create faultily; create erroneously; mar or render monstrous in the making.

The lesson is forcibly taught . . . that our life might be much easier and simpler than we make it . . . that we *miscreate* our own evils. *Emerson*, Essays, Ser. I. iv.

Seeing superb manly beauty in the place of the thick-featured sodden satyr of her *miscreating* fancy, the irresistible was revealed to her on its divinest whirlwind.
G. Meredith, Tragic Comedians, iv.

miscue (mis-kū′), *v. i.*; pret. and pp. *miscued*, ppr. *miscuing*. [*miscue, n.*] 1. In *billiards*, to make a miscue.—2. In *theat.*, to miss one's cue or answer a wrong cue.

misdateful (mis-dāt′fůl), *a.* [*misdate* + *-ful.*] Full of misdates; very inaccurate in chronology. [Rare.]

Poor Bielfield being in this Chapter very fantastic, *misdateful* to a mad extent, and otherwise, except as to general effect, worth little serious belief.
Carlyle, Frederick the Great, XIII. ix.

misdemeanant, *n.*—**First-class misdemeanant.** In *Eng. law*, prisoners convicted of misdemeanor and not sentenced to hard labor are, by the Prisons Act (28 and 29 Vict. c. 126, s. 67), divided into two classes, one of which is called the first division. In the discretion of the court a convict can be placed in this division, and he is then not regarded as a criminal convict, but is known as a *first-class misdemeanant*, or a *misdemeanant of the first division*.

misdescriptive (mis-des-krip′tiv), *a.* [*mis-*[1] + *descriptive.*] That describes erroneously.

misenglish† (mis-ing′glish), *v. t.* [*mis-*[1] + *English.*] To mistranslate into English. *N. E. D.*

miserabilism (miz′ę-ra-bil-izm), *n.* [*miserable* + *-ism.*] The state of being miserable; miserablism; specifically, a complainingly pessimistic view of, or attitude towards, life. See the extract.

The third . . . of these unscientific species combines the characteristic evils of both wrathful and quietistic pessimism. It has been aptly termed *Miserabilism* (Miserabilismus). The miserabilistic pessimist spends his life in sulky grumbling at his lot, without making the slightest effort to improve it. He is not active, nor has the grace to be resigned.
J. W. Barlow, Ultim. Pessimism, p. 8. *N. E. D.*

miserabilistic (miz″ę-ra-bi-lis′tik), *a.* Pertaining to, characteristic of, or practising miserabilism. [Rare.]

miserablism (miz'ẹ-rạ-bl-izm), *n.* [*miserable* + *-ism*.] The state of being miserable; miserabilism.

What was the mental state of Jesus's followers when he died and while he yet lay in the tomb? . . . The truth they relied on was branded as folly and crime. . . . Dispersion, denial, *miserablism*, and absolute despair must have followed, and the teachings of Jesus might have been forgotten. *G. S. Hall*, Adolescence, II. 335.

misère (mi-zãr'), *n.* [F., lit. 'misery.'] In *card-playing*, as in solo whist, boston, etc., a declaration to lose tricks instead of to win them. *Amer. Hoyle*, p. 248.—**Open misère** or **misère ouverte**, in *card-playing*, a declaration to lose a certain number of tricks with the cards exposed on the table. *Amer. Hoyle*, p. 248.—**Petite misère ouverte**, in *boston*, the declaration to lose 12 tricks, after having discarded a card which is not shown, the single player's remaining twelve cards being exposed on the table, but not liable to be called.

misericorde, *n.* 4. Relaxation of monastic rule; indulgence.

"As we have," he said, "in the course of this our toilsome journey, lost our meridian, indulgence shall be given to those of our attendants who shall, from very weariness, be unable to attend the duty at prime, and this by way of *misericord* or indulgentia." *Scott*, Monastery, II. ii.

5. An apartment in a monastery in which certain relaxations of the rule were permitted; especially, one in which those monks ate to whom special allowances were made in food and drink. *N. E. D.*

misericordious† (miz"ẹ-ri-kôr'di-us), *a.* [OF. *misericordieux*. See *misericorde*.] Merciful; compassionate.

misery, *n.* 6. See ★*misère*.

misexpressive (mis-eks-pres'iv), *a.* [*mis-*[1] + *expressive*.] Expressing a meaning other than that intended.

Law made by the supreme legislature is called promulged law, and law emanating immediately from a subordinate source is called unpromulged law. But the terms promulged and unpromulged, as thus applied, are not less *misexpressive* than written and unwritten. *J. Austin*, Lect. on Jurisprudence, II. 542.

misfeature (mis-fē'tụ̄r), *n.* [*mis-*[1] + *feature*, *n.*] A distorted feature; a bad feature or trait. *N. E. D.*

He [man] has his Winter too of pale *misfeature*,
Or else he would forego his mortal nature.
Keats, Sonnet, Human Seasons.

misfeature (mis-fē'tụ̄r), *v. t.*; pret. and pp. *misfeatured*, ppr. *misfeaturing*. [*mis-*[1] + *feature*, *v.*] To mar the features of; distort or misrepresent the features of.

The strange *misfeaturing* mask that I saw so amazed me, that I
Stumbled on deck, half mad.
Tennyson, The Wreck, ix.

misfere†, *v. i.* [See *misfare*, *v. i.*] 1. To do wrong; misbehave.—2. To be unfortunate; fare ill.

misfigure (mis-fig'ụ̄r), *v. t.*; pret. and pp. *misfigured*, ppr. *misfiguring*. [*mis-*[1] + *figure*, *v.*] To disfigure. [Obs. or dial.]

misfire (mis-fīr'), *v. i.*; pret. and pp. *misfired*, ppr. *misfiring*. [*mis-*[1] + *fire*, *v.*] To miss fire: said of a firearm.

The weapons were all exceedingly clumsy and unwieldy, tiresome to charge and discharge, and continually *missfiring*. *W. W. Greener*, The Gun, p. 43.

misgiv, *v.* A simplified spelling of *misgive*.

mishcup (mish-kup'), *n.* [Narragansett.] Same as ★*scup*[2].

mishcuppauog (mish-ku-pâ'og), *n. pl.* [Narragansett *mishkuppaúog*, plural: see ★*mishcup*, *scup*[2], and *scuppaug*.] A plural of ★*mishcup*.

mishwap (mish'wäp), *n.* [Algonkin (of Labrador).] An Indian lodge. [Labrador.]

misidentification (mis-ī-den"ti-fi-kā'shọn), *n.* False or inaccurate identification.

The chief defects in practice were (1) frequent failure to identify, (2) liability to *mis-identification*. *Encyc. Brit.*, XXV. 468.

misimpression (mis-im-presh'ọn), *n.* [*mis-*[1] + *impression*.] An erroneous impression or idea.

misinclined (mis-in-klīnd'), *p. a.* [*misincline*, *v.*] 1. Wrongly inclined.—2. Disinclined.

misintelligence, *n.* 3. Ignorance; faulty intelligence or knowledge. [Rare.]

The whole condition of things at the South is shameful, and I am ready for a movement now to emancipate the whites. No doubt the government is bound to protect the *misintelligence* of the blacks, but surely not at the expense of the intelligence of the men of our own blood. *Lowell*, Letters, II. 174.

mislocate (mis-lō'kāt), *v. t.*; pret. and pp. *mislocated*, ppr. *mislocating*. [*mis-*[1] + *locate*.] To locate or place wrongly.

mismay (mis-mā'), *v. t.* [*mis-* for *dis-may*.] To dismay. [Obs. or Scotch.]

mismove (mis-möv'), *n.* [*mis-*[1] + *move*, *n.*] A mistaken move; a false move.

misnome (mis-nōm'), *v. t.*; pret. and pp. *misnomed*, ppr. *misnoming*. [*misnome(r)*.] To misname. [Rare.]

This My Novel, or Varieties in English Life was *misnomed* and insulted as "a Continuation of the Caxtons," with which biographical work it has no more to do . . . than I with Hecuba. *Bulwer*, in Blackwood's Mag., LXXI. 86.

misocapnic (mis-ọ-kap'nik), *a.* [Gr. *μισεῖν*, hate, + *καπνός*, smoke, + *-ic*.] Smoke-hating; disliking tobacco-smoke.

Not having . . . before his eyes the fear of that *misocapnic* Solomon James I. or of any other lying Stuart, that not to . . . Sir Walter Raleigh, but to Sir Amyas Leigh; . . . does Europe owe . . . that age of smoke. *Kingsley*, Westward Ho! vii.

misocapnist (mis-ọ-kap'nist), *n.* [*misocapn(ic)* + *-ist*.] One who dislikes tobacco-smoke. [Rare.]

misocatholic (mis-ọ-kath'ọ-lik), *a.* [Gr. *μισεῖν*, to hate, + E. *Catholic*.] Hating Roman Catholicism. [Rare.]

misogallic (mis-ọ-gal'ik), *a.* [Gr. *μισεῖν*, to hate, + E. *Gallic*.] Disliking the French; hostile to the French. [Rare.]

misogamic (mis-ọ-gam'ik), *a.* [*misogam(y)* + *-ic*.] Pertaining to or exhibiting misogamy or hatred of marriage. [Rare.]

misogynic (mis-ọ-jin'ik), *a.* [*misogyn(ous)* + *-ic*.] Woman-hating; misogynous.

In the Works and Days . . . we glean indications of Hesiod's rank and condition in life, that of a stay-at-home farmer . . . and an old-fashioned bachelor whose *misogynic* views and prejudice against matrimony have been conjecturally traced to his brother Perses having a wife as extravagant as himself. *Encyc. Brit.*, XI. 777.

misogynism (mi-soj'i-nizm), *n.* Same as *misogyny*.

misomath (mis'ọ-math), *n.* [Gr. *μισεῖν*, to hate, + E. *math(ematics)*.] One who dislikes mathematics. [Rare.]

misoneist (mis-ọ-nē'ist), *n.* [*misone(ism)* + *-ist*.] One who hates or dislikes novelty. [Rare.]

misoneistic (mis"ọ-nē-is'tik), *a.* [*misoneist* + *-ic*.] Averse to change or novelty; disliking innovation.

Women have often stood in the way of progressive movements. Like children, they are notoriously *misoneistic*; they preserve ancient habits and customs and religions. *C. Lombroso* (trans.), Man of Genius, p. 139.

misopedia, misopædia (mis-ọ-pē'di-ạ), *n.* [Gr. *μισεῖν*, hate, + *παῖς* (*παιδ-*), child.] Extreme dislike of, or aversion for, children.

misopedism, misopædism (mi-sop'ẹ-dizm), *n.* [*misoped(y)* + *-ism*.] Same as ★*misopedia*.

misopedist, misopædist (mis-ọ-pē'dist), *n.* [Gr. *μισόπαις* (*μισοπαιδ-*), a child-hater, + *-ist*.] One who dislikes children; a child-hater. [Rare.]

misopedy (mi-sop'ẹ-di), *n.* Same as ★*misopedia*.

misopogonistically (mis-ọ-pō-gọ-nis'ti-kạl-i), *adv.* [Gr. *μισοπώγων*, beard-hater, < *μισεῖν*, to hate, + *πώγων*, beard, + *-istically*.] Like a beard-hater; with dislike of beards. [Rare.]

He and Basil read together poems and philosophies, and holier things, or talked low and *misopogonistically* of their fellow-student Julian's bearded boding smile. *Mrs. Browning*, Greek Christian Poets, p. 236.

misosophist (mi-sos'ọ-fist), *n.* [Gr. *μισόσοφος*, < *μισεῖν*, to hate, + *σοφία*, wisdom, + *-ist*.] A hater of wisdom. [Rare.]

misosophy (mi-sos'ọ-fi), *n.* [Gr. *μισεῖν*, hate, + *σοφία*, wisdom.] Hatred of wisdom. *Coleridge*. [Rare.]

misotheist (mis'ọ-thē-ist), *n.* [*misothe(ism)* + *-ist*.] One who hates God. [Rare.]

mispick (mis-pik'), *n.* [*mis-*[1] + *pick*[1], *n.*] The omission of a weft-thread in weaving.

misprizal (mis-prī'zạl), *n.* [*misprize*[2], *v.*, + *-al*[1].] The act of misprizing or undervaluing; contempt; scorn.

misreflection (mis-rẹ̄-flek'shọn), *n.* An illusory reflection. See the extract.

Fallacies of reflection are fallacies of time and cause, and they may be classed as *misreflections* and myths. The *misreflections* are a fourth group of illusions and the myths a fourth group of delusions. *J. W. Powell*, Truth and Error, p. 374.

misrendering (mis-ren'dėr-ing), *n.* A faulty or erroneous rendering.

Retranslation into Greek is frequently necessary in order to correct the *misrenderings* of the translator. *Encyc. Brit.*, XXV. 492.

Miss. An abbreviation (*a*) of *Mississippi*; (*b*) of *mission*, *missionary*.

missal, *n.*—**Mozarabic missal**, the missal which contains the order of the Mass according to the Mozarabic rite, the use of which is now confined to a chapel of the Cathedral of Toledo endowed by Cardinal Jiménez for the maintenance of that rite.

miss-and-out (mis'ạnd-out'), *n.* In *trap-shooting*, a competition from which a contestant retires upon missing a target.

The races were each at 10 birds per man, there being three of these, and finally a *miss-and-out* between the last two men up. *Forest and Stream*, Feb. 21, 1903, p. 159.

missary† (mis'ạ-ri), *n.* [LL. *missarius*, < *missa*, mass.] A Roman Catholic or a Roman Catholic priest. [Rare.]

missatical† (mi-sat'i-kạl), *a.* [LL. *missaticus*, < *missa*, mass.] Of or pertaining to the mass; Roman Catholic.

missensation (mis-sen-sā'shọn), *n.* Lack of perception due to diversion of attention. See the extract. [Rare.]

I do not hear the speaker because I am attending to a sight, or I do not see a sight because I am listening to what another person is saying. All of such *missensations* are easily corrected by ordinary methods of verification. . . . I shall call all such errors of judgment *missensations*, and group them in a higher class which I shall call illusions. *J. W. Powell*, Truth and Error, p. 309.

missey-moosey (mis'i-mö-zi), *n.* [English corruption of Amerindian *mozemize*.] The American mountain-ash, *Sorbus Americana*. See *Indian* ★*mozemize*.

missible (mis'i-bl), *a.* [L. *miss(us)*, pp. of *mittere*, send, + *-ible*. See *missile*.] That may be sent or transmitted.

This Custom-and-Duty Age would have made the Preacher on the Mount take out a licence, and St. Paul's Epistles would not have been *missible* without a stamp. O that you may find means to go on! *Lamb*, Letters, CLXIII. 310.

missil, *a.* and *n.* A simplified spelling of *missile*.

mission, *n.*—**Military mission**, an apparently diplomatic and ostensibly friendly mission, accompanied by a large military force, sent by one country, usually a very powerful one, to a less powerful one.

Persia had no regular army until 1807, when some regiments of regular infantry (*sarbáz*) were embodied and drilled by the first French *military mission* to Persia under General Gardane. Since then seven other *military missions* (two British, two French, two Austrian, and one Russian) have come to Persia at the request of the Persian Government, and many officers and non-commissioned officers, and even civilians, of various nationalities, . . . have been engaged as army instructors. *Encyc. Brit.*, XXXI. 621.

Mission furniture, a trade-name for a kind of dark stained furniture, usually of ashwood, characterized by great plainness and solidity and the prevalence of straight lines. It was originated in 1894 by a furniture-maker of New York and is said to have been patterned closely after the general style of certain chairs from one of the Spanish missions in California.

mission-bells (mish'ọn-belz), *n.* In California, *Fritillaria mutica*, a species bearing a raceme of from 3 to 17 dark purple or greenish, spotted or checkered, bell-shaped flowers. Also called *rice-root lily*. Also, the related *F. lanceolata* or any Californian species. See ★*Fritillaria*, 1.

mission-grass (mish'ọn-grȧs), *n.* See *St. Augustine* ★*grass*.

Mississippian, *n.* 2. In the scheme of classification and nomenclature of the rocks adopted by the United States Geological Survey, the purely marine sedimentation of the early or Lower Carboniferous rocks of the interior or Mississippi basin.

missiv, *a.* and *n.* A simplified spelling of *missive*.

missourite (mi-zö'rīt), *n.* [*Missouri* (river) + *-ite*[2].] In *petrog.*, a phaneric igneous rock composed of leucite, augite, and olivin, with smaller amounts of biotite, iron oxids, and apatite, occurring in the Highwood mountains, Montana. *Weed and Pirsson*, 1896.

mistify (mis'ti-fī), *v. t.*; pret. and pp. *mistified*, ppr. *mistifying*. [*mist*[1] + *-i-fy*.] To convert into a mist or a very fine spray, as by a fine spray-nozle. [Rare.]

The nozzles for "*mistifying*" the wash most in use are known as the Vermorel and Riley's, which can be fitted to any length of tubing, so as to reach any height, and can be turned in any direction. *Encyc. Brit.*, XXVII. 635.

mistpouffer (mist'pöf-ėr), *n.* [Also *mistpoeffer*; < D. **mist-poffer*, 'fog pistol,' < *mist*, = E. *mist*[1], + *poffer*, pistol, < *poffen*, puff.] A mysterious noise heard over the ocean in quiet, foggy weather off the coast of Belgium and Holland. See *Barisal* ★*gun*.

In the Monthly Weather Review for September, 1897, page 393, we have given some account of the "barisal guns," the "*mistpouffers*," and similar phenomena whose origin is as yet not certainly understood. . . . It may be that the barisal guns have their origin in the escape of bubbles of gas just as do the "guns" of Seneca Lake. *U. S. Monthly Weather Rev.*, July, 1903, p. 336.

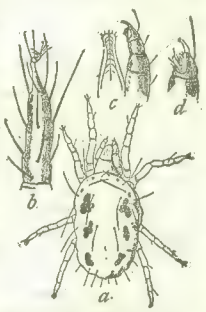
mistress, *n.* 7. In *mining*, a cover for sinkers in a wet shaft; a cover for a sinker's lamp. [Scotch.]

mistura (mis-tū′rä), *n.* [L.: see *mixture*.] In *phar.*, same as *mixture*, 2.

misurato (mē-sö-rä′tō), *a.* [It.] Measured; hence, as a direction in *music*, in a measured manner.

misuze, *v. t.* and *n.* An amended spelling of *misuse*.

mitapsis (mi-tap′sis), *n.* [Gr. *μίτος*, a thread, + *ἁψις*, a joining.] The process of fusion of chromatin, the final stage in the reproductive process of cell-conjugation: essentially the same in meaning as ★*synapsis*. The name *mitapsis* refers to the fact that at the time of fusion the chromatin granules are strung out on long, slender threads. *Cook and Swingle*.



mitchel (mich′el), *n.* [Perhaps from *Mitchel*, a surname.] See the extract. [Eng.]

Mitchel, a name given by workmen to Purbeck stones of twenty-four inches by fifteen when squared for building. *Gwilt*, Encyc. Archit., p. 1318. *N. E. D.*

mitchellite (mich′el-īt), *n.* [Named from Professor Elisha *Mitchell*, an American geologist.] A magnesian variety of chromite from North Carolina. See ★*magnochromite*.

Mitchillina (mich-i-lī′nä), *n.* [NL., named after Samuel Latham *Mitchill*, United States senator from the State of New York, 1804–09, the first to study systematically the fishes of New York harbor.] A genus of deep-sea fishes of the family *Alepocephalidæ*.

mite[1], *n.*—**Black-currant mite**, a European eriophyid mite, *Eriophyes ribis*, which occurs on the black currant and is an especial pest in England.—**Brown mite**, an American acarid, *Bryobia pratensis*, which occurs in enormous numbers in orchards in the Western States. Also called ★*clover-mite* (which see, with cut).—**Red mite**, a small reddish mite of the family *Tetranychidæ*, *Tetranychus telarius*, found commonly in hothouses and also commonly called *red spider*.—**Red-spotted mite**, one of the leaf-mites or 'red spiders' of the family *Tetranychidæ*, *Tetranychus sexmaculatus*, found commonly on the orange in Florida and California.—**Six-spotted mite of orange**. Same as *red-spotted* ★*mite* or *California* ★*spider*.

Red-spotted Mite of the Orange (*Tetranychus sexmaculatus*).
a, adult mite, much enlarged; *b*, greater enlargement of foot; *c*, *d*, mouth parts. (From "Insect Life," U. S. D. A.)

mite[2], *n.* 5. A copper or billon coin of very small value, current in Brabant and Holland.

miter, *v. t.* 6. In *organ-building*, to introduce one or more miter-joints into (a pipe), so as to adapt it to a contracted space: such a pipe is said to be *mitered* or *mitered over*.

miter-arch (mī′tėr-ärch), *n.* The arch or angle formed by mitering, as in groining.

miter-bevel (mī′tėr-bev″el), *n.* Same as *miter-square*.

miter-bracket (mī′tėr-brak″et), *n.* An angle-bracket in the bracketing of a molded cornice. *N. E. D.*

miter-gear (mī′tėr-gēr), *n.* A bevel-gear having an angle of 90° at the apex of its pitch-cone; a bevel-gear whose teeth make an angle of 45° with the axis; one of a pair of equal bevel-gears whose axes form a right angle.

miter-snake (mī′tėr-snāk), *n.* A small serpent of western Texas, *Contia episcopa*, the markings of which are suppposed to suggest a bishop's miter.

miter-wheel, *n.* 1. (*b*) A friction-gearing or -wheel of which the working face is at an angle of 45° to the axis.

Mithratic (mith-rat′ik), *a.* [*Mithra(s)* + *-atic*[2].] Pertaining to or concerned with the worship of Mithras; Mithraic.

mithridatism (mith-ri-dāt′izm), *n.* [*Mithridates* (see *mithridate*) + *-ism*.] Immunity against the action of a poison acquired by taking the drug in constantly increasing doses: a method said to have been conceived by Mithridates to protect himself against palace intrigues.

mithridatize (mith′ri-dā-tīz), *v. t.*; pret. and pp. *mithridatized*, ppr. *mithridatizing*. [*mithridat(e)* + *-ize*.] To induce the condition of mithridatism in. See ★*mithridatism*.

mitic (mit′ik), *a.* [*m(agnetite)*, + *i(lmenite)* + *t(itanite)* + *-ic*.] In *petrog.*, in the quantitative classification of igneous rocks (see ★*rock*[1]), a term indicating the presence of one or more of the normative minerals in the second subgroup of femic minerals.

mitis-metal (mī′tis-met″al), *n.* [L. *mitis*, soft, + E. *metal*.] 1. A malleable cast-steel slightly alloyed with aluminium, chiefly used, on account of its high magnetic permeability, for field-magnets in generators and motors. —2. A commercial product consisting of wrought-iron which is fusible enough to cast in molds. The fluidity results from the presence of aluminium in the bath of metal.

mitochondria (mit-ō-kon′dri-ą), *n.* [Gr. *μίτος*, thread, + *χόνδρος*, cartilage.] A body of unknown significance, consisting of coiled filaments, found outside of the nucleus in the cytoplasm of certain cells. *Benda*.

Follicular Epithelium in Birds.—Marie Loyez finds that in some birds all the cells of the follicular epithelium exhibit, outside the nucleus, an almost spherical body of considerable size, composed apparently of coiled filaments. It stains strongly with iron-hæmatoxylin, and is analogous to the ergastoplasm of Garnier, the *mitochondria* of Benda, and the pseudochromes of Heidenhain. *Jour. Roy. Micros. Soc.*, Oct., 1903, p. 594.

mitokinetic (mit″ō-ki-net′ik), *a.* [*mito(sis)* + *kinetic*.] Noting the force which has its seat in the kinoplasm of the cell and is supposed to produce the achromatic spindle during karyokinetic cell-division. *Hartog*.

Third, there is the force which has its seat in the kinoplasm, and which produces the chains of force which Hartog calls "*mitokinetic*" because of their analogies with magnetism. *Jour. Roy. Micros. Soc.*, Dec., 1904, p. 637.

mitom (mī′tom), *n.* [Also *mitome*; < NL. *mitoma*.] A term used by Flemming to designate the reticulum of cell-protoplasm. Also *mitome*.

mitoma (mi-tō′mą), *n.* [NL., < Gr. *μίτος*, a thread, a web, + *-oma*.] The minute mesh composing the more solid part of the protoplasm and inclosing the more fluid portion. Same as ★*mitom*.

mitome (mī′tōm), *n.* See ★*mitom*.

mitoschisis (mi-tos′ki-sis), *n.* [NL., < Gr. *μίτος*, thread, + *σχίσις*, splitting, cleaving.] Mitosis, or karyokinetic cell-division: so-called from the longitudinal splitting of the thread-like chromosomes peculiar to this form of division, as distinguished from amitosis, or akinesis. *Flemming*, 1882.

mitosis, *n.*—**Heterotypical mitosis**. See ★*heterotype division*.—**Homotypical mitosis**, a form of karyokinetic or mitotic cell-division occurring in the secondary spermatocytes of certain animals, such as the salamander. It differs from the common form in the shortness of the chromosomes and their irregular arrangement after division into the daughter-chromosomes. *Flemming*, 1887.—**Somatic mitosis**, the form of mitosis, or indirect cell-division, found in the cells of the soma, or body, as distinguished from that which occurs in the germ-cells, or during spermatogenesis and oögenesis.

mitosome (mī′tō-sōm), *n.* [Gr. *μίτος*, thread, + *σῶμα*, body.] In *cytol.*, a body formed from the spindle-fibers of the secondary spermatocytes, said to give rise to the middle-piece and tail envelop of the spermatozoön: probably equivalent to the '*Nebenkern*' of La Valette St. George. *Platner*, 1889.

Mitra, *n.* 3. [*l. c.*] In *Gr. antiq.*, a long band of stuff, leather, or metal, bound about the head or loins: much used by women. It is mentioned in the Iliad and has been found on archaic statuettes discovered in excavations at Delphi, Olympia, and elsewhere. Although often made of metal not a single example has come down to us complete.

Mitral insufficiency. See *valvular* ★*insufficiency*.

Mitraster (mi-tras′tėr), *n.* [NL., < Gr. *μίτρα*, girdle, head-band, + *ἀστήρ*, star.] A genus of fossil starfishes or a subgenus of *Goniaster* (which see), from the Cretaceous rocks.

mitsumata (mit″sȯ-mä′tä), *n.* [Jap. *mitsumata*, *mitsz-mata*, < *mitsu*, *mitsz*, three, + *mata*, a fork or crotch.] A low shrub, *Edgeworthia papyrifera*, of the family *Daphnaceæ*, native to China and Japan, and cultivated in the latter country for its bark. The bark is used in the manufacture of the best grades of paper, especially when mixed with the fiber of the kozo and the ganpi. Compare ★*ganpi*.

mitsvah (mitz′vä), *n.*; pl. *mitsvoth* (-vōt). [Heb. *mitsvah* (*mitswah*), < *tsavah*, command, charge, order.] Among the Jews, a precept. According to Rabbi Simlai, there were revealed to Moses no less than 613 precepts, namely 365 prohibitions, corresponding to the number of the days in the year, and 248 mandates, corresponding to the number of 'members' (bones) in the human body. Upon this basis various lists of commandments, great and small, have been compiled from the Hebrew scriptures to make up the mysterious number.

mitsvoth, *n.* Plural of ★*mitsvah*.

mittelhand (mit′el-hänt), *n.* [G. 'middle hand.'] In *skat*, the second player on the first trick; the one who bids first.

mittimus, *n.* 1. (*c*) In *old Eng. law*, a writ by which the sheriff of a county palatine was required to summon a jury from the county for the trial of a cause, the record of which was inclosed or sent (hence the name) with the writ.

mixed[1], *p. a.* 4. In *geol.*, technically applied to those igneous rocks which under the microscope are found to consist of both crystalline and glassy matter, the two being intimately involved. *Geikie*, Text-book of Geol., p. 152, note.—**Mixed curve**. *See* ★*curve*.

mixer, *n.* 3. A receptacle for diluting a drop of blood with a definite quantity of artificial serum preliminary to counting the blood-corpuscles.—4. A person of a social temperament; one who makes acquaintances readily and somewhat indiscriminately: as, he is a good *mixer*. [U. S. slang.]

mixer-valve (mik′sėr-valv), *n.* A valve by which the proportions of the fluids or gases in a mixture are regulated; specifically, a valve used to regulate the amount of external or unheated air supplied to a hot-blast in a blast-furnace, or to regulate the proportions of fuel and air in an internal-combustion motor. *Elect. World and Engin.*, Jan. 2, 1904, p. 22.

mixing-chamber (mik′sing-chām″bėr), *n.* 1. A volume or space within which a mingling of substances may occur; specifically, a vessel, stationary or revolving, in which the stone, cement, and sand which together form concrete for building purposes may be intimately compounded.—2. The chamber, space, or passage in a gas-engine or other internal-combustion motor in which the fuel, in atomized or vaporized form, is intimately mixed with the air which is to support its combustion.

mixing-picker (mik′sing-pik″ėr), *n.* A machine for opening and mixing wool preparatory to carding.

mixing-stack (mik′sing-stak), *n.* A pile, as of cotton, made up of layers of the material from different packages, as bales, so as to insure a uniform blend in length and quality of staple. *Taggart*, Cotton Spinning, I. 50.

mixing-syrup (mik′sing-sir″up), *n.* A trade name for a thick solution of glucose-sugar, made from starch, sold to be mixed with, and so to cheapen, table syrup made from cane-sugar.

mixing-valve (mik′sing-valv), *n.* Same as ★*mixer-valve*.

mixipterygium (mik″sip-te-rij′i-um), *n.*; pl. *mixipterygia* (-ą). [NL., < Gr. *μίξις*, mingling, copulation, + *πτέρυξ*, wing, fin.] Gegenbaur's term for the claspers of male elasmobranchs, the long, cartilaginous projections from the base of the ventral fins. The forward shifting of the fin is partially arrested in the male owing to the development of the mixipterygium.

Mixochoanites (mik-sō-kō-ą-nī′tēz), *n.* [NL., < Gr. *μίξις*, a mixing, + *χόανος*, a funnel.] In Hyatt's classification of the cephalopods, a suborder of the *Nautiloidea* comprising straight or slightly curved shells in which the older septa are curved orad or toward the apertures, and the siphuncle is highly modified. In specialized forms like *Ascoceras* the siphuncles have short funnels and collars and the gerontic living-chambers are contracted by the formation of large septa developed on one side only. The group is wholly Silurian.

Mixonus (mik′sō-nus), *n.* [NL.] A genus of brotuloid fishes found in the deep sea, one specimen being taken in the mid-Atlantic at the depth of 2,500 fathoms.

mixoscope (mik′sō-skōp), *n.* [Gr. *μιξο-*, mixed, + *σκοπεῖν*, view. See *scope*[3].] An apparatus for mixing colors.

mixoscopia (mik-sō-skō′pi-ą), *n.* [Gr. *μιξο-*, mixed, + *σκοπεῖν*, view.] A form of sexual perversion in which libidinous pleasure is excited by the sight, or mental picture, of the cohabitation of the desired one with another.

mixoscopic (mik-sō-scop′ik), *a.* [*mixoscop(ia)* + *-ic*.] Of the nature of, or affected with, mixoscopia. *Alien. and Neurol.*, May, 1903, p. 167.

mixotrophic (mik-sō-trof'ik), *a.* [Gr. *μιξο-*, mixed, + *τροφή*, nourishment. See *trophic.*] Imperfectly trophic: applied to chlorophyl-bearing plankton which, because of abundant organic matter in the water, has begun to lose chlorophyl and consequently the power of manufacturing food from inorganic substances.

mixtion, *n.* 3. In *law*, confusion of goods, that is, such an admixture of the property of two or more persons that it is impossible to determine the precise property of each.

mixture, *n.* 9. The material for the charge of an internal-combustion engine. It usually consists of fuel, in a vaporized or finely pulverized condition, mixed with air.—**A. c. e. mixture,** a mixture of alcohol, chloroform, and ether, in 1, 2, and 3 parts respectively: used to produce anæsthesia by inhalation.—**Basham's mixture,** a transparent reddish aromatic solution of iron and ammonium acetate.—**Bordeaux mixture,** a material largely used to destroy parasitic fungi, especially on fruit-trees and grape-vines, and applied in the form of spray. It is made in the proportion of 4 pounds of crystallized copper sulphate and 5 pounds of quick-lime to 45 gallons of water.—**Copper mixture of Gironde.** See ★*copper*1.—**Cornell mixture,** a fungicide and insecticide preparation, made from Bordeaux mixture, kerosene emulsion, and an arsenite.—**Johnson's mixture,** a fungicide preparation, consisting of cupric sulphate, ammonium carbonate, and a large proportion of water, intended for application to plants by spraying.—**Neutral mixture,** a greenish-yellow solution obtained by neutralizing fresh lemon-juice with bicarbonate of potassium: it is diaphoretic and sedative.—**Schleich's anesthetic mixture.** See ★*anesthetic.*—**Single-tree mixture,** in *forestry*, a mixture in which trees of different species occur singly.—**Thilorier's mixture,** a mixture of liquid ether with carbon dioxid in the solid state. By the rapid evaporation of this mixture under reduced pressure, as produced by an air-pump, a temperature of −110° C. may be obtained.

miya (mē'yä), *n.* [Jap.] 1. A Japanese Shinto temple or shrine.—2. [*cap.*] The residence of the Mikado of Japan.—3. [*cap.*] The title of the Mikado's children.

miyakite (mē'yä-kīt), *n.* [*Miyakojima*, an island of Japan, + *-ite*2.] In *petrog.*, pyroxene-andesite occurring on Miyakojima, in which the pyroxene is a manganiferous babingtonite. *Petersen*, 1891.

mizdeh (miz'de), *n.* [Ar. ?] A fish, *Mormyrus oxyrhynchus*, of the family *Mormyridæ*, found in the Nile. It was an object of veneration to the ancient Egyptians and therefore frequently occurs in their emblematic inscriptions.

mizzen, *n.*—**Mizzen clue-lines,** the purchases for hauling up the clues of the mizzen-topsail, topgallantsail, and royal.

II. *a.* Noting the hindmost pair of horns in a five-horned giraffe, a small pair of projections arising from the lambdoid crest, back of the larger frontal horns.

Five-horned Giraffe showing Mizzen Horns.

These structures, on the analogy of the masts of a ship, it may be convenient to speak of as "*mizzen*" horns.
Proc. Zool. Soc. London, 1901, 477.

mizzen-backstays (miz'n-bak″stāz), *n. pl.* The backstays of the mizzen-topmast and mizzen-topgallantmast; also the backstays of the mizzen-royalmast.

mizzen-braces (miz'n-brā″sez), *n. pl.* The braces on the yards belonging to the mizzenmast; the braces of the cross-jack, topsail-, topgallant-, and royal-yards; also the skysail-yard, if that spar is carried.

mizzen-buntlines (miz'n-bunt″linz), *n. pl.* The buntlines belonging to the squaresails on the mizzen.

mizzen-chains (miz'n-chānz), *n. pl.* Plates of iron bolted to a ship's sides abreast the mizzen-mast for securing the shrouds and backstays of that mast.

mizzen-crosstrees (miz'n-krôs″trēz), *n. pl.* The crosstrees on the mizzenmast, situated at the meeting of the head of the topmast and the foot of the topgallantmast.

mizzenmast, *n.* 2. *pl.* The lower-mast, topmast, and topgallantmast of the mast next abaft the mainmast.

mizzenmast-man (miz'n-mast-man), *n. Naut.*, one of the crew stationed to attend to the gear of the mizzenmast.

mizzen-parrels (miz'n-par″elz), *n. pl. Naut.*, the iron collars which confine the hoisting mizzen-yards to the masts. See *main* ★*parrels.*

mizzen-sail, *n.* 2. *pl.* The squaresails on the mizzenmast, namely, the cross-jack (not always carried) or mizzen-course, the lower and upper topsails, topgallantsail, royal, and sometimes a skysail. See ★*mainsail*, 2.

mizzen-sheets (miz'n-shēts), *n. pl. Naut.*, the sheets of the squaresails on the mizzen-mast.

mizzen-stays (miz'n-stāz), *n. pl. Naut.*, all the stays which give support to the mizzen lower mast, topmast, and topgallantmast.

mizzen-staysails (miz'n-stā″sālz), *n. pl. Naut.*, the fore-and-aft sails which set between the mizzenmast and mainmasts.

mizzen-trusses (miz'n-trus″ez), *n. pl. Naut.*, the iron shapes which confine the mizzen lower yard and the mizzen lower topsail-yard to the mast, and upon which the yards revolve or pivot.

mizzen-yards (miz'n-yärdz), *n. pl. Naut.*, all the yards belonging to the mizzenmast.

M. L. E. An abbreviation of *Master* or *Mistress of English Literature.*

M. L. G. An abbreviation of *Middle Low German.*

M. Lit. An abbreviation of *Master of Literature.*

Mlle. A contraction of *Mademoiselle.*

M. L. S. An abbreviation of *Master of Library Science*, a degree conferred by the University of the State of New York.

M. L. S. B. An abbreviation of *Member of the London School Board.*

M. L. W. An abbreviation of *Mean Low Water. Amer. Jour. Sci.*, May, 1904, p. 335.

MM. An abbreviation (*b*) of *their Majesties;* (*c*) of *Martyrs.*

mm1. An abbreviation (*b*) of the plural of Latin words commonly abbreviated *m.*, as *magistri;* (*c*) of the Latin *matrimonium;* (*d*) of the Latin *meritissimus.*

mm2. An abbreviation of *square millimeter.*

mm3. An abbreviation of *cubic millimeter.*

μμ. A symbol used to denote a thousandth of a micron or a millionth of a millimeter.

MM. A. An abbreviation of the Latin *Magistri Artium*, Masters of Arts.

M. M. E. An abbreviation of *Master of Mechanical Engineering.*

m. m. f. An abbreviation of *magnetomotive force.*

M. Mus. An abbreviation of *Master of Music.*

M. N. A. S. An abbreviation of *Member of the National Academy of Sciences.*

Mnemia (nē'mi-ä), *n.* [NL. (Eschscholtz, 1829), appar. < Gr. *Μνήμη*, Memory, one of the Muses.] The typical genus of the family *Mnemiidæ.*

Mnemiidæ (nē-mī'i-dē), *n. pl.* [NL., < *Mnemia* + *-idæ.*] A family of lobate ctenophorans in which the lobes are very large, the auricles are long and ribbon-shaped, and the origin of the auricles and lobes is placed almost at the same height as the funnel. It contains the genera *Mnemia*, *Alcinoë*, and *Mnemiopsis.*

mnemism (nē'mizm), *n.* [Gr. *μνήμη*, memory, + *-ism.*] The 'memory' which has been attributed to cells and organic molecules, and has been held to be an explanation of inheritance. *Hyatt*, Biol. Lectures, 1899, p. 153. [Rare.]

mnemogenesis (nē-mō-jen'e-sis), *n.* [Gr. *μνήμη*, memory, + *γένεσις*, generation.] The generation of new organisms by means of the organic 'memory' or mnemism of parents. Those who hold the opinion that inheritance is memory attribute the building of an embryo to mnemogenesis, or the unfolding of a record of a memory which, having been stored up in the central nervous system of the parent, is impressed upon the developing germ in the order in which it was stored. [Rare.]

The premature development of characteristics and some other rare phenomena . . . can only be explained by assuming an irregularity in the action of *mnemogenesis.* *Hyatt*, Biol. Lectures, 1899, p. 156.

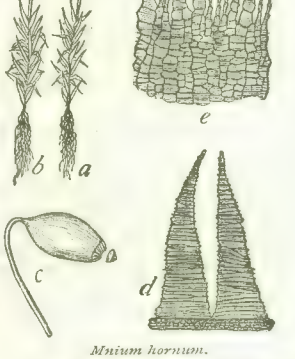
mnemogenic (nē-mō-jen'ik), *a.* Of or pertaining to mnemogenesis. [Rare.]

When special tendencies or structures have arisen, their reappearance in descendants at the same time, or earlier, . . . becomes one of the strongest confirmations of the *mnemogenic* hypothesis.
Hyatt, Biol. Lectures, 1899, p. 155.

mnemonicon (nē-mon'i-kon), *n.*; pl. *mnemonica* (-kä). [See *mnemonics.*] An aid to the memory; a mnemonic device.

mnemonize (nē'mō-nīz), *v. t.*; pret. and pp. *mnemonized*, ppr. *mnemonizing.* [*mnemon(ic)* + *-ize.*] To associate (in memory) with a system of mnemonics; remember by means of mnemonics.

Each lecture is . . . separately dedicated to two persons, twelve fortunate individuals being thus *mnemonized* into immortality. *N. A. Rev.*, July, 1845, p. 263.



mnemotechnist (nē-mō-tek'nist), *n.* [*mnemotechn(y)* + *-ist.*] One who is skilled in mnemotechnics.

Mnestra (nes'trä), *n.* [NL., < Gr. *Μνῆστρα*, a daughter of Danaus.] A genus of hydromedusans. *M. parasitica*, found on a pelagic snail, *Phyllirrhoë bucephala*, is one of the very small number of parasitic medusæ.

Mniaceæ (nī-ā'sē-ē), *n. pl.* [NL. (Brotherus, 1901), < *Mnium* + *-aceæ.*] A family of acrocarpous mosses of the order *Bryales*, typified by the genus *Mnium*, and distinguished from the *Bryaceæ*, to which it was formerly referred, by the club-shaped (instead of filiform) paraphyses of the male organs, and by the hexagonal (not rhombic) parenchymatous cells of the upper surface of the leaves. There are 4 genera and 79 species, of which latter 72 belong to the genus *Mnium.* They grow in moist, shady places, on the ground, on the bark of trees, or on rocks, and are found in nearly all parts of the world, but chiefly in temperate regions.

mniotiltine (nī-ō-til'tin), *a.* Relating to or having the characteristics of the *Mniotiltidæ*, a family containing the small North American warblers.

Mnium (nī'um), *n.* [NL. (Linnæus, 1753, adopted from Dillenius, 1741), < Gr. *μνίον*, also *μνῖον*, a moss.] A large genus of acrocarpous mosses, now made the type of the family *Mniaceæ.* It is characterized by synœcious flowers, erect stems, covered below with scale-like leaves becoming broader and toothed above and on the branches, and bearing at the summit one to several nodding or declined capsules on more or less elongated setæ. There are 72 species of wide distribution, 30 occurring in America, growing in swampy or moist ground, on rocks, or on trees.

Mnium hornum.

a, plant with sporogonium, still bearing a calyptra; *b*, plant with ripe sporogonium; *c*, mature capsule with operculum removed; *d*, two peristome teeth of the outer row; *e*, part of inner peristome. *a* and *b*, two thirds natural size; *c*, twice natural size; *d* and *e*, greatly enlarged. (From Strasburger's "Text-book of Botany.")

M. N. S. An abbreviation (*a*) of *Master of Natural Science;* (*b*) of *Member of the Numismatical Society.*

Mo. An abbreviation (*b*) of *Missouri;* (*c*) of *Monday.*

M. O. An abbreviation of *Master of Oratory.*

Moab (mō'ab), *n.* [See *Moabite.*] See the extract.

Moab, a name applied to the turban-shaped hat which was some few years back fashionable among ladies, and ladylike swells of the other sex. From the Scripture phrase, "*Moab* is my washpot" (Ps. lx. 8), which latter article the hat in question was supposed to resemble.
Slang Dict.

Moabitish (mō′a-bī-tish), *a.* [*Moabite* + *-ish*[1].] Of or pertaining to the Moabites; Moabite.

moafza (mō-äf′zä), *n.* [Ar. *muhāfza*, governorship, guardianship, < *hafaz*, keep, learn.] An administrative division of modern Egypt.

moa-hunter (mō′a-hun″tėr), *n.* A hunter of the moa: a poetical name applied, in the plural, to an extinct people, probably of Papuan relationship, supposed to have inhabited New Zealand before the advent of the Maoris.

moat[1], *v. t.* 2. In *mining*, to puddle; cover with earth so as to exclude air, as a mine shaft in case of an underground fire. [Scotch.]

moating (mō′ting), *n.* The puddling beaten in behind the stonework of a mining-shaft built up through a bed of quicksand. *N. E. D.*

mobile[1], *n.* 3. A name proposed as a substitute for *motor-vehicle*, or *automobile*.

Mobilian, *n.* 2. The trade language formerly spoken in the Gulf States, a jargon originating in the intercourse between whites and Indians. It contained many Choctaw words.

mobiliary (mō-bil′i-ā-ri), *a.* [F. *mobiliaire*, < L. *mobilis*, movable. See *mobile*[1].] 1. In the Channel Islands, relating to movable property; also the distinctive epithet of a court that deals with 'mobiliary' questions. *N. E. D.* —2. Of or pertaining to household furniture. —3. In *mil.*, of or pertaining to mobilization.

mobility, *n.* 4. In *phytogeog.*, the inherent capacity of a plant for migration. *F. E. Clements.*

mobilizable (mō′bi-lī-za-bl), *a.* [*mobilize* + *-able.*] Capable of being made or of becoming mobile or movable; that may be mobilized.

The hæmal and other mobile or *mobilizable* cells of the body. *Buck*, Med. Handbook, I. 44.

mobilization, *n.* 2. The act or process of rendering mobile or movable: as, the *mobilization* of a stiff joint.

Möbius's surface. See ★*surface.*

mob-madness (mob′mad″nes), *n.* The uncontrolled emotionalism or frenzy of an excited crowd: a phenomenon particularly described by Le Bon in his study, "The Psychology of the Crowd." *E. A. Ross*, Social Control, p. 147.

moca (mō′kä), *n.* [Porto Rican.] In Porto Rico, the cabbage-tree, *Vouacapoua Americana*. See *cabbage-tree*, 2, and *wacapou*.

moccasined[2] (mok′a-sind), *p. a.* [Lit., 'bitten by a moccasin,' that is, 'poisoned.'] Intoxicated. [Slang, southern U. S.]

In some parts of the Southern States *moccasined* = "intoxicated" was common as a slang term. *Jour. Amer. Folk-lore*, Oct.–Dec., 1902, p. 248.

mocha, *n.* 4. In *glove-making:* (*a*) A soft leather made from Arabian goatskins, nominally from Mocha. (*b*) Generally, a very soft sheepskin, tanned principally with oil.

Mocha ware. See ★*ware*[2].

mochila (mō-chē′lä), *n.* [Sp., a caparison, knapsack, etc., prob. from *mocho*, cut short, lopped, cropped, < L. *mutilus*, lopped: see *mutilate.*] The leather flap which covers a saddletree.

mochylic (mō-kil′ik), *a.* Noting an alcohol, a colorless compound, $C_{26}H_{46}O$, found, probably in combination with palmitic acid, in bird-lime, and obtained by boiling the inner bark of *Ilex integra* with water. It crystallizes in small lustrous prisms melting at 234° C.

Mock bishop's weed, *Ptilimnium capillaceum*, an umbelliferous plant of the United States, ranging from Massachusetts to Florida and west to Texas.

mock-acacia (mok′a-kā″shiä), *n.* The locust-tree, *Robinia Pseud-acacia*.

mock-bird, *n.* 2. A bird that imitates; a parrot. [Rare.]

> The king would dress an ape up in his crown
> And robes, and seat him on his glorious seat,
> And on the right hand of the sunlike throne
> Would place a gaudy *mock-bird* to repeat
> The chatterings of the monkey.
> *Shelley*, Witch of Atlas, lxxiv.

mock-chervil (mok′chėr″vil), *n.* 1. Cow-parsley.—2. Shepherd's-needle.

mocking-bird, *n.* 2. In Demerara, a name applied to orioles of the genus *Cassicus*, and especially to *C. icteronotus*, which is often kept as a cage-bird on account of its pleasant note.—3. In Australia, the lyre-bird, *Menura superba:* so called on account of its remarkable power of song.

mocking-thrush (mok′ing-thrush), *n.* Any one of the *Mimin*æ, a group of North American birds including the mocking-bird and catbird.

mock-knee (mok′nē), *n.* A large tumor-like swelling appearing on the knee of horses and cattle, due in most cases to repeated bruising and injury to the soft tissues, and sometimes resulting in the formation of hard epidermal scales.

mock-orange, *n.* 3. Same as *calabazilla.*—4. The Victorian laurel, *Pittosporum undulatum*, a small tree yielding a hard, close-grained whitish wood. In the Azores it is used for protecting orange-trees from the wind. Called also *native laurel.* See *Pittosporum.*

mock-strawberry (mok′strâ″ber-i), *n.* Same as *Indian* ★*strawberry* (*a*).

moco (mō′kō), *n.* [W. Ind., of obscure origin.] Cut money. [Windward and Leeward Islands.]

mocock (mō-kok′), *n.* Same as ★*mocuck. Notes and Queries*, Aug. 10, 1907, p. 107. [Canada.]

mocomoco (mō-kō-mō′kō), *n.* [Carib.] A variety of arum, *Montrichardia arborescens*, growing in Guiana, etc. *N. E. D.*

mocuck (mō-kuk′), *n.* [Also *mowkowk;* < Ojibwa *makak*, Menomini *makak.*] A box of birch bark for sugar, rice, etc., used by the Indians of Ontario, Minnesota, Michigan, etc. *Bartlett*, Dict. of Americanisms.

mod[2] (mōd), *n.* [Gael. *mòd*, an assembly, < Icel. *mōt.* See *moot*[1].] The yearly meeting of the Highland Association, for literary and musical compositions. *N. E. D.* [Great Britain.]

modal, *a.* 3. Of or pertaining to or having the numerical value of a statistical mode.

Any race as we find it is very largely the product of its *modal* members. *K. Pearson*, Grammar of Sci., p. 445.

4. In *petrog.*, in the quantitative system of classification of igneous rocks (see ★*rock*[1]), relating to the mode.—5. Of or pertaining to the mode of a curve. See ★*mode*, 11.—6. In *math.*, most frequently occurring.—**Modal frequency.** See ★*frequency.*—**Modal sensitivity.** See ★*sensitivity.*—**Modal value.** Same as ★*mode*[1], 12.

A numerical value for which such a frequency is greatest is termed a *modal value* or mode. *K. Pearson*, Grammar of Sci., p. 382.

modality, *n.* 6. In *psychol.*: (*a*) The nature or character of sensation or stimulus as determined by the sense-department to which it belongs or appeals: a term proposed by Helmholtz, to avoid a confusing use of *quality.*

It was found, for instance, that the simple reaction-time depended not only upon such objective factors as the *modality* of the stimulus, . . . but also quite as much upon certain more subjective conditions. *Amer. Jour. Psychol.*, XV. 489.

Hence—(*b*) the sense-department itself: as, sensations of different *modalities.*

modalize (mō′dal-īz), *v. t.*; pret. and pp. *modalized*, ppr. *modalizing.* [*modal* + *-ize.*] To render modal; impart modality to.

mode[1], *n.* 11. In *math.*: (*a*) The most frequent measure; the class with greatest frequency. (*b*) The point at which a curve, indicating frequencies of occurrence of a variable event, reaches its maximum. In the normal frequency curve (see *Quételet's* ★*curve*), the average is at the same time the mode, while in skew curves the average and mode do not coincide. (*c*) In a table of frequencies which gives a list of the different quantities appearing, with a statement of the number of times that each appeared, the one which occurs most often.—12. In *biom.*, that statistical value of a character which is most prevalent in a group of organisms.

Mr. Tower indicates a similar seasonal change in the case of the *mode* of Chrysanthemum leucanthemum. He proposes a new definition for the term '*mode*,' but the word '*mode*' was introduced into statistics with a perfectly definite sense, and it seems undesirable now to alter it. "The average prevailing state of one or more characters of a homogeneous lot of individuals" is not a biometric definition. It might refer to any constant whatever of the frequency,—to the mean, the *mode*, the variability, or indeed to the whole frequency distribution itself. The now established use of the word '*mode*' is for that value of an organ or character, at which the frequency of the population per unit of the character or organ is a maximum,—the frequency 'per unit of the character' being used, if the character be not discrete, in the sense of the infinitesimal calculus. The definition is clear; it belongs to the theory of statistics to show us how to determine whether there is one or more true *modes*, and if there be, to settle the degree of their significance. *Biometrika*, April, 1902, p. 305.

13. In *petrog.*, in the quantitative classification of igneous rocks (see ★*rock*[1]), the actual mineral composition of a rock in distinction from the norm, with which it may or may not coincide.—**Mode color.** See ★*color.*—**Normative mode.** See ★*normative.*—**Octave mode.** See *mode*[1], 7 (*a*).—**Secular mode,** the statistical mode which prevails for a given year or season in a species or any other statistical population.

A '*secular mode*' is the prevailing state of one or more characters of a homogeneous lot of individuals, of the same pleomorphic condition and stage of development, for a particular place and year. *Biometrika*, April, 1902, p. 314.

mode-imitation (mōd′im-i-tā″shọn), *n.* Imitation of the new, in distinction from *custom-imitation* or imitation of the long established: a term introduced by Tarde.

model, *n.* 7. See the extract.

An insect thus resembled by another is spoken of as its "*model*," the imitating insect is called a "mimic," and the combination of model and mimic or mimics is known as a "mimetic pair" or "mimetic assemblage," as the case may be. *Nature*, Oct. 31, 1907, p. 673.

Half-model (*naut.*), a block-model which shows one side of a vessel from the midship line.—**Waterline model.** Same as ★*block-model.*

model-basin (mod′el-bā″sn), *n.* An establishment for the experimental investigation of the phenomena of the motion of vessels and screw-propellers through the water, the determination of suitable forms of hull for a given speed, and the ascertainment of the power necessary to drive a given form of hull through the water at any given speed. The basin or tank used in the experimental work is an excavation of canal-shaped cross-section, from 300 to 500 feet long, 25 to 50 feet wide, and 8 to 15 feet deep, and filled with water. Above the surface of the water is a traveling carriage moved by power, which can be run over the length of the basin at any desired speed. The model of a vessel to be tested is towed through the water by a lever-arm attached to and hanging below the carriage, and suitable registering instruments record the speed of the model and its resistance to motion through the water. From the data thus obtained a curve of resistance of the model is made and the power required to drive a full-sized vessel is determined by the application of Froude's law.

modeliar (mo-del′yär), *n.* [Tamil *mudalizār*, an honorific plural from *mudali*, a chief. *Yule and Burnell.*] A native head-man, in the Tamil districts of Ceylon; a chief.

moderant (mod′e-rant), *n.* [L. *moderant(em)*, acc. sing. of ppr. of *moderari*, to moderate.] That which moderates or mitigates.

moderantist (mod′e-ran-tist), *n.* [*moderant(ism)* + *-ist.*] One who professes moderantism: one who belongs to the party of the 'moderates.' See *moderantism.*

moderator, *n.* 7. In *astrol.*, any one of the four principal points in a nativity upon which the native's fortunes are supposed to depend: the sun, moon, ascendant, or mid-heaven.—8. In *mech.*, a device for moderating or reducing the speed of an internal-combustion engine by the operation of a throttle-valve. Its action is the reverse of that of the accelerator.—**Moderator band.** See ★*band*[2].

modernism, *n.* 3. Specifically, a tendency among Roman Catholics to modern and progressive views condemned by Pius X. in an encyclical issued in 1907.

modernist, *n.* 3. One who holds modern views; specifically, a Roman Catholic who holds the views (modernism) condemned by Pius X. in his encyclical issued in 1907.

modesty, *n.* 4. (*a*) The hare's-ear or thorough-wax, *Bupleurum rotundifolium.* (*b*) The bladder-ketmia or flower-of-an-hour, *Hibiscus Trionum.*

modificand (mod′i-fi-kand″), *n.* [L. *modificand(us)*, ger. of *modificare*, modify.] That which is to be, or ought to be, modified. [Rare.]

modification, *n.* 7. In *biol.*, a change which is brought about in a living being by its own activity and is not transmitted to descendants, as contrasted with a variation regarded as a congenital change which is not the effect of the activity of the organism and is transmitted to descendants; an acquired character. *Natural Sci.*, Nov., 1896, p. 288.

modify, *v. t.*—**Modified milk.** See ★*milk.*—**Modified smallpox.** Same as *varioloid.*

modinature (mō-di-nā′tụr), *n.* [Also *modenature;* < L. *modus*, mode, + *natura*, nature.] The dispositon of the moldings in a classical cornice, or, by extension, in any part of the entablature.

modinha (mō-dēn′yä), *n.* [Pg., dim. of *moda*, mode.] In *music*, a form of song very popular in Portugal, combining features of the French romance and the Italian aria.

Modiolopsis (mō″di-ō-lop′sis), *n.* [NL., < *Modiola* + Gr. *ὄψις*, a form, appearance.] A genus of extinct pelecypod mollusks, hav-

ing the form of the *Modiola*, with narrow hinge-plate and edentulous hinge. It is of Silurian age.

Modiomorpha (mō″di-ō-môr′fä), *n.* [NL., < *Modiola* + Gr. *μορφή*, form.] A genus of prionodesmaceous pelecypods, having the form of the *Modiola*, with a single oblique elongate ridge-like tooth. It is found in Devonian rocks.

mod. præscript. An abbreviation of the Latin *modo præscripto*, in the manner prescribed.

Mods. An abbreviation of *Moderations*. See *moderation*, 5, pl.

I should have thought that four years of Oxford with a little finishing at Wren's . . . would make a lad quite safe who had been in the Sixth at a public school and got a scholarship and first in *Mods*.
Nature, June 16, 1904, p. 145.

modulation, *n.*—**Abrupt modulation**, in *music*, a modulation or transition of key accomplished suddenly, without ordinary harmonic process. See *modulation*, 3 (*b*).

modulative (mod′ū-lā-tiv), *a.* [*modulate* + *-ive*.] Having the function of modulating; serving to modulate.

Our punctuation-marks seem to have been originally *modulative*, . . . though punctuation is now mainly logical. *H. Sweet*, Eng. Sounds, § 235.

module, *n.* 5. Equivalent to the phrase *with congruence-modulus*. See *modulus of a congruence*, under *modulus*.

modulus, *n.*—**Bulk modulus**, the modulus of elasticity of volume. It is the quantity c in the formula: $c = \frac{\text{stress}}{\text{strain}}$, where the stress is a hydrostatic pressure and the resulting strain is the diminution suffered by a unit volume of the substance.—**Modulus of a complex number**, $a + bi$ is $+|a^2 + b^2|^{\frac{1}{2}}$.—**Modulus of a complex quantity**, $x + iy$, the absolute value $|x + iy|$, the positive square root $|x^2 + y^2|^{\frac{1}{2}}$.—**Modulus of a curve**, a function of the coefficients of the equation of a curve which is absolutely invariant for every birational transformation.—**Modulus of a real number**, its absolute value.—**Modulus of compression**, the plastic pressure throughout a substance produced by a forced uniform dilatation of it.—**Modulus of decay**, the time in which a velocity, decreasing in geometrical proportion, becomes $\frac{1}{2.7183}$ of its initial value.—**Modulus of periodicity**, the constant by which the values of an integral on opposite banks of a cross-cut differ.—**Modulus of resistance**. Same as ★*modulus of rupture*. Also sometimes used as the equivalent of the modulus of elastic resistance.—**Modulus of rupture**, a number which represents the weight necessary per square inch of cross-section to break a beam of any given material of definite length, breadth, and depth, usually one square inch in section and one foot long.—**Principal modulus**, a modulus of elasticity where the stress provokes only a strain of its own type.—**Stretch modulus**, in *phys.*, a numerical constant used to express the elongation of a substance when subjected to longitudinal stress; Young's modulus. See ★*compressional strength*.

Mœbia (mē′bi-ä), *n.* [NL., named after Professor Karl *Möbius* of Berlin.] A genus of brotuloid fishes containing two species found in the deep sea.

moel (mō′el), *n.* [W. *moel*, a hill bare on top, a sugar-loaf hill (common in local names), also a heap, a pile, prop. an adj., bald (compare E. *bald* as applied to mountains, or to the bare top of a mountain), = Ir. *moil*, a heap, a pile.] An isolated hill or small mountain, of convex or dome-like form above, and with concave slopes around the base.

Mr. J. E. Marr read a short but important paper on the peculiar form of isolated hill known from its popular Welsh name as a *Moel*. *Geog. Jour.* (R. G. S.), XVI. 446.

Moel Ferna slates. See ★*slate*[2].

moellon, *n.* 2. In *tanning*, partly oxidized oil recovered by expression from skins in the process of oil-tanning. It is used in currying leather which has already been tanned by other methods, and for this purpose is sometimes prepared specially from skins that have been repeatedly used. Also called *degras*.

Mœræ, Moirai (mē′rē, moi′rī), *n. pl.* [NL. *Mœræ*, Gr. *Μοῖραι*, pl. of *μοῖρα*, part, lot, destiny, fate; connected with *μέρος*, part, share, < *μείρεσθαι*, part, divide.] In *class. antiq.*, the fates: Homer, in the Iliad, speaks of Mœra in general, and of several Mœræ; and, in the Odyssey, of the Clothes ('spinners'). In later mythology three Fates appear, Clotho ('the spinner'), Lachesis ('the disposer of lots'), and Atropos ('the inevitable'), who cuts the thread.

Mœritherium (mē-ri-thē′ri-um), *n.* [NL., < Gr. *Μοῖρις*, Mœris, a lake in Egypt, + *θηρίον*, a wild beast.] A genus of extinct ungulate mammals, described from remains found in the Eocene of the Fayum, Egypt, and believed to represent the ancestors of the proboscideans. The animal was about the size of a large tapir; the molars are cross-ridged; there is one pair of tusk-like lower incisors; and the second incisors of the upper jaw are developed as tusks. The arrangement of the bones of the cranium shows some points peculiar to the *Proboscidea*.

Mœsa-blight (mē′sä-blīt), *n.* An undetermined East Indian plant-bug of the family *Capsidæ*, allied to *Helopeltis*, which blights the plants of the genus *Mœsa*.

moff (mof), *n.* A Caucasian silk fabric.

mofussilite (mō-fus′il-īt), *n.* [*mofussil* + *-ite*[2].] In India, one who lives in the mofussil, or country, as distinguished from the residencies.

mogigraphia (moj-i-graf′i-ä), *n.* [NL., < Gr. *μογι-*, hardly (*μόγος*, toil, *μογεῖν*, toil, suffer), + *-γραφια* < *γράφειν*, write.] Writers' cramp.

mogigraphic (moj-i-graf′ik), *a.* [*mogigraph(ia)* + *-ic*.] Pertaining to or of the nature of mogigraphia.

mogiphonia (moj-i-fō′ni-ä), *n.* [Gr. *μόγις*, with difficulty, + *φωνή*, sound.] In *pathol.*, a difficulty in producing loud vocal sounds with the larynx, ordinary speech remaining unaffected. *Syd. Soc. Lex.*

mogo (mō′gō), *n.* [Aboriginal Australian.] A stone ax of the natives of New South Wales.

mogra (mō′grä), *n.* [Hindi.] The Arabian jasmine, *Jasminum Sambac*.

M. O. H. An abbreviation of *Medical Officer of Health*.

Moham. An abbreviation of *Mohammedan*.

mohar, *n.* See *mohur*.

mohawkite (mō′hâk-īt), *n.* [*Mohawk* (see def.) + *-ite*[2].] An arsenide of copper, nickel, and cobalt, $(Cu,Ni,Co)_3As$, closely related to domeykite, found at the Mohawk mine, in the copper region of Keweenaw Point, Michigan.

Mohawk-weed (mō′hâk-wēd), *n.* The perfoliate bellwort, *Uvularia perfoliata*.

mohel (mō′hel), *n.* [Heb. *mul*, to cut off.] A circumciser; the officiating rabbi who is specially qualified to perform the operation of circumcision.

Moho, *n.* 3. [*l. c.*] A short-winged, short-tailed rail, *Pennula ecaudata*, peculiar to Hawaii.

Mohrodendron (mō-rō-den′dron), *n.* [NL. (Britton, 1893), < *Mohr* (Charles *Mohr* (1824–1901), a German botanist and pharmacist in America) + Gr. *δένδρον*, tree.] A name improperly given to *Halesia*, a genus of dicotyledonous trees or shrubs belonging to the family *Styracaceæ*. See *Halesia*.

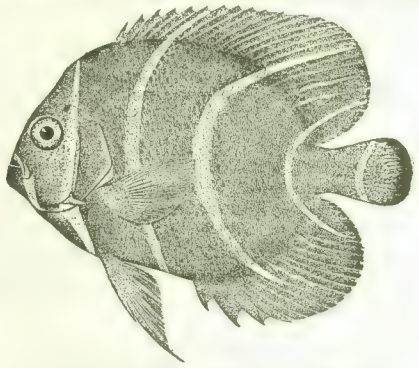
Moine schist. See ★*schist*.

Moiragetes (moi-ra-jē′tēz), *n.* [Gr. *μοιραγέτης*, < *μοῖρα*, fate, + *ἡγεῖσθαι*, lead.] Leader of the Fates: an epithet of Apollo and Zeus.

There were also statues of two of the Fates, of Zeus *Moiragetes*, and of Apollo *Moiragetes*.
J. H. Middleton, in Jour. Hellenic Studies, IX. 292.

moiré, *v. t.* 2. In finishing cotton goods, to stamp a fabric so as to produce a watered or moiré effect, for which various methods are employed.

moirette (mwo-ret′), *n.* [*moire* + *-ette*.] A textile fabric made to imitate moire. *N. E. D.*



moissanite (mwo′san-īt), *n.* [*Moissan* (see def.) + *-ite*[2].] Carbon silicide, identified by Dr. Henri Moissan of Paris in the meteoric iron of Cañon Diablo, Arizona. The same substance made artificially in the electric furnace is extensively used in the arts under the name of *carborundum*.

Moist thermometer. See ★*thermometer*.

moisture-proof (mois′tūr-prōf), *a.* Proof against moisture or its ill effects; not liable to be affected by moisture; damp-proof: as, transformers mounted in *moisture-proof* iron cases. *Elect. Rev.*, Sept. 10, 1904, p. 420.

moisture-scales (mois′tūr-skālz), *n. pl.* Scales for ascertaining the percentage of weight lost by the evaporation of the moisture held in any sample of ore or other loose material in bulk. The material is first weighed, then dried, and again weighed. The beam has two sets of marks, one for weight and one for percentage gradations, the sliding weight showing at the second weighing both the loss in actual weight and the percentage of loss resulting from the evaporation of the moisture.

Mojarra almejera, a fish, *Hæmulon sexfasciatum*, from the Pacific coast of tropical America.—**Mojarra cantileña**, a fish, *Eucinostomus californiensis*, of the Pacific coast of Mexico and Central America.—**Mojarra cardenal**, a fish, *Holocentrus suborbitalis*, found in abundance from Mazatlan to Panama, inhabiting the pools in the rocky shores left by the tide.—**Mojarra china**, a fish, *Gerres lineatus*, found on the west coast of Mexico.—**Mojarra de las piedras**, a chætodontoid fish, *Pomacanthus zonipectus*, found on the west coast of Mexico

Mojarra de las piedras (*Pomacanthus zonipectus*).
(From Bulletin 47, U. S. Nat. Museum.)

and Central America from Mazatlan to Panama.—**Mojarra dorada**, a carangoid fish, *Gnathanodon speciosus*, widely distributed through the tropical parts of the Pacific and Indian oceans.—**Mojarra garabata**, a sparoid fish, *Calamus brachysomus*, found in the Gulf of California and in neighboring waters.—**Mojarra prieta**, a fish, *Hæmulon scudderi*, of the family *Hæmulidæ*, found on the Pacific coast of tropical America.—**Mojarra verde**, a cichloid fish, *Heros beani*, inhabiting the Rio Presidio near Mazatlan, Mexico.

mojarrita (mo-hä-rē′tä), *n.* [Sp., dim. of *mojarra*.] Any fish of the genus *Eucinostomus* and family *Gerridæ*. These fishes are numerous in warm seas.

mojarron (mō-hä-rōn′), *n.* [Sp., aug. of *mojarra*: see *mojarra*.] A fish, *Anisotremus interruptus*, of the family *Hæmulidæ*, found on the west coast of tropical America.

moki[1] (mō′ki), *n.* [Maori.] The native name of two New Zealand fishes, the blue cod, *Percis colias*, and the bastard trumpeter, *Latris ciliaris*. *N. E. D.*

moki[2] (mō′kē), *n.* [Maori.] Same as ★*mokihi*.

mokihi (mō′kē-hē), *n.* [Maori *mokihi*, also *moki*.] A raft made of bundles of bulrushes, tied firmly together at one end and expanded by being tied to a stick at the other. Also written *moki* and *moguey*.

moko (mō′kō), *n.* [Maori.] Tattooing as practised by the natives of New Zealand, the designs consisting of elaborate figures with predominating spirals and covering a great part of the body.

The "*moko*" or tattooing of a New Zealander is really a mark of rank, and only slaves are forbidden the more or less complete tattooing of the face. A completely tattooed face is literally covered with spiral scrolls, circles, and curved lines; but though the principal marks are generally similar, they are not exactly alike on any two persons, owing to the almost infinite variety of combinations at the operator's command.
Sci. Amer. Sup., Sept. 12, 1903, p. 23160.

It is not a fact—as popularly supposed—that the "*moko*" was distinctive in different families; serving, as is sometimes said, the purpose of a coat-of-arms. The "*moko*" was in fact all made on the same pattern—that of all Maori carvings. Some were more elaborate than others. The sole difference was that some were in outline only, some were half filled in, and others were finished in elaborate detail. *E. E. Morris*, Austral English.

moko (mō′kō), *v. t.* To tattoo in the manner practised by the natives of New Zealand.

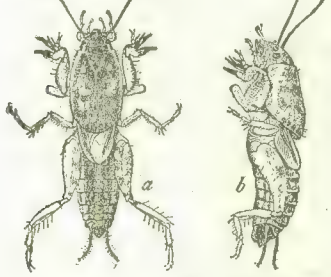
moko-moko (mō-kō-mō′kō), *n.* [Maori.] 1. A New Zealand lizard, *Lygosoma moko*.—2. The bell-bird.

mokum (mō′kum), *n.* [Jap. *moku-me*.] A Japanese alloy used chiefly for decorations upon articles of gold or silver.

mol[2] (mol), *a.* [F. *mol*, *mou*, = G. *moll*, < L. *mollis*, soft: see *moll*[2].] In *music*, minor: as, E *mol*, or E minor.

mol[3], **mole**[7] (mōl), *n.* [NL. *mol(ecula)*, molecule.] The gram-molecule, or the gram-molecular weight of an element or compound: a brief form introduced by Ostwald.

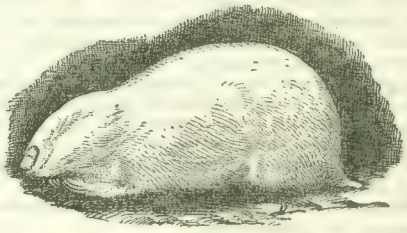
molad (mō′lad), *n.* [Heb., < *yalad*, bear, bring forth.] The birth-time or beginning of the new moon. The Jewish month is lunar and therefore begins with the molad. See ★*rosh hodesh*.



molal (mō′lal), *a.* [*mol*[3] + *-al*[1].] Of, or pertaining to, that amount of an element or compound which is equal to its molecular weight taken in grams. This amount is sometimes called a *mol*, and from the term in the German language an adjective *molar* is derived. The use of this German form of the adjective in English is infelicitous, since the English word 'molar' has already a very different meaning. Accordingly, some have lately used the adjective *molal*.

From the *molal* fluidity of the components of the mixture the *molal* fluidity was computed by the mixture formula. *Phys. Rev.*, Jan., 1908, p. 55.

molar[1], *a.*—**Molar height.** See ★*height*.
molar[2], *a.*—**Molar death.** See ★*death*.
molarity (mō-lar′i-ti), *n.* [*molar*[2] + *-ity*.] The action of forces upon bodies as a whole, as distinguished from the molecular forces.



The stellar bodies are interrelated through gravity and various forms of molar force which may be combined under the term *molarity*; and astronomy in its earlier form was the science of these relations.
W J McGee, in Science, May 19, 1905, p. 771.

molasquit (mō-las′kit), *n.* [An arbitrary formation, < *molas(ses)* + *-quit* (uncertain).] A food for horses and cattle, prepared from molasses and fine bagasse from the sugar-mills. Sufficient cane-cellulose is mixed with molasses to permit its transportation as a dry material. The fine bagasse readily absorbs a large quantity of molasses and is itself digestible to a considerable extent. The resulting mixture is a valuable fodder which contains about 45 per cent. of saccharine matter.
Molasse, *n.*—**St. Gall Molasse,** a division of the Miocene Tertiary series in Switzerland, being a marine stage lying between the fresh-water or gray Molasse below and the fresh-water Oeningen Molasse above.
molasses, *n.* 2. The repellent fluid ejected from the mouths of grasshoppers and certain other insects when captured.
molasses-grass (mō-las′ez-gras), *n.* See ★*grass*.
molavee, *n.* Same as ★*maulvi*.
mold[2], *n.*—**Fruit-mold,** a serious fungous disease which attacks the fruit of the apple, cherry, peach, pear, and plum. It is caused by the fungus *Sclerotinia fructigena*, the conidial condition of which has long been known as *Monilia fructigena*. Also called *fruit-rot* and *brown* ★*rot* (which see).—**Oil-mold.** Same as ★*grease-mold*.—**Sooty mold,** a fungous disease of citrous trees and the olive, which produces a dark sooty growth on leaves, branches, and sometimes the fruit, caused by species of *Meliola* and *Apiosporium*. See ★*Meliola* and ★*Apiosporium*.—**White mold of sweet potato.** Same as *white* ★*rust*.
mold[4], *n.* 12. In *paleon.*, the external impression of an organic body, test, or skeleton in the rocks: contrasted with *cast*, which is an internal impression. See *cast*[1], 14.—**Dry-sand mold,** a mold which has been baked to a hard mass to prepare it to receive molten metal: distinguished from a *green-sand mold*, which is not dried or baked before the molten iron or other metal is poured into it.
moldave† (mol-dāv′), *n.* [*Moldavia.*] A long outer garment worn by ladies during the first half of the nineteenth century. *N. E. D.*
moldavite (mol-dā′vīt), *n.* [*Moldavia*, Hungary, + *-ite*[2].] In *petrog.*, a green glass found in oval grains an inch long. Its origin is in doubt: considered by Suess to be of meteoric character, possibly a variety of obsidian. It is found in sandy deposits in Moldavia, Hungary. Sometimes used as a gem. See ★*bottle-stone*.
mold-block (mōld′blok), *n.* A cast-iron block forming a part of the casting-bed in an iron-refinery.
Molders' crane. See ★*crane*[2].
molding[2], *n.*—**Belt-molding.** (*b*) A small and delicately molded belt-course, especially in interior fittings, joinery, etc.—**Cat's-head molding.** See ★*cat's-head*.—**Double-cone molding,** a molding composed of a series of double cones, that is, of truncated cones joined base to base and top to top, so that it continually varies from thicker to thinner. It is a rare ornament, identified with Romanesque architecture.—**Open-sand molding,** a process of casting without the use of a cope or top-flask: used for casting pig-iron and heavy castings that do not need to be of an exact size, such as grate-bars.—**Plain molding,** a molding having a continuous surface, or one unbroken by corners.—**Rope molding,** a round, convex molding carved with a twist or spiral resembling a rope.
Moldo-Wallachian (mol″dō-wo-lā′ki-an), *n.* See *Rumanian*.
mole[2], *n.*—**Marsupial-mole.** Same as ★*mole-marsupial*.
mole-cricket, *n.*—**Southern short-winged mole-cricket,** an American gryllid, *Scapteriscus abbreviatus*, occurring in the southern United States.

Southern Short-winged Mole-cricket (*Scapteriscus abbreviatus*).
a, winged adult, dorsal view; *b*, same, lateral view. Natural size. (Chittenden, U. S. D. A.)

Molecular conductivity, death, encounter. See ★*conductivity*, etc.—**Molecular heat of vaporization.** See ★*heat*.—**Molecular magnetic friction.** See *magnetic* ★*hysteresis*.—**Molecular refraction.** See ★*refraction*.—**Molecular refractive power or refractivity.** See ★*refractive*.—**Molecular resistance, rigidity, shadow, silver, stability, streams, volume.** See ★*resistance*, etc.—**Molecular theory of vital currents.** See ★*current*[1].
molecule, *n.*—**Active molecules,** in *electrochem.*, those molecules of a dissolved electrolyte which are dissociated into their ions and are therefore active in carrying the electric current.—**Double molecule,** the simplest form of molecular complex in which two molecules combine to form one.—**Inactive molecules,** in *electrochem.*, those molecules of a dissolved electrolyte which are not dissociated into ions and are therefore not active in carrying an electric current.—**Proteid molecule,** a molecule of an albuminous substance in the wider sense of the term, or of a proteid in the narrower sense.
mole-diver (mōl′dī″vėr), *n.* The little grebe.
mole-marsupial (mōl′mär-sū″pi-al), *n.* A small marsupial which has the habits and very much the appearance of a small mole and which inhabits the desert regions of central South Australia. It is of a pale yellow color, with a horny shield on the nose, and a bare, leathery tail. Only about a dozen specimens

Mole-marsupial (*Notoryctes typhlops*).

of the animal, which has been named *Notoryctes typhlops*, have been found. It is the type of the family *Notoryctidæ*.
molette, *n.* 2. A small steel roller upon the surface of which is cut a pattern, in relief, which is pressed into the surface of a copper printing-cylinder of a calico-printing machine.
molewort (mōl′wėrt), *n.* Water-cress.
molinary (mō′li-nā-ri), *a.* [LL. *molinarius*, < *molina*, a mill.] Of or pertaining to milling or the grinding of cereals.

The 'Lead,' a stream, 'led' from the Tay past Rose Terrace, into the town for *molinary* purposes; and long ago, I suppose, bricked over, or choked with rubbish.
Ruskin, Fors Clavigera, i. 161.

Molka berry. See ★*berry*[1].
mollescence (mo-les′ens), *n.* [L. *mollis*, soft, + *-escence*.] Softening; in *pathol.*, same as *mollities*.
mollescent (mo-les′ent), *a.* [L. *mollescent(em)*, ppr. of *mollescere*, become soft.] Becoming soft; softening.
mollichthyolin (mol-ik′thi-ō-lin), *n.* A mixture of molline and ichthyol. It is used externally in diseases of the skin.
Mollienisia (mol″i-e-nis′i-ä), *n.* [NL. (Le Sueur, 1821), named after M. *Mollien*, a French minister of finance.] A genus of fishes of the family *Pœciliidæ*, small mud-loving fishes found from North Carolina to Mexico in the coastwise swamps.
Mollisia (mo-lis′i-ä), *n.* [NL. (Karsten, 1871), irreg. < L. *mollis*, soft.] A large genus of discomycetous fungi having separate or crowded bright-colored sessile waxy ascomata. The spores are elongate, unicellular, and hyaline. About 150 species have been described. They occur on dead stems and decaying branches and are widely distributed.
Mollisiaceæ (mo-lis-i-ā′sē-ē), *n. pl.* [NL., < *Mollisia* + *-aceæ*.] A family of discomycetous fungi, named from the genus *Mollisia*, containing 19 genera. The ascocarps are mostly small and sessile. See ★*Mollisia*.
Mollities unguium, a trophic disease of the nails in which they become abnormally soft and yielding.
moll-rowing (mol′rou″ing), *n.* Domestic squabbling; the quarreling of man and wife. [Slang.]

One scene was the work of my brother and myself. It was the outside of a lodging-house by moonlight. . . . The scene wound up with a great concert of "practical" cats on the roof, whose diabolical *moll-rowings* still ring in my ears.
G. A. Sala, Things I have Seen and People I have [Known, II. 121.

molly[4] (mol′i), *n.* [A senseless application of the familiar name *Molly*: see *Molly*[1].] In the printers' game of jeffing, a throw of quadrats which exposes only the unnicked sides; hence, any useless work with types in a composing-room.
molly-gut (mol′i-gut), *n.* Same as *goose-fish*.
mollyhawk (mol′i-hâk), *n.* An emendation of *mollymawk*, a name given by sailors to the smaller albatrosses. The change has been made on the mistaken supposition that mollymawk was a corruption of mollyhawk.

On Adam's Island Mr. Cockayne had an opportunity of studying the nests of the albatross placed in exposed situations, where the solitary chicken remains on the nest for a year, and on the desolate Bounty Islands were found the nests of the *mollyhawk*, and numbers of animals, crustaceans, spiders and beetles which make their home in the guano or on the bare rocks.
Nature, Nov. 5, 1903, p. 14.

moloker (mō′lok-ėr), *n.* A renovated silk hat. *N. E. D.* [Slang.]
molombwa (mō-lom′bwä), *n.* [Native name in West Africa.] Same as *molompi*. The pulverized heartwood of the tree is used by the natives as an ornament by sprinkling it upon their hair and clothing.
molote (mo-lō′tā), *n.* A long-handled heart-shaped hoe used by the Latookas and other natives of the Upper Nile Valley and the lake regions.

The handles of the *molotes* are extremely long, from seven to ten feet, and the instrument being shaped like a miner's spade (heart-shaped), is used like a Dutch hoe, and is an effective tool in ground that has been cleared, but is unfitted for preparing fresh soil.
Sir S. W. Baker, The Albert Nyanza, p. 164.

Molpadia (mol-pā′di-ä), *n.* [NL., < Gr. *Μολπαδία*, a feminine name.] The typical genus of the family *Molpadiidæ*. *Cuvier*, 1817.
Molpadiidæ (mol-pā-dī′i-dē), *n. pl.* [NL., < *Molpadia* + *-idæ*.] A family of holothurians, of the order *Actinopoda*, having neither tube-feet nor papillæ, the posterior end gradually tapering into a tail-like piece, mouth and anus terminal, usually fifteen simple or digitate tentacles, calcareous ring of five radial and five interradial pieces, and a single stone-canal with an internal madreporite. Respiratory trees are present but Cuvierian organs are rare. It contains the genera *Molpadia*, *Eupyrgus*, *Caudina*, *Haplodactyla*, *Trochostoma*, and *Ankyroderma*.
molula (mol′ū-lä), *n.* [NL., dim. of L. *mola*, a millstone: see *mola*, *molar*[1].] In *entom.*, the convex and sometimes bent head of the tibia of the hind leg of an insect, armed with a horny process on each side by which it is attached to the thigh. Also called *knee-ball*. *Kirby and Spence*.
mol. wt. An abbreviation of *molecular weight*.
Molybdate of ammonium, a salt of molybdic acid largely used in the determination of phosphorus and phosphoric acid in analysis. It is in constant use in the laboratories of steel-works and fertilizer-factories.
Molybdenum blue. See ★*blue*.—**Molybdenum glance.** See *molybdenite*.
molybdomancy (mō-lib′dō-man-si), *n.* [Gr. *μόλυβδος*, lead, + *μαντεία*, divination.] Divination by means of the behavior of molten lead, conclusions being based on the number, form, etc., of the drops.
molybdophyllite (mo-lib-dof′i-līt), *n.* [Gr. *μόλυβδος*, lead, + *φύλλον*, leaf, + *-ite*[2].] A rare lead silicate occurring in colorless foliated masses somewhat resembling mica, found at Långban, Sweden.
Momable slates. See ★*slate*[2].
moment, *n.* 9. In *statistics*, influence in determining the position of the center or of the axis of distribution, as of population or resources.—**Center of moments.** See ★*center*[1].—**Dictyotic moment.** See ★*dictyotic*.—**Lorication moment.** Same as ★*dictyotic moment*.—**Moment of friction.** See ★*friction*.—**Moment of momentum,** a quantity, sometimes employed in the mechanics of rotation, equal to the angular momentum ($m\omega$), or the product of the mass and angular velocity. Since the angular velocity is $\frac{v}{r}$, angular momentum may be written $\frac{mv}{r}$—momentum (mv) multiplied by distance (r); hence the name *moment of momentum*.—**Moment of population,** a compound quantity formed by multiplying the population of a given area by the distance of its population-center from an assumed parallel or meridian. By means of this idea, the United States Census Office, using as element the square degree, determines centers of population.—**Moment of rotation,** the rotational inertia or moment of inertia.—**Moment of torsion,** the torque tending to twist a body, as a rod; the constant T in the equation $T = -\frac{\pi n r^4 \theta}{2l}$, where n is the slide modulus, r the radius of the twisted body, θ the angle through which the free end is twisted, and l is the distance from the free end along the axis of torsion to the point of clamping.—**Moment of two straight lines.** See ★*line*[2].—**Psychological moment,** the best or the right time: as, it happened at the *psychological moment*. The expression rests upon a misunderstanding of the German *das psychologische Moment*, i. e. the psychological factor.—**Statical moment.** Same as *moment of a force*.—**Unit moment of a couple.** See ★*couple*.
momentum, *n.*—**Angular momentum,** the product of the angular velocity of a rotating body into its moment of inertia.—**Electromagnetic momentum,** momentum due to velocity of an electromagnetic mass: opposed

to ordinary mass, the momentum of which is termed *mechanical momentum*.—**Mechanical momentum**, momentum of the sort ordinarily dealt with in dynamics, in which the moving body has no electrostatic charge and consequently no electromagnetic mass.—**Moment of momentum.** See ★*moment*.

momiology (mō-mi-ol′ō-ji), *n.* [F. *momie*, a mummy, + *-ology*.] The scientific study of mummies.

Even the history of the Egyptian dynasties is a department of *momiology*, for the tablets of Abydos and Sakkarah belonged to temples which are connected with that future life and day of judgment for which the mummy lies patiently waiting.

Athenæum, March 3, 1894, p. 283.

momme (mom′mē), *n.* [Jap.] A Japanese unit of weight, equivalent to 3.756 grams, or nearly 60 grains. *C. Hering*, Conversion Tables, p. 61.

mon[5] (mon), *n.* [Jap.] A Japanese money of account, the ten thousandth part of a silver yen, equal to 50 cents.

mon[6] (mon), *n.* [Corean?] A Corean coin, the hundredth of a Japanese tempo, equivalent to one tenth of a cent.

mon. An abbreviation (*a*) of *monastery*; (*b*) of *monetary*; (*c*) of *Monday*.

Monacanthidæ (mon-a-kan′thi-dē), *n. pl.* [NL., < *Monacanthus* + *-idæ*.] A family of fishes closely allied to the *Balistidæ*, herbivorous shore-forms found in warm seas.

monachate (mon′a-kāt), *n.* [L. *monachatus*. See *monk*.] The period of life passed as a monk. *N. E. D.*

monachist (mon′a-kist), *a.* [*monach(ism)* + *-ist*.] Pertaining or relating to monachism or monasticism.

I do not find in Giorgione's work any of the early Venetian *monachist* element. He seems to me to have belonged more to an abstract contemplative school.

Ruskin, Modern Painters, V. ix. § 11.

monachize (mon′a-kīz), *v. i.*; pret. and pp. *monachized*, ppr. *monachizing*. [*monach(ism)* + *-ize*.] To live a monastic life; become a monk.

monaco (mon′a-kō), *n.* [It. *Monaco*, a petty principality now under French protection, < L. *Arx* (or *Saxa*) *Monœci*, 'the fort (or rock) of Monœcus,' Gr. Μόνοικος, 'he who dwells alone,' an epithet of Hercules.] A silver coin of the value of 58 sols, bearing the arms of the Prince of Monaco.

monactin (mon-ak′tin), *n.* [Gr. *μόνος*, single, + *ἀκτίς*, (*ἀκτιν-*), ray.] A sponge-spicule of one axis.

monactinellid (mo-nak-ti-nel′id), *n.* and *a.* **I.** *n.* One of the *Monactinellida*, an order of sponges.

II. *a.* Having the characters of or pertaining to the *Monactinellida*.

monad, *n.*—**Collared monad,** in *zoöl.*, a monad which possesses a delicate membranous collar at one pole; one of the *Choanoflagellata*.—**Hooked** or **springing monad.** See ★*Bodo*.

monadary, *n.* Same as *monadiary*.

Monadelphic surface. See ★*surface*.

monadistic (mon-a-dis′tik), *a.* Pertaining to or of the nature of monadism.

monadnock (mō-nad′nok), *n.* [A generic use of the name of Mount *Monadnock* in southwestern New Hampshire. The name *Monadnock* (formerly also *Monadnuck*, *Monadnic*, *Menadnock*) is of Algonkin origin, prob. from *manit*, 'that which is exceeding, surpassing, extraordinary, supernatural' (hence *manit*, *manitto*, a spirit, God: see *manito*), + *-adene* (*-ahdin*, *-adn*), a hill or mountain, + *-auke* (*-ohke*, etc., in colonial spellings often *-ock*, *-oc*), land, country, place. The meaning would be 'the place where there is a very high mountain.'] In *phys. geog.*, an isolated hill or mountain rising over a peneplain, and surviving because of the superior resistance of its rocks or of its distance from the larger rivers; a residual hill.

The rivers Lesse, Ourthe, Süre, and Vierre, which radiate from the Serpont *monadnock*, all suddenly turn, at intervals, at right angles to their normal course, and these bends lie in concentric circles as if the region has been denuded in concentric waves.

Geog. Jour. (R. G. S.), XVIII. 615.

monadological (mon″a-dō-loj′i-kal), *a.* [*monadolog(y)* + *-ic-* + *-al*[1].] Of or pertaining to monadology, or the doctrine of monads.

In this case matter is thought of as made up of similar [mental] atoms of a lower order (monistic or *monadological* spiritualism), or the mind-atom is regarded as specifically different from matter proper (dualistic spiritualism). *W. Wundt* (trans.), Outlines of Psychol., p. 313.

monæne (mon′ēn), *n.* [Gr. *μόνος*, single, + *-αινα*, as in *τρίαινα*, trident.] In sponge-spicules, a triæne in the cladome of which two of the three rays have atrophied or been arrested in development.

monamide (mon-am′id), *n.* [Gr. *μόνος*, one, + E. *amide*.] A class name applied, in organic chemistry, to compounds, derived from acids and ammonia, containing the univalent radical $-CONH_2$: occasionally used, incorrectly, for amines.

monamido (mon-am′i-dō), *a.* [*mon(o)-* + *amido-*.] Containing a single amido (NH_2) group: as, *monamido* acid.

monandric (mō-nan′drik), *a.* Practising or characterized by monandry; monandrous.

monapsal (mon-ap′sal), *a.* [*mon(o)-* + *apse* + *-al*[1].] In *arch.*, having only one apse.

Monarch butterfly. See ★*butterfly*.

monarcho† (mon′ärk-kō), *n.* [For It. *monarcha*, monarch.] A title assumed by a fantastical individual of Shakspere's time; hence, humorously, a monarch.

This Armado is a Spaniard, that keeps here in court; A phantasime, a *Monarcho*, and one that makes sport To the prince and his bookmates. *Shak.* L. L. L. iv, i.

Monarda, *n.* 2. [*l. c.*] A plant of the genus *Monarda*.—**Monarda oil.** See ★*oil*.

Monardella (mō-när-del′ä), *n.* [NL. (Bentham, 1834), a diminutive of *Monarda*, on account of the resemblance of the two genera.] A genus of plants of the family *Menthaceæ*. They are annual or perennial sweet-smelling herbs, with rose-purple, lavender, or white flowers in terminal heads subtended by broad, often colored bracts. There are about 15 species, natives of western North America, chiefly of California, some of which are occasionally cultivated.

monarthritis (mon-är-thrī′tis), *n.* [NL., < Gr. *μόνος*, single, + *ἀρθρον*, joint, + *-itis*.] Inflammation of one joint.—**Monarthritis deformans,** arthritis deformans affecting one joint only.

Monastic architecture, the architecture of the convents and monasteries of the Christian middle ages, and the resulting styles down to the eighteenth century. Romanesque art in western Europe is largely monastic in origin.

monasticize (mō-nas′ti-sīz), *v. t.*; pret. and pp. *monasticized*, ppr. *monasticizing*. [*monastic* + *-ize*.] To make monastic; convert to monasticism.

monatomism (mon-at′ǫm-izm), *n.* [*monatom(ic)* + *-ism*.] The character of being monatomic.

monaulic (mō-nâ′lik), *a.* [Gr. *μόνος*, single, + *αὐλός*, pipe, + *-ic*.] Having an undivided tube, as the hermaphrodite duct leaving the ovotestis in certain mollusks. Compare ★*diaulic*, 2.

monaxile (mon-ak′sil), *a.* and *n.* [Gr. *μόνος*, single, + L. *axis*, axis, + *-ile*.] **I.** *a.* Same as *monaxial*.

II. *n.* A monaxial sponge-spicule.

monaxon, *n.* 2. In *neurol.*, a nerve-cell with a single neuraxon, or axis-cylinder process.

monaxonal (mon-ak′sǫ-nal), *a.* [*monaxon* + *-al*[1].] In sponge-spicules, monactinal.

monaxonidan (mon-ak-son′i-dan), *a.* and *n.* [*Monaxida* + *-an*.] **I.** *a.* Relating or pertaining to the *Monaxonida*; having only monaxon spicules.

II. *n.* Any member of the *Monaxonida*.

monchiquite (mon′chi-kīt), *n.* [Serra de *Monchique*, Portugal, + *-ite*[2].] In *petrog.*, a porphyritic rock with aphanitic groundmass, composed of hornblende, augite, biotite, olivin, and magnetite in a ground-mass of the same minerals, with an isotropic base having the composition of analcite. *Hunter and Rosenbusch*, 1890.

monchiquoid (mon′chi-koid), *a.* [*Monchiqu(ite)* + *-oid*.] In *petrog.*, resembling monchiquite in mineral composition and texture.

mond (mond), *n.* [D. *mond* = G. *mund* = E. *mouth*.] A mouth; particularly, the mouth of a river: an element in many South African Dutch place-names.

Mond. An abbreviation of *Monday*.

mondaine (mon-dān′), *a.* and *n.* [F., fem. of *mondain*, < L. *mundanus*, of the world: see *mundane*.] **I.** *a.* Worldly; absorbed in the fashionable world.

II. *n.* A woman who loves the pomps and vanities of this world; one who is devoted to the world of fashion; a worldling.

monembryonic (mon-em-bri-on′ik), *a.* [Gr. *μόνος*, single, + *ἐμβρυον*, embryo, + *-ic*.] Of or pertaining to a single embryo; bearing a single embryo.

monembryony (mon-em′bri-ǫ-ni), *n.* [*monembryon(ic)* + *-y*[3].] The state or condition of bearing only one embryo.

monergic (mō-nėr′jik), *a.* [< Gr. *μόνος*, single, + E. (*en*)*ergic*: properly *monenergic*.] In *plant physiol.*, having a single nucleus, or center of vital energy: opposed to ★*polyergic*.

monergist (mon′ėr-jist), *n.* [*monerg(ism)* + *-ist*.] One who holds the doctrine of monergism, namely, that the Holy Spirit is the only efficient agent in regeneration.

monergistic (mon-ėr-jis′tik), *a.* [*monergist* + *-ic*.] Of or pertaining to monergism; of the nature of monergism.

Monesia bark. (*b*) See ★*bark*[2].

monetary, *a.*—**Latin Monetary Union.** See ★*Latin Union*.

monetite (mon′ē-tīt), *n.* [*Moneta* (see def.) + *-ite*[2].] Acid calcium phosphate ($HCaPO_4$) occurring in minute yellowish-white triclinic crystals, found in a bed of guano on the islands Moneta and Mona, West Indies.

money, *n.*—**Anglo-Gallic money,** coins struck in France by English rulers of a portion of that country, from the time of Henry II.—**Ear money,** an archaic money struck in the Low Countries for Java, in deference to native predilection.—**Black money.** (*a*) Copper coins struck at Tours and made current in England during the reigns of Edward II. and Edward III. (*b*) See the extract.

When any class of work involves special unpleasantness or injury to clothing, "*black money*" or "dirty money" is sometimes stipulated for. Thus, the boilermakers and engineers receive extra rates for jobs connected with oil-carrying vessels. *Webb*, Industrial Democracy, I. 313.

Cloth money, an early Chinese copper coinage.—**Condemnation money,** in *law*: (*a*) The damages which the losing party to an action is adjudged to pay. (*b*) In an appeal bond, the amount that should be awarded against the appellant by the judgment of the court upon affirming the judgment or order appealed from.—**Cut money,** sections of silver or gold coins cut for circulation as subsidiary money, especially in the West Indies and Spanish colonies.—**Danes' money,** a local name for Roman coins found in Northamptonshire. [Eng.]—**Don Patiño's money,** a local name once current in Jamaica for the Spanish pistareen: so named from a colonial and finance minister of Spain at the beginning of the eighteenth century.—**Exurgat money,** an English coinage of Charles I., with the inscription on the reverse, *Exurgat Deus, dissipentur inimici* (Ps. lxvii., Vulg.), "Let God arise, let his enemies be scattered" (Ps. lxviii. 1, Rev. ver.).—**Franco-Italian money,** the coins struck by temporary French rulers of parts of Italy, from Charles VI. to Louis XVI. *W. C. Hazlitt.*—**Franco-Spanish money,** the coins struck in Spain by Louis XIII. and Louis XIV. of France, during their occupation of parts of that country. *W. C. Hazlitt.*—**Hock-Tuesday money,** in *old Eng. law*, money paid to a lord that his tenants and bondmen might celebrate the second Tuesday after Easter week—the day on which the English overcame the Danes. *Cowel.*—**India money,** an English coinage made in the seventeenth century for use by the East India Company. Also called *Indian money*, and *Porteullis money*. See *porteullis*, 4.—**Lanka money,** a bar of silver stamped with Arabic inscriptions, used as money in Ceylon.—**Merovingian money,** a term loosely applied to the whole group of coins struck in the Low Countries and in France in the sixth, seventh, and eighth centuries and actually originating in Holland. *W. C. Hazlitt.*—**New plate money,** a coinage, as opposed to Mexican plate, created by Charles II. of Spain (1686), who ordered that the American piece-of-eight (reals) should pass as a piece of ten new reals.—**Saddle money,** a Chinese copper coinage in use from the first to the fourth century B.C.—**Temple money.** See ★*temple*[1].—**Tin-dangle money.** Same as ★*bridge-money*.

Cloth Money.

money-bound (mun′i-bound), *a.* Detained on board awaiting a remittance to pay for a passage that has been made: said of a ship's passenger.

money-grass (mun′i-gràs), *n.* Same as *penny-grass*, 1.

money-maker, *n.* 3. Any commodity which sells well and is profitable for those who make or handle it.

money-plant (mun′i-plant), *n.* Same as *money-flower*.

mongo (mon′gō), *n.* See the extract.

Mongo (Phaseolus mungo Bl.), smaller than the lentil, but of the same flavor, cultivated on a large scale, as it is the principal food of many towns.

Pron. Gaz. Philippine Is., p. 80.

Mongolian, *a.*—**Mongolian idiocy, idiot.** See ★*idiocy*, ★*idiot*.—**Mongolian mark** or **spot,** a dark spot in the lumbar region, occurring in Mongolian new-born children and also observed among the new-born of the American (Indian) race.

Mongolization (mong″gō-li-zā′shon), *n.* [*Mongolize* + *-ation*.] The process of Mongolizing or rendering Mongolian in character.

Mongolize (mong′gō-līz), *v. t.*; pret. and pp. *Mongolized*, ppr. *Mongolizing*. [*Mongol* + *-ize*.] To render Mongolian in character; subject to Mongolian influence or control.

> Australia was determined . . . not to *Mongolise* its dominions.
> *Daily News* (London), July 2, 1906. *N. E. D.*

Mongolo-Tatar (mong″gō-lō-tä′tär), *a.* and *n.* **I.** *a.* Of or pertaining to peoples that speak languages of the Mongol and Tungus divisions of the Ural-Altaic stock (the Mongol, Kalmuck, Buriat, Tungus, and Manchu), or to the languages themselves. Sometimes also used to include the Turkish languages or the whole group of Ural-Altaic languages. *Keane*, Ethnology, p. 299.

II. *n.* A people of Mongolo-Tatar affinities.

Mongrel disease. See ★*disease*.

monheimite (mon′hīm-īt), *n.* [Named (1853) after a German, Von *Monheim*, who described it.] A variety of the zinc carbonate, smithsonite, containing over 20 per cent. of iron carbonate.

Monicono-stereoscopic glasses. See ★*glass*.

monilethrix (mō-nil′ē-thrix), *n.* [Irreg. < L. *monile*, a necklace, + Gr. *θρίξ*, hair.] Irregular atrophy of the hairs, giving them a beaded appearance.

Monilia (mō-nil′i-ä), *n.* [NL. (Persoon, 1797), so called in allusion to the chain of spores, < L. *monile*, a necklace.] A genus of *Fungi Imperfecti*, type of the family *Moniliaceæ*, having erect branched conidiophores bearing chains of conidia. *M. fructigena* and *M. cinerea* are known to be conidial conditions of the discomycetous genus *Sclerotinia*. They are the destructive fruit-molds which attack the peach, plum, cherry, etc. See *fruit-*★*mold*, *peach-blight*, *rot*, and ★*Sclerotinia*.

Moniliaceæ (mō-nil-i-ā′sē-ē), *n. pl.* [NL., < *Monilia* + *-aceæ*.] A family of hyphomycetous fungi named from the genus *Monilia* (see ★*Monilia* and ★*Moniliales*). It is the same as the *Mucedinaceæ*, for which it is to be substituted, that name not being based on the name of a genus.

Moniliales (mō-nil-i-ā′lēz), *n. pl.* [NL., < *Monilia* + *-ales*.] The largest order of the group *Fungi Imperfecti*, frequently called *Hyphomycetes*, containing the 4 families *Moniliaceæ*, *Dematiaceæ*, *Stilbaceæ*, and *Tuberculaceæ*.

Moniligaster (mō-nil-i-gas′tėr), *n.* [NL., < L. *monile*, necklace, + *gaster*, belly.] The typical genus of the family *Moniligastridæ*. *Perrier*, 1873.

Moniligastridæ (mō-nil-i-gas′tri-dē), *n. pl.* [NL., *Moniligaster* (*-gastr-*) + *-idæ*.] A family of terricolous *Oligochæta*, consisting of large or small earthworms with 8 paired setæ in each segment, the inconspicuous clitellum occupying segments 10–13, and one or two pairs of male pores. It contains the genera *Moniligaster* and *Desmogaster*, found in India, Ceylon, Sumatra, Borneo, Burma, and the Bahamas. *M. grandis* attains a length of two feet.

monimiaceous (mō-nim-i-ā′shius), *a.* Belonging to the plant family *Monimiaceæ*.

monimolite (mō-nim′ō-līt), *n.* [G. *monimolit* (1865); < Gr. *μόνιμος*, lasting, stable, + *λίθος*, stone.] An antimoniate of lead, iron, and sometimes calcium, occurring in yellow to brown isometric crystals and also in massive forms: found in Sweden.

Monimostylica (mon″i-mō-stil′i-kä), *n. pl.* [Gr. *μόνιμος*, lasting, + *στῦλος*, pillar.] A division of reptiles including those which have the quadrate immovable, as turtles, crocodiles, and extinct forms: contrasted with *Streptostylica*.

monism, *n.*—**Cosmonomic monism.** See ★*cosmonomic*.—**Psychophysical monism**, the metaphysical opinion that physical and psychical phenomena are parallel aspects or attributes of one and the same underlying thing of which no experiential knowledge is possible.

> The first [parallelist theory] looks upon mind and body as of equal reality or rather unreality, and interprets them as parallel manifestations or aspects of a single real being: to this we may give the name of *psychophysical monism*. *C. A. Strong*, Why the Mind has a Body, p. 299.

monistically (mō-nis′ti-kal-i), *adv.* In the manner of the monists; in accordance with monistic philosophy.

> So far as the present work is concerned, it knows nothing of the value judgments by which the world ground is interpreted in terms of ethical personality; and it ignores all psychological experiences in which the inworkings of a transcendent moral person are known—experiences construed now *monistically* and now pluralistically.
> *Jour. Philos., Psychol. and Sci. Methods*, Aug. 4, 1904, [p. 442.

monistichous (mō-nis′ti-kus), *a.* [Gr. *μόνος*, single, + *στίχος*, row, file.] Covered with a single layer of cells, like the ommatidium or structure which underlies the lens unit of the eye of a scorpion.

monitor, *n.* 9. In *hydraul.*, a device consisting of a universal-jointed pipe, to which is attached a nozle throwing a powerful stream of water: used in hydraulic mining and on fire-boats. See *hydraulic mining*, under *hydraulic*.—**10.** A turret or tool-holder in a lathe. See ★*turret*[1], 6.—**11.** Same as ★*catamaran*, 4.—**Gould's monitor**, *Monitor gouldi*, a large Australian lizard, named after the naturalist John Gould.

monitor (mon′i-tor), *v. t.* To be a monitor or adviser to; admonish.

> So after my own heart! I knew, I knew
> There was a place untenanted in it;
> In that same void white Chastity shall sit,
> And *monitor* me nightly to lone slumber.
> *Keats*, Endymion, iv. 135.

monitor-lathe (mon′i-tor-lāᵺ), *n.* Same as *turret-lathe*.

monitorship (mon′i-tor-ship), *n.* The position and duties of a monitor.

monium (mō′ni-um), *n.* [NL., < Gr. *μόνος*, single, alone.] The name given by Sir W. Crookes to a supposed new chemical element the presence of which in salts of so-called 'yttrium' seemed to be indicated by a peculiar phosphorescent spectrum exhibiting a group of lines almost alone near the extreme ultra-violet (whence the name): it was later proposed to change the name to *victorium*, in honor of Queen Victoria. Monium must be looked upon as one of the large number of inferred but unestablished elements.

> In his presidential address to the British Association in 1898 he [Sir William Crookes] announced the discovery of yet another member of the rarer earths—*monium* or victorium. The spectroscopic examination of this showed the spectrum crossed by an isolated group of lines high up in the ultra-violet end, and the existence of which could be detected only upon the photographic sensitive negative. *Sci. Amer.*, Aug. 8, 1903, p. 99.

monkey, *n.* **10.** In *mining*, an appliance for automatically gripping or letting go the rope in rope haulage.—**11.** *pl.* In the Australian bush, a sheep-shearer's name for sheep. [Slang.]

> No one felt better pleased than he did to see the last lot of '*monkeys*,' as the shearers usually denominated sheep, leave the head-station.
> *A. C. Grant*, Bush Life in Queensland, I. 88, quoted in [E. E. Morris, Austral English.

12. A local name for the cinder-notch of the dam in an iron-making blast-furnace, through which the slag or cinder can be allowed to flow out as it accumulates in the smelting process. It is placed on the side of the furnace, and about 30 or 40 inches below the level of the twyers where the blast is introduced in furnaces of modern size.

> On the side of the furnace, and 30 to 40 inches below the level of the tuyeres, the "cinder notch" or "*monkey*" is situated. *Sci. Amer. Sup.*, Oct. 19, 1907, p. 242.

Green monkey, a name applied to several African monkeys of the genus *Cercopithecus*, but more particularly to *C. sabæus*, the general color of which is a greenish gray.—**Howling monkey.** Same as *howler*, 2.—**King-monkey**, *Colobus polycomus*, one of the colobes, or horse-tailed monkeys of Sierra Leone, having a pure white forehead that suggests a crown.—**Monkey bass.** See ★*bass*[2].—**Monkey flush.** See ★*flush*[9].—**Patas monkey.** Same as *patas*.—**Road-monkey**, in *lumbering*, one whose duty is to keep a logging-road in proper condition. Also *blue-jay*.—**Satan-monkey**, *Pithecia satanas*, the black saki, a South American monkey, dark brown or black in color, with a bushy tail, heavy whiskers, and a thick crest or wig.—**Stump-tailed monkey**, one of the short-tailed macaques, *Macacus arctoides*, of southeastern Asia.—**Sykes's monkey**, an East African species, *Cercopithecus albogularis*, black above and white beneath.—**Weeper** or **weeping monkey.** Same as *weeper*, 4.

monkey-belt (mung′ki-belt), *n.* *Naut.*, a waist-belt worn by a seaman when working in a dangerous position over the vessel's side, as when 'cutting in' a whale.

monkey-drift (mung′ki-drift), *n.* In *mining*, a small drift used by prospectors.

monkey-forecastle (mung′ki-fōr″kas-l), *n.* See ★*deck*, 2.

monkeyfy (mung′ki-fī), *v. t.*; pret. and pp. *monkeyfied*, ppr. *monkeyfying*. [*monkey* + *-fy*.] To make like a monkey, literally or figuratively.

> Notwithstanding the very *monkeyfying* process to which some of the illustrations of inferior human types have been subjected in this pictorial chorography, the correspondences are not such as to carry conviction to most minds. *Sir D. Wilson*, Prehistoric Man, I. 172.

monkey-gangway (mung′ki-gang″wā), *n.* A small gangway parallel with the main gangway. *Coal and Metal Miner's Pocket-book*.

monkey-jar (mung′ki-jär), *n.* A water-monkey.

monkey-jug (mung′ki-jug), *n.* A coarse earthenware jug with a globular body and narrow neck, covered with a grayish brown glaze made from wood ashes and sand. The body is modeled in the semblance of a grotesque human head, the eyeballs and teeth being made of a white, porous clay, and usually movable. These jugs were made at Bath, South Carolina, about the year 1863.

monkey-nut (mung′ki-nut), *n.* The peanut.

monkey-orchis (mung′ki-ôr″kis), *n.* A plant, *Orchis tephrosanthos*.

monkey-rolls (mung′ki-rōlz), *n. pl.* The smaller rolls in an anthracite breaker.

monkey-rope (mung′ki-rōp), *n.* *Naut.*, the rope secured to a monkey-belt.

monkey-shaft (mung′ki-shäft), *n.* In *mining*, a shaft which rises from a lower to a higher level. [Australia.]

> They began to think they might be already too deep for it, and a small '*monkey*'-*shaft* was therefore driven upwards from the end of the tunnel.
> *G. Sutherland*, Tales of Goldfields, p. 69, quoted in [E. E. Morris, Austral English.

monkey's-pea (mung′kiz-pē), *n.* See ★*pea*[1].

monkey-twyer (mung′ki-twī″ėr), *n.* One of the blank twyer-openings built into a blast-furnace above the ordinary twyers to be used in case of an emergency. *Phillips and Bauerman*, Elements of Metallurgy, p. 225.

monkey-vine (mung′ki-vīn), *n.* A species of the genus *Ipomæa*, *I. Nil*.

monkey-yard (mung′ki-yärd), *n.* *Naut.*, an auxiliary spar; a light yard used in exercising and training cadets and apprentices on board ship or at a naval station.

monk's-head (mungks′hed), *n.* The dandelion. Also *priest's-crown* (which see).

mono-articular (mon″ō-är-tik′ū-lär), *a.* Same as *monarticular*. *Lancet*, Aug. 22, 1903, p. 513.

monoazo (mon-ō-az′ō), *a.* [*mono-* + *azo-*.] Pertaining to a chemical compound that contains one azo group.—**Monoazo color.** See ★*color*.—**Monoazo type**, a type of coal-tar coloring matter characterized by the presence of one azo group.

monobacillary (mon-ō-bas′i-lā-ri), *a.* [Gr. *μόνος*, single, + NL. *bacillus* + *-ary*.] Relating to one species of bacillus.

monobacteria (mon″ō-bak-tē′ri-ä), *n. pl.* [NL., < Gr. *μόνος*, single, + NL. *bacteria*.] Bacteria the cells of which are separate. *Billroth*.

monobacterial (mon″ō-bak-tē′ri-al), *n.* [Gr. *μόνος*, single, + NL. *bacterium* + *-al*[1].] Relating to one form of bacterium.

Monobar chain. See ★*chain*.

monobasic, *a.* 2. Pertaining or relating to monobasis.—**Monobasic phosphate.** See ★*phosphate*.

monobasicity (mon″ō-bā-sis′i-ti), *n.* [*monobasic* + *-ity*.] In *chem.*, the character of being monobasic; the character of an acid as containing but one atom of hydrogen replaceable by a metal or electropositive radical; or the special character of a salt as containing a metal or electropositive radical replacing but one atom of hydrogen out of a larger number of such replaceable atoms in the corresponding acid.

monobasis (mō-nob′a-sis), *n.* [Gr. *μόνος*, single, + *βάσις*, step (used in the sense of descent).] Descent on simple or narrow lines, as by inbreeding, or by vegetative propagation: the alternative of symbasis as a method of descent. *Cook and Swingle*.

monobium (mo-nō′bi-um), *n.*; pl. *monobia* (-ä) [NL., < Gr. *μόνος*, single, + *βίος*, life.] A unicellular organism which lives a free or independent life, as contrasted with a cœnobium, one that is a unit in an aggregation of cells. *Haeckel*.

monoblepsia (mon-ō-blep′si-ä), *n.* [NL.] Same as *monoblepsis*.

monobranchiate (mon-ō-brang′ki-āt), *a.* [*mono-* + *branchiate*.] Having but one set of branchiæ or gills. *Syd. Soc. Lex.*

monobromacetanilid (mon″ō-brōm-a-se-tan′i-lid), *n.* [*mono-* + *brom*(*ine*) + *acetanilid*.] A colorless, crystalline, synthetic compound, $C_6H_4.Br.NH.C_2H_3O$, obtained by the action of bromine on acetanilid and said to combine the

sedative effect of bromine and the antipyretic effect of acetanilid. Also *antisepsine*.

monobrom-derivative (mon″ō-brōm-dē-riv′ạ-tiv), *n.* In *organic chem.*, a class-name applied to compounds containing one atom of bromine in the place of one of hydrogen. It is synonymous with *monobrom substitution-product*.

monocarp, *n.*— **Perennial monocarp,** a plant which lives many years but dies after once flowering, as the common century-plant. *Möbius.*

monocarpal (mon-ō-kär′pạl), *a.* Same as *monocarpous*.

monocarpian (mon-ō-kär′pi-ạn), *a.* Same as *monocarpous*.

monocelled (mon′ō-seld), *a.* [Gr. *μόνος*, single, + E. *cell* + *-ed*².] Consisting of but a single cell; unicellular: said of organisms such as the *Protozoa* and *Protophyta*.

Monocentric eyepiece. See ★*eyepiece*.

monochasy (mō-nok′ạ-si), *n.* Same as *monochasium*.

monochlor-. [*mono-* + *chlor(in)-*.] In *chem.*, in compound words, signifying the presence of one atom of chlorin in combination or introduced by substitution, as iodine monochlorid, and monochloracetic acid.

monochloracetic (mon″ō-klō-rạ-set′ik), *a.* [*mono-* + *chloracetic*.] Noting an acid, a colorless crystalline compound, $CH_2Cl.COOH$, prepared by the action of chlorin on acetic acid. It crystallizes in needles or rhombic plates, melts at 62.5–63.5° C., boils at 185–187° C., and attacks the skin: used in the synthesis of indigo.

monochlor-derivative (mon″ō-klōr-dē-riv′ạ-tiv), *n.* In *organic chem.*, the class-name applied to compounds containing one atom of chlorin in the place of one of hydrogen. It is synonymous with *monochlor substitution-product*.

monochoanitic (mon″ō-kō-ạ-nit′ik), *a.* [Gr. *μόνος*, simple, + *χόανος*, funnel, + *-ite*² + *-ic*.] Having simple funnels: used of the ammonoid cephalopods, and expressing a primitive condition of shell structure.

monochordist (mon′ō-kôr-dist), *n.* [*monochord* + *-ist*.] One who plays upon or writes about the monochord.

monochordize (mon′ō-kôr-dīz), *v. i.*; pret. and pp. *monochordized*, ppr. *monochordizing*. [*monochord* + *-ize*.] To play on, or as on, the monochord. [Rare.]

> He became gay, did leap for joy, would loll and rock himself in the cradle, then nod with his head, *monochordising* with his fingers. *Rabelais* (trans.), i. 48.

monochromasy (mon-ō-krō′mạ-si), *n.* [*monochroma(tic)* + *-sy*.] In *psychol.*, that form of color-blindness in which all visible objects are seen as shades of the same quality. As opposed to *dichromasy*, by the adherents of the Young-Helmholtz theory of color-vision, the term leaves it open as to whether the single remaining visual quality is a color or a brightness. There is now, however, no doubt that monochromasy is identical with total color-blindness, and that the vision of the monochromate is gray-vision and that only. *Stud. Yale Psychol. Lab.*, 1900, p. 15.

monochromate (mon-ō-krō′māt), *n.* [*mono-* + *chromate*.] 1. In *chem.*, a normal chromate, as of potassium, K_2CrO_4, in contradistinction to a dichromate or pyrochromate, as $K_2Cr_2O_7$: the former may be viewed as $K_2O.CrO_3$, and the latter as $K_2O.2CrO_3$.— 2. In *psychol.*, a totally color-blind person; one who is afflicted with monochromasy. *Baldwin*, Dict. Philos. and Psychol., II. 793.

monochromatic, *a.* 2. In *psychol.*, pertaining to or characterized by monochromasy: as, *monochromatic* vision.— 3. Having an affinity for only one dye at a time, in contradistinction to polychromatic.— **Monochromatic illuminator.** See ★*illuminator*.

II. *n.* Same as ★*monochromate*, 2.

monochromatism (mon-ō-krō′mạ-tizm), *n.* [*monochromat-ic* + *-ism*.] Monochromatic light or its production.

> *Monochromatism.*—Fabry and Perot . . . recommend as a source of monochromatic light the arc produced between mercury electrodes in a Torricellian vacuum. *Appleton's Ann. Cyc.*, 1899, p. 707.

monochromatist (mon-ō-krō′mạ-tist), *n.* Same as ★*monochromist*.

monochrome, *n.* **II.** *a.* Of one color; painted in one color; monochromic.

monochromic (mon-ō-krō′mik), *a.* [*monochrome* + *-ic*. See *monochrome*.] Of one color; pertaining to or of the nature of monochromy; monochromical.

monochromist (mon′ō-krō-mist), *n.* [*monochrom(e)* + *-ist*.] One who paints in monochrome.

monocle, *n.* 3. In *photog.*, an uncorrected spectacle-lens, usually periscopic, of about 1½ inches diameter, and of a focus of 2 inches and upward. It is necessary to make correction in focussing since the lens has both a chemical and a visual focus. For ordinary landscape work this correction may be made by means of the formula $f = f0{\cdot}02$, which is practically one fiftieth of the focus. This is only applicable when the lens is working at its equivalent focus. *Woodbury*, Encyc. Dict. of Photog., p. 290.

monocleid (mon′ō-klīd), *a.* [Gr. *μόνος*, single, + *κλείς* (*κλειδ-*), key.] Having, or locked by, a single key: said of certain writing-desks and cabinets in which all the compartments are fastened by locking a single lock.

Monoclinal shifting, the tendency of a stream flowing parallel to the strike of tilted strata to shift to one side in eroding its valley. The shifting is in the direction of the dip of the rocks and results in sapping the valley bluff on the down-dip side. *Chamberlin and Salisbury*, Geol., I. 120.

monococcus (mon-ō-kok′us), *n.*; pl. *monococci* (-sī). [NL., < Gr. *μόνος*, single, + *κόκκος*, berry (coccus).] A coccus form of bacteria in which the cells are separate. *Billroth.*

monocœlic (mon-ō-sē′lik), *a.* [Gr. *μόνος*, single, + *κοιλία*, a cavity.] Having only one cavity.

Monocondylia (mon-ō-kon-dil′i-ạ), *n. pl.* [NL.] The more commonly used form of *Monocondyla*.

monocondylic (mon″ō-kon-dil′ik), *a.* Same as *monocondylian*.

monocondylous (mon-ō-kon′di-lus), *a.* [As *Monocondyl(a)* + *-ous*.] Having a single occipital condyle, as is the case with birds and reptiles, which are collectively termed *monocondylia*: contrasted with ★*amphicondylous*.

monocormic (mon-ō-kôr′mik), *a.* [Gr. *μόνος*, single, + *κορμός*, a tree-trunk.] In *bot.*, having but one trunk, or main axis of growth.

monocot (mon′ō-kot), *n.* An abbreviated form, among botanists, of *monocotyledon*.

monocotyl (mon-ō-kot′l), *n.* [Gr. *μόνος*, single, + *κοτύλη*, a cup, a socket.] Same as *monocotyledon*.

Monocotyle (mon-ō-kot′i-lē), *n.* [NL. (Taschenberg, 1878), < Gr. *μόνος*, single, + *κοτύλη*, a cup, a socket.] The typical genus of the family *Monocotylidæ*.

monocotylean (mon-ō-kot-i-lē′ạn), *a.* and *n.* **I.** *a.* Same as *monocotyledonous*. [Rare.]

II. *n.* Same as *monocotyledon*. [Rare.]

Monocotylidæ (mon″ō-ko-til′i-dē), *n. pl.* [NL., < *Monocotyle* + *-idæ*.] A family of trematodes, of the order *Heterocotylea*, having the posterior sucker usually small, no anterior suckers, and the common genital pore median. It includes the genera *Monocotyle*, *Calicotyle*, and *Pseudocotyle*, parasites of sharks and rays.

monocotyloid (mon-ō-kot′i-loid), *a.* and *n.* [*monocotyl* + *-oid*.] **I.** *a.* Resembling a monocotyledon.

II. *n.* A plant which resembles a monocotyledon.

monocotylous (mon-ō-kot′i-lus), *a.* [NL. *monocotylus*, < Gr. *μόνος*, single, + *κοτίλη*, cup.] 1. Having but one vent or mouth.— 2. Same as *monocotyledonous*. *N. E. D.*

monocranus (mo-nok′rạ-nus), *a.*; pl. *monocrani* (-nī). [NL., < Gr. *μόνος*, single, + *κρανίον*, the skull.] A monster having a single skull but more or less duplication of the parts of the face.

monocratic (mon-ō-krat′ik), *a.* Pertaining to, or of the nature of, monocracy; monarchic.

monocrepid (mon-ō-krep′id), *n.* [Gr. *μόνος*, single, + *κρηπίς*, foundation.] In the structure of silicious sponge-spicules, such irregular forms or desmata as have only a single fundamental layer.

monocrotic (mon-ō-krot′ik), *a.* [Gr. *μόνος*, single, + *κρότος*, a stroke, beat.] Striking once: said of a pulse the sphygmographic tracing of which shows but one notch, the down stroke showing an unbroken line.

monocrotism (mō-nok′rō-tizm), *n.* [*monocrot(ic)* + *-ism*.] A condition in which there is but one pulse-beat for each contraction of the heart: the opposite of *dicrotism*.

monocrotous (mō-nok′rō-tus), *a.* Same as ★*monocrotic*.

Monocular rivalry. See ★*rivalry*.

monoculist (mo-nok′ū-list), *n.* [LL. *monocul(us)*, one-eyed, + *-ist*.] A one-eyed person. *N. E. D.*

monocycle, *n.* 2. In *biol.*, the type of individual or racial development which consists of but a single cycle: opposed to ★*polycycle*. *Hyatt*, 1893.

monocyclic, *a.* 3. In *bot.*, living only one season; annual: opposed to *dicyclic*. See ★*dicyclic*, 3 (*b*). *F. E. Clements.*— 4. In *elect.*, pertaining to a single-phase alternating-current system of electric distribution, which utilizes an auxiliary electromotive force (the teaser electromotive force) out of phase with the main electromotive force, and wattless, that is, supplying no power or practically no power, but only wattless currents. See ★*wattless*.— 5. Of or pertaining to a monocycle. See ★*monocycle*, 2.— **Monocyclic generator,** a polyphase generator, the armature of which has two windings, a main coil and a lesser coil in quadrature with the former.— **Monocyclic system,** in *phys.*: (*a*) A mechanical system within which only stationary movements in closed curves occur and between the portions of which only conservative forces are active. (*b*) See ★*monocyclic*, 4.

monocyclon (mon-ō-sī′klon), *n.*; pl. *monocycla* (-klạ). [NL.] In *biol.*, same as ★*monocycle*.

monodactylate (mon-ō-dak′ti-lāt), *a.* [*monodactyl* + *-ate*¹.] Having, like a horse, a single digit.

> It is, however, certain that there is a *monodactylate* representative of the family [*Proterotheriidæ*]. *Encyc. Brit.*, XXX. 509.

monodactyly (mon-ō-dak′ti-li), *n.* [*monodactyl* + *-y*³.] The state of having but one digit in the foot. The horse is a typical example of monodactyly, but the condition is also found in some of the *Litopterna* and, abnormally, in other animals.

monodermic (mon-ō-dėr′mik), *n.* [Gr. *μόνος*, single, + *δέρμα*, skin.] Consisting of or pertaining to a single layer of cells; epithelial.

monodiametral (mon″ō-dī-am′e-tral), *a.* [Gr. *μόνος*, single, + *διάμετρος*, diameter.] Having a single diameter: said of quartan curves.

monodic² (mō-nod′ik), *a.* [Gr. *μόνος*, single, + *δός*, way.] In *biol.*, along a single path: used by Giglio Tos in the phrase *monodic development* to express his peculiar conception of biological ontogeny. See ★*polyodic*².

monodiplopia (mon-ō-di-plō′pi-ạ), *n.* [NL., < Gr. *μόνος*, single, + *διπλόος*, double, + *ὤψ* (*ὠπ-*), eye.] Double vision when an object is looked at with one eye.

monodist, *n.* 2. One who writes or sings a monody. *N. E. D.*

monodomous (mō-nod′ō-mus), *a.* [Gr. *μόνος*, single, + *δόμος*, house.] A term applied to a formicary consisting of but a single nest: opposed to ★*polydomous*. *Forel.*

monodontal (mon-ō-don′tal), *a.* [*monodont* + *-al*¹.] 1. Having a single tooth; monodont; also, of the nature of a single tooth.

> They [the narwhals] were near me; so near that I could see their checkered backs. . . . The horn, that *monodontal* process which gives them their name of sea-unicorn, was perfectly examinable. *Kane*, in U. S. Grinnell Exped. (First Exped., 1856), [p. 340.

2. In *elect.*, having one armature-tooth per pole for each phase: said of the windings of certain generators and motors.

> Low-voltage machines are usually provided with polyodontal windings, these windings having several separate armature teeth per pole per phase, while the high-voltage machines are generally *monodontal*. *Encyc. Brit.*, XXXI. 889.

monodramatist (mon-ō-dram′ạ-tist), *n.* [*monodramat(ic)* + *-ist*.] A writer of monodramas.

monodrome (mon′ō-drōm), *a.* [Gr. *μόνος*, single, + *δρόμος*, a running, course, race.] Same as *monodromic*.

> On *monodrome* functions and transcendental numbers. *Nature*, Feb. 11, 1904, p. 359.

monodromy (mō-nod′rō-mi), *n.* [*monodrome* + *-y*³.] In *math.*: (*a*) The characteristic property that, if the argument returns by any path to its original value, the function also returns to its original value. (*b*) The property that the curves described by a revolution or rotation through four right angles are closed.

> It is pointed out that in the non-Pythagorean geometries devised by Hilbert, Helmholtz's axiom of *monodromy* is not verified, inasmuch as it is possible, by rotation through four right angles, to bring the points of a line into positions which they do not occupy before the rotation. It is pointed out further that, in the same geometries, it is possible to pass from one point to another of a straight line without passing through all intermediate points and without leaving the line. The application of the name "geometry" to systems which admit such possibilities is criticised. *Nature*, Feb. 19, 1903, p. 382.

Monodromy group. See ★*group*[1].— **Monodromy of space,** the characteristic property that it coincides with itself (with its trace) after revolution through a perigon about any axis.

monody, *n.* 3. A poem in which grief for the death of the subject of the poem is expressed.

In this *Monody*, the author bewails a learned friend, unfortunately drowned . . . and by occasion foretells the ruin of our corrupted clergy, then in their height.
Milton, Lycidas, argt.

monodynamism (mon-ō-dī'na-mizm), *n.* [Gr. *μόνος*, single, + *δύναμις*, power.] The theory that all natural phenomena are the manifestations of a single principle, power, or force.

The monotheistic tendency is visible in Greece, as elsewhere. . . . Side by side with this tentative and growing monotheism there is a bold and unhesitating *monodynamism*, the efforts of all the early thinkers being to reduce all the powers of nature to one principle.
G. H. Lewes, History of Philosophy, I. 3.

monodynamous (mon-ō-dī'na-mus), *a.* [Gr. *μόνος*, single, + *δύναμις*, power, + *-ous.*] In *bot.*, having one stamen larger than the others.

monoeidic (mon-ō-ī'dik), *a.* [Gr. *μονοειδής*, of one form.] Of one form or nature. *N. E. D.*

What then shall we imagine to be the aspect of the supreme beauty itself, simple, pure, uncontaminated with the intermixture of human flesh and colours, and all other idle and unreal shapes attendant on mortality; the divine, the original, the supreme, *the monoeidic* beautiful itself?
Shelley, Essays, Letters from Abroad, Trans. and Frag., [I. 124.

mono-electronic (mon″ō-ē-lek-tron'ik), *a.* [Gr. *μόνος*, single, + E. *electron* + *-ic.*] Containing a single electron: said of atoms which when dissociated break up into one negatively charged particle, and one much larger positively charged portion.

monœstrous (mon-es'trus), *a.* [Gr. *μόνος*, single, + *οἶστρος*, vehement impulse, + *-ous.*] Having but one œstrum. See the extract.

F. H. A. Marshall finds that in Scottish black-faced sheep the length of the sexual season varies with the locality, both in regard to the number of diœstrous cycles in a season and to the duration of each cycle. There is a perfect gradation between the *monœstrous* condition of some wild sheep and the extreme polyœstrum of certain merinos. *Jour. Roy. Micros. Soc.*, Aug., 1903, p. 484.

Monogameliæ (mon″ō-ga-mē'li-ē), *n. pl.* [NL., < Gr. *μόνος*, single, + *γαμήλιος*, of marriage, < *γάμος*, marriage.] In Lankester's classification, a family of *Discomedusæ* in which the four subgenital pits are united into one continuous cavity: contrasted with *Tetragameliæ*.

monogamelian (mon″ō-ga-mē'li-an), *a.* [*Monogameliæ* + *-an.*] Relating or pertaining to the *Monogameliæ*; having the four subgenital pits united into one continuous cavity.

monoganglial (mon-ō-gang'gli-al), *a.* [Gr. *μόνος*, single, + *γάγγλιον*, a tumor. See *ganglion.*] In *pathol.*, affecting only one gland: said of a bubo.

monogastric, *a.* 2. Said of a muscle having but one part or belly.

Digastric [muscle]. This, in spite of its name, is really a *monogastric* muscle in the Carnivora.
Proc. Zool. Soc. London.

monogatari (mō-nō-ga-tä'rē), *n.* [Jap., history, story, narration.] In Japanese literature, a story; a narrative.

If we judge Old Japan by its artistic and literary production, it is precisely in those works which are least Chinese that the greater value is to be found—the ancient poetry, the mediæval *monogatari*, some of the later romances, and the works of the ukiyo school of art. The histories are dreary compilations, of no merit and little authority; the philosophies are platitudinarian logomachies founded on partially understood Chinese arguments; and such science as Old Japan possessed is a mere echo of that of China.
Athenæum, May 6, 1905, p. 552.

monogen (mon'ō-jen), *n.* [See *monogenesis.*] In *chem.*, an element which combines in one proportion only. *N. E. D.*

monogene (mon'ō-jēn), *a.* [Gr. *μονογενής*, produced once: see *monogenous.*] Noting those volcanic outbreaks which consist of a single mass of lava, usually quite infusible and viscous, and which have been formed by one eruptive effort: a term suggested by Strübel.
Geikie, Text-book of Geol., p. 322.

monogeneity (mon-ō-je-nē'i-ti), *n.* The character of being monogenous.

monogenesis, *n.* (*d*) Origination or derivation from a single species, or, in a restricted sense, from a single pair. Contrasted with ★*polygenesis* (which see).

monogenetic, *a.* 4. Having the whole life-history a single cycle, there being no alternation of generations, or, in parasitic forms, of hosts.—**Monogenetic color.** See ★*color.*

monogenic (mon-ō-jen'ik), *a.* [See *monogenous.*] 1. Same as *monogenous.*—2. In *chem.*, combining with an element in only one form; forming only one compound with a monovalent element. *N. E. D.*—3. Same as *monogenetic.*—4. In *petrog.*, noting a fragmental rock, conglomerate or breccia, whose fragments or parts are all of one kind of rock.—5. Having a univocal derivative: the better and now accepted form for *monogeneous*, 2, and *monogenous*, 3.—**Monogenic function,** $y \equiv fx$, one having the property that $\frac{\Delta y}{\Delta x}$ tends, in general, to a unique finite limit.

Monogenica (mon-ō-jen'i-kä), *n.* See ★*Asporea.*

monogeny, *n.* 3. The 'natal probability,' or statistical expectation of offspring, based on the age of one parent only.

monoglyphic (mon-ō-glif'ik), *a.* [Gr. *μόνος*, single, + *γλυφή*, carving.] Having only one siphonoglyph, the sulcus, as certain polyps: contrasted with ★*diglyphic.*

A discussion of the variations in Metridium dianthus. In reference to the last topic, it may be noted that the author seeks to show:—(a) that regular hexamerous diglyphic polyps arise non-sexually as well as sexually; (b) that *monoglyphic* forms arise sexually as well as non-sexually. *Jour. Roy. Micros. Soc.*, Feb., 1903, p. 45.

monogonium (mon-ō-gō'ni-um), *n.*; pl. *monogonia* (-ä). [Gr. *μόνος*, single, + *γόνος*, generation.] The non-sexual sporulating stage of the malarial parasite as it occurs in man. *Grassi.*

In the Atti della Fondazione Scientifica Cagnola (vol. xviii.), Prof. Grassi gives an excellent survey of our present knowledge of malaria. He describes fully its epidemiology and prophylaxis, and the morphology and development of the malaria parasite. In the latter connection he introduces some new terms. The asexual parasites producing the febrile attacks are named "*monogonia*," the developmental forms in the mosquito "amphigonia," while the recurrent attacks of fever which occur at long intervals after infection are regarded as being due to parthenogenetic parasites, which develop from the non-flagellating (female) sexual cells, or gametocytes. *Nature*, Sept. 24, 1903, p. 517.

monogram-machine, *n.* 2. A sewing-machine having a universal feed-motion and presenting the fabric to the needle in any direction, the feed being controlled by a pantograph. In practice, ten or more machines are placed in a line upon a bench, the power being under the control of the operator, who sits at the bench at the right of the battery of machines. Each machine is supplied with the same quality of thread and the fabric clamped in the feed may be the same in each machine, in which case the finished work will be alike in all the machines. A pantograph is placed on the bench before the operator and by means of suitable rods and joints is connected with the feed of each machine. The design to be stitched upon the fabric is placed on the bench under the pointer of the pantograph and the operator, by making the pointer trace the design, causes, through the pantograph, the feed in each machine to present the fabric to its needle in the same order and all the machines to make an exact reproduction of the design in stitching.

Monograptus (mon-ō-grap'tus), *n.* [Gr. *μόνος*, single, + *γραπτός*, written (see *graptolite*).] A genus of monoprionidian graptolites with straight or curved hydrosoma and the thecæ in contact: abundant in the Silurian.

monohydrate (mon-ō-hī'drāt), *n.* [Gr. *μόνος*, single, + *ὑδωρ* (*ὑδρ-*), water, + *-ate*[1].] In *chem.*, a substance containing one molecule of water in a combined state: as, the *monohydrate* of sodium carbonate, $Na_2CO_3.H_2O$, now an article of commerce under the trade-name 'concentrated sal-soda.' Sometimes, though improperly, 'monohydrate' is applied to a substance which may be viewed as derived from and as containing the constituent elements of one molecule of water, though no longer united as in water; thus, sulphuric acid, H_2SO_4, is sometimes called a 'monohydrate,' since it may be produced by the interaction of one molecule each of sulphur trioxid and water, $H_2O + SO_3 = H_2SO_4$.

moncic (mo-nō'ik), *a.* Same as *monœcious.*

monoicous (mō-noi'kus), *a.* Same as *monœcious.*

monoidal (mō-noi'dal), *a.* [*monoid* + *-al*[1].] In *math.*, connected with a monoid, a hypersurface of nth order with an $(n-1)$ fold point.

mono-ideistic (mon″ō-ī-dē-is'tik), *a.* In *psychol.*, pertaining to or characterized by monoideism.

The history of philosophy shows that the *monoideistic* thinkers . . . either stiffened in the mold by precociously formulating and defining their ideas . . . or else were the victims of an environment or an age itself overwrought, one-sided and extreme.
G. S. Hall, Adolescence, II. 50.

mono-infection (mon″ō-in-fek'shon), *n.* Infection with but one variety of pathogenic organism. *Buck*, Med. Handbook, VIII. 500.

monolater (mō-nol'a-tėr), *n.* [See *monolatry.*] One who worships only one god. See *monolatry.*

monolatrous (mō-nol'a-trus), *a.* [*monolatr(y)* + *-ous.*] Pertaining to or of the nature of monolatry; practising monolatry.

Monolene (mō-nol'ē-nē), *n.* [NL., < Gr. *μόνος*, single, + *ὠλένη*, arm (see *ulna*).] A genus of flounders found on the Atlantic coast of the United States south to the West Indies.

monolepsis (mon-ō-lep'sis), *n.* [NL., < Gr. *μόνος*, one, only, + *λῆψις*, a taking.] The transmission to a cross-bred organism and to its descendants of the characteristics of only one parent, to the exclusion of those of the other: contrasted with ★*amphilepsis.* *Bateson and Saunders*, Rep. Evol. Com. Roy. Soc., 1902, I. 155.

monoleptic (mon-ō-lep'tik), *a.* [*monolepsis.*] Pertaining to, by means of, or exhibiting monolepsis. *Bateson and Saunders*, Rep. Evol. Com. Roy. Soc., 1902, I. 155.

monoline (mon'ō-lin), *n.* [Gr. *μόνος*, single, + E. *line*[2].] A trade-name of a form of type-setting machine which produces a solid line of type, or type-bar.

The Scudder *monoline*, a Canadian machine somewhat like the linotype, except that the matrices are located upon a disk. *Census Bulletin* 216, June 28, 1902, p. 51.

monolithic, *a.* 4. Made of one mass of artificial stone, as a concrete of broken stone, cement, and sand, without joints: used in structures such as mills and houses, dams, retaining-walls, and bridge abutments and piers, floors, columns, and other similar constructions.

The writer believes that a masonry or *monolithic* dam would be highly objectionable, either at Panama or Nicaragua, on account of the great damage that might be done to it in a few moments by an earthquake, and which might require several years to repair, and in the meantime the canal would be closed.
Sci. Amer. Sup., Jan. 31, 1903, p. 22648.

monolog, *n.* A simplified spelling of *monologue.*

monologic (mon-ō-loj'ik), *a.* [*monolog(ue)* + *-ic.*] Pertaining to, or of the nature of, a monologue.

monological (mon-ō-loj'i-kal), *a.* [*monolog(ue)* + *-ic* + *-al*[1].] Pertaining to or of the nature of monologue; fond of monologue.

There have been three famous talkers in Great Britain, either of whom would illustrate what I say about dogmatists. . . . and Thomas, last of the Dynasty. . . . The talking dynasty has always been hard upon us Americans. . . . As for King Thomas, the last of the *monological* succession, he made such a piece of work with his prophecies and his sarcasms about our little trouble with some of the Southern States, that we came rather to pity him for his whims and crotchets than to get angry with him for calling us bores and other unamiable names.
O. W. Holmes, Poet at the Breakfast-table, x.

monologize, *v. i.* Same as *monologuize.*

monologuist (mon'ō-log-ist), *n.* Same as *monologist.*

monoloph (mon'ō-lof), *n.* [Gr. *μόνος*, single, + *λόφος*, tuft.] In the hexactinellid sponges, having one tuft or rope of elongate spicules for the attachment of the sponge; also, in sponge-spicules derived from the caltrop, having one of the arms tufted.

monolophous (mō-nol'ō-fus), *a.* [Gr. *μονος*, single, + *λόφος*, crest, + *-ous.*] In tetractinal sponge-spicules, having one ray forked or branched like a crest. Compare ★*dilophous*, ★*trilophous* and ★*tetralophous.*

monomeniscous (mon″ō-mē-nis'kus), *a.* [Gr. *μόνος*, single, + *μηνίσκος*, a crescent (a lens).] Having but a single lens in the eye.

The central eyes [of Limulus] are "simple eyes," that is to say, they have a single lens and are hence called *monomeniscous.* *Encyc. Brit.*, XXV. 526.

monomeric (mon-ō-mer'ik), *a.* [Gr. *μόνος*, single, + *μέρος*, part, + *-ic.*] 1. In *zoöl.*, relating to or derived from a single metamere; consisting of only one piece or segment. *Baldwin*, Dict. of Philos. and Psychol., II. p. 151.—2. In *petrog.*, a term applied by Stache and John (1879) to segregations in igneous rocks that are composed of a single kind of mineral.

monomethylic (mon″ō-me-thil'ik), *a.* [*mono-* + *methyl* + *-ic.*] Containing one univalent methyl group, CH_3, in the molecule: applied to organic compounds.

monomodal (mon-ō-mō'dal), *a.* [Gr. *μόνος*, single, + L. *modus*, mode, + *-al*[1].] Having only one mode. See ★*mode*, *n.*, 11 (*b*).

The author shows that a *monomodal* curve is not sufficient evidence that a population is homogeneous, but that a process of biological analysis must precede the general mathematical analysis, to attain satisfactory results. *Bot. Gazette*, April, 1904, p. 314.

monomolecular (mon″ō-mō-lek′ū-lăr), *a.* [Gr. *μόνος*, single, + NL. *molecula*, molecule, + *-ar*[3].] Consisting of or involving a single molecule: in *chem.*, of a substance, having its simplest molecular composition in contradistinction from polymeric derivatives formed by the union of two, three, or more of the simplest molecules. Thus, formic aldehyde (CH_2O) may be spoken of as monomolecular, and metaformaldehyde ($C_3H_6O_3$) as its trimolecular derivative, $3CH_2O$.

In the synthesis of phenyltolylmethane from toluene and benzyl chloride in the presence of aluminium chloride, the reaction is *monomolecular*, and is probably one between toluene and a compound of aluminium and benzyl chloride, and the same applies to the reaction in the presence of ferric chloride.
Jour. Phys. Chem., Oct., 1904, p. 521.

monomorphism (mon-ō-môr′fizm), *n.* [*monomorph(ic)* + *-ism.*] The state or condition of the members of a race or species in which they form a single group with respect to the distribution among them of a given characteristic.

Among the soles this uniformity or *monomorphism* no longer obtains. *Amer. Nat.*, July, 1903, p. 501.

mononeural (mon-ō-nū′răl), *a.* [Gr. *μόνος*, single, + *νεῦρον*, nerve, + *-al*[1].] 1. Relating to one nerve, one source of nervous supply, or one neuromere.—2. Mononeurous.

mononeuritis (mon″ō-nū-rī′tis), *n.* [NL., < Gr. *μόνος*, single, + *νεῦρον*, nerve, + *-itis.*] Inflammation of a single nerve.

mononeurous (mon-ō-nū′rus), *a.* [Gr. *μόνος*, single, + *νεῦρον*, nerve. See *Mononeura.*] 1. Having only a ganglionic nervous system; belonging to the *Mononeura.*—2. Mononeural.

mononT (mon′ont), *n.* [Gr. *μόνος*, single, + *ὤν* (*ὀντ-*), being.] A non-sexual cell which gives rise to others by the process of fission.

mononuclear, *a.* **II.** *n.* A cell with a single nucleus; a uninuclear, as distinguished from a multinuclear, cell.

It is important, then, to note the percentage of large *mononuclears* met with in the series of typhoid fever cases, so that they may be compared with that of the malarial series to be dealt with presently.
Lancet, May 30, 1903, p. 1503.

mononucleated (mon-ō-nū′klē-ā-ted), *a.* [*mono-* + *nucleus* + *-ate*[1] + *-ed*[2].] Having but a single nucleus; uninucleated: said of certain cells.

With predominance of the large *mononucleated* cells filled with melanotic pigment.
Med. Record, Feb. 28, 1903, p. 336.

mononychous (mō-non′i-kus), *a.* [Gr. *μονώνυχος*, also *μονῶνυξ*, having a single claw or hoof, solidungulate (applied to the horse), < *μόνος*, single, + *ὄνυξ*, claw, nail, hoof.] Having an undivided claw.

mononymy (mō-non′i-mi), *n.* [*mononym(ic)* + *-y*[3].] A mononymic system of nomenclature.

monopectinate (mon-ō-pek′ti-nāt), *a.* [Gr. *μόνος*, single, + L. *pecten* (*pectin-*), comb, + *-ate*[1].] In gastropods, having one row of plates in the ctenidium or gill, as in the *Streptoneura.* Compare *bipectinate.*

monoped (mon′ō-ped), *a.* and *n.* [*mono-* + L. *pes* (*ped-*), foot.] **I.** *a.* Having but one foot (or leg), a condition sometimes found in human monstrosities.

II. *n.* A person, animal, or thing that has only one foot (or leg); specifically, a monster with only one foot (or leg).

monophagous (mō-nof′ą-gus), *a.* [Gr. *μονοφάγος*, < *μόνος*, single, alone, + *-φαγος*, < *φαγεῖν*, eat.] 1. Feeding on a single substance, or a single kind of food: opposed to *heterophagous.*—2. Specifically, of sporozoans, passing the entire life-cycle in one host; permanently intracellular: contrasted with ★*polyphagous.*

monophagy (mō-nof′ą-ji), *n.* [*monophag(ous)* + *-y*[3].] 1. The character or habit of being monophagous; the eating of only one kind of food.—2. The act or habit of eating alone. [Rare.]

monophase (mon′ō-fāz), *a.* [Gr. *μόνος*, single, + *φάσις*, phase.] Having or exhibiting only a single phase; single-phase; monophasic. See ★*single-phase.*—**Monophase generator,** an alternating-current generator which produces a single-phase current.

monophasia (mon-ō-fā′ziă), *n.* [NL., < Gr. *μόνος*, single, + *φάσις*, speaking.] A form of aphasia in which the patient can articulate but one word or, at most, one sentence.

monophasic (mon′ō-fā-zik), *a.* [*monophas(e)* + *-ic.*] Monophase; single-phase.

monophone (mon′ō-fōn), *n.* [Gr. *μόνος*, single, + *φωνή*, voice.] Same as *homophone.* [Rare.]

monophonous, *a.* 2. Same as *homophonous.*

monophotal (mon′ō-fō-tal), *a.* Of or pertaining to the monophote.

monophrastic (mon-ō-fras′tik), *a.* [Gr. *μόνος*, single, + *-φραστος*, < *φράζειν*, speak (*φράσις*, a speaking), + *-ic.*] 1. Consisting of a single word or phrase.—2. Speaking or responding in a single word or phrase, or with great brevity.

Boys especially are often dumb-bound, *monophrastic*, inarticulate, and semi-aphasic save in their own vigorous or inelegant way. *G. S. Hall*, Adolescence, II. 454.

monophthalmic (mon-of-thal′mik), *a.* [See *monophthalmus.*] Having only one eye.

Monophyes (mo-nof′i-ēz), *n.* [NL., < Gr. *μονοφυής*, of single nature, < *μόνος*, single, + *φύεσθαι*, grow.] The typical genus of the family *Monophyidæ. Claus*, 1874.

Monophyidæ (mon-ō-fī′i-dē), *n. pl.* [NL., < *Monophyes* + *-idæ.*] A family of calyconectous siphonophorans, having a single nectophore at the apex of the long tubular stem, the cormidia eudoxiform, separated by equal free internodes, and each siphon with a bract. It includes, among other genera, *Monophyes, Cymba,* and *Sphæronectes.*

monophylesis (mon″ō-fī-lē′sis), *n.* [Gr. *μόνος*, single, + *φυλή*, tribe.] Evolution in a single line of descent. See ★*polyphylesis.*

monophyllic (mon-ō-fil′ik), *a.* [Gr. *μόνος*, single, + *φύλλον*, leaf, + *-ic.*] Consisting of a single leaf or leaf-like division: used of the sutural divisions in the shells of the ammonoid cephalopods.

monoplane (mon′ō-plān), *n.* [Gr. *μόνος*, single, + E. *plane.*] A flying-machine or a gliding-machine which depends for sustention upon a single aëroplane (surface) or upon a single pair of aëroplanes laterally disposed. In a flying-machine of this type, M. Louis Bleriot crossed the English Channel, July 25, 1909. See ★*aëroplane*[1], *n.*, 2.

Another aëroplane . . . is the "*monoplane*" of M. Robert Esnault Pelterie. This, unlike most recent types, has only a single transverse supporting surface, which in one machine measured 9·6 metres from tip to tip with a superficial area of 18 square metres; in a more recent machine these dimensions have been reduced to 8·6 metres and 16 square metres respectively. *Nature*, Dec. 5, 1907, p. 106.

monoplastid (mon-ō-plas′tid), *n.* [*monoplast* + *-id*[2].] A one-celled animal organism.

monoplegic (mon-ō-plē′jik), *a.* [*monopleg(ia)* + *-ic.*] Relating to or suffering from monoplegia.

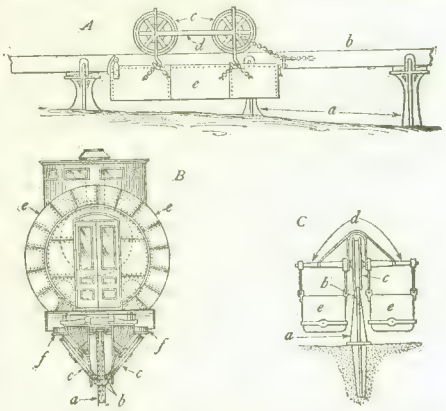
Monopleura (mon-ō-plö′rą), *n.* [NL., < Gr. *μόνος*, single, + *πλευρόν*, rib.] A genus of very inequivalve teleodesmaceous pelecypods, typical of the family *Monopleuridæ*, with a long, twisted, conical, attached right valve, a shallow left valve, and strongly developed dentition. It is found in the cretaceous rocks.

monopodium, *n.* 2. A form of table having only a central support, used by the ancient Romans.

monoprostyle (mon-ō-prō′stīl), *a.* [*mono-* + *prostyle.*] In *arch.*, prostyle, with a single row of columns. See *prostyle,* with cut.

monops (mon′ops), *n.* [Gr. *μονώψ*, one-eyed, < *μόνος*, single, + *ὤψ*, eye.] A being with but one eye.

monopsia (mon-op′si-ą), *n.* [NL., < Gr. *μόνος*, single, + *ὄψις*, vision, sight.] Same as *cyclopia.*



monopsychism (mon-ō-sī′kizm), *n.* [Gr. *μόνος*, single, + E. *psychism.*] The theory that all souls (or the souls of all mankind) are one; the unity of souls asserted by this theory. *N. E. D.*

monopsychosis (mō-nop-si-kō′sis), *n.* [NL., < Gr. *μόνος*, single, + *ψύχωσις*, animation (taken as 'mental action').] Same as *monomania.*

monopterous (mō-nop′te-rus), *a.* [Gr. *μόνος*, single, + *πτερόν*, wing.] Having but one wing, as some seeds.

monopylarian (mon″ō-pi-lā′ri-ąn), *a.* Same as *monopylean.*

monorail (mon′ō-rāl), *n.* [*mono-* + *rail*[1].] A railway in which the cars run on a single rail.

Monorail.

A, side elevation, suspended type; *B*, front view, supported type; *C*, front view, suspended type.
a, carrying-posts; *b*, single or monorail; *c*, supporting and guiding-wheels; *d*, frame from which cars are suspended; *e*, car bodies; *f*, driving-wheels.

This rail may be fixed to an overhead structure and the cars suspended from it, or it may be laid on ties or chairs and the cars run over it. In the latter case there are usually three rails, one to support the car, and two steadying or side-rails, but all placed on a single stand or chair in the center of the road-bed.

In the Langen *monorail* the car is hung from a single overhead rail; a line on this system is worked between Barmen and Elberfeld, a distance of about 9 miles, the cars for a part of the way being suspended over the river Wupper. *Encyc. Brit.*, XXXII. 143.

monorailroad (mon-ō-rāl′rōd), *n.* Same as *monorailway.*

monorailway (mon-ō-rāl′wā), *n.* [*monorail* + *way.*] Same as ★*monorail.*

A *monorailway* is employed at Clichy for completing the piling after the bags have been delivered upon the heaps by the inclined conveyors. These *monorailways* are 1,000 feet or more in length, and are constructed as desired on the tops of the great piles of coke.
Amer. Inventor, June 15, 1904, p. 267.

monorchidism (mo-nôr′ki-dizm), *n.* Same as *monorchism.*

monorefringent (mon″ō-rē-frin′jent), *a.* [*mono-* + *refringent.*] Refracting light in the manner of an isotropic, singly refracting medium: opposed to *birefringent.*

monorhinous (mon-ō-rī′nus), *a.* [*monorhine* + *-ous.*] Having a single nasal passage, as in the lampreys; monorhinal; monorhine.

monosaccharide (mon-ō-sak′ą-rid), *n.* [*mono-* + *saccharide.*] A carbohydrate the molecule of which is not divisible into simpler groups without loss of its essential characteristics. According to the number of carbon atoms, monosaccharides are divided into trioses, tetroses, pentoses, hexoses, etc. One of the best-known examples is the hexose dextrose (glucose).

monose (mon′ōs), *n.* [Gr. *μόνος*, single, + *-ose.*] Same as ★*monosaccharide.*

monoseme (mon′ō-sēm), *a.* [Gr. *μόνος*, single, + *σημεῖον*, a sign.] In *anc. pros.*, having a single mora or unit of time. See *monosemic.*

monoserial (mon-ō-sē′ri-al), *a.* [Gr. *μόνος*, single, + L. *series*, series, + *-al*[1].] Being in one series: used in zoölogy and comparative anatomy, generally for a series of organs, cells, teeth, or the like, that may be in two or more series in other forms.

A transitional stage from the biserial archipterygium of the latter [Dipnoi] into the *monoserial* of recent sharks.
Encyc. Brit., XXIX. 398.

monosiphonic (mon″ō-sī-fon′ik), *a.* [Gr. *μόνος*, single, + *σίφων*, siphon.] Monosiphonous; in hydroids, having the tubes of the hydrocaulus distinct from one another: opposed to ★*polysiphonic.*

monosodic (mon-ō-sō′dik), *a.* [Gr. *μόνος*, single, + NL. *sod-ium* + *-ic.*] In *chem.*, containing one atom of sodium: said of a salt: as, *monosodic* orthophosphate (NaH_2PO_4), a salt which occurs in normal human urine.

Calcium oxalate, which was ordinarily held in solution by the *monosodic* acid phosphate.
Med. Record, Feb. 14, 1903, p. 277.

monospermic (mon-ō-spėr′mik), *a.* [Gr. *μόνος*, single, + *σπέρμα*, seed, + *-ic.*] 1. Exhibiting or pertaining to monospermy.—2. Same as *monospermous.*

monospermy (mon′ō-spėr-mi), *n.* [Gr. *μόνος*, single, + *σπέρμα*, seed, + *-y*³.] The entrance of but a single spermatozoön into the egg: the normal and, in most animals, the only type of fertilization: opposed to ★*dispermy* and *polyspermy*.

monosporangium (mon″ō-spō-ran′ji-um), *n.*; pl. *monosporangia* (-ä). [NL., < Gr. *μόνος*, single, + NL. *sporangium*.] A sporangium which contains monospores.

monospore (mon′ō-spōr), *n.* [Gr. *μόνος*, single, + *σπορά*, seed (spore).] An asexual spore of the red algæ, which remains undivided and is thus distinguished from a tetraspore.

monosporiferous (mon″ō-spō-rif′e-rus), *a.* [*monospore* + L. *ferre*, bear, + *-ous*.] Bearing monospores: said of algæ.

monostele (mon′ō-stēl), *n.* [Gr. *μόνος*, single, + *στήλη*, pillar.] In *bot.*, a single undivided stele. See ★*stele*³, 2, and compare ★*polystele*.

Arrangement in strands: the central cylinder or *monostele*. *Encyc. Brit.*, XXV. 412.

monostelic (mon-ō-stē′lik), *a.* [*monostele* + *-ic*.] In *bot.*, having a monostele. Also *monostelous*.

Side by side with *monostelic* types which furnish a most interesting sequence. *Encyc. Brit.*, XXV. 415.

monostelous (mon-ō-stē′lus), *a.* Same as ★*monostelic*.

monostely (mon-ō-stē′li), *n.* [*monostele* + *-y*³.] In *bot.*, the condition of being monostelic.

monostereoscope (mon-ō-ster′ē-ō-skōp), *n.* [Gr. *μόνος*, single, + E. *stereoscope*.] An apparatus for projecting two pictures upon a screen so as to appear as one, with stereoscopic or solid effect. The two pictures are projected from separate magic lanterns.

monostich, *n.* **II.** *a.* Consisting of a single line or verse.

monostichodont (mon-ō-stik′ō-dont), *a.* [Gr. *μόνος*, single, + *στίχος*, row, + *ὀδούς* (*ὀδοντ-*), tooth.] In leeches, having only one row of teeth in each jaw.

Among the fresh-water leeches (Natantia), which have an eyeless ring between the third and fourth pairs of eyes, only the *monostichodont* forms (*i.e.*, those with a single row of teeth in each jaw) are important.
Buck, Med. Handbook, IV. 701.

Monostomatidæ (mon″ō-stō-mat′i-dē), *n. pl.* [NL.] Same as *Monostomidæ*.

monostome (mon′ō-stōm), *n.* [NL. *Monostomum*.] A trematoid of the genus *Monostomum*, or *Monostomulum*.

The other case was that of an elderly woman from whose eye eight so-called *monostomes* were removed from the lens substance. The descriptions do not enable one to determine the species or to assert the identity of the forms. *Buck*, Med. Handbook, VII. 866.

Eye monostome, *Monostomulum lentis*, a small immature trematoid said to be parasitic in the eye of man.

monostomous (mō-nos′tō-mus), *a.* Same as *monostomatous*.

monostratified (mon-ō-strat′i-fīd), *p. a.* [Gr. *μόνος*, single, + E. *stratified*.] In *biol.*, arranged in a single layer or stratum, like the cells in a simple epithelium. *Buck*, Med. Handbook, IV. 79.

monostromatic (mon″ō-strō-mat′ik), *a.* [Gr. *μόνος*, single, + *στρῶμα* (*τ-*), layer, + *-ic*.] Having only one layer of cells: said of the frond or tissue of an alga which is but one layer of cells in thickness.

monosulphonic (mon″ō-sul-fon′ik), *a.* [*mono-* + *sulphonic*.] In *chem.*, containing one combining unit of the compound radical HSO_3: said of an acid: as, benzene *monosulphonic* acid ($C_6H_5.HSO_3$), in which HSO_3 replaces one atom of hydrogen in benzene (C_6H_6).

Monosyllabic family of languages. See ★*family*.

monosyllabize (mon-ō-sil′a-bīz), *v. t.*; pret. and pp. *monosyllabized*, ppr. *monosyllabizing*. [*monosyllab*(*le*) + *-ize*.] To render monosyllabic. *N. E. D.*

monosymptomatic (mon-ō-simp-tō-mat′ik), *a.* [*mono-* + *symptomatic*.] In *med.*, having a single distinct or dominant symptom.

Neurasthenia is a disease in which headache in some cases may be almost a *monosymptomatic* sign.
F. S. Pearce, in Therapeutic Gazette, Jan., 1903, p. 9.

monotechnic (mon-ō-tek′nik), *a.* [Gr. *μόνος*, single, + *τέχνη*, art.] Pertaining to or concerned with a single form of skilled labor; relating to a single branch of technology; opposed to *polytechnic*.

Thousands of our youth of late have been diverted from secondary schools to the *monotechnic* or trade classes now established for horology, glass-work, brick-laying, carpentry. *G. S. Hall*, Adolescence, I. 170.

Many of the American schools of engineering are practically *monotechnic* institutes in contradistinction to the polytechnics here, and consequently better equipment and staffing is observed in any one department.
Jour. Inst. Elect. Engin. (London), Feb. 25, 1903–04, [p. 458.

monothalamous, *a.* **3.** Having but one chamber, as some *Foraminifera* of the family *Lituolidæ*.

Monotidæ (mō-not′i-dē), *n. pl.* [NL., < *Monot*(*us*) + *-idæ*.] A family of digonoporous marine turbellarians, of the order *Rhabdocellida*, having a single otolith, pharynx plicatus directed backward, and paired germaria and vitellaria. It contains the genera *Monotus* and *Automolos*.

Monotis (mo-nō′tis), *n.* [NL., < Gr. *μόνωτος*, one-eared (one-handled), < *μόνος*, single, + *οὖς* (*ὠτ-*), ear.] A genus of prionodesmaceous *Pelecypoda*, of the family *Pteriidæ*, comprising nearly equivalve, radially striate shells from the Triassic rocks.

Monotocardia (mon″ō-tō-kär′di-ä), *n. pl.* [NL., < Gr. *μόνωτος*, one-eared, + *καρδία*, heart.] A group of gasteropodous mollusks in which the heart has only one auricle, the true breathing organ is single, and there is a single kidney. It includes the great majority of the marine univalves, all of the fresh-water and land operculates, as well as the *Heteropoda*. Contrasted with ★*Diotocardia*.

monotocardiac (mon″ō-tō-kär′di-ak), *a.* [*Monotocardia* + *-ac*.] Relating or pertaining to the *Monotocardia*; having a single auricle in the heart: as, the *monotocardiac* condition. *Rep. Brit. Ass'n Advancement of Sci.*, 1902, p. 630.

monotocardian (mon″ō-tō-kär′di-an), *a.* Same as ★*monotocardiac*.

monotomid (mō-not′ō-mid), *n.* and *a.* **I.** *n.* A member of the coleopterous family *Monotomidæ*.

II. *a.* Having the characters of or belonging to the family *Monotomidæ*.

monotone, *n.* **5.** A single or uniform tint or color. [Rare.]

monotoned (mon′ō-tōnd), *p. a.* [★*monotone*, 5.] Having a single or uniform tone or tint.

The *monotoned* wastes of the great Gold Desert.
R. Boldrewood, Miner's Right, xxxvi.

monotonia (mon-ō-tō′ni-ä), *n.* [NL., < Gr. *μονοτονία*: see *monotony*.] Same as *monotony*, 1.

monotonic, *a.* **3.** Homogeneous; in marine zoölogy an aggregation of organisms is said to be monotonic if some one species, genus, or family forms more than one half of the total volume.—**Monotonic plankton.** See ★*plankton*.

monotonize (mō-not′ō-nīz), *v. t.*; pret. and pp. *monotonized*, ppr. *monotonizing*. To reduce to one tone or type; render monotonous.

Monotonous throughout an interval, in *math.*, said of a function which never increases or never diminishes throughout the interval.

monotony, *n.* **3.** In *math.*: (*a*) Continual increase, or continual decrease. (*b*) Unchanging character, neither increasing nor decreasing.

monotrichic (mon-ō-trik′ik), *a.* [Gr. *μόνος*, single, + *θρίξ* (*τριχ-*), hair.] In *bacteriol.*, having a single polar flagellum, as the cells in the genus *Pseudomonas*.

monotrichous (mō-not′ri-kus), *a.* [*monotrich*(*ic*) + *-ous*.] Same as ★*monotrichic*.

monotriglyphic (mon″ō-trī-glif′ik), *a.* [*monotriglyph* + *-ic*.] Said of the Doric order when there is but one triglyph over the intercolumniation.

Monotrocha, *n.* **3.** [*l. c.*] In chætopodous annelids, a larval stage with a single preoral circle of cilia.

monotropaceous (mon″ō-trō-pā′shius), *a.* Belonging to the plant family *Monotropaceæ*.

monotrophic (mon-ō-trof′ik), *a.* [Gr. *μόνος*, single, + *τροφή*, nourishment, + *-ic*.] Capable of carrying on but one series of fermentations or decompositions.

The nitrifying, nitrogen-fixing, sulphur- and iron-bacteria he [Fischer] regards as *monotrophic*.
Encyc. Brit., XXVI. 55.

monotropism (mō-not′rō-pizm), *n.* [*monotrop*(*y*) + *-ism*.] The state or condition of monotropy.

This development of *monotropism* cannot take place except through the sorting and grouping of specialized molecules. *J. A. Ryder*, Biol. Lectures, 1894, p. 39.

Monotropsis (mon-ō-trop′sis), *n.* [NL. (Schweinitz, 1817), < *Monotropa* + Gr. *ὄψις*, appearance.] A genus of dicotyledonous plants of the family *Monotropaceæ*. See *Schweinitzia*.

monotropy (mō-not′rō-pi), *n.* [Gr. *μόνος*, only, + *τρόπος*, turning.] Homogeneity upon or with reference to a system of parallel lines only. [Rare.]

[The] completest homogeneity is found to occur in only one direction in parallel lines extending through the mass. This condition we may designate as *monotropy*.
J. A. Ryder, Biol. Lectures, 1894, p. 38.

Monotus (mō-nō′tus), *n.* [NL., < Gr. *μόνωτος*, one-eared, < *μόνος*, single, + *οὖς* (*ὠτ-*), ear.] The typical genus of the family *Monotidæ*. *M. hirudo* is parasitic. *Diesing*, 1862.

monotype, *n.* **3.** The trade-name of a machine which casts and sets in order single types.

monotypous (mon-ō-tī′pus), *a.* Same as *monotypic*, 1.

monoüreid (mon-ō-ū′rē-id), *n.* [*mono-* + *urea* + *-id*.] In *organic chem.*, the class-name applied to compounds containing the bivalent radical –CONHCONHCO–. They are to be regarded as urea (carbamide) in which two hydrogen atoms are replaced by the bivalent radical of a dibasic acid.

monovariance (mon-ō-vā′ri-ans), *n.* See ★*univariance*. *Physical Rev.*, Dec., 1904, p. 458.

monovariant (mon-ō-vā′ri-ant), *a.* [Gr. *μόνος*, single, + E. *variant*.] In *phys. chem.*, having but one degree of freedom.—**Monovariant system.** See ★*bivariant system*.

monovular (mon-ō′vū-lär), *a.* [Gr. *μόνος*, single, + E. *ovular*.] Containing but one ovum or ovule: as, a *monovular* Graafian follicle. *L. O. Howard*, in Science, Dec. 21, 1906, p. 817.

monoxalate (mon-ok′sa-lāt), *n.* [*mono-* + *oxal*(*ic*) + *-ate*¹.] Oxalic acid in which one hydrogen atom has been replaced by a metal: as, *monoxalate* of potassium, KHC_2O_4.

monoxeny (mō-nok′se-ni), *n.* [Gr. *μόνος*, single, + *ξενία*, hospitality, < *ξένος*, host.] The habit of frequenting a host of but one species: applied by De Bary to certain fungi. See ★*dixeny* and ★*polyxeny*.

Monozoa, *n. pl.* **2.** A grade of *Cestoidea* in which the animal consists of a single segment containing a single set of reproductive organs: contrasted with ★*Merozoa*. Same as ★*Cestodariidæ*. *Lang*.

monozoic, *a.* **2.** In *Coccidiidea*, producing only one falciform body: as, a *monozoic* spore. Contrasted with ★*dizoic* and so on to ★*polyzoic*, 3.—**3.** In cestodes, having only one set of generative organs, as in the unsegmented *Archigetes*. Contrasted with ★*polyzoic*, or segmented forms like *Tænia*.

Monroe shales. See ★*shale*².

Monroeism (mon-rō′izm), *n.* Same as *Monroe doctrine* (which see, under *doctrine*).

Monroeist (mon-rō′ist), *n.* [*Monroe*(*ism*) + *-ist*] One who supports the Monroe doctrine (which see, under *doctrine*).

Mons pubis. Same as *mons Veneris*, but designating occasionally the similar region in the male.—**Mons ureteris,** the projection on the wall of the bladder which surrounds the orifice of the ureter.

Monsig. An abbreviation of *Monsignor*.

Monsoon current, forest. See ★*current*¹, ★*forest*.

Mont. An abbreviation of *Montana*.

Montalban (mon-tal′ban), *a.* and *n.* [NL. *Mont*(*es*) *alb*(*i*), 'White Mountains,' + *-an*.] **I.** *a.* In *geol.*, noting a division of the Precambrian strata: named from the White Mountains of New Hampshire.

II. *n.* The Montalban division.

[Obsolete in both uses.]

Montana formation. See ★*formation*.

montbretia (mont-brē′ti-ä), *n.* [From *Montbretia*, a former genus name of these plants, dedicated to G. Coquebert de *Montbret* (died in 1836), a French naturalist and traveler.] A small group of cormous gladiolus-like plants of the family *Iridaceæ*, now merged with the genus *Tritonia*. The species best known in gardens (where they are treated after the manner of gladiolus) are *Tritonia Pottsii* and *T. crocosmæflora*, the latter a hybrid of *T. Pottsii* and *Crocosmia aurea*. The plants are South African. They produce a blaze of red or orange flowers in summer.

monte-acide (môn-tä-sēd′), *n.* [F., < *monter*, lift, + *acide*, acid.] An arrangement in use in sulphuric-acid works for raising the acid from a lower to a higher level by means of compressed air, thus avoiding contact of acid with the metal-work or valves of pumps.

Montebello sandstone. See ★*sandstone.*

month, *n.*—**The R months.** See ★*R.*

Montia (mon′ti-ạ), *n.* [NL. (Linn.), named after Joseph *Monti*, a professor of botany.] A genus which comprises several species (about 20) of small herbs of the family *Portulacaceæ*, some of which are often referred to *Claytonia*. The species are American. The winter purslane (*M. perfoliata*) is sometimes grown as a pot-herb, and it also runs wild in waste places. It is a tufted herb with edible, radical leaves, and a scape bearing a cluster of small white flowers, and beneath the flowers a leaf-like cup: native to the western side of the continent.

Montian (mon′ti-ạn), *a.* and *n.* In *geol.*, noting a substage of the Cretaceous system in France and Germany which lies at the top of the series above the Maestrichtian and constitutes the upper division of the Danian stage.

monticolous (mon-tik′ọ-lus), *a.* Same as *monticoline.*

monticule, *n.* 2. In the tabulate corals of the family *Chætetidæ*, a group of autopores which form a slightly elevated cluster on the surface of the corallum.—3. Same as *monticulus.*

monticulose (mon-tik′ū-lōs), *a.* [See *monticulous* and *-ose.*] Covered with small eminences; monticulate. *Dana.*

monton, *n.* 2. In *mining*, a heap or pile of ore.

Montrose shales. See ★*shale*[2].

montroydite (mon-troid′it), *n.* [Named from *Montroyd* Sharpe, one of the owners of the Terlingua mercury mines.] Mercuric oxid, HgO, occurring in orange-red orthorhombic crystals: found at Terlingua, Texas.

monument, *n.* 9. A conspicuous crag of a somewhat pillar-like and symmetrical form. [Western U. S.]

monumentalism (mon-ū-men′tạl-izm), *n.* [*monumental* + *-ism.*] The state or character of being monumental.

The plain lessons of the Crimean War were unheeded and *monumentalism* became the ideal of the coast defences, although the performance of the little Telegraph Battery at Sebastopol, confirming much previous experience, should have amply sufficed to moderate the ambitions of military engineers. *Encyc. Brit.*, XXVIII. 451.

monumentalize (mon-ū-men′tạl-īz), *v. t.*; pret. and pp. *monumentalized*, ppr. *monumentalizing.* [*monumental* + *-ize.*] To record or commemorate by a monument; record permanently; render monumental in character.

monzonite (mon′zō-nīt), *n.* [F. *monzonite* (De Lapparent, 1864), ⟨ *Monzoni*, near Predazzo in Tyrol, + *-ite*[2].] In *petrog.*, a phaneric igneous rock intermediate in composition between syenite and diorite, that is, composed of alkali feldspar, usually orthoclase, and lime-soda feldspar, andesin or labradorite, in equal or nearly equal proportions, with subordinate amounts of hornblende, pyroxene, or mica, rarely olivin, and minor constituents. There may be a variable amount of quartz: when it is present in considerable amount the rock is quartz-monzonite or granodiorite.

monzonitic (mon-zō-nit′ik), *a.* [*monzonite* + *-ic.*] In *petrog.*, having the composition of monzonite.

monzonose (mon′zō-nōs), *n.* [*monzonite* + *-ose.*] In *petrog.*, in the quantitative system of classification of igneous rocks (see ★*rock*[1]), the name of sodipotassic rocks belonging to the domalkalic rang of the perfelic order of the dosalanes.

mooch (möch), *v. i.* See *mouch.*

moocher (mö′chėr), *n.* [See *moucher.*] A moucher. See the extracts.

"Why, I remember jes lots o' things. I 's been a crook, I 's been a *moocher*, an' now I 's shatin' on me uppers. Why, what I 's seen would keep them blokes up there in Cooper Union readin' all winter, I guess."
J. Flynt, in Cent. Mag., March, 1894, p. 706.

In police parlance as a '*moocher*,' or a man who hung around saloons and drank and ate only when some one treated. *Kansas City Daily Times*, Feb. 15, 1904.

moodirieh, *n.* See ★*mudirieh.*

moogadee (mö′gạ-dē), *n.* [Western Amer. Indian.] A name applied by the Fort Hall Indians of Idaho to *Catostomus pocatello*, a sucker of the Snake River basin. *Jordan and Evermann*, Amer. Food and Game Fishes, p. 53.

moolvi (möl′vē), *n.* Same as ★*maulvi.*

moon[1], *n.* 1. Upon the moon's surface the force of gravity is only one sixth of gravity upon the earth, a fact of great importance in relation to the moon's surface-phenomena, and probably connected with the almost complete, if not absolute, absence of a lunar atmosphere. Some recent observers report appearances which they attribute to gases and water vapor rising at various points on the moon's surface through fumaroles and fissures, and condensing during the lunar night into white patches of snow or frost, which disappear after the sun rises. If this is correct it would indicate a possible feeble survival of the moon's former volcanic activity. The recent investigations of Very apparently prove that the temperature of the moon's surface at points where the sun is nearly overhead rises above that of boiling water, as was long ago maintained by Lord Rosse. When the sun's rays are withdrawn it probably falls nearly to the absolute zero (−273°C., −460°F.), so low that most gases would be liquefied or frozen. Photography has of late done much to improve our maps of the moon's surface. In the study of delicate details, however, the best photographs cannot rival visual observations made with powerful telescopes.

4. (*d*) A kind of knife used in shaving skins; a moon-knife. See ★*mooning.*

7. Moonlight.

In the *moon* athwart the place of tombs.
Tennyson, Passing of Arthur, l. 214.

Horizontal moon, the moon as viewed when rising or setting. Its diameter at such times appears much greater than at considerable altitudes, whence the expression, once familiar, now obsolete, "the illusion of the horizontal moon."—**Hunters' moon,** in *astron.*, the full moon next after the *harvest-moon* (which see).—**Local transit of the moon.** See ★*transit.*—**Lower transit of the moon.** See ★*transit.*—**Station of the moon.** See ★*station.*—**Tidal theory of the moon's origin.** See ★*tidal evolution.*—**To shoot the moon,** to remove secretly with one's belongings in the night in order to escape payment of rent, or distraint. [Slang.]—**Wet moon,** a new moon, one horn of whose crescent is much lower than the other, like a bowl tipped up on edge and unable to hold water. The wet moon is a popular (but fallacious) sign of coming wet weather.

moon[1], *v. t.* 3. In opposum-hunting, to locate (the hiding-place of the animal) by bringing the tree in which it is supposed to lurk into clear view between one's self and the moon. [Australia.]—4. To shave (skins) with a moon or moon-knife. See ★*mooning*, 1.

moonack, *n.* 2. A mythical animal much feared by the negroes of the Southern States.

moon-blindness (mön′blīnd″nes), *n.* 1. Same as *moon-blink.*

Hemeralopia is called *moon-blindness* by sailors, and is attributed by them to a morbific influence emanating from that planet, especially affecting such persons as commit the imprudence of sleeping on deck.
Buck, Med. Handbook, IV. 627.

2. An eye-disease of the horse, scientifically known as periodic ophthalmia, the cause of which is unknown. One attack is followed at regular intervals by others which finally produce total blindness in one or both eyes.

moon-dog (mön′dog), *n.* A luminous spot in the sky due to the refraction and reflection of the moon's rays by minute ice-crystals floating in the air. See *paraselene* and *sun-dog.*

mooneyed, *a.* 4. Having feathers marked towards the ends with rounded or oval spots, as in the spangled Hamburg breeds of fowls.

The feather markings of the penciled varieties differ greatly from those of the spangled; the latter being commonly called "*moon-eyed*" from the round or oval appearance of the spangles, while the markings of the penciled varieties are in parallel bars of reddish-bay or black, or clear silvery-white and black, as the case may be.
Yearbook U. S. Dept. Agr., 1896, p. 467.

moonfish, *n.* (*f*) The opah, *Lampris guttatus.* (*g*) Same as ★*mariposa*, 2.

moon-guitar (mön′gi-tär″), *n.* Same as ★*yukin.*

mooning (mö′ning), *n.* [*moon*[1], *v.*, + *-ing*[1].] 1. In *leather-manuf.*, the shaving of skins with a 'moon' or moon-knife.

The kid skins are shaved either by "*mooning.*" . . . "*Mooning*" is performed with a round steel, shaped like a plate, and having the center cut out, and a handle placed across the opening.
Sci. Amer. Sup., Jan. 24, 1903, p. 22629.

2. The act of going about as if moonstruck.

moonlet (mön′let), *n.* [*moon*[1] + *-let.*] A little moon: applied to the small bodies of which the rings of Saturn are composed.

The rings of Saturn appear to be continuous masses separated by circular rifts. This is the phenomenon which is observed through a telescope. By no known means can we ever approach or handle the rings; yet everybody who understands the evidence now believes that they are not what they appear to be, but consist of minute *moonlets*, closely packed, indeed, but separate the one from the other.
A. W. Rucker, in Smithsonian Rep., 1901, p. 175.

moonsif, *n.* Same as ★*munsif.*

moor[1], *n.*—**Moor rock.** See ★*rock*[1].

moor[2], *v. i.*—**To moor across** (*naut.*), to drop the anchors on either side of a stream.—**To moor along** (*naut.*), to come to anchor in a river with a hawser leading to the shore for the purpose of steadying the vessel.

moored (mörd), *a.* In *mining*, obstructed with rubbish or mud; silted up. *Barrowman*, Glossary. [Scotch.]

mooring-buoy (mör′ing-boi), *n.* A can-buoy which has a large swivel on its top, to which vessels make fast their cables instead of riding at anchor.

moor-burn (mör′bėrn), *n.* The burning of the heather on a moor, which is unlawful between April 11 and Nov. 1. *N. E. D.* [Scotch.]

moor-burner (mör′bėr″nėr), *n.* One who sets fire to heather on a moor. See ★*moor-burn.* [Scotch.]

mooring-kit (mör′ing-kit), *n.* In marine hardware, a wooden keg with an air-tight cover, used to support a mooring-chain. It has galvanized iron rings at top and bottom, joined together by an iron rod. The lower ring supports the chain and the upper ring is used as a holdfast for a boat's mooring-rope or -chain. It is usually painted in some distinctive color or pattern.

mooring-mat (mör′ing-mat), *n.* *Naut.*, a flat mat made of thrums like a door-mat. It is bound around a mooring hawser to prevent chafing at a certain part or point.

mooring-staple (mör′ing-stā″pl), *n.* A large staple-shaped forging fastened on the side of a war-ship, to which chain-cable may be shackled to hold the vessel when moored alongside a wharf.

moor-myrtle (mör′mėr″tl), *n.* See ★*myrtle.*

mooruk (mör′uk), *n.* [Native name: from the sound of its cry?] A species of cassowary, *Casuarius bennetti*, peculiar to the island of New Britain.

moose, *n.* The Alaskan moose has been described as a new species, *Alces gigas*, distinguished by its larger teeth and antlers, and by other characteristics.

moose-berry (mös′ber″i), *n.* Same as ★*moose-bush.*

moose-bush (mös′bůsh), *n.* The hobble-bush or American wayfaring-tree, *Viburnum alnifolium.*

moose-horn (mös′hôrn), *n.* Same as *moose-call. Jour. Amer. Folk-lore*, Oct.–Dec., 1902, p. 249.

moosemise (mös′mīs), *n.* [From an eastern Algonkian form answering to the (western) Ojibwa *monzomish* (applied to the hobble-bush, *Viburnum alnifolium*); ⟨ *monz*, moose, + *-mish*, bush.] The false wintergreen, *Pyrola rotundifolia.* See *Indian* ★*mozemize.* [Vermont.] *Jour. Amer. Folk-lore*, Oct.–Dec., 1902, p. 249.

moose-trumpet (mös′trum″pet), *n.* Same as *moose-call. Jour. Amer. Folk-lore*, Oct.–Dec., 1902, p. 249.

moot[4] (möt), *n.* In *ship-building:* (*a*) A ring used to gage the diameter of treenails. (*b*) A piece of hard wood bound with iron at both ends, used in making blocks.

mooted (mö′ted), *p. a.* [*moot*[1], *v.*, + *-ed*[2].] Unsettled; disputed; argued; subject to different opinions; moot.

mope-hawk (mōp′hâk), *n.* Same as *more-pork*, a large Australian night-jar of the genus *Podargus.* The name is probably given under the mistaken impression that it was the original and proper form.

moph (mof), *n.* [A perverted abbreviation of *hermaphrodite*, the instrument being properly named *hermaphrodite calipers.*] An instrument consisting of a pair of compasses, one leg of which is fashioned like the leg of a pair of calipers. *N. E. D.*

mopoke (mō′pōk), *n.* Same as *more-pork.*

Mor. An abbreviation of *Morocco.*

mora[2], *n.*—**Giuoco della mora,** a game played in Italy by two players matching the fingers of the right hands, the left being held behind the back. A similar game was common in ancient Greece in which the left hands were confined by holding a stick.

mora[4] (mō′rạ), *n.*; pl. *moræ* (-rē). [NL., ⟨ Gr. *μόρα*, a part; connected with *μοῖρα*, a part: see ★*Mœræ.*] In *Gr. antiq.*, one of the six main divisions of the army of Sparta, commanded by a polemarch.

Moraceæ (mō-rā′sē-ē), *n. pl.* [NL. (Lindley, 1847), ⟨ *Morus* + *-aceæ.*] A family of dicotyledonous archichlamydeous (apetalous) plants of the order *Urticales*, the mulberry family, typified by the genus *Morus*, and characterized by unisexual flowers, the staminate usually in panicles or spikes, and the pistillate in heads, a superior ovary, solitary, pendulous, anatropous ovules, one or two styles, and as many seeds. There are 67 genera and about 925 species, mostly trees and shrubs of temperate and tropical regions. Besides the mulberries the family includes the breadfruits, the figs, the Osage orange, the hop, and the hemp.

moraceous (mō-rā′shius), *a.* Belonging to the *Moraceæ* or mulberry family.

moradin (mō-rā′din), *n.* [NL. *morada* (see def.) + *-in*[2].] A colorless crystalline compound, $C_{16}H_{14}O_6$, contained in the bark of false cinchona, cascarilla, or china morada,

Pogonopus febrifugus. It has a blue fluorescence and melts at 201–202° C.

morai (mō-rä′ē), *n.* [Also *marae, morae,* in many Polynesian dialects.] A sort of elevated stone platform or terrace, often of considerable size, found on elevated sites in certain of the Polynesian Islands.

The principal object of ambition among these people ['Otaheite'] is to have a magnificent *Morai*, and this was a striking memorial of the rank and power of Oberea.
Hawkesworth, Voyages into Southern Hemisphere, 1785, II. 443.

moraine, *n.*—**Bottom moraine,** a ground moraine; subglacial drift and boulder-clay.—**Frontal moraine,** a moraine found at the front of a glacier.—**Interlobate moraine,** a compound moraine formed between adjacent glacial lobes.—**Intermediate moraine,** a special name, suggested by T. C. Chamberlin, for those portions of the terminal moraine of the continental ice-sheet which were deposited where two lobes coalesced. Also *interlobate moraine*. *Rep. U. S. Geol. Surv.*, 1881–82, p. 301.—**Kame moraine,** a moraine formed of roughly stratified glacial debris and having a knob and basin topography.

In its relations to other phases of drift, therefore, as well as in the particulars already specified, the kame belt stands in the position of a moraine. For it, and for similar aggregations of kames, the designation *kame moraine* is proposed.
R. D. Salisbury, Geol. Surv. of New Jersey, 1892, p. 93.

Lodge moraine, glacial debris deposited beneath the ice. *Chamberlin and Salisbury*, Geol., I. 286.—**Marginal moraine,** a moraine deposited at the margin of a glacier; a terminal moraine.—**Moraine of advance,** a moraine which is formed during the advance of a glacier. *J. Geikie*, The Great Ice Age, p. 262.—**Moraine of recession,** Same as ★*moraine of retreat*.—**Moraine of retreat,** a moraine which is formed during the retreat of a glacier. *J. Geikie*, The Great Ice Age, pp. 209, 213.—**Moraine profonde.** (*a*) The stony, mixed drift, which constituted the ground moraine of the continental ice-sheet. (*b*) A mixed stony drift gathered from the disintegration of underlying rocks and strewn over lower slopes as by landslides.—**Push moraine,** a moraine formed of the debris pushed forward by the front of a glacier. *Chamberlin and Salisbury*, Geol., I. 286.—**Retreatal moraine.** Same as ★*moraine of retreat*.—**Shoved moraine.** Same as *push* ★*moraine*.—**Submarginal moraine,** the deposit of debris formed under the margin of a glacier. *J. Geikie*, The Great Ice Age, p. 741.—**Superficial moraine,** the debris on the surface of a glacier.—**Terminal moraine.** See *moraine*. The term is used only in North America as applied to the ice-sheet of the Wisconsin epoch.

Morainic apron. Same as ★*apron*, 6.—**Morainic loops,** the forward curves of moraines formed around the lobes of a continental glacier.

moralism, *n.* 3. A tendency to moralize; a habit of moralizing.

Is it the laureate? He lies buried under his own historical quartos! There is neither his mannerism nor his *moralism*, nor his methodism.
Southey, Doctor, Interchap. vii.

morassic (mō-ras′ik), *a.* [*morass* + *-ic.*] Having the character of or pertaining to a morass: as, a *morassic* habitat; a *morassic* soil.

All of these *morassic* formations characterize quiet shores.
C. MacMillan, in Minn. Bot. Stud., Bulletin IX. 995.

moratorium (mor-ạ-tō′ri-um), *n.* [NL., neut. sing. of LL. *moratorius*, causing delay, dilatory: see ★*moratory*.] In *law*, legal title to delay in making a due payment: as a legislative authorization of suspension of payment by a government bank.

moratory (mor′ạ-tō-ri), *a.* and *n.* [LL. *moratorius*, delaying, < *morator*, a delayer, < *morare*, delay: see *moration*.] **I.** *a.* Of or pertaining to moratorium; delaying: as, a *moratory* bill.

II. *n.* One who postpones the maturity of notes, bills of exchange, and the like.

morauke (mo-rä′ke), *n.* [G. dial. (Swiss) *moracke, moroche, moracher*, dim. *morauchli* (Stalder, 1812).] A whitefish, *Coregonus hiemalis*, native of Lake Constance, Switzerland, now introduced into the United States.

Moravian[2] (mō-rā′vi-an), *a.* and *n.* [ML. *Moravia*, Moray, + *-an.*] Of or pertaining to Moray; an inhabitant of Moray.

moray, *n.*—**Black moray,** *Lycodontis funebris*, an eel of the family *Muræniдæ*, found on both coasts of tropical America.—**Common spotted moray,** *Lycodontis moringa*, an eel found from Punta Concepcion to Isla de Cedros.

morbify (môr′bi-fī), *v. t.*; pret. and pp. *morbified*, ppr. *morbifying*. [L. *morbus*, disease, + *-i-* + *-fy.*] To render diseased. [Rare.]
Browning, Aristoph. Apol.

morbigenous (môr-bij′e-nus), *a.* [L. *morbus*, disease, + *-genus*, -producing.] Exciting or producing disease.

morbus, *n.*—**Morbus anglicus,** rachitis.—**Morbus cæruleus,** cyanosis of the new-born, due usually to some malformation of the heart.—**Morbus comitialis,** epilepsy.—**Morbus cordis,** heart-disease.—**Morbus coxæ senilis,** arthritis deformans which affects the hip.—**Morbus regius,** jaundice.—**Morbus sacer,** epilepsy.

morcellate (môr-sel′āt), *v. t.*; pret. and pp. *morcellated*, ppr. *morcellating*. [F. *morceler*, divide, + *-ate*[2]. The Latin type would be **morcellare*.] To shatter or break into many pieces. Rocks which are finely divided by many joints are said to be morcellated.

morcellation (môr-se-lā′shọn), *n.* [*morcellate* + *-ion.*] 1. The act of shattering or breaking.—2. In *surg.*, removal of a part, as a tumor, a little at a time instead of by excision in mass.

morcellement (môr-sel-maṅ′), *n.* [F., < *morceler*, divide: see ★*morcellate*.] Same as ★*morcellation*, 2.

Porcelini suggested *morcellement*, the danger of which consists in the subsequent necrosis of the stump of the cervix.
Phil. Med. Jour., Jan. 31, 1903, p. 199.

mordant. **I.** *a.*—**Acid mordant colors.** Same as *mordant acid* ★*colors*.

II. *n.*—**Dutch mordant,** one of the acid baths used in biting a plate in etching. Its composition is given by Hamerton as chlorate of potash, 20 grams; hydrochloric acid, 100 grams; water, 880 grams.

mordant, *v. t.*—**Mordanting principle,** a term used by textile-colorists to indicate the substance used to produce a mordant, in order to distinguish it from the mordant proper.

In one of the most important wool mordanting processes, potassium bichromate ($K_2Cr_2O_7$) is used in the mordanting bath, but the actual mordant precipitated upon the fiber is an acid oxide of chromium (CrO_3). The potassium bichromate is, therefore, the *mordanting principle*. *L. A. Olney*, Textile Chem. and Dyeing, II. 115.

mordellid (môr-del′id), *n.* and *a.* **I.** *n.* A member of the coleopterous family *Mordellidæ*.

II. *a.* Having the characters of or belonging to the family *Mordellidæ*.

Mordey effect. The effect of increasing load in diminishing the hysteresis of the core of armatures of certain generators and motors: first noted by W. M. Mordey.

mordoré (môr-dō-rā′), *n.* [F., < OF. *more*, Moor, + *doré*, gilded.] A brown color mixed with red. *N. E. D.*

morelle, *n.* 2. The belladonna.

morena (mō-rā′nä), *n.* [Sp., also *murena*, < L. *muræna*: see *Muræna*.] Any eel of the family *Murænidæ*, commonly called *moray eels*. They inhabit tropical and subtropical seas and are abundant about rocky places and coral reefs. Some of them reach a large size, and all are pugnacious and voracious.—**Morena pinta,** *Muræna lentiginosa*, an eel found from the Gulf of California to the Galapagos Islands.—**Morena pintita,** *Lycodontis dovii*, an eel of the family *Murænidæ*, found from the Gulf of California to the Galapagos Islands.—**Morena prieta,** *Lycodontis castaneus*, an eel reaching a length of six feet, and found in abundance about the rocks of Mazatlan, Mexico.—**Morena verde.** Same as *black* ★*moray*.

morencite (mō-ren′sīt), *n.* [*Morenci* (see def.) + *-ite*[2].] A hydrated ferric silicate occurring in brownish-yellow silky fibrous seams in a lime shale at Morenci, Arizona.

morenosite (mō-rā′nō-sīt), *n.* [Sp. *morenosita* (1853) (irreg. formed), named after a Señor *Moreno* of Spain.] Hydrous nickel sulphate, $NiSO_4+7H_2O$, usually occurring in fibrous forms or as an efflorescence of a green color. It results from the alteration of nickel ores.

Moresco-Spanish (mō-res″kō-span′ish), *a.* Of or pertaining to the Moors of Spain, especially to Moorish art in Spain.

Moreton Bay canes. See ★*bangalow*.

Morgagni's crypts, globules or **spheres.** See ★*crypt*, ★*globules*.

Morgan (môr′gạn), *n.* A breed of trotting horses which originated with a stallion owned by Justin Morgan of Vermont.

morganic, *a.* Same as *morganatic*.

morganite (môr′gạn-īt), *n.* [For J. P. *Morgan* + *-ite*.] Rose beryl. *Kunz*.
